6. Quando aplicar as disposições da presente secção, e para proteger as consignações inscritas, a Comissão utilizará apenas o ficheiro de referência reestruturado em conformidade com o procedimento descrito no anexo à Resolução n.º 9.

7. Em 1 de Julho de 1983, a Comissão envia a cada administração um documento a indicar todas a consignações relativas a essa administração, explicitando aquelas que estão inscritas na secção provisória do ficheiro de referência e as que se propõem em substituição.

Secção II

Exame e aprovação das consignações propostas

8. Ao receber o documento mencionado no § 7, cada administração acusa a sua recepção e examina as consignações de substituição propostas para se certificar de que são aceitáveis. Logo que possível informa a Comissão:

Do seu acordo; ou
Das consignações que considera inaceitáveis.

Neste último caso, a administração dá, o mais rapidamente possível, as suas razões à Comissão.

9. A Comissão examina as respostas recebidas de acordo com o § 8 e procura satisfazer as administrações interessadas, no que se refere às consignações propostas consideradas inaceitáveis, procedendo de preferência a pequenas modificações. Para isso procede do seguinte modo:

Durante 6 meses a partir de 1 de Julho de 1983 reúne todas as respostas recebidas de acordo com o § 8 e a seguir trata-as em conjunto e sem dar prioridade à resposta de qualquer administração. Depois,
Reúne todas as respostas recebidas, de acordo com o § 8, entre 6 e 9 meses a partir de 1 de Julho de 1983, e a seguir trata a segunda série como indicado acima para a primeira série.

10. O procedimento descrito na presente secção termina a 1 de Julho de 1984.

Secção III

Medida a tomar pela Comissão

11. Quando estiver terminado o procedimento prescrito nas secções I e II do presente anexo, a Comissão inscreve no ficheiro de referência todas as consignações de substituição aceites pelas administrações, com uma anotação a indicar:

Que terão o mesmo estatuto que as consignações que não foram transferidas, em conformidade com as disposições da Resolução n.º 9;
O seu carácter provisório, em conformidade com as disposições no n.º **1311**.

12. Em todas as consignações mencionadas no § 11 a Comissão inscreve a data apropriada na coluna 2d do ficheiro de referência, em conformidade com o § 6.3 do anexo à Resolução n.º 9.

13. A Comissão publica a seguir, em forma de suplementos recapitulativos à Lista Internacional das Frequências, todas as consignações de substituição efectuadas em conformidade com o procedimento prescrito na parte I do presente anexo.

14. Depois da publicação dos suplementos prescitos no § 13, a Comissão informa por telegrama todas as administrações cujas consignações a transferir, de classe de funcionamento A, ainda em suspenso não puderam ser transferidas.

Secção IV

Entrada em vigor do artigo 12

15. A partir de 1 de Julho de 1984, as disposições do artigo 12 aplicar-se-ão às faixas de frequências atribuídas ao serviço fixo entre 4000 kHz e 27 500 kHz.

16. Depois dessa data, uma administração que tenha sido informada pela Comissão, em aplicação do § 14, de que algumas das suas considerações a transferir não foram substituídas em conformidade com o procedimento de transição, poderá escolher novas consignações, tendo em conta as consignações inscritas no ficheiro de referência em aplicação do § 11, e apresentará à Comissão novas notificações de acordo com o artigo 12.

PARTE II

Fase de transferência

SECÇÃO V

Medidas a tomar pelas administrações

17. Depois de ter recebido e aceitado as consignações de substituição das suas consignações inscritas e transferidas por decisão da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), uma administração efectua a passagem da antiga consignação para a nova, o mais tardar:

Em 1 de Julho de 1989, no caso das faixas de frequência superiores a 10 MHz;
Em 1 de Julho de 1994, no caso das faixas de frequência inferiores a 10 MHz.

18. Depois de ter efectuado a passagem da antiga consignação para a consignação de substituição, uma administração informa rapidamente do facto a Comissão, e esta suprime, no ficheiro de referência, o símbolo especial inscrito em frente da consignação de substituição em conformidadde com o n.º **1311** (v. o § 11 acima), o que indica que a transferência foi efectuada, e inscreve a data da substituição na coluna 2c. A data que figurava inicialmente na coluna 2c em frente da consignação transferida é inscrita na coluna «Observações».

19.1 Se, depois de ter efectuado a passagem a uma consignação de substituição de classe de funcionamento A, uma administração sofrer interferência prejudicial ou receber uma queixa de interferência prejudicial relativa a uma outra consignação de classe de funcionamento A, essa administração:

a) Procurará resolver o problema com qualquer outra administração em causa;
b) E, não sendo possível encontrar uma solução, pode escolher e propor à Comissão uma consignação de substituição (1).

19.2 Se, após ter efectuado a passagem a uma consignação de substituição de classe de funcionamento B, uma administração sofrer interferência prejudicial a essa classe de funcionamento, pode escolher e apresentar à Comissão uma ou outra consignação de substituição (1).

20. Após parecer favorável da Comissão relativamente à consignação de substituição escolhida em aplicação dos §§ 19.1, alínea *b*), ou 19.2, essa administração pode pedir a inscrição na coluna 2d do ficheiro de referência, em frente dessa consignação, da data comum de 1 de Janeiro de 1982 para a classe de funcionamento A e de 2 de Janeiro de 1982 para a classe de funcionamento B.

SECÇÃO VI

Significado das datas inscritas no ficheiro de referência

21. O significado das datas relativas às consignações transferidas é mencionado no anexo à Resolução n.º 9 e no artigo 12.

ANEXO B À RESOLUÇÃO N.º 8

Procedimento provisório relativo às fichas de notificação de frequência nas faixas atribuídas em exclusivo ou em partilha ao serviço fixo entre 4000 kHz e 27 500 kHz

1. Durante o período compreendido entre 1 de Janeiro de 1982 e 30 de Junho de 1984 qualquer administração que tenha necessidade de uma consignação com urgência tal que não possa aguardar o fim do período de transição poderá notificar uma nova consignação nas faixas atribuídas em exclusivo ou em partilha ao serviço fixo entre 4000 kHz e 27 500 kHz. As fichas de notificação assim apresentadas devem conter as informações indicadas na secção pertinente do apêndice 1.

2. Considera-se que qualquer administração que apresente uma ficha de notificação em conformidade com o § 1 anterior aceita que a sua consignação:

a) Seja de natureza provisória;
b) Seja submetida ao procedimento de revisão descrito no anexo C da presente Resolução e deva, se for caso disso, ser modificada, tendo em conta os resultados dessa revisão;

(1) Se uma administração lhe pedir, a Comissão ajudá-la-á a aplicar o procedimento descrito nos §§ 19.1, alínea *b*), ou 19.2.

c) Não cause interferência prejudicial a qualquer consignação inscrita no ficheiro de referência e com direito a protecção.

3. Ao receber uma ficha de notificação completa e em conformidade com o § 1, a Comissão examina-a relativamente ao n.º **1240** e devolve à administração notificadora qualquer ficha de notificação que não esteja em conformidade com essa disposição, indicando os motivos dessa devolução.

4. As fichas de notificação conformes com o n.º **1240** são inscritas numa secção especial da circular semanal com uma anotação a indicar que estão sujeitas ao procedimento provisório e ao procedimento de revisão descritos, respectivamente, no presente anexo e no anexo C à presente Resolução. As consignações notificadas em aplicação do n.º **1218** são, além disso, anotadas em conformidade.

5. A Comissão elabora e mantém em dia a lista especial de todas as fichas de notificação tratadas de acordo com o § 4.

ANEXO C À RESOLUÇÃO N.º 8

Procedimento de revisão relativo às consignações de frequência a estações do serviço fixo nas faixas compreendidas entre 4000 kHz e 27 500 kHz

1. A partir de 1 de Julho de 1984 a Comissão examinará, em conformidade com as disposições apropriadas do artigo 12, todas as consignações provisórias da lista especial elaborada de acordo com o anexo B à presente Resolução, com vista à sua inscrição no ficheiro de referência.

2. Para fins deste exame, as consignações serão tratadas sem que seja dada prioridade a qualquer administração. Todavia, as consignações notificadas nos termos do n.º **1218** serão tratadas em primeiro lugar.

3. Todas as consignações provisórias devem ser examinadas pela Comissão tendo em conta a probabilidade de interferência prejudicial originária de consignações inscritas no ficheiro de referência a título provisório em aplicação das disposições do anexo A da presente Resolução e tendo em conta a probabilidade de interferência prejudicial causada a estas últimas consignações. Segundo as conclusões formuladas pela Comissão na sequência deste exame serão tomadas as seguintes medidas:

4. *Conclusão favorável relativamente ao § 3 anterior.*

4.1. As consignações provisórias notificadas nos termos do n.º **1218** são inscritas no ficheiro de referência com a data de 1 de Julho de 1984, na coluna 2d.

4.2. As outras consignações provisórias devem ser examinadas em conformidade com o n.º **1242** com respeito às consignações de frequência inscritas no ficheiro de referência à data do início do procedimento provisório descrito no anexo B à presente resolução. Conforme as conclusões da Comissão, assim se aplicam as disposições pertinentes do artigo 12. Quando tais consignações devam ser inscritas, a data de 1 de Julho de 1984 inscrever-se-á na coluna 2d.

5. *Conclusão desfavorável relativamente ao § 3 anterior.*

Tendo em conta a classe de funcionamento da consignação e o conteúdo do ficheiro de referência reestruturado, a Comissão propõe consignações de substituição apropriadas e inscreve-as provisoriamente com data de 1 de Julho de 1984 na coluna 2d.

6. Quando terminar esse exame, a Comissão elabora e publica sob a forma de anexo à sua circular semanal uma lista temporária de consignações inscritas e de consignações de substituição propostas, e envia um exemplar dessa lista, assim como um extracto por país, a cada uma das administrações que tenha consignações provisórias na lista especial mencionada no § 1 do presente anexo.

7. Ao receberem a lista mencionada no § 6, as administrações estudam as consignações propostas em substituição das suas consignações temporárias e, no prazo de 5 meses a contar da data de publicação da lista temporária, comunicarão à Comissão se as consignações propostas são aceitáveis. Se as consignações propostas não forem aceitáveis, as administrações devem indicar os motivos.

8. Ao aceitarem as consignações propostas, as administrações devem indicar a data mais tardia em que as vão pôr ao serviço. Essa data não deve exceder o prazo de um ano a contar da publicação da lista temporária.

9. Ao examinar as respostas dadas em aplicação do § 7, a Comissão procura, se necessário por meio de pequenos ajustamentos, dar satisfação às administrações interessadas relativamente às consignações propostas e julgadas inaceitáveis, e propõe-lhes frequências de substituição. Simultaneamente, a Comissão substitui a inscrição provisória pertinente pela nova frequência proposta.

10. Se, à data de 1 de Julho de 1985, as inscrições provisórias efectuadas por força dos §§ 5 ou 9 não tiverem sido aceites pelas administrações interessadas, a Comissão substitui-as pelas consignações provisórias correspondentes com uma anotação apropriada. A partir dessa data não são tidas em consideração nem a lista especial nem a lista temporária.

11. As administrações que tenham consignações provisórias para as quais não tenha sido possível encontrar consignações de substituição aceitáveis são livres de escolher novas consignações de substituição e enviam novas fichas de notificação em conformidade com as disposições do artigo 12. A Comissão auxilia a administração que lho peça a aplicar o procedimento descrito no presente parágrafo.

RESOLUÇÃO N.º 9

Relativa à revisão de certas partes do ficheiro de referência internacional das frequências nas faixas de frequências atribuídas ao serviço fixo compreendidas entre 3000 kHz e 27 500 kHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é necessário melhorar a precisão e a fiabilidade do ficheiro de referência internacional das frequências, especialmente nas faixas atribuídas em exclusivo ou em partilha ao serviço fixo compreendidas entre 3000 kHz e 27 500 kHz;
b) Que iniciativas anteriores da IFRB mostraram que é possível, graças à cooperação das administrações, melhorar sensivelmente a precisão e a fiabilidade do ficheiro de referência;

reconhecendo

a) Que para resolver este problema é preciso atáca-lo à escala mundial num espírito de cooperação activa;
b) Que para rever certas partes do ficheiro de referência é necessário definir um procedimento que preveja a cooperação de todas as administrações e da IFRB;

reconhecendo, por outro lado,

a) Que parte importante das consignações relativas ao serviço fixo se destina a utilizações diferentes da exploração regular;
b) Que a identificação da classe de funcionamento dessas consignações no ficheiro de referência facilitaria a gestão internacional das faixas de frequências atribuídas ao serviço fixo nessa parte do espectro e deveria constituir uma característica tipo ficheiro de referência;
c) Que a determinação dos horários regulares de funcionamento facilitaria igualmente a gestão desse serviço;
d) Que esta maneira de identificar a classe de funcionamento e o horário regular de funcionamento dessas consignações deveria ser aplicada a qualquer procedimento destinado à revisão;
e) Que, uma vez aplicadas , estas medidas constituiriam uma base sólida para a adopção dos arranjos de transição necessários à substituição das consignações às estações do serviço fixo a transferir de acordo com decisões da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979):

decide

adoptar o procedimento descrito em anexo à presente Resolução tendo em vista a revisão das partes do ficheiro de referência relativas às faixas atribuídas ao serviço fixo entre 3000 kHz e 27 500 kHz;

decide, por outro lado,

que a presente resolução entre em vigor em 1 de Janeiro de 1980;

convida as administrações e a IFRB

a colaborarem sem reservas, e prontamente, na aplicação deste procedimento.

ANEXO DA RESOLUÇÃO N.º 9

Procedimento aplicável à revisão das inscrições no ficheiro de referência nas faixas atribuídas ao serviço fixo entre 3000 kHz e 27 500 kHz

1. A Comissão extrai do ficheiro de referência e comunica a cada administração, logo que possível depois de 1 de Janeiro de 1980, uma lista nacional (1) individual de todas as consignações (2) inscritas no ficheiro de referência em nome dessa administração ou para as quais foram recebidas fichas de notificação antes dessa data, nas faixas atribuídas em exclusivo ou em partilha ao serviço fixo entre 3000 kHz e 27 500 kHz. Ao mesmo tempo, a Comissão indica a essa administração as consignações para as quais pareça disponível um outro meio de telecomunicação.

2. Ao receber a lista mencionada no § 1 anterior cada administração acusa a sua recepção enviando um telegrama à Comissão. Uma administração que não tenha recebido a sua lista nacional até 1 de Abril de 1980 informa disso imediatamente

(1) A Comissão determina por um inquérito prévio o número de exemplares da lista nacional a enviar a cada administração. A lista nacional é apresentada da mesma maneira que a Lista Internacional das Frequências, mas o modo de envio da lista pode variar conforme as circunstâncias, em função dos pedidos das administrações e sob reserva do acordo da Comissão.

(2) Para as necessidades do presente procedimento, as consignações a estações do serviço fixo aeronáutico são consideradas como estações do serviço fixo na ou nas faixas em causa.

a Comissão, que envia sem demora a essa administração um outro exemplar. A Comissão deve certificar-se de que cada uma das administrações recebeu de facto a lista nacional relativa às suas próprias consignações.

3. Depois, de ter acusado a recepção da sua lista nacional, cada administração examina esta e:

a) Suprime qualquer inscrição que já não seja necessária;

b) Classifica as inscrições restantes do serviço fixo utilizando os símbolos seguintes:

Símbolo A — consignação destinada a ser utilizada para exploração regular que não é assegurada por um outro meio satisfatório de telecomunicação;

Símbolo B — consignação destinada a ser utilizada como consignação de reserva de um outro meio de telecomunicação;

Símbolo C — consignação para utilização ocasional de reserva que não exiga protecção internacionalmente reconhecida contra interferências prejudiciais;

c) Indica as horas normais (UTC) de funcionamento da consignação ou indica-as em serviço de dia (HJ), serviço de noite (HN) ou serviço de transição (HT).

4. Depois de ter aplicado as disposições referidas nos §§ 2 e 3 anteriores, cada administração devolve a sua lista nacional anotada à Comissão logo que possível e o mais tardar até 31 de Março de 1981.

5. A Comissão envia a cada administração um aviso de recepção da sua lista nacional anotada. No caso de dificuldade especial ou a pedido das administrações, a Comissão dá-lhes a assistência ou os conselhos que, consoante o caso, as circunstâncias justifiquem.

6. Em 1 de Outubro de 1981 a Comissão publicará uma secção provisória do ficheiro de referência referente unicamente às consignações nas faixas atribuídas ao serviço fixo entre 3000 kHz e 27 500 kHz. Essa secção incluirá todas as consignações que figuram nas listas nacionais, tais como anotadas pelas administrações, e as consignações que figuram nas listas nacionais que não terão sido devolvidas à Comissão, com excepção das consignações que tenham sido objecto de uma conclusão desfavorável relativamente ao n.º **1240,** sem referência ao n.º **342.** As consignações incritas nessa secção provisória serão anotadas como a seguir se indica:

6.1. Todas as consignações levarão um símbolo a indicar uma referência à presente Resolução.

6.2. As datas inscritas nas colunas 2a, 2b ou 2d ou o símbolo inscrito na coluna 2d e as conclusões que figuram na parte apropriada da coluna 13 serão modificadas como indicado no quadro anexo.

6.3. As consignações de frequência às estações do serviço fixo nas partes de faixas reatribuídas a outros serviços levarão um símbolo a indicar tratarem-se de consignações para as quais se encontrarão consignações de substituição em conformidade com a Resolução n.º 8, mantendo a data e o estatuto indicados no quadro anexo.

7. Antes de aplicar os §§ 1.2 e 2.2 do quadro anexo às consignações dos países com um pequeno número de consignações, a Comissão consulta a administração cuja consignação motivou uma conclusão desfavorável para se certificar de que não foi produzida qualquer interferência real desde a inscrição da consignação. Se a administração responder que não foi produzida qualquer interferência, a Comissão inscreverá o símbolo correspondente à classe de funcionamento A da consignação e modificará a conclusão desfavorável. Em qualquer outro caso aplicará as disposições do n.º **1218** para encontrar uma outra frequência e substituirá a frequência consultando a administração interessada.

8. Logo que possível, depois de 1 de Janeiro de 1982, a Comissão deverá:

8.1. Publicar um suplemento à secção provisória do ficheiro de referência contendo as consignações para as quais tenham sido recebidas fichas de notificação entre 1 de Janeiro de 1980 e 31 de Dezembro de 1981 e inscritas no ficheiro de referência.

8.2. Enviar às administrações um exemplar da respectiva lista nacional.

8.3. Incorporar no ficheiro de referência a secção provisória mencionada no § 6, conluindo as consignações mencionadas no § 8.1 anterior em substituição das inscrições correspondentes nas faixas de frequência em questão.

9. Depois de ter cumprido estas tarefas, a Comissão publicará um relatório a indicar os resultados obtidos graças a este procedimento.

QUADRO ANEXO

	Coluna 13a	Coluna 2	Coluna 13c
1. Faixas de frequências inferiores a 3900 kHz (Região 1), 3950 kHz (Região 3) e 4000 kHz (Região 2)			
1.1. Listas devolvidas à Comissão:			
Classe de funcionamento A das consignações	Suprimir todos os símbolos a indicar as conclusões relativamente ao n.º **1241.**	Substituir a data em 2a ou 2b por 1 de Janeiro de 1982 em 2a.	RES 9 SUP RR 515

Conclusão favorável relativamente ao n.º **1240**	INA	Substituir a data ou o símbolo em 2d por 3 de Janeiro de 1982.	RES 9
Inscrições de acordo om o n.º **342** do Regulamento das Radiocomunicações.	INA	Substituir a data ou o símbolo em 2d por 5 de Janeiro de 1982.	RES 9

RESOLUÇÃO N.º 10

Relativa à utilização de ligações radiotelegráficas e radiotelefónicas pelas organizações da Cruz Vermelha, do Crescente Vermelho e do Leão-e-Sol Vermelho

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a obra universal de socorro das organizações da Cruz Vermelha, do Crescente Vermelho e do Leão-e-Sol Vermelho assume importância crescente e é muitas vezes indispensável;

b) Que, nessas circunstâncias, acontece frequentemente que os meios normais de comunicações estão sobrecarregados, avariados, completamente interrompidos ou indisponíveis;

c) Que é necessário facilitar por todos os meios possíveis a intervenção eficaz dessas organizações nacionais e internacionais;

d) Que nas intervenções dessas organizações são essenciais meios de ligação rápidos e autónomos;

e) Que é necessário que as organizações nacionais da Cruz Vermelha, do Crescente Vermelho e do Leão-e-Sol Vermelho, empenhadas numa acção de socorro internacional, possam comunicar entre si e com a Comissão Internacional da Cruz Vermelha e a Liga das Sociedades da Cruz Vermelha:

decide solicitar instantemente às administrações

1. Que tomem em consideração as necessidades eventuais das organizações da Cruz Vermelha, do Crescente Vermelho e do Leão-e-Sol Vermelho em meios de radiocomunicação se os meios normais de comunicação estiverem interrompidos ou indisponiveís;

2. Que consignem a essas organizações o número mínimo de frequências de trabalho necessárias, em conformidade com o quadro de atribuição das faixas de frequências. Para os circuitos fixos entre 3 MHz e 30 MHz escolher-se-á, na medida do possível, frequências adjacentes às faixas do serviço de amador;

3. Que tomem todas as medidas praticáveis para proteger essas ligações contra interferências prejudiciais.

RESOLUÇÃO N.º 11

Relativa à utilização das radiocomunicações para a segurança dos navios e das aeronaves dos Estados não envolvidos num conflito armado (1)

A Conferência Administrativa Mundial das Radiocomunciações (Genebra, 1979),

considerando

a) Que o direito internacional reconhece que os Estados não envolvidos num conflito armado, chamados daqui em diante Estados neutros, o direito de exercer com segurança actividades comerciais normais sem risco de danos causados por Estados envolvidos num conflito armado;
b) Que, na vizinhança do local de um conflito armado, os navios e aeronaves de um Estado neutro correm um risco considerável;
c) Que, para a salvaguarda da vida humana, é desejável, nessas circunstâncias, poder identificar esses navios e aeronaves e determinar a sua posição;
d) Que as radiocomunicações oferecem um meio rápido de identificar e de localizar os navios e aeronaves antes de entrarem numa zona de conflito armado e enquanto atravessam essa zona;

tendo em conta

a) Que a Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) adoptou uma recomendação relativa aos transportes sanitários e à segurança dos navios e aeronaves dos Estados não envolvidos num conflito armado; e
b) Que a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) tratou em profundidade da questão dos transportes sanitários no quadro do Regulamento das Radiocomunicações, acrescentando uma nova secção II ao artigo 40, mas que não tomou disposições para a segurança dos navios e aeronaves dos Estados neutros:

decide convidar as administrações

1. A terem presentes as condições a satisfazer para identificar e localizar os navios e aeronaves dos Estados neutros e para comunicar com eles, e especialmente a possibilidade de utilizar os radares secundários aeronáuticos de vigilância e os equipamentos de resposta de radar marítimos;

2. A estudarem se é necessário estabelecer um procedimento aceitável e, na afirmativa, a defini-lo de modo a contribuir para garantir a segurança dos navios e aeronaves dos Estados neutros em período de conflito armado, recorrendo ao anexo à presente Resolução que descreve um procedimento possível;

convida o Conselho de Administração

a considerar a inscrição desta questão na agenda da próxima conferência administrativa mundial das radiocomunicações competente;

encarrega o secretário-geral

a comunicar o conteúdo da presente resolução à OMCI e à OACI para que tomem as medidas apropriadas.

ANEXO À RESOLUÇÃO N.º 11

Procedimento possível para a identificação e a localização dos navios e aeronaves dos Estados neutros

Para os fins de anunciar e de identificar navios e aeronaves do Estado não envolvidos num conflito armado, mencionados daqui em diante como transportes neutros, uma transmissão completa dos sinais de urgência descritos nos n.ºs **3196** e **3197** será seguida, em radiotelegrafia, pelo grupo único «NNN» e, em radiotelefonia, unicamente pela palavra «NEUTRAL» pronunciada como em francês.

As frequências enumeradas no n.º **3201** podem ser utilizadas pelos transportes neutros para fins de auto-identificação e de estabelecimento das comunicações. Logo que possível, deve transferir-se a comunicação para uma frequência de trabalho apropriada.

A utilização do sinal como descrito no § 1.º indica que a mensagem que se segue diz respeito a um transporte neutro. A mensagem deve conter os seguintes dados:

a) O indicativo de chamada ou qualquer outro meio reconhecido de identificação do veículo de transporte neutro;
b) A posição do veículo de transporte neutro;
c) O número e o tipo de veículos de transporte neutro;

---

(1) Substitui a Recomendação Mar2-17 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

d) O itinerário previsto;
e) A duração estimada do percurso e as horas de partida e chegada previstas, consoante o caso;
f) Qualquer outra informação, tal como altitude de voo, frequências radioeléctricas de escuta, línguas utilizadas, modos e códigos dos sistemas de radares secundários de vigilância.

As disposições da secção I do artigo 40 apilcam-se, se necessário, à utilização de sinais de urgência por transportes neutros.

A identificação e a localização de navios podem efectuar-se utilizando equipamentos de resposta de radar marítimos normalizados.

A identificação e a localização de aeronaves neutras podem efectuar-se utilizando o sistema de radar secundário de vigilância (SSR), tal como especificado no anexo 10 à Convenção de Chicago de 7 de Dezembro de 1944, relativa à Aviação Civil Internacional, actualizado periodicamente. O modo e o código SSR a reservar para uso exclusivo das aeronaves neutras devem ser definidos pelas partes no conflito ou uma das partes no conflito, agindo de comum acordo ou isoladamente, em conformidade com procedimentos recomendados pela Organização de Aviação Civil Internacional.

A utilização das radiocomunicações para anunciar e identificar os transportes neutros é facultativa. Contudo, se forem utilizadas, aplicam-se as disposições do Regulamento das Radiocomunicações e, em especial, as dos artigos 37 e 38.

RESOLUÇÃO N.º 12

Relativa às novas regras de formação dos indicativos de chamada

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que numerosos países, em especial os países em desenvolvimento, têm necessidade urgente de novos indicativos de chamada;
b) Que o Regulamento das Radiocomunicações (Genebra, 1979) contém, no artigo 25, novas regras de formação dos indicativos de chamada;
c) Que, de acordo com o artigo 69 do Regulamento, essas regras entrarão em vigor em 1 de Janeiro de 1981;

solicita instantemente às administrações interessadas

que utilizem as novas regras de formação dos indicativos de chamada contidas no artigo 25 do Regulamento, logo que necessário e mesmo antes da data fixada para a sua entrada em vigor;

encarrega o secretário-geral

de publicar as informações recebidas dessas administrações sobre a utilização das novas regras de formação dos indicativos de chamada.

RESOLUÇÃO N.º 13

Relativa à formação dos indicativos de chamada e à atribuição de novas séries internacionais (1)

A Conferência Adminisitrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) A recomendação da Conferência Internacional das Radiocomunicações (Atlantic City, 1947) relativa à formação dos indicativos de chamada;
b) O pedido crescente de indicativos de chamada devido tanto ao aumento do número dos Membros da União como ao das necessidades dos países já Membros;
c) As informações fornecidas pelo secretário-geral no que se refere à atribuição de séries de indicativos de chamada desde 1947 e as possibilidades do sistema de formação dos indicativos de chamada actualmente utilizado;

pensando

que convém, tanto quanto possível, evitar modificar os indicativos de chamada actualmente em uso;

notando

a) Que, estando esgotadas as antigas séries de indicativos de chamada, formadas quer por três letras, quer por um algarismo e duas letras, se recorreu a novas séries, compostas por uma letra, um algarismo e uma letra, não podendo em nenhum caso esse algarismo ser 0 ou 1;

---

(1) Substitui a Resolução n.º 8 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

b) Que o método mencionado na alínea *a*) não se aplica às séries começadas pelas seguintes letras: B, F, G, I, K, M, N, R, U e W;
c) Que foi apresentada à presente Conferência uma proposta visando formar novas séries de indicativos de chamada, substituindo o terceiro caracter, que é uma letra, por um algarismo;
d) Que isso provocaria, contudo, modificações sucessivas à secção III do artigo 25:

decide

1. Que o secretário-geral continue a convidar instantemente as administrações:
1.1. A utilizarem ao máximo as possibilidades das séries que lhes estão actualmente atribuídas, a fim de evitar, tanto quanto possível, novos pedidos;
1.2. A reexaminarem os indicativos de chamada consignados até ao presente, com vista a libertar eventualmente certas séries e a colocá-las à disposição da União;
2. Que o secretário-geral forneça todos os conselhos úteis às administrações que lhos peçam sobre os meios de empregar nas melhores condições de economia, como é de regra, as séries que lhes estão atribuídas;
3. Que se, apesar de tudo, parecer que devem esgotar-se todas as possibilidades do sistema actual de formação dos indicativos de chamada antes da próxima Conferência Administrativa Mundial das Radiocominicações competente, o secretário-geral:
3.1. Estude a possibilidade de formar novas séries de indicativos de chamada na base das propostas mencionadas na alínea *c*);
3.2. Difunda uma circular:
3.2.1. A expor a situação;
3.2.2. A convidar instantemente as administrações a enviarem-lhe propostas sobre os meios de resolver essa situação;
4. Que, auxiliado pelas informações assim reunidas, o secretário-geral estabeleça e apresente à próxima Conferência Administrativa Mundial das Radiocomunicações competente um relatório que inclua os seus comentários e sugestões.

RESOLUÇÃO N.º 14

Relativa à transferência de tecnologia

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Os termos da Resolução relativa ao desenvolvimento e à cooperação económica internacional (n.º 3362.S-VII), adoptada pela Assembleia Geral das Nações Unidas quando da sua 7.ª secção extraordinária, bem como os termos da secção III dessa Resolução, que realça o papel da ciência e da tecnologia ao serviço do desenvolvimento;
b) Os termos da Resolução n.º 32/160 da Assembleia Geral, que proclama um Decénio dos Transportes e das Comunicações em África durante o período de 1978-1987 e que prevê que um ano desse Decénio seja proclamado Ano Mundial das Comunicações;
c) As decisões da Assembleia Geral relativas à preparação de uma estratégia de desenvolvimento internacional durante o Terceiro Decénio da Nações Unidas para o desenvolvimento, fixado para os anos 80 (Resolução n.º 33/193);

notando

que, aquando da recente Conferência das Nações Unidas sobre a Aplicação da Ciência e da Tecnologia ao Desenvolvimento (Viena, Agosto de 1979), os governos adoptaram uma Declaração relativa a um programa de acção, com vista a acelerar a aplicação da ciência e da tecnologia ao desenvolvimento;

consciente

da importância de que se reveste a aplicação da ciência e da tecnologia no domínio das telecomunicações para o desenvolvimento dos serviços e da realização de objectivos sociais, económicos e culturais;

consciente igualmente

da importância do papel da UIT como instituição especializada das Nações Unidas encarregada de empreender acções para a realização dos objectivos enunciados na Convenção Internacional das Telecomunicações:

decide convidar instantemente

1. Os governos dos países Membros, especialmente os dos países em desenvolvimento, e as suas administrações a tomarem medidas para estabelecerem políticas de desenvolvimento das telecomunicações nacionais com vista a reforçarem as suas actividades de cooperação técnica para a realização de uma transferência eficaz da tecnologia das telecomunicações, a fim de melhorar todos os tipos de serviços de telecomunicações, especialmente no domínio das radiocomunicações;

2. As administrações a participarem, tanto quanto lhes seja praticamente possível, nos grupos de estudo das Comissões Consultivas Internacionais da União, que são lugares importantes para a transferência de informações sobre o progresso e a aplicação das telecomunicações à tecnologia;

decide encarregar o secretário-geral

1. De intensificar ainda mais as actividades de cooperação técnica visando a planificação, o estabelecimento e a exploração de sistemas de telecomunicações, assim como a formação de pessoal para esses fins, com vista a acelerar a transferência e a boa aplicação da tecnologia em benefício do desenvolvimento, tendo em conta as necessidades próprias de cada país;

2. De procurar obter, no plano internacional, recursos que permitiam acelerar esses programas de cooperação técnica, especialmente fundos que pudessem ser atribuídos no quadro do Programa de Acção de Viena;

3. De levar a presente Resolução ao conhecimento de todos os países membros da União e dos órgãos competentes das Nações Unidas;

convida o conselho de administração

a acompanhar os progressos alcançados na realização dos objectivos enunciados pela presente Resolução e, se necessário, a apresentar um relatório sobre esses progressos à próxima Conferência de Plenipotenciários.

RESOLUÇÃO N.º 15

Relativa à cooperação internacional e à assistência técnica no domínio das radiocomunicações espaciais (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra,1979),

considerando

a) Que grande número de países membros da União Internacional das Telecomunicações não estão em condições de beneficiar imediatamente das vantagens proporcionadas pela técnica dos satélites para o desenvolvimento dos seus serviços de telecomunicações;

b) Que esses países poderiam retirar enormes vantagens dos programas de assistência técnica executados sob os auspícios da União;

notando

a) Que os sistemas internacionais de telecomunicações por satélite estão sujeitos às disposições da Convenção e dos Regulamentos da União e que todos os países, incluindo especialmente os países em desenvolvimento, podem, por esse facto, participar nos sistemas de telecomunicações espaciais;

b) Que terão de ser resolvidos alguns problemas para que os países em desenvolvimento possam participar efectivamente nos sistemas internacionais de telecomunicações espaciais e integrar esses sistemas nas suas redes de telecomunicações nacionais;

decide convidar o conselho de administração

1. A chamar a atenção das administrações para os meios que lhes permitem beneficiar de assistência técnica no domínio da aplicação das telecomunicações espaciais;

2. A estudar a melhor maneira de os países membros da União poderem formular e apresentar pedidos de assistência a fim de receberem o máximo de auxílio financeiro e outros;

3. A estudar a melhor maneira de poderem ser utilizados os fundos tornados disponíveis pela Organização das Nações Unidas em aplicação da sua Resolução n.º 1721, a fim de prestar assistência sob forma técnica e outras às administrações dos países membros da União, para que estas possam utilizar efectivamente as telecomunicações espaciais;

4. A estudar como os trabalhos das comissões consultivas e outros organismos da União poderão ser utilizados mais eficazmente para fornecer às administrações dos países membros da União informações e assistência para o desenvolvimento das radiocomunicações espaciais.

RESOLUÇÃO N.º 16

Relativamente ao papel das telecomunicações no desenvolvimento rural integrado

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

---

(1) Substitui a Resolução Spa 4 da Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1963).

lembrando

a Resolução n.º 3362 (S-VII) da 7.ª Sessão Extraordinária da Assembleia Geral das Nações Unidas, que, entre outras coisas, pediu aos Estados membros que encoragem o desenvolvimento rural integrado nos países em desenvolvimento;

lembrando, por outro lado,

a importância atribuída ao desenvolvimento rural por diversas conferências intergovernamentais durante o 2.º Decénio das Nações Unidas para o Desenvolvimento, que reconheceram a necessidade de intensificar os esforços de desenvolvimento com vista a satisfazer as aspirações das comunidades rurais e a acelerar o desenvolvimento das infra-estruturas nas zonas rurais;

As Resoluções n.ºs 799 (Aplicação da estratégia internacional do desenvolvimento para o 2.º Decénio das Nações Unidas para o desenvolvimento) e 800 (As telecomunicações — un factor importante do desenvolvimento económico e social — papel desempenhado pela UIT neste domínio) do conselho de administração da União e a importância das telecomunicações para o desenvolvimento social e económico, assim como os diversos projectos e estudos empreendidos pela União para alcançar esses objectivos;

convencida

da importância das telecomunicações como elemento essencial da infra-estrutura das zonas rurais;

reconhecendo

a) Que à maior parte dos países em desenvolvimento faltam ainda recursos apropriados no domínio das telecomunicações;
b) Que actualmente numerosas regiões rurais do mundo não beneficiam das vantagens da técnica das telecomunicações;
c) Que as populações de numerosos países vivem isoladas umas das outras devido a obstáculos geográficos, tais como oceanos, montanhas, florestas e desertos;
d) Que as telecomunicações modernas e, em especial, as radiocomunicações, incluindo as técnicas espaciais, podem contribuir para vencer essas dificuldades e integrar as comunidades rurais no processo de desenvolvimento;
e) Que numerosos países em desenvolvimento não estão em condições de estabelecer completamente, utilizando os seus próprios recursos, redes modernas de telecomunicação;

notando

as possibilidades demonstradas das técnicas modernas das telecomunicações, que proporcionam o meio de levar às zonas rurais os serviços de ensino, de saúde e de protecção social, factores importantes de desenvolvimento social;

notando, além disso,

que uma rede rural adequada de telecomunicações pode contribuir largamente para estimular o desenvolvimento das actividades agrícolas e o de outros sectores importantes para o progresso económico e social;

dirige um apelo instante aos governos dos países membros

para que intensifiquen os seus esforços no domínio da cooperação técnica com vista ao desenvolvimento acelerado das telecomunicações em benefício das comunidades rurais, tendo em conta os recursos insuficientes de diversos países em desenvolvimento;

apela também para as administrações

a fim de que participem nos estudos efectuados pelos grupos autónomos especializados (GAS 3 e GAS 5) da CCITT/CCIR relativamente ao desenvolvimento das telecomunicações rurais;

pede ao secretário-geral

1. Que continue a dispensar atenção especial às actividades de assistência técnica da União com vista à planificação pormenorizada, à exploração e à manutenção da infra-estrutura das telecomunicações rurais, e à aplicação das técnicas apropriadas;

2. Que chame a atenção dos órgãos competentes das Nações Unidas para a presente Resolução; e

3. Que continue a cooperar com as instituições especializadas e as organizações do sistema das Nações Unidas no domínio do desenvolvimento rural integrado;

convida o conselho de administração

a examinar a presente Resolução, a velar por que seja aplicada e a dar conta dos progressos realizados no Relatório anual sobre as actividades da União.

RESOLUÇÃO N.º 17

Relativa à determinação da estrutura das comissões que uma conferência administrativa das radiodeterminações possa criar em função da sua agenda

A Conferência Administrativa Mundial das Radiocomuniações (Genebra, 1979),

considerando

a) Que certas administrações, por não disporem de pessoal suficiente, experimentam dificuldades em constituir as delegações que as representarão nas conferências administrativas das radiocomunicações, na razão de, pelo menos, um delegado por comissão constituída;

b) Que é hoje difícil às administrações preverem o número e o nome das comissões que serão constituídas em cada conferência antes da reunião desta, assim como os assuntos que convirá atribuir a cada uma;

c) Que a experiência adquirida em conferências precedentes pertinentes mostra que é desejável que o secretário-geral prepare com suficiente antecedência um projecto de estruturação para a conferências futuras;

reconhecendo

a) Que a organização dos trabalhos de uma conferência administrativa das radiocomunicações só pode ser decidida por essa conferência em função da sua agenda e das propostas e dos outros documentos que lhe são apresentados;

b) Que, no entanto, a organização de conferências anteriores pode proporcionar uma orientação útil para a de uma nova conferência e que as informações relativas à organização dos trabalhos de conferências passadas podem, por consequência, facilitar às administrações os preparativos com vista a conferências futuras:

decide

1. Que, uma vez fixada pelo Conselho de Administração a agenda de uma conferência administrativa das radiocomunicações, o secretário-geral envie às administrações, simultaneamente como um exemplar da resolução que contém essa agenda, um convite a comunicar a sua opinião sobre a estrutura que a conferência deveria ter tendo em conta a agenda;

2. Que, depois de ter recebido a resposta das administrações, o secretário-geral elebore para a conferência, em consulta com a IFRB e com o director da CCIR e tendo em conta a experiência adquirida em conferências anteriores de carácter análogo, um projecto de estrutura a indicar, simultaneamente com as comissões sugeridas, os artigos, apêndices, resoluções, recomendações e outros assuntos contidos na agenda que devem ser tratados por cada comissão;

3. Que o secretário-geral informe desse projecto de documento o Conselho de Administração e o envie como documento de informação a todas as administrações.

RESOLUÇÃO N.º 30

Relativa à revisão de inscrições do ficheiro de referência internacional das frequências a pedido de conferências anteriores

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1951) adoptou uma Lista Internacional das Frequências em que figuravam inscrições não conformes com o Quadro de Repartição das Faixas de Frequências de Atlantic City (1947);

b) Que a Conferência Administrativa das Radiocomunicações (Genebra, 1959) introduziu os conceitos de serviço primário e de serviço secundário, modificando, assim, o Quadro de Repartição das Faixas de Frequências de Atlantic City (1947), privando certas inscrições da Lista Internacional das Frequências do seu carácter prioritário;

c) Que a Conferência Administrativa das Radiocomunicações (Genebra, 1959), no estabelecimento do Ficheiro de Referência Internacional das Frequências, considerou e tratou de modo especial a transferência dessas inscrições do Ficheiro de Referência das Frequências em conformidade com as disposições da Resolução n.º 4 (Genebra, 1959);

d) Que no período compreendido entre 1 de Janeiro de 1952 e 31 de Março de 1953 foram introduzidas nessa lista consignações sem exame, com um símbolo na coluna 2d e que a Comissão tem essas consignações em conta quando do exame de qualquer ficha de notificação;

considerando, além disso,

e) Que tinha sido pedido instantemente às administrações que tomassem as medidas necessárias;

f) Que a presente Conferência tinha sido convidada a reexaminar a situação;

decide

1. Que a Comissão examine, sob o ponto de vista da sua conformidade com o novo Quadro de Atribuição das Faixas de Frequências, as consignações de frequência às quais era aplicada a Resolução n.º 4 da Conferência das Radiocomunicações (Genebra, 1959) e corrija, em conformidade, as suas conclusões a contar da data de entrada em vigor dos Actos Finais da presente Conferência. Quando uma tal conclusão for modificada em aplicação da presente Resolução, inscreve-se uma observação apropriada na coluna «Observações»;

2. Que as consignações que comportam um símbolo na coluna 2d e que não são abrangidas pela Resolução n.º 9 sejam examinadas com vista a substituir esse símbolo pela data de 1 de Abril de 1953;

3. Que a Comissão informe as administrações interessadas das medidas que vier a tomar relativamente às suas consignações inscritas na lista.

RESOLUÇÃO N.º 31

Relativa à aplicação de certas disposições dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) para ter em conta as modificações introduzidas pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) no quadro de atribuição das faixas de frequências para a Região 2, na faixa de 11,7-12,7 GHz.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971) atribuiu, na Região 2, a faixa de frequências de 11,7-12,2 GHz ao serviço fixo por satélite, ao serviço de radiodifusão por satélite, ao serviço fixo, ao serviço móvel (excepto móvel aeronáutico) e ao serviço de radiodifusão;

b) Que a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) estabeleceu disposições e um plano associado para o serviço de radiodifusão por satélite na faixa de 11,7-12,5 GHz (Região 1) e na faixa de 11,7-12,2 GHz (Região 3);

c) Que essa Conferência também definiu critérios de partilha inter-regionais na base das atribuições de faixas de frequências então em vigor;

d) Que as atribuições de faixas de frequências ao serviço fixo por satélite e ao serviço de radiodifusão por satélite, na faixa de 12 GHz na Região 2, foram alargadas e modificadas pela presente Conferência;

e) Que a presente Conferência também decidiu incorporar no Regulamento das Radiocomunicações, como apêndice 30, as disposições e o plano associado adoptados pela Conferência de 1977;

reconhecendo

a) Que essas modificações do Quadro de atribuição das faixas de frequências não implicam, em princípio, novos casos de partilha inter-regionais diferentes do caso visado na alínea *b*) seguinte;

b) Que as disposições do apêndice 30 podem ser aplicadas directamente, como indicado acima, a todos os casos de partilha diferentes da partilha entre o serviço fixo por satélite nas Regiões 1 e 3 e o serviço de radiodifusão por satélite na Região 2, na faixa de frequências de 12,2-12,7 GHz;

c) Que o caso único visado na alínea *b*) é objecto da Resolução n.º 700;

decide

1. Que as disposições do artigo 4 e o anexo ao apêndice 30 relativos à modificação do plano estabelecido para o serviço de radiodifusão por satélite nas Regiões 1 e 3 se apliquem também à protecção do serviço de radiodifusão por satélite na faixa de 12,2-12,5 GHz, e do serviço fixo por satélite na faixa de 12,2-12,3 GHz atribuídas a esses serviços na Região 2;

2. Que as disposições do artigo 6 e o anexo 3 ao apêndice 30 relativos ao procedimento de coordenação e de notificação das consignações de frequência às estações de Terra que afectam as consignações de frequência às estações do serviço de radiodifusão por satélite se apliquem também na faixa de 12,2-12,7 GHz no que respeita ao serviço de radiodifusão por satélite na Região 2;

3. Que as disposições do artigo 7 e o anexo 4 ao apêndice 30, bem como a Resolução n.º 503, relativos aos procedimentos preliminares e à coordenação, notificação e inscrição das consignações de frequência às estações do serviço fixo por satélite e do serviço de radiodifusão por satélite na Região 2, se apliquem também à faixa de 12,2-12,3 GHz atribuída ao serviço fixo por satélite e à faixa de 12,2-12,5 GHz atribuída ao serviço de radiodifusão por satélite na Região 2;

4. Que as disposições do artigo 9 e o anexo ao apêndice 30, que especificam os valores limitados da densidade de fluxo de potência entre 11,7 GHz e 12,2 GHz para proteger os serviços de Terra nas Regiões 1 e 3 contra as emissões das estações espaciais do serviço de radiodifusão por satélite na Região 2, se apliquem também à faixa de 12,2-12,5 GHz;

5. Que, até a conferência regional de 1983 para a Região 2 tome decisões finais relativamente à faixa de 12,5--12,7 GHz:

a) O artigo 9 e os valores limites indicados no anexo 5, alínea *l*), do apêndice 30 se apliquem às estações espaciais do serviço de radiodifusão por satélite a funcionar na Região 2, e

b) Os valores limites da densidade de fluxo de potência indicada no n.º **2574** se apliquem às estações espaciais do serviço fixo por satélite, a funcionar na Região 2, no que respeita aos países mencionados dos n.ºs **848** e **850** e na Região 3;

pede à CCIR

1. Que estude com urgência a questão da protecção adequada dos serviços de Terra em cada região influenciada, na faixa de 12,2-12,7 GHz, com vista a assegurar a planificação eficaz do serviço de radiodifusão por satélite na Região 2 em conformidade com os n.ºs 4 e 5 da presente Resolução;

2. Que elabore um relatório especial sobre a questão com a antecedência necessária para poder ser examinado pelas reuniões preparatórias competentes e forneça directivas para os trabalhos da dita conferência regional.

RESOLUÇÃO N.º 32

Relativa à utilização das consignações de frequência às estações de radiocomunicação de Terra e de radiocomunicação espacial nas faixas de 11,7-12,2 GHz na Região 3 e de 11,7-12,5 GHz na Região 1 (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) adoptou a Resolução Sat-2;

b) Que, de acordo com as disposições do n.º **838** do Regulamento das Radiocomunicações, o serviço fixo, o serviço móvel e o serviço de radiodifusão existentes e futuros a funcionarem na faixa de 11,7-12,2 GHz na Região 3 e na faixa de 11,7-12,5 GHz na Região 1 não devem causar interferência prejudicial às estações de radiodifusão por satélite de acordo com as decisões da dita Conferência;

c) Que as decisões da dita Conferência compreendem um plano para as estações do serviço de radiodifusão por satélite;

d) Que os procedimentos de coordenação previstos na Resolução n.º 33 só deverão ser aplicados até à data de entrada em vigor dos planos estabelecidos em execução da Resolução n.º 507;

decide

1. Que todas as administrações que utilizem ou tencionem utilizar consignações de frequência a estações de Terra nas faixas abrangidas pelo plano determinem, sempre que possível, se essas consignações afectam ou não as consignações de frequência conformes com o plano (se necessário, com a assistência da IFRB);

2. Que as administrações possam continuar a utilizar consignações de frequência não conformes com o plano de radiodifusão por satélite, com a condição de que se ponham de acordo com as administrações cujas estações de radiodifusão por satélite são afectadas;

3. Que as administrações que desejem incluir um acordo comuniquem o teor desse acordo à IFRB;

4. Que, ao receber essas informações, a IFRB inscreva um símbolo na coluna «Observações» do ficheiro de referência, para indicar a duração especificada no acordo, a qual deverá ser igualmente publicada numa secção especial da circular semanal da IFRB;

5. Que a Resolução Sat-2 seja revogada e substituída pela presente resolução;

convida a IFRB

a prestar assistência às administrações para lhes permitir aplicarem as disposições da presente Resolução.

RESOLUÇÃO N.º 33

Relativa à entrada em serviço de estações espaciais do serviço de radiodifusão por satélite antes da entrada em vigor de acordos e de planos associados para o serviço de radiodifusão por satélite (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

---

(1) Substitui a Resolução Sat-2 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

(2) Substitui a Resolução Spa2-3 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

considerando

a) Que a Resolução n.º 507 considera o estabelecimento de planos para o serviço de radiodifusão por satélite, mas que algumas administrações podem, contudo, sentir necessidade de pôr em serviço estações deste serviço antes do estabelecimento desses planos;

b) Que convém que as administrações evitem, na medida do possível, a proliferação de estações espaciais do serviço de radiodifusão por satélite antes de tais planos terem sido estabelecidos;

c) Que uma estação espacial do serviço de radiodifusão por satélite é susceptível de causar interferências prejudiciais às estações de Terra que funcionam na mesma faixa de frequências, mesmo que estas estações estejam fora da zona de serviço da estação espacial;

d) Que os procedimentos especificados no artigo 11 do Regulamento das Radiocomunicações não contêm disposições relativas à coordenação entre estações espaciais do serviço de radiodifusão por satélite e estações de Terra, nem entre estações espaciais do serviço de radiodifusão por satélite e sistemas espaciais dependentes de outras administrações;

decide

1. Que seja aplicado o procedimento seguinte, excepto quando tenham sido estabelecidos e postos em vigor acordos e planos associados para o serviço de radiodifusão por satélite:

SECÇÃO A

Procedimento de coordenação entre estações espaciais do serviço de radiodifusão por satélite e estações de Terra

2.1. Antes de notificar à IFRB ou de pôr em serviço uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite numa faixa de frequências, quando essa faixa de frequências for atribuída, com igualdade de direitos, ao serviço de radiodifusão por satélite e a um serviço de radiocomunicações de Terra, quer na mesma Região ou Sub-Região, quer em Regiões ou Sub-Regiões diferentes, uma administração coordena a utilização dessa consignação com qualquer outra administração cujos serviços de radiocomunicações de Terra sejam susceptíveis de ser afectados. Para o efeito, comunica à Comissão todas as características técnicas dessa estação tais como estão indicadas nas secções pertinentes do apêndice 3 ao Regulamento das Radiocomunicações, que são necessárias para avaliar os riscos de interferência a um serviço de radiocomunicações de Terra (1).

2.2. A Comissão publica essas informações numa secção especial da sua circular semanal e, quando a circular semanal contiver informações dessa natureza, avisa do facto as administrações por telegrama-circular.

2.3. Qualquer administração que considere que os seus serviços de radiocomunicação de Terra são susceptíveis de ser afectados apresenta as suas observações à administração que procura a coordenação e, em todos os casos, à Comissão. Essas observações deverão ser enviadas num prazo de quatro meses a contar da data da circular semanal pertinente da IFRB. Entende-se que qualquer administração que não tenha apresentado as suas observações dentro deste prazo considerou que os seus serviços de radiocomunicação de Terra não são susceptíveis de ser afectados.

2.4 . Qualquer administração que tenha apresentado observações sobre a estação em projecto deve, quer comunicar o seu acordo, com uma cópia, à Comissão, quer, se isso não for possível, enviar à administração que procura a coordenação todos os dados em que se fundamentam as suas observações, assim como todas as sugestões que possa fazer com vista a uma solução satisfatória do problema.

2.5. A administração que projecte pôr em serviço uma estação espacial do serviço de radiodifusão por satélite, assim como qualquer outra administração que considere que os seus serviços de radiocomunicação de Terra são susceptíveis de ser afectados pela estação em questão, podem pedir a ajuda da Comissão em qualquer momento durante o procedimento de coordenação.

2.6. Excepto nos casos em que tenha sido pedida a assistência da Comissão, quando haja desacordo persistente entre a administração que procura a coordenação e a administração junto da qual foi procurada a coordenação, a administração que procura a coordenação adia por seis meses, a contar da data de publicação das informações a que se refere o § 2.2, o envio à Comissão da sua ficha de notificação respeitante à consignação em projecto.

SECÇÃO B

Procedimento de coordenação entre estações espaciais do serviço de radiodifusão por satélite e sistemas espaciais dependentes de outras administrações

3. Uma administração que tenha a intenção de pôr em serviço uma estação espacial do serviço de radiodifusão por satélite aplica, para efeitos da coordenação com os sistemas espaciais de outras administrações, as seguintes disposições do artigo 11.º do Regulamento de Radiocomunicações;

---

(1) Convém que os métodos de cálculo e os critérios de interferência a utilizar para avaliar a interferência se baseiem nos pareceres pertinentes da CCIR aceites pelas administrações interessadas em aplicação da Resolução n.º 703 ou de outro modo. Em caso de desacordo sobre um parecer da CCIR, ou na ausência de tal parecer, os métodos e critérios são objecto de acordos entre as administrações interessadas. Tais acordos deverão fazer-se sem causar prejuízo às outras administrações.

3.1. N.os **1041** a **1058**, inclusive.

3.2.1. N.os **1060** a **1965** (1).

3.2.2. Não é requerida qualquer coordenação nos termos do § 3.2.1 quando uma administração se proponha modificar as características de uma consignação existente de tal modo que não seja com isso aumentada a probabilidade de interferências prejudiciais causadas a estações do serviço de radiocomunicação espacial de outras administrações.

3.2.3. N.os **1074** a **1105**, inclusive.

SECÇÃO B

Notificação, exame e inscrição no ficheiro de referência das consignações às estações espaciais do serviço de radiodifusão por satélite tratadas na presente Resolução

4.1. Deve ser notificada à Comissão qualquer consignação de frequência (2) a uma estação espacial do serviço de radiodifusão por satélite. Para o efeito, a administração notificadora aplica as disposições dos n.os **1495** a **1497** do Regulamento das Radiocomunicações.

4.2. As notificações feitas nos termos do § 4.1 são tratadas inicialmente em conformidade com as disposições do n.º **1498**.

5.1. A Comissão examina cada ficha de notificação:

5.2. *a*) Relativamente à sua conformidade com as cláusulas da Convenção, com o quadro de atribuição das faixas de frequências e com as outras cláusulas do Regulamento das Radiocomunicações, com excepção das relativas aos procedimentos de coordenação e à probabilidade de interferências prejudiciais, que são objecto dos §§ 5.3, 5.4 e 5.5;

5.3. *b*) Se for caso disso, relativamente à sua conformidade com as disposições do § 2.1 da secção A anterior, as quais dizem respeito à coordenação da utilização da consignação de frequência com as outras administrações interessadas;

5.4. *c*) Se for caso disso, relativamente à sua conformidade com as disposições do § 3.2.1 da secção B anterior, as quais dizem respeito à coordenação da utilização da consignação de frequência com as outras administrações interessadas;

5.5. *d*) Se for caso disso, relativamente à probabilidade de interferência prejudicial em detrimento do serviço assegurado por uma estação de um serviço de radiocomunicações espaciais ou de um serviço de radiocomunicações de Terra para a qual já tenha sido inscrita no ficheiro de referência uma consignação de frequência conforme com as disposições dos n.os **1240** ou **1503**, consoante o caso, do Regulamento das Radiocomunicações, se essa consignação de frequência não causou, de facto, interferência prejudicial ao serviço assegurado por uma estação que tenha sido objecto de uma consignação anteriormente inscrita no ficheiro de referência e que esteja ela própria conforme com os n.os **1240** ou **1503**, consoante o caso.

6.1. Segundo as conclusões a que chegue a Comissão na sequência do exame previsto nos §§ 5.2, 5.3, 5.4 e 5.5, o procedimento continuará pela forma seguinte:

6.2. Quando a Comissão formular uma conclusão desfavorável relativamente ao § 5.2, a ficha de notificação é devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivam a conclusão da Comissão e com as sugestões que possa fazer para chegar a uma solução satisfatória do problema.

6.3. Quando a Comissão formular uma conclusão favorável relativamente ao § 5.2 ou quando formular a mesma conclusão depois de a ficha de notificação ter sido apresentada de novo, examina a ficha relativamente às disposições dos §§ 5.3 e 5.4.

6.4. Quando a Comissão concluir que os procedimentos de coordenação de que tratam os §§ 5.3 e 5.4 foram aplicados com êxito relativamente a todas as administrações cujos serviços podem ser afectados, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d do ficheiro de referência, com uma observação na coluna «Observações» a indicar que essa inscrição não prejudica de nenhum modo as decisões a incluir nos acordos e planos associados de que trata a Resolução n.º 507.

6.5. Quando a Comissão concluir que os procedimentos de que tratam os §§ 5.3 ou 5.4, consoante o caso, não foram aplicados ou foram aplicados sem êxito, a ficha de notificação é devolvida imediatamente pelo correio aéreo à administração notificadora com a indicação das razões que motivam essa devolução e com as sugestões que a Comissão possa fazer para chegar a uma solução satisfatória do problema.

6.6. Quando a administração notificadora apresentar de novo a sua ficha de notificação declarando que não teve êxito na tentativa de efectuar a coordenação, a Comissão examina a ficha sob o ponto de vista do § 5.5.

6.7. Quando a administração notificadora apresentar de novo a sua ficha de notificação e se a Comissão concluir que os procedimentos de coordenação foram aplicados com êxito relativamente a todas as administrações cujos serviços podem ser afectados, a consignação é tratada como se indica no § 6.4.

---

(1) Convém que os métodos de cálculo e os critérios de interferências a utilizar para avaliar a interferência se baseiem nos pareceres pertinentes da CCIR aceites pelas administrações interessadas em aplicação da Resolução n.º 703 ou de outro modo. Em caso de desacordo sobre um parecer da CCIR, ou na ausência de tal parecer, os métodos e critérios são objecto de acordos entre as administrações interessadas. Tais acordos deverão fazer-se sem causar prejuízo às outras administrações.

(2) A expressão «consignação de frequência», sempre que figure na presente Resolução, deve ser entendida como referindo-se quer a uma nova consignação de frequência, quer a uma modificação a uma consignação já inscrita no ficheiro de referência internacional das frequências (denominado daqui em diante «ficheiro de referência»).

6.8. Quando a Comissão formular uma conclusão favorável relativamente ao § 5.5, a consignação é inscrita no ficheiro de referência. O símbolo apropriado representativo da conclusão da Comissão indica que, se for caso disso, os procedimentos de coordenação de que tratam os §§ 2.1 ou 3.2.1 não foram coroados de êxito. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d do ficheiro de referência, com a observação mencionada no § 6.4.

6.9. Quando a Comissão formular uma conclusão desfavorável relativamente ao § 5.5, a ficha de notificação é devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivam a conclusão da Comissão e com as sugestões que possa fazer para chegar a uma solução satisfatória do problema.

6.10. Se a administração apresentar novamente a sua ficha não modificada e se insistir em novo exame dessa ficha, mas se a conclusão da Comissão relativamente ao § 5.5 continuar a ser a mesma, a consignação é inscrita no ficheiro de referência. Mas esta inscrição só será feita se a administração notificadora avisar a Comissão de que a consignação esteve em serviço durante, pelo menos, quatro meses sem que daí tenha resultado qualquer queixa de interferência prejudicial. A data de recepção pela Comissão da ficha de notificação original é inscrita na coluna 2d do ficheiro de referência, com a observação mencionada no § 6.4. Inscreve-se uma observação apropriada na coluna 13 para indicar que a consignação não está conforme com as disposições dos §§ 5.3, 5.4 ou 5.5, consoante o caso. No caso de a administração interessada não receber qualquer queixa de interferência prejudicial relativa ao funcionamento da estação em causa durante o período de um ano após a sua entrada em serviço, a Comissão reexamina a sua conclusão.

6.11. Se a utilização de uma consignação de frequência a uma estação espacial, que foi inscrita no ficheiro de referência de acordo com as disposições do § 6.10 da presente Resolução ou do n.º **1544,** causar efectivamente interferência prejudicial à recepção de uma estação espacial do serviço de radiodifusão para a qual foi inscrita anteriormente uma consignação de frequência no ficheiro de referência, na sequência de uma conclusão favorável relativamente aos §§ 5.2, 5.3, 5.4 e 5.5 da presente Resolução, consoante o caso, a estação interferente deverá fazer cessar imediatamente a interferência prejudicial logo que for avisada dessa interferência.

6.12. Se a utilização de uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite, que foi inscrita no ficheiro de referência de acordo com as disposições do § 6.10 da presente Resolução, causar efectivamente interferência prejudicial à recepção de uma estação de radiocomunicação espacial para a qual foi inscrita anteriormente uma consignação de frequência no ficheiro de referência na sequência de uma conclusão favorável relativamente aos n.ºs **1503** a **1512**, consoante o caso, a estação interferente deverá fazer cessar imediatamente a interferência prejudicial logo que for avisada dessa interferência.

6.13. Se a utilização de uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite, que foi inscrita no ficheiro de referência de acordo com as disposições do § 6.10 da presente Resolução, causar efectivamente interferência prejudicial à recepção de uma estação de Terra para a qual foi inscrita anteriormente uma consignação de frequência no ficheiro de referência na sequência de uma conclusão favorável relativamente ao n.º **1240** a estação interferente deverá fazer cessar imediatamente a interferência prejudicial logo que for avisada dessa interferência.

6.14. Se a utilização de uma consignação de frequência não conforme com as disposições dos n.ºs **1240, 1352** ou **1503** causar efectivamente interferência prejudicial à recepção de qualquer estação que funcione em conformidade com as disposições do § 5.2 da presente Resolução, a estação que utilizar a consignação de frequência não conforme com as disposições dos números pré-citados deverá fazer cessar imediatamente a interferência prejudicial logo que for avisada dessa interferência.

RESOLUÇÃO N.º 34

Relativa ao estabelecimento de serviços de radiodifusão por satélite na faixa de 12,5-12,75 GHz (Região 3) e à partilha com os serviços espaciais e de Terra (Regiões 1, 2 e 3)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

que atribui a faixa de 12,5-12,75 GHz ao serviço de radiodifusão por satélite para fins de recepção comunitária na Região 3;

reconhecendo

que, nos termos da Resolução n.º 507, o Conselho de Administração poderá querer habilitar uma futura conferência administrativa das radiocomunicações competente a estabelecer um plano para o serviço de radiodifusão por satélite na faixa de 12,5-12,75 GHz na Região 3;

decide

1. Que, até que seja estabelecido um plano para o serviço de radiodifusão por satélite na faixa de 12,5-12,75 GHz na Região 3, continuem a aplicar-se as disposições da Resolução n.º 33 e o artigo 11 à coordenação entre as estações de serviço de radiodifusão por satélite na Região 3 e:

1) As estações espaciais do serviço de radiodifusão por satélite e do serviço fixo por satélite nas Regiões 1, 2 e 3;
2) As estações de Terra nas Regiões 1, 2 e 3;

2. Que convém que a CCIR estude urgentemente as disposições técnicas que possam ser aplicadas à partilha entre as estações do serviço de radiodifusão por satélite na Região 3 e:

1) As estações espaciais do serviço de radiodifusão por satélite e do serviço fixo por satélite nas Regiões 1 e 2;
2) As estações de Terra nas Regiões 1 e 2;

3. Que, até que disposições técnicas sejam elaboradas pela CCIR e aceites pelas administrações interessadas nos termos da Resolução n.º 703, a partilha entre as estações espaciais do serviço de radiodifusão por satélite na Região 3 e os serviços de Terra nas Regiões 1, 2 e 3 se baseie nos seguintes critérios:

1) A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial do serviço de radiodifusão por satélite na Região 3, sejam quais forem as condições e os métodos de modulação, não deve exceder os limites indicados no anexo 5 ao apêndice 30, sendo de notar que o subparágrafo 2) só se aplicará à protecção do serviço de radiodifusão;
2) Além do critério do subparágrafo 1), devem aplicar-se as disposições do n.º **2574** aos países mencionados nos n.ºs **848** e **850**;
3) Os limites indicados nos subparágrafos 1) e 2) anteriores podem ser excedidos no território de um país, com a condição de que a administração desse país os tenha aceitado.

RESOLUÇÃO N.º 35

Relativa ao procedimento a seguir para pôr termo a um desacordo acerca das normas técnicas ou das regras de procedimento da Comissão Internacional de Registo de Frequências

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, em conformidade com as disposições do n.º **1001.1**, as normas técnicas e as regras de procedimento da IFRB são comunicadas a todos os membros da União e podem ser objecto de comentários das administrações;
b) Que uma administração pode estar em desacordo quanto ao fundo desses documentos;
c) Que, no caso de um desacordo não pode ser resolvido, deveria haver um procedimento que permitisse superar as divergências;

reconhecendo

a) Que, no que se refere às normas técnicas, a CCIR poderia constituir a melhor fonte de pareceres competentes;
b) Que, no que se refere às regras de procedimento, uma conferência administrativa mundial das radiocomunicações poderia constituir a melhor fonte de interpretação do Regulamento das Radiocomunicações;

decide

1. Que, no caso de desacordo persistente quanto ao fundo das normas técnicas da IFRB, a Comissão, com o acordo da administração interessada, apresente a questão à CCIR, para estudos internacionais e elaboração de um parecer pertinente pela assembleia plenária seguinte da CCIR;

2. Que se a CCIR não estiver em condições de emitir tal parecer ou se existir um desacordo persistente quanto ao fundo das regras de procedimento da IFRB, a questão possa nos dois casos ser enviada ao Conselho de Administração para ser inscrita na agenda da conferência administrativa mundial das radiocomunicações seguinte;

3. Que, enquanto a questão não for resolvida, a Comissão continue a aplicar a norma técnica ou a regra de procedimento em litígio, mas que uma vez resolvida a questão por um parecer da CCIR ou por uma decisão de uma conferência administrativa mundial das radiocomunicações, a Comissão tome sem demora as medidas que se imponham, incluindo o reexame de todas as conclusões formuladas sobre o assunto.

RESOLUÇÃO N.º 36

Relativa ao estabelecimento, pela Comissão Internacional do Registo de Frequências, de documentação explicativa acerca da aplicação do novo método de designação das emissões nos procedimentos de notificação e à revisão, que daí resulta, do ficheiro de referência internacional das frequências.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tendo adoptado

o artigo 4 e o apêndice 6, que contêm um novo sistema de designação das emissões;

considerando

a) Que essas designações se revestem de importância fundamental para os procedimentos de notificação especificados no Regulamento das Radiocomunicações;
b) Que é essencial que esse novo sistema de designação das emissões seja aplicado não somente às novas designações de frequência como também às inscrições existentes no ficheiro de referência;
c) Que certas novas designações são mais pormenorizadas do que as antigas;
d) Que a IFRB não possui meios para substituir automaticamente todas as designações antigas pelas novas;

notando

a) Que certas administrações poderão experimentar dificuldades em aplicar o novo método de designação das emissões quando da sua primeira aplicação;
b) Que essas administrações terão necessidade de informações explicativas sobre este assunto muito antes da entrada em vigor dos Actos Finais da presente Conferência;

decide

1. Que a IFRB elabore documentação explicativa que inclua exemplos acerca da aplicação do novo método de designação, com vista à sua utilização nos procedimentos de notificação especificados no Regulamento das Radiocomunicações e ponha essa documentação à disposição das administrações o mais cedo possível e o mais tardar em 1 de Outubro de 1980;

2. Que a IFRB proceda à conversão dos dados inscritos no ficheiro de referência em consulta com as administrações e na base das informações que elas forneçam;

3. Que se num prazo razoável a IFRB não tiver recebido de uma administração as informações indicadas no § 2, converta os dados inscritos no ficheiro de referência tão exactamente quanto possível e acrescente na coluna «Observações» uma nota a mencionar que a conversão foi efectuada em conformidade com o presente parágrafo;

4. Que a partir da entrada em vigor da presente revisão do Regulamento das Radiocomunicações só se utilizem para os procedimentos de coordenação e de notificação as designações das emissões que figuram no artigo 4;

Entretanto, se a Comissão receber ulteriormente informações ou notificações contendo o tipo de designação antigo, não as considerará incompletas por essa única razão. Se for praticável, a Comissão modificará a designação, e se forem necessários esclarecimentos, consultará a administração interessada.

RESOLUÇÃO N.º 37

Relativa à introdução e ao desenvolvimento da utilização das técnicas informáticas para facilitar a gestão do espectro radioeléctrico pelas administrações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) A Resolução n.º 7, relativa ao desenvolvimento da gestão nacional do espectro radioeléctrico;
b) A Resolução n.º 6, relativa à elaboração de um manual destinado a explicar e a ilustrar certas disposições do Regulamento das Radiocomunicações;
c) A Recomendação n.º 31, destinada à CCIR relativa à elaboração de um manual sobre a aplicação das técnicas informáticas à gestão do espectro radioeléctrico;

considerando, por outro lado,

a) O valor potencial das técnicas informáticas para numerosos aspectos da gestão do espectro;
b) A necessidade de uma assistência complementar às administrações, especialmente nos países em desenvolvimento, para lhes permitir introduzir e desenvolver os equipamentos informáticos ou tirar rendimento óptimo dos seus equipamentos informáticos existentes com vista à gestão do espectro radioeléctrico;

decide que o secretário-geral

organize rapidamente um exame desses problemas de modo que as medidas seguintes sejam tomadas o mais eficazmente possível:

1. Organização de ciclos de estudos regionais consagrados especialmente à formação neste domínio, tendo em conta as necessidades nacionais das administrações;

2. Utilização de todos os recursos pedagógicos de que a União dispõe para assegurar uma formação complementar neste domínio em função das necessidades nacionais das administrações;

3. Estabelecimento, no quadro das instâncias existentes da UIT, de disposições apropriadas destinadas a auxiliar as administrações a identificar os problemas especiais neste domínio e a solucioná-los utilizando o melhor possível as técnicas informáticas;

convida o conselho de administração

a examinar as recomendações do secretário-geral e a encontrar os recursos necessários.

RESOLUÇÃO N.º 38

Relativa à reconsignação de frequências às estações dos serviços fixo e móvel que funcionam nas faixas atribuídas aos serviços de radiolocalização e de amador na Região 1

(1625-1635 kHz, 1800-1810 kHz, 1810-1850 kHz e 2160-2170 kHz)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

que a presente Conferência adoptou modificações na atribuição das faixas de frequências compreendidas entre 1606,5 kHz e 2850 kHz;

notando

a) Que a aplicação do quadro revisto de atribuição das faixas de frequências apresenta dificuldades, especialmente para as estações de serviço móvel na Região 1, nas faixas 1625-1635 kHz, 1800-1810 kHz e 2160-2170 kHz, postas à disposição dos serviços de radiolocalização, e na faixa de 1810-1850 kHz, posta à disposição do serviço de amador;

b) Que a presente Conferência recomendou a convocação, o mais tardar em 1982, de uma conferência administrativa das radiocomunicações para os serviços móveis em geral;

sublinhando

a necessidade de elaborar planos de consignação de frequência para a faixa de 1606,5 -2850 kHz na Região 1, a fim de aplicar as disposições dos n.os **486** e **492** do Regulamento das Radiocomunicações;

convida a conferência para os serviços móveis

mencionada acima a dar prioridade à adopção de um novo plano de consignação de frequências na faixa de 1606,5 -2850 kHz para o serviço móvel marítimo na Região 1;

decide

1. Que na Região 1, com excepção dos países e das faixas de frequências mencionadas (1) nos n.os **485, 490, 491, 493** e **499,** a partir da data de entrada em vigor do plano de consignação de frequências para o serviço móvel marítimo que figurará nos actos finais da conferência competente, terminem todas as operações de estações dos serviços fixo e móvel nas faixas de 1625-1635 kHz, 1810-1850 kHz e 2160-2170 kHz;

2. Que o plano de consignação de frequências mencionado acima indique as frequências de substituição para as estações do serviço móvel marítimo, bem como as disposições relativas ao seu implemento;

3. Que as administrações em nome das quais estejam inscritas consignações às estações dos serviços fixo, móvel terrestre ou móvel aeronáutico (OR) nas faixas respectivas escolham as consignações de substituição apropriadas e as notifiquem à IFRB e que, quando a conclusão da Comissão seja favorável relativamente aos n.os **1240** e **1241**, a consignação tenha a mesma data e o mesmo estatuto que aquela que substitui no que se refere às consignações dos países da Região 1;

4. Que a protecção assegurada às estações dos serviços fixo e móvel de acordo com os n.os **486** e **492** continue a aplicar-se até que consignações de substituição satisfatórias tenham sido encontradas e postas ao serviço de acordo com as disposições da presente Resolução;

5. Que a partir da data de entrada em vigor do plano de consignação de frequências para o serviço móvel marítimo, contido nos actos finais da conferência competente, as consignações de frequência que não tenham sido transferidas de acordo com o ponto 3 da presente Resolução só continuem a funcionar na base das disposições do n.º **342**.

---

(1) N.º **485**, faixas de 1625-1635 kHz, 1800-1810 kHz e 2160-2170 kHz, n.º **490**, faixa de 1810-1830 kHz, n.º **491**, faixa de 1810-1830 kHz, n.º **493**, faixa de 1810-1850 kHz, e n.º **499**, faixa de 2160-2170 kHz.

RESOLUÇÃO N.º 60

Relativa às informações sobre a propagação das ondas radioeléctricas utilizadas para determinar a zona de coordenação

(V. o apêndice 28)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o apêndice 28 do Regulamento das Radiocomunicações descreve um método de determinação da zona de coordenação que faz intervir certa documentação relativa à propagação das ondas radioeléctricas;

b) Que as informações sobre a propagação contidas nesse apêndice se baseiam, directa ou indirectamente, em dados de propagação que figuram nos textos da CCIR;

c) Que os estudos da CCIR sobre a propagação estão ainda em curso, de modo que as suas conclusões estão sujeitas a modificação e poderão, no futuro, levar à modificação das secções do apêndice 28 que contêm as informações de propagação;

d) Que em certas partes do Mundo não foi efectuada qualquer medida da propagação das ondas radioeléctricas;

reconhecendo

a) Que, geralmente, são necessários vários anos para reunir dados suficientes de que se possam tirar conclusões seguras acerca da propagação;

b) Que, por razões administrativas, é conveniente que não sejam revistas muito frequentemente informações sobre a propagação utilizadas para a determinação da zona de coordenação e que, de qualquer forma, essa revisão se não faça, excepto se for suficientemente importante o seu efeito sobre as dimensões da zona de coordenação;

c) Que a determinação da zona de coordenação efectuada de acordo com o apêndice 28 não necessita de conhecimento pormenorizado das características de propagação sobre trajectos individuais e que é conveniente que assim se continue a proceder;

convida a CCIR

a prosseguir no estudo dos dados sobre a propagação com interesse para a determinação da zona de coordenação e a manter os textos correspondentes com uma apresentação que permita a sua inserção directa no apêndice 28 em substituição das actuais secções 3, 4 e 6 ou do anexo III;

decide

1. Que todas as assembleias plenárias da CCIR deverão chegar a uma conclusão quanto a saber se, com base nas informações sobre a propagação contidas nos pareceres mais recentes da CCIR, se justifica uma revisão das secções 3, 4 e 6 ou do anexo III do apêndice 28 ao Regulamento das Radiocomunicações;

2. Que, quando uma assembleia plenária da CCIR tenha chegado à conclusão de que se justifica uma revisão das secções 3, 4 e 6 ou a do apêndice 28, o director da CCIR informe do facto o secretário-geral da UIT e lhe transmita as modificações propostas ao apêndice 28;

pede

1. Que o Conselho de Administração inscreva, então, na agenda da próxima conferência administrativa mundial das radiocomunicações um ponto extraordinário versando sobre o exame da referida conclusão da CCIR;

2. Que, se a pré-citada conferência administrativa mundial das radiocomunicações decidir que devem ser revistas as informações sobre a propagação utilizadas no apêndice 28, o secretário-geral, em consulta com a IFRB, inclua as emendas decididas por tal conferência num documento que dê o novo texto das secções 3, 4 e 6 ou do anexo III do apêndice 28, publicado com uma forma tal que possa substituir directamente a versão do apêndice 28 então em vigor, e envie esse documento a todas as administrações;

decide, além disso,

que, a partir da data que a referida conferência fixe, o texto revisto sirva de base a todas as determinações ulteriores da zona de coordenação feitas, utilizando o apêndice 28.

RESOLUÇÃO N.º 61

Relativa à divisão do Mundo em zonas climáticas para o cálculo das características de propagação

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a propagação das ondas radioeléctricas, especialmente nas frequências superiores a 1 GHz, é influenciada significativamente pelas precipitações, assim como pelas tempestades de areia e de poeira;
b) Que, para certas regiões geográficas, não se dispõe de valores medidos nem de estatísticas a curto prazo relativamente à intensidade das precipitações;
c) Que existem muito poucos dados sobre a ocorrência e sobre os efeitos das tempestades de areia e de poeira;
d) Que, para a avaliação das características de propagação, a CCIR dividiu o Mundo em cinco zonas hidrometeorológicas, correspondentes de um modo geral às características das precipitações, e que essa divisão já não é apropriada:
e) Que a divisão actual do Mundo num número tão reduzido de zonas hidrometeorológicas não tem provavelmente a precisão necessária para permitir uma avaliação correcta do desvanecimento e da difusão provocados pelas precipitações em certas partes do Mundo;
f) Que os efeitos das tempestades de areia e de poeira não têm sido objecto de estudos e de avaliações apropriadas, quanto à gravidade ou quanto às suas variações no tempo;
g) Que a CCIR está actualmente a efectuar certos estudos sobre os efeitos das precipitações e das tempestades de areia e de poeira:

pede à CCIR

1. Que acelere e alargue os seus trabalhos sobre os efeitos das precipitações e atribua mais importância ao estudo das tempestades de areia e de poeira;
2. Que dê pareceres sobre a natureza dos estudos necessários nas regiões geográficas para as quais sejam insuficientes os dados;
3. Que, tendo em conta os novos dados de que possa dispor, preste especial atenção à revisão da classificação actual do Mundo em zonas hidrometeorológicas;

convida instantemente as administrações

1. A encorajarem e a empreenderem urgentemente nos seus países, medidas das taxas de precipitações e das variações no espaço e no tempo dessas precipitações, designadamente da sua estrutura celular;
2. A encorajarem e a empreenderem, igualmente com urgência, medidas da influência das tempestades de areia e de poeira sobre a propagação;
3. A comunicarem os resultados dessas medidas à CCIR para que esta possa descrever de modo mais precioso e mais pormenorizado os fenómenos que entram em jogo e estabelecer uma classificação melhorada das tempestades de areia e de poeira, assim como das regiões hidrometeorológicas, para aplicação aos problemas das radiocomunicações.

RESOLUÇÃO N.º 62

Relativa à utilização experimental das ondas radioeléctricas pelos satélites de pesquisa inosférica (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a pesquisa sobre a ionosfera terrestre se reveste de enorme importância para o estudo das relações entre o Sol e a Terra e igualmente para a utilização racional das ondas radioeléctricas que se propagam pela ionosfera;
b) Que se efectuarem pesquisas coroadas de êxito com satélites, tais como o *Alouette 1* e *2*, o *ISIS 1* e *2* e o *ISS*, munidos de aparelhos de sondagem ionosférica por cima;
c) Que serão postos em serviço satélites de pesquisa ionosférica semelhantes aos citados anteriormente, para continuar as pesquisas na ionosfera e acima desta;
d) Que os aparelhos de sondagem por cima funcionam a maior parte deles em regime de impulsos com varrimento de frequência;

(1) Substitui a Resolução Spa2-4 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

e) Que os satélites em causa são geralmente utilizados intermitentemente, durante uma fracção do dia, segundo as características da órbita;

f) Que o sistema de sondagem pode ser telecomandado com precisão, e quando se quiser, a partir da estação terrena correspondente;

decide

que as administrações podem continuar a autorizar a emissão de ondas radioeléctricas a partir de satélites de pesquisa ionosférica colocados em órbitas por cima da ionosfera nas faixas de ondas hectométricas e decamétricas desde que se disponha de meios apropriados para comandar as emissões desse satélites, como estipula o n.º **2612** do Regulamento das Radiocomunicações, a fim de impedir que sejam causadas interferências prejudiciais e outros serviços.

RESOLUÇÃO N.º 63

Relativa à protecção dos serviços de radiocomunicação contra as interferências causadas pela radiação dos aparelhos industriais, científicos e médicos (ISM)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que os aparelhos ISM geram e utilizam localmente energia radioeléctrica e que nem sempre é possível evitar que parte dessa energias seja radiada para o exterior;

b) Que existe um número crescente de aparelhos ISM, que funcionam em diversas frequências, repartidas por todo o espectro;

c) Que, em certos casos, uma fracção importante da energia pode ser radiada por um aparelho ISM fora da sua frequência de trabalho;

d) Que, certos serviço radioeléctricos, especialmente aqueles que utilizam intensidades de campo pequenas, correm o risco de sofrer interferências causadas pela radiação de aparelhos ISM e que esse risco, é inaceitável, especialmente quando se trata de serviços de radionavegação ou de outros serviços de segurança;

e) Quem, para limitar os riscos de interferência em determinadas partes do espectro:

i) As precedentes conferências de radiocomunicações (Atlantic City, 1947; Genebra, 1959) designaram algumas faixas de frequências no interior das quais os serviços de radiocomunicação devem aceitar as interferências prejudiciais produzidas pelos aparelhos ISM;

ii) A presente Conferência só aceitou aumentar o número de faixas de frequências utilizáveis pelos aparelhos ISM com a condição de que sejam definidos limites da radiação desses aparelhos no interior das faixas recentemente designadas para utilização mundial e no exterior do conjunto das faixas utilizáveis pelos aparelhos ISM;

decide

que, para garantir protecção conveniente aos serviços de radiocomunicação, é necessário que se proceda urgentemente a estudos destinados a definir os limites a impor às radiações dos aparelhos ISM em todo o espectro radioeléctrico, e mais especialmente nas faixas recentemente designadas;

convida a CCIR

1. A prosseguir, em colaboração com a CISPR e a CEI, nos estudos que empreendeu acerca da radiação dos aparelhos ISM em todo os espectro radioeléctrico, com vistas a assegurar protecção conveniente aos serviços de radiocomunicação;

2. A especificar, tão rapidamente quanto possível, em pareceres, os limites a impor à radiação dos aparelhos ISM no interior e no exterior das faixas que lhes estão destinadas no Regulamento das Radiocomunicações.

Deveria ser dada prioridade a estudos que permitam chegar a um parecer relativo às faixas de frequências recentemente designadas pela presente Conferência para os aparelhos ISM e que são as seguintes:

6765-6795 kHz;
433,05-434,79 MHz;
61-61,5 GHz;
122-123 GHz;
244-246 GHz;

convida a próxima conferência administrativa mundial das radiocomunicações competente

a resolver o problema das interferências causadas pelos aparelhos ISM aos serviços de radiocomunicação, tendo em conta os pareceres da CCIR.

RESOLUÇÃO N.º 64

Relativa ao estudo pela CCIR da protecção dos equipamentos radioeléctricos contra o raio

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que existem no Mundo zonas em que, apesar da instalação de dispositivos de protecção contra o raio, os equipamentos são constantemente danificados, e muitas vezes com extrema gravidade, em consequência de descargas que se dão durante tempestades eléctricas ou trovoadas violentas;
b) Que, devido às circunstâncias, às condições climáticas, à poluição do ambiente pelo homem, etc., os estudos realizados não chegaram a resultados seguros;
c) A falta de meios materiais e de experiência dos técnicos confrontados com este fenómeno;

considerando, além disso,

o n.º 72 da Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973);

convida a CCIR

1. A estudar este fenómeno em consulta com a CCITT e a emitir um parecer sobre o assunto;
2. A incluir, na medida do possível, no estudo deste fenómeno, a fim de facilitar a aplicação das técnicas de protecção, estatísticas sobre as descargas de raio em função das zonas climáticas onde elas se manifestam, sobre a frequência dessas manifestações e as grandezas características do raio, medidas em forma de tensões ou de correntes induzidas, assim como as constantes de tempo associadas;

e convida as administrações

a apresentarem à CCIR os dados técnicos e os resultados dos estudos efectuados neste domínio.

RESOLUÇÃO N.º 65

Relativa à difusão de informações actualizadas sobre os pareceres da CCIR mencionados no Regulamento das Radiocomunicações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notado

a) Que o Regulamento das Radiocomunicações se refere a pareceres determinados da CCIR, bem como a «pareceres pertinentes da CCIR»;
b) Que a Resolução n.º 703 prevê consultas quanto à aplicabilidade dos pareceres da CCIR relativos aos critérios técnicos de partilha de faixas de frequências entre serviços de radiocomunicação espacial e serviços de radiocomunicação de Terra ou entre serviços de radiocomunicação espacial;
c) Que os pareceres da CCIR podem ser revistos pelas assembleias plenárias da CCIR, o que provoca uma modificação dos números de referência;

considerado

a) Que, para aplicarem bem o Regulamento das Radiocomunicações, as administrações devem saber quais os pareceres da CCIR que são de tomar em consideração;
b) Que as informações sobre a actualização desses pareceres são da maior importância;

convida a CCIR

1. A identificar . a fazer uma lista das disposições do Regulamento das Radiocomunicações que contêm uma referência a um parecer determinado da CCIR ou a um «parecer pertinente da CCIR», indicando ao mesmo tempo os números de referência e os títulos desses pareceres;
2. A encarregar o director da CCIR de fornecer ao secretário-geral as informações necessárias à actualização dessa lista;

solicita ao secretário-geral

que comunique a todas as administrações a lista desses pareceres, bem como qualquer actualização ulterior.

RESOLUÇÃO N.º 66

Relativa à divisão do Mundo em Regiões tendo em vista a atribuição das faixas de frequências

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a divisão actual do Mundo em Regiões 1, 2 e 3 para efeitos de atribuição das faixas de frequências remonta a 1947 e que as bases técnicas em que essa divisão assenta não estavam então claramente definidas;
b) Que, desde 1947, as técnicas das radiocomunicações fizeram progressos consideráveis e apareceu grande número de novos países;

consciente

de que a divisão do Mundo em três Regiões, tal como existe, talvez corresponda de forma apropriada e equitativa às necessidades de todos os países;

reconhecendo

que não é possível, durante a presente Conferência, proceder com êxito à revisão da divisão existente do Mundo em Regiões:

decide

que essa divisão deve ser revista tendo em conta os progressos mais importantes alcançados na técnica das radiocomunicações e o aumento do número dos Membros da União que se encontram em graus diferentes de desenvolvimento;

pede a CCIR

que empreenda um estudo das bases técnicas e operacionais de uma eventual divisão do Mundo para efeitos de atribuição das faixas de frequências radioeléctricas, estudo esse baseado em todos os factores pertinentes, tais como a propagação das ondas radioeléctricas, as condições climáticas, a configuração geográfica natural do Mundo, o nível de desenvolvimento económico e técnico, e que permita uma utilização mais eficaz do espectro das frequências por todos os países Membros da União;

pede instantemente a todos os Membros da União

que participem activamente no estudo acima mencionado, contribuindo para os trabalhos em vista;

pede, além disso, à CCIR

que dê por concluído esse estudo e apresente os resultados dele o mais tardar na sua XVI Assembleia Plenária e, em qualquer caso, que elabore um relatório para ser examinado pela próxima assembleia plenária;

convida o conselho de administração

a acompanhar os progressos desse estudo e a dar pareceres à Conferência de Plenipotenciários para que a questão possa ser resolvida, como convém, numa futura conferência administrativa mundial das radiocomunicações da União.

RESOLUÇÃO N.º 67

Relativa ao aperfeiçoamento da concepção e da utilização dos materiais radioeléctricos

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o espectro das frequências é um recurso natural limitado que só tem interesse na medida em que seja explorado;
b) Que a utilização eficaz do espectro pode ser comprometida pelas características dos materiais de emissão e de recepção;
c) Que as condições de funcionamento dos sistemas radioeléctricos podem também causar prejuízo à utilização eficaz do espectro;
d) Que o progresso constante da electrónica e dos ramos conexos permitem produzir sistemas de radiocomunicação que utilizem mais racionalmente o espectro das frequências:

decide

que as administrações deveriam encorajar o aperfeiçoamento da concepção e da construção dos materiais radioelétricos, bem como do modo de exploração dos sistemas, com vista a utilizar da melhor maneira o espectro das frequências radioeléctricas.

RESOLUÇÃO N.º 68

Relativa à nova definição de certos termos contidos no anexo 2 à Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973) e aplicáveis ao regulamento das Radiocomunicações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tendo examinado e adoptado

os termos e definições contidos no artigo 1 do Regulamento das Radiocomunicações (Genebra, 1979), que contém certo número de termos já definidos no anexo 2 à Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973), intitulado «Definição de certos termos empregados na Convenção e nos Regulamentos da União Internacional das Telecomunicações»;

julgando

que as definições de certos termos, como «interferência nociva» (no presente Regulamento «interferência prejudicial»), «telegrafia» e «telefonia», assim como termos associados que figuram igualmente no anexo 2 à Convenção e que se revestem de certa importância para o Regulamento das Radiocomunicações, deveriam ser revistas para as tornar mais precisas e mais em conformidade com as técnicas actuais;

reconhecendo, todavia

que, tendo em conta o artigo 51 e especialmente o n.º **167** da Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973), só uma conferência de plenipotenciários da União Internacional das Telecomunicações está habilitada a modificar os termos contidos no anexo 2 à referida Convenção, assim como as suas definições;

recomenda

à Conferência de Plenipotenciários da União Internacional das Telecomunicações (Nairobi, 1982) que reexamine a definição, no anexo 2 à Convenção Internacional das Telecomunicações, dos termos «interferência nociva», «telegrafia» e «telefonia» e dos termos associados, tendo em conta os termos e definições adoptados para uso do Regulamento das Radiocomunicações pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), assim como propostas eventualmente apresentadas pela CCIR e a CCITT em aplicação da Resolução n.º 44 da Conferência de Plenipotenciários (Málaga, Torremolinos, 1973);

encarrega o secretário-geral

1. De apresentar esta questão à atenção da referida Conferência de Plenipotenciários;
2. De indicar por notas, na versão publicada do Regulamento das Radiocomunicações, as definições que divergem do anexo 2 da Convenção, acentuando o facto de que as definições correspondentes que figuram nesse anexo prevalecerão sobre as que figuram no Regulamento das Radiocomunicações, na medida em que apresentem diferenças;
3. De modificar ou de suprimir essas notas para ter em conta decisões da Conferência de Plenipotenciários.

RESOLUÇÃO N.º 100

Relativa à coordenação, à notificação e à inscrição no Ficheiro de Referência Internacional das Frequências das consignações a estações do serviço fixo por satélite em relação às estações do serviço de radiodifusão por satélite na Região 2 (1).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

que o regulamento das Radiocomunicações não contém qualquer disposição que trate da coordenação, da notificação e da inscrição no Ficheiro de Referência Internacional das Frequências das consignações de frequência às estações do serviço fixo por satélite na faixa de 12,1-12,3 GHz no que respeita à sua interacção com as estações de serviço de radiodifusão por satélite na Região 2;

decide

que as disposições dos artigos 11 e 13 do Regulamento das Radiocomunicações sejam aplicadas nesses casos até que a questão possa ser examinada por uma conferência administrativa das radiocomunicações competente.

---

(1) Substitui a Resolução Sat-6 da Conferência Administrativa Mundial Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

RESOLUÇÃO N.º 101

Relativa à conclusão de acordos e à preparação de planos associados para ligações de conexão com estações espaciais do serviço de radiodifusão por satélite a funcionar na faixa dos 12 GHz, em conformidade com o plano adoptado pela Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) para as Regiões 1 e 3.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que convém utilizar o mais eficazmente possível a órbita dos satélites geostacionários e as faixas de frequências atribuídas ao serviço fixo por satélite;

b) Que a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) elaborou e adoptou disposições e um plano associado de atribuição de canais e de posições orbitais nas faixas de frequências de 11,7-12,5 GHz para a Região 1 e de 11,7-12,2 GHz para a Região 3, que figuram no apêndice 30;

c) Que as ligações de conexão com os satélites de radiodifusão fazem parte do serviço fixo por satélite e que a utilização das faixas de frequências nessas ligações é actualmente regida pela disposições dos artigos 11 e 13 do Regulamento das Radiocomunicações;

d) Que a presença de numerosas satélites de radiodifusão a funcionar em posições da órbita dos satélites geostacionários determinadas pelos planos pré-citados será causa de grandes dificuldades para a coordenação com os sistemas do serviço fixo por satélite, da utilização das faixas de frequências nas ligações de conexão para a transmissão de programas;

e) Que os critérios de partilha existentes no artigo 27 não foram elaborados especialmente para as ligações de conexão para o serviço de radiodifusão por satélite nas faixas em que a utilização do serviço fixo por satélite por satélite é reservada exclusivamente às ligações de conexão para o serviço de radiodifusão por satélite;

notando

a) Que a presente Conferência reconheceu certas faixas de frequências como disponíveis para as ligações de conexão com os satélites de radiodifusão (v. o quadro das atribuições de faixas de frequências e as notas associadas, n.ºs **835, 858, 863 e 869**);

b) Que a escolha de faixas de frequências para as ligações de conexão com os satélites de radiodifusão deve ser deixada às administrações interessadas.

decide

1. Que as ligações de conexão com os satélites de radiodifusão a funcionar nas faixas de 11,7-12,5 GHz na Região 1 e de 11,7-12,2 GHz na Região 3 devem ser organizadas e exploradas nas faixas de 10,7-11,7 GHz, 14,5-14,8 GHz (unicamente para os países situados fora da Europa e para Malta) e 17,3-18,1 GHz para a Região 1 e 14,5-14,8 GHz e 17,3-18,1 GHz para a Região 3, em conformidade com os acordos e os planos associados, adoptados por uma conferência administrativa das radiocomunicações em que poderão participar todas as administrações interessadas, assim como as administrações cujos serviços possam ser afectados. Todavia, as administrações podem igualmente utilizar as ligações de conexão com os satélites de radiodifusão na faixa de 14-14,5 GHz (unicamente para os países situados fora da Europa e para Malta) ou noutras faixas de frequências atribuídas ao serviço fixo por satélite (Terra para espaço), com a condição de que seja feita a coordenação com outras redes de serviço fixo ou por satélite;

2. Que, até à entrada em vigor dos acordos e dos planos associados pré-citados, as administrações e a IFRB devem aplicar os procedimentos descritos nos artigos 11 e 13 e na Resolução n.º 102 para as ligações de conexão com os satélites de radiodifusão a funcionar nas faixas mencionadas no § 1 acima;

3. Que, até, à entrada em vigor dos Actos Finais da Conferência Administrativa das Radiocomunicações proposta, os critérios especificados no artigo 27 para a partilha entre os serviços de Terra e o serviço fixo por satélite sejam também aplicados às ligações de conexão de serviço de radiodifusão por satélite nas faixas acima mencionadas;

convida o conselho de administração

a estudar a questão da convocação de uma conferência administrativa das radiocomunicações a fim de fixar a data e o local apropriados, assim como a agenda de tal conferência;

convida a CCIR

1. A estudar as características técnicas mais apropriadas para as ligações de conexão com os satélites de radiodifusão, bem como os métodos de planificação para a atribuição dos canais a essas ligações nas faixas atribuídas pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) (v. a Recomendação n.º 101);

2. A estudar e a determinar com urgência os critérios de partilha apropriados a aplicar entre os serviços fixos e móvel e as ligações de conexão com os satélites de conexão com os satélites de radiodifusão.

RESOLUÇÃO N.º 102

Relativa à coordenação entre administrações das características técnicas das ligações de conexão com as estações espaciais do serviço de radiodifusão por satélite da faixa de 11,7-12,5 GHz (Região 1) e 11,7-12,2 GHZ (Região 3) para o período compreendido entre a entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) e a entrada em vigor dos actos finais da futura conferência de planificação das ligações de conexão com tais estações espaciais.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, antes da convocação de uma conferência de planificação das ligações de conexão, qualquer administração que deseje utilizar uma ligação de conexão com uma estação espacial do serviço de radiodifusão por satélite deveria poder determinar as características técnicas dessa ligação, de acordo com todas as administrações que partilham a mesma posição orbital para tais estações previstas no plano contido nos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) (apêndice 30), tendo em conta os pareceres pertinentes da CCIR;

b) Que qualquer administração que deseje pôr em serviço uma estação espacial do serviço de radiodifusão por satélite e conformidade com as disposições do apêndice 30 e utilizar, para o efeito, uma consignação de frequência para a ligação de conexão, deverá aplicar os procedimentos de publicação antecipada e de coordenação previstos no artigo 11 para essa ligação de conexão:

decide

1. Que a IFRB, quando proceda à publicação antecipada nos termos do n.º **1044** deve também indicar as administrações em nome das quais esteja inscrita, de acordo com o apêndice 30, uma consignação de frequência para a mesma posição orbital;

2. Que o acordo ou as objecções das administrações mencionadas no § 1 anterior sejam comunicados à administração que procura a coordenação num prazo de quatro meses a partir da data da publicação antecipada;

3. Que possa ser efectuado um acordo de pré-coordenação entre as administrações que partilham a mesma posição orbital no plano, se necessário com a assistência da Comissão, numa reunião para que serão convidadas essas administrações e à qual poderão assistir se o desejarem;

4. Que o resultado desse acordo de pré-coordenação seja publicado em complemento dos procedimentos normais de coordenação efectuados em conformidade com as disposições do artigo 11, e que a conferência encarregada futuramente da planificação das ligações de conexão seja informada de todos os acordos de pré-coordenação efectuados em aplicação da presente Resolução, sem prejudicar de modo nenhum as decisões que essa conferência venha a tomar.

RESOLUÇÃO N.º 103

Relativa à melhoria da assistência aos países em desenvolvimento com vista a facilitar o acesso do seu serviço fixo às faixas das ondas decamétricas e a assegurar a protecção das suas consignações contra as interferências prejudiciais.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tomando nota

de outras resoluções adoptadas pela presente Conferência relativas às necessidades especiais dos países em desenvolvimento;

considerando

a) Que, em numerosos casos, os países em desenvolvimento têm necessidade de assistência de natureza altamente especializada, que deve frequentemente ser obtida a curto prazo, em especial no que respeita ao serviço fixo e à utilização de faixas de frequências na gama das ondas decamétricas;

b) Que os conhecimentos técnicos e a experiência que nesse sentido apresentam mais interesse para tais países lhes podem ser fornecidos pela Comissão Internacional do Registo de Frequências ou por intermédio desta;

considerando, além disso,

c) Que os recursos da IFRB são limitados;

decide

1. Que as disposições dos n.ºs **1218, 1260, 1275 a 1304, 1416** e **1963** a **1966** do Regulamento das Radicomunicações se destinem essencialmente a ser utilizadas pelas administrações dos países em desenvolvimento;

2. Que as administrações dos países desenvolvidos deveriam recorrer o menos possível a tais disposições;

3. Que as administrações dos países em desenvolvimento deveriam recorrer o mais possível a tais disposições.

RESOLUÇÃO N.º 200 (¹)

Relativa à utilização das classes de emissão R3E e J3E para fins de perigo e de segurança na frequência portadora de 2182 kHz (²)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que o Regulamento das Radiocomunicações prevê a utilização na frequência portadora de 2182 kHz:

Da classe de emissão A3E ou H3E pelas estações de navio, de aeronave e de engenho de salvamento;
Da classe de emissão H3E pelas estações costeiras;
Das classes de emissão especificadas no apêndice 37 pelas radiobalizas de localização de sinistros;

b) Que essas disposições têm por finalidade principal assegurar a eficácia das comunicações de perigo e de segurança pelo emprego de técnicas já experimentadas com êxito;

tomando nota igualmente

a) Do relatório final do Grupo de Especialistas (Genebra, 1963);
b) Dos estudos pertinentes da CCIR relativos à técnica da faixa lateral única (v. a Questão 26-1/8, os pareceres n.ºs 488, 543 e 544 e o Relatório n.º 744 da CCIR);

reconhecendo

que o emprego das classes de emissão R3E e J3E daria à exploração na frequência portadora de 2182 kHz as vantagens inerentes ao emprego da técnica da faixa lateral única de que já se beneficia noutras frequências;

reconhecendo, todavia,

que a CCIR recomenda que não se utilize a classe de emissão R3E para fins de perigo e de segurança (v. parecer n.º 543 da CCIR);

considerando

a) Que grande número de aparelhos que utilizam as classes de emissão A3E e H3E estarão ainda em uso para o perigo e a segurança em 1 de Janeiro de 1982;
b) Que o material de faixa lateral única deve ser concebido para funcionar com tolerâncias de frequências mais estritas e segundo padrões técnicos mais elevados que o material de dupla faixa lateral;
c) Que o material concebido para a segurança, especialmente o material dos engenhos de salvamento, deve:

Ter um funcionamento seguro em condições exteriores variáveis e após longos períodos de armazenamento;
Ser em todas as circunstâncias de emprego fácil para uma pessoa sem experiência;
Ser de preço relativamente módico;

d) Que se devem satisfazer as necessidades de radiogoniometria e de orientação por outros meios;
e) Que deve ser também satisfeita a necessidade de emitir e de receber os sinais de alarme radiotelefónicos a duas frequências, em especial os sinais das radiobalizas de localização de sinistros, e que, nesse sentido, se devem ter em conta as tolerâncias de frequência indicadas no apêndice 37 e os pareceres pertinentes da CCIR;

decide

1. Que se deve continuar a estudar o emprego das classes de emissão R3E e J3E para o perigo e a segurança;
2. Que convém que esse estudo seja concluído com a antecedência necessária para que a próxima conferência administrativa mundial das radiocomunicações competentes possa tomar uma decisão sobre a data de passagem definitiva às classes de emissão R3E e J3E na frequência portadora de 2182 kHz;

pede à CCIR

que continue a estudar esta questão como assunto urgente e que, se possível, emita pareceres com bastante antecipação antes da conferência pré-citada:

(¹) Nota do secretário-geral: v., também, a Resolução n.º 305.
(²) Substitui a Resolução Mar2-20 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

pede ao secretário-geral

que comunique a presente Resolução à Organização Intergovernamental Consultiva da Navegação Marítima;

convida a Organização Intergovernamental Consultiva da Navegação Marítima

a incluir o exame deste assunto no quadro do estudo actualmente empreendido sobre o sistema de perigo e de segurança marítima.

RESOLUÇÃO N.º 201

Relativa às disposições de exploração, à taxação e à contabilidade da correspondência pública nos serviços móveis

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a CCITT, de acordo com as decisões da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) elaborou dois pareceres relativos à exploração no serviço móvel marítimo e à taxação, à contabilidade e ao reembolso no serviço móvel marítimo;

b) Que a presente Conferência aceitou, no conjunto e na maior parte dos pontos de pormenor, as conclusões do relatório sobre os estudos efectuados pela CCITT, de acordo com as resoluções pertinentes da Conferência Administrativa Mundial da Radiocomunicações Marítimas (Genebra, 1974), que desde então foram ab-rogadas;

c) Que, por isso, o Regulamento Adicional das Radiocomunicações, assim como certas disposições do Regulamento das Radiocomunicações relativas à exploração, à taxação e à contabilidade da correspondência pública nos serviços móveis foram substituídos por disposições que, de um modo geral, tornam aplicáveis os pareceres da CCITT;

d) Que certo número das disposições substituídas se referiam a serviços móveis diferentes do serviço móvel marítimo e do serviço móvel marítimo por satélite;

e) Que as disposições contidas nos dois pareceres acima mencionados da CCITT relativamente à correspondência pública só se aplicam actualmente ao serviço móvel marítimo e ao serviço móvel marítimo por satélite;

f) Que, além disso, em qualquer revisão dos pareceres pertinentes da CCITT é necessário tomar plenamente em consideração os interesses marítimos, deixando às administrações um prazo suficiente que lhes permita efectuar consultas relativas a esses interesses;

reconhecendo

a) Que não existem actualmente disposições especiais previstas para a correspondência pública internacional nos serviços móveis diferentes do serviço móvel marítimo e do serviço móvel marítimo por satélite;

b) Que a correspondência pública internacional poderá, contudo, alargar-se, no futuro, a serviços móveis diferentes do serviço móvel marítimo e do serviço móvel por satélite;

convida a CCITT

a empreender, em caso de necessidade, o estudo de disposições relativas às normas de exploração, de taxação e de contabilidade relativas à correspondência pública nos serviços móveis diferentes do serviço móvel marítimo e do serviço móvel marítimo por satélite, visando harmonizar o mais possível todas as disposições referentes aos serviços móveis em questão;

convida, além disso, a CCITT

a que no prosseguimento dos seus trabalhos relativos ao serviço móvel marítimo e ao serviço móvel marítimo por satélite, tome especialmente em consideração os interesses marítimos;

decide

que, na eventualidade de um serviço de correspondência pública internacional ser aberto num serviço móvel diferente do serviço móvel marítimo e do serviço móvel marítimo por satélite, deverá esse novo serviço satisfazer, tanto quanto seja possível na prática, as disposições actuais de exploração, de taxação e de contabilidade previstas pelo Regulamento das Radiocomunicações, pelo Regulamento Telefónico e pelo Regulamento Telegráfico, bem como pelos pareceres pertinentes da CCITT, até que se possam efectuar as revisões necessárias.

RESOLUÇÃO N.º 202

Relativa à convocação de uma conferência administrativa mundial das radiocomunicações para os serviços móveis

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a Resolução n.º 814 do Conselho de Administração;

considerando

a) Que a agenda da presente Conferência prevê uma revisão parcial do Regulamento das Radiocomunicações e que a revisão completa exigiria a convocação de uma conferência apropriadaa para rever o conteúdo dos artigos restantes, especialmente os que se referem ao serviços móveis;
b) Que, tendo em conta as decisões que ela tomou e a necessidade de harmonizar certas disposições aplicáveis aos serviços móveis aeronáutico, marítimo e terrestre, e, em especial, de melhorar as disposições relativas ao perigo e à segurança, e dados os progressos técnicos e a introdução de novos sistemas, é necessário rever um certo número de disposições relativas aos serviços móveis;
c) Que é necessário ter em conta as novas exigências a que devem fazer face os serviços móveis;
d) Que a presente Conferência formulou diversas recomendações prevendo a convocação de uma conferência que trataria das disposições aplicáveis aos serviços móveis;
e) Que quando forem introduzidas pela presente Conferência modificações às faixas de frequências atribuídas aos serviços móveis, pode ser necessário fazer modificações nos planos das vias e outras subdivisões dessas faixas de frequências para os serviços interessados;

notando, além disso,

que os Actos Finais da Conferência Administrativa Mundial da Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) prevêem um plano de adjudicação para este serviço, que esse plano está em vias de aplicação e que ele não deveria ser modificado num futuro próximo;

decide convidar o conselho de administração

a tomar as disposições necessárias com vista à convocação de uma conferência administrativa mundial das radiocomunicações para os serviços móveis, a fim de rever as disposições do Regulamento das Radiocomunicações que dizem respeito mais particularmente a esses serviços;

convida

1. A CCIR a preparar as bases técnicas e de exploração para a conferência;
2. A IFRB a prestar a sua ajuda técnica para a preparação e a organização da conferência.

RESOLUÇÃO N.º 300

Relativa à utilização e à notificação das frequências emparelhadas reservadas aos sistemas de telegrafia de faixa estreita com impressão directa e de transmissão de dados que funcionam nas faixas de ondas decamétricas atribuídas ao serviço móvel marítimo (1)

(V. apêndice 32)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que certas partes das faixas de ondas decamétricas atribuídas ao serviço móvel marítimo foram reservadas para os sistemas de telegrafia de faixa estreita com impressão directa e de transmissão de dados, desde que tais sistemas utilizem exclusivamente frequências emparelhadas;
b) Que, em cada faixa, o número das frequências emparelhadas é limitado;
c) Que uma futura conferência que para isso tivesse competência poderia atribuir aos sistemas de telegrafia de faixa estreita com impressão directa faixas mais largas que as faixas actuais;
d) Que, por esta razão, a Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) não considerou oportuno, quando da sua reunião, estabelecer um plano, mas que tal plano poderia tornar-se necessário ulteriormente em consequência da saturação das vias;
e) Que entretanto, devem ser tomadas medidas provisórias pelas administrações e pela IFRB para assegurar a entrada em serviço ordenada dessas novas frequências emparelhadas;

decide

1. Que as frequências emparelhadas das faixas de ondas decamétricas reservadas aos sistemas de telegrafia de faixa estreita com impressão directa entre estações costeiras e estações de navio utilizadas por estas estações, notificadas e inscritas no Ficheiro de Referência Internacional das Frequências de acordo com as seguintes modalidades:

1.1. As consignações de pares de frequências para a emissão e a recepção far-se-ão exclusivamente às estações costeiras. As estações de navio de qualquer nacionalidade utilizarão legitimamente para as suas emissões as frequências de recepção das estações costeiras com as quais permutem tráfego.

---

(1) Substitui a Resolução Mar2-7 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

1.2. Para obter uma utilização eficaz das frequências, cada administração escolherá os pares de frequências a consignar às estações costeiras de acordo com as suas necessidades, com a ajuda da IFRB.

1.3. As consignações assim escolhidas e postas em serviço serão notificadas à IFRB em fichas cujo modelo figura no apêndice 1 ao Regulamento das Radiocomunicações e as administrações fornecerão as características fundamentais indicadas nas secções A ou B, consoante o caso, do referido apêndice. Se tais consignações estiverem em conformidade com o quadro de atribuição das faixas de frequências e com as disposições conexas do Regulamento das Radiocomunicações, assim como com a presente Resolução, a Comissão, a título de informação, publicá-las-á na parte 1-A da sua circular semanal e inscrevê-las-á no ficheiro de referência. Não inscreverá qualquer data na coluna 2 do ficheiro de referência e não formulará qualquer conclusão resultante de um exame técnico de compatibilidade com uma consignação existente. Contudo, a data em que a Comissão tenha recebido a ficha de notificação será indicada na parte 1-A da circular semanal e na coluna «Observações» do ficheiro de referência. Inscrever-se-á também na coluna «Observações» uma referência à presente Resolução.

1.4. Qualquer ficha de notificação que não esteja de acordo com as disposições pré-citadas do Regulamento das Radiocomunicações ou com a presente Resolução será devolvida pela IFRB à administração notificadora, acompanhada de qualquer sugestão que a Comissão possa fazer sobre o assunto.

1.5. Caso venham a surgir dificuldades entre países que utilizam a mesma via, a questão será resolvida por acordo mútuo entre as administrações interessadas.

2. Que uma futura conferência com competência para isso seja convidada a examinar as dificuldades que possa ter levantado a aplicação da presente Resolução e a tomar, se necessário, uma decisão sobre o estatuto a dar às consignações acima mencionadas ou sobre as condições de preparação de um plano para as faixas e os sistemas em questão. As inscrições feitas no ficheiro de referência em aplicação da presente Resolução não prejudicarão de nenhum modo as decisões que possam vir a ser tomadas pela conferência acima mencionada.

3. Que a presente Resolução se aplique às consignações de frequência emparelhadas reservadas aos sistemas de telegrafia de faixa estreita com impressão directa como indicado no § 1.1 acima, apesar de todas as outras disposições contrárias do Regulamento das Radiocomunicações e das resoluções existentes de conferências administrativas das radiocomunicações.

RESOLUÇÃO N.º 301

Relativa à notificação das frequências não emparelhadas utilizadas pelas estações de navio para os sistemas de telegrafia de faixa estreita com impressão directa e de transmissão de dados (1)

(V. apêndice 33)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que certas partes das faixas de ondas decamétricas atribuídas ao serviço móvel marítimo são reservadas para os sistemas de telegrafia de faixa estreita com impressão directa e de transmissão de dados que utilizam frequências não emparelhadas;

b) Que a Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) não esteve em condições de decidir até que ponto é necessário regulamentar a utilização racional das frequências para a transmissão, pelas estações de navio, de sinais de telegrafia de impressão directa emitidos em frequências não emparelhadas, nem de decidir sobre que base conviria fundar essa regulamentação;

c) Que há conveniência em que estas questões sejam examinadas por uma futura conferência competente no assunto;

d) Que as disposições actuais do Regulamento das Radiocomunicações não dão às administrações as directivas necessárias para o período compreendido entre a data de entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) e a data de entrada em vigor dos da conferência indicada na alínea *c*) acima;

decide

1. Que durante o período a que se refere a alínea *d*) acima qualquer administração que explore ou ponha em funcionamento, para ser utilizado nos navios, um sistema de telegrafia de faixa estreita com impressão directa ou de transmissão de dados utilizando frequências não emparelhadas deverá notificar à IFRB, para fins de inscrição no Ficheiro de Referência Internacional das Frequências, as frequências em que deverão emitir os navios que participem nesse serviço;

2. Que as fichas de notificaçãso relativas às frequências utilizadas na recepção pelas estações costeiras não sejam objecto de um exame técnico da parte da IFRB e que as consignações notificadas sejam inscritas no ficheiro de referência

(1) Substitui a Resolução Mar2-8 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

unicamente a título de informação, sem data, na coluna 2, mas com a inclusão, na coluna «Observações», de uma observação pertinente que contenha simplesmente uma referência à presente Resolução;

3. Que essas inscrições no ficheiro de referência não prejudicarão, de nenhum modo, as decisões que possa tomar a conferência mencinada na alínea *c*) acima.

RESOLUÇÃO N.º 302

Relativa ao tratamento pela IFRB das fichas de notificação de consignação de frequência às estações oceanográficas (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que adoptou a Resolução n.º 314 relativa ao estabelecimento de um sistema mundial coordenado de reunião de dados respeitantes à oceanografia;

b) Que a IRFB tem necessidade de instruções sobre a notificação das consignações de frequência às estações oceanográficas e a sua inscrição no Ficheiro de Referência Internacional das Frequências:

decide

dar instruções à IFRB no sentido de só aceitar para fins de inscrição no Ficheiro de Referência Internacional das Frequências as fichas de notificação apresentadas por administrações nos termos dos n.ºs **1214** a **1217** e **1219** do Regulamento das Radiocomunicações relativas a estações oceanográficas de emissão e de recepção que estão situadas em terra e estão em conformidade com as disposições da Resolução n.º 314. A IFRB tratará essas fichas de notificação de acordo com as disposições do n.º **1245** do Regulamento das Radiocomunicações. As inscrições pertinentes no ficheiro de referência não prejudicarão, de modo nenhum, as decisões que venha a tomar a próxima conferência administrativa das radiocomunicações competente para tratar do serviço móvel marítimo.

RESOLUÇÃO N.º 303

Relativa às frequências navio-navio nas faixas compreendidas entre 1605 kHz e 3600 kHz na Região 1 (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o Ficheiro de Referência Internacional das Frequências inclui, entre as suas incrições iniciais, as frequências que foram consignadas pela Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1951) a determinados países para comunicações entre navios nas faixas compreendidas entre 1605 kHz e 3600 kHz na Região 1;

b) Que há conveniência em tomar disposições para a notificação e a inscrição no ficheiro de referência da utilização dessas frequências para comunicações entre navios pelas administrações de outros países da Região 1:

decide

1. Que há conveniência em que a utilização das frequências referidas na alínea *a*) por outras administrações seja coordenada pelas administrações interessadas e notificada posteriormente à Comissão Internacional do Registo de Frequências;

2. Que, após ter recebido tal notificação, a Comissão inscreva essas novas consignações no ficheiro de referência internacional das frequências, sem data, na coluna 2a nem na coluna 2b, mas com uma observação pertinente na coluna «Observações», seguida da data de recepção pela Comissão da ficha de notificação;

convida as administrações

a reexaminar as zonas de utilização das consignações de frequência em causa, tais como estão inscritas no ficheiro de referência, a fim de melhorar a possibilidade de partilha;

pede à IFRB

que apresente, se for caso disso, às administrações interessadas as propostas que possa estar em condições de formular, com vista a alcançar o objectivo de que trata o parágrafo precedente.

---

(1) Substitui a Resolução Mar19 da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1974).

(2) Substitui a Resolução n.º 15 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

RESOLUÇÃO N.º 304

Relativa à adopção da nova disposição das vias utilizadas para a telegrafia morse da classe A1A nas faixas atribuídas ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que na sua recomendação Mar7, a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967) recomendou às administrações que estudassem as questões relativas à utilização futura da relação harmónica nos aparelhos radioeléctricos de navio;
b) Que a Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) tomou medidas para que as estações de navio possam utilizar, para a telegrafia morse da classe A1A, frequências de chamada e frequências de trabalho que não estão em relação harmónica;
c) Que é desejável que seja adoptada, logo que possível, a nova disposição das vias;

reconhecendo

a) Que é necessário prever um período de extinção para os aparelhos radioeléctricos cujo funcionamento depende da relação harmónica das frequências de chamada e das frequências de trabalho;
b) Que a evolução e os progressos da técnica, especialmente a dos sintetizadores de frequência, permitiram que se disponha de aparelhos radioeléctricos mais estáveis e mais fiáveis;

decide

1. Que as estações de navio cujo funcionamento depende de frequências de chamada e de frequênicas de trabalho em relação harmónica consignadas antes de 1 de Janeiro de 1976 poderão continuar a utilizar as consignações que se encontrem no interior das faixas indicadas no apêndice 312 para a chamada e trabalho dos navios em telegrafia morse da classse A1A;
2. Que convém que, logo que possível, os navios utilizem aparelhos que possam funcionar de acordo com a nova disposição das vias que figuram no apêndice 35 relativamente às frequências necessárias à execução do seu serviço;
3. Que os aparelhos instalados depois de 1 de Janeiro de 1976 deverão funcionar de acordo com a nova disposição das vias que figuram no apêndice 35 relativamente às frequências necessárias à execução do seu serviço.

RESOLUÇÃO N.º 305 (2)

Relativa à utilização das classes de emissão R3E e J3E nas frequências portadoras de 4125 kHz e 6215,5 kHz utilizadas além das frequência portadora de 2182 kHz para fins de perigo e de segurança (3)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que o Regulamento das Radiocomunicações autoriza até 1 de Janeiro de 1984 a utilização de emissões da classe H3E pelas estações costeiras, as estações de aeronave que emitam nas frequências portadoras de 4125 kHz e 6215,5 kHz (v. os n.ºs **2982** e **2986**);
b) Que essas disposições têm por finalidade principal assegurar a eficácia das comunicações de perigo e de segurança pelo emprego de técnicas já experimentadas com êxito;

tomando igualmente nota

a) Do relatório final do Grupo de Especialistas (Genebra, 1963);
b) Dos estudos pertinentes da CCIR relativos à técnica da faixa lateral única (v. a Questão n.º 26-1/8, os pareceres n.ºs 488, 543 e 544 e o Relatório n.º 744 da CCIR);

reconhecendo

que o emprego das classes de emissão R3E e J3E daria à exploração nas frequências portadoras de 4125 kHz e 6215,5 kHz as vantagens inerentes ao emprego da técnica da faixa lateral única, de que já beneficia noutras frequências;

reconhecendo, todavia,

que a CCIR recomenda que a classe de emissão R3E não seja utilizada para fins de perigo e de segurança (v. parecer n.º 543 da CCIR);

---

(1) Substitui a Resolução Mar2-4 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).
(2) Nota do secretário-geral: v., também, a Resolução n.º 200.
(3) Substitui a Resolução Mar2-21 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

considerando

a) Que o grande número de aparelhos que utilizam a classe de emissão H3E são ainda utilizados para o perigo e a segurança:
b) Que o material que utiliza as classes de emissão R3E e J3E deve ser concebido para funcionar com tolerâncias de frequência mais estritas e segundo normas técnicas mais elevadas que o material que utiliza a classse de emissão H3E com detecção de envolvente no receptor;
c) Que o material concebido para a segurança deveria , em todas as circunstâncias, ter um funcionamento seguro em condições exteriores variáveis e ser de emprego fácil por uma pessoa sem experiência;

decide

que não é necessário prosseguir o estudo relativo ao emprego das classes de emissão R3E e J3E para o perigo e a segurança nas frequências portadoras de 4125 kHz e 6125,5 kHz (v. os pareceres n.os 543 e 544 da CCIR);

pede ao secretário-geral

que comunique a presente Resolução à Organização Intergovernamental Consultiva da Navegação Marítima;

convida

1. A Organização Intergovernamental Consultiva da Navegação Marítima a incluir o exame deste assunto no quadro do estudo actualmente empreendido sobre o sistema de perigo e de segurança marítima;
2. A próxima conferência administrativa mundial das radiocomunicações competente a continuar o exame deste assunto.

RESOLUÇÃO N.º 306

Relativa ao emprego da técnica da faixa lateral única nas faixas do serviço móvel marítimo radiotelefónico compreendidas entre 1605 kHz e 4000 kHz (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) A Recomendação n.º 28 da Conferência Administrativa das Radiocomunicações (Genebra, 1959);
b) Que a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967) decidiu impor a utilização da técnica da faixa lateral única, excepto em certas circunstâncias;
c) Que é desejável substituir logo que possível as emissões em faixa lateral dupla por emissões em faixa lateral única nas faixas atribuídas ao serviço móvel marítimo entre 1605 kHz e 4000 kHz;

decide

que, salvo disposição contrária nos Actos Finais da presente Conferência, as estações radiotelefónicas do serviço móvel marítimo que funcionam nas faixas compreendidas entre 1605 kHz e 4000 kHz deverão estar em conformidade com as seguintes condições:

1. Nenhuma nova instalação de aparelhos em faixa lateral dupla deve ser autorizada nas estações de navio, com excepção dos casos previstos nos n.os **2973, 4127** e **4130** do Regulamento das Radiocomunicações;

2. Até 1 de Janeiro de 1982, as estações costeiras e as estações de navio equipadas com aparelhos em faixa lateral única deverão igualmente estar equipadas de modo a poderem efectuar emissões da classe H3E compatíveis com o emprego de receptores em faixa lateral dupla.

Subsistirá para além de 1 de Janeiro de 1982 a obrigação de poder efectuar emissões H3E na frequência portadora de 2182 kHz.

3. Após 1 de Janeiro de 1982 só serão autorizadas as emissões das classes R3E e J3E. Todavia, serão também autorizadas as emissões seguintes:

As emissões das classes A3E e H3E para as estações de navio, de aeronave ou de engenho de salvamento emitindo na frequência portadora de 2182 kHz;
As emissões da classe H3E para que as estações costeiras que emitam na frequência portadora de 2182 kHz;
Nas Regiões 1 e 3 e na Gronelândia, a título excepcional, as emissões da classe H3E para as estações costeiras que difundem mensagens de segurança na frequência portadora de 2170,5 kHz;
As emissões das classes H2B, R2B e J2B para as estações costeiras para fins de chamada selectiva na frequência portadora de 2170,5 kHz;
As emissões das classes especificadas no apêndice 37 ao Regulamento das Radiocomunicações para as radiobalizas de localização de sinistros (v. igualmente o n.º **3265** do Regulamento das Radiocomunicações).

---

(1) Substitui a Resolução Mar5 da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967).

4. A partir de 1 de Janeiro de 1982 as estações de navio e as estações de aeronave que devem adoptar a técnica da faixa lateral única nas frequências de trabalho do serviço móvel marítimo utilizarão unicamente emissões da classe H3E na frequência portadora de 2182 kHz.

RESOLUÇÃO N.º 307

Relativa à passagem à técnica da faixa lateral única das estações radiotelefónicas do serviço móvel marítimo nas faixas compreendidas entre 1605 kHz e 4000 kHz (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as estações radiotelefónicas em faixa lateral dupla do serviço móvel marítimo que funcionam nas faixas compreendidas entre 1605 kHz e 4000 kHz utilizam uma largura de faixa da ordem dos 6 kHz;
b) Que essas estações terão de utilizar no futuro a técnica da faixa lateral única;
c) Que devem ser previstas medidas para evitar, tanto quanto possível, durante o período de passagem à técnica da faixa lateral única, interferências prejudiciais entre as estações que utilizam a técnica da faixa lateral dupla e as estações que utilizam a técnica da faixa lateral única;

decide

1. Que a passagem à técnica da faixa lateral única das estações indicadas na alínea *a*) acima se efectue em conformidade com as disposições seguintes:

1.1. A frequência portadora da via em faixa lateral única situada na parte superior da via em faixa lateral dupla seja a mesma que a frequência portadora dessa via;

1.2. A frequência portadora da via em faixa lateral única situada na parte inferior da antiga via em faixa lateral dupla seja de 3 kHz inferior à frequência portadora dessa via quando esta última frequência for, pelo menos, 6 kHz superior à frequência portadora da via radiotelefónica adjacente em faixa lateral dupla;

1.3. Na Região 1, a frequência portadora da via em faixa lateral única situada na parte inferior da antiga via em faixa lateral dupla para as comunicações entre navios seja de 2,5 kHz inferior à frequência portadora dessa via quando esta última frequência estiver afastada 5 kHz da frequência das via radiotelefónica em faixa lateral dupla.

2. Que as emissões da classe H3E não devem ser utilizadas nas vias em faixa lateral únicas situadas na parte inferior das antigas vias em faixa lateral dupla.

RESOLUÇÃO N.º 308

Relativa ao espaçamento das frequências atribuídas ao serviço móvel marítimo na faixa de 156-174 MHz (2)

(V. o apêndice 18 e o artigo 60)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as frequências das faixas de ondas métricas compreendidas entre 156 MHz e 174 MHz são cada vez mais utilizadas no serviço móvel marítimo;
b) Que existe uma necessidade crescente de vias em ondas métricas para uso das operações portuárias;
c) Que existe uma necessidade crescente de vias em ondas métricas para a correspondência pública no serviço móvel marítimo;
d) Que existe necessidade de vias em ondas métricas para o serviço de movimento de navios;
e) Que é necessário prever vias em ondas métricas para utilizações diferentes da radiotelefonia, por exemplo o fac-símile e a telegrafia de faixa estreita com impressão directa;
f) Que as operações de luta contra a poluição, de busca e de salvamento, assim como a exploração dos navios e dos quebra-gelos, exigem vias em ondas métricas para as comunicações entre os helicópteros ou aeronaves ligeiras e os navios;

notando

que, em virtude da revisão do Regulamento das Radiocomunicações (Genebra, 1959) pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967) e pela Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974):

a) O espaçamento das vias atribuídas ao serviço móvel marítimo radiotelefónico em ondas métricas está a ser reduzido de 50 kHz para 25 kHz;

---

(1) Substitui a Resolução Mar4 da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967).
(2) Substitui a Resolução Mar2-14 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

b) Se obtiveram vias suplementares, numeradas de 60 a 88, intercalando vias espaçadas de 25 kHz entre as vias espaçadas de 50 kHz do apêndice 18 do Regulamento das Radiocomunicações (Genebra, 1959);
c) Convém atribuir as vias espaçadas de 25 kHz numa base internacional;
d) A passagem de um espaçamento de 50 kHz a um espaçamento de 25 kHz devia processar-se como segue:

1) Data em que se pôde começar a modificar os emissores para que funcionem com um desvio máximo de ± 5 kHz e a modificar os receptores para aumentar, se necessário, o seu ganho de baixa frequência — 1 de Janeiro de 1972;
2) Data em que as modificações indicadas na alínea *d*), parágrafo 1, deviam estar excluídas para todos os aparelhos existentes — 1 de Janeiro de 1973;
3) Data até à qual convinha que as estações costeiras conversassem a possibilidade de receber emissões com desvio máximo de ± 15 kHz, e a partir da qual convinha modificar, o mais depressa possível, os receptores dessas estações para que estivessem, em conformidade com as condições de selectividade exigidas para vias espaçadas de 25 kHz — 1 de Janeiro de 1973;
4) Data a partir da qual todos os novos aparelhos deviam funcionar com um espaçamento de 25 kHz entre vias — 1 de Janeiro de 1973;
5) Data a partir da qual as estações só poderão utilizar aparelhos que satisfaçam o espaçamento de 25 kHz entre vias e a partir da qual se poderão utilizar sem qualquer reserva as vias intercalares — 1 de Janeiro de 1983.

decide

1. Que as administrações poderão, nas zonas em que isso seja necessário, autorizar a utilização das vias 60 a 88, com excepção das vias 75 e 76, reservadas para faixas de guarda da via 16;
2. Que as características técnicas dos aparelhos destinados a funcionar nas vias espaçadas de 25 kHz no serviço móvel marítimo em ondas métricas deverão estar em conformidde com as disposições do apêndice 19;
3. Que em 1 de Janeiro de 1983 todos os aparelhos deverão já satisfazer o espaçamento de 25 kHz entre vias e que a partir dessa data podem ser utlizadas sem qualquer reserva todas as vias intercalares.

RESOLUÇÃO N.º 309

Relativa à utilização não autorizada das frequências atribuídas ao serviço móvel marítimo (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as observações de fiscalização das emissões relativas á utilização das frequências da faixa de 2170-2194 kHz e das faixas atribuídas em exclusivo ao serviço móvel marítimo entre 4063 kHz e 25 110 kHz mostram que um certo número de frequências dessas faixas continua a ser utilizado por estações de serviços diferentes do serviço móvel marítimo, especialmente por estações de radiodifusão de grande potência, das quais algumas são exploradas en contravenção às disposições do n.º **2665** do Regulamento das Radiocomunicações;
b) Que essas estações causam assim interferências prejudiciais às comunicações permutadas nesse serviço e que se observou nas faixas em questão um número muito grande de emissões cujas fontes não puderam ser identificadas com certeza;
c) Que as radiocomunicações constituem o único meio de comunicação de que dispõe o serviço móvel marítimo;

considerando, em especial,

d) Que é essencial que as vias que servem o escoamento do tráfego de perigo e de segurança estejam isentas de interferências prejudiciais, devido à necessidade absoluta de salvaguardar a vida humana e os bens;

decide solicitar instantemente às administrações

1. Que procedam de modo que estações pertencentes a serviços diferentes do serviço móvel marítimo se abstenham de utilizar as frequências situadas nas vias de perigo e de segurança, nas faixas de guarda dessas vias e nas faixas atribuídas em exclusivo ao serviço móvel marítimo, salvo nas condições expressamente estipuladas nos n.ºs **342, 518, 519, 522** ou **956** a **958** do Regulamento das Radiocomunicações;
2. Que continuem a tudo fazer para identificar e localizar a fonte de qualquer emissão não autorizada susceptível de pôr em perigo vidas humanas e bens e que comuniquem à IFRB as informações obtidas;
3. Que participem nos programas de fiscalização das emissões que a IFRB possa organizar em cumprimento das disposições da presente Resolução;

---

(1) Substitui a Resolução Mar2-15 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

4. Que peçam aos respectivos governos que promulguyem toda a legislação que considerem necessária para proibir às estações situadas ao largo das suas costas que transgridam as disposições do n.º **2665** do Regulamento das Radiocomunicações;

encarregar a IFRB

1. De continuar a organizar, a intervalos regulares, programas de fiscalização das emissões nas vias de perigo e de segurança, nas faixas de guarda dessas vias e nas faixas atribuídas em exclusivo ao serviço móvel marítimo entre 4063 kHz e 26 175 kHz, com vista a identificar as estações de outros serviços que funcionem nessas faixas;

2. De tomar as disposições necessárias com vista à eliminação das emissões das estações de outros seviços que funcionem nessas faixas e que causem interferências prejudiciais ao serviço móvel marítimo ou sejam susceptíveis de lhas causarem;

3. De pedir, conforme as necessidades, a colaboração das administrações, por um lado, para identificar as fontes dessas emissões, empregando todos os meios disponíveis, por outro, para obter a suspensão dessas emissões.

RESOLUÇÃO N.º 310

Relativa às frequências a prever com vista à instalação e à futura entrega em serviço de sistemas de telemedida, de telecomando e de permuta de dados para os movimentos dos navios

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) A necessidade de especificar frequências radioeléctricas que o serviço móvel marítimo poderá utilizar à escala mundial para satisfazer as necessidades dos movimentos dos navios, por meio de técnicas de permuta automática de dados digitais, de telemedida e de telecomando;

b) Os desenvolvimentos que estão actualmente em curso em diversas partes do espectro das frequências e em razão dos quais será necessário, no futuro,prever faixas de frequências comuns para assegurar a utilização eficaz do espectro;

c) A importância destes sistemas de comunicação a curta distância para a segurança e a eficácia da exploração dos navios;

d) As vantagens que estes sistemas trazem às autoridades portuárias no que respeita à segurança e à eficácia da gestão dos portos e das operações portuárias;

notando

a) Que, de acordo com as conclusões da reunião especial preparatória da CCIR, as frequências de 10 GHz parecem satisfatórias para tais sistemas automáticos para comunicação a curta distância;

b) Que se devem ainda obter informações complementares operacionais e técnicas para permitir determinar a utilização mais eficaz possível do espectro, bem como os critérios de partilha;

decide

1. Que a próxima conferência administrativa mundial das radiocomunicações competente deverá examinar as frequências que possam ser utilizadas para essas operações, à luz dos estudos que tenham sido efectuados;

2. Que a CCIR deverá estudar a questão das larguras de faixa e das formas de apresentação dos dados e dar o seu parecer sobre este assunto, coordenando os seus trabalhos com as administrações que desenvolvem e que experimentam os sistemas de transmissão digitais;

pede ao secretário-geral

que apresente a presente resolução à Organização Intergovernamental Consultiva da Navegação Marítima (OMCI), convidando-a a definir as necessidades operacionais no que se refere à permuta de dados com navios, utilizando as técnicas de transmissão digitais, e que formule recomendações apropriadas para ajudar as administrações a preparar uma futura conferência.

RESOLUÇÃO N.º 311

Relativa à introdução de um sstema de chamada selectiva numérica para fazer face às necessidades do serviço móvel marítimo (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que há urgente necessidade de dispor de um só e único sistema de chamada selectiva numérica para fazer face às necessidades do serviço móvel marítimo em todo o Mundo;

---

(1) Substitui a Resolução Mar2-19 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

b) Que a Organização Intergovernamental Consultiva da Navegação Marítima (OMCI) (1) comunicou à Conferência Administrativa Mundial das Radicomunicações Marítimas (Genebra, 1974), bem como à CCIR, as suas necessidades de um sistema de chamada selectiva para fins gerais que permita facilitar a transmissão e a recepção de todas as comunicações;

c) Que os artigos 25, 60, 62 e 65 do Regulamento das Radiocomunicações prevêem a utilização de um tal sistema;

d) Que os estudos relativos às características técnicas e de exploração de um tal sistema, efectuados pela CCIR no quadro da sua Questão n.º 9-3/8, estão já muito avançados;

e) Que as regras técnicas aplicáveis aos sistemas, tais como definidas do Regulamento das Radiocomunicações, se baseiam essencialmente nos pareceres da CCIR;

f) Que as assembleias plenárias da CCIR, se efectuam todos os três anos, ao passo que as conferências administrativas das radiocomunicações, que estão habilitadas a modificar o Regulamento das Radiocomunicações e procedem a essas modificações utilizando largamente os pareceres da CCIR, se realizam menos frequentemente e com muito menos regularidade;

é de opinião

a) Que as assembleias plenárias da CCIR adoptarão, provavelmente, pareceres relativos às características técnicas e de exploração aplicáveis a um só e único sistema de chamada selectiva numérica;

b) Que convém que as administrações beneficiem dos pareceres mais recentes da CCIR relativos aos sistemas de chamada selectiva destinados ao serviço móvel marítimo;

decide, por isso,

1. Convidar a CCIR a concluir os seus trabalhos para responder à Questão n.º 9-3/8 e a emitir, logo que possível, pareceres relativos às características técnicas e de exploração de um sistema selectivo numérico;

2. Que convém que cada assembleia plenária da CCIR faça o que seja necessário para levar ao conhecimento do secretário-geral da UIT os pareceres da CCIR que possam, ter influência nos criterios técnicos e de exploração relativos à introdução de um só e único sistema de chamada selectiva numérica no serviço móvel marítimo;

3. Que, depois de lhes ter comunicado os textos pertinentes da CCIR, o secretário-geral escreva às administrações pedido-lhes que indiquem, no prazo de quatro meses, quais os pareceres da CCIR ou as características técnicas e de exploração definidas nos pareceres mencionados no n.º 1 anterior que elas preferem aplicar no quadro das disposições apropriadas do Regulamento das Radiocomunicações:

4. Que, expirado esse prazo, o secretário-geral envie às administrações uma compilação das respostas recebidas.

RESOLUÇÃO N.º 312

Relativa à introdução de novos procedimentos de chamada em telegrafia morse A1A em ondas decamétricas (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é necessário utilizar mais eficazmente o espectro das frequências radioeléctricas, assim como o tempo de trabalho do pessoal de exploração a bordo dos navios;

b) Que é desejável melhorar a eficácia da chamada nas faixas utilizadas para a telegrafia morse A1A em ondas decamétricas;

c) Que a Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) adoptou um novo procedimento de chamada para a telegrafia morse A1A em ondas decamétricas (artigo 63 e apêndice 34)

d) Que, para assegurar a eficácia deste novo procedimeno de chamada, é necessário que as administrações cheguem a acordo sobre os grupos indicados no apêndice 34, em conformidade com uma distribuição planificada das estações costeiras numa base regional e em função do tráfego;

e) Que as administrções que participaram na Conferência de 1974 adoptaram um plano de distribuição (anexo à presente resolução) das estações costeiras classificadas em quatro grupos, por países e por zonas, a fim de assegurar uma melhor distribuição das chamadas;

convida

as administrações que asseguram um serviço internacional de correspondência pública a indicarem, com vista à publicação da Nomenclatura das estações costeiras, os períodos de serviço durante os quais será assegurada a escuta na ou nas vias comuns e, se necessário, na ou nas vias de grupos;

---

(1) Resolução A.420(XI) da OMCI.

(2) Substitui a Resolução Mar2-5 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

convida, além disso,

as administrações que desejem integrar-se num grupo de plano de distribuição, ou as administrações já incluídas no plano e que desejem introduzir qualquer modificação nesse plano, a coordenarem, tanto quanto seja possível, as modificações pretendidas com as outras administrações interessadas e susceptíveis de ser afectadas que figuram num grupo em questão. Qualquer administração que tenha decidido integrar-se num grupo ou mudar de grupo no plano comunicará ao secretário-geral a sua decisão, que será publicado no anexo à Nomenclatura das estações costeiras;

encarrega o secretário-geral

1. De levar a presente resolução ao conhecimento de todas as administrações de que dependem estações costeiras nos países ou nas zonas que figuram no plano de distribuição, a fim de obter dessas administrações o acordo sobre esse plano ou sobre as rectificações a esse plano para satisfazerem as suas necessidades;

2. De manter actualizado, tendo em conta os resultados dessa consulta com as administrações interessadas, o plano de distribuição anexo à Nomenclatura das estações costeiras;

3. De publicar qualquer modificação do plano de distribuição no *Boletim de Exploração*, antes da publicação de qualquer revisão do plano na Nomenclatura das estações costeiras.

ANEXO À RESOLUÇÃO N.º 312

Plano de distribuição para as vias de grupos
Estações costeiras que funcionam em telegrafia morse A1A em ondas decamétricas

Países e zonas

RESOLUÇÃO N.º 313

Relativa à introdução de um novo sistema de identificação das estações do serviço móvel marítimo e do serviço marítimo por satélite (identidades no serviço móvel marítimo)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) A necessidade de atribuir, para fins da segurança e das telecomunicações, uma identidade própria a cada navio;
b) A necessidade de proceder de modo que essa identidade seja utilizável nos sistemas automáticos;
c) O facto de que, para se obter um formato comum de endereço que convenha aos sistemas automáticos, as identidades consignadas às estações terrenas de navio, às estações costeiras, às estações terrenas costeiras e as identidades utilizadas para as chamadas de grupo devem ser de natureza semelhante quando são transmitidas pelo trajecto radioeléctrico;

considerando, além disso,

a) Que é desejável que o código constituído pela identidade da estação de navio, ou uma parte desse código, possa ser utilizado pelos assinantes das redes públicas com comutação para chamar os navios em exploração automática;
b) Que, em certos países, as redes públicas comutadas têm limitações quanto ao número máximo dos algarismos que podem ser utilizados para compor (no disco ou no teclado) a identidade da estação de navio;
c) Que em parecer da CCITT (1) descreve um método de identificação de navio que tem em conta essa contingência;
d) Que, no interesse do desenvolvimento da exploração automática no sentido estação costeira-navio, as limitações, sejam quais forem, deveriam ser reduzidas ao mínimo;

(1) Parecer da CCITT E.210/F. 120.

notando

que a CCIR estuda a adopção do novo sistema de identidades para as estações do serviço marítimo e do serviço móvel marítimo e do serviço móvel marítimo por satélite:

decide

que, no caso das administrações que utilizam essa forma de identificação para as estações do serviço móvel marítimo por satélite, a atribuição das identidades se faça em conformidade com as disposições do apêndice 43 até à decisão apropriada da próxima conferência administrativa mundial das radiocomunicações competente;

convida as administrações

a continuarem a participar nos estudos da CCIR e da CCITT sobre este assunto;

pede ao secretário-geral

que prepare o quadro dos algarismos de identificação de nacionalidade (NID), em estreita colaboração com a CCIR e a CCITT, e que apresente esse quadro a exame pela próxima conferência administrativa mundial das radiocomunicações competente, para inclusão no apêndice 43.

RESOLUÇÃO N.º 314

Relativamente ao estabelecimento de um sistema mundial coordenado para a reunião de dados relativos à oceanografia (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que foi expresso o desejo de que se estabeleça um sistema mundial coordenado de reunião de dados relativos á oceanografia;

b) Que em cada uma das seis faixas de ondas decamétricas atribuídas em exclusivo ao serviço móvel marítimo a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967) reservou uma faixa de frequências destinada a ser utilizada, em conformidade com as disposições do apêndice 31 ao Regulamento das Radiocomunicações, para a reunião de dados relativos à oceanografia;

c) Que as faixas de frequências de que se trata só serão utilizadas com o máximo rendimento mediante a colaboração das administrações e a coordenação a que estas procedam;

d) Que certas administrações manifestaram desejo de que se estabeleça, na base de um plano coordenado nas faixas atribuídas pela presente Conferência, um sistema mundial coordenado de transmissão de dados relativos à oceanografia;

e) Que, entretanto, outras administrações desejam utilizar, num futuro próximo, estações de reunião de dados relativos à oceanografia, no quadro das decisões tomadas sobre esta questão pela presente Conferência;

f) Que, por consequência, convém estabelecer um programa coordenado de reunião de dados relativos à oceanografia nas faixas de frequências indicadas na alínea *b*) anterior;

g) Que a Comissão Oceanográfica Intergovernamental (COI) e a Organização Mundial (OMM) se consultam desde 1962 sobre os esforços de cooperação a desenvolver no domínio da reunião de dados relativos à oceanografia (por exemplo, o grupo de especialistas OMM/COI encarregado de estudar a coordenação das necessidades, Genebra, 19-21 de Julho de 1967);

decide

1. Convidar a COI e a OMM a estabelecerem em comum, concertadamente com a IFRB e, consoante o caso, com as administrações dos Membros, um plano coordenado concebido de modo a satisfazer as necessidades presentes e futuras de todos os Membros interessados e a permitir que as estações participantes na reunião de dados relativos à oceanografia funcionem num sistema mundial no quadro das disposições tomadas pela presente Conferência relativamente a um tal sistema. Esse plano deverá comportar a indicação da distribuição geográfica das estações oceanográficas;

2. Incitar as administrações a consignarem, para a parte do sistema mundial sob sua jurisdição, frequências conformes com o plano acima, assim como com as recomendações da COI e da OMM;

3. Convidar, além disso, a COI e a OMM a assumirem em comum, concertadamente com a IFRB, a responsabilidade de manter o plano actualizado, tendo em conta a evolução das necessidades de dados relativos à oceanografia;

---

(1) Substitui a Resolução Mar20 da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967).

4. Que a próxima conferência administrativa das radiocomunicações competente para tratar de questões relativas ao serviço móvel marítimo deverá ter em consideração o plano de que tratam os §§ 1 a 3 anteriores, a fim de determinar as modificações eventualmente necessárias para melhorar a sua eficácia.

RESOLUÇÃO N.º 315

Relativa à supressão eventual das taxas de estação móvel para a correspondência pública no serviço móvel marítimo

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a VI Assembleia Plenária da CCITT (Genebra, 1976) adoptou o projecto de parecer relativo à taxação, à contabilidade e ao reembolso móvel marítimo, com excepção dos pontos relativos especialmente às taxas de estação para a correspondência pública no serviço móvel marítimo;

b) Que o projecto de parecer acima indicado foi ulteriormente modificado, à luz da decisão tomada pela VI Assembleia Plenária da CCITT (Genebra, 1976), relativamente às taxas de estação móvel, e que esse projecto de parecer foi aprovado na sequência de uma votação por correspondência,

c) Que o parecer modificado compreende as seguintes disposições (1):

> As taxas de estação móvel podem ser aplicadas aos serviços de radiotelegrafia pública, de radiotelefonia e de radiotelex assegurados em ondas hectométricas e decamétricas, mas não devem aplicar-se a nenhum dos serviços que funcionam em ondas métricas, a nenhum dos serviços móveis por satélite, nem a nenhum serviço explorado automaticamente. Todavia, as taxas de estação móvel podem também aplicar-se aos radiotelegramas transmitidos em ondas métricas.
>
> As taxas de estação móvel deverão ser abolidas para o tráfego encaminhado a partir das 23.59 TMG de 31 de Dezembro de 1987.

decide

adoptar a data recomendada para a supressão das taxas de estação móvel para a correspondência pública no serviço móvel marítimo.

RESOLUÇÃO N.º 316

Relativa à cooperação técnica com os países em desenvolvimento no domínio das telecomunicações marítimas (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tendo notado

que a assistência prestada pela União, concertadamente com outras organizações, especialmente a Organização Intergovernamental Consultiva da Navegação Marítima (OMCI), no domínio das telecomunicações marítimas, aos países em desenvolvimento, permite augurar bem do futuro;

consciente

a) Do facto de que os países em desenvolvimento têm necessidade, para intensificarem as suas permutas comerciais, de aumentar a actividade da sua marinha mercante e de atrair o tráfego marítimo de outros países;

b) Do papel importante que têm as telecomunicações nas actividades marítimas de todo o Mundo, quer se trate da economia quer da segurança;

c) Das possibilidades de dar à marinha mercante meios de segurança satisfatórios e melhores perspectivas económicas, embora consagrando somas relativamente modestas à instalação e à exploração de serviços de telecomunicações marítimas;

---

(1) V. o parecer D.90/F111 da CCITT (§§ B12 e B13).

(2) Substitui a Resolução Mar2-18 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

considerando

a) Que para numerosos países em vias de desenvolvimento é necessário reforçar a eficácia dos serviços que interessam:

À segurança da navegação e à salvaguarda da vida humana no mar;
À rentabilidade das operações portuárias;
À correspondência pública destinada aos passageiros e aos membros das tripulações;

b) Que seria possível, a este respeito, alargar as actividades de cooperação técnica da União, de modo a proporcionar a esses países uma assistência das mais válidas:

decide convidar o secretário-geral

1. A oferecer a assistência da União aos países em desenvolvimento que se esforçam por melhorar as suas telecomunicações marítimas, fornecendo-lhes, nomeadamente, pareceres técnicos relativos à instalação, à exploração e à manutenção do material, bem como contribuindo para a formação profissional do pessoal;

2. A pedir, para isso, a colaboração da OMCI, da Conferência das Nações Unidas para o Comércio e o Desenvolvimento (CNUCED) e de outras instituições especializadas das Nações Unidas, consoante o caso;

3. A continuar a procurar, com especial atenção, o auxílio do Programa das Nações Unidas para o Desenvolvimento (PNUD) e outras fontes de financiamento para permitir à União prestar assistência técnica a um tempo suficiente e eficaz no que se refere às telecomunicações marítimas, em colaboração com outras instituições especializadas interessadas, se for caso disso;

convidar os países membros

a contribuírem, prioritariamente, na medida das suas possibilidades e do estado de desenvolvimento da sua técnica, para a cooperação técnica prestada pela União aos países em desenvolvimento no domínio das telecomunicações marítimas, facilitando o recrutamento de especialistas, que deverão ser enviados com a missão de trabalhar nesses países, acolhendo estagiários titulares de bolsas de estudo concedidas pela União e vindos dos ditos países, enviando conferências aos ciclos de estudos organizados pela União e, se esta lho pedir, dando-lhe pareceres sobre questões técnicas;

convidar os países em desenvolvimento

a incluírem, segundo as suas necessidades, nos seus programas nacionais de pedidos de assistência técnica exterior programas relativos às telecomunicações marítimas e a apoiarem os projectos multinacionais neste domínio.

RESOLUÇÃO N.º 400

Relativa ao tratamento das fichas de notificação referentes às consignações de frequência a estações aeronáuticas nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz (1)

A Conferência Administrativa das Radiocomunicações (Genebra, 1979),

considerando

a) Que os Actos Finais da Conferência Administrativa das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) entraram em vigor em 1 de Setembro de 1979;

b) Que o novo plano de adjudicação de frequências contido no apêndice 27 Aer2 entrará em vigor em 1 de Fevereiro de 1983, à 1 hora UTC;

c) Que certas administrações podem desejar começar a aplicar certas disposições do novo plano de adjudicação de frequências antes da data especificada para a sua entrada em vigor, nos casos em que não sejam, assim, causadas interferências prejudiciais ao serviço assegurado pelas estações que funcionam de acordo com o plano actual de consignação de frequências;

d) Que é, por consequência, necessário prever um procedimento provisório para facilitar a passagem do plano actual ao novo plano de consignação de frequências;

decide

1. Que durante o período transitório que decorrerá entre a data de entrada em vigor dos Actos Finais supramencionados e a data de entrada em vigor do novo plano de adjudicação de frequências:

1.1. Continuem a aplicar-se as disposições dos n.ºs **1334** a **1341** do Regulamento das Radiocomunicações durante o exame das fichas de notificação relativas às consignações de frequência às estações aeronáuticas do serviço móvel aeronáutico (R), em conformidade com as consignações do plano existente;

---

(1) Substitui a Resolução Aer2-4 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

1.2. Todas essas consignações sejam inscritas no ficheiro de referência internacional das frequências, de acordo com as conclusões formuladas pela IFRB;

1.3. A IFRB examine as consignações de frequência numa via de novo plano, a fim de determinar se as adjudicações do plano existente beneficiam da protecção especificada no apêndice 27 Aer2 (parte I, secção II-A, § 5). Ao proceder a esse exame, a Comissão admitirá que a frequência em questão será utilizada de acordo com os critérios de partilha entre as zonas especificadas no apêndice 27 Aer2 (parte I, secção II-B, § 4);

1.4. Qualquer consignação em conformidade com as disposições do § 1.3 acima e que tenha sido objecto de uma conclusão favorável seja incluída no ficheiro de referência;

1.5. A data a inscrever na coluna 2a ou na coluna 2b do ficheiro de referência seja determinada como segue:

a) Se a conclusão for favorável relativamente aos n.os **1336** a **1339**, inscrever-se-á a data de 29 de Abril de 1966 na coluna 2a;

b) Se a conclusão for favorável relativamente ao n.º **1341**, inscrever-se-á a data de 29 de Abril de 1966 na coluna 2b;

c) Para todas as outras consignações (incluindo as que possam estar de acordo com o novo plano de adjudicação de frequências, mas não com o plano actual), a data a inscrever na coluna 2b será a data em que a IFRB tenha recebido a ficha de notificação.

1.6. Qualquer consignação de acordo com o novo plano de adjudicação de frequências seja especificada como tal por meio de um símbolo conveniente que a IFRB inscreverá na coluna «Observações» do ficheiro de referência;

2. Que à data de entrada em vigor do novo plano de adjudicação de frequências a IFRB examine as consignações de frequência às estações aeronáuticas do serviço móvel aeronáutico (R) inscritas no ficheiro de referência internacional das frequências nas faixas atribuídas em exclusivo a este serviço entre 2850 kHz e 22 000 kHz, no que respeita à sua conformidade com o novo plano de adjudicação de frequências, seguindo para isso as partes pertinentes do procedimento descrito nos n.os **1334** a **1341** do Regulamento das Radiocomunicações, e inscreva em frente dessas consignações, na coluna 2a ou na coluna 2b do ficheiro de referência internacional das frequências, uma data determinada como segue:

2.1. Para as consignações com emissão em faixa lateral dupla (A3E) já inscritas no ficheiro de referência à data de entrada em vigor do novo plano de adjudicação de frequências, essa data continuará a ser a que estiver inscrita na coluna 2a ou na coluna 2b, consoante o caso, até 1 de Fevereiro de 1983. Uma data que figure na coluna 2a para uma consignação de frequência que utilize a faixa lateral dupla (A3E) será transferida para a coluna 2b em 2 de Fevereiro de 1983. Em 1 de Janeiro de 1987 a IFRB examinará as inscrições e, após consulta às administrações interessadas, anulará as inscrições que já não estejam em uso, conservando as outras apenas para informação, sem data, na coluna 2b;

2.2. Se a conclusão for favorável relativamente aos n.os **1335** a **1339,** inscrever-se-á a data de 5 de Março de 1978 na coluna 2b;

2.3. Se a conclusão for favorável relativamente aos n.os **1335** a **1341,** inscrever-se-á a data de 5 de Março de 1978 na coluna 2b;

2.4. Para todas as outras consignações, inscrever-se-á a data de 6 de Março de 1978 na coluna 2b;

3. Que à data de entrada em vigor do novo plano de adjudicação de frequências, as adjudicações que figuram nesse plano substituam, no ficheiro de referência internacional das frequências, as adjudicações que figuram no plano actual;

convida as administrações

a notificarem, logo que possível, à IFRB a anulação das consignações de frequência cuja utilização for abandonada por virtude da entrada em serviço das adjudicações do novo plano.

RESOLUÇÃO N.º 401

Relativa à implementação do plano de adjudicação de frequências nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz (1)

A Conferência Administrativa das Radiocomunicações (Genebra, 1979),

considerando

a) Que as faixas atribuídas em exclusivo entre 2850 kHz e 22 000 kHz ao serviço móvel aeronáutico (R) pela Conferência Administrativa das Radiocomunicações (Genebra, 1959) foram modificadas pela Conferência Administrativa Extraordinária das Radiocomunicações Aeronáuticas (Genebra, 1966);

b) Que a Conferência Administrativa Extraordinária das Radiocomunicações Aeronáuticas (Genebra, 1966) instituiu procedimentos destinados a serem aplicados pelas administrações no que respeita à entrada em serviço das modificações;

c) Que foram tomadas as disposições necessárias para que a IFRB ponha esses procedimentos em execução;

---

(1) Substitui a Resolução Aer2-5 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

reconhecendo

a) Que o serviço móvel aeronáutico (R) é antes de tudo um serviço de segurança;

b) Que a Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) introduziu novas modificações às referidas faixas, a fim de ter em conta as técnicas da faixa lateral única;

c) Que é necessário que todas as administrações adoptem as modificações efectuadas por essa Conferência, a fim de evitar interferências prejudiciais aos serviços assegurados por estações que funcionam em conformidade com as disposições do Regulamento das Radiocomunicações;

decide

1. Que, o mais tardar três meses antes da entrada em vigor do novo plano, as administrações notifiquem à IFRB as modificações destinadas a tornar conformes com esse plano as inscrições que figuram já no ficheiro de referência;

2. Que as consignações inscritas no ficheiro de referência à data de 1 de Fevereiro de 1983 e que nessa data não estejam em conformidade com as decisões da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) sejam tratadas como segue:

2.1. A IFRB fará chegar às administrações interessadas, dentro dos 30 dias que se seguem a 1 de Fevereiro de 1983, extractos pertinentes do ficheiro de referência, informando-as de que, em conformidade com os termos da presente resolução, as consignações em causa deverão ser transferidas para as frequências apropriadas num prazo de seis meses a contar da data de expedição dos referidos extractos;

2.2. Se uma administração não notificar essa transferência à IFRB no prazo prescrito, a inscrição existente será mantida no ficheiro de referência, sem indicação da data na coluna 2 e com uma observação apropriada na coluna «Observações». As administrações serão informadas dessa medida;

3. Que, se uma administração o desejar, a IFRB lhe preste toda a ajuda necessária. Em tal caso a IFRB aplicará as disposições dos n.ºs **1445** a **1449** do Regulamento das Radiocomunicações.

RESOLUÇÃO N.º 402

Relativa à implementação do novo arranjo aplicável às faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz (1)

A Conferência Administrativa das Radiocomunicações (Genebra, 1979),

considerando

a) Que a utilização de cada uma das faixas de frequências compreendidas entre 2850 kHz e 22 000 kHz e atribuídas em exclusivo ao serviço móvel aeronáutico (R) pela Conferência Administrativa das Radiocomunicações (Genebra, 1959) foi modificada pela Conferência Administrativa Extraordinária das Radiocomunicações Aeronáuticas (Genebra, 1966);

b) Que a Conferência Administrativa Extraordinária das Radiocomunicações Aeronáuticas (Genebra, 1966) decidiu que as administrações deveriam substituir progressivamente e o mais cedo possível, nas suas radiocomunicações do serviço móvel aeronáutico (R), a técnica da faixa lateral dupla pela técnica da faixa lateral única, pelo que a utilização das faixas em questão foi modificada de novo pela Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) para permitir a utilização da técnica da faixa lateral única;

c) Que um número muito grande de consignações de frequência às estações de aeronave e às estações aeronáuticas serão transferidas das frequências actuais para novas frequências e vias designadas por essa Conferência;

d) Que as transferências de consignações das frequências deveriam ser efectuadas logo que possível para que se possam materializar as vantagens que oferecem as novas vias designadas por essa Conferência;

e) Que a transferência das consignações deveriam ser realizada perturbando o menos possível o serviço prestado por cada estação;

f) Que a transferência das consignações deveria ser realizada de modo a evitar interferências prejudiciais entre as estações interessadas durante o período de implementação;

g) Que os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) entraram em vigor em 1 de Setembro de 1979;

h) Que o novo plano de adjudicação das frequências do apêndice 27 Aer2 entrará em vigor em 1 de Fevereiro de 1983;

---

(1) Substitui a Resolução Aer2-3 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

reconhecendo

a) Que o serviço móvel aeronáutico (R) é antes de tudo um serviço de segurança;

b) Que certas frequências foram adjudicadas para uso mundial;

c) Que a implementação das decisões da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) relativas ao novo arranjo das faixas atribuídas ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz deveria efectuar-se de maneira ordenada para a transferência dos serviços actuais das antigas para as novas consignações;

decide

1. Que, durante o período compreendido entre a data de entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) (1 de Setembro de 1979) e a data de entrada em vigor do novo plano de adjudicação de frequências que figura no apêndice 27 Aer2 (1 de Fevereiro de 1983), a utilização das vias para qualquer nova exploração em faixa lateral única se efectue de acordo com as seguintes disposições:

1.1. A frequência portadora (frequência de referência) da via em faixa lateral única situada na parte superior da antiga via em faixa lateral dupla será a mesma que a frequência portadora (frequência de referência) dessa via;

1.2. A frequência portadora (frequência de referência) da via em faixa lateral única situada na parte inferior da antiga via em faixa lateral dupla será 3 kHz inferior à frequência portadora (frequência de referência) dessa via;

1.3. Antes de 1 de Fevereiro de 1983 as estações aeronáuticas e as estações de aeronave dotadas de equipamento faixa lateral única podem utilizar uma ou outra das metades da antiga via em faixa lateral dupla, sendo a frequência portadora (frequência de referência) em faixa lateral única aquela que vem indicada nos §§ 1.1 e 1.2 anteriores;

1.4. Qualquer administração pode utilizar as vias do novo plano desde que não cause interferências prejudiciais aos utentes das vias do plano actual. Para a utilização operacional das vias em questão convém que as administrações tenham em conta as disposições do n.º 27/20 do apêndice 27 Aer2 ao Regulamento das Radiocomunicações;

2. Que em 1 de Fevereiro de 1983 as frequências indicadas no apêndice 27 ao Regulamento das Radiocomunicações sejam substituídas pelas frequências indicadas na parte II, secção II, artigo 2, do apêndice 27 Aer2;

3. Que é necessário que as administrações tomem as medidas apropriadas para passar o mais cedo possível à técnica da faixa lateral única, não permitindo mais a instalação de novos equipamentos em faixa lateral dupla a partir de 1 de Abril de 1981. As estações de aeronave e as estações aeronáuticas deverão poder começar o mais cedo possível a utilizar aparelhos em faixa lateral única e deverão, além disso, deixar de efectuar emissões em faixa lateral dupla no mais curto espaço de tempo e, em qualquer caso, o mais tardar em 1 de Fevereiro de 1983;

4. Que até 1 de Fevereiro de 1983 as estações aeronáuticas e as estações de aeronave dotadas de aparelhos em faixa lateral única devem igualmente ser equipadas de modo a poderem efectuar, quando necessário, emissões da classe H3E compatíveis com o emprego de receptores em faixa lateral dupla;

5. Que, salvo disposições contrárias contidas nos Actos Finais da Conferência Administrativa Mundial do Serviço Móvel Aeronáutico (R) (Genebra, 1978), a partir de 1 de Fevereiro de 1983 só sejam autorizadas as classes de emissão H2B, J3E, J2B, J2D e J9X. Contudo, a exploração em faixa lateral dupla poderá prosseguir para uso nacional até 1 de Fevereiro de 1987, com a condição de que essa exploração se efectue em conformidade com as disposições dos n.ºs **299** e **307** do Regulamento das Radiocomunicações e não cause interferências prejudiciais às estações que asseguram comunicações internacionais no serviço móvel aeronáutico (R) em faixa lateral única. Todavia, pede-se instantemente às administrações com necessidade desse alargamento do período de aplicação integral da faixa lateral única que cessem, logo que possível, a exploração em faixa lateral dupla.

RESOLUÇÃO N.º 403

Relativa à utilização das frequências de 3023 kHz e 5680 kHz comuns aos serviços móveis aeronáuticos (R) e (OR) (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tendo notado

que parece existirem certas anomalias nas condições de utilização das frequências de 3023,5 kHz e 5680 kHz estipuladas no apêndice 26 ao Regulamento das Radiocomunicações (Genebra, 1959), tais como estão enunciadas nas alíneas 2-*a*) e 2-*b*) que figuram na coluna 3 do artigo 2 do plano de adjudicação de frequências, e que foram tomadas medidas para fazer desaparecer essas anomalias;

---

(1) Substitui a Resolução Aer2-1 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

considerando

a) Que a coordenação das operações de busca e salvamento no local de um sinistro seria melhorada se durante essas operações a utilização das frequências de 3023 kHz (anteriormente 3023,5) e 5680 kHz fosse alargada às comunicações entre as estações móveis e as estações terrestres que nelas participarem;

b) Que seria do interesse geral do serviço móvel aeronáutico que as mesmas disposições relativas à utilização das frequências de 3023 kHz (anteriormente 3023,5) e 5680 kHz fossem aplicadas no serviço móvel aeronáutico (R) e no serviço móvel aeronáutico (OR);

decide

convidar as administrações a aplicarem no serviço móvel aeronáutico (OR), a partir da data de entrada em vigor do plano de adjudicação de frequências adoptado pela Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978), as disposições que regem a utilização das frequências 3023 kHz e 5680 kHz estipuladas no apêndice 27Aer2 (parte II, secção II, artigo 3).

RESOLUÇÃO N.º 404

Relativa à implementação da nova disposição das faixas de frequências atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 21 924 kHz e 22 000 kHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que na sua Recomendação Aer2-5 a Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) tinha recomendado às administrações que estudassem as questões relativas à utilização futura da faixa de 21 924-22 000 kHz;

b) Que a presente Conferência atribuiu esta faixa em exclusivo ao serviço móvel aeronáutico (R);

decide

que é necessário acrescentar no apêndice 27 Aer2 uma faixa de frequências suplementar para pôr em serviço frequências mundiais apropriadas para as comunicações a grande distância e reduzir a saturação das faixas utilizadas actualmente:

encarrega o secretário-geral

de publicar o novo apêndice 27 Aer2, adoptado pela Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978), com a inclusão de um plano para a faixa de 21 924-22 000 kHz segundo as indicações enunciadas em anexo à presente Resolução;

reconhecendo

que há risco de resultarem interferências prejudiciais ao serviço móvel aeronáutico (R) nesta faixa se em 1 de Fevereiro de 1983 as consignações existentes na faixa de 21 924-22 000 kHz não tiverem sido transferidas quer para as novas frequências destinadas ao serviço móvel aeronáutico (R), quer para outras faixas mais apropriadas para as consignações de frequência às estações do serviço fixo aeronáutico;

decide

1. Que a implementação das medidas tomadas pela presente Conferência relativamente à nova disposição da faixa de ondas decamétricas atribuída ao serviço móvel aeronáutico (R) deverá efectuar-se de acordo com o procedimento metódico definido a seguir para a passagem das antigas para as novas consignações;

2. Que as consignações visadas no § 1 devem ser tratadas como segue:

2.1. A IFRB enviará extractos pertinentes do ficheiro de referência às administrações interessadas, num prazo de 30 dias a contar de 1 de Fevereiro de 1982, informando-as de que, em conformidade com as disposições da presente Resolução, as consignações em causa devem ser transferidas para as faixas apropriadas num prazo de 6 meses após o envio desses extractos;

2.2. Se uma administração não notificar a transferência no prazo prescrito, manter-se-á a inscrição inicial no ficheiro de referência, sem indicação de data na coluna 2 e com uma observação apropriada na coluna «Observações», sendo a administração interessada avisada desta medida;

3. Que, se uma administração o desejar, a IFRB lhe preste a assistência necessária. Para isso a IFRB aplicará as disposições dos n.ºs **1445** e **1449** do Regulamento das Radiocomunicações.

ANEXO À RESOLUÇÃO N.º 404

Indicação de modificações a introduzir no apêndice 27 Aer2 do Regulamento das Radiocomunicações

A. APÊNDICE 27 Aer2

No índice, *parte II, no título, substituir a frequência de* 17 970 kHz *por* 22 000 kHz.
No n.º 27/10, *substituir* 17 970 kHz *por* 22 000 kHz.
No n.º 27/16, *acrescentar no quadro as novas frequências seguintes:*

KHz	
21 924-22 000	
21 925	21 964
21 928	21 967
21 931	21 970
21 934	21 973
21 937	21 976
21 940	21 979
21 943	21 982
21 946	21 985
21 949	21 988
21 952	21 991
21 955	21 994
21 958	21 997
21 961	–
	25 vias

No n.º 27/31-A, *no título que precede o* n.º 27/31-A, *substituir* 18 MHz *por* 22 MHz; *no texto do* n.º 27/31-A *substituir* 13 MHz *e* 18 MHz *por* 13 MHz, 18 MHz *e* 22 MHz.
No n.º 27/31-B, 2.ª linha, *substituir* a faixa dos 18 MHz *pelas faixas* dos 18 MHz; *e* 22 MHz 4.ª linha, *depois de* 18 MHz *acrescentar* 22 MHz.
Na parte II, *no título, substituir a frequência* de 17 970 kHz *por* 22 000 kHz.
No n.º 27/189, *acrescentar no quadro a nova coluna seguinte para a faixa dos* 22 MHz:

Zonas	Faixas (MHz) 22 kHz
W I	21 940 21 946 21 952 21 958 21 967 21 973 21 979 21 988 21 997
W II	21 964 21 985
W III	21 949 21 970
W IV	21 955 21 976 21 991
W V	21 943 21 961 21 982 21 994

Imediatamente depois do n.º 27/207, *acrescentar o novo quadro seguinte, correspondente à faixa de* 22 MHz:

27/207ADD Faixa de **21 924-22 000** **22 MHz**

RESOLUÇÃO N.º 405

Relativa à utilização das frequências do serviço móvel aeronáutico (R) (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) elaborou e adoptou um novo plano de adjudicação de frequências para a utilização das ondas decamétricas pelo serviço móvel aeronáutico (R) (apêndice 27 Aer2 ao Regulamento das Radiocomunicações);

b) Que o tráfego aéreo está sujeito a modificações contínuas;

c) Que essas modificações devem ser tomadas em consideração pelas administrações interessadas; mas

d) Que ao procurar satisfazer as novas necessidades de comunicações convém não tomar qualquer decisão susceptível de impedir ou de comprometer a utilização coordenada das ondas decamétricas pelo serviço móvel aeronáutico (R) tal como prevista no plano;

e) Que as famílias de frequências adjudicadas às zonas de passagem das linhas aéreas mundiais principais (ZLAMP) às zonas das linhas aéreas regionais e nacionais (ZLARN), assim como às subdivisões dessas zonas e às zonas VOLMET, foram escolhidas tendo em conta as condições de propagação que permitem a escolha de frequências que melhor convém às distâncias consideradas;

(1) Substitui a Resolução Aer2-7 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

f) Que convém tomar medidas para que seja correcta a ordem de grandeza das frequências utilizadas;
g) Que é essencial repartir o tráfego de comunicações tão uniformemente quanto possível entre as frequências disponíveis;
h) Que foram adjudicadas frequências para uma utilização mundial:

decide

que as administrações tomem, a título individual ou em colaboração, as medidas necessárias a fim de:

1. Assegurar a maior utilização possível de frequências mais elevadas para diminuir o tráfego nas faixas de ondas decamétricas do serviço móvel aeronáutico (R);

2. Utilizar tanto quanto possível antenas com uma directividade e um rendimento apropriados, para reduzir ao mínimo os riscos de interferências mútuas no interior de uma zona ou entre diversas zonas;

3. Coordenar a utilização das famílias necessárias para um troço de linha determinado, em conformidade com os princípios técnicos expostos no apêndice 27 Aer2, e tendo em conta os dados disponíveis sobre as condições de propagação, a fim de que sejam utilizadas as frequências que melhor convenham para ligação entre o solo e uma aeronave situada a uma dada distância da estação aeronáutica que assegura o serviço no troço de linha considerado;

4. Melhorar as técnicas e os procedimentos de exploração e utilizar o material que permita obter o rendimento mais elevado possível das comunicações ar-solo em ondas decamétricas;

5. Coligir dados técnicos precisos sobre o funcionamento dos seus sistemas de comunicação em ondas decamétricas, especialmente dados que tenham influência nas normas técnicas e de exploração, para facilitar um reexame do plano;

6. Determinar, por meio de arranjos regionais, o melhor método que permita assegurar as comunicações necessárias em qualquer nova linha aérea regional ou internacional a longa distância que não seja ou não possa ser servida no quadro das ALAMP e das ZLARN, de modo que não crie interferência prejudicial na utilização das frequências previstas no plano.

RESOLUÇÃO N.º 406

Relativa à utilização de faixas de frequências superiores às faixas de ondas decamétricas, para as comunicações e a difusão de informações meteorológicas no serviço móvel aeronáutico (R) e no serviço móvel aeronáutico por satélite (R) (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, sob o ponto de vista do serviço móvel aeronáutico, as faixas de frequências superiores às faixas de ondas decamétricas permitem assegurar comunicações mais seguras e melhor protegidas contra interferências do que as comunicações em ondas decamétricas;
b) Que, sob o ponto de vista técnico, assim como sob o ponto de vista da exploração, a utilização das ondas métricas pela aviação fez progressos notáveis;
c) Que se reconhece, presentemente, a possibilidade de estabelecer, no futuro, comunicações por satélite;
d) Que, devido ao constante desenvolvimento das telecomunicações aeronáuticas em todas as regiões do Mundo, existe um pedido crescente de frequências para o estabelecimento de comunicações com as aeronaves em voo e a difusão de informações meteorológicas para essas aeronaves;

decide

que convém que, na medida do possível e tendo em conta os imperativos económicos e técnicos, as administrações, para satisfazerem as suas necessidades de comunicações e de difusão de informações meteorológicas, procurem utilizar frequências escolhidas em faixas de frequências superiores às faixas de ondas decamétricas, atribuídas ao serviço móvel aeronáutico (R) e ao serviço móvel aeronáutico por satélite (R).

RESOLUÇÃO N.º 407

Relativa à utilização não autorizada de frequências das faixas atribuídas ao serviço móvel aeronáutico (R) (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, as observações de fiscalização das emissões relativas à utilização das frequências das faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz mostram que certo número de

---

(1) Substitui a Resolução Aer2-6 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

(2) Substitui a Resolução Aer2-2 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

frequências dessas faixas são ainda utilizadas por estações que pertencem a serviços diferentes do serviço móvel aeronáutico (R), especialmente por estações de radiodifusão de grande potência, algumas das quais funcionam em contravenção das disposições do n.º **2665** do Regulamento das Radiocomunicações;

b) Que essas estações causam, assim, interferências prejudiciais ao serviço móvel aeronáutico (R) e que se observou nas faixas em questão um grande número de emissões cujas origens não puderam ser identificadas com certeza absoluta;

c) Que as radiocomunicações constituem o único meio de comunicação à disposição do serviço móvel aeronáutico (R) e que este serviço é um serviço de segurança;

considerando, em especial

d) Que é essencial que as vias directamente utilizadas para o funcionamento dos serviços de transporte aéreo em boas condições de segurança e de regularidade estejam isentas de interferências prejudiciais, sendo dado que estas vias são indispensáveis à salvaguarda da vida humana e dos bens;

decide solicitar instantemente às administrações

1. Que se esforcem por que estações pertencentes a serviços diferentes do serviço móvel aeronáutico (R) se abstenham de utilizar as frequências das faixas atribuídas a este serviço, salvo nas condições estipuladas nos n.ºs **342** e **956** do Regulamento das Radiocomunicações;

a) Que não se poupem a esforços para identificar e localizar a origem de qualquer emissão não autorizada capaz de causar interferências prejudiciais ao serviço móvel aeronáutico (R) e susceptível, por isso, de pôr em perigo este serviço de segurança;

b) E que comuniquem os resultados obtidos à IFRB;

3. Que participem nos programas de fiscalização das emissões que a IFRB possa ser levada a organizar de acordo com a presente Resolução;

4. Que peçam aos respectivos governos que promulguem a legislação adequada que possa ser necessária para impedir as estações situadas a bordo de aeronaves de funcionarem em contravenção das disposições do n.º **2665** do Regulamento das Radiocomunicações;

encarregar a IFRB

1. De continuar a organizar programas de fiscalização das emissões nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R), com o objectivo de eliminar as emissões das estações de outros serviços que funcionam nestas faixas, emissões que causem interferências prejudiciais ao serviço móvel aeronáutico (R) ou sejam susceptíveis de as causar;

2. De tomar as medidas necessárias para eliminar as emissões das estações de outros serviços que funcionam nestas faixas, emissões que causem interferências prejudiciais ao serviço móvel aeronáutico (R) ou sejam susceptíveis de as causar;

3. De procurar, se for caso disso, a cooperação das administrações, de um lado, para identificar as origens dessas emissões, empregando todos os meios disponíveis, de outro, para obter a suspensão dessas emissões.

RESOLUÇÃO N.º 500

Relativa à modificação das frequências portadoras das estações de radiodifusão em ondas quilométricas na Região

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, tanto do ponto de vista técnico como económico, há interesse em reduzir as interferências que se produzem nos receptores de radiodifusão domésticos devido a frequências de combinação;

b) Que essas interferências são notavelmente reduzidas quando os valores nominais das frequências portadoras das estações de radiodifusão são múltiplos do afastamento dos canais;

c) Que os valores nominais das frequências portadoras das estações inscritas no plano de radiodifusão em ondas quilométricas para a Região 1 (Genebra, 1975) não são múltiplos do afastamento dos canais (9 kHz);

d) Que, para evitar interferências entre essas estações, é necessário que as frequências portadoras das estações de radiodifusão em ondas quilométricas da Região 1 sejam modificadas na mesma data, pelo menos no caso de todas as estações que partilham o mesmo canal, sem que daí resulte diminuição do afastamento entre as frequências portadoras adjacentes;

e) Que a modificação das frequências portadoras das estações de radiodifusão em ondas quilométricas aumentará, em certos casos, as interferências causadas às estações de radionavegação aeronáutica;

notando

que o serviço de radionavegação aeronáutica é um serviço de segurança:

decide

1. Que durante o período que vai de 1 de Fevereiro de 1986 a 1 de Fevereiro de 1990 os valores nominais das frequências portadoras de todas as estações em ondas quilométricas que funcionam em conformidade com o Acordo de Radiodifusão em Ondas Quilométricas e Hectométricas (Genebra, 1975) ou estão projectadas em conformidade com as disposições desse Acordo deverão ser reduzidos de 2 kHz, de modo que essas frequências fiquem a ser múltiplos de 9 kHz, permanecendo sem alteração as outras características das estações;

2. Que para garantir que se possam tomar as disposições para evitar qualquer interferência adicional ao serviço de radionavegação aeronáutica, a modificação das frequências das estações de radiodifusão deverá efectuar-se por grupos de cinco canais adjacentes, começando pelo grupo que tem as frequências mais baixas;

3. Que as modificações deverão efectuar-se em três fases, a saber:

Canais 1 a 5 — em 1 de Fevereiro de 1986
Canais 6 a 10 — em 1 de Fevereiro de 1988 à 1.00 UTC;
Canais 11 a 15 — em 1 de Fevereiro de 1990

4. Que à data da primeira modificação (1 de Fevereiro de 1986) o limite inferior da faixa atribuída ao serviço de radiodifusão passará a ser de 148,5 kHz e que depois de 1 de Fevereiro de 1990 a faixa atribuída a esse serviço será a faixa de 148,5-283,5 kHz;

5. Que qualquer modificação de uma consignação de frequência a uma estação de radionavegação aeronáutica que daí venha a resultar deverá ser notificada à IFRB e, se o seu exame levar a uma conclusão favorável relativamente às disposições dos n.os **1240** e **1241**, deverá ser inscrita no ficheiro de referência sem modificação de data ou de estatuto. Porém, se a conclusão da Comissão só for desfavorável relativamente às disposições do n.º **1241**, a modificação deverá ser inscrita no ficheiro de referência em conformidade com as disposições pertinentes do artigo 12, sem qualquer modificação da data inicial;

decide, além disso,

que as administrações deverão informar a IFRB, pelo menos, dois anos antes de introduzir modificações previstas nas características das suas estações de radiodifusão existentes em ondas quilométricas ou antes de pôr em serviço novas estações;

encarrega a IFRB

de publicar essas informações numa secção especial da sua circular semanal;

encarrega o secretário-geral

de comunicar a presente resolução ao secretário-geral da OACI.

RESOLUÇÃO N.º 501

Relativa ao exame pela IFRB das fichas de notificação referentes a estações do serviço de radiodifusão da Região 2 que funcionam na faixa de 535-1605 kHz durante o período que precede a entrada em vigor dos Actos Finais da Conferência Administrativa Regional de Radiodifusão em Ondas Hectométricas (Região 2).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, uma Conferência administrativa regional de radiodifusão em ondas hectométricas (Região 2) será convocada, em duas sessões, a fim de estabelecer um plano para o serviço de radiodifusão na faixa de 535-1605 kHz:

b) Que a 1.ª sessão dessa Conferência se realizará em Março de 1980 e a 2.ª sessão em Novembro de 1981;

c) Que as disposições pertinentes do artigo 12 foram modificadas pela presente Conferência;

d) Que a Conferência Administrativa Regional de Radiodifusão em Ondas Hectométricas (Região 2) adoptará as disposições que a Comissão deverá aplicar para a notificação e a inscrição no ficheiro de referência das consignações de frequência que figuram no plano;

e) Que é, por consequência, necessário estabelecer o procedimento que a Comissão deverá aplicar para o exame das fichas de notificação relativas às estações de radiodifusão da Região 2 que funcionam na faixa de 535-1605 kHz durante o período que vai desde a data de entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) até à data de entrada em vigor dos Actos Finais da Conferência Administrativa Regional de Radiodifusão em Ondas Hectométricas (Região 2):

decide

que entre a data de entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) e a data de entrada em vigor dos Actos Finais da Conferência Administrativa Regional de Radiodifusão em Ondas Hectométricas (Região 2) a Comissão não examinará, no que refere às disposições do n.º **1241**, as fichas de notificação das consignações de frequência às estações de radiodifusão da Região 2 que funcionam na faixa de 535-1605 kHz e inscrevê-las-á sem menção de data na coluna 2a ou na coluna 2b, sendo a data que figura na coluna 2c só dada a título de informação.

RESOLUÇÃO N.º 502

Relativa ao período compreendido entre a data de entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) e a data em que as disposições e o plano associado adoptados por essa Conferência serão incluídos, em anexo, no Regulamento das Radiocomunicações (1).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) entraram em vigor em 1 de Janeiro de 1979;
b) Que a Resolução Sat-4 da referida Conferência pede à Conferência Administrativa Mundial das Radiocomunicações de 1979 que inclua, em anexo, no Regulamento das Radiocomunicações as disposições e o plano associado que essa Resolução estabeleceu;
c) Que medeia um período transitório entre a aplicação dos Actos Finais da Conferência de 1977 e a entrada em vigor do Regulamento das Radiocomunicações que comporta a inclusão das disposições e do plano associado da Conferência de 1977 (apêndice 30);

considerando, além disso,

que os Actos Finais da Conferência de 1977 são considerados como contendo um acordo mundial e um plano associado, de acordo com a Resolução Spa2-2 da Conferência Administrativa Mundial das Radiocomunicações Espaciais (Genebra, 1971);

decide

1. Que durante esse período transitório e depois da data da sua inclusão em anexo, no Regulamento das Radiocomunicações e as disposições e o plano associado conservam a sua integridade como instrumento jurídico;
2. Que durante este período a IFRB e os outros órgãos adequados daquela deverão apoiar-se nas disposições dos Actos Finais da Conferência de 1977 e do Regulamento das Radiocomunicações.

RESOLUÇÃO N.º 503

Relativa à coordenação, à notificação e à inscrição no Ficheiro de Referência Internacional das Frequências das consignações de frequência às estações do serviço de radiodifusão por satélite da Região 2 (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que será estabelecido um plano para o serviço de radiodifusão por satélite da Região 2 em conformidade com a Resolução n.º 701;
b) Que na Região 2 o serviço de radiodifusão por satélite deveria ser explorado de acordo com os princípios enunciados no artigo 12 e nos anexos 6 e 7 do apêndice 30 ao Regulamento das Radiocomunicações;
c) Que algumas das disposições adoptadas pela Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) relativas às estações do serviço de radiodifusão por satélite nas Regiões 1 e 3 podem igualmente aplicar-se à Região 2 até à entrada em vigor do plano que será estabelecido para essa Região em cumprimento da Resolução n.º 701;
d) Que durante o período transitório os procedimentos expostos na Resolução n.º 33 continuarão a aplicar-se na Região 2;

---

(1) Substitui a Resolução Sat-3 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).
(2) Substitui a Resolução Sat-5 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

decide

1. Que qualquer administração que pretenda pôr em serviço uma estação espacial de radiodifusão por satélite na Região 2 deverá, para fins da coordenação com os sistemas de radiocomunicação espacial das outras administrações, aplicar as disposições apropriadas do artigo 11 (n.os **1042** a **1056**, inclusive) do Regulamento das Radiocomunicações;

2. Que as disposições pertinentes da Resolução n.º 33 se aplicarão à coordenação, à notificação e à inscrição das consignações de frequências às estações de radiodifusão por satélite na Região 2, sempre que se trate de uma estação do serviço de radiodifusão por satélite ou do serviço fixo por satélite na Região 2;

2.1. Que qualquer administração que notifique uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite na Região 2, nos termos do § 4.1 da Resolução n.º 33, notificará igualmente uma consignação por frequência a uma estação terrena de recepção tipo;

3. Que os procedimentos de coordenação, de notificação e de inscrição para as estações do serviço fixo por satélite descritos no artigo 7 do apêndice 30 ao Regulamento das Radiocomunicações serão aplicados igualmente às estações de radiodifusão por satélite na Região 2, em relação às estações de radiodifusão por satélite para as quais uma consignação de frequência está em conformidade com o plano, em todos os casos em que:

A largura de faixa necessária da consignação de frequência prevista para a Região 2 se sobreponha parcialmente à de uma consignação de frequência da Região 1 e ou Região 3; e

A densidade de fluxo de potência que seria produzida pela consignação de frequência pretendida para uma estação espacial de radiodifusão da Região 2 exceda o valor especificado no anexo 1 do apêndice 30;

4. Que para fornecer as informações indicadas na secção B da Resolução n.º 33 e na secção II do artigo 7 do apêndice 30 convirá utilizar o anexo 2 do apêndice 30;

5. Que cada consignação de frequência notificada em observância do § 4.1 da Resolução n.º 33 ou do § 2.1 da presente resolução ou da secção III do artigo 7 do apêndice 30 será objecto de uma ficha de notificação distinta, elaborada segundo as disposições do anexo 2 do apêndice 30.

RESOLUÇÃO N.º 504

Relativa aos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) no que respeita à Região 2

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) adoptou somente disposições para a Radiodifusão por Satélite (Genebra, 1977) adoptou somente disposições transitórias para a Região 2;

b) Que a presente Conferência decidiu introduzir no quadro de atribuição das faixas de frequências para a Região 2 modificações que influenciam as condições em que se baseiam essas disposições transitórias dos Actos Finais da Conferência de 1977;

c) Que a presente Conferência também decidiu incorporar as disposições e o plano associado adoptados pela Conferência de 1977 no Regulamento das Radiocomunicações como apêndice 30;

d) Que se reunirá, em 1983, uma conferência administrativa regional das radiocomunicações a fim de elaborar um plano para o serviço de radiodifusão por satélite na Região 2, em conformidade com a Resolução n.º 701;

decide

1. Que as disposições do artigo 12 do apêndice 30 relativas à segmentação do arco na Região 2 deixam de ser aplicáveis na faixa de 11,7-12-1 GHz e que não o serão mais no resto da faixa de 11,7-12,2 GHz depois da Conferência Administrativa Regional das Radiocomunicações de 1983;

2. Que as outras disposições transitórias do apêndice 30 relativas unicamente à Região 2 continuarão a aplicar-se até às decisões da Conferência Administrativa Regional das Radiocomunicações de 1983. Após essa data, considerar-se-ão os Actos Finais da Conferência Administrativa Regional de 1983 como anulando as disposições transitórias relativas à Região 2 e actualmente contidas no apêndice 30, sob reserva de que tenham sido oficialmente adoptados pela próxima conferência administrativa mundial das radiocomunicações competente.

RESOLUÇÃO N.º 505

Relativa ao serviço de radiodifusão por satélite (radiodifusão sonora) na gama de frequências de 0,5 GHz a 2 GHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que várias administrações apresentaram propostas relativas a atribuições de faixas de frequências ao serviço de radiodifusão por satélite (radiodifusão sonora) na gama de 0,5-2 GHz;

b) Que as faixas de frequências actualmente atribuídas ao serviço de radiodifusão por satélite não permitem a recepção individual de programas sonoros por receptores portáteis e por receptores instalados em automóveis;
c) Que a introdução do serviço de radiodifusão por satélite (radiodifusão sonora) na gamas de 0,5-2 GHz é tecnicamente realizável e permitiria a recepção individual por receptores portáteis e por receptores instalados em automóveis;
d) Que experiências de simulação confirmaram algumas das hipóteses apresentadas em estudos teóricos, mas que, no entanto, não foi ainda feita qualquer demonstração de um sistema prático;
e) Que devem fazer-se estudos complementares antes da entrada em serviço de sistemas operacionais;
f) Que a CCIR empreendeu estudos sobre este serviço, no quadro do programa de estudos 34B/10;
g) Que a gama de frequências conveniente para este serviço é limitada a 0,5 GHz para a extremidade inferior (devido á elevação do nível do ruído artificial e ao aumento das dimensões das antenas de emissão quando a frequência decresce) e a 2 GHz para a extremidade superior (devido à diminuição da superfície equivalente das antenas de recepção quando a frequência aumenta);
h) Que, devido ao nível elevado da densidade de fluxo de potência necessária, a partilha com os serviços de Terra parece extremamente difícil;

notando

a) Que certas administrações apresentaram propostas relativas à faixa de frequências de 1429-1525 MHz;
b) Que o serviço de radioastronomia dispõe de uma atribuição na faixa inferior contígua, de modo que a parte inferior da faixa de 1429-1525 MHz não pode ser encarada para uma atribuição ao serviço de radiodifusão por satélite (radiodifusão sonora);
c) Que na fase experimental bastaria uma largura de faixa de algumas centenas de kilohertz;

decide

1. Que as administrações deverão ser encorajadas a fazer experiências sobre o serviço de radiodifusão por satélite (radiodifusão sonora) no interior da gama de frequências de 0,5-2 GHz em pequenas subfaixas convenientemente situadas, sob reserva de acordo entre as administrações interessadas. Uma dessas subfaixas pode situar-se na faixa de 1429-1525 MHz;

2. Que a CCIR deverá prosseguir e acelerar os estudos relativos às características técnicas de um sistema de radiodifusão sonora por satélite para a recepção individual em receptores portáteis e em receptores para veículos automóveis, à possibilidade da partilha com os serviços de Terra e aos critérios de partilha apropriados;

3. Que a próxima conferência administrativa mundial das radiocomunicações que deva tratar dos serviços de radiocomunicação espacial em geral, ou de um desses serviços em especial, deverá estar habilitada a examinar os resultados dos diversos estudos efectuados e a tomar as decisões necessárias à atribuição de uma faixa de frequências apropriadas;

4. Que a conferência acima mencionada deverá, além disso, elaborar procedimentos apropriados com vista a proteger e, se necessário, a transferir para outras faixas as consignações às estações dos serviços de Terra susceptíveis de serem afectadas.

RESOLUÇÃO N.º 506

Relativa à utilização da órbita dos satélites geostacionários, com exclusão de qualquer outra órbita, pelas estações espaciais que funcionam nas faixas de frequências de 12 GHz atribuídas ao serviço de radiodifusão por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) aprovou, para as Regiões 1 e 3, um plano especificando consignações de frequências nas faixas mencionadas acima e posições na órbita dos satélites geostacionários;
b) Que uma conferência administrativa regional das radiocomunicações, que se realizará em 1983, deve elaborar um plano semelhante para a Região 2;
c) Que a exploração de serviços de radiocomunicações espacial nas referidas faixas de frequências, mas numa órbita diferente da dos satélites geostacionários, seria incompatível com os planos mencionados nas alíneas *a*) e *b*):

decide

que as administrações devem proceder de modo que as suas estações espaciais nas faixas de frequências consideradas utilizem a órbita dos satélites geostacionários, com exclusão de qualquer outra órbita.

---

(1) Substitui a Resolução Sat-7 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

RESOLUÇÃO N.º 507

Relativa ao estabelecimento de acordos e de planos associados para o serviço de radiodifusão por satélite(1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é importante fazer o melhor uso possível da órbita dos satélites geostacionários e das faixas de frequências atribuídas ao serviço de radiodifusão por satélite;
b) Que o grande número de instalações de recepção utilizando antenas directivas, que poderão ser postas em funcionamento para um serviço de radiodifusão por satélite, poderá ser obstáculo à mudança das localizações das estações espaciais deste serviço na órbita dos satélites geostacionários, partir do momento em que sejam postas em serviço;
c) Que as emissões de radiodifusão por satélite poderiam provocar interferências prejudiciais em grande parte da superfície da Terra;
d) Que os outros serviços que beneficiam de atribuições na mesma faixa têm necessidade de utilizar esta antes da entrada em funcionamento ao serviço de radiodifusão por satélite;

decide

1. Que as estações do serviço de radiodifusão por satélite sejam estabelecidas e exploradas em conformidade com acordos e planos associados estabelecidos por conferências administrativas, mundiais ou regionais, consoante o caso, nas quais poderão participar todas as administrações interessadas e aquelas cujos serviços sejam susceptíveis de ser afectados;
2. Que, durante o período que precede a entrada em vigor de tais acordos e planos associados, as administrações e a IFRB apliquem o procedimento descrito na Resolução n.º 33;

convida o conselho de administração

a prosseguir o exame da questão da convocação de conferências administrativas mundiais, ou de conferências administrativas regionais, se for caso disso, com vista a fixar as datas e locais, assim como a agenda, convenientes.

RESOLUÇÃO N.º 508

Relativa à convocação de uma conferência administrativa mundial das radiocomunicações para a planificação das faixas de ondas decamétricas atribuídas ao serviço de radiodifusão

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que não é satisfatória a situação que actualmente existe nas faixas de ondas decamétricas atribuídas em exclusivo ao serviço de radiodifusão;
b) Que importa proceder de modo a que sejam garantidos a todos os países direitos iguais de livre utilização dessas faixas;

decide

1. Que a utilização das faixas de ondas decamétricas atribuídas em exclusivo ou partilhadas com o serviço de radiodifusão (com exclusão das faixas reservadas para a radiodifusão na zona tropical) seja objecto de planificação por uma conferência administrativa mundial das radiocomunicações;
2. Que a planificação se baseie na utilização de emissões de faixa lateral dupla (FLD). A conferência deveria igualmente estudar a forma como um sistema de faixa lateral única (FLU) poderia ser introduzido progressivamente sem causar deterioração grave nas emissões em faixa lateral dupla;
3. Que a conferência visada no § 1 se realize em duas sessões;
4. Que a 1.ª sessão:
4.1. Seja encarregada de especificar os critérios técnicos para a planificação e os princípios que deverão reger a utilização das faixas de ondas decamétricas atribuídas ao serviço de radiodifusão, em especial:
4.1.1. A potência apropriada para a radiodifusão em ondas decamétricas, tendo em conta os outros factores técnicos pertinentes;
4.1.2. As necessidades de cada país no que se refere à radiodifusão nacional e internacional;
4.1.3. O número máximo de frequências a utilizar para a difusão de um mesmo programa com destino a uma mesma zona;
4.1.4. A especificação de um sistema em faixa lateral única que possa ser utilizado no futuro pela radiodifusão em ondas decamétricas;

---

(1) Substitui a Resolução Spa2-2 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

4.2. Decida, além disso, sobre os princípios de planificação a aplicar e sobre o método de planificação a utilizar pela 2.ª sessão;

5. Que na sua 2.ª sessão, que deveria realizar-se o mais cedo 12 meses e o mais tarde 18 meses depois da 1.ª sessão, a conferência:

5.1. Proceda à planificação em conformidade com os princípios e o método fixados aquando da 1.ª sessão;

5.2. Examine e, se necessário, reveja as disposições pertinentes do Regulamento das Radiocomunicações relativas ao serviço de radiodifusão em ondas decamétricas;

pede instantemente às administrações

que até à realização da conferência não utilizem emissores de potência mais elevada que a necessária para assegurar uma recepção satisfatória e que se esforcem porque o número das frequências utilizadas corresponda ao mínimo necessário;

chama a atenção do conselho de administração

para a urgência de que se reveste essa conferência, e

convida o conselho de administração

a tomar todas as disposições necessárias para a convocação da conferência e a fixar a data da 1.ª sessão o mais cedo possível depois da próxima assembleia plenária da CCIR, tendo em conta o prazo mínimo fixado no artigo 58 (n.º 303) da Convenção;

pede à IFRB

que efectue os estudos técnicos e os trabalhos preparatórios necessários, incluindo os indicados no n.º **1771** do Regulamento das Radiocomunicações;

pede à CCIR

que acelere os estudos que são objecto das Recomendações n.os 500 e 501.

RESOLUÇÃO N.º 509

Relativa à convocação de uma conferência regional de radiodifusão encarregada de reexaminar e de rever as disposições dos Actos Finais da Conferência Africana de Radiodifusão em Ondas Métricas e Decimétricas (Genebra, 1963)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o último plano africano de radiodifusão em ondas métricas e decimétricas foi estabelecido em Genebra, em 1963, para a radiodifusão sonora na faixa II (87,5-100 MHz) e para a radiodifusão televisiva nas faixas I (47-68 MHz), III (174-233 MHz), IV (470-582 MHz) e V (582-960 MHz);

b) Que alguns países africanos não participaram na Conferência Africana de Radiodifusão em Ondas Métricas e Decimétricas (Genebra, 1963);

c) Que muitos outros países africanos se tornaram então independentes e que esses países deverão ser incluídos num novo plano;

notando

a) Que está previsto organizar uma conferência de planificação de radiodifusão sonora em modulação de frequência para a faixa de 87,5-108 MHz (v. Resolução n.º 510);

b) A extensão, de 174-223 MHz a 174-230 MHz, da atribuição que foi feita, a título primário, ao serviço de radiodifusão (televisão) na Região 1;

constando

que é necessário actualizar o plano existente;

decide

que seja convocada uma conferência regional logo que possível, e de preferência antes de 1984, a fim de reexaminar e de rever as disposições do plano actual de radiodifusão televisiva em ondas métricas e decimétricas (Genebra, 1963) para a zona africana de radiodifusão, tendo em conta as consignações contidas no Plano de Estocolmo de 1961;

convida o conselho de administração

a tomar todas as disposições necessárias para convocar essa conferência e para lhe fixar a data e a agenda;

pede à CCIR

que efectue os estudos técnicos necessários;

pede à IFRB

que efectue os trabalhos preparatórios necessários à dita conferência.

RESOLUÇÃO N.º 510

Relativa à convocação de uma conferência de planificação da radiodifusão sonora na faixa de 87,5-108 MHz para a Região 1 e certos países interessados da Região 3

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a faixa atribuída, a título primário, ao serviço de radiodifusão na Região 1 foi alargada de 87,5-100 MHz para 87,5-108 MHz;
b) Que na Região 1 a faixa de 100-108 MHz está actualmente atribuída ao serviço móvel, excepto móvel aeronáutico (R), e também ao serviço fixo em alguns países;
c) Que vários países da Região 3 com fronteiras terrestres com a Região 1 utilizam também esta faixa para o serviço de radiodifusão;
d) Que é necessário estabelecer um novo plano de radiodifusão sonora para toda a faixa de 87,5-100 MHz para todos os países da Região 1 que utilizam ou que prevêem utilizar a faixa de 87,5-100 MHz para a radiodifusão sonora em modulação de frequência;
e) Que para outros países da Região 1 é necessário estabelecer um plano de radiodifusão sonora na faixa de 100-108 MHz;
f) Que esse novo plano não deveria em nenhum caso influenciar desfavoravelmente as consignações existentes, ou em projecto, às estações de televisão na faixa de 87,5-100 MHz, que estão em conformidade com o Acordo Regional de Estocolmo, 1961;
g) Que esse novo plano, na faixa de 87,5-100 MHz, não deveria ter como consequência a deterioração das zonas de serviço das estações existentes de radiodifusão sonora que funcionam em conformidade com o Acordo Regional de Estocolmo, 1961, situadas na zona de coordenação com os países que utilizam esta faixa para a televisão em conformidade com o Acordo Regional de Estocolmo, 1961;
h) Que é necessário introduzir, logo que possível, estações de radiodifusão sonora na faixa de 100-108 MHz em conformidade com esse plano;
i) Que existe a possibilidade de as instalações de radionavegação utilizadas para a aterragem automática de aeronaves e que funcionam na faixa adjacente de 108-112 MHz serem submetidas a interferências prejudiciais por estações de radiodifusão situadas na proximidade e funcionamento na faixas de 87,5-108 MHz, se as frequências das respectivas estações não forem judiciosamente escolhidas, e de tais interferências porem em perigo a vida humana:

decide

1. Que se realize uma conferência regional antes de 31 de Dezembro de 1983, com vista a estabelecer um acordo para a Região 1 e para os países interessados da Região 3 e um plano associado relativo à radiodifusão sonora na faixa de 87,5-108 MHz para a Região 1 e para as partes do Afeganistão e do Irão contíguas da Região 1;
2. Que essa Conferência se efectue em duas sessões:

A 1.ª sessão permitirá estabelecer as bases técnicas para a preparação do plano, os critérios mútuos de partilha entre o serviço de radiodifusão sonora e os outros serviços, incluindo o serviço de radiodifusão (televisão) que funciona na faixa de 87,5-108 MHz;
A 2.ª sessão, que se realizará de preferência 6 a 12 meses depois da 1.ª, deverá elaborar o acordo e o plano associado;

3. Que se deve dar aos países interessados da Região 3 a possibilidade de participarem nessa conferência;

pede à CCIR

que estude urgentemente as bases necessárias à planificação e à determinação dos critérios de protecção entre as estações de radiodifusão sonora e as estações de radiodifusão televisiva entre as estações de radiodifusão sonora e as estações dos serviços fixo e móvel, excepto aeronáutico (R);

convida o conselho de administração

a fixar as datas e a agenda dessa conferência;

pede às administrações

que, quando da planificação da faixa de 87,5-108 MHz, tenham em conta os problemas de compatibilidade com as instalações de radionavegação que funcionam na faixa adjacente.

RESOLUÇÃO N.º 600

Relativa à utilização, para o serviço de radionavegação, das faixas de frequências de 2900-3100 MHz, 5470-5650 MHz, 9200-9300 MHz, 9300-9500 MHz e 9500-9800 MHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a presente Conferência adoptou disposições relativas ao desenvolvimento de equipamentos de resposta que devem ser instalados a bordo de navios e utilizados no serviço de radionavegação marítima, nas faixas de frequências de 2930-2950 MHz, 5470-5480 MHz e 9280-9300 MHz;

b) Que atribuições de frequência para o serviço de radionavegação, nas faixas utilizadas para a radionavegação aeronáutica e marítima, são objecto de pedidos crescentes, em razão:

i) Do aumento do número de radiodetectores marítimos de bordo, aumento esse que tende a intensificar-se devido á exigência que visa tornar obrigatória a instalação desses equipamentos a bordo dos navios em todo o Mundo;

ii) Das crescentes necessidades no que se refere a auxiliares da navegação e a equipamentos de resposta destinados a funcionar em associação com radiodetectores primários;

iii) Da necessidade de aumentar a utilização dessas faixas pelas estações do serviço de radionavegação aeronáutica, tendo em conta o facto de que se exige também a instalação desses equipamentos a bordo de aeronaves a título obrigatório em todo o Mundo;

c) Que se produzem cada vez mais interferências prejudiciais na faixa de 9300-9500 MHz devido a essas circunstâncias;

d) Que tais aplicações de radiodetectores levantam importantes problemas de segurança;

notando

a) As disposições da Recomendação n.º 605;

b) As conclusões da reunião especial preparatória da CCIR;

c) A necessidade de dispor de informações complementares, relativas à exploração e aos aspectos técnicos, para decidir sobre a utilização mais eficaz das frequências;

decide

1. Que a próxima conferência administrativa mundial das radiocomunicações competente deverá:

1.1. Reexaminar as notas relativas a estas faixas atribuídas ao serviço de radionavegação e introduzir-lhes as modificações que considere apropriadas, à luz de estudos complementares;

1.2. Elaborar recomendações apropriadas com carácter regulamentar;

2. Que a CCIR deverá prosseguir o exame dos aspectos técnicos e formular pareceres;

convida

1. O conselho de administração a tomar as disposições necessárias para que as questões de radionavegação que interessam aos serviços móveis figurem na agenda da próxima conferência de radiocomunicações competente no que se refere a serviços móveis;

2. As administrações a estudarem a utilização dessas faixas pelos serviços de radionavegação e a apresentarem propostas com vista à utilização eficaz das referidas faixas;

pede ao secretário-geral

que apresente esta resolução à OMCI e à OACI e que peça a essas organizações que examinem com urgência as exigências operacionais dos serviços de radionavegação marítima e aeronáutica que utilizam estas faixas de frequências e formulem recomendações apropriadas a fim de auxiliar as administrações a prepararem essa conferência.

RESOLUÇÃO N.º 601

Relativa às normas e aos pareceres referentes às radiobalizas de localização de sinistros que funcionam nas frequências de 121,5 MHz e 243 MHz (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as radiobalizas de localização de sinistros que funcionam nas frequências de 121,5 MHz e 243 MHz se destinam a facilitar as operações de busca e salvamento;
b) Que as frequências de 121,5 MHz e 243 MHz são correntemente utilizadas pelas aeronaves que participam em operações de busca e salvamento;
c) Que a Organizçaão da Aviação Civil Internacional recomendou características do sinal especificações técnicas aplicáveis aos aparelhos de aeronave que funcionam na frequência de 121,5 MHz ou na frequência de 243 MHz, ou nessas duas frequências;

decide

que convém que as administrações que autorizem a utilização de radiobalizas de localização de sinistros funcionando na frequência de 121,5 MHz ou na frequência de 243 MHz, ou nessas duas frequências, tomem as disposições necessárias para que essas radiobalizas estejam em conformidade com as normas e com os pareceres pertinentes da Organização da Aviação Civil Internacional e da Comissão Consultiva Internacional das Radiocomunicações.

RESOLUÇÃO N.º 640

Relativa à utilização internacional, em caso de catástrofe natural, das radiocomunicações nas faixas de frequências atribuídas ao serviço de amador

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, em caso de catástrofe natural, os sistemas de comunicação normais ficam frequentemente sobrecarregados, danificados ou totalmente inutilizáveis;
b) Que é indispensável restabelecer rapidamente as comunicações para facilitar as operações de socorro organizadas à escala mundial;
c) Que as faixas atribuídas ao serviço de amador não estão sujeitas a planos internacionais ou a procedimentos de notificação e que, portanto, se prestam bem a uma utilização a curto prazo nos casos de urgência;
d) Que as comunicações internacionais, em caso de catástrofe, seriam facilitadas pelo recurso provisório a certas faixas de frequências atribuídas ao serviço de amador;
e) Que, em tais circunstâncias, as estações do serviço de amador, devido à sua larga dispersão e à sua capacidade demonstrada em casos semelhantes, podem ajudar a responder às necessidades essenciais de comunicações;
f) Que existem redes nacionais e regionais de amadores que, para os casos de urgência, utilizam certas frequências nas faixas atribuídas ao serviço de amador;
g) Que, em caso de catástrofe natural, a comunicação directa entre as estações do serviço de amador e de outras estações poderia revelar-se útil, especialmente para efectuar comunicações indispensáveis até ao restabelecimento das comunicações normais;

reconhecendo

que, no que se refere às comunicações em caso de catástrofe natural, os direitos e as responsabilidades pertencem às administrações interessadas;

decide

1. Que as faixas atribuídas ao serviço de amador indicadas no n.º **510** podem ser utilizadas pelas administrações para dar resposta às necessidades de comunicações internacionais em caso de catástrofe;
2. Que essas faixas assim utilizadas só devem servir para comunicações relacionadas com operações de socorro em caso de catástrofe natural;
3. Que, para as comunicações em caso de catástrofe, a utilização das faixas atribuídas ao serviço de amador por estações não pertencentes a este serviço deve ser limitada ao período de urgência e às zonas geográficas particulares, definidas pela autoridade responsável do país afectado;
4. Que as comunicações estabelecidas em caso de catástrofe devem efectuar-se no interior da zona sinistrada e entre a zona sinistrada e a sede permanente da organização que assegura as operações de socorro;

---

(1)Substitui a Resolução Mar7 da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967).

5. Que tais comunicações só devem efectuar-se com o consentimento da administração do país atingido pela catástrofe;

6. Que as comunicações de socorro de origem exterior ao país sinistrado não devem substituir as redes de amador nacionais ou internacionais já previstas para as situações de urgência;

7. Que é desejável uma estreita colaboração entre as estações do serviço de amador e as estações de outros serviços de radiocomunicações que possam considerar necessário utilizar as frequências atribuídas ao serviço de amador para as comunicações em caso de catástrofe;

8. Que tais comunicações internacionais de socorro devem, na medida do possível, evitar causar interferências às redes do serviço de amador;

convida as administrações

1. A satisfazerem as necessidades para as comunicações internacionais em caso de catástrofe;

2. A preverem, na sua regulamentação nacional, os meios de satisfazer as necessidades para as comunicações de urgência.

RESOLUÇÃO N.º 641

Relativa à utilização da faixa de frequências de 7000-7100 KHz (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a partilha das faixas de frequências entre o serviço de amador e o serviço de radiodifusão não é desejável e que convém evitá-la;

b) Que é desejável que esses serviços recebam, na faixa 7, atribuições mundiais exclusivas;

c) Que a faixa de 7000-7100 kHz é atribuída em exclusivo ao serviço de amador em todo o Mundo;

decide

que a faixa de 7000-7100 kHz deve ser interdita ao serviço de radiodifusão e que as estações de radiodifusão devem deixar de emitir em frequências desta faixa.

RESOLUÇÃO N.º 642

Relativa à entrada em serviço das estações terrenas do serviço de amador por satélite

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

que os procedimentos dos artigos 11 e 13 são aplicáveis ao serviço de amador por satélite;

reconhecendo, além disso,

a) Que as características das estações terrenas do serviço de amador por satélite são muito diversas;

b) Que as estações espaciais do serviço de amador por satélite estão concebidas de maneira que as estações terrenas de amador de todos os países a elas tenham acesso;

c) Que a coordenação entre as estações dos serviços de amador e de amador por satélite se efectua sem que haja necessidade de recorrer a procedimentos oficiais;

d) Que, em aplicação das disposições do n.º **2741** do Regulamento das Radiocomunicações, incumbe à administração que autoriza uma estação espacial do serviço de amador por satélite eliminar qualquer interferência prejudicial;

nota

que certas informações especificadas nos apêndices 3 e 4 não podem razoavelmente ser fornecidas no caso de estações do serviço de amador por satélite;

decide

1. Que, quando uma administração (ou uma administração agindo em nome de um grupo de administrações expressamente nomeadas) se propuser estabelecer um sistema de satélites do serviço de amador por satélite e desejar publicar informações relativas às estações terrenas desse sistema, poderá:

1.1. Comunicar à IFRB a totalidade, ou parte, das informações pedidas no apêndice 3; a IFRB publicará essas informações numa secção especial da sua circular semanal, pedindo que os comentários lhe sejam comunicados no prazo de quatro meses a contar da data de publicação;

---

(1) Substitui a Resolução n.º 10 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

1.2. Notificar, nos termos dos n.os **1488** a **1491**, a totalidade ou parte das informações indicadas no apêndice 3; a IFRB inscrevê-las-á numa lista especial;

2. Que essas informações incluirão, no mínimo, as características de uma estação terrena tipo do serviço de amador por satélite, que possa transmitir sinais à estação espacial para accionar ou modificar as funções da estação espacial ou para as terminar.

RESOLUÇÃO N.º 700

Relativa à partilha entre o serviço fixo por satélite nas Regiões 1 e 3 e o serviço de radiodifusão por satélite na Região 2, na faixa de 12,2-12,7 GHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

a) Que fez uma atribuição ao serviço de radiodifusão por satélite na faixa de 12,1-12,7 GHz na Região 2;
b) Que a atribuição ao serviço fixo por satélite foi mantida na faixa de 12,5-12,75 GHz nas Regiões 1 e 3, e que foi feita uma atribuição adicional na faixa de 12,2-12,5 GHz para a Região 3;
c) Que quando do estabelecimento do plano de radiodifusão por satélite (Genebra, 1977) para as Regiões 1 e 3 foram tidas devidamente em conta as necessidades de exploração futuras do serviço fixo por satélite na Região 2 e que, para o efeito, houve a necessidade de impor restrições para a preparação do plano e para o procedimento de modificação associado;

decide

1. Que antes da entrada em vigor das disposições apropriadas e do plano associado que deverão ser estabelecidos pela conferência regional para a planificação do serviço de radiodifusão por satélite na Região 2, as disposições da Resolução n.º 33, assim como as disposições do artigo 11, se aplicarão à coordenação entre as estações espaciais do serviço de radiodifusão por satélite da Região 2 e as estações espaciais do serviço fixo por satélite das Regiões 1 e 3;

2. Que ao estabelecer um plano (assim como qualquer procedimento de modificação associado) para o serviço de radiodifusão por satélite na Região 2 deverá ter-se em conta a necessidade de um funcionamento satisfatório, no futuro, do serviço fixo por satélite nas Regiões 1 e 3, e que, no caso de se julgar necessário impor condicionamentos a esse serviço, de modo que não seja causada qualquer interferência prejudicial aos serviços fixos por satélite ou de radiodifusão por satélite em questão, convirá que esses condicionamentos não sejam em nenhum caso mais estritos que os impostos ao serviço fixo por satélite na Região 2 pelo apêndice 30;

3. Que, para indicar à conferência regional os princípios orientadores a seguir para alcançar o objectivo expresso no n.º 2 anterior, a CCIR deverá estudar urgentemente as disposições técnicas necessárias, tendo em conta os sistemas ou projectados do serviço fixo por satélite para a exploração nas faixas de 12,5-12,7 GHz na Região 1 e de 12,2-12,7 GHz na Região 3.

RESOLUÇÃO N.º 701

Relativa à convocação de uma conferência administrativa regional das radiocomunicações encarregadas de estabelecer um plano pormenorizado para o serviço de radiodifusão por satélite na faixa de 12 GHz e as ligações de conexão associadas na Região 2 (1).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que a Conferência Administrativa Mundial da Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) adoptou um plano de consignações de frequência e de posições orbitais para o serviço de radiodifusão por satélite nas faixas de 12 GHz para as Regiões 1 e 3;
b) Que a referida Conferência adoptou disposições provisórias, na previsão do estabelecimento de um plano análogo para a Região 2;
c) Que, após consulta aos Membros da Região 2 pelo conselho de administração, se prevê a convocação, em 1983, de uma conferência administrativa regional das radiocomunicações para a radiodifusão por satélite para a Região 2;
d) Que a presente Conferência adoptou modificações do quadro de atribuição das faixas de frequências, que terão repercussões sérias nas condições em que a conferência da Região 2 se baseará para estabelecer o seu plano para o serviço de radiodifusão por satélite na faixa de 12 GHz;
e) Que a presente Conferência também decidiu incorporar as disposições e o plano associado adoptados pela Conferência de 1977 no Regulamento das Radiocomunicações como apêndice 30:

---

(1) Substitui as Resoluções Sat-8 e Sat-9 e a Recomendação Sat-8 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

considerando

a) Que os anexos 8 e 9 do apêndice 30 contêm os dados técnicos e os critérios de partilha utilizados para o estabelecimento das disposições e do plano associado;
b) Que convém tirar partido dos progressos técnicos resultantes das experiências efectuadas com satélites de radiodifusão desde 1977;
c) Que convém também tirar partido dos estudos recentes da CCIR;
d) Que, relativamente aos serviços de radiocomunicação espacial, a presente Conferência atribuiu, na Região 1, a faixa de 12,3-12,7 GHz ao serviço de radiodifusão por satélite, e a faixa de 12,1-12,3 GHz ao serviço fixo por satélite e ao serviço de radiodifusão por satélite, em conformidade com as disposições da nota 841 do quadro de atribuição das faixas de frequências;
e) Que a presente Conferência reservou as faixas de 14,5-14,8 GHz e de 17,3-18,1 GHz para serem utilizadas nas ligações de conexão para os satélites de radiodifusão;
f) Que há vantagens importantes em planificar as ligações ascendentes ao mesmo tempo que se efectua a planificação dos sistemas de radiodifusão por satélite que funcionam na faixa de 12 GHz;

reconhecendo

a) Que já não é necessária a segmentação do arco na faixa de 11,7-12,1 GHz e que deixará de ser necessária na faixa de 12,1-12,3 GHz após a conferência administrativa regional das radiocomunicações de 1983;
b) Que os sistemas do serviço fixo por satélite que funcionam na faixa de 11,7-12,2 GHz não devem impor restrições ao estabelecimento de um plano de radiodifusão por satélite na Região 2, mas que, nas decisões da conferência administrativa regional das radiocomunicações de 1983, convirá ter em consideração aqueles sistemas que sejam desenvolvidos até à data da conferência administrativa regional das radiocomunicações de 1983, e que estejam em conformidade com as disposições dos Actos Finais da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971) e da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977):

decide

1. Que, o mais tardar em 1983, se realizará uma conferência administrativa regional das radiocomunicações (CARR), à qual se refere a alínea *c*) da parte *notando*, a fim de:

1.1. Dividir a faixa de 12,1-12,3 GHz em duas subfaixas e atribuir, a título primário, a subfaixa inferior ao serviço fixo por satélite e a subfaixa superior ao serviço de radiodifusão por satélite, ao serviço de radiodifusão, ao serviço móvel, excepto móvel aeronáutico, e ao serviço fixo (v. o n.º **841**);

1.2. Estabelecer um plano pormenorizado de consignações de frequência e de posições orbitais para o serviço de radiodifusão por satélite na Região 2, na faixa de 12,3-12,7 GHz e na parte da faixa de 12,1-12,3 GHz, que essa conferência atribuirá ao serviço de radiodifusão por satélite;

1.3. Planificar as ligações de conexão numa parte da faixa de 17,3-18,1 GHz, da mesma largura que a faixa total atribuída ao serviço de radiodifusão por satélite na faixa de 12 GHz. Todavia, as administrações poderão, nas ligações de conexão para os satélites de radiodifusão, utilizar faixas de frequências diferentes das faixas previstas no plano, com a condição de que essa utilização não exija qualquer modificação do plano;

1.4. Estabelecer procedimentos que regulamentarão a utilização, pelo serviço de radiodifusão por satélite, das faixas especificadas no § 1.2 da presente Resolução e, se necessário, procedimentos aplicáveis às ligações de conexão correspondentes;

2. Que a planificação deverá ter em conta as secções pertinentes do apêndice 30, e especialmente os anexos 4 e 5, assim como outras decisões tomadas pela presente Conferência. Ao tomar em consideração os anexos 6, 7 e 8, convirá igualmente ter em conta os pareceres mais recentes da CCIR e os últimos progressos da técnica;

3. Que o plano indicará a consignação pormenorizada das posições orbitais e dos canais disponíveis, garantindo assim que as necessidades no que se refere à radiodifusão por satélite apresentadas por cada administração serão satisfeitas equitativamente em relação a todos os países interessados. Por princípio, convirá garantir a cada administração da Região um número mínimo (4) de canais para a exploração do serviço de radiodifusão por satélite. Para além deste mínimo, ter-se-ão em conta as características especiais dos países (superfície, zonas horárias, diversidade linguística, etc.);

4. Que todas as administrações da Região 2 deverão apresentar à IFRB as suas necessidades no que se refere ao serviço de radiodifusão por satélite o mais tardar um ano antes do início da conferência administrativa regional das radiocomunicações encarregada de estabelecer um plano para esse serviço na Região 2. Essas necessidades poderão ser actualizadas à vontade das administrações. Considera-se que a palavra «necessidade» inclui o número e os limites de cada zona de serviço, assim como o número de canais necessários para cada zona. Seis meses antes da data limite fixada para o envio dos pedidos, a IFBR lembrará às administrações, por carta-circular ou telegrama, que devem comunicar as suas necessidades;

5. Que a planificação se fará na base da recepção individual, mas que cada administração poderá utilizar o sistema de recepção que melhor corresponda às suas necessidades (recepção individual ou recepção comunitária, ou ambas);

6. Que, quando da planificação, não se deverá perder de vista os sistemas devem ser concebidos de modo a reduzir ao mínimo as diferenças e incompatibilidades técnicas com os sistemas utilizados noutras Regiões;

7. Que a planificação deverá ter em conta as disposições das Resoluções n.ºs 31 e 700 relativas à questão da partilha inter-regional;

convida o conselho de administração

a tomar as medidas necessárias para a convocação da referida conferência administrativa regional das radiocomunicações, baseando-se nas disposições da presente Resolução para estabelecer a agenda dessa conferência;

convida a CCIR

a efectuar os estudos necessários para apresentar com a antecedência necessária informações técnicas de que a conferência terá provavelmente necessidade como base dos seus trabalhos (v., também, a Recomendação n.º 101);

convida a IFBR

1. A pedir a todas as administrações dos países da Região 2 que apresentem as suas necessidades no que se refere ao serviço de radiodifusão por satélite em conformidade com as disposições do § 4 anterior;
2. A reunir as informações apresentadas pelas administrações sob uma forma que permita o estudo comparativo delas, a comunicar essas informações ao secretário-geral para publicação e a enviá-las às administrações o mais tardar nove meses antes da abertura da Conferência Administrativa Regional das Radiocomunicações.

RESOLUÇÃO N.º 702

Relativa à convocação de uma conferência administrativas regional das radiocomunicações encarregada de definir critérios de partilha para a utilização das faixas das ondas métricas e decimétricas atribuídas aos serviços fixo, de radiodifusão e móvel da Região 3.

A conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que atribuições de frequências nas faixas das ondas métricas e decimétricas foram sujeitas, durante esta Conferência, a importantes revisões, que ocasionaram partilhas essencialmente entre os serviços fixo, de radiodifusão e móvel;
b) Que o desenvolvimento anárquico dos serviços que partilham esta parte do espectro em toda a Região ameaça dar origem à utilização desordenada e ineficaz deste último;
c) Que não existe qualquer critério bem estabelecido para definir a partilha do espectro entre os serviços a que essas faixas estão atribuídas;
d) Que na Região 3 não existe qualquer acordo regional quer regule a instalação de radiodifusão nessas faixas;
e) Que não é certo, nesta fase, que seja necessário um plano de consignação para a Região 3;

notando

a prioridade que ela deu à convocação de futuras conferências administrativas de radiocomunicações;

decide

1. Que em devido tempo seja convocada uma conferência administrativa regional das radiocomunicações;
2. Que essa conferência regional defina os critérios técnicos de partilha entre os serviços fixo, de radiodifusão e móvel aos quais estão atribuídas as faixas em causa;
3. Que após a definição desses critérios técnicos a conferência decida igualmente as medidas a tomar em seguida;

convida o conselho de administração

a preparar a convocação da referida conferência administrativa regional das radiocomunicações, apoiando-se nas indicações dadas na presente Resolução para estabelecer a agenda da conferência;

convida a CCIR

a proceder aos estudos necessários para apresentar, em devido tempo, as informações técnicas provavelmente necessárias para servir de base aos trabalhos da conferência regional;

convida as administrações

a contribuírem de modo apropriado para os estudos da CCIR.

RESOLUÇÃO N.º 703

Relativa aos métodos de cálculo e aos critérios de interferência recomendados pela CCIR no que respeita à partilha das faixas de frequências entre serviços de radiocomunicações espacial e serviços de radiocomunicação de Terra ou entre serviços de radiocomunicação espacial (1).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 199),

considerando

a) Que nas faixas de frequências partilhadas, com igualdade de direitos, pelos serviços de radiocomunicação espacial e pelos serviços de radiocomunicação de Terra é preciso impor a cada um desses serviços certas restrições de ordem técnica e certos procedimentos de coordenação a fim de evitar interferências mútuas;

---

(1) Substitui a Resolução Spa2-6 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

b) Que nas faixas de frequências partilhadas por estações espaciais situadas a bordo de satélites geostacionários é necessário impor procedimentos de coordenação a fim de limitar as interferências mútuas;

c) Que os métodos de cálculo e os critérios de interferência relativos aos procedimentos de coordenação mencionados nas alíneas *a*) e *b*) acima se baseiam em pareceres da CCIR;

d) Que, graças não só aos bons resultados da utilização partilhada das faixas de frequências pelos serviços de radiocomunicação espacial e pelos serviços de radiocomunicação de Terra, como também aos progressos constantes da técnica espacial, cada assembleia plenária da CCIR que se realizou desde a X Assembleia Plenária (Genebra, 1963) melhorou alguns dos critérios técnicos que a assembleia plenária precedente tinha preconizado;

e) Que a assembleia plenária da CCIR se reúne de três em três anos, ao passo que as conferências administrativas das radiocomunicações, que estão habilitadas a modificar o Regulamento das Radiocomunicações utilizando em larga medida os pareceres da CCIR, se reúnem, na prática, com menos frequência e muito menos regularmente;

f) Que a Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 193) reconhece aos Membros da União a faculdade de concluírem acordos especiais sobre questões de telecomunicações, não podendo, no entanto, tais acordos contrariar as disposições da Convenção ou dos regulamentos a ela anexos relativamente a interferências prejudiciais causadas aos serviços de radiocomunicação dos outros países;

convencida

a) De que as futuras assembleias plenárias da CCIR introduzirão provavelmente novas modificações nos métodos de cálculo e nos critérios de interferência recomendados;

b) De que as administrações deveriam ser informadas antecipadamente dos projectos de pareceres pertinentes da CCIR;

c) Que convém que as administrações apliquem, na medida do possível, os pareceres em vigor da CCIR relativos aos critérios de partilha, quando estabelecerem planos de sistemas destinados a funcionar nas faixas de frequências partilhadas, com igualdade de direitos, entre serviços de radiocomunicação espacial e serviços de radiocomunicação de Terra ou entre serviços de radiocomunicação espacial;

convida a CCIR

a) A pedir às comissões de estudos que, nas suas reuniões finais que precedem a assembleia plenária, preparem uma lista provisória em que assinalem as passagens pertinentes dos projectos de pareceres revistos e projectos de novos pareceres da CCIR que tenham incidência sobre os métodos de cálculo e sobre os critérios de interferência, assim como as secções específicas do Regulamento das Radiocomunicações a que se aplicam, relativamente à partilha entre serviços de radiocomunicação espacial e serviços de radiocomunicação de Terra, ou entre serviços de radiocomunicação espacial;

b) A pedir ao director da CCIR que, no prazo de 30 dias a seguir às reuniões finais das comissões de estudos, faça chegar essa lista às administrações e à IFRB acompanhada dos textos desses projectos de pareceres revistos e dos novos pareceres;

decide

1. Que a IFRB difunda imediatamente por todas as administrações as informações mencionadas na alínea *b*) da parte *convida a CCIR*, de modo que essas informações lhes cheguem, sempre que possível, antes da convocação da assembleia plenária seguinte.

Esse envio deverá ser acompanhado de uma nota a indicar que os textos em anexo vão ser submetidos à aprovação da assembleia plenária seguinte da CCIR;

2:

a) Que cada assembleia plenária da CCIR, depois de ter adoptado, na totalidade ou em parte, os pareceres pertinentes, examinado e aprovado as partes apropriadas da lista mencionada na alínea *a*) da parte *convida a CCIR*, tome as disposições necessárias para que o secretário-geral seja informado dessa lista, assim como dos pareceres que tenham incidência sobre os métodos de cálculo apropriados e os critérios de interferência a utilizar;

b) Que, no prazo de 30 dias, o secretário-geral difunda esta lista, assim como os textos pertinentes, por todas as administrações, para lhes pedir que indiquem, num prazo de quatro meses, quais são os pareceres da CCIR ou os critérios técnicos definidos nos pareceres mencionados no § 2, alínea *a*) acima, que aceitam utilizar na aplicação das disposições pertinentes do Regulamento das Radiocomunicações;

3. Que as administrações que não respondam, no prazo de 4 meses, ao pedido do secretário-geral recebam um telegrama a pedir-lhes que comuniquem a sua decisão respeitante à aplicação desses pareceres no quadro das disposições pertinentes do Regulamento das Radiocomunicações. Se, no prazo de 30 dias a contar da data do envio do telegrama, não for recebida resposta de uma administração, considerar-se-á que essa administração não deseja, de momento, expressar qualquer opinião;

4. Que, no caso de uma administração, em resposta ao pedido do secretário-geral, indicar que não pode aceitar determinado parecer da CCIR ou determinado critério técnico definido nesses pareceres, ou no caso de uma administração não responder ao pedido do secretário-geral como está indicado no § 3 acima, os métodos de cálculo e os critérios de interferência pertinentes definidos no Regulamento das Radiocomunicações continuem a aplicar-se nos casos que digam respeito a essa Administração;

5. Que o secretário-geral publique, para informação de todas as administrações, uma lista elaborada pela IFRB na base das respostas ao pedido supracitado dos pareceres da CCIR ou dos métodos de cálculo e dos critérios de interferência pertinentes definidos nesses pareceres, com a indicação das administrações para as quais cada um desses pareceres ou cada um desses critérios técnicos é aceitável ou inaceitável. Essa lista recapitulativa incluirá também os nomes das administrações mencionadas no § 3 acima;

6. Que a IFRB deve ter em conta:

a) As condições de aplicação dos métodos de cálculo e os critérios de interferência da CCIR, quando proceder a exames técnicos em casos que interessam unicamente a administrações para as quais esses métodos e esses critérios são aceitáveis;

a) As condições de aplicação dos métodos de cálculo e dos critérios de interferência definidos no Regulamento das Radiocomunicações, em conformidade com a lista recapitulativa mencionada no § 5 acima, quando proceder a exames técnicos, em casos que interessam as outras administrações;

7. Que o secretário-geral solicite anualmente às administrações que ainda não tenham respondido que lhe comuniquem a sua decisão em aplicação do § 3 acima;

8. Que se posteriormente surgirem questões relativamente á aplicação de qualquer dos métodos de cálculo e de qualquer dos critérios de interferência pertinentes, num caso que implique as administrações referidas no § 3 acima, a IFRB proceda a um inquérito junto das administrações interessadas para saber se elas estariam de acordo em que sejam aplicados os métodos e critérios técnicos definidos nos pareceres pertinentes da CCIR e de que trata o § 2 acima;

9. Que a lista recapitulativa publicada em aplicação do § 5 acima seja actualizada com base nas respostas recebidas em aplicação dos §§ 7 e 8 acima.

RECOMENDAÇÕES

Nota do secretário-geral

Em aplicação das decisões tomadas pela Conferência, as Recomendações foram classificadas e enumeradas pelas categorias e segundo o sistema de numeração indicado a seguir. Além disso, na aplicação deste processo de classificação verificou-se que certas Recomendações, pertencentes a um dado grupo, estavam directamente relacionadas com Recomendações que figuram noutros grupos. Este facto foi tido em conta para facilitar a consulta dos textos.

RECOMENDAÇÃO N.º 1

Relativa à utilização de sistemas de radiocomunicações espaciais no caso de catástrofes naturais, de epidemias, de fomes e de outras situações críticas análogas (1)

A Conferência Administrativa das Radiocomunicações (Genebra, 1979),

considerando

a) Que, em caso de catástrofes naturais, epidemias, de fomes e de outras situações críticas análogas, podem ser salvas vias por socorros rápidos e eficazes;
b) Que são essenciais telecomunicações rápidas e fiáveis para essa operações de socorro;
c) Que, em consequência dos danos que sofreram ou por outras razões, os meios de telecomunicação normais das zonas sinistradas são frequentemente insuficientes para as operações de socorro e que os recursos locais não permitem restabelecê-los ou completá-los rapidamente;
d) Que o emprego de sistemas de radiocomunicações espaciais constitui um dos meios que permitiria assegurar telecomunicações rápidas e fiáveis para as operações de socorro;

notando

a) Que, segundo o que se sabe da planificação no que se refere a sistemas de radiocomunicações espaciais, não estão previstas frequências nem vias designadas para as radiocomunicações em caso de sinistro;
b) Que, na ausência de tais disposições, não é possível estabelecer especificações para estações terrenas de funcionamento universal que possam ser transportadas rapidamente;
c) Que o Relatório n.º 554-1 da CCIR apresenta os resultados mais recentes dos estudos relativos às estações terrenas transportáveis afectas às operações de socorro;

recomenda

1. Que as administrações, individualmente ou em colaboração, quando estabelecerem os planos dos seus sistemas de radiocomunicações espaciais tomem medidas com vista a satisfazer as necessidades de eventuais operações de socorro e determinem para o efeito vias radioeléctricas e facilidades que possam ser imediatamente utilizadas para operações de socorro;
2. Que as administrações interessadas prescindam de aplicar os procedimentos de coordenação previstos no Regulamento das Radiocomunicações no caso de estações terrenas transportáveis afectas às operações de socorro;

convida a CCIR

a continuar os estudos sobre especificações tipo e as frequências preferíveis para estações terrenas transportáveis e para equipamento compatível transportável para as radiocomunicações fixas e móveis destinadas às operações de socorro.

RECOMENDAÇÃO N.º 2

Relativa ao exame, pelas conferências administrativas mundiais das radiocomunicações, do estado de ocupação do espectro das frequências no domínio das radiocomunicações espaciais (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as faixas de frequências utilizáveis para as aplicações espaciais são limitadas em número e em largura;
b) Que são em número limitado as posições possíveis para satélites cujo principal objectivo é o estabelecimento de ligações de telecomunicações e que algumas posições são mais favoráveis que outras para certas ligações;
c) Que convém dar a todas as administrações a possibilidade de estabelecerem as ligações espaciais que julgem necessárias;
d) Que a importância e o custo das redes ou dos sistemas espaciais são tais que é necessário evitar o mais possível pôr entraves à sua exploração e ao seu desenvolvimento;
e) Que a técnica está em constante e rápida evolução e que convém assegurar a melhor utilização possível dos recurso no domínio das radiocomunicações espaciais;
f) Que as administrações devem proceder de modo que as consignações de frequência para aplicações espaciais sejam utilizadas da maneira mais eficaz possível tendo em conta o desenvolvimento da técnica e seja abandonadas logo que deixem de estar em serviço;
g) Que, apesar das disposições do artigo 11 do Regulamento das Radiocomunicações e dos princípios adoptados pela Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971) que prevêem procedimentos de consulta e de coordenação muito vastos entre administrações com vista à melhor inclusão possível de todos os sistemas espaciais, pode acontecer que, com o aumento da utilização das frequências e das posições orbitais, as administrações encontrem dificuldades inaceitáveis numa ou várias faixas de frequências para prover às suas necessidades no que se refere às radiocomunicações espaciais;

recomenda

que a próxima conferência administrativa mundial das radiocomunicações apropriada seja habilitada a tratar da situação descrita no *considerando* g), se tal situação se apresentar;

---

(1) Substitui a Resolução Spa2-13 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).
(2) Substitui a Resolução Spa2-1 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

convida, por isso, o conselho de administração

se tal situação se apresentar, a fixar a agenda da próxima conferência administrativa mundial das radiocomunicações apropriada de modo a permitir-lhe examinar sob todos os aspectos a utilização de ou das faixas de frequências consideradas, incluindo especialmente as consignações em causa registadas no Ficheiro Internacional de Referência das Frequências, e encontrar uma solução para o problema.

RECOMENDAÇÃO N.º 3

Relativa à transmissão de energia eléctrica por meio de frequências radioeléctricas a partir de um engenho espacial

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, sob o ponto de vista técnico, pode ser possível no futuro transformar certas partes de radiação solar em energia eléctrica a bordo de um engenho espacial e transmitir essa energia para a Terra utilizando técnicas de transmissão radioeléctrica e que essa energia poderia completar os recursos mundiais de energia;

b) Que a transmissão eventual de radiações de tal potência poderia ter efeitos desfavoráveis sobre a propagação na ionosfera das ondas radioeléctricas destinadas a outros serviços;

reconhecendo

a) Que é necessário garantir que a transmissão, por meio de frequências radioeléctricas, da energia eléctrica recolhida no espaço não venha a causar interferências prejudiciais aos serviços de radiocomunicação;

b) Que é necessário avaliar as consequências ecológicas e biológicas eventuais da transmissão radioeléctrica dessa energia, especialmente para aeronaves que atravessem o feixe das antenas que servirão a essa transmissão;

notando

que o Relatório da Reunião Especial Preparatória da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) se refere à possibilidade técnica de construir um satélite para recolher a energia solar;

notando igualmente

as disposições do artigo 6 do Regulamento das Radiocomunicações relativas à obrigação que as administrações têm de não causar interferência prejudicial aos serviços de radiocomunicação que funcionem em conformidade com as disposições do Regulamento;

recomenda à CCIR

que estude de modo apropriado, sob todos os aspectos, os efeitos dessa transmissão radioeléctrica de energia a partir do espaço sobre um serviço de radiocomunicação e formule recomendações, apropriadas, tendo em conta as incidências ecológicas e biológicas;

convida o secretário-geral

a transmitir esta Recomendação ao Secretário-Geral das Nações Unidas.

RECOMENDAÇÃO N.º 4

Relativa à forma de melhorar o agrupamento das ligações das redes nacionais e internacionais de radiocomunicação que funcionam nas faixas compreendidas entre 4000 kHz e 27 500 kHz (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) As necessidades sempre crescentes de frequências, especialmente nas faixas compreendidas entre 400 kHz e 27 500 kHz;

b) A estrutura actual das redes nacionais e internacionais de radiocomunicação nessas faixas;

---

(1) Substitui a Recomendação n.º 11 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

c) O tráfego relativamente reduzido em certas ligações dessas redes;
d) As disposições da Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973), relativas à utilização racional de frequências e do espectro (artigo 33);

tendo em conta esse facto

a) De que rendimento de um grupo de ligações é superior à soma dos rendimentos das ligações individuais;
b) Que, por consequência, é possível diminuir o número total das frequências necessárias;
c) Que, em certas partes do Mundo, existem zonas e países interconectados por diversas ligações tanto radioeléctricas como por cabos;

recomenda

1. Que, em todos os casos em que isso seja possível, as administrações se esforcem, agrupando mais eficazmente as ligações radioeléctricas de tráfego reduzido, por diminuir a saturação das faixas compreendidas entre 4000 kHz e 27 500 kHz;

2. Que os países interconectados por ligações radioeléctricas ou por cabos concluam, sempre que possível na prática, acordos especiais relativos à utilização em comum das ligações internacionais existentes e funcionando nas faixas compreendidas entre 4000 kHz e 27 500 kHz;

3. Que, por regra geral, esses acordos garantam a cada um dos países participantes vantagens equivalentes no que respeita às condições financeiras e aos meios de exploração;

4. Que, ao projectarem novas ligações radioeléctricas ou a extensão daquelas que existem já, as administrações tenham em conta, tanto quanto possível, os princípios enunciados nos §§ 1 a 3 acima.

RECOMENDAÇÃO N.º 5

Relativa aos meios a adoptar para reduzir a saturação da faixa 7 (3-30 MHz) (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

a) Que é necessário reduzir com urgência o volume de pedidos referentes à faixa 7 do espectro das frequências radioeléctricas;
b) Quem, tirando partido dos últimos progressos da técnica das telecomunicações, e especialmente dos conseguidos na utilização das faixas 8 e superiores, no emprego de cabos coaxiais, etc., é possível contribuir para essa redução;
c) Que a utilização de meios técnicos aperfeiçoados de substituição conduziria a gastos consideráveis, ao passo que seria menos oneroso continuar a empregar as frequências da faixa 7, e que, em tais condições, certas administrações experimentariam mais dificuldades que outras, mais favorecidas, em adoptar esses novos meios;

recomenda

1. Que todas as administrações tomem medidas necessárias para reduzir o volume dos pedidos referentes à faixa 7, utilizando o mais possível as técnicas modernas;

2. Que seja pedido às organizações internacionais que prestam a sua assistência que dêem importância especial ao fornecimento de equipamento às administrações que, por razões de ordem económica, não estejam em condições de, elas próprias, o adquirirem, de modo a permitir a adopção por essas administrações de meios de telecomunicação de substituição, contribuindo assim para uma maior economia na utilização da faixa 7.

RECOMENDAÇÃO N.º 6

Relativa às necessidades práticas dos países que têm necessidade de assistência especial (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

recomenda

a todas as administrações que se esforcem particularmente por colaborar com as administrações dos países com necessidade de assistência especial, fornecendo-lhe informações de fiscalização das emissões e assistência técnica que possa ajudá-las a obter consignações de frequência que convenham às suas ligações;

---

(1) Substitui a Recomendação n.º 10 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).
(2) Substitui a Recomendação n.º 35 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

convida a IFRB

a fornecer às administrações dos países com necessidade de assistência especial informações e dados técnicos que lhes sejam necessários, incluindo explicações pormenorizadas sobre o Regulamento das Radiocomunicações de modo a permitir-lhes escolher e obter consignações de frequência que convenham ao funcionamento das suas ligações.

RECOMENDAÇÃO N.º 7

Relativa à adopção de modelos normalizados de licenças concedidas às estações de navio e às estações de aeronave (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a normalização dos modelos de licenças concedidas às estações de navio e de aeronaves que efectuam percursos internacionais facilitaria consideravelmente a inspecção dessas estações;
b) Que modelos normalizados de licenças a conceder às estações de navio e de aeronave serviriam de guia útil às administrações que desejam melhorar os seus modelos actuais de licenças nacionais;
c) Que esses modelos normalizados de licença poderiam ser utilizados com vantagem por essas administrações para constituírem o certificado de que trata o n.º **2027** do Regulamento das Radiocomunicações;

considerando, além disso,

que a Conferência Administrativa das Radiocomunicações (Genebra, 1959) elaborou:

a) Uma série de princípios para a execução dos modelos normalizados de licenças (v. o anexo 1);
b) Modelos de licenças a conceder às estações de aeronave (v. os anexos 2 e 3):

recomenda

1. Que as administrações, se acharem esses modelos práticos e aceitáveis, os adoptem para uso internacional;
2. Que as administrações se esforcem, tanto quanto possível, por tornarem os seus modelos de licenças nacionais conforme com esses modelos normalizados.

ANEXO À RECOMENDAÇÃO N.º 7

Princípios a seguir para a elaboração de modelos normalizados de licenças a conceder às estações de navio e às estações de aeronave

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) considerou que, quando da elaboração dos modelos normalizados de licenças de estações de navio e de aeronaves, convém:

1. Apresentar, tanto quando possível, os modelos de licenças sob a forma de quadros. As linhas e as colunas desse quadro devem ser marcadas por letras ou algarismos;
2. Dar uma forma o mais possível semelhante às licenças das estações de navio das estações de aeronave;
3. Dar às licenças o formato internacional A4;
4. Apresentar as licenças sob forma que facilite ao máximo a verificação desses documentos a bordo dos navios ou das aeronaves;
5. Imprimir as licenças em caracteres latinos, na língua nacional do país que as concede. As administrações dos países cuja língua nacional não pode ser escrita em caracteres latinos utilizarão essa língua nacional e, além disso, uma língua de trabalho da União;
6. Colocar no cimo da licença o título «Licença de estação de navio» ou «Licença de estação de aeronave». Esse título será na língua do país de origem, assim como nas três línguas de trabalho da União. Estes princípios foram aplicados quando da elaboração dos modelos de licença de que tratam os anexos 2 e 3.

---

(1) Substitui a Recomendação n.º 17 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

ANEXO 2 À RECOMENDAÇÃO N.º 7

(Nome completo da autoridade que concede a licença, escrito na língua nacional)

... (*a*)

SHIP STATION LICENCE

LICENCE DE STATION DE NAVIRE

LICENCIA DE ESTACIÓN DE BARCO

N.º ...

Duração de validade

Em conformidade com... (regulamentação nacional) e com o Regulamento das Radiocomunicações anexo à Convenção Internacional das Telecomunicações actualmente em vigor, é concedida a presente autorização para a utilização do equipamento radioeléctrico abaixo descrito:

1	2	3	4
Nome do navio	Indicativo de chamada ou outro modo de identificação	Armador do navio	Categoria de correspondência pública

	Aparelho	a	b	c	d
		Tipo	Potência (watts)	Classe de emissão	Faixas de frequência ou frequências consignadas
5	Emissores				(*b*)
6	Emissores de socorro de navio				(*b*)
7	Emissores de engenho de salvamento				(*b*)
8	Outro aparelho	(*Facultativo*)			

(*a*) As palavras «licença de estação de navio» devem ser escritas na língua nacional, no caso de essa língua ser uma língua de trabalho da União.
(*b*) Valor numérico ou símbolo.

Pela autoridade que concede a licença:

... ...
(Localidade) (Data) (Marca de autenticação)
(Selo branco)

ANEXO 3 À RECOMENDAÇÃO N.º 7

(Nome completo da autoridade que concede a licença, escrito na língua nacional)

... (*a*)

AIRCRAFT STATION LICENCE

LICENCE DE STATION D'AÉRONEF

LICENCIA DE ESTACIÓN DE AERONAVE

N.º ...

Duração da validade

Em conformidade com... (regulamentação nacional) e com o Regulamento das Radiocomunicações anexo à Convenção Internacional das Telecomunicações actualmente em vigor, é concedida a presente autorização para utilização do equipamento radioeléctrico abaixo descrito:

1	2	3	4
Nacionalidade e sinais de matrícula da aeronave	Indicativo de chamada ou outro modo de identificação	Tipo de aeronave	Proprietário da aeronave

(*a*) As palavras «licença de estação de navio» devem ser escritas na língua nacional, no caso de essa língua ser uma língua de trabalho da União.
(*b*) Valor numérico ou símbolo.

	Aparelho	a Tipo	b Potência (watts)	c Classe de emissão	d Faixas de frequência ou frequências consignadas
5	Emissores				(*b*)
6	Emissores de engenho de salvamento (se for caso disso).				(*b*)
7	Outro aparelho	(*Facultativo*)			

(*a*) As palavras «licença de estação de aeronave» devem ser escritas na língua nacional, no caso de essa língua ser uma língua de trabalho da União.
(*b*) Valor numérico ou símbolo.

Pela autoridade que concede a licença:

... ...
(Localidade) (Data) (Marca de autenticação)
(Selo branco)

RECOMENDAÇÃO N.º 8

Relativa à identificação automática das estações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

a) Que o artigo 25 do Regulamento das Radiocomunicações autoriza, sempre que isso seja possível, a identificação automática das estações nos serviços apropriados e em certas circunstâncias;
b) Que nem sempre é realizável nem oportuno dar uma identificação manual;
c) Que as fontes de interferência prejudicial não são muitas vezes identificadas durante longos períodos e que as medidas que poderiam ser tomadas com vista a atenuar a interferência se encontram por causa disso atrasadas;
d) Que os procedimentos relativos à identificação automática podem ajudar, quando necessário, a remover certos inconvenientes da identificação manual;
e) Que a emissão automática de um indicativo de chamada ou de outros sinais pode permitir identificar certas estações que nem sempre é possível identificar, por exemplo, os feixes hertzianos e os sistemas espaciais;
f) Que é desejável promover um método de identificação automática comum a fim de facilitar a aplicação efectiva das disposições do artigo 25, o que impediria a proliferação de numerosos sistemas e técnicas de modulação variados que poderiam ser utilizados para esse fim;

recomenda

à CCIR que estude a questão da identificação automática das estações, com vista a recomendar características, técnicas e métodos de aplicação de um sistema universal comum, incluindo técnicas de modulação normalizadas, que serão aplicadas de acordo com as disposições do artigo 25, tendo em devida conta as necessidades dos diferentes serviços e tipos de estações.

RECOMENDAÇÃO N.º 9

Relativa às medidas a tomar para impedir o funcionamento de estações de radiodifusão a bordo de navios ou de aeronaves fora dos limites dos territórios nacionais (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o funcionamento de estações de radiodifusão a bordo de navios ou de aeronaves situados fora dos limites do território nacional de um país é contrário às disposições dos n.os **2665** e **3603** do Regulamento das Radiocomunicações;
b) Que tal funcionamento é contrário à utilização racional das frequências e pode acabar por criar uma situação extremamente confusa;

(1) Substitui a Recomendação n.º 16 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

c) Que o funcionamento de tais estações de radiodifusão pode efectuar-se fora de qualquer jurisdição dos países Membros e tornar assim difícil a aplicação das leis nacionais;

d) Que se pode ficar em presença de uma situação particularmente difícil sob o ponto de vista jurídico quando essas estações de radiodifusão funcionarem a bordo de navios ou de aeronaves que não forem regularmente matriculados em qualquer país;

recomenda

1. Que as administrações peçam aos seus governos respectivos que examinem por que meios, directos ou indirectos, é possível evitar ou fazer cessar o funcionamento das estações acima mencionadas e que, além disso, tomem, se necessário, as medidas que se imponham;

2. Que as administrações comuniquem ao secretário-geral o resultado desses estudos e lhe transmitam qualquer outra indicação de interesse geral para que ele possa, por sua vez, transmitir essas informações aos Membros.

RECOMENDAÇÃO N.º 10

Relativa à apresentação de propostas de modificação dos textos do Regulamento das Radiocomunicações (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tendo tomado nota

a) Do facto de que nas propostas apresentadas por certas administrações foi utilizado um método uniforme para apresentar os textos modificados (textos novos sublinhados, textos suprimidos riscados);

b) De que esse método se revelou muito eficaz quando do exame dos textos propostos;

c) De que, se esse método uniforme fosse aplicado nas diferentes fases de elaboração dos textos de uma conferência (subgrupos de trabalho, grupos de trabalho), isso facilitaria a tarefa das delegações e poderia facilitar a da conferência;

d) De que o secretário-geral tomou as medidas para dar directivas às administrações, a fim de as ajudar na apresentação das suas propostas às conferências administrativas, em conformidade com as disposições da Convenção Internacional das Telecomunicações, e na coordenação da sua apresentação às conferências;

recomenda

1. Que as administrações sejam convidadas a apresentar as suas propostas de maneira uniforme;

2. Que, a fim de facilitar essa apresentação, o secretário-geral publique directivas que deverão ser também aplicadas quando de futuras conferências;

3. Que, quando de próximas conferências administrativas das radiocomunicações, se utilize uma apresentação uniforme nas diversas fases de elaboração dos textos, pelo menos até ao nível dos grupos de trabalho.

RECOMENDAÇÃO N.º 11

Relativa à numeração que figura na margem do Regulamento das Radiocomunicações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a cada artigo do Regulamento das Radiocomunicações está associado um sistema lógico de numeração dos parágrafos e dos subparágrafos e que, principalmente para facilitar as referências, são acrescentados números consecutivos na margem em frente de cada disposição;

b) Que nessa numeração na margem é largamente utilizada pelas administrações e os organismos permanentes da União;

c) Que foram previstas séries de números de reserva no fim de cada artigo do Regulamento das Radiocomunicações revisto (Genebra, 1979) para facilitar o aditamento pelas futuras conferências administrativas mundiais das radiocomunicações de novas disposições, e em especial de novos artigos;

reconhecendo

a) Que a familiarização com novos números na margem exige grandes esforços de modo que poderia provocar dificuldades a sua eventual modificação por uma conferência administrativa mundial das radiocomunicações que empreenda uma revisão parcial do Regulamento das Radiocomunicações;

---

(1) Substitui a Recomendação Mar2-20 da Conferência Administrativa das Radiocomunicações Marítimas (Genebra, 1974).

b) Que a revisão de numeração na margem só será indispensável se for convocada uma futura conferência administrativa mundial das radiocomunicações para empreender uma revisão geral do Regulamento das Radiocomunicações;

recomenda

1. Que uma futura conferência administrativa mundial das radiocomunicações que empreenda uma revisão parcial do Regulamento das Radiocomunicações só utilize os números de reserva se for necessário incluir disposições suplementares no fim dos artigos;

2. Que, se for necessário incluir uma ou várias disposições suplementares num artigo, sejam utilizadas referências alfabéticas suplementares como sufixo a seguir aos números atribuídos;

3. Que, no caso de ser suprimida uma disposição existente, não volte a ser utilizado o número que figura na margem.

RECOMENDAÇÃO N.º 12

Relativa à convocação de futuras conferências administrativas das radiocomunicações para tratar de serviços específicos

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que o ponto 2.10 do seu mandato a convida a propor ao conselho de administração e à próxima Conferência de Plenipotenciários um programa para a convocação das futuras conferências administrativas das radiocomunicações para tratar de serviços específicos;

b) Que várias das suas Resoluções e Recomendações pedem ou mencionam a convocação dessas futuras conferências;

considerando

a) Que, ao estabelecer o calendário das futuras conferências administrativas mundiais das radiocomunicações, convém tomar em consideração outras conferências em que participam Membros da União e especialmente as conferências regionais e sub-regionais, a Conferência de Plenipotenciários e as reuniões da CCIR;

b) Que as conferências devem ser suficientemente espaçadas para que as administrações e os organismos permanentes da União disponham de prazos suficientes para a preparação de cada conferência;

c) Que um certo número de assuntos específicos evocados nas Resoluções e nas Recomendações mencionadas na alínea *b*) da parte *notando*, devem ser tratados por uma conferência competente e que compete ao conselho de administração tomar, em tempo útil, as medidas necessárias à inclusão de cada questão na agenda da conferência apropriada;

recomenda ao conselho de administração e, se for caso disso, à Conferência de Plenipotenciários

1. Que inclua as seguintes conferências administrativas mundiais das radiocomunicações no calendário das futuras conferências:

Conferência administrativa mundial das radiocomunicações para os serviços móveis (v. a Resolução n.º 202);
Conferência administrativa mundial das radiocomunicações para a planificação das faixas de ondas decamétricas atribuídas ao serviço de radiodifusão (v. a Resolução n.º 508 e as Recomendações n.os 500 e 501);
Conferência administrativa mundial das radiocomunicações sobre a utilização de órbita dos satélites geoestacionários e a planificação dos serviços espaciais que utilizam essa órbita (v. a Resolução n.º 3);

2. Que inclua as seguintes conferências administrativas regionais das radiocomunicações no calendário das futuras conferências:

Secção final da Conferência para a Radiodifusão em Ondas Hectométricas na Região 2 (já prevista para Novembro de 1981);
Conferência para a planificação do serviço de radiodifusão por satélite na Região 2 (já prevista para o 2.º trimestre de 1983) (v. a Resolução n.º 701);
Conferência para a planificação da radiodifusão sonora na faixa de 87,5-108 MHz para a Região 1 e certos países interessados da Região 3 (v. a Resolução n.º 510);
Conferência para a conclusão de acordos e o estabelecimento dos planos associados para as ligações ascendentes na direcção dos satélites de radiodifusão que funcionam na faixa de 12 GHz nas Regiões 1 e 3 (v. a Resolução n.º 101);

Conferência administrativa regional das radiocomunicações encarregada de definir critérios de partilha para a utilização das faixas das ondas métricas e decimétricas atribuídas aos serviços fixos, de radiodifusão e móvel na Região 3 (v. a Resolução n.º 702);
Conferência encarregada de rever a Convenção e o Plano de Copenhaga de 1948 para a zona marítima europeia — Região 1 (v. igualmente a este respeito a Recomendação n.º 300);
Conferência encarregada de reexaminar e de rever as disposições dos Actos Finais da Conferência Africana de Radiodifusão em Ondas Métricas e Decimétricas (Genebra, 1963) (v. a Resolução n.º 509);
Conferência encarregada da preparação de um plano de radiodifusão na faixa de 1605-1705 kHz na Região 2 (v. a Recomendação n.º 504);

3. Que tome as medidas necessárias para convocar cada uma dessas conferências logo que possível após o termo dos trabalhos preparatórios que se lhe referem, tendo em conta:

a) As opiniões relativas ao calendário das conferências, como previsto nas Recomendações e nas Resoluções mencionadas nos §§ 1 e 2 da parte *recomenda*;
b) A necessidade de espaçar essas conferências de modo adequado para que as administrações e os organismos permanentes da União disponham de prazos suficientes para a sua preparação;
c) O programa das conferências projectadas ou previstas, diferentes das conferências administrativas das radiocomunicações, em que devem participar os Membros da União;
d) Os recursos que as diversas administrações e a União no seu conjunto deverão consagrar à realização deste programa de conferências.

RECOMENDAÇÃO N.º 13

Relativa a uma conferência administrativa mundial das radiocomunicações para uma revisão geral ou parcial do Regulamento das Radiocomunicações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

que a presente Conferência estabeleceu um programa de conferências administrativas mundiais especializadas das radiocomunicações para o próximo decénio;

considerando

a evolução muito rápida da tecnologia das telecomunicações e as consequências da sua aplicação especialmente na utilização racional do espectro radioeléctrico;

considerando

a necessidade de uma revisão geral ou parcial do Regulamento das Radiocomunicações para permitir o desenvolvimento harmonioso de diversos serviços que não serão tratados pelas conferências especializadas previstas pela presente Conferência;

recomenda o conselho de administração

que examine, a partir de 1990, se é necessário convocar uma conferência administrativa mundial das radiocomunicações com o fim de proceder a uma revisão geral ou parcial do Regulamento das Recomendações.

RECOMENDAÇÃO N.º 30

Relativa à fiscalização internacional das emissões (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é desejável obter uma utilização mais eficaz do espectro das frequências radioeléctricas a fim de ajudar as administrações a satisfazerem mais facilmente as suas necessidades de frequências, e que para esse fim é desejável tomar medidas para que a Lista Internacional das Frequências reflita mais fielmente a utilização real do espectro das frequências;

(1) Substitui a Recomendação n.º 5 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

b) As disposições do Regulamento das Radiocomunicações (Genebra, 1979), segundo as quais a Comissão Internacional do Registo de Frequências deve rever as inscrições no Ficheiro de Referência Internacional das Frequências com vista a torná-las tão conformes quanto possível com a utilização do espectro das frequências;
c) Que os dados provenientes da fiscalização internacional das emissões deveriam ajudar essa Comissão a desempenhar tal função;

reconhecendo

a) Que um sistema internacional de fiscalização das emissões só pode ser plenamente eficaz se cobrir todas as zonas do Mundo;
b) Que, em certas zonas do Mundo, os meios para esse fim são actualmente inexistentes ou insuficientes para permitir uma fiscalização eficaz;

convida a CCIR

a estudar e a elaborar, em colaboração com a Comissão, pareceres técnicos relativos aos meios suplementares necessários para assegurar uma cobertura mundial apropriada com vista à aplicação do Regulamento das Radiocomunicações, mais especialmente os artigos 10, 11, 12, 13, 14 e 20; e

convida as administrações

1. A fazerem todos os esforços para desenvolver os meios de fiscalização, como previsto no artigo 20 do Regulamento das Radiocomunicações, tendo em conta as possibilidades oferecidas pelos organismos das Nações Unidas encarregadas da assistência técnica;
2. A informarem a Comissão da medida em que estão dispostas a cooperar em fiscalizações de natureza determinada que por ela possam ser pedidas.

RECOMENDAÇÃO N.º 31

Relativa a um manual sobre a aplicação das técnicas informáticas na gestão do espectro radioeléctrico

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o devido ao pedido crescente de frequências radioeléctricas, convém melhorar a utilização do espectro radioeléctrico;
b) Que, para resolver os problemas apresentados pela utilização do espectro radioeléctrico, é preciso dispor de meios de armazenamento, de extracção e de análise dos dados que podem proporcionar os métodos informáticos;
c) Que a gestão do espectro radioeléctrico representa, para as administrações, uma série de tarefas cuja amplitude e complexidade vão crescendo;
d) Que, graças aos progressos técnicos, podem ser obtidos computadores poderosos e microcomputadores de preço razoável;
e) Que muitas administrações têm necessidade de directivas sobre as técnicas informáticas aplicáveis à gestão do espectro radioeléctrico;
f) Que é desejável uma certa compatibilidade para facilitar a coordenação entre administrações e a permuta de dados com a IFRB;
g) Que são numerosas as administrações que se interessam pelos sistemas informáticos de gestão do espectro radioeléctrico e que algumas delas estão activamente a desenvolver esses sistemas;
h) Que o secretariado-geral põe meios informáticos à disposição de todos os organismos da União e fornece-lhes conselhos neste domínio e, se necessário, também os fornece igualmente às administrações;

recomenda à CCIR

1. Que, o mais tardar até 1982, prepare um manual que descreva os diferentes aspectos da aplicação das técnicas informáticas na gestão do espectro radioeléctrico, examine as diferentes formas como a questão foi abordada, dê as directivas apropriadas nos diversos níveis das aplicações práticas e contenha pareceres para os casos em que entre em jogo a cooperação internacional;
2. Que reexamine e reveja periodicamente esse manual;

convida o secretariado-geral e a IFRB

a participarem na elaboração desse manual.

RECOMENDAÇÃO N.º 60

Relativa às normas técnicas da IFRB (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

que as normas técnicas da Comissão Internacional do Registo das Frequências (IFRB) são de uso diário para o exame técnico dos pareces de notificação de frequências;

pede instantemente à CCIR

que apresse a execução de todas as fases dos programas de estudos que sejam de natureza a ajudar a IFRB a aperfeiçoar ainda mais as suas normas técnicas; e

convida as administrações

a dispensarem, na sua participação nos trabalhos da CCIR e das suas Comissões de estudo, prioridade especial aos estudos de que se trata aqui.

RECOMENDAÇÃO N.º 61

Relativas às normas técnicas necessárias para avaliação das interferências prejudiciais nas faixas de frequências superiores a 28 MHz (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a definição de interferência prejudicial (n.º 163 do Regulamento das Radiocomunicações), de carácter qualitativo, dá lugar a uma estimativa puramente subjectiva do incómodo de tal interferência;
b) Que para o desempenho das suas tarefas regulamentares, a IFRB adoptou, nas suas normas técnicas, para as faixas de frequências inferiores a 28 MHz, valores da relação sinal útil/sinal interferente abaixo dos quais se podem esperar interferências prejudiciais;
c) Que a «interferência prejudicial» implica um grau de interferência ou uma probabilidade de interferência considerável;
d) Que, por isso, é desejável determinar o nível da interferência pela qual as emissões, radiações ou induções influenciam desfavoravelmente um serviço de radiocomunicação além dos limites específicos estabelecidos para o seu funcionamento, sob o ponto de vista da qualidade e da eficácia exigidas pela natureza desse serviço;
e) Que a avaliação do nível de interferência está ligada a factores tais como a natureza dos serviços em causa, o número de fontes de interferência, as percentagens de tempo durante os quais o sinal interferente influencia desfavoravelmente o sinal útil;

notando

a) Que até aqui a IFRB considerou os valores máximos admissíveis de interferência, tais como estão especificados nos pareceres pertinentes da CCIR, como sendo valores que permitem assegurar um serviço satisfatório;
b) Que todavia, a IFRB não possui informações sobre a medida em que esse valores recomendados e as percentagens de tempo associadas podem ser excedidos sem que por isso um serviço seja desfavoravelmente influenciado além dos limites especificados estabelecidos para o seu funcionamento, sob o ponto de vista da qualidade e da eficácia pela natureza do serviço;

convida a CCIR

a prosseguir o estudo desta questão e a recomendar critérios técnicos para as faixas de frequências superiores a 28 MHz atribuídas aos serviços de radiocomunicação espacial, à radioastronomia e aos serviços de radiocomunicação de Terra interessados, a fim de permitir que a IFRB e as administrações apliquem os critérios assim definidos para essas faixas.

---

(1) Substitui a Recomendação n.º 2 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).
(2) Substitui a Recomendação Spa2-12 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

RECOMENDAÇÃO N.º 62

Visando completar as características adicionais de classificação das emissões e fornecer novos exemplos de designações de emissões tais como figuram no apêndice 6 (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que esta Conferência adoptou no artigo 4 um novo método de designação das emissões baseado no parecer n.º 507 da CCIR;
b) Que uma parte essencial desse novo método é a classificação das emissões;
c) Que o novo método de classificação estabelece uma distinção entre as características fundamentais (primeiro, segundo e terceiro símbolos) cuja utilização é obrigatória e as características adicionais (quarto e quinto símbolos) cuja utilização é facultativa;
d) Que a classificação completa das emissões abrange o conjunto desses cinco símbolos;
e) Que a lista das características adicionais dada na parte A do apêndice 6 não é talvez suficientemente completa para ter em conta no futuro as novas técnicas e que, por isso, ela pode ser objecto de aditamentos a intervalos relativamente frequentes;
f) Que um parecer da CCIR proporcionaria um quadro apropriado para esse aditamento;

considerando, além disso,

a) Que na parte B do apêndice 6 é dada uma lista de exemplos de designações completas de emissões;
b) Que, todavia, essa lista não é exaustiva e que o n.º **265** do Regulamento das Radiocomunicações estipula, por isso, que poderiam ser dados outros exemplos nos pareceres mais recentes da CCIR e que esses exemplos poderiam igualmente ser publicados no prefácio à Lista Internacional das Frequências;

convida a CCIR

1. A prosseguir os estudos sobre a classificação das emissões, com vista a completar a lista das características adicionais para, no futuro, ter em conta as novas técnicas, sem, no entanto, modificar as características adicionais que tenham sido objecto de um acordo e que figurem na parte A do apêndice 6;

2. A fornecer exemplos de designação completas de emissões que não são dados na parte B do apêndice 6 tendo igualmente em conta os aditamentos mencionados no § 1 acima;

convida a Comissão Internacional de Registo de Frequências

a publicar, no prefácio à Lista Internacional de Frequências, as novas características adicionais, assim como os novos exemplos mencionados nos §§ 1 e 2 acima, logo que sejam consignados nos pareceres pertinentes da CCIR;

e recomenda

que as administrações utilizem as características adicionais completadas referidas no § 1 acima.

RECOMENDAÇÃO N.º 63

Relativa à apresentação de fórmulas e de exemplos para o cálculo das larguras de faixa necessárias

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, segundo o artigo 4 do Regulamento das Radiocomunicações, a largura de faixa necessária deve fazer parte da designação completa das emissões;
b) Que a parte B do apêndice 6 dá uma lista parcial de exemplos e de fórmulas para o cálculo da largura de faixa necessária de certas emissões típicas;
c) Que não se dispõe de dados suficientes para determinar os factores K utilizados em todo o quadro de exemplos de larguras de faixa necessárias que figuram no apêndice 6;
d) Que, sob o ponto de vista mais particular da utilização do espectro radioeléctrico, assim como da fiscalização e da notificação das emissões, é necessário conhecer as larguras de faixa necessárias para as diferentes classes de emissão;

---

(1) Substitui a Recomendação n.º 8 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

e) Que é desejável, por razões de simplicidade e de uniformidade internacional, que as medidas destinadas a determinar a largura de faixa necessária sejam feitas tão raramente quanto possível;

recomenda que a CCIR

1. Forneça a intervalos de tempo convenientes fórmulas adicionais que permitam determinar a largura de faixa necessária para as classes de emissão correntes, bem como exemplos destinados a completar as da parte B do apêndice 6;

2. Estude e indique valores para os factores K suplementares de que há necessidade para calcular a largura de faixa necessária para as classes de emissão correntes;

convida a IFRB

a publicar exemplos de tais cálculos no prefácio à Lista Internacional das Frequências.

RECOMENDAÇÃO N.º 64

Relativa às relações de protecção e aos campos mínimos necessários (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

que as informações de que se dispõe sobre a relação de protecção e o campo mínimo necessário para cada serviço devem ser ainda mais precisas que possam estabelecer planos mais eficazes para a utilização do espectro das frequências radioeléctricas;

convida a CCIR

1. A continuar o estudo das relações de protecção que definem o limiar de interferência prejudicial para os diferentes serviços;

2. A continuar o estudo das relações sinal/ruído e dos campos mínimos necessários para receber de forma satisfatória as diferentes classes de emissão nos diferentes serviços;

3. A continuar o estudo das tolerâncias de desvanecimento nos diferentes serviços;

4. A dispensar especial atenção a esses estudos para ajudar a IFRB a melhorar as normas técnicas que utiliza.

RECOMENDAÇÃO N.º 65

Relativa às técnicas que permitam elaborar novos esquemas de partilha e de utilização das faixas de frequências

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

a) Que os progressos técnicos, especialmente no que respeita às técnicas radioeléctricas digitais, assim como aos novos processos de codificação, de modulação e de acesso, tornam possível o estabelecimento de novos esquemas de partilha que oferecem vantagens económicas e técnicas e que permitem aumentar a eficácia da partilha do espectro e da utilização das faixas de frequências;

b) Que se constatam progressos rápidos no que respeita às técnicas correspondentes;

convida a CCIR

1. A proceder ao estudo das técnicas radioeléctricas digitais e de novos processos de codificação, de modulação e de acesso, por exemplo nas técnicas de radiocomunicação por blocos e de expansão do espectro, e dos sistemas de funções múltiplas;

2. A ultimar novos métodos para a utilização de uma portadora em partilha no tempo por diferentes serviços de radiocomunicação, ou seja, a utilização de uma mesma parte do espectro por vários serviços;

3. A apresentar pareceres sobre os seguintes assuntos para as futuras conferências administrativas mundiais das radiocomunicações pertinentes:

Critérios técnicos e especificações dos esquemas de partilha do espectro mais eficazes para os diversos serviços;

Critérios técnicos e critérios de qualidade que permitam assegurar a compatibilidade e o interfuncionamento dos sistemas;

Critérios em que basear a gestão do espectro para os sistemas conformes com essas novas técnicas.

---

(1) Substitui a Recomendação n.º 3 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

RECOMENDAÇÃO N.º 66

Acerca de estudos sobre os níveis máximos tolerados de radiações não essenciais

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o apêndice 8 ao Regulamento das Radiocomunicações especifica os níveis tolerados das radiações não essenciais expressos em nível de potência média de qualquer componente não essencial fornecida por um emissor à linha de alimentação da antena, para as faixas inferiores a 17,7 GHz;
b) Que o objectivo principal do apêndice 8 é o de especificar os níveis máximos tolerados das radiações não essenciais que, sendo realizáveis, assegurem uma protecção suficiente contra as interferências prejudiciais;
c) Que os níveis excessivos de radiações não essenciais pode causar interferências prejudiciais;
d) Que, enquanto o apêndice 8 só trata da potência média do emissor e das radiações não essenciais, existe grande variedade de radiações em que a interpretação da expressão «potência média» é difícil, assim como, consequentemente, a medida dessa potência;
e) Que a CCIR, embora esteja a estudar esta questão, ainda não emitiu parecer apropriado respeitante ao apêndice 8 no caso das faixas de frequências superiores a 960 MHz;
f) Que as radiações não essenciais de emissores que funcionam em estações espaciais podem causar interferências prejudiciais, especialmente pelas componentes de amplificadores de faixa larga que não podem ser ajustados após o lançamento;
g) Que as radiações não essenciais de estações terrenas necessitam também de estudos especiais;
h) Que a CCIR não publicou informações relativas às radiações não essenciais de estações que utilizam técnicas de modulação digital e que funcionam em faixas de frequências superiores a 960 MHz;

notando

a muito intensa utilização do espectro radioeléctrico acima de 960 MHz nas grandes zonas urbanas e do desenvolvimento rápido dessa utilização que se efectua actualmente sobretudo acima de 10 GHz;

recomenda que a CCIR

1. Estude urgentemente a questão das radiações não essenciais resultantes das emissões de serviços espaciais e elabore na base desses estudos, pareceres relativos aos níveis máximos tolerados das radiações não essenciais, expressos em potência média das componentes não essenciais fornecidas pelo emissor à linha de alimentação da antena;
2. Prossiga o estudo dos níveis das radiações não essenciais em todas as faixas de frequências, insistindo nas faixas de frequências, nos serviços e nas técnicas de modulação que não estejam actualmente tratados no apêndice 8;
3. Estabeleça técnicas de medida apropriadas para as radiações não essenciais, incluindo a determinação de níveis de referência para as transmissões de faixa larga, assim como a possibilidade de aplicação de larguras de faixa de referência nas medidas;
4. Estude a categorização das emissões e das radiações não essenciais segundo a sua «potência média» e elabore pareceres apropriados para facilitar a interpretação desse termo e a medida da potência média para diferentes categorias de emissão.

RECOMENDAÇÃO N.º 67

Relativa à definição dos termos «zona de serviço» e «zona de cobertura»

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que nos textos oficiais da UIT se encontram frequentemente os termos «zona de serviço» e «zona de cobertura»;
b) Que estes dois termos são utilizados com o mesmo sentido ou com sentidos diferentes, segundo os diversos serviços de radiocomunicações;
c) Que não existe definição dos termos «zona de serviço» e «zona de cobertura» no artigo 1 do Regulamento das Radiocomunicações;

notando

a) Que o termo «zona de serviço» é já utilizado nos textos dos apêndices 1, 3, 4, 5 e 25 Mar2 do Regulamento das Radiocomunicações;

b) Que existe uma definição de «zona de serviço» para a radiodifusão de Terra no parecer n.º 499-1 da CCIR, baseado no campo utilizável;

c) Que uma definição muito semelhante à do parecer n.º 499-1 figura no anexo 2 dos Actos Finais da Conferência Administrativa Regional de Radiodifusão em Ondas Quilométricas e Hectométricas (Regiões 1 e 3) (Genebra, 1975);

d) Que uma definição de «zona de serviço» para radiodifusão por satélite figura no anexo 8 dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977). Essa definição é de natureza administrativa e é acompanhada de uma nota técnica na qual há uma referência a uma densidade de fluxo de potência apropriada e a uma protecção contra interferências baseada numa relação de protecção combinada;

e) Que aspectos técnicos e administrativos estão algumas vezes compreendidos na definição da «zona de serviço» e que não podem ser separados facilmente;

f) Que figura no anexo 8 acima mencionado uma definição de «zona de cobertura» para a radiodifusão por satélite, baseada no nível de densidade de fluxo de potência que assegura, na ausência de interferência, uma qualidade de recepção especificada;

reconhecendo

que as definições existentes de «zona de serviço» e «zona de cobertura» estão ligadas às definições do campo utilizável ou da densidade de fluxo utilizável, quer na presença, quer na ausência de sinais interferentes;

convida a CCIR

1. A estabelecer uma definição de «zona de cobertura»;

2. A estabelecer as bases técnicas de uma definição geral de «zona de serviço» que tenham em conta a presente utilização deste termo em todos os textos oficiais da UIT com vista a permitir que futuras conferências administrativas determinem os aspectos administrativos desse definição.

RECOMENDAÇÃO N.º 68

Relativa aos estudos e à previsão da propagação e dos ruídos radioeléctricos (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a utilização eficaz das frequências radioeléctricas depende do emprego dos dados e normas técnicas, de maior confiança, sobretudo nas partes do espectro que estão mais saturadas;

b) Que se pode facilitar a satisfação de novas necessidades de frequências e o desenvolvimento dos serviços de radiocomunicação melhorando onde seja necessário as normas técnicas actualmente utilizadas pela IFRB;

c) Que o antigo apêndice A do Regulamento das Radiocomunicações (edição de 1968), intitulado «Estudo e previsão da propagação e dos ruídos radioeléctricos», reconhecia que a importância dos dados sobre a propagação e os ruídos radioeléctricos é determinante para a utilização óptima das frequências e o estabelecimento de planos eficazes para os serviços de radiocomunicação;

d) Que esse apêndice tinha por objectivo principal o estabelecimento e o funcionamento de sistemas mundiais de estações de observação, a fim de obter dados sobre os ruídos radioeléctricos e sobre os fenómenos ionosféricos, troposféricos e outros que influenciam a propagação das ondas;

e) Que as administrações tomam as disposições mais apropriadas para estudar, coordenar e difundir rapidamente esses dados e as previsões relativas a esses dados e que elas se esforçam igualmente por promover os estudos sobre a propagação e sobre os ruídos radioeléctricos por intermédio da CCIR;

f) Que a CCIR adoptou programas de estudos que tratam de grande número desses problemas;

g) Que em certas partes do Mundo não foi efectuada qualquer medida da propagação e dos ruídos radioeléctricos;

pede à CCIR

1. Que encoraje e ajude a empreender o estudo da propagação e dos ruídos radioeléctricos nas regiões que não estejam ainda dotadas de um sistema apropriado de estação de observação;

2. Que continue o estudo da propagação e dos ruídos radioeléctricos e que tome as medidas necessárias com vista a coordenar os resultados obtidos em diferentes países;

---

(1) Substitui a Recomendação n.º 4 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

3. Que preste atenção especial àqueles estudos que ajudem a melhorar as normas técnicas utilizadas por esse Comissão;

4. Que forneça regularmente relatórios sobre essas questões, mesmo que os estudos não estejam concluídos;

5. Que continue a consultar regularmente as outras organizações que efectuam estudos sobre a propagação e os ruídos radioeléctricos, por exemplo a União Radiocientífica Internacional, a fim de realizar uma coordenação tão larga quanto possível;

recomenda às administrações

1. Que empreendam o estudo da propagação e dos ruídos radioeléctricos nas regiões que não estejam ainda dotadas de um sistema apropriado de estações de observação e que comuniquem os resultados desse estudo à CCIR;

2. Que continuem a favorecer o estabelecimento e o funcionamento de um sistema mundial de estações de observação, a fim de obterem dados sobre os ruídos radioeléctricos e sobre os fenómenos ionosféricos, troposféricos e outros que influenciam a propagação das ondas;

3. Que continuem a tomar as disposições mais apropriadas para estudar, coordenar e difundir rapidamente esses dados e as previsões relativas aos mesmos;

4. Que, no estabelecimento e na adopção dos seus programas de trabalhos sobre a propagação e os ruídos radioeléctricos, tenham em conta os pareceres, relatórios, questões e programas de estudos da CCIR que se aplicam a esses problemas, especialmente os resultados já obtidos, os planos estabelecidos para os estudos futuros e os modos de apresentação recomendados nesses documentos.

RECOMENDAÇÃO N.º 69

Relativa às tolerâncias de frequência dos emissores (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o apêndice 7 ao Regulamento das Radiocomunicações especifica as tolerâncias de frequência a respeitar pelos emissores;

b) Que o principal objectivo desse apêndice foi diminuir a fracção do espectro das frequências necessárias para cada via por meio de uma redução das tolerâncias de frequência, e que muitos casos é ainda possível obter uma melhoria considerável na utilização do espectro, graças a uma nova redução das tolerâncias de frequência;

c) Que, melhorando, em diversos serviços, a tolerância de frequência para a levar ao valor mais estrito que seja possível atingir no estado da técnica, se poderia aumentar a relação sinal/ruído, melhorar a inteligibilidade e reduzir erros;

d) Que, em certos casos, uma tolerância de frequência mais estrita não aumentaria, na prática, o número das vias disponíveis;

e) Que em certas faixas de frequências as tolerâncias *especificadas no apêndice 7* se aproximam talvez já do valor mínimo utilizável para certas categorias de estações, quando elas aplicam as técnicas e os métodos de exploração actuais;

f) Que será de grande utilidade para as administrações, quando tenham de planificar os seus serviços e de se equiparem com material, conhecer as tolerâncias que podem ser consideradas como o valor limite mínimo utilizável para as estações, quando essas apliquem as técnicas e os métodos de exploração actuais;

g) Que, em certos casos, a obtenção de uma tolerância de frequência mais estrita está sujeita a restrições de ordem económica que convém conhecer e que convém ter em conta:

convida a CCIR

1. A prosseguir o estudo das tolerâncias de frequência com vista a reduzir a fracção do espectro das frequências necessárias para uma dada via;

2. A considerar se, em certos casos, é ou não possível prever valores de tolerância limites que não seria necessário tornar mais estritos nas condições de exploração actualmente conhecidas e precisar quais poderiam ser esses valores;

3. A fazer um relatório sobre a possibilidade de atingir esses valores limites tendo em conta os imperativos económicos e de concepção e outras considerações práticas;

4. A indicar, se necessário, quais as tolerâncias especificadas no apêndice 7 que atingiram já esses valores limites.

---

(1) Substitui a Recomendação n.º 1 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

RECOMENDAÇÃO N.º 70

Relativa ao estudo das características técnicas do material (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

reconhecendo

que as informações técnicas de que se dispõe sobre os diversos tipos de aparelhos utilizados para a recepção das diferentes classes de emissão nos diferentes serviços devem ser ainda mais completas e mais precisas para que se possam estabelecer os planos mais eficazes para a utilização do espectro das frequências radioeléctricas;

convida a CCIR

1. A prosseguir os seus estudos sobre as características que deveriam apresentar os diversos tipos de aparelhos utilizados para a recepção das diferentes classes de emissão nos diferentes serviços, no que respeita à largura de faixa, à selectividade, à sensibilidade e à estabilidade, e a formular pareceres sobre tal assunto;
2. A prosseguir o estudo dos métodos práticos que permitam obter as características recomendadas;
3. A estudar o afastamento mínimo praticamente realizável entre vias adjacentes, considerando as diferentes classes de emissão, os diferentes serviços e as diferentes faixas de frequências;
4. A estudar as outras condições a que é desejável que satisfaçam, no seu conjunto, os sistemas empregados pelos diferentes serviços, com vista a determinar as condições técnicas a que deve satisfazer o material, incluindo a aparelhagem terminal das estações e as antenas;
5. A estudar os métodos que permitam determinar se o material satisfaz as condições recomendadas;
6. A dispensar atenção especial aos estudos que ajudarão a Comissão Internacional do Registo de Frequências a melhorar as normas técnicas que emprega.

RECOMENDAÇÃO N.º 71

Relativa à normalização das características técnicas e de exploração dos materiais radioeléctricos

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as administrações se encontram confrontadas com a necessidade de consagrar cada vez mais recursos à regulamentação da qualidade de funcionamento dos materiais radioeléctricos;
b) Que as administrações, especialmente as dos países em desenvolvimento, têm muitas vezes dificuldades em obter esses recursos;
c) Que haveria vantagem em aplicar, tanto quanto praticamente possível, normas mutuamente reconhecidas, assim como os procedimentos de homologação associados;
d) Que certo número de organismos internacionais, entre os quais a CCIR, a OACI, a OMCI, a CISPR e a CEI, estabelecem recomendações e normas relativas às características técnicas e de exploração aplicáveis à qualidade de funcionamento dos materiais e à medida dessa qualidade;
e) Que, nesse domínio, as necessidades específicas dos países em desenvolvimento nem sempre têm sido tomadas plenamente em consideração;

recomenda

1. Que as administrações se esforcem por cooperar com vista a estabelecer especificações internacionais de qualidade de funcionamento e métodos de medida associados que possam ser utilizados como modelos para as normas nacionais aplicáveis aos materiais radioeléctricos;
2. Que essas especificações internacionais de qualidade de funcionamento e os métodos de medida associados correspondam a condições largamente representativas, assim como às necessidades específicas dos países em desenvolvimento;
3. Que, logo que existam tais especificações internacionais de qualidade de funcionamento para os materiais radioeléctricos, as administrações adoptem, tanto quanto praticamente possível, essas especificações como base para as suas normas nacionais;
4. Que as administrações considerem, tanto quanto praticamente possível, a aceitação mútua dos procedimentos de homologação para os materiais de acordo com essas especificações de qualidade de funcionamento.

---

(1) Substitui a Recomendação n.º 6 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

RECOMENDAÇÃO N.º 72

Relativa à terminologia

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as discussões relativas a certos termos e definições técnicas que figuram no artigo 1 fizeram surgir diversos problemas que não foram resolvidos de forma completamente satisfatória durante a dita Conferência;
b) Que a evolução da técnica e dos modos de expressão pode conduzir à junção, à modificação ou, eventualmente, à supressão de certas definições:

convida a CCIR e a CCITT,

cada uma no seu domínio próprio, a examinarem as definições dos termos técnicos que figuram no artigo 1 e a proporem qualquer modificação que considerem útil;

encarrega o secretário-geral

de transmitir as propostas elaboradas por esses dois organismos às conferências administrativas interessadas, para que estas últimas as tomem em consideração no quadro do seu mandato.

RECOMENDAÇÃO N.º 73

Relativa ao emprego do termo «canal» no Regulamento das Radiocomunicações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o termo «canal» (em francês *voie*, em inglês *channel*, em espanhol *canal*) é utilizado muito largamente no Regulamento das Radiocomunicações para os planos de adjudicação das frequências nos apêndices 16, 18, 25 Mar2, 26, 27, 27 Aer2, 32, 33 e 34 (1);
b) Que o termo «canal» (em francês *voie*, em inglês *channel*, em espanhol *canal*) tem sentidos diferentes noutras disposições do Regulamento das Radiocomunicações e para os diferentes serviços de radiocomunicação;
c) Que não deve haver nenhuma ambiguidade quanto ao sentido do termo «canal» quando do seu emprego nos textos do Regulamento das Radiocomunicações;

convida a CCIR

a definir o termo «canal» de forma que possa ser utilizado de modo coerente e sem confusão nos textos do Regulamento das Radiocomunicações, em todas as línguas de trabalho da UIT.

RECOMENDAÇÃO N.º 74

Relativa ao emprego do sistema internacional de unidades (SI) (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o sistema SI permite resolver numerosos problemas que apresentam os sistemas de unidades mais antigos;
b) Que a Organização Internacional de Normalização aprovou o sistema SI e recomenda a sua adopção geral;

reconhecendo

a) Que o sistema SI, já adoptado por numerosas organizações internacionais, é recomendado pela CCIR e pela CCITT e utilizado pela CCIR e pelos organismos permanentes da União;

---

(1) O termo *voie* é actualmente utilizado em francês nestes apêndices, mas poder-se-ia eventualmente encarar a sua substituição ulterior pelo termo «canal», tendo em conta a definição deste termo que a CCIR venha a estabelecer.
(2) Substitui a Recomendação n.º 9 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

b) Que o sistema SI tem estatuto de norma nacional em numerosos países;
c) Que nos países que ainda não adoptaram o sistema SI como norma nacional os engenheiros das radiocomunicações, os cientistas e os autores de publicações relativas à radioelectricidade recorrem muito frequentemente a este sistema;
d) Que o emprego do sistema SI se estende constantemente a todas as partes do Mundo;

recomenda

que as administrações utilizem o sistema SI nas suas relações com a União e os organismos que a constituem.

RECOMENDAÇÃO N.º 100

Relativa à faixas de frequências preferenciais para os sistemas que utilizam a propagação por difusão troposférica

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

Considerando

a) Que a Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971) pediu à CCIR que estudasse as faixas de frequências preferenciais para os sistemas de difusão troposférica e que a mesma Conferência convidou uma futura conferência administrativa mundial das radiocomunicações a examinar esta questão;
b) As dificuldades técnicas e de exploração mencionadas pela CCIR (Relatório da Reunião Especial Preparatória, Genebra, 1978) nas faixas de frequências partilhadas pelos sistemas de difusão troposférica, pelos sistemas espaciais e pelos outros sistemas de Terra;
c) As atribuições adicionais de faixas de frequências que foram feitas pela presente Conferência aos serviços espaciais, para ter em conta o seu desenvolvimento crescente;
d) Que a IFRB tem necessidade de que as administrações lhe forneçam informações específicas sobre os sistemas que utilizam a difusão troposférica para poder assegurar-se que foram aplicadas as disposições pertinentes do Regulamento das Radiocomunicações (por exemplo, a nota 763 e os n.ºs **2560** e **2564**);

reconhecendo, todavia,

que as administrações podem querer continuar a utilizar sistemas de difusão troposférica para responder a certas necessidades de telecomunicações;

notando

que a proliferação desses sistemas em todas as faixas de frequências, em especial nas que são partilhadas com os sistemas espaciais, só fará agravar uma situação já difícil:

recomenda à CCIR

1. Que prossiga com urgência o estudo das faixas de frequências que possuam as características melhor adaptadas, sob o ponto de vista da propagação, aos sistemas que utilizam a difusão troposférica;
2. Que prossiga o estudo das possibilidades e dos critérios de partilha entre os sistemas que utilizam a difusão troposférica e os outros sistemas, em especial os sistemas espaciais;
3. Que elabore, na sequência dos estudos acima mencionados, um parecer relativo às faixas de frequências específicas que foram consideradas mais satisfatórias para tais sistemas e isso, se possível, antes da sua próxima assembleia plenária. Essas faixas de frequências deverão ser definidas tendo em conta as atribuições a outros serviços, em especial as atribuições aos serviços espaciais;

recomenda às administrações

1. Que colaborem com urgência e na medida das suas possibilidades com a CCIR, enviando-lhe contribuições referentes aos estudos mencionados acima;
2. Que, para consignarem frequências às novas estações dos sistemas que utilizam a difusão troposférica, tenham em conta as informações publicadas até agora pela CCIR, a fim de que os sistemas que sejam estabelecidos no futuro empreguem um número limitado de faixas de frequências determinadas;
3. Que indiquem explicitamente nas fichas de notificação das consignações de frequência que enviam à IFRB se essas consignações correspondem a estações de sistemas de difusão troposférica;

convida o conselho de administração

a adoptar as disposições necessárias para que uma futura conferência administrativa das radiocomunicações examine as faixas de frequências do serviço fixo a atribuir de preferência aos novos sistemas que utilizam a propagação por difusão troposférica, tendo em conta as atribuições de frequência ao serviço de radiocomunicação espacial e os pareceres elaborados para o efeito pela CCIR.

RECOMENDAÇÃO N.º 101

Relativa às ligações de conexão no serviço de radiodifusão por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é necessário dispor de documentação abundante sobre as características das ligações de conexão para a planificação do serviço de radiodifusão por satélite;
b) Que a CCIR prossegue o estudo deste problema segundo o programa de estudos pertinente;
c) Que as relações portadora/ruído nas ligações de conexão no sentido dos satélites de radiodifusão deveriam ter valores da ordem de dez vezes superiores aos das ligações descendentes;
d) Que, no que respeita à interferência nas ligações de conexão entre satélites de radiodifusão ocupando localizações diferentes na órbita, relações de protecção nas ligações ascendentes (superiores cerca de 10 dB às relações de protecção nas ligações descendentes) parecem poder ser facilmente obtidas pela discriminação do diagrama das antenas de emissão das estações terrenas, cujo diâmetro deverá, bem entendido, ser superior ao das antenas de recepção utilizadas para a ligação descendente;
e) Que, quando a planificação se basear em parâmetros de separação tais como diagramas de radiação para as antenas de emissão das estações espaciais, entrelaçamento das portadoras ou discriminação de polarização ou os dois parâmetros, com o fim de obter, na ligação descendente, a relação portadora/interferência exigida entre as zonas de serviço servidas a partir de uma mesma localização na órbita, a relação portadora/interferência mais elevada a prever nas ligações ascendentes que conduzem à ou às estações espaciais que ocupam essa localização deve ser obtida mediante os mesmos parâmetros de separação, com a condição de que essa relação permita melhorar a separação efectiva de cerca de 10 dB. As características da estação terrena de emissão não têm, naturalmente, influência sobre essa separação, salvo no que respeita à pureza da polarização no eixo do feixe;
f) Que para a colocação efectiva em serviço dos sistemas de radiodifusão por satélite é necessário ter em conta todas as funções conexas dos satélites de exploração espacial (perseguição, telemedida, telecomando e medida das distâncias) ligadas ao funcionamento das estações espaciais de radiodifusão;

convida a CCIR

1. A prosseguir, para as antenas de recepção das estações espaciais do serviço de radiodifusão por satélite, o estudo das características de radiação que permitam obter por si mesmas, ou combinadas com outros meios de discriminação, as relações de protecção necessárias nas ligações de conexão dos sistemas do serviço de radiodifusão por satélite, no caso das emissões da ou das estações espaciais que ocupam uma dada posição na órbita dos satélites geostacionários;

2. A prosseguir, para as antenas de recepção das estações espaciais do serviço de radiodifusão por satélite, o estudo das características de polarização que permitam obter por si mesmas, ou combinadas com outros meios de discriminação, as relações de protecção necessárias nas ligações de conexão dos sistemas do serviço de radiodifusão por satélite, no caso das emissões da ou das estações espaciais que ocupam uma dada posição na órbita dos satélites geostacionários;

3. A prosseguir o estudo das características técnicas das ligações de conexão que devem ser tomadas em consideração quando da aplicação do Plano para esse serviço;

4. A estudar as características e as condições técnicas e de concepção que afectam a aplicação das «funções dos serviços de exploração espacial» das estações espaciais do serviço de radiodifusão por satélite;

5. A estudar as condições necessárias para a separação dos canais adjacentes nas ligações de conexão com destino à ou às estações espaciais do serviço de radiodifusão por satélite ocupando uma dada posição na órbita dos satélites geostacionários.

RECOMENDAÇÃO N.º 102

Relativa ao estudo dos métodos de modulação para os feixes hertzianos sob o ponto de vista da partilha das faixas de frequências com os sistemas do serviço fixo por satélite (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, segundo o artigo 8 do Regulamento das Radiocomunicações, certas faixas de frequências podem ser partilhadas pelo serviço fixo por satélite e pelo serviço fixo;

---

(1) Substitui a Recomendação Sat-5 da Conferência Administrativa Mundial das Radiocomunicações para a Radioxlifusão por Satélite (Genebra, 1977).

(2) Substitui a Recomendação Spa-4 da Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1963).

b) Que os artigos 27 e 28 do Regulamento das Radiocomunicações fixam os critérios de partilha que é preciso respeitar a fim de evitar as interferências mútuas entre as estações desses dois serviços;
c) Que a redução das interferências entre os dois serviços parece ser o mais importante dos numerosos factores de que depende a eficácia da utilização das faixas de frequências;

notanto

a) Que a eficácia da utilização das faixas de frequências partilhadas por esses dois serviços depende dos métodos de modulação utilizados nos sistemas em causa;
b) Que o estudo das características de modulação preferidas para os sistemas do serviço fixo por satélite está previsto no programa de estudos 2D-1/4 da CCIR:

recomenda que a CCIR

estude especialmente, no quadro da Questão n.º 2-3/4, os métodos de modulação (como a modulação por impulsos codificados utilizada com a modulação de fase ou de frequência), em particular para os feixes hertzianos em visibilidade directa, sob o ponto de vista da partilha das faixas de frequências com os sistemas do serviço fixo por satélite.

RECOMENDAÇÃO N.º 103

Relativa à dispersão da energia da portadora nos sistemas do serviço fixo por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a utilização de técnicas de dispersão da energia da portadora nos sistemas do serviço fixo por satélite pode conduzir a uma redução sensível das interferências causadas às estações de um serviço de radiocomunicação de Terra que funcionam nas mesmas faixas de frequências;
b) Que a utilização dessas técnicas pode conduzir a uma redução sensível das interferências entre sistemas do serviço fixo por satélite que funcionam nas mesmas faixas de frequências e a um aumento correspondente da eficácia de utilização da órbita dos satélites geostacionários;
c) Que essas técnicas são correntemente utilizadas com êxito nos sistemas do serviço fixo por satélite sem degradação da qualidade de funcionamento;

recomenda

1. Que os sistemas do serviço fixo por satélite que empregam uma modulação angular por sinais analógicos utilizem, na medida em que isso seja praticamente possível, técnicas de dispersão da energia da portadora a fim de espalhar em qualquer momento a energia de modo compatível com um funcionamento satisfatório desses sistemas;
2. Que os sistemas do serviço fixo por satélite que empregam uma modulação digital utilizem técnicas de dispersão de energia da portadora quando isso for possível sob os pontos de vista técnico e prático.

RECOMENDAÇÃO N.º 200

Relativa à data de entrada em vigor da faixa de guarda de 10 kHz para a frequência de 500 kHz no serviço móvel (perigo e chamada)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é necessário utilizar o espectro das frequências o mais eficazmente possível;
b) Que a presente Conferência adoptou uma faixa de guarda de 495 kHz a 505 kHz para a frequência de 500 kHz, que é a frequência internacional de chamada e de perigo em radiotelegrafia no serviço móvel;

reconhecendo

a) Que é necessário prever um prazo suficiente para que os equipamentos radioeléctricos actualmente usados sejam retirados do serviço;
b) Que os progressos da técnica permitiram o fabrico de equipamentos mais estáveis e mais fiáveis;

---

(1) Substitui a Recomendação Spa2-11 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

recomenda

à próxima conferência administrativa mundial das radiocomunicações competente que tome uma decisão sobre a data de entrada em vigor desta nova disposição;

pede ao secretário-geral

que comunique a presente recomendação à Organização Intergovernamental Consultiva da Navegação Marítima (OMCI), pedindo-lhe que inclua o exame deste assunto no quadro do estudo do sistema de perigo e de segurança marítima e que apresente à conferência acima mencionada uma recomendação relativa à data de entrada em vigor da nova faixa de guarda.

RECOMENDAÇÃO N.º 201

Relativa ao tráfego de perigo, de urgência e de segurança (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tendo notado

que a Organização Intergovernamental Consultiva da Navegação Marítima (OMCI):

a) Adoptou uma resolução (2) acerca do sistema de perigo no mar;
b) Está a preparar um futuro sistema mundial de perigo e de segurança no mar que inclui melhorias propostas para curto prazo e a definição das necessidades e das medidas transitórias propostas com vista a uma melhoria a longo termo;

tomando nota, além disso,

que os estudos relativos às medidas a tomar para o perigo e a segurança no quadro de um sistema de radiocomunicações marítimas por satélite são objecto de questões e de programas de estudos da CCIR;

considerando

a) A importância especial da necessidade, sublinhada pela OMCI, de um sistema que transmitisse automaticamente, em caso de perigo, sinais de alarme, seguidos de transmissão, igualmente automática, de informações suplementares relativas ao caso de perigo;
b) Que convém que o alarme automático em caso de perigo, seguido da transmissão automática de informações suplementares relativas ao caso de perigo, seja feito numa ou em várias frequências reservadas para fins de perigo;
c) Que é necessário prever frequências apropriadas para as necessidades conexas em matéria de chamada e de comunicações de segurança;
d) Que a emissão das mensagens de perigo, de urgência e de segurança e o seu registo na recepção devem poder efectuar-se sem interrupção, quer as estações interessadas funcionem ou não sob a vigilância de pessoal;

recomenda

1. Que a OMCI seja convidada a prosseguir os seus estudos a fim de chegar à implementação próxima do futuro sistema de perigo;

2. Que a CCIR prossiga os seus trabalhos com vista a determinar o papel das radiocomunicações marítimas por satélite tanto no quadro de um sistema de perigo coordenado como para a segurança;

3. Que as administrações, tendo em conta os progressos contínuos da tecnologia, encarem a necessidade de reservar uma ou, eventualmente, várias frequências para fins de perigo;

4. Que as administrações, inspirando-se nos progressos técnicos, encarem uma automatização mais aperfeiçoada dos sistemas de telecomunicação que permita difundir sem interrupção as mensagens de perigo, de urgência e de segurança, com vista a substituir a radiotelegrafia em código morse e, eventualmente, a radiotelefonia;

5. Que as administrações fixem como seu objectivo tomar uma decisão sobre o assunto quando da próxima conferência administrativa mundial das radiocomunicações competente.

---

(1) Substitui a Recomendação Mar2-16 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).
(2) Resolução A-420 (XI) da OMCI.

RECOMENDAÇÃO N.º 202

Relativa à melhoria da protecção contra interferências prejudiciais das frequências de perigo e de segurança e das que têm relação com o perigo e a segurança

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que importa reduzir ao mínimo os riscos de interferências prejudiciais nas frequências utilizadas para a salvaguarda da vida humana;
b) Que esta Conferência, ao examinar o artigo 18 relativo às interferências, reconhecem por unanimidade que convém melhorar a protecção contra interferências prejudiciais das frequências de perigo e de segurança e das que têm relação com o perigo e a segurança;
c) Que se poderia, designadamente, contribuir para a melhoria dessa protecção inserindo no Regulamento das Radiocomunicações disposições estipulando que os ensaios nessas frequências devessem ser efectuados, sempre que isso seja possível na prática, utilizando uma antena fictícia ou com uma potência reduzida;
d) Que essas disposições estão contidas no artigo 38 relativo às frequências de perigo e de segurança;

notando, todavia,

que a presente Conferência não está habilitada a rever o artigo 38;

convida as administrações

a estudarem esta questão e a apresentarem propostas à próxima conferência administreativa mundial das radiocomunicações competente.

RECOMENDAÇÃO N.º 203

Relativa à utilização futura da faixa de 2170-2194 kHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a frequência de 2182 kHz é a frequência internacional de perigo em radiotelefonia;
b) Que, com excepção das emissões autorizadas na frequência portadora de 2182 kHz, é proibida qualquer emissão nas frequências compreendidas entre 2173,5 e 2190,5 kHz;
c) Que, na Região 1, as faixas de frequências adjacentes de 2170-2173,5 kHz e de 2190,5-2194 kHz são utilizadas, respectivamente, pelas estações costeiras chamando de navio (incluindo as chamadas solectivas) e pelas estações de navio chamando as estações costeiras;

notando

a) Que a presente Conferência modificou o quadro de atribuição das faixas de frequência para reduzir a faixa de guarda de um lado e do outro da frequência de 2182 kHz a ± 8,5 kHz e que atribuiu a faixas de 2170-2173,5 kHz e de 2190-2194 kHz, em exclusivo, ao serviço móvel marítimo em todo o Mundo;
b) Que é actualmente necessário reorganizar o conjunto da faixa de 2170-2194 kHz a reexaminar as disposições regulamentares, sobretudo no que respeita aos artigos 38 e 60;

recomenda

que a próxima conferência administrativa mundial das radiocomunicações competente seja convidada:

1. A examinar as atribuições no interior da faixa de 2170-2194 kHz;
2. A rever os parâmetros técnicos e de exploração apropriados com vista a reduzir ainda mais a faixa de guarda de um lado e do outro da frequência de 2182 kHz;
3. A ultimar todas as disposições regulamentares eventualmente necessárias;
4. A elaborar nestas bases planos para a aplicação de qualquer nova disposição;
5. A fixar a data de entrada em vigor desses planos e dessas disposições;

pede ao secretário-geral

que comunique a presente recomendação ao secretário-geral da Organização Intergovernamental Consultiva da Navegação Marítima (OMCI) para que seja estudasa pelos órgãos competentes e que estes formulem recomendações sobre este assunto;

convida

as administrações a estudar esta questão e a apresentar propostas para exame pela própria conferência administrativa mundial das radiocomunicações competentes.

RECOMENDAÇÃO N.º 204

Relativa à aplicação dos capítulos NX, NXI e NXII da Reestruturação do Regulamento das Radiocomunicações (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o Regulamento das Radiocomunicações constitui o quadro regulamentar fundamental para todos os serviços móveis e que as suas disposições devem responder, tanto quanto possível, às necessidades e às condições de exploração práticas desses serviços;
b) Que a presente Conferência adoptou a reestruturação do Regulamento das Radiocomunicações proposto pelo grupo de especialistas, tendo em conta as propostas formuladas por um certo número de administrações com vista a uma melhoria dessa reestruturação;
c) Que a subdivisão das precedentes disposições relativas ao serviço móvel em vários capítulos, correspondendo aos diversos serviços móveis, fez surgir certas anomalias, no que respeita a esses serviços, relativas em especial à sua aplicabilidade ao serviço móvel aeronáutico e ao serviço móvel terrestre;
d) Que algumas dessas anomalias suscitam problemas fundamentais de exploração que não são da competência da presente Conferência;
e) Que o serviço móvel aeronáutico tem por objecto as comunicações que devem assegurar uma exploração segura e regular das aeronaves;
f) Que para isso a Organização da Aviação Civil Internacional aprovou normas e práticas recomendadas adaptadas às necessidades da exploração das aeronaves, as quais deram as suas provas na prática e são hoje de uso corrente;

recomenda

que a próxima conferência administrativa mundial das radiocomunicações competentes faça a revisão dos capítulos NX, NXI e NXII (1), a fim de as adaptar às necessidades e às práticas actuais dos serviços interessados;

pede ao secretário-geral

que comunique o texto da presente recomendação à OACI e à OMCI e que chame a atenção dessas organizações para o estudo do conteúdo dos capítulos NX e NXI (2), respectivamente, com vista a prestar assistência às administrações para a preparação dessa conferência.

RECOMENDAÇÃO N.º 300

Relativa à planificação da utilização das frequências pelo serviço móvel marítimo na faixa de 435-526,5 kHz, na Região 1

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a presente Conferência modificou as atribuições ao serviço móvel marítimo na faixa de 415-526,5 kHz;
b) Que a presente Conferência adoptou as Recomendações n.ºs 200 e 309 relativas a essa faixa;
c) Que a presente Conferência reviu certas normas técnicas utilizadas no serviço móvel marítimo;
d) Que algumas das normas técnicas que serviam de base ao Plano de consignação para os países europeus contido nos Actos Finais da Conferência Marítima Europeia (Copenhaga, 1948) estão já ultrapassadas;
e) Que os navios que utilizam as frequências desta faixa navegam em todo o Mundo;

---

(1) Capítulos X, XI e XII do Regulamento das Radiocomunicações de 1979.
(2) Capítulos X e XI do Regulamento das Radiocomunicações de 1979.

f) Que certos países atribuíram já frequências a outros serviços que funcionam nesta faixa, o que pode impor condicionamentos na planificação do serviço móvel marítimo;
g) Que é por consequência necessário examinar em pormenor a utilização e a planificação desta faixa, tendo em conta as normas e os progressos técnicos mais recentes;

notando

que a presente Conferência recomendou que seja convocada uma conferência administrativa das radiocomunicações para os serviços móveis;

recomenda ao conselho de administração

que providencie para que a conferência para os serviços móveis seja competente para tomar decisões relativamente à planificação e à utilização das frequências desta faixa na Região 1;

pede à CCIR

que empreenda com urgência o estudo dos aspectos técnicos e de exploração desses problemas, incluindo os critérios de partilha com outros serviços;

convida

1. O secretário-geral a comunicar a presente recomendação à Organização Intergovernamental Consultiva da Navegação Marítima (OMCI), solicitando-lhe que examine com urgência as necessidades de exploração do serviço móvel marítimo que utiliza esta faixa de frequências e que formule as recomendações que considere apropriadas;
2. As administrações da Região 1 a estudar esta questão e a submeter, para exame, propostas à conferência para os serviços móveis.

RECOMENDAÇÃO N.º 301

Relativa à planificação da utilização das frequências nas faixas atribuídas ao serviço móvel marítimo entre 1606,5 kHz e 3400 kHz, na Região 1

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que esta Conferência modificou as atribuições ao serviço móvel marítimo nas faixas compreendidas entre 1606,5 e 3400 kHz;
b) Que esta Conferência adoptou a Recomendação n.º 203 e a Resolução n.º 38 relativas a essas faixas;
c) Que é desejável utilizar essas faixas da forma mais eficaz quando da aplicação do quadro revisto de atribuição das faixas de frequências;
d) Que os navios que utilizam as frequências dessas faixas navegam em todo o Mundo;
e) Que os planos existentes são limitados à utilização regional;
f) Que, por isso, é necessário examinar pormenorizadamente a utilização e a planificação dessas faixas;

notando

que esta Conferência recomendou que seja convocada uma conferência administrativa das radiocomunicações para os serviços móveis;

recomenda ao conselho de administração

que providencie para que a conferência para os serviços móveis tenha competência para tomar decisões relativas à planificação e à utilização das frequências dessas faixas na Região 1;

pede à CCIR

que empreenda com urgência o estudo dos aspectos técnicos e de exploração desses problemas, incluindo os critérios de partilha com outros serviços;

convida

1. O secretário-geral a comunicar a presente recomendação à Organização Intergovernamental Consultiva da Navegação Marítima (OMCI), pedindo-lhe que examine com urgência as necessidades de exploração do serviço móvel marítimo que utiliza essas faixas de frequências e que formule as recomendações que julgue apropriadas;
2. As administrações da Região 1 a estudarem esta questão e a submeterem, para exame, propostas à conferência para os serviços móveis.

RECOMENDAÇÃO N.º 302

Relativa a uma melhor utilização das vias radiotelefónicas em ondas decamétricas pelas estações costeiras nas faixas de frequências atribuídas em exclusivo ao serviço móvel marítimo (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que um grande número de pedidos de adjudicação respeitantes a vias radiotelefónicas em ondas decamétricas tinham sido apresentados à Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974);
b) Que o número de vias resultante da revisão do apêndice 16 não basta para responder a esses pedidos nas melhores condições;
c) Que as modalidades de partilha que daí resultam foram estabelecidas essencialmente em função de critérios de exploração;
d) Que depois da presente Conferência será ainda mais importante garantir a melhor utilização possível das vias radiotelefónicas em ondas decamétricas nas faixas atribuídas em exclusivo ao serviço móvel marítimo;
e) Que convém que as administrações assegurem umas às outras, em cada via, uma qualidade de serviço equivalente;
f) Que prossegue actualmente a preparação de meios técnicos para facilitar a utilização em comum das frequências por estações costeiras vizinhas dependentes de administrações diferentes ou por uma estação costeira explorada por conta de várias administrações;

recomenda às administrações

1. Que desenvolvam todos os seus esforços com vista a concluir arranjos de exploração mutuamente satisfatórios, relativos especialmente:

— Aos diferentes esquemas de partilha no tempo;
— À separação das horas de abertura do serviço;
— Voluntariamente e no quadro regional, à utilização das vias radiotelefónicas em ondas decamétricas com uma prioridade ligada ao volume do tráfego;

2. Que utilizem todos os meios à sua disposição, incluindo os indicados acima, para permitir a melhor utilização possível das vias radiotelefónicas em ondas decamétricas pelas estações costeiras nas faixas atribuídas ao serviço móvel marítimo;

convida as administrações

1. A terem em conta, quando consignem a estações costeiras frequências das faixas de ondas decamétricas, as disposições dos n.os **954** e **1804** do Regulamento das Radiocomunicações;
2. A procederem de modo que as estações costeiras:

— Utilizem a faixa de frequências e a potência mínima adaptadas às condições de propagação e à natureza do serviço;
— Utilizem, sempre que possível, antenas direccionais;
— Dêem às estações de navio instruções apropriadas, como vem indicado no n.º **5056** do Regulamento das Radiocomunicações;

convida a CCIR

a prosseguir os seus estudos, a fim de melhorar todos os critérios de partilha, técnicos e de exploração, que tenham incidência sobre a utilização pelas estações costeiras das vias radiotelefónicas em ondas decamétricas nas faixas atribuídas em exclusivo ao serviço móvel marítimo, assim como os métodos de escolha das vias disponíveis, por meios electrónicos ou outros, com vista a facilitar o acesso múltiplo a essas vias.

RECOMENDAÇÃO N.º 303

Relativa à utilização das frequências portadoras de 4125 kHz e 6215,5 kHz, além da frequência portadora de 2182 kHz, para fins de perigo e de segurança, bem como para a chamada e a resposta na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N. (2).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

---

(1) Substitui a Recomendação Mar2-7 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).
(2) Substitui a Recomendação Mar2-4 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

considerando

a) Que em certas zonas do Mundo não é praticamente possível assegurar uma cobertura eficaz para fins de perigo e de segurança na frequência internacional de perigo em radiotelefonia (2182 kHz) porque as estações costeiras que asseguram a escuta nesta frequência estão muito afastadas umas das outras;

b) Que grande número de navios equipados apenas para a radiotelefonia navegam nessas zonas e ficam então fora do alcance das estações costeiras que asseguram a escuta na frequência portadora de 2182 kHz;

c) Que para ultrapassar esta dificuldade numerosas administrações das zonas acima mencionadas estabeleceram nas suas estações costeiras escutas nas frequências portadoras de 4125 kHz e 6215,5 kHz, para fins de perigo e de segurança, bem como para a chamada e a resposta, tendo-se verificado que essas escutas completam eficazmente a que é efectuada na frequência de 2182 kHz;

d) Que o Regulamento das Radiocomunicações prevê a possibilidade de utilizar, para fins de perigo e de segurança, assim como para a chamada e a resposta, além da frequência portadora de 2182 kHz, por um lado, a frequência portadora de 4125 kHz na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N., e, por outro lado, a frequência portadora de 6215,5 kHz na zona da Região 3 situada ao sul do paralelo 25°N.;

e) Que poderia haver interesse em que os navios equipados apenas para a radiotelefonia e que navegam nessas zonas tenham meios para emitir e receber nas frequências portadoras de 4125 kHz e 6215,5 kHz, quando as chamadas na frequência de 2182 kHz correm o risco de ser ineficazes;

recomenda

1. Que as administrações informem os exploradores dos navios equipados apenas com radiotelefonia e que estejam sob a sua dependência de que certas estações terrestres que figuram na Nomenclatura das estações costeiras têm meios para completar o serviço assegurado na frequência portadora de 2182 kHz, para fins de perigo e de segurança, assim como para a chamada e a resposta, por um serviço que funciona na frequência portadora de 4125 kHz na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N., e na frequência portadora de 6215,5 kHz na zona da Região 3 situada ao sul do paralelo 25° N.;

2. Que as administrações que possuem certos navios equipados somente com radiotelefonia não percam de vista que, se não é obrigatório que as estações de navio e as estações costeiras estejam dotadas de instalaçoes que permitam emitir e receber nas frequências de 4125 e 6215,5 kHz, não deixa de ser um facto que tais instalações podem ser essenciais à segurança desses navios quando navegam nas zonas acima mencionadas.

RECOMENDAÇÃO N.º 304

Relativa às frequências do apêndice 16 (secção B) ao Regulamento das Radiocomunicações, destinadas a ser utilizadas em todo o Mundo pelos navios de todas as categorias, assim como pelas estações costeiras (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as frequências indicadas no quadro das frequências de emissão de faixa lateral única para a exploração *simplex* (via a uma frequência) e para a exploração de faixas cruzadas entre navios (duas frequências) ainda não são utilizadas à escala mundial para as comunicações entre navios e as estações costeiras;

b) Que os navios de longo curso, em todo o Mundo, têm necessidade de poder comunicar com as estações costeiras de qualquer administração:

recomenda

que as administrações asseguram, tanto quanto possível, um serviço nessas frequências nas suas principais estações costeiras radiotelefónicas e notifiquem ao secretário-geral informações pormenorizadas relativas a esses serviços, com vista à sua publicação na Nomenclatura das estações costeiras.

---

(1) Substitui a Recomendação Mar2-6 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

RECOMENDAÇÃO N.º 305

Relativa à utilização das vias 15 e 17 do apêndice 18 pelas estações de comunicações de bordo (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967) previu a utilização das vias 15 e 17 do apêndice 18 para as comunicações internas de exploração a bordo dos navios nas águas territoriais com uma potência aparente radiada que não excedesse 0,1 W e que a Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) elevou esse limite de potência para 1 W;
b) Que um certo número de administrações fazem grande uso dessas vias;
c) Que certas administrações não têm utilizado para as comunicações internas a bordo dos navios devido à falta de vias em ondas métricas para as outras necessidades do serviço móvel marítimo;
d) Que, por essa mesma razão, essas administrações desejam que essas vias deixem de ser utilizadas nas comunicações de bordo;
e) Que, sobre o assunto, a presente Conferência manteve as disposições do quadro de atribuição das faixas de frequências;

notando

que a CCIR adoptou o parecer n.º 542 e o Relatório n.º 589-1;

reconhecendo

a) Que é necessário dispor, no plano internacional, de diversas vias comuns para as estações de comunicação de bordo, a fim de poder daer resposta às necessidades mundiais no futuro;
b) Que pode ser necessário dispor de frequências que permitam utilizar *relais* nos grandes navios, tais como os porta-contentores, os navios-cisternas, etc.;
c) Que talvez haja necessidade de adquirir mais experiência no que respeita à eficácia de emprego das vias em ondas decimétricas mantidas disponíveis para o efeito pela presente Conferência;

recomenda

1. Que a próxima conferência administrativa mundial das radiocomunicações competente determine se a utilização das vias 15 e 17 do apêndice 18 é ainda necessária para as comunicações de bordo e, se não for esse o caso, que ela fixe a data em que convém que essa utilização cesse;

2. Que na mesma conferência examine o caso das vias em ondas decimétricas utilizadas pelas estações de comunicações de bordo, com vista a determinar se o seu número e a sua localização no espectro das frequências correspondem de facto às necessidades dessas estações;

3. Que essa mesma conferência determine se é necessário proceder a atribuições suplementares de frequências que as estações de comunicações de bordo poderiam utilizar em todo o Mundo, incluindo nas águas territoriais de todos os países;

4. Que as administrações dispensem toda a atenção necessária às normas técnicas dessas estações e ao seu funcionamento, a fim de assegurar a sua compatibilidade mútua no seio de um sistema internacional eficaz.

RECOMENDAÇÃO N.º 306

Relativa ao estabelecimento de uma escuta na frequência de 156,8 MHz pelas estações costeiras para fins de perigo (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a frequência de 156,8 MHz foi designada como frequência internacional de perigo para as estações do serviço móvel marítimo que funcionam nas faixas autorizadas entre 156 MHz e 174 MHz;
b) Que esta frequência é muito útil para as comunicações a curta distância e que a sua utilização, em situações de perigo, contribuirá para melhorar notavelmente a segurança da vida humana no mar, especialmente nas zonas de tráfego elevado, onde se pode manter uma escuta eficaz;
c) Que muitas administrações já asseguram a cobertura das suas costas na faixa de 156-174 MHz;

---

(1) Substitui a Recomendação Mar2-11 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).
(2) Substitui a Recomendação Mar2-10 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

d) Que seria entretanto pouco prático ou inútil para certas administrações, nas condições que lhes são próprias, assegurar uma cobertura suficiente das suas costas na faixa de 156-174 MHz que garantissem uma escuta eficaz para fins de perigo na frequência de 156,8 MHz:

recomendo

que as administrações, quando julgarem necessário e possível na prática, tomem as medidas necessárias ao estabelecimento de uma escuta na frequência de 156,8 MHz para fins de perigo nas costas dos seus países.

RECOMENDAÇÃO N.º 307

Relativa à escolha, nas faixas do serviço móvel marítimo compreendidas entre 1605 kHz e 3800 kHz, de uma frequência reservada às necessidades da segurança (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a radiotelefonia em ondas hectométricas apresenta uma utilidade crescente para a segurança dos navios, pois que:

i) Em conformidade com as disposições da Convenção Internacional para a Salvaguarda da Vida Humana no Mar (Londres, 1960) os navios de carga de tonelagem bruta compreendida entre 300 t e 1600 t, a menos que estejam providos de uma estação radiotelegráfica, devem estar providos de uma estação radiotelefónica;

ii) A Organização Intergovernamental Consultiva da Navegação Marítima (OMCI) recomenda (2) que os navios obrigatoriamente equipados quer com uma instalação radiotelegráfica (navios de mais de 1600 t brutas) quer com uma instalação radiotelefónica estejam também dotados de instalações que lhes permitam a escuta permanente, quando estejam no mar, na frequência radiotelefónica de perigo.

Que se encoraje, nos navios equipados para a radiotelegrafia, a instalação de um emissor radiofónico que possa funcionar na faixa dos 2 MHz e que as administrações encarem a adopção de um regulamento nacional que imponha a instalação de um receptor de escuta na frequência de perigo radiotelefónico a bordo dos navios a que não se aplique a Convenção de Londres (1960);

b) Que, todavia, em muitas regiões, a escuta na frequência radiotelefónica de perigo em ondas hectométricas é muito difícil por causa de numerosas chamadas transmitidas nessa frequência no tráfego corrente;

c) Que se apresentariam dificuldades análogas se fossem adoptados sistemas de escuta e de alarme mais evoluídos que os sistemas actuais;

d) Que, em certas regiões, o tráfego radiotelefónico em ondas hectométricas aumenta constantemente;

convida a CCIR

a empreender com urgência um estudo dos aspectos técnicos e de exploração dos problemas suscitados pela situação acima exposta.

recomenda

que a próxima conferência administrativa mundial das radiocomunicações competente determine, em função dos resultados dos trabalhos da CCIR:

1. Uma frequência reservada à transmissão de chamadas e mensagens de perigo e, eventualmente, de sinais e mensagens de urgência, bem como de sinais e certas mensagens de segurança, com exclusão de qualquer chamada destinada ao tráfego corrente;
2. Uma frequência, diferente da precedente, destinada à chamada por voz e à chamada selectiva para o tráfego corrente;
3. Para cada uma destas duas frequências uma faixa de guarda de largura conveniente.

---

(1) Substitui a Recomendação Mar2-2 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).
(2) Resolução A-217 (VII) da OMCI.

RECOMENDAÇÃO N.º 308

Relativa à designação de frequências das faixas de ondas hectométricas a utilizar em comum pelas estações costeiras radiotelefónicas para as comunicações com as estações de navio de nacionalidades diferentes das suas (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que nos navios de pequena tonelagem dotados de aparelhos em faixa lateral única é essencial dispor de um receptor de frequências fixas controladas por cristal, para que seja facilitado o ajuste correcto;

b) Que os navios deste tipo que efectuam viagens internacionais e comunicam com estações costeiras de nacionalidades diferentes das suas têm necessidade de dispor de número considerável de cristais suplementares;

c) Que reduzir o número de cristais necessários permite manter num nível satisfatório o custo dos receptores em faixa lateral única;

considerando

a) Que convém consignar a todas as estações costeiras frequências de trabalho internacionais para as suas comunicações com navios de nacionalidades diferentes das suas, não excluindo tal utilização dessas frequências o seu emprego para as necessidades nacionais;

b) Que, examinando o Ficheiro de Referência Internacional das Frequências, se verificou que, tanto à escala regional como à escala mundial, não parecia existir qualquer frequência disponível susceptível de ser utilizada pelas estações costeiras para as suas comunicações com navios de nacionalidades diferentes das suas;

recomenda

1. Que as administrações estudem esta questão com a maior urgência possível, a fim de formularem propostas destinadas a serem apresentadas à próxima conferência administrativa das radiocomunicações habilitada para tratar desta questão;

2. Que, entretanto, os países procurem a possibilidade de concluírem arranjos regionais, bilaterais ou multilaterais, a fim de colocarem à disposição das estações costeiras frequências de trabalho comuns para comunicarem com estações de navio de nacionalidades diferentes das suas.

RECOMENDAÇÃO N.º 309

Relativa à designação de uma frequências nas faixas de 435-495 kHz ou 505-526,5 kHz (525 kHz na Região 2), numa base mundial para a emissão pelas estações costeiras de boletins meteorológicos e de avisos à navegação, com destino aos navios, utilizando a telegrafia de faixa estreita com impressão directa.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que para melhorar as disposições existentes do sistema actual de urgência e de segurança marítimas, a Organização Intergovernamental Consultiva da Navegação Marítima (CI) recomendou (2) às administrações que introduzissem emissões de telegrafia de faixa estreita com impressão directa para difundir os boletins meteorológicos e os avisos à navegação;

b) Que essas emissões teriam por efeito reforçar a segurança da vida humana no mar;

c) Que a CCIR recomendou (3) um sistema automático de telegrafia de faixa estreita com impressão directa para a transmissão aos navios de informações relativas à navegação e à meteorologia;

d) Que em certos países da Europa há administrações que assegurqm já tais emissões a título experimental utilizando a frequência de 518 kHz;

e) Que algumas administrações propuseram à presente Conferência que designasse a frequência de 518 kHz para ser utilizada para o efeito numa base mundial;

f) Que a presente Conferência pensa que esta questão depende da próxima conferência administrativa mundial das radiocomunicações competente;

---

(1) Substitui a Recomendação Mar5 da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1967).

(2) V. Resolução A-420 (XI) da Assembleia da OMCI.

(3) V. o parecer n.º 540 da CCIR.

g) Que é ainda necessário assegurar a transmissão de avisos aos navegantes e boletins meteorológicos aos navios utilizando a telegrafia morse normal;

recomenda

que a próxima conferência administrativa mundial das radiocomunicações competente estude esta questão e tome as medidas necessárias com vista a designar uma frequência internacional apropriada para transmitir os avisos à navegação e os boletins meteorológicos, utilizando a telegrafia de faixa estreita com impressão directa, conservando ao mesmo tempo as disposições relativas à telegrafia morse normal, actualmente utilizada para transmitir esses avisos;

convida as administrações

a estudarem esta questão com vista a apresentarem propostas pertinentes à próxima conferência administrativa mundial das radiocomunicações competente;

pede ao secretário-geral

que comunique a presente Recomendação à Organização Intergovernamental Consultiva da Navegação Marítima (OMCI), solicitando-lhe que prossiga o estudo desta questão e formule as recomendações que se impõem.

RECOMENDAÇÃO N.º 310

Relativa a um sistema automático de radiocomunicações em ondas decimétricas para o serviço móvel marítimo

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

consciente

a) Do aumento contínuo da população do Globo e das necessidades que daí advêm no que respeita ao transporte seguro e eficaz de géneros alimentícios e de outras mercadorias essenciais;
b) Da necessidade de um crescimento económico rápido e eficaz em todo o Mundo;
c) De que as frotas marítimas participam activamente no comércio e estão em plena expansão;

considerando

a) Que a faixa de ondas métricas atribuída ao serviço móvel marítimo (apêndice 18) está já saturada em muitas regiões do Mundo;
b) Que as necessidades em matéria de vias radiotelefónicas suplementares em ondas decimétricas para as operações portuárias para o movimento de navios, assim como para a correspondência pública no serviço móvel marítimo, são, no futuro, da ordem das 200 a 240 vias dúplex em certas regiões saturadas;
c) Que é altamente desejável que o sistema marítimo que funciona em ondas decimétricas e outros sistemas internacionais de correspondência pública do serviço móvel sejam integralmente automatizados, a fim de assegurar a utilização eficaz das vias e a exploração económica dos serviços, no interesse dos seus utentes;
d) Que a normalização é de grande importância nos serviços móveis internacionais;
e) Que as administrações podem desejar utilizar todas as vias ou uma parte das vias, designadas para a utilização marítima, para outros serviços móveis automatizados. Pode ser o caso quando é preciso assegurar radiocomunicações comuns ou combinadas nos portos, nas vias navegáveis ou nos molhes adjacentes. Nas zonas onde são nulas as necessidades dos serviços móveis, essas vias poderiam ser utilizadas para outros serviços de radiocomunicação;

tendo tomado nota

a) Do relatório n.º 587-1 que a CCIR emitiu a este respeito em resposta à Questão n.º 23-2/8;
b) Da Decisão n.º 30, pela qual a CCIR encarregou o grupo de trabalho provisório 8/5 de prosseguir o estudo deste assunto na base da Questão n.º 23-2/8 e tendo em conta os resultados dos estudos descritos no Relatório n.º 587-1;
c) Da circular COM 73 da Organização Intergovernamental Consultiva da Navegação Marítima (OMCI), segundo a qual, em matéria de telecomunicações a curta distância, os serviços marítimos internacionais automáticos têm necessidade de uma faixa de 10 MHz de largura;

recomenda

à próxima conferência administrativa mundial das radiocomunicações competente:

1. Que designe faixas apropriadas de largura suficiente para um sistema de comunicação do serviço móvel marítimo, incluindo a correspondência pública, indo-as buscar às faixas actualmente atribuídas ao serviço móvel no plano mundial;

2. Que defina os meios que permitam estabelecer, conforme as necessidades, planos de consignação regionais que tenham em conta as necessidades mundiais do serviço móvel marítimo e sejam compatíveis com a exploração de outros serviços;

convida a CCIR

1. A estudar com urgência as faixas a que haja de dar preferência por razões de exploração e de partilha e a publicar um parecer ou um relatório antes da próxima conferência administrativa mundial das radiocomunicações competente;

2. A estudar, concertadamente com a CCITT, os aspectos técnicos e de exploração de um sistema marítimo e móvel terrestre integrado e automatizado;

pede ao secretário-geral

que leve a presente Recomendação ao conhecimento da Organização Intergovernamental Consultiva da Navegação Marítima (OMCI) para exame e comentários.

RECOMENDAÇÃO N.º 311

Relativa á utilização de um sinal de frequência acústica consecutivo ao sinal de alarme radiotelefónico emitido pelas estações costeiras (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as estações costeiras recebem numerosos sinais de alarme radiotelefónicos que não podem identificar, quer porque não são seguidos de uma mensagem falada, quer porque essa mensagem é ininteligível por causa de interferências ou do nível demasiadamente fraco da modulação;

b) Que as estações costeiras devem tomar medidas a fim de identificar todos os sinais de alarme que recebem e de alertar os serviços de busca e salvamento para acção subsequente;

c) Que muitos dos sinais de alarme radiotelefónicos que precedem a mensagem MAYDAY RELAY provêm de estações costeiras situadas a distâncias consideráveis da estação costeira que as recebe;

d) Que poderia ser extremamente útil que se pudesse distinguir os sinais de alarme radiotelefónicos emitidos pelas estações costeiras dos que são emitidos pelas estações de navio;

reconhecendo

a) Que a recepção normal do sinal de alarme radiotelefónico não deveria ser afectada por qualquer característica necessária para estabelecer a distinção entre os sinais de alarme radiotelefónicos emitidos pelas estações costeiras e os que são emitidos pelas estações de navio;

b) Que a Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974) se ocupou de propostas tendentes a seguir por uma frequência acústica única o sinal de alarme radiotelefónico emitido pelas estações costeiras e que ensaios práticos efectuados na região do mar do Norte durante a referida Conferência mostraram que um sinal acústico de 1300 Hz com dez segundos de duração convém para o efeito;

c) Que os gastos necessários para transformar os aparelhos em serviço nas estações costeiras seriam provavelmente pouco elevados;

recomenda

que se faça seguir o sinal de alarme radiotelefónico, quando emitido por uma estação costeira, de um sinal acústico de 1300 Hz com dez segundos de duração (v. o n.º **3272**).

RECOMENDAÇÃO N.º 312

Relativa aos estudos de interligação dos sistemas de radiocomunicações móveis marítimas com as redes telefónica e telegráfica internacionais (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que adoptou e incluiu no artigo 62 disposições relativas à utilização de um sistema digital de chamada selectiva;

---

(1) Substitui a Recomendação Mar2-5 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

(2) Substitui a Recomendação Mar2-19 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

b) Que a CCIR adoptou a Questão n.º 9-3/8, relativa a um sistema de chamada selectiva apropriado às futuras condições de exploração do serviço móvel marítimo;
c) Que os estudos característicos técnicos e de exploração de um sistema digital de chamada selectiva efectuados pela CCIR estão já avançados;
d) Que a CCIR adoptou a Questão n.º 23-3/8, relativa aos sistemas radiofónicos automáticos em ondas métricas para o serviço móvel marítimo;
e) Que a CCITT está a estudar a interligação dos diferentes serviços telefónicos móveis internacionais — especialmente do serviço móvel marítimo e do serviço móvel marítimo por satélite — com a rede telefónica internacional;
f) Que foi proposto à CCITT o estudo de novas questões (7/1, 4/X) relativas à interligação dos serviços de telecomunicações marítimas por satélite e do serviço de telex internacional;

considerando

a) Que é desejável poder utilizar uma interligação dos sistemas de radiocomunicação do serviço móvel marítimo com as redes telefónica e telegráfica públicas internacionais que permita o encaminhamento automático do tráfego permutado entre as estações de navio e as redes nacionais;
b) Que essa interligação melhoraria muito sensivelmente as radiocomunicações marítimas;

convida instantemente a CCIR e a CCITT

a empreenderem todos os estudos necessários relativos à compatibilidade dos sistemas de radiocomunicações móveis marítimas com os sistemas telefónicos e telegráficos internacionais, designadamente os diversos critérios de qualidade de serviço que permitam uma interligação total dos serviços móveis marítimos com as redes telefónica e telegráfica internacionais;

e convida as administrações

a dar prioridade a esses estudos na sua participação nos trabalhos da CCIR e da CCITT.

RECOMENDAÇÃO N.º 313

Relativa a disposições temporárias relativas aos aspectos técnicos e de exploração do serviço móvel marítimo por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que adoptou um mínimo de disposições destinadas a preparar de forma metódica a introdução do serviço móvel marítimo por satélite;
b) Que as indemnizações têm por enquanto uma experiência reduzida ou nula em matéria de exploração do serviço móvel marítimo por satélite;
c) Que por consequência, não se poderiam fixar desde já disposições regulamentares abrangendo pormenorizada e completamente os aspectos técnicos e de exploração desse serviço;
d) Que, entretanto, se poderiam revelar necessárias, antes da próxima conferência administrativa das radiocomunicações competente, disposições provisórias, de ordem administrativa, técnica e relativas à exploração;

recomenda

que, enquanto vão adquirindo a experiência necessária para servir de base à adopção de disposições regulamentares pormenorizadas pela próxima conferência administrativa das radiocomunicações competente, as administrações participantes no serviço móvel marítimo por satélite cheguem a acordo sobre disposições temporárias, de ordem administrativa, técnica e relativas à exploração, as notifiquem ao secretário-geral e convidem as outras administrações a observá-las, sem compromisso para o futuro.

RECOMENDAÇÃO N.º 400

Relativa à passagem do plano actual ao novo plano de adjudicação de frequências nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

---

(1) Substitui a Recomendação Mar2-15 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).
(2) Substitui a Recomendação Aer2-4 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

considerando

a) Que as Actas Finais da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) entraram em vigor em 1 de Setembro de 1979;
b) Que o novo plano de adjudicação de frequências contido no apêndice 27 Aer2 entrará em vigor em 1 de Fevereiro de 1983, às 00.01 horas UTC;
c) Que algumas administrações desejarão talvez pôr em vigor certas disposições do novo plano de adjudicação de frequências antes desta última data, quando isso for possível, sem causar interferências prejudiciais às estações que funcionam em conformidade com as disposições do actual plano de adjudicação de frequências;
d) Que na sequência da Conferência Administrativa Extraordinária das Radiocomunicações Aeronáuticas (Genebra, 1966), a Organização da Aviação Civil Internacional (OACI), em virtude das disposições do n.º 27/20 do apêndice 27 e agindo no espírito e no quadro da Resolução Aer6 dessa Conferência, elaborou um programa de transição para o serviço móvel aeronáutico (R), a fim de passar do plano de adjudicação de frequências do apêndice 26 ao do apêndice 27;
e) Que o programa de transição da OACI foi seguidamente transmitido à Comissão Internacional de Registo de Frequências, para difusão pelas administrações dos Membros da UIT;
f) Que será útil, de novo, adoptar um programa de natureza a facilitar a passagem do plano actual ao novo plano de adjudicação de frequências;

recomenda

1. Que a OACI seja convidada a elaborar um programa de transição, no quadro do apêndice 27 Aer2, para a utilização operacional, pelas estações aeronáuticas, das frequências que figuram no plano de adjudicação de frequências, excepto para as linhas aéreas regionais e nacionais (ZLARN) que não intervêm na exploração internacional;
2. Que a OACI seja convidada a transmitir à Comissão Internacional de Região de Frequências, para difusão pelas administrações, o programa de transição para o novo plano de adjudicação de frequências;
3. Que as administrações apliquem as disposições do programa de transição em coordenação com a OACI e em conformidade com os princípios enunciados no n.º 27/20 do apêndice 27 Aer2;

solicita ao secretário-geral

que leve a presente Recomendação à atenção da Organização da Aviação Civil Internacional.

RECOMENDAÇÃO N.º 401

Relativa ao emprego eficaz das frequências do serviço móvel aeronáutico (R) designadas para utilização mundial (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

que a Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) adjudicou um número limitado de frequências para utilização mundial para fins de fiscalização da regularidade dos voos e da segurança das aeronaves;

recomenda às administrações

1. Que o número total de estações aeronáuticas em ondas decamétricas funcionando nas vias designadas para utilização mundial seja mantido a um mínimo compatível com uma utilização económica e eficaz das frequências;
2. Que, quando isso for possível e prático, uma única estação deste tipo sirva os exploradores de aeronaves de países limítrofes e que, normalmente, não haja mais de uma estação por país.

RECOMENDAÇÃO N.º 402

Relativa à cooperação com vista ao emprego eficaz das frequências do serviço móvel aeronáutico (R) designadas para utilização mundial (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

---

(1) Substitui a Recomendação Aer2-2 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).
(2) Substitui a Recomendação Aer2-3 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

considerando

a) Que é necessário utilizar o mais eficazmente possível as frequências do serviço móvel aeronáutico (R) designadas para utilização mundial;

b) Que foi adoptado um plano com vista à adjudicação por zonas das frequências do serviço móvel aeronáutico (R) designadas para utilização mundial;

c) Que é desejável uma coordenação entre as administrações dos países situados nas zonas definidas pelo plano de adjudicação.

d) Que a administração de um país tem o direito de escolher e de notificar à IFRB, com vista à sua inscrição no Ficheiro de Referência Internacional das Frequências, qualquer consignação de frequência numa via adjudicada à zona onde esse país está situado;

e) O papel que a IFRB desempenha nos procedimentos de regulamentação, em conformidade com o artigo 12 do Regulamento das Radiocomunicações;

f) O papel que a Organização da Aviação Civil Internacional (OACI) desempenha no domínio da exploração aeronáutica internacional;

convida

1. As administrações dos países situados numa zona mundial de adjudicação, quando julgarem isso oportuno, e a OACI a pedirem o parecer da IFRB com vista a proceder, sob o ponto de vista técnico, à melhor escolha de frequências, a fim de utilizar com o máximo de eficácia as frequências do serviço móvel aeronáutico (R) designadas para utilização mundial;

2. As administrações dos países situados numa zona mundial de adjudicação, quando julgarem isso oportuno, a coordenarem mutuamente a utilização dessas frequências sob o ponto de vista da exploração aeronáutica e, a este respeito, a não perderem de vista a vantagem que poderiam ter em obterem o parecer da OACI neste processo;

3. A IFRB a ajudar qualquer administração ou grupo de administrações dos países situados numa zona mundial de adjudicação e que desejem coordenar as suas necessidades de frequências designadas para utilização mundial, e a prosseguirem a sua cooperação com a OACI para esse fim;

solicita ao secretário-geral

que leve a presente Recomendação à atenção da Organização de Aviação Civil Internacional.

RECOMENDAÇÃO N.º 403

Relativa ao desenvolvimento de técnicas que contribuirão para reduzir a saturação das faixas de ondas decamétricas atribuídas ao serviço móvel aeronáutico (R) (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que várias administrações trabalham activamente para desenvolver técnicas de telecomunicação cuja utilização, se fosse mais alargada no serviço móvel aeronáutico (R), contribuiria para reduzir a saturação das faixas de ondas decamétricas atribuídas a este serviço; entre esses técnicas é de assinalar a utilização de frequências superiores às que correspondem às faixas de ondas decamétricas com estações telecomandadas e a utilização de antenas direccionais, de técnicas de radiocomunicação espacial e de transmissão automática de dados;

b) Que seria útil às outras administrações tomarem conhecimento dessas técnicas, a fim de estudarem a sua aplicação nas suas ligações do serviço móvel aeronáutico (R);

c) Que a Organização de Aviação Civil Internacional (OACI) trabalha activamente para coordenar a utilização prática dessas técnicas;

recomenda

às administrações que trabalham no desenvolvimento de técnicas que contribuam para reduzir a saturação das faixas de ondas decamétricas que informem periodicamente a IFRB dos progressos alcançados;

encarrega a IFRB

de difundir periodicamente as informações assim obtidas pelas administrações, bem como pela OACI.

---

(1) Substitui a Recomendação Aer2-1 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

RECOMENDAÇÃO N.º 404

Relativa à utilização da faixa de 136-137 MhZ pelo serviço móvel aeronáutico (R) (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o quadro de atribuição das faixas de frequências modificado pela presente Conferência comporta atribuições ao serviço móvel aeronáutico (R), a título primário, e aos serviços fixo e móvel, excepto móvel aeronáutico (R), a título secundário, na faixa de 136-137 MHz;

b) Que se prevêem igualmente atribuições ao serviço de exploração espacial (espaço para Terra), ao serviço de meteorologia por satélite (espaço para Terra) e ao serviço de pesquisa espacial (espaço para Terra), a título primário, até 1 de Janeiro de 1990, e depois a título secundário e que o serviço móvel aeronáutico (R) só pode ser introduzido a título primário depois de 1 de Janeiro de 1990, em conformidade com os planos aprovados à escala internacional para esse serviço;

b) Que o serviço móvel aeronáutico (R) corre o risco de, a partir dessa data, ficar sujeito a interferências perigosas para a segurança da navegação aérea, e que importa proteger, no mais alto grau, este serviço contra interferências causadas por estações dos seguintes serviços: fixo, móvel, excepto móvel aeronáutico (R), de pesquisa espacial (espaço para Terra), de exploração espacial (espaço para Terra) e de meteorologia por satélite (espaço para Terra);

recomenda

1. Que em todas as Regiões as administrações que utilizem, ou tenham intenção de utilizar, depois de 1 de Janeiro de 1990, estações dos serviços fixo, móvel, excepto móvel aeronáutico (R), de exploração espacial (espaço para Terra), de meteorologia por satélite (espaço para Terra) e de pesquisa espacial (espaço para Terra) na faixa de 136-137 MHz tomem todas as disposições possíveis para assegurar a protecção necessária ao serviço móvel aeronáutico (R) e para fazer o funcionamento das estações dos outros serviços a que a faixa está atribuída a título secundário à medida que vão sendo postas em serviço estações do serviço móvel aeronáutico (R);

2. Que as administrações notifiquem à Comissão Internacional de Registo das Frequências (IFRB) os seus planos de colocação em serviço de estações aeronáuticas do serviço móvel aeronáutico (R);

3. Que as administrações notifiquem à IFRB, de preferência antecipadamente, a data em que as estações autorizadas a funcionar a título secundário cessarão de funcionar, referindo-se à presente Recomendação;

e solicita à IFRB

que aplique essas informações todos os 6 meses a partir de 1 de Janeiro de 1985.

RECOMENDAÇÃO N.º 405

Relativa a um estudo da utilização do serviço móvel aeronáutico (R) por satélite (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Os esforços persistentes desenvolvidos no serviço móvel aeronáutico (R) com vista a melhorar as comunicações proporcionalmente ao aumento do número, das dimensões e da velocidade das aeronaves;

b) Os esforços desenvolvidos pela União Internacional das Telecomunicações para reduzir a saturação das faixas de frequências compreendidas entre 4 e 27,5 MHz;

c) A necessidade de utilizar com economia as ondas decamétricas;

notando

a) Que a aplicação das técnicas de radiocomunicações espaciais às necessidades da aviação civil internacional oferece a possibilidade de melhorar substancialmente as comunicações do serviço móvel aeronáutico (R), evitando ao mesmo tempo a saturação das faixas compreendidas entre 4 e 27,5 MHz;

b) Que ensaios demonstraram que é possível estabelecer comunicações entre as aeronaves e estações aeronáuticas utilizando como retransmissor um satélite geostacionário;

c) Que a tecnologia das radiocomunicações espaciais progride rapidamente;

---

(1) Substitui a Recomendação Spa7 da Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1963).

(2) Substitui a Recomendação Aer2 da Conferência Administrativa Extraordinária das Radiocomunicações Aeronáuticas (Genebra, 1966).

d) Que as possibilidades técnicas deixam supor que, num futuro próximo, se poderá dispor de meios de radiocomunicações espaciais que deverão permitir satisfazer bom número das necessidades do serviço móvel aeronáutico (R) nas linhas aéreas mundiais principais, com excepção das linhas polares;
e) Que antes de as administrações estarem dispostas a pôr em execução um programa visando a aplicação das técnicas das radiocomunicações espaciais convém proceder a um estudo aprofundado dessas técnicas e definir as medidas a tomar;
f) Que a medida em que as administrações podem pôr em execução um tal programa está estreitamente ligada às consequências económicas da sua aplicação;
g) Que a Organização da Aviação Civil Internacional (OACI) é a instituição internacional interessada em primeiro lugar pelo estabelecimento de normas e práticas recomendadas que regem os sistemas e técnicas de radiocomunicação utilizadas em proveito da aviação civil internacional;
h) Que a CCIR estudou a aplicação das técnicas de radiocomunicação espacial no serviço móvel aeronáutico (R), mas que esses estudos poderiam necessitar de uma revisão;

convida a CCIR

a prosseguir os seus estudos sobre a aplicação das técnicas de radiocomunicação espacial no serviço móvel aeronáutico (R) em cooperação com a OACI;

recomenda

1. Que as administrações, tendo em conta os factores económicos e de exploração em jogo, tomem em consideração as possibilidades de dar satisfação às necessidades do serviço móvel aeronáutico (R) nas linhas aéreas mundiais principais recorrendo às técnicas de radiocomunicações espaciais;

2. Que as administrações prossigam o estudo destas questões baseando-se nos factores expostos no anexo à presente Recomendação.

ANEXO À RECOMENDAÇÃO N.º 405(1)

1. Características técnicas do sistema de recepção e de emissão dos satélites e das aeronaves:

a) Potência (portadora) necessária à recepção no sentido aeronave-satélite;
b) Potência (portadora) necessária à recepção no sentido satélite-aeronave;
c) Potência aparente radiada pela estação de satélite (por via);
d) Potência aparente radiada pela estação terrena de aeronave (por via);
e) Tipo de transmissão a utilizar;
f) Largura de faixa de cada via;
g) Disposição das vias;
h) Condições de polarização;
i) Necessidade de utilizar a bordo da aeronave uma antena não direccional; reflexos no mar (ou no solo);
j) Afastamento necessário entre as frequências de emissão e de recepção do satélite;
k) Características do satélite que permitam às aeronaves utilizar independentemente cada via (acesso múltiplo ou aleatório);
l) Condições relativas à fiabilidade do sistema;
m) Diversos.

2. Número e localização dos satélites:

a) Serviço a assegurar; repartição geográfica das linhas aéreas e número de voos em cada uma delas;
b) Grupo de linhas aéreas susceptíveis de ser servidas utilizando um satélite comum;
c) Número de satélites necessários para servir cada grupo de linhas aéreas;
d) Localização de cada um dos satélites;
e) Número de vias de que deve dispor cada satélite;
f) Diversos.

3. Características técnicas necessárias para as estações terrenas aeronáuticas:

a) Características convenientes das antenas de emissão e de recepção: ganho, largura do feixe, localização, etc;
b) Potência aparente radiada mínima;
c) Preparação e utilização de estações terrenas terminais a preço módico;
d) Necessidade de um sistema de chamada selectiva (SELCAL);
e) Diversos.

---

(1) A listas de factores que se segue não tem a pretensão de ser exaustiva. Não tem também por finalidade restringir o exame de qualquer outro aspecto da utilização do serviço móvel aeronáutico (R) por satélite.

4. Modo de funcionamento e localização das estações terrenas aeronáuticas:

a) Modo de funcionamento: quando a estação de satélite dispõe de múltiplas frequências, é ou não necessário continuar a aplicar o método actual, que consiste em assegurar a separação das linhas aéreas utilizando frequências distintas, quer dizer:

— Pôr à disposição de todas as estações terrenas todas as frequências do serviço (R) utilizadas pelo satélite; ou
— Repartir a carga do tráfego entre as frequências disponíveis, sendo limitada a utilização de cada uma delas a uma região geográfica determinada; ou ainda
— Prever qualquer outro arranjo;

b) Se for caso disso, estabelecimento de uma lista (por ordem de frequências) mencionando as estações terrenas que devem utilizar uma frequência determinada do satélite;
c) Diversos.

5. Disposições que permitem o escoamento do tráfego aeronáutico entre pontos fixos:

a) Características técnicas relativas às instalações terminais;
b) Características técnicas relativas ao material instalado a bordo do satélite;
c) Características do satélite que permitam às instalações terminais terem independentemente acesso aos retransmissores estabelecidos por meio desse satélite (acesso múltiplo ou aleatório);
d) Faixas de frequências a utilizar;
e) Afastamento necessário entre as frequências de emissão e de recepção do satélite;
f) Preparação e utilização de instalações terminais de preço módico;
g) Organismos que deveriam fornecer, possuir ou explorar satélites ou instalações terminais; medida em que convém encaminhar as comunicações entre pontos fixos do serviço aeronáutico;
h) Diversos.

6. Estimativa do custo de um sistema de satélites compreendendo o material em terra, o material a bordo das aeronaves e o material a bordo do ou dos satélites.

7. Questões de exploração relativas a um sistema de satélites, incluindo o material indicado no § 6 acima, em especial:

a) O quadro geral em que o sistema tem de funcionar;
b) O processo evolutivo de adopção do sistema.

RECOMENDAÇÃO N.º 406

Relativa à revisão do Plano de adjudicação das frequências para o serviço móvel aeronáutico (OR) (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que os planos de adjudicação das frequências para o serviço móvel aeronáutico estabelecidos pela Conferência Internacional Administrativa das Radiocomunicações Aeronáuticas (CIARA) (Genebra, 1949) e adoptadas pela Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1951), foram adoptadas em grande medida pela Conferência Administrativa das Radiocomunicações (Genebra, 1959) e incluídos no Regulamento das Radiocomunicações;
b) Que a Conferência Administrativa Extraordinária das Radiocomunicações encarregada da revisão do plano de adjudicação para o serviço móvel aeronáutico (R) (Genebra, 1966) decidiu incluir esse plano como apêndice 27;
c) Que a Conferência Administrativa Extraordinária das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978) adoptou princípios técnicos para o estabelecimento do plano de adjudicação de frequências para o serviço móvel aeronáutico (R), entre os quais, designadamente, o emprego do espaçamento entre frequências portadoras de 3 kHz para uma utilização de classes de emissão e de potência determinadas que podem ser retomadas directamente para o estabelecimento do plano de adjudicação do serviço móvel aeronáutico (OR);
d) Que desde a Conferência Administrativa Radiocomunicações (Genebra, 1959) não houve qualquer revisão do plano de adjudicação do serviço móvel aeronáutico (OR);
e) Que desde 1959 numerosos países se tornaram Membros da União;

---

(1) Substitui a Resolução n.º 13 da Conferência Administrativa das Radiocomunicações (Genebra, 1959) e a Recomendação Aer2-8 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

f) Que a presente Conferência adoptou a Resolução n.º 403, relativa à utilização das frequências de 3023 kHz e 5680 kHz, comuns aos serviços móveis aeronáuticos (R) e (OR);

g) Que a Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973) prevê, no n.º 44 do artigo 7, que uma conferência administrativa mundial das radiocomunicações possa proceder à revisão parcial do Regulamento das Radiocomunicações:

emite o parecer

de que o plano do serviço móvel aeronáutico (OR), tal como figura no apêndice 26 do Regulamento das Radiocomunicações, deve ser objecto de um novo exame e de que importa que as administrações procedam com urgência ao estudo das necessidades relativamente a comunicações das suas ligações aeronáuticas, tanto nacionais como internacionais, a fim de determinarem em que momento será necessário empreender esse novo exame nas condições mais favoráveis aos interesses aeronáuticos;

recomenda

que o conselho de administração convoque uma conferência administrativa mundial das radiocomunicações encarregada de proceder a um novo exame do apêndice 26 e das disposições correspondentes do Regulamento das Radiocomunicações.

RECOMENDAÇÃO N.º 407

Relativa ao n.º 27/123 do apêndice 27 Aer2 (subdivisão da zona 5B (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) As discussões havidas acerca da proposta de modificação do n.º 27123 do apêndice 27 Aer2;

b) O facto de que as administrações interessadas concordaram em prosseguir entre elas as consultas relativas à divisão da zona 5B:

recomenda

1. Que as administrações interessadas procedam a essas consultas a fim de se chegar a uma solução satisfatória;

2. Que as administrações interessadas apresentem os resultados das suas consultas à próxima conferência administrativa mundial das radiocomunicações competente, a fim de que esta chegue a uma conclusão definitiva ao n.º 27/123.

RECOMENDAÇÃO N.º 500

Relativa à elaboração da documentação técnica necessária para a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão em Ondas Decamétricas

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

que, se os textos da CCIR fornecem já um volume importante de documentação técnica sobre a radiodifusão em ondas decamétricas, há todavia assuntos que necessitam de estudos complementares e que, em certos casos, a documentação disponível deve ser adaptada com vista à sua utilização para fins de planificação;

notando, em especial,

a) Que a CCIR recomendou um método de avaliação do campo e do desenvolvimento de transmissão na faixa 7 (ondas decamétricas) fundado nas informações disponíveis mais eficazes, e que ela empreendeu a elaboração de um novo método informático que engloba os elementos especiais considerados necessários para melhorar a precisão dessas avaliações nas distâncias longas e médias, bem como nas regiões equatoriais e nas regiões de altitude elevada;

b) Que se possuem poucas informações sobre as previsões de propagação em numerosas regiões equatoriais;

---

(1) Substitui a Recomendação Aer2-7 da Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978).

c) Que o emprego de antenas direccionais é indispensável para uma utilização eficaz do espectro na faixa 7 (ondas decamétricas) e que as radiações em direcções diferentes da direcção desejada podem causar interferências:

solicita à CCIR

1. Que conclua os seus trabalhos relativos ao estabelecimento de um método melhorado de previsões por ordenador (parecer n.º 533), tendo em conta especialmente trajectos transequatoriais de médio e grande comprimento e regiões situadas em latitudes elevadas;

2. Que adopte o método aplicado actualmente nas previsões de propagação de modo que seja melhor adaptado à planificação do serviço de radiodifusão e que recomende os valores dos índices de actividade solar;

3. Que emita, quando ainda os não houver, pareceres relativos às relações de protecção, inclusive nos casos em que o sinal desejado é de um tipo diferente aos valores apropriados de espaçamento dos canais e ao valor mínimo da relação sinal/ruído para uma recepção satisfatória;

4. Que tome as medidas necessárias para que o manual de diagramas de antenas da CCIR inclua todos os principais tipos de antenas de uso corrente;

5. Que prepare dados sobre os aperfeiçoamentos práticos das antenas direccionais e os apresente sob forma que convenha à planificação;

convida as administrações

a participarem activamente nesses estudos e a fornecerem à CCIR as informações de que disponham sobre as questões acima indicadas e especialmente sobre os valores de campo observados na faixa 7 (ondas decamétricas), com vista a uma comparação com os valores previstos.

RECOMENDAÇÃO N.º 501

Relativa ao estudo da introdução da técnica da faixa lateral única nas faixas de ondas decamétricas atribuídas ao serviço de radiodifusão, para a preparação da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão em Ondas Decamétricas.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o emprego da faixa lateral única permite uma utilização mais eficaz do espectro;

b) Que a introdução dessa técnica para fins de radiodifusão em ondas decamétricas apresenta problemas de ordem técnica e económica:

solicita à CCIR

que apresse os estudos relativos à introdução da técnica da faixa lateral única no serviço de radiodifusão em ondas decamétricas e às especificações de um sistema apropriado de faixa lateral única, prestando atenção especial aos problemas económicos respeitantes aos emissores e aos receptores;

convida as administrações

a fornecerem à CCIR informações sobre este assunto.

RECOMENDAÇÃO N.º 502

Relativa às especificações dos receptores de televisão de preço módico

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que se está a tomar consciência cada vez maior das possibilidades oferecidas pela televisão como instrumento de desenvolvimento nacional;

b) Que foi demonstrado que a recepção directa de emissões de televisão a partir de satélites é realizável no plano técnico e interessante sob o ponto de vista económico;

c) Que, dentro dos recursos limitados de que dispõem, numerosos países em desenvolvimento poderiam desejar explorar ao máximo as vantagens da televisão;

d) Que a existência de um receptor de televisão eficaz e de preço módico constituiria um estimulante poderoso para a introdução e o desenvolvimento de serviços de radiodifusão televisiva nos países em desenvolvimento;

e) Que se pode prever que haverá necessidade de receptores de televisão monocromática e a cores para receber as emissões provenientes de estações de Terra e de satélites;
f) Que a CCIR já empreendeu o estudo de especificações para receptores de televisão monocromática de preço módico, para uso doméstico e para uso comunitário, do mesmo modo que o estudo das características de um sistema de recepção para o serviço de radiodifusão (televisão) por satélite;
g) Que um acordo geral sobre a qualidade de funcionamento de receptores de televisão apropriados ajudaria consideravelmente os fabricantes desses receptores a produzirem aparelhos do tipo pretendido, de acordo com normas de qualidade adequadas, e isso por um custo tão baixo quanto possível;
h) Que é necessário ter em conta, na concepção e produção dos receptores de televisão, os progressos rápidos da técnica, assim como a obsolência:

convida a CCIR

1. A estabelecer especificações de qualidade de funcionamento para um ou vários tipos de receptores de televisão de preço módico, em conformidade com a alínea *e*) acima e que convenham à produção em série;
2. A colaborar, se necessário, com outros organismos internacionais que trabalhem no mesmo domínio, a fim de ultimarem no mais curto prazo possível especificações para esses receptores de preço módico;

solicita ao secretário-geral

que comunique ao Secretário-Geral das Nações Unidas, especialmente para conhecimento do director da Organização das Nações Unidas para o Desenvolvimento Industrial, os resultados desses trabalhos, acompanhados de sugestões relativamente às medidas a tomar, e que comunique ao director-geral da UNESCO para informação.

RECOMENDAÇÃO N.º 503

Relativa à radiodifusão em ondas decamétricas

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) A saturação das faixas de ondas decamétricas atribuídas ao serviço de radiodifusão;
b) A importância das interferências na via adjacente;

notando

que é possível melhorar esta situação aplicando os pareceres pertinentes da CCIR;

recomenda às administrações

1. Que dispensem atenção especial às disposições relativas ao «espectro fora de faixa» contidas no parecer n.º 328-4 da CCIR;
2. Que encoragem, em toda a medida do possível, os construtores a ultimarem e a constituírem receptores de radiodifusão conformes com as disposições do parecer n.º 332-4 da CCIR, relativo à selectividade dos receptores;

convida as administrações

a tirarem partido, tanto quanto seja praticamente possível, do funcionamento sincronizado dos emissores, tendo em conta o parecer n.º 205-1 da CCIR;

convida a CCIR

a efectuar outros estudos relativos aos pareceres mencionados acima, tendo em conta as necessidades da radiodifusão em ondas decamétricas, com vista a actualizar esses três pareceres sempre que seja necessário.

RECOMENDAÇÃO N.º 504

Relativa à preparação de um plano de radiodifusão na faixa de 1605-1705 kHz na Região 2

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a faixa de 1605-1705 kHz foi atribuída pela presente Conferência ao serviço de radiodifusão na Região 2;

b) Que, em conformidade com o n.º **480**, a utilização desta faixa pelo serviço de radiodifusão está sujeita à elaboração de um plano de radiodifusão por uma conferência administrativa regional das radiocomunicações;

c) Que o quadro de atribuição das faixas de frequências prevê, além disso, que, na Região 2, a faixa de 1605-1625 kHz seja atribuída em exclusivo ao serviço de radiodifusão e que a faixa de 1625-1705 kHz seja atribuída ao serviço de radiodifusão em partilha com outros serviços;

tendo em conta

as disposições do n.º **346** do Regulamento das Radiocomunicações:

recomenda

1. Que seja convocada uma conferência administrativa regional das radiocomunicações com vista a estabelecer um plano para o serviço de radiodifusão na faixa de 1605-1705 kHz na Região 2;

2. Que essa conferência seja convocada o mais tardar para 1985;

3. Que a data exacta de entrada em vigor do plano seja fixada quando da referida conferência administrativa regional das radiocomunicações. Todavia, a utilização destas faixas pelo serviço de radiodifusão não deveria começar antes de 1 de Julho de 1987 para as frequências compreendidas entre 1625 e 1665 kHz e antes de 1 de Julho de 1990 para as frequências compreendidas entre 1665 e 1705 kHz;

convida

1. O conselho de administração a tomar as medidas necessárias para a convocação de uma conferência administrativa das radiocomunicações para a Região 2 encarregada de planificar a utilização da faixa de 1605-1705 kHz pelo serviço de radiodifusão;

2. A CCIR a efectuar os estudos técnicos necessários para a convocação de uma conferência de radiodifusão para a Região 2, tendo em conta as atribuições feitas a outros serviços nas Regiões 1 e 3 e a necessidade de estabelecer critérios de partilha;

encoraja as administrações da Região 2

a favorecerem o desenvolvimento e a produção em quantidade suficiente de receptores que convenham para a faixa de radiodifusão estendida à frequência de 1705 kHz.

RECOMENDAÇÃO N.º 505

Relativa a estudos de propagação na faixa de 12 GHz para o serviço de radiodifusão por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que os critérios técnicos adoptados quando da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977), encarregada de estabelecer um plano de consignações para o serviço de radiodifusão por satélite nas Regiões 1 e 3, compreendiam uma margem máxima de 2 dB, com um ângulo de elevação de 45°, para a atenuação pelas precipitações;

b) Que certos estudos inclinaram que a margem necessária na zona tropical poderia ser superior a 2 dB;

c) Que a Reunião Especial Preparatória da CCIR (Genebra, 1978) reconheceu que, para a aplicação da técnica proposta no Relatório n.º 721 da CCIR, os dados disponíveis sobre as taxas de precipitação são de natureza a conduzir a uma subavaliação da atenuação que se produz nas regiões tropicais;

d) Que é igualmente necessário reunir uma quantidade de informações sobre diversos outros factores de propagação a tomar em conta para planificar o serviço de radiodifusão por satélite;

recomenda à CCIR

1. Que acelere o estudo dos efeitos da atenuação devida às precipitações nas regiões tropicais e que especifique, o mais rapidamente possível, os valores da atenuação compatíveis com um funcionamento satisfatório do serviço de radiodifusão por satélite;

2. Que prossiga o estudo dos efeitos da atenuação devida às precipitações, com pequenos ângulos de elevação, em todas as zonas hidrometeorológicas;

3. Que prossiga o estudo dos efeitos das tempestades de areia e de poeira;

---

(1) Substitui a Recomendação Sat-3 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

4. Que estude a relação existente entre as características de propagação durante 99 % do mês mais desfavorável e as da proppagação durante o ano;

5. Que estude, no caso das emissões de polarização circular, o nível da componente despolarizada em relação à componente polarizada;

solicita ao director da CCIR

que informe todas as administrações dos valores de atenuação devidos às precipitações que tenham sido especificados.

RECOMENDAÇÃO N.º 506

Relativa às harmónicas da frequência fundamental das estações de radiodifusão por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a faixa de frequências de 23,6-24 GHz está atribuída ao serviço de radioastronomia a título primário;

b) Que a segunda harmónica da frequência fundamental das estações de radiodifusão por satélite funcionando na faixa de 11,8-12 GHz poderia perturbar consideravelmente as observações de radioastronomia na faixa de 23,6-24 GHz se não fossem tomadas medidas eficazes para reduzir o nível dessa harmónica;

atendendo

às disposições do n.º **306** do Regulamento das Radiocomunicações;

recomenda

que, ao determinarem as características das suas estações espaciais do serviço de radiodifusão por satélite, especialmente na faixa de 11,8-12 GHz, as administrações tomem todas as medidas necessárias para reduzir o nível da segunda harmónica abaixo dos valores indicados nos pareceres pertinentes da CCIR.

RECOMENDAÇÃO N.º 507

Relativa às radiações não essenciais no serviço de radiodifusão por satélite (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, devido ao nível elevado da sua potência, as estações espaciais do serviço de radiodifusão por satélite causarão provavelmente, devido a radiações não essenciais, interferências aos serviços assegurados nas faixas de frequências adjacentes ou em relação harmónica;

b) Que se deve ter em conta, quando da planificação do serviço de radiodifusão por satélite, a necessidade de reduzir a um nível aceitável a interferência causada:

Aos serviços assegurados nas faixas adjacentes que se encontram no limite inferior e no limite superior da faixa de 12 GHz atribuída ao serviço de radiodifusão;

Ao serviço de radioastronomia a que está atribuída a faixa de 23,6-24 GHz;

c) Que a CCIR prossegue o estudo deste problema de acordo com o programa de estudos pertinente;

convida a CCIR

a prosseguir com urgência o estudo das questões técnicas e de exploração apresentadas pelas radiações não essenciais das estações espaciais do serviço de radiodifusão por satélite.

---

(1) Substitui a Recomendação Sat-2 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

(2) Substitui a Recomendação Sat-6 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

RECOMENDAÇÃO N.º 508

Relativa às antenas de emissão do serviço de radiodifusão por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é necessário dispor de documentação abundante sobre as antenas de emissão para a planificação do serviço de radiodifusão por satélite;
b) Que a CCIR prossegue o estudo destes problemas de acordo com as questões e os programas de estudos pertinentes:

convida a CCIR

1. A prosseguir o estudo dos diagramas de referência para as componentes co-polar e contrapolar das antenas de emissão do serviço de radiodifusão por satélite, tanto para a recepção individual como para a recepção comunitária, e, em especial, o estudo dos meios que permitiam obter uma melhor supressão dos lóbulos laterais e das consequências económicas que daí advêm;
2. A prosseguir o estudo das características técnicas que permita obter uma precisão de orientação da antena de emissão tal que:

O afastamento do feixe de antena em relação à sua direcção de orientação nominal não exceda 0,1°;
O ângulo de rotação do feixe de emissão em volta do seu eixo não exceda + 2°.

RECOMENDAÇÃO N.º 600

Relativa à utilização da faixa de frequências de 9300-9500 MHz (2)(3)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

notando

a) Que existem duas classes principais de radiodetectores meteorológicos de aeronave que funcionam, respectivamente nas faixas de 5350-5460 MHz e 9300-9500 MHz;
b) Que existe um número considerável de radiodetectores de navio dos quais a maior parte funciona na faixa de 9300-9500 MHz;
c) Que existem igualmente na faixa 9300-9500 MHz radiodetectores em Terra do serviço de radionavegação marítima, do serviço de radionavegação aeronáutica e do serviço meteorológico;
d) Que a utilização da faixa de 5350-5460 MHz atribuída, a título primário, exclusivamente ao serviço de radionavegação aeronáutica é limitada aos dispositivos de radiodetecção aerotransportados;
e) Que os radiodetectores de navio partilham unicamente com os radiodetectores de terra a utilização das faixas de 2900-3100 MHz e 5470-5650 MHz atribuídas, a título primário, respectivamente, apenas ao serviço de radionavegação e ao serviço de radionavegação marítima;
f) Que se verificou ser necessário atribuir a faixa de 9300-9500 MHz, na base de igualdade de direitos, ao serviço de radionavegação aeronáutica e ao serviço de radionavegação marítima;
g) Que na faixa de 9300-9320 MHz a utilização de radiodetectores de navio deixou de ser autorizada, a fim de facilitar o desenvolvimento das balizas de radiodetectores de frequência fixa nessa faixa;
h) Que na faixa de 9320-9500 MHz a utilização de balizas de radiodetecção de frequência fixa do serviço de radionavegação marítima, em terra ou no mar, não é autorizada;

considerando

a) Que é da maior importância que nenhuma interferência prejudicial seja causada aos serviços de radionavegação que asseguram a salvaguarda da vida humana;
b) Que convém que as condições de funcionamento de um serviço de salvaguarda da vida humana sejam as mesmas em todo o Mundo;
c) Que, na falta de coordenação, o aumento da utilização da faixa de 9300-9500 MHz só pode aumentar a probabilidade de interferências prejudiciais entre o serviço de radionavegação aeronáutica e o serviço de radionavegação marítima;

recomenda

1. Que as administrações, a Organização da Aviação Civil Internacional (OACI) e a Organização Consultiva Intergovernamental da Navegação Marítima (OMCI) estudem esta questão logo que possam; e, especialmente,

---

(1) Substitui a Recomendação Sat-4 da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).
(2) V. também a Resolução n.º 600.
(3) Substitui a Recomendação n.º 12 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

2. Que determinem se, e em que proporções, uma interferência reconhecida como tecnicamente possível entre os dois serviços se torna prejudicial em circunstâncias operacionais;

3. Que, se tal eventualidade se produzir, procurem a possibilidade de reduzir a interferência prejudicial por meios técnicos de exploração e de procedimento, admitindo que os novos equipamentos devem sempre corresponder às mais elevadas normas técnicas;

convida

as administrações, a Organização da Aviação Civil Internacional e a Organização Consultiva Intergovernamental da Navegação Marítima a comunicarem à União os resultados dos seus estudos, assim como as suas opiniões e as propostas que daí resultem.

RECOMENDAÇÃO N.º 601

Relativa às frequências a utilizar no serviço de radionavegação aeronáutica para um sistema destinado a evitar as colisões entre aeronaves (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que ainda não se ultimou um sistema eficaz para evitar as colisões de aeronaves e melhorar, assim, a segurança da navegação aeronáutica, tendo em conta especialmente a sua velocidade cada vez maior, mas que um tal sistema se impõe com urgência;

b) Que, se, uma vez ultimado, esse sistema exigisse o emprego de frequências radioeléctricas, deveria funcionar numa das faixas atribuídas ao serviço de radionavegação aeronáutica;

c) Que é impossível prever, na hora actual, se as faixas atribuídas ao serviço de radionavegação aeronáutica convirão para um tal sistema;

recomenda

que as administrações e a Organização da Aviação Civil Internacional (OACI) prestem atenção especial aos trabalhos de desenvolvimento de um sistema eficaz para evitar as colisões entre aeronaves, tendo em conta o facto de que, se as frequências radioeléctricas se revelarem necessárias e se as faixas atribuídas ao serviço de radionavegação aeronáutica não forem convenientes para esse sistema, haverá que estudar a questão numa base internacional.

RECOMENDAÇÃO N.º 602

Relativa aos radiofaróis marítimos

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que os radiofaróis marítimos são regidos na zona europeia marítima pelo Acordo Regional Relativo aos Radiofaróis Marítimos na Zona Europeia da Região 1, Paris, 1951, chamado daqui em diante «Acordo de Paris, 1951»;

b) Que o Acordo de Paris, 1951, se baseia largamente na disposição geográfica dos radiofaróis existentes antes de 1939 e na situação da navegação marítima nessa época;

c) Que, desde a conclusão do Acordo de Paris, 1951, a disposição geográfica e certas características dos radiofaróis marítimos foram modificadas por acordos bilaterais ou multilaterais, para ter em conta, em especial, as mudanças surgidas nos hábitos ou na regulamentação da navegação marítima na zona em questão;

d) Que o Acordo de Paris, 1951, se baseia essencialmente na utilização de receptores radiogoniométricos auditivos;

e) Que se assiste, de há alguns anos para cá, a um aumento importante do número de receptores radiogoniométricos, que só dependem da onda portadora dos radiofaróis e que, por outro lado, não utilizam a modulação para separar os radiofaróis que funcionam na mesma frequência;

f) Que é, portanto, desejável que, após o exame das características técnicas de funcionamento dos radiofaróis marítimos por uma conferência administrativa mundial das radiocomunicações competente, seja convocada uma conferência especializada na base do artigo 32 da Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973), a fim de proceder à revisão do Acordo de Paris, 1951;

---

(1) Substitui a Recomendação n.º 20 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

g) Que esse exame deveria incidir tanto sobre a extensão da zona abrangida pelo Acordo como sobre as características técnicas do alcance, o valor do campo nos limites de alcance, o espaçamento entre canais adjacentes, a percentagem de modulação ou qualquer outra disposição julgada necessária;

notando

A existência no capítulo VIII do Regulamento das Radiocomunicações (artigo 35, secção IV, parágrafo C «Radiofaróis marítimos») das disposições dos n.os **2860** a **2866**;

A existência no capítulo III (artigo 8.º, secção 1) do n.º **405**, que define a Zona Europeia Marítima:

recomenda

1. Que as administrações interessadas examinem a questão dos limites da zona abrangida pelo Acordo e apresentem propostas sobre este assunto à próxima conferência administrativa mundial das radiocomunicações competente;

2. Que todas as administrações e a CCIR se debrucem urgentemente sobre as características técnicas dos radiofaróis marítimos e apresentem as suas conclusões sobre o assunto à próxima conferência administrativa mundial das radiocomunicações competente;

convida o conselho de administração

a tomar as medidas necessárias para que as questões relativas às estações de radiofaróis marítimos que interessam aos serviços móveis sejam inscritas na agenda da próxima conferência administrativa mundial das radiocomunicações para os serviços móveis, de tal modo que esta última possa considerar uma modificação dos artigos pertinentes do Regulamento das Radiocomunicações;

pede ao secretário-geral

que comunique o texto desta recomendação à Organização Consultiva Intergovernamental da Navegação Marítima (OMCI) e à Associação Internacional de Sinalização Marítima (AISM).

RECOMENDAÇÃO N.º 603

Relativa às disposições técnicas relativas aos radiofaróis marítimos na Zona Africana (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a necessidade de facilitar o estabelecimento de novos radiofaróis marítimos na faixa de 283,5-315 kHz, especialmente nas localidades vizinhas das Zonas Europeia e Africana:

recomenda

que as administrações dos países da Zona Afreicana adoptem disposições análogas às do Acordo Regional Relativo aos Radiofaróis Marítimos na Zona Europeia da Região 1, Paris, 1951.

RECOMENDAÇÃO N.º 604

Relativa à utilização futura e às características das radiobalizas de localização de sinistros (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, segundo os termos do artigo 39 do Regulamento das Radiocomunicações, os sinais das radiobalizas de localização de sinistros têm por finalidade essencial facilitar a determinação da posição de náufragos durante as operações de busca e de salvamento;

b) Que a Resolução A.91 (IV) da Organização Intergovernamental Consultiva da Navegação Marítima (OMCI) indica que as radiobalizas de localização de sinistros se destinam principalmente à aproximação por rádio, mas que podem também ser utilizadas para o alerta quando as circunstâncias se prestem a isso;

---

(1) Substitui a Recomendação n.º 21 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

(2) Substitui a Recomendação Mar2-12 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

c) Que, pela sua Resolução A.217 (VII), a OMCI recomenda às administrações que exijam que todos os navios estejam equipados, se for conveniente, com radiobalizas de localização de sinistros funcionando nas frequências radioeléctricas mais apropriadas;

d) Que a OMCI considera obrigatório actualmente o equipamento de todos os navios de passageiros e os navios de carga de tonelagem bruta superior ou igual a 300 t com radiobalizas de localização de sinistros;

considerando, em especial,

que a Resolução A.279 (VIII), a OMCI sublinhou a necessidade urgente de uniformizar as características das radiobalizas de localização de sinistros;

constatando

a) Que o Regulamento das Radiocomunicações existem, para as radiobalizas de localização de sinistros, disposições relativas às frequências de 2182 kHz, 121,5 MHz e 243 MHz;

b) Que a Conferência Mundial das Telecomunicações Espaciais (Genebra, 1971), no que respeita às radiobalizas de localização de sinistros, reservou a faixa de frequências de 406-406,1 MHz para o serviço móvel por satélite, unicamente para a utilização e o desenvolvimento de sistemas de radiobalizas de localização de sinistros de pequena potência usando técnicas espaciais;

c) Que a Resolução A.91 (IV) da OMCI recomenda que a frequência portadora de 2182 kHz seja utilizada como frequência de primeira escolha pelas radiobalizas de localização de sinistros;

d) Que as características técnicas das radiobalizas de sinistros que funcionam na frequência portadora de 2182 kHz estão especificadas no artigo 39 do Regulamento das Radiocomunicações e no seu apêndice 37, bem como no parecer n.º 439 da CCIR;

e) Que, nos termos da Resolução n.º 601, as radiobalizas de sinistros que funcionam nas frequências de 121,5 MHz devem estar em conformidade com os pareceres pertinentes da CCIR, assim como com as normas e práticas recomendadas pela Organização da Aviação Civil Internacional (OACI):

recomenda

1. Que, tendo em conta os assuntos de interesse comum que têm neste domínio, a OMCI e a OACI sejam convidadas a reexaminar, nos mais curtos prazos, os seus conceitos sobre as radiobalizas de localização de sinistros em relação com as operações de busca e salvamento da vida humana no mar;

2. Que, depois a OMCI e a OACI terem precisado os seus conceitos, seja pedido à CCIR que estude as questões técnicas e de exploração próprias das radiobalizas de localização de sinistros, inclusive as frequências preferidas, especialmente em relação com as necessidades fundamentais da aproximação por rádio e com as características técnicas dessas radiobalizas, tendo em conta a necessidade da sua uniformização.

RECOMENDAÇÃO N.º 605

Relativa às características técnicas e às frequências dos equipamentos de resposta a bordo dos navios (1)(2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que, a tonelagem e a velocidade dos navios de comércio aumentam em todo o Mundo;

b) Que, em cada ano, grande número de navios mercantes são vítimas de colisões que provocam perdas de vidas humanas e de bens e que essas colisões comportam elevados riscos para o meio ambiente natural;

c) Que importa estabelecer uma correlação entre os alvos radar e os navios que fazem emissões radiotelefónicas em ondas métricas;

d) Que estudos e ensaios mostraram que os equipamentos de resposta a bordo dos navios podem tornar mais visíveis e melhorar as imagens dos alvos radar relativamente às imagens radar normais;

e) Que os estudos em curso e os ensaios relativos aos equipamentos de resposta a bordo dos navios mostram que se pode esperar a curto prazo um desenvolvimento desses aparelhos, o que permitirá uma melhoria adequada das imagens radar e uma identificação dos alvos radar, e oferecerá eventualmente possibilidades de transmissão de dados;

f) Que pode ser necessário proteger esses equipamentos de resposta contra interferências;

g) Que convém que a escolha das características técnicas desses equipamentos de resposta seja coordenada com os outros utentes do espectro das frequências radioeléctricas cujas operações poderiam ser prejudicadas;

---

(1) Receptor-emissor que emite automaticamente um sinal quando recebe a interrogação apropriada.

(2) Substitui a Recomendação Mar2-14 da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

pede à CCIR

que, após consulta às organizações internacionais apropriadas, recomende a ordem de grandeza das frequências e das larguras de faixa necessárias para o efeito e que melhor convenham, assim como as características técnicas a que devem satisfazer tais dispositivos, tendo em atenção a compatibilidade electromagnética com os outros serviços a que a mesma faixa de frequências é atribuída;

convida

as administrações e a Organização Intergovernamental Consultiva da Navegação Marítima (OMCI) a continuar o estudo das vantagens que poderiam resultar, para a exploração, da utilização generalizada de equipamentos de resposta a bordo dos navios e a examinar se haveria vantagem em adoptar, com vista a pô-lo em serviço ulteriormente, um sistema aprovado no plano internacional;

recomenda

que enquanto aguardam desenvolvimento e avaliações mais avançadas de natureza técnica e de exploração, as administrações se preparem para tomar, quando da próxima conferência administrativa mundial das radiocomunicações competente, as medidas necessárias para a utilização de tais dispositivos.

RESOLUÇÃO N.º 620

Relativa ao serviço dos auxiliares da meteorologia na faixa de 27,5-28 MHz (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

recomenda

às administrações que consignaram frequências da faixa de 27,5-28 MHz às estações do serviço dos auxiliares de meterologia que tomem disposições para transferir essas consignações, logo que possível, para faixas mais elevadas atribuídas ao mesmo serviço;

convida a Organização Meteorológica Mundial

a estudar esta questão e a proceder, se necessário, à coordenação necessária entre as administrações.

RECOMENDAÇÃO N.º 700

Relativa à utilização e à partilha das faixas de frequências atribuídas às radiocomunicações espaciais (2)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

as Resoluções n.os 1721 (XVI), parte D, e 1802 (XVII), parte IV. 3, da Assembleia Geral das Nações Unidas, em cada uma das quais é designadamente mencionada a convicção dos Membro das Nações Unidas de que os sistemas de telecomunicações por satélites devem ser organizadas numa base mundial e de maneira tal que todos os países possam a eles ter acesso sem qualquer discriminação;

considerando, além disso

as consequências de ordem económica e social que traria para todas as nações a introdução de um sistema de telecomunicações mundial por satélite, como o mostrou um relatório destinado aos Membros e Membros associados da UNESCO em cumprimento de uma decisão tomada em Dezembro de 1962 pela 12.ª Sessão da Conferência Geral dessa instituição;

reconhecendo

que os Membros da União Internacional das Telecomunicações têm todos interesse em utilizar equitativa e racionalmente as faixas de frequências atribuídas às radiocomunicações espaciais e que têm, dessa maneira, o direito de as utilizar;

---

(1) Substitui a Recomendação n.º 33 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).
(2) Substitui a Recomendação Spa10 da Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1963).

recomenda aos Membros da União

que a utilização e a exploração das faixas de frequências atribuídas às radiocomunicações espaciais sejam sujeitas a acordos internacionais baseados em princípios de justiça e de equidade e de natureza a permitirem a utilização e a partilha dessa faixas no interesse mútuo de todas as nações.

RECOMENDAÇÃO N.º 701

Relativa à utilização da faixa de frequências de 1330-1400 MHz pelo serviço de radioastronomia

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as observações de radiações radioeléctricas de átomos de hidrogénio neutro na faixa de 1330-1400 MHz têm importância primordial para a compreensão de estrutura de galáxias longínquas e, por consequência, da evolução do universo;
b) Que o serviço de radioastronomia foi inscrito no quadro de atribuição das faixas de frequências na faixa de 1330-1400 MHz;
c) Que o serviço de radioastronomia se dedica à recepção de radiações electromagnéticas de nível extremamente fraco, de origem extraterrestre, e que deve ser protegido contra as radiações artificiais tanto quanto seja possível;
d) Que é limitada a possibilidade de o serviço de radioastronomia partilhar faixas de frequências com outros serviços;

recomenda

1. Que, ao preparar as suas propostas para a próxima conferência administrativa das radiocomunicações competente, as administrações estudem as disposições a tomar, na faixa de 1330-1400 MHz, para assegurar ao serviço de radioastronomia maior protecção contra outros serviço que produzam radiações;
2. Que, ao estabelecerem planos de consignações de frequência, as administrações tenham em conta que as observações de radioastronomia são efectuadas na faixa de 1330-1400 MHz.

RECOMENDAÇÃO N.º 702

Relativa à utilização das faixas de frequências de 1400-1727 MHz, 101-120 GHz e 197-220 GHz para pesquisa de emissões intencionais de origem extraterrestre

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é particularmente importante para a humanidade determinar se existem civilizações extraterrestre;
b) Que é nas faixas de 1400-1727 MHz, 101-120 GHZ e 197-220 GHZ que é melhor a probabilidade de descobrir um sinal emitido por uma civilização extraterrestre, porque estas faixas contêm riscas do espectro com interesse fundamental em física e que estão ligadas aos fenómenos universais;
c) Que nas fixas mencionadas no considerando *b*) existe uma probabilidade de descobrir, com uma relação sinal-ruído máxima, uma radiação emitida por civilizações extraterrestre;
d) Que a busca de civilizações extraterrestres foi inscrita nas faixas de 1400-1727 MHz, 101-120 GHz e 197-220 GHz do quadro de atribuição das faixas de frequências;
e) Que as tentativas visando reconhecer sinais provenientes de civilizações extraterrestres supõem a recepção de radiações de nível extremamente fraco e que essa recepção deve, por conseguinte, ser protegida contra radiações artificiais, tanto quanto seja possível;
f) Que para a recepção de sinais emitidos por uma civilização extraterrestre há muito poucas possibilidades de partilhar faixas de frequências com serviços radioeléctricos activos;

recomenda

que ao elaborarem as suas propostas para a próxima conferência administrativa das radiocomunicações competente, as administrações estudem a oportunidade de tomar disposições que visem assegurar, nas faixas de 1400-1727 MHz, 101-120 GHZ e 197-220 GHz, um meio ambiente protegido apropriado para a recepção de radiações de origem extraterrestre;

convida

as organizações interessadas na busca de civilizações extraterrestres a tomarem em consideração os seguinte pontos:
1. As disposições pertinentes do Regulamento das Radiocomunicações;

2. A necessidade de manter uma estreita coordenação com todas as administrações nacionais relativamente à utilização das frequências;

3. A necessidade de escolher, para as instalações de recepção destinadas a essas observações, localizações tão afastadas quanto possível de fontes de interferência radioeléctrica;

4. Os relatórios e pareceres pertinentes da CCIR:

RECOMENDAÇÃO N.º 703

Relativa à necessidade de fazer cessar o funcionamento das estações dos serviços fixo e móvel nas faixas de frequências de 149,9-150,05 MHz e 399,9-400,05 MHz, atribuídas ao serviço de radionavegação por satélite (1).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as faixas de frequências de 149,9-150,05 MHZ e 399,9-400,05 MHz foram atribuídas em exclusivo, em todo o Mundo, ao serviço de radionavegação por satélite;

b) Que numerosas administrações têm necessidade de prazos prolongados para poderem assegurar, noutras faixas apropriadas, o funcionamento dos serviços fixo e móvel existentes;

c) Que é do interesse de todas as administrações que o serviço de radionavegação por satélite seja posto a funcionar a curto prazo, especialmente no que respeita à sua aplicação à navegação marítima;

d) Que as interferências causadas aos utentes do serviço de radionavegação por satélite poderiam fazer perigar a segurança da vida humana e de bens;

e) Que a CCIR estuda actualmente as possibilidades de partilha das faixas de frequências entre o serviço de radionavegação por satélite e os serviços de Terra, mas que não está ainda em condições de formular conclusões sobre o assunto;

recomenda

1. Que, na expectativa de uma conclusão positiva da CCIR relativamente à possibilidade de partilha entre as estações do serviço de radionavegação por satélite e os serviço fixo e móvel, as administrações tomem todas as medidas possíveis para proteger contra interferências prejudiciais o funcionamento das estações terrenas móveis que utilizem o serviço de radionavegação por satélite;

2. Que, à luz das disposições do parágrafo precedente, as administrações sejam convidadas a, logo que possível, porem termo ao funcionamento das estações dos serviços fixo e móvel nas faixas de 149,9-150,05 MHz e de 399,9-400,05 MHz, especialmente daquelas que estão situadas nas regiões costeiras.

RECOMENDAÇÃO N.º 704

Relativa à compatibilidade entre o serviço de radiodifusão na faixa de 100-108 MHz e o serviço de radionavegação aeronáutica na faixa de 108-117,975 MHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a radiodifusão em ondas métricas é cada vez mais utilizada com potências elevadas na faixa de 100-108 MHz;

b) Que a faixa de 108-117,975 MHz é utilizada mundialmente por sistemas de radionavegação aeronáutica aprovados no plano internacional;

c) Que a parte da faixa compreendida entre 108 e 11,975 MHz é utilizada pelos sistemas de aterragem por instrumentos (ILS) empregados pelas aeronaves para a aterragem automática;

d) Que a faixa compreendida entre 108 e 117,975 MHz é utilizada pelo sistema de radiofarol de alinhamento omnidireccional em ondas métricas (VOR);

e) Que, em certas partes das Regiões 2 e 3, se têm produzido interferências entre o serviço de radiodifusão e o serviço de radionavegação aeronáutica;

consciente

a) De que os produtos de intermodulação provenientes de combinações de emissões de radiodifusão podem cair na faixa de 108-117,975 MHz, atribuída ao serviço de radionavegação aeronáutica;

b) De que se podem formar produtos de intermodulação no receptor de radionavegação;

---

(1) Substitui a Recomendação Spa-8 da Conferência Administrativa Extraordinária das Radiocomunicações (Genebra, 1963).

c) De que emissões de radiodifusão de grande potência podem provocar o bloqueamento dos receptores de radionavegação;
d) De que as emissões do serviço de radionavegação aeronáutica podem causar interferências ao serviço de radiodifusão:

pede à CCIR

1. Que estude com urgência o problema das interferências entre os dois serviços;
2. Que determine os critérios apropriados de protecção dos dois serviços;

convida

a Organização de Aviação Civil Internacional (OACI) e as outras organizações internacionais apropriadas a estudar com urgência o problema e a comunicar os resultados à CCIR;

recomenda

que, ao consignarem frequências ao serviço de radiodifusão na faixa de 100-108 MHz e ao serviço de radionavegação aeronáutica na faixa de 108-117,975 MHz, as administrações tenham em atenção os riscos de interferência possíveis e apliquem medidas de protecção apropriadas.

RECOMENDAÇÃO N.º 705

Relativa aos critérios a aplicar à partilha das frequências entre o serviço de radiodifusão por satélite e o serviço de radiodifusão de Terra na faixa de 620-790 Mhz (1).

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que frequências da faixa de 620-790 MHz podem ser consignadas a estações de televisão com modulação de frequência do serviço de radiodifusão por satélite;
b) Que é necessário fixar um limite da densidade de fluxo de potência a fim de proteger eficazmente o serviço de radiodifusão de Terra;

notando

a) Que nas suas conclusões a reunião especial mista da CCIR (Genebra, 1971) indicou os limites seguintes da densidade de fluxo de potência, a fim de proteger o serviço de radiodifusão de Terra:

$$\begin{cases} 121 \text{ dB (W/m}^2\text{) para } \delta \leq 20° \\ 121 + 0{,}4(\delta - 20) \text{ dB (W/m}^2\text{) para } 20° < \delta \leq 60° \\ 105 \text{ dB (W/m}^2\text{) para } 60° < \delta \leq 90° \end{cases}$$

sendo δ o ângulo de chegada acima do plano horizontal (em graus);
b) Que ensaios suplementares efectuados por uma administração depois da reunião especial mista da CCIR mostraram que podem ser necessário adoptar os seguintes valores, mais prudentes, para os limites de densidade de fluxo de potência:

$$\begin{cases} 130 \text{ dB (W/m}^2\text{) para } \delta \leq 20° \\ 130 + 0{,}4(\delta - 20) \text{ dB (W/m}^2\text{) para } 20° < \delta \leq 60° \\ 114 \text{ dB (W/m}^2\text{) para } 60° < \delta \leq 90° \end{cases}$$

sendo δ o ângulo de chegada acima do plano horizontal (em graus);
c) Que o Relatório n.º 631-1 da CCIR dá o resultado dos estudos efectuados até 1978;
d) Que é necessário colher informações suplementares sobre a relação de protecção contra a interferência causada por um sinal de televisão com modulação de frequência a um sinal de televisão de faixa lateral residual, tanto para os sistemas de 625 linhas como para os de 525 linhas;
e) Que com os sistemas de recepção de televisão de Terra utilizando as técnicas actuais, o campo mínimo a proteger pode em certos casos ser inferior aos valores recomendados no parecer n.º 417-2 da CCIR;
f) Que se pode ser levado a ter em conta as reflexões no solo;
g) Que a técnica de dispersão da energia pode reduzir a relação de protecção necessária e que convém utilizá-la se ela se revelar eficaz.

---

(1) Substitui a Recomendação Spa2-10 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

recomenda

1. Que devido à falta de informações suficientes sobre as experiências efectuadas nas condições de exploração, e a fim de proporcionar critérios de partilha a título provisório, a densidade de fluxo de potência máxima produzida à superfície da Terra na zona de serviço de uma estação de radiodifusão de Terra (v. o parecer n.º 417-2 da CCIR) por uma estação espacial do serviço de radiodifusão por satélite não exceda os valores seguintes na faixa de 620-790 MHz:

$$121 \text{ dB } (W/m^2) \text{ para } \delta \leq 20°$$
$$129 + 0{,}4(\delta - 20) \text{ dB } (W/m^2) \text{ para } 20° < \delta \leq 60°$$
$$105 \text{ dB } (W/m^2) \text{ para } 60° < \delta \leq 90°$$

sendo δ o ângulo de chegada acima do plano horizontal (em graus);

2. Que este limites só sejam excedidos sobre o território de um país se houver acordo da sua administração;

3. Que se evite emitir portadoras não moduladas;

4. Que a CCIR estude com urgência os critérios a aplicar para a partilha das frequências entre o serviço de radiodifusão por satélite e o serviço de radiodifusão de Terra na faixa de 620-790 Mhz e que redija um parecer sobre os valores da densidade de fluxo de potência a utilizar para substituir os limites provisórios indicados acima;

5. Que, nos seus estudos, a CCIR tome especialmente em consideração os seguintes factores:

5.1. Relação de protecção necessária contra a interferência causada por um sinal de televisão com modulação de frequência a uma sinal de televisão de faixa lateral residual, tanto para os sistemas de 525 linhas como para os de 625 linhas;

5.2. Campo mínimo a proteger do serviço de televisão de Terra, tendo em conta o estado da técnica;

5.3. Efeito das reflexões no solo;

5.4. Número dos satélites de radiodifusão visíveis de um receptor de radiodifusão de Terra;

5.5. Efeito da discriminação de polarização;

5.6. Efeito da directividade da antena;

6. Que, nos seus estudos, a CCIR examine as vantagens da técnica de dispersão da energia no serviço de radiodifusão por satélite (televisão).

RECOMENDAÇÃO N.º 706

Relativa à partilha das frequências entre, por um lado, o serviço de exploração da Terra por satélite (detectores passivos) e o serviço de pesquisa espacial (detectores passivos) e, por outro lado, os serviços fixo, móvel, excepto móvel aeronáutico, e fixo por satélite na faixa de 18,6-18,8 GHz.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que foram efectuadas em diversas faixas de frequências atribuídas aos serviços de exploração da Terra por satélite e de pesquisa espacial para o funcionamento de detectores passivos a bordo de engenhos espaciais;

b) Que as atribuições efectuadas na faixa de 18,6-18,8 GHz são-no em partilha com os serviços fixo, móvel, excepto móvel aeronáutico, e por fixo por satélite;

c) Que a aplicação dos critérios de partilha contidos no Relatório n.º 694 da CCIR poderia limitar o desenvolvimento dos serviços fixo, móvel, excepto móvel aeronáutico, e fixo, por satélite;

convida a CCIR

1. A fazer reexaminar o conteúdo do Relatório n.º 694 por todas as comissões de estudos relacionados com ele (especialmente as comissões de estudos 4 e 9);

2. A prosseguir os estudos que já produziram o Relatório n.º 609-1, tendo em conta as necessidades dos serviços de exploração da Terra por satélite (detectores passivos) e de pesquisa espacial (detectores passivos);

3. A estudar as restrições mínimas que poderiam ser aplicadas aos serviços fixo, móvel, excepto móvel aeronáutico, e fixo por satélite (espaço para Terra) para assegurar um funcionamento satisfatório dos detectores passivos;

4. A estudar as restrições máximas que podem ser toleradas pelos serviços fixo, móvel, excepto móvel aeronáutico, e fixo por satélite sem comprometer o funcionamento de todos os serviços susceptíveis de utilizar esta faixa de frequências.

RECOMENDAÇÃO N.º 707

Relativa à utilização da faixa de frequências de 32-32 GHz, partilhada entre o serviço intersatélites e o serviços de radionavegação

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a faixa de 32-33 GHz é atribuída ao serviço intersatélites e ao serviço de radionavegação ;
b) Que o serviço de radionavegação apresenta aspectos de segurança:
c) Que a nota 893 foi incluída no artigo 8;

recomenda

que, com urgência, sejam empreendidos estudos relativamente aos critérios a aplicar para a partilha da faixa de frequências 32-33 GHz entre os dois serviços pré-citados;

pede à CCIR

que efectue esses estudos;

recomenda, além disso,

que uma futura conferência administrativa mundial das radiocomunicações competente reveja os pareceres da CCIR, com o objectivo de incluir os critérios de partilha acima mencionados no artigo 28.

RECOMENDAÇÃO N.º 708

Relativa às faixas de frequências partilhadas pelos serviços de radiocomunicação espacial entre si, bem como entre os serviços de radiocomunicação espacial e os serviços de radiocomunicação de Terra (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) O valor, para a Conferência, da documentação contida no Relatório Espacial Preparatória da CCIR (Genebra, 1978);
b) O facto de que a XIV Assembleia Plenária da CCIR aprovou um certo número de questões e de programas de estudos de acordo com os quais essa Comissão deve ainda estudar problemas muito diversos relativos às radiocomunicações espaciais;

considerando, entretanto,

a) Que certos pareceres da CCIR, de que a seguir se indica a lista, necessitam da continuação dos trabalhos e dos estudos:

Parecer n.º 355-2: «Partilha de frequências entre sistemas do serviço fixo por satélite e dos serviços de radiocomunicação de Terra que funcionam na mesma faixa de frequências»;
Parecer n.º 465-1: «Diagrama de radiação de referência de estação terrena, a utilizar para a coordenação e para a avaliação das interferências na faixa das frequências compreendidas entre 2 e 10 GHz aproximadamente»;
Parecer n.º 466-2: «Nível máximo admissível da interferência, numa via telefónica de uma rede de satélite geostacionário do serviço fixo por satélite utilizando a modulação de frequência com multiplexagem em frequência, produzida por outras redes deste serviço»;

a) Que as discussões da presente Conferência, especialmente as relativas aos artigos 27, 28 e 29 e aos outros artigos pertinentes so Regulamento das Radiocomunicações, mostraram que há necessidade de informações suplementares para responder às questões e programas de estudos que a seguir se indicam e que estão a ser examinados pela CCIR:

Questão n.º 1-2/4: «Antenas para os sistemas do serviço fixo por satélite»;
Questão n.º 2-3/4: «Características técnicas dos sistemas do serviço fixo por satélite»;
Programa de estudos n.º 2A-3/4: «Possibilidade de partilha das faixas de frequências entre os sistemas do serviço fixo por satélite e os serviço de radiocomunicação de Terra»;
Programas de estudos n.º 2J-2/4: «Factores técnicos de que depende a eficácia de utilização da órbitra dos satélites geostacionários por redes de satélites de radiocomunicação partilhando faixas de frequências atribuídas ao serviço fixo por satélite»;

c) Que seria útil conhecer os valores numéricos precisos da densidade de fluxo de potência produzida pelas estações espaciais do serviço de radiodifusão por satélite que permitissem estabelecer uma distinção entre a «recepção individual» e a recepção comunitária» no serviço de radiodifusão por satélite;

---

(1) Substitui a Recomendação Spa2-15 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

d) Que a partilha das frequências entre o serviço de radionavegação e o serviço fixo por satélite (Terra para espaço) foi adoptada na faixa de frequências de 14-14,3 GHz;

recomenda

1. Às administrações, às explorações privadas reconhecidas e a outros participantes nos trabalhos da CCIR que dêem prioridade à apresentação de contribuições para o estudo das questões pré-citadas, de modo que possam ser preparadas propostas de pareceres, quando das reuniões das comissões de estudos competentes, para fins de exame pela Assembleia Plenária da CCIR;

2. À CCIR que estude ou, se for o caso, que continue a estudar;

2.1. Os diagramas de referência de antenas de estação terrena que possam convir à fixação de normas de funcionamento mínimas, com vista a recomendar diagramas para esse fim para melhorar a utilização das faixas de frequências partilhadas entre o serviço fixo por satélite e os serviços de radiocomunicação de Terra, bem como, entre serviços de radiocomunicação espacial, e melhorar a utilização da órbita dos satélites geostacionários;

2.2. Os diagramas de referência de antenas de satélite que possam convir à fixação de normas de funcionamento mínimas, especialmente fora do feixe de radiação principal, para melhorar a utilização da órbita dos satélites geostacionários e para aumentar as possibilidades de reutilização das frequências;

2.3. Os diagramas de referência de antenas de polarização cruzadas que possam convir à fixação de normas de funcionamento mínimas e, a este respeito, estudar igualmente;

2.3.1. As partes de espectro das frequências em que seria mais vantajoso utilizar polarizações ortogonais lineares ou polarizações ortogonais circulares;

2.3.2. A oportunidade, tendo em conta factores técnicos e considerações relativas à utilização da órbita de utilizar polarizações ortogonais num mesmo satélite comparativamente com uma tal utilização em dois satélites;

2.4. Os limites a impor às radiações não essenciais, assim como às tolerâncias de frequência nos serviços de radiocomunicação espacial e nos serviços de radiocomunicação de Terra, na medida em que esses limites e essas tolerâncias possam afectar a partilha as faixas de frequências;

2.5. Os critérios de interferência admissível para os diversos serviços de radiocomunicação espacial e de radiocomunicação de Terra que partilham as faixas de frequências atribuídas pela presente Conferência, a fim de permitir a determinação:

2.5.1. Da distância de coordenação e da probabilidade de interferência entre estações aquém dessa distância;

2.5.2. Dos limites a impor à densidade de fluxo de potência produzida à superfície da Terra pelas estações espaciais;

2.6. O nível máximo de interferência admissível que pode ser causada a uma ligação por satélite geostacionária por qualquer outra rede de satélite geostacionário e pelo conjunto de todas as outras redes de satélite geostacionário, espacialmente no caso:

2.6.1. De sinais telefónicos modulados em frequência;

2.6.2. De sinais de televisão modulados em frequência;

2.6.3. De sinais de modulação digital;

assim como a forma mais apropriada como convém especificar essas interferência admissíveis neste e noutros casos;

2.7. Os critérios de interferência a aplicar à partilha de frequências entre redes de satélite não geostacionário e redes de satélite geostacionário;

2.8. A possibilidade de estabelecer um critério técnico para expressar a eficácia da utilização da órbita dos satélites geostacionários;

2.9. A possibilidade de melhorar e de simplificar o método que permite determinar a zona de coordenação, tal como está descrito no apêndice 28 do Regulamento das Radiocomunicações;

2.10. As condições de partilha das frequências nas faixas atribuídas pela presente Conferência ao serviço de radiodifusão por satélite, com vista a emitir logo que possível pareceres apropriados que permitam às administrações e à IFRB dispor de dados técnicos necessários para aplicar os procedimentos de exame, especialmente os enunciados nos artigos 11, 12 e 13 do Regulamento das Radiocomunicações e na Resolução n.º 33;

2.11. A determinação dos níveis de densidade de fluxo de potência necessários para a recepção individual e para a recepção comunitária no serviço de radiodifusão por satélite, com vista a especificar valores numéricos que permitam estabelecer uma distinção entre esses tipos de recepção;

2.12. Os critérios de partilha das frequências entre o serviço de radionavegação e o serviço fixo por satélite (Terra para espaço) na faixa de frequências de 14-14,3 GHz.

RECOMENDAÇÃO N.º 709

Relativa à partilha das faixas de frequências entre o serviço móvel aeronáutico e o serviço intersatélites

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as faixas de 54,25-58,2 GHz, 59-64 GHz, 116-134 Ghz, 170-182 GHz e 185-190 GHz estão atribuídas ao serviço intersatélites e ao serviço móvel;

b) Que as faixas acima mencionadas estão situadas em partes do espectro das frequências radioeléctricas vizinhas dos picos de absorção atmosférica;

c) Que, entretanto, nem sequer a absorção atmosférica é por si mesma suficiente para impedir que sejam causadas interferências prejudiciais às estações do serviço intersatélites por estações que funcionam a bordo de aeronaves voando a grande altitude;

d) Que por essa razão as estações de aeronave do serviço móvel aeronáutico podem funcionar sob reserva de não causarem interferência prejudicial ao serviço intersatélites [v. o n.º **909**, cujo texto é reproduzido na nota (1)];

recomenda

que se proceda urgentemente a estudos dos critérios de partilha aplicáveis a esses dois serviços nas faixas de frequências acima mencionadas;

pede à CCIR

que efectue esses estudos;

recomenda, além disso,

que uma futura conferência administrativa mundial das radiocomunicações competente examine novamente as atribuições nessas faixas, tendo em conta os resultados do trabalho da CCIR.

RECOMENDAÇÃO N.º 710

Relativa à utilização de radiodetectores aerotransportados nas faixas de frequências partilhadas pelo serviço intersatélites e o serviço de radiolocalização

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que as faixas de 59-64 GHz e 126-134 GHz estão atribuídas ao serviço intersatélites e ao serviço de radiolocalização;

b) Que estas faixas estão situadas nas partes do espectro das frequências radioeléctricas vizinhas dos picos de absorção atmosférica;

c) Que, entretanto, a absorção atmosférica por si mesma nem sempre é suficiente para impedir que sejam causadas interferências prejudiciais a estações do serviço intersatélite por radiodetectores que funcionam a bordo de aeronaves voando a grande altitude;

d) Que por esta razão os radiodetectores aerotransportados do serviço de radiolocalização podem funcionar com a condição de não causarem interferência prejudicial ao serviço intersatélites [v. o n.º **910**, cujo texto vem reproduzido na nota (2)];

recomenda

que se proceda com urgência a estudos sobre os critérios de partilha aplicáveis a esses dois serviços nas faixas de frequências acima mencionadas;

solicita à CCIR

que se efectue esses estudos;

recomenda, além disso;

que uma futura administrativa mundial das radiocomunicações competente examine de novo as atribuições nestas faixas, tendo em conta os resultados dos trabalhos da CCIR.

RECOMENDAÇÃO N.º 711

Relativa à coordenação das estações terrenas (3)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

---

(1) N.º **909**: nas faixas de 54,25-58,2 GHz, 116-134 GHz, 170-182 GHz, 185-190 GHz as estações do serviço móvel aeronáutico podem funcionar sob reserva de não causarem interferência prejudicial ao serviço intersatélites (v. o n.º **435**).

(2) N.º **910**: nas faixas de 59-64 GHz e 126-134 GHz os radiodetectores aerotransportados do serviço de radiolocalização podem funcionar desde que não causem interferência prejudicial ao serviço intersatélites (v. o n.º **435**).

(3) Substitui a Recomendação Spa2-9 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

considerando

a) Que, nos termos do artigo 11 do Regulamento das Radiocomunicações, as consignações de frequência às estações terrenas em certas faixas partilhadas, com igualdade de direitos entre serviços de radiocomunicação de Terra e serviços de radiocomunicação espacial devem ser objecto de uma coordenação, de modo a evitar as interferências prejudiciais mútuas;

b) Que o método de cálculo descrito no apêndice 28 ao Regulamento das Radiocomunicações se aplica somente às frequências da faixa de 1 GHz a 40 GHz;

c) Que os quadros I e II desse apêndice não incluem valores numéricos de todos os parâmetros necessários para certos serviços de radiocomunicação espacial e para certos serviços de radiocomunicação de Terra que partilham faixas de frequências com igualdade de direitos;

convida a CCIR

a prosseguir com urgência os seus estudos:

Sobre os dados relativos aos serviços de radiocomunicação espacial e de radiocomunicação de Terra que partilham faixas de frequências com igualdade de direitos e que não figuram nos quadros I e II do apêndice 28 ao Regulamento das Radiocomunicações;

Sobre a elaboração de métodos de cálculo que permitem determinar a zona de coordenação das estações terrenas para as frequências inferiores a 1 GHz e superiores a 40 GHz;

recomendações às administrações

que utilizem até à próxima conferência administrativa mundial das radiocomunicações competente:

Os pareceres da CCIR eventualmente aplicáveis, no que se refere aos valores que não figuram nos quadros I e II do apêndice 28 ao regulamento das Radiocomunicações;

Os métodos de determinação da zona de coordenação para as frequências inferiores a 1GHz e superiores a 40 GHz que sejam objecto de parecer da CCIR.

RECOMENDAÇÃO N.º 712

Relativa à interdependência entre a concepção dos receptores, o argumento dos canais e os critérios de partilha no serviço de radiodifusão por satélite (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a concepção dos receptores, o agrupamento dos canais e os critérios de partilha são inter dependentes e que têm influência importante na elaboração de um plano para o serviço de radiodifusão por satélite;

b) Que, até ao presente, talvez não se tenha prestado suficiente atenção a estes factores e à influência que exercem na aplicação de tal plano;

convida a CCIR

a estudar o problema da interdependência entre a concepção dos receptores, o agrupamento dos canais e os critérios de partilha, bem como a influência desses factores na exploração do serviço de radiodifusão por satélite.

APÊNDICE 25 Mar2 (2)

Plano de adjudicação de frequências às estações costeiras radiotelefónicas que funcionam nas faixas exclusivas do serviço móvel marítimo entre 4000 e 23 000 kHz

(V. os n.os **4198** e **4212** do Regulamento das Radiocomunicações e o apêndice 16)

Nota a). — As frequências na coluna 1 são frequências consignadas (v. o n.º **142**). Cada frequência é seguida, entre parêntesis, da indicação da frequência portadora, assim como do número da via. (V. a secção A do apêndice 16 ao Regulamento das Radiocomunicações.)

Nota b). — As estações costeiras radiotelefónicas que funcionam nas faixas exclusivas do serviço móvel marítimo entre 4000 e 23 000 kHz devem utilizar a potência mínima necessária para cobrir a sua zona de serviço. Não devem em caso algum utilizar uma potência de ponta superior a 10 kW por via. (V. o n.º **4373** do Regulamento das Radiocomunicações.)

Nota c). — A actualização do plano que figura no presente apêndice efectuar-se-á em conformidade com o procedimento que consta do artigo 16 do Regulamento das Radiocomunicações.

---

(1) Substitui a Recomendação n.º Sat-7 da Conferência Administrativa das Radiocomunicações (Genebra, 1959).

(2) Actos Finais da Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974).

APÊNDICE 26

Plano de adjudicação das frequências para o serviço móvel aeronáutico e informações correspondentes

PARTE I

Disposições gerais

SECÇÃO I

Definições

1. *Plano de adjudicação das frequências.*

Plano que indica as frequências a utilizar numa zona ou por um país, sem precisar as estações a que essas frequências podem ser consignadas.

2. *Significação da terminologia* empregada no presente apêndice para os diferentes métodos de repartição das frequências:

Repartição das frequências	Em francês	Em inglês	Em espanhol	Em português
Serviços	Attribution (attribuer)	Allocation (to allocate)	Atribución (atribuir)	Atribuição (atribuir)
Zonas	Allotissement (allotir)	Allotment (to allot)	Adjudicación (adjudicar)	Adjudicação (adjudicar)
Estações	Assignation (assigner)	Assignement (to assign)	Asignación (asignar)	Consignação (consignar)

3. V. o n.º **27/3** (1).
4. V. o n.º **27/4** (1).
5. V. o n.º **27/5** (1).
6. V. o n.º **27/6** (1).
7. *Família de frequências do serviço aeronáutico.*

Grupo de frequências escolhidas em diferentes faixas do serviço móvel aeronáutico para permitir o estabelecimento de comunicações entre as aeronaves em voo e as estações aeronáuticas correspondentes, quaisquer que sejam as horas e as distâncias.

Secção II

Princípios técnicos e de exploração para a elaboração do plano de adjudicação das frequências para o serviço móvel aeronáutico (OR)

A) Determinação da largura das vias

1. *Espaçamento entre frequências.*

Os espaçamentos entre frequências indicados no quadro seguinte permitem o emprego de sistemas de comunicação de rendimento elevado.

Faixa (kHz)	Espaçamento entre frequências (kHz)	Faixa (kHz)	Espaçamento entre frequências (kHz)
2 850-3 155	7	8 815- 9 040	08,5
3 400-3 500	7	11 175-11 400	9,5
3 900-3 950	7	13 200-13 360	10
4 650-4 750	7	15 010-15 100	10
5 480-5 730	7,5	17 900-18 030	10
6 525-6 765	7,5		

a) Supõe-se que para as emissões da classe A3 as frequências de modulação têm por limite superior 3000 Hz e para as outras classes de emissões autorizadas a radiação das faixas laterais não excede a das emissões da classe A3.

b) A utilização para as diversas classes de emissão (A1, A2, A3, A4 e F1) das vias tal como derivam do quadro precedente será objecto de arranjos especiais entre as administrações interessadas a fim de evitar as interferências que poderiam resultar da utilização simultânea de uma memsa via para emissões de classes diferentes, não se concedendo qualquer prioridade de princípio a uma classe de emissão especial.

c) Reconhece-se que é possível fraccionar em duas ou mais vias A1 cada uma das vias que resultam dos espaçamentos acima.

d) O agrupamento de vias adjacentes derivadas do quadro precedente, para satisfazer necessidades especiais, ficará sujeito a arranjos especiais entre as administrações interessadas.

e) Os arranjos indicados nas alíneas *b*), *c*) e *d*) anteriores serão concluídos em virtude das disposições do artigo 43 (Acordos especiais) da Convenção Internacional das Telecomunicações e do artigo 4 do Regulamento das Radiocomunicações.

---

(1) Apêndice 27 Aer2.

2. *Frequências a adjudicar.*

No quadro seguinte encontra-se a lista das frequências a adjudicar nas faixas exclusivas reservadas ao serviço móvel aeronáutico, na base da largura de faixa prevista no § 1 anterior:

kHz

2850–3155	4650–4750	8815–9040	15 010–15 100
3 023,5 (*a*) (R) e (OR) 3 032 3 039 3 046 3 053 3 060 3 074 3 081 3 088 3 095 3 102 3 109 3 116 3 123 3 130 3 137 3 144 3 151 (OR) 18 vias	4 703,5 4 710,5 4 717,5 4 727,5 4 731,5 4 738,5 4 745,5 (OR) 7 vias	8 967 8 975,5 8 984 8 992,5 9 001 9 009,5 9 018 9 026,5 9 035 (OR) 9 vias	15 016 15 026 15 036 15 046 15 056 15 066 15 076 15 086 15 092,5 (*b*) 15 096,5 (*b*) (OR) 10 vias

3900–3950	6525–6765	11 180,5 11 190 11 199,5 11 205 11 218,5 11 228 11 237,5 11 247 11 256,5 11 266 11 273 (*b*) (OR) 11 vias	17 975 (*b*) 17 983,5 17 993,5 18 003,5 18 013,5 18 023,5 (OR) 6 vias
Região 1 3 904 3 911 3 918 3 925 3 932 3 939 3 946 (OR) 7 vias	6 685 (*b*) 6 687,5 (*b*) 6 693 6 700,5 6 708 6 715,5 6 723 6 730,5 6 738 6 745,5 6 753 6 760,5 (OR) 12 vias	13 200–13 360	
		13 205,5 13 215,5 13 225,5 13 235,5 13 245,5 13 255,5 (OR) 6 vias	

(*a*) Ver Resolução n.º 403 da CAMR79.
(*b*) Esta frequência só deve ser utilizada para emissões da classe A1.

3. *Vias comuns aos serviços (R) e (OR).*

Fica autorizada no Mundo inteiro, como se indica na parte II do presente apêndice, a utilização das vias comuns aos serviços (R) e (OR) e cujas frequências centrais são de 3023,5 kHz e 5680 kHz (1).

Não obstante as disposições do plano de adjudicação que figura na parte II do presente apêndice, pode igualmente utilizar-se a frequência 5680 kHz nas estações aeronáuticas, para as comunicações com estações de aeronave, quando as outras frequências das estações aeronáuticas não estiverem disponíveis ou forem desconhecidas. Esta utilização será limitada, contudo, a zonas e condições tais que não possa resultar qualquer interferência prejudicial às outras comunicações autorizadas do serviço móvel aeronáutico.

4. V. o n.º ***27/20*** (2).

5. *Adaptação do procedimento de adjudicação.*

Os planos de adjudicação contidos neste apêndice não esgotam todas as possibilidades de partilha. Assim, para fazer face a necessidades especiais de exploração que os presentes planos de adjudicação não satisfaçam, as administrações podem consignar frequências escolhidas nas faixas de ondas decamétricas do serviço móvel aeronáutico em

(1) V. a Resolução n.º 403 da CAMR79.
(2) Apêndice 27 Aer2.

zonas diferentes daquelas a que estão adjudicadas nos referidos planos. Todavia, a utilização das frequências assim consignadas não deverá diminuir a protecção de que gozam essas mesmas frequências, nas zonas a que estão adjudicadas pelos planos, para valor inferior ao determinado pela aplicação do procedimento previsto na secção II-B da parte I e do § 4 (*d*) da secção II da parte III do presente apêndice, para os serviços (R) e (OR), respectivamente.

6. Quando for necessário satisfazer as exigências da exploração das linhas aéreas internacionais, as administrações poderão adoptar os procedimentos de adjudicação para a consignação das frequências do serviço móvel aeronaútico (R). Essas consignações serão seguidamente sujeitas à aprovação prévia das administrações interessadas.

7. Recorrer-se-á à coordenação descrita no § 4 quando for oportuno fazê-lo para a utilização racional das frequências em causa.

8. Além das disposições deste apêndice que prevêem a estensão de certas frequências das ZLAMP-EU e ME, para corresponder às necessidades de vôos internacionais do e para o territótrio da URSS, a administração deste país poderá utilizar, para o mesmo fim, as frequências adjudicadas às ZLARN-2 e 3 e às suas subdivisões. Não deverá daí resultar diminuição da protecção para aquém das normas mencionadas no § 5 anterior para o conjunto das estações do serviço móvel aeronáutico.

B) Curvas de alcance da interferência

1. *Definição das curvas.*

As curvas anexas indicam, para as diferentes ordens de grandeza das frequências, o limite das distâncias mínimas aceitáveis a que se devem situar duas estações terrestres que emitam na mesma frequência e cuja potência radiada seja de 1 kW (emissão não modulada), a fim de assegurar, no limite de alcance útil da emissão desejada de uma das estações terrestres, uma relação sinal útil/sinal interferente de 15 dB, a bordo de uma estação de aeronave.

O alcance útil não é indicado nas curvas.

2. *Tipo de mapa utilizado.*

Essas curvas, a traçar em papel vegetal, só podem ser utilizadas com um planisfério elaborado segundo uma projecção de Mercator e cuja escala seja idêntica à indicada em cada uma das curvas. Elas não devem, pois, ser utilizadas com mapas que não estejam de acordo com estas definições. Os planisférios anexos, em que figuram os limites das ZLAMP e das ZLARN, estão igualmente elaborados na escala conveniente e podem utilizar-se com as curvas.

3. *Mudança de escala ou de sistema de projecção.*

Se se pretender utilizar outros mapas em projecção de Mercator com escala diferente, será necessário desenhar, a partir das coordenadas que figuram nos quadros seguintes, novas curvas para ter em consideração a mudança de escala.

Ao traçar as novas curvas é necessário ter presente que o ponto de intersecção do eixo vertical de simetria, isto é, um meridiano, e do eixo perpendicular que representa um paralalelo deve ficar à latitude 00°; na curva 00°, à latitude 20° N., na curva 20°, a 40° N., na de 40°, etc.

As coordenadas geográficas que figuram nos quadros seguintes são dadas em relação ao meridiano 180°, tomado como eixo de simetria para a construção das curvas.

4. V. o n.° **27/30** (1).

5. *Modo de emprego.*

Toma-se um dos mapas anexos ao presente apêndice e escolhe-se o vegetal que contenha a curva correspondente á ordem de grandeza das frequências e às condições de partilha que se pretende estudar.

Coloca-se o centro do vegetal (isto é, a intersecção do eixo de simetria e do eixo horizontal) na linha que delimita a zona ou na posição geográfica do emissor. Anota-se a latitude desse ponto e toma-se a curva a ela correspondente.

Para um emissor situado num ponto qualquer exterior à curva a relação de protecção definida no § 1 anterior será superior a 15 dB.

Para um emissor situado num qualquer ponto interior à curva a relação de protecção obtida será inferior a 15 dB.

A orientação das curvas é tal que são utilizáveis para o hemisfério norte; para o hemisfério sul deverão inverter-se. Deve-se tomar esta precaução quando se tiver de seguir os limites das zonas e passar de um para outro hemisfério.

---

C) Potência radiada

Salvo indicação contrária figurando nas partes II e IV, supõe-se que as potências de ponta radiadas são as seguintes:

Classe de emissão	Estações	Potência de ponta radiada
A1	Estações terrestres	1 kW
	Estações de aeronave	50 W
A3 (taxa de modulação 100 %)	Estações terrestres	4 kW
	Estações de aeronaves	50 W

PARTE II

Princípios técnicos e de exploração aplicados na adjudicação das frequências ao serviço móvel aeronáutico (OR)

SECÇÃO I

Faixas de frequências e vias disponíveis

1. *Faixas de frequências.*

As faixas de frequências disponíveis para o serviço móvel aeronáutico (OR) formam três categorias distintas:

a) Faixas atribuídas exclusivamente ao serviço móvel aeronáutico (OR);
b) Faixas atribuídas em partilha especificamente ao serviço móvel aeronáutico (OR) e a outros serviços;
c) Faixas atribuídas ao serviço móvel e de que o serviço móvel aeronáutico (OR) se não encontra especificadamente excluído.

2. *Frequências a funcionar*

A) Faixas exclusivas:

Na parte I indicam-se as frequências a consignar nas faixas atribuídas exclusivamente ao serviço móvel aeronáutico (OR).

B) Faixas partilhadas:

As vias que se propõe atribuir ao serviço móvel aeronáutico (OR) nas faixas que ele partilha com outros serviços têm a mesma largura que as das faixas exclusivas. Contudo, não se designou especificamente nenhuma frequência dessas faixas para estas atribuições. Determinou-se o número de vias cuja atribuição se propõe nestas faixas para o serviço móvel aeronáutico (OR), tendo em vista especialmente a largura das faixas e o número de serviços que as partilham.

C) Vias comuns aos serviços (R) e (OR):

Está autorizada em todo o Mundo e nas condições definidas no n.º 3 da secção II da parte I a utilização das vias comuns aos serviços (R) e (OR) e cujas frequências centrais são 3023,5 kHz e 5680 kHz (1).

3. *Escolha das frequências.*

A) Faixas exclusivas:

Satisfizeram as necessidades até ao limite das faixas disponíveis — inclusive as necessidades comuns a várias regiões — com o auxílio das frequências das faixas atribuídas no Mundo inteiro exclusivamente ao serviço móvel aeronáutico (OR). Na Região 1, as necessidades excedentes foram satisfeitas na maior medida possível por meio das frequências da faixa 3900-3950 kHz, atribuídas em exclusivo aeronáutico (OR) nessa região.

B) Faixas partilhadas.

O restante das necessidades foi satisfeito na maior medida possível com as frequências das faixas indicadas no n.º 1, alíneas *b*) e *c*), da presente secção e considerada nesta ordem.

(1) V. a Resolução n.º 403 da CAMR 79.

SECÇÃO II

Adaptação dos princípios técnicos

1. *Fracionamento das vias.*

Para utilizar as faixas de modo mais racional considerou-se que é possível alojar numa via, prevista para emissão de classe A3, quer uma emissão de classe A3, quer duas ou mais emissões A1, A3A, quer ainda outros tipos complexos de transmissão. Quando uma via estiver subdividida, as subdivisões não devem ser utilizadas por administrações diferentes. Quando se utilizarem as vias suplementares assim obtidas, deverá ter-se o cuidado de não causar interferência prejudicial aos utilizadores das vias adjacentes.

2. *Modificação da classe de uma emissão.*

Em virtude da necessidade de se evitarem interferências prejudiciais, por um lado, e, por outro lado, de utilizar do modo mais eficaz as faixas de frequências disponíveis, fica autorizada a modificação da classe de uma emissão no caso em que tal modificaçãonão exija qualquer alargamento da faixa necessária.

3. *Adjudicação de vias adjacentes (OR).*

Quando um país assim o pedir, as adjudicações a esse país serão agrupadas em vias adjacentes, se as condições geográficas o permitirem e sempre que isso se revelar possível.

4. *Relações de protecção e partilhas.*

a) Nas zonas em que se revelou necessário aumentar o número de repetições das consignações, satisfez-se por meio de uma via adjudicada a uma administração vários pedidos formulados por essa administração, mesmo no caso de daí poder resultar uma diminuição da relação de protecção entre as emissões das estações interessadas;

b) Nas zonas em que o número de pedidos excede muito a média, as relações de protecção podem ser reduzidas por acordo entre as administrações interessadas;

c) Foram repetidas certas consignações, apesar de haver forte probabilidade de interferências entre estações dependentes de administrações diferentes: ao fazê-lo, admitiu-se que todas as estações em questão só emitiriam intermitentemente. Nesta caso, todas as estações interessadas têm direitos iguais de utilização da frequência comum e nenhuma estação ou grupo de estações beneficia de qualquer prioridade sobre as outras;

d) Certas frequências foram consignadas sob a forma de consignações chamadas «secundárias». Neste caso, uma estação que disponha de uma frequência sob a forma de uma consignação chamada «primária» é protegida pelas seguintes disposições contra as interferências que possa provocar outra estação que disponha da mesma frequência a título de consignação secundária:

A potência emitida pela estação que dispõe da consignação secundária deve ser inferior à da estação que dispõe da mesma frequência a título de consignação primária;

A distância entre as estações interessadas deve ser, pelo menos, igual a metade da distância de repetição necessária para assegurar uma relação de protecção de 20 dB.

5. *Limitação da potência das estações.*

As administrações interessadas devem estabelecer acordo para reduzir de noite a potência radiada pelas estações aeronáuticas, a fim de poderem utilizar essas frequências durante a noite.

PARTE IV

Plano de adjudicação das frequências para o serviço móvel aeronáutico (OR) nas faixas compreendidas entre 2505 kHz e 23 350 kHz

1. No plano foram utilizadas as seguintes abreviaturas:

a) *Lista alfabética das abreviaturas que designam os países:*

AFS União Sul-Africana.
AGL Angola.
ALB Albânia (República Popular da).
ALS Estado do Alasca, Estados Unidos da América.
ARG República Argentina.
ARS Arábia Saudita.
ATN Antilhas Holandesas.

AUS	Austrália (Federação da).
AUT	Áustria.
AZR	Açores.
B	Brasil.
BER	Bermudas.
BLR	República Socialista Soviética da Bielorrússia.
BOL	Bolívia.
BUL	Bulgária (República Popular da).
CAF	República Centro-Africana.
CAN	Canadá
CAR	Carolinas.
CBG	Camboja.
CHL	Chile.
CHN	China.
CLM	Colômbia (República da).
CLN	Ceilão.
CME	Camarões (Estado dos) (sob tutela da França).
COG	República do Congo.
CPV	Cabo Verde (ilhas de).
CTI	República da Costa do Marfim.
CTR	Costa Rica.
CUB	Cuba.
CYP	Chipre.
D	Alemanha.
DAH	República do Daomé.
DNK	Dinamarca.
DOM	República Dominicana.
E	Espanha.
EGY	República Árabe Unida (região egípcia).
EQA	Equador.
ETH	Etiópia.
F	França e Argélia.
FJI	Fiji (ilhas).
FNL	Finlândia.
G	Reino Unido da Grã-Bretanha e da Irlanda do Norte.
GAB	República do Gabão.
GDL	Guadalupe (Distrito Francês de).
GIB	Gilbraltar.
GNP	Guiné Portuguesa.
GRC	Grécia.
GRL	Gronelândia.
GTM	Guatemala.
GUB	Guiana Inglesa.
GUF	Guiana (Distrito Francês da).
HKG	Hong-Kong.
HND	Honduras (República das).
HOL	Países Baixos.
HTI	Haiti (República do).
HVO	República do Alto Volta.
HWA	Estado do Havai, Estados Unidos da América.
I	Itália.
IND	Índia.
INP	Índia Portuguesa.
INS	Indonésia (República da).
IOB	Índias Ocidentais Inglesas.
IRN	Irão.
IRQ	Iraque.
ISL	Islândia.
ISR	Estado de Israel.
J	Japão.
JON	Ilha Johnston.
KEN	Quénia.
LAO	Laos.

LBN	Líbano.
LBY	Líbia.
MAC	Macau.
MDG	Madagáscar (República Malgaxe).
MDW	Ilhas Midway.
MEX	México.
MLA	Malásia.
MLI	Federação do Mali.
MLT	Malta.
MOZ	Moçambique.
MRA	Marianas.
MRC	Marrocos (Reino de).
MRL	Marshall.
MRT	Martinica (Distrito Francês da).
MTN	República Islâmica da Mauritânia.
NCG	Nicarágua.
NCL	Nova Caledónia e dependências.
NGN	Nova Guiné Holandesa.
NGR	República da Nigéria.
NHB	Novas Hébridas (arquipélago) (condomínio franco-britânico).
NOR	Noruega.
NZL	Nova Zelândia.
OCE	Polinésia Francesa.
PAK	Paquistão.
PAP	Papua (Territórios de).
PHL	Filipinas (República das).
PNR	Panamá (República do).
PNZ	Zona do Canal do Panamá.
POL	Polónia (República Popular da).
POR	Portugal.
PRG	Paraguai.
PRU	Peru.
PTR	Porto Rico.
REU	Reunião (Distrito Francês de).
RHS	Rodésia do Sul.
ROU	República Popular Romena.
S	Suécia.
SLV	Salvador (República do).
SMB	Somália Britânica.
SMF	Costa Francesa dos Somális.
SNG	Singapura.
STP	São Tomé e Príncipe.
SUI	Suíça.
SUR	Suriname.
SYR	República Árabe Unida (região síria).
TCD	República do Chade.
TCH	Checoslováquia.
TGO	Togo (República do).
TMP	Timor Português.
TUN	Tunísia.
UKR	República Socialista Soviética da Ucrânia.
URG	Uruguai.
URS	União das Repúblicas Socialistas Soviéticas.
URS-AM	União das Repúblicas Socialistas Soviéticas — Ásia Central.
URS-C	União das Repúblicas Socialistas Soviéticas — Cáucaso.
URS-E	União das Repúblicas Socialistas Soviéticas — Europa.
URS-SEO	União das Repúblicas Socialistas Soviéticas — Sibéria e Extremo Oriente.
USA	Os 48 Estados contíguos dos Estados Unidos da América (excepto os Estados do Alasca e do Havai).
VEN	Venezuela.
VTN	Vietname.
WAK	Wake (ilha).
YUG	Jugoslávia.

b) Outras abreviaturas:

N. = Norte. E. = Este. S. = Sul. W. = Oeste.

Exemplos:

«N.-46° N.» *significa* «ao norte de 46° norte».
«55° W.-64° W. e N.-7° S.» *significa* «entre 55° oeste e 64° oeste e ao norte de 7° sul».
W = Watts.
kW = Kilowatts.

Exemplo:

«CUB (500 W)» significa «Cuba, potência limitada a 500 watts na antena».
(6) *significa* «estações francesas».
(7) *significa* «estações dos Estados Unidos da América».
(81) *significa* «Alemanha de Leste».
■ *significa* «redes da comunidade francesa».

APÊNDICE 27 Aer2

Plano de adjudicação de frequências ao serviço móvel aeronáutico (R) e informações conexas

(V. o artigo 50 do Regulamento das Radiocomunicações)

PARTE I

Disposições gerais

SECÇÃO I

Definições

1. *Plano de adjudicação de frequência.*

27/1 Plano que indica as frequências a utilizar numa zona, sem precisar as estações a que essas frequências podem ser consignadas.

27/2 2. Significação da terminologia empregada no presente apêndice para os diferentes métodos de repartição de frequências:

Repartição das frequências a	Em francês	Em inglês	Em espanhol	Em português
Serviços	Attribution (attribuer)	Allocation (to allocate)	Atribución (atribuir)	Atribuição (atribuir)
Zonas	Allotissement (allotir)	Allotment (to allot)	Adjudicación (adjudicar)	Adjudicação (adjudicar)
Estações	Assignation (assigner)	Assignement (to assign)	Asignación (asignar)	Consignação (consignar)

27/3 3. *Uma linha aérea mundial principal* é uma linha de grande comprimento, compreendendo um ou vários troços, cujo carácter é essencialmente internacional, que se estende por vários países e exige comunicações a grande distância.

27/4 4. *Uma zona de passagem das linhas aéreas mundiais principais* (ZLAMP) é uma zona que abrange certo número de linhas aéreas mundiais principais que geralmente seguem uma mesma corrente de tráfego e que geograficamente são suficientemente próximas para poderem ser servidas logicamente pelas mesmas famílias de frequências.

27/5 5. *As linhas aéreas regionais e nacionais* são todas as linhas aéreas que utilizam o serviço móvel aeronáutico (R) e que não satisfazem à definição de linhas aéreas mundiais principais dada no n.° **27/3**.

27/6 6. *Uma zona das linhas aéreas regionais e nacionais* (ZLARN) é uma zona de engloba um certo número de linhas aéreas definidas no n.° **27/5.**

27/7 7. *Uma zona de adjudicação* VOLMET é uma zona cujos limites englobam todos os pontos onde uma instalação destinada a difusões em ondas decamétricas pode emitir utilizando uma família de frequências adjudicada à zona em causa.

27/8 8. *Uma zona de recepção* VOLMET é uma zona interior da qual as aeronaves devem poder receber as emissões de uma ou de várias estações situadas na zona de adjudicação VOLMET à qual ela está associada.

27/8-A 8-A. *Uma zona mundial de adjudicação* é uma zona à qual são adjudicadas frequências que permitem o estabelecimento de comunicações a grande distância entre uma estação aeronáutica situada nessa zona e uma aeronave em serviço em qualquer sítio do mundo (1).

27/9 9. *Uma família de frequências do serviço móvel aeronáutico (R)* é constituída por duas ou mais frequências escolhidas em diferentes faixas do serviço móvel aeronáutico (R) e destinadas ao estabelecimento de comunicações na zona de utilização autorizada (v. os n.os **27/189** a **27/207**) a qualquer hora, entre as estações de aeronave e as estações aeronáuticas correspondentes.

Secção II

Princípios técnicos e de exploração aplicados na elaboração do plano de adjudicação de frequências para o serviço móvel aeronáutico (R)

A) Características e utilização das vias

1. *Espaçamentos entre frequências.*

27/10 1.1. O espaçamento entre frequências portadoras (frequências de referência) é de 3 kHz. Este espaçamento é suficiente para sistemas de comunicação que utilizam as classes de emissão referidas nos n.os **27/49** a **27/52** nas faixas de frequências compreendidas entre 2850 kHz e 17 970 kHz atribuídas em exclusivo ao serviço móvel aeronáutica (R). A frequência portadora (frequência de referência) das vias indicadas no plano de ser um múltiplo inteiro de 1 kHz.

27/8.1. (1) O tipo de comunicações a que se refere o n.° **27/8-A** pode ser objecto de regulamentação pelas administrações.

27/11 1.2. Para as emissões radiotelefónicas, as frequências de áudio têm por limites 300 Hz e 2700 Hz; para as outras classes de emissão autorizadas, a largura de faixa ocupada não ultrapassa o limite superior das emissões da classe A3J.

Todavia, a especificação destes limites não implica qualquer restrição no que respeita à extensão de emissões que não as da classe A3J, desde que sejam respeitados os limites relativos às emissões não desejadas (v. os n.os **27/66-B** e **27/66-C**.

27/11-A *Nota.* — Para os tipos de emissor de estação de aeronave e de estação aeronáutica instalados pela primeira vez antes de 1 de Fevereiro de 1983, as frequências de áudio são limitadas a 3000 Hz.

27/11-B 1.3. A fim de evitar a possibilidade de interferências, uma via dada não deverá ser utilizada na mesma zona de adjudicação para a radiotelefonia e para a transmissão de dados.

27/12 1.4. A fim de evitar as interferências prejudiciais susceptíveis de se verificarem em consequência do emprego simultâneo de uma mesma via para emissões de classes diferentes, a utilização, para as diversas classes de emissão que não as A3J e A2H, das vias derivadas das frequências indicadas no n.º **27/16** deverá ser objecto de acordos especiais entre as administrações interessadas e aquelas cujos serviços são susceptíveis de ser desfavoravelmente influenciados.

27/13 *(Suprimido.)*

27/14 1.5. Para evitar possíveis interferências, as vias adjacentes derivadas das frequências indicadas no quadro (n.º **27/16**) não foram, em geral, adjudicadas às mesmas ZLAMP, ZLARN ou zonas VOLMET. Todavia, para satisfazer necessidades especiais, as administrações interessadas poderão fazer acordos especiais para a consignação de vias adjacentes derivadas das frequências indicadas no referido quadro.

27/15 1.6. Os acordos indicados nos n.os **27/12** e **27/14** serão *concluídos* em virtude das disposições dos artigos da Convenção Internacional das Telecomunicações e do Regulamento das Radiocomunicações intitulados «Acordos especiais» (*).

2. *Frequências adjudicadas.*

27/16 No quadro seguinte encontra-se a lista das frequências portadoras (frequências de referência) adjudicadas nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R), na base dos espaçamentos entre frequências especificados no n.º 27/10 (1).

(*) Nota do secretariado-geral: o artigo pertinente do Regulamento das Radiocomunicações é agora o artigo 7, intitulado «Acordos especiais».

27/16.1. (1) Para calcular a frequência consignada a partir de uma frequência portadora (frequência de referência) dada no quadro, v. os n.os **27/72, 27/72-B** e **27/73.**

(Suprimidos.)

4. A Organização da Aviação Civil Internacional (ICAO) assegura a coordenação internacional das radiocomunicações do serviço móvel aeronáutico (R). Esta Organização deverá ser consultada, em todos os casos apropriados, para utilizar operacionalmente as frequências previstas no plano.

5. *Adaptação do procedimento de adjudicação.*

27/21 O plano de adjudicação contido no presente apêndice não esgota, evidentemente, todas as possibilidades de partilha. Assim, para fazer face a necessidades especiais de exploração que o presente plano não satisfaça de outra maneira, as administrações podem consignar frequências das faixas do serviço móvel aeronáutico (R) em zonas diferentes daquelas a que estão adjudicadas no plano. Todavia, a utilização das frequências assim consignadas não deve diminuir a protecção de que gozam essas mesmas frequências, nas zonas a que estão adjudicadas pelo plano, para valor inferior ao determinado pela aplicação do procedimento previsto para o serviço (R) na secção II-B da parte I do presente apêndice.

27/22 6. Quando for indispensável satisfazer as necessidades da exploração das linhas aéreas internacionais, as administrações podem adaptar o procedimento de adjudicação para consignar frequências do serviço móvel aeronáutico (R); essas consignações serão objecto de um acordo prévio por parte de administrações cujos serviços possam ser desfavoravelmente influenciados.

27/23 7. Recorrer-se-á à coordenação descrita no n.º **27/20** quando for oportuno e conveniente fazê-lo para utilizar racionalmente as frequências em causa e, nomeadamente, nos casos em que os procedimentos especificados no n.º **27/22** não sejam satisfatórios.

B. Curvas de alcance da interferência

27/24 1. *Disposições gerais.*

27/24-A 1.1. *Alcance útil.*

Em função de determinados factores (potência de emissor, perda de propagação, nível de ruído, etc.), existe um limite no que respeita à distância a que é possível estabelecer comunicações fiáveis entre uma estação aeronáutica e uma estação de aeronave. Esta distância limite, baseada no trajecto de propagação mais desfavorável, é designada «alcance útil». Admite-se, frequentemente, que a distância limite é o limite da zona das linhas aéreas.

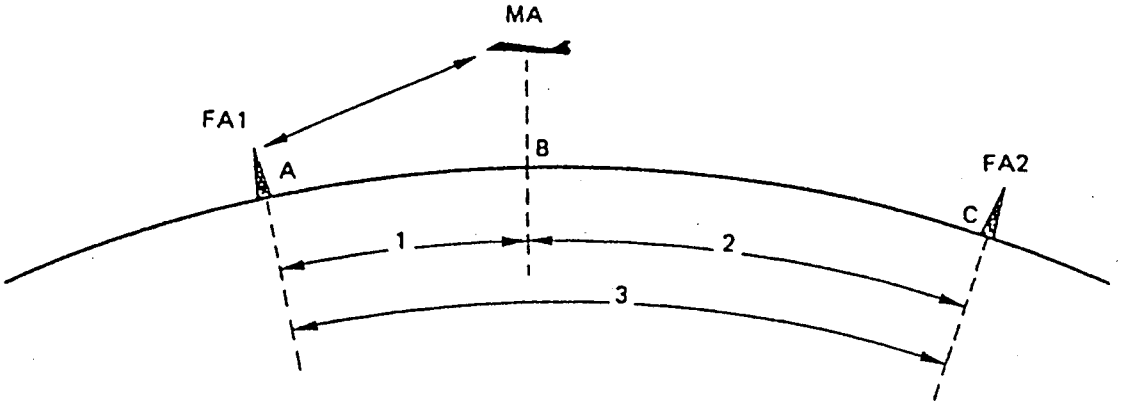
27/24-B 1.2. *Alcance de interferência.*

É a distância mínima entre o limite de alcance útil da emissão desejada e a estação susceptível de causar interferências, que assegura uma relação sinal útil/sinal interferente de 15 dB. Esta relação de protecção é estabelecida entre o sinal desejado recebido por uma estação de aeronave no limite do alcance útil e o sinal proveniente de uma estação aeronáutica que, emitindo na mesma frequência, é susceptível de causar interferências. O alcance de interferência foi calculado para diferentes frequências indicadas nos quadros que figuram nos n.ºs **27/39** a **27/48**, em condições de propagação diurna e nocturna, em latitudes médias, para uma actividade solar média e para uma potência aparente radiada média de 1 kW da estação aeronáutica.

27/24-C 1.3. *Distância de repetição.*

É a distância a que se pode partilhar uma frequência; esta distância é igual à soma do alcance útil e do alcance de interferência.

27/24-D 1.4. O desenho da figura 1 ilustra a utilização do conceito de alcance de interferência no planeamento de frequências, baseada na determinada da distância de repetição.



FA1 = estação aeronáutica em comunicação com a estação de aeronave MA.
FA2 = estação aeronáutica em comunicação com estações de aeronave que não a estação MA.
MA = estação de aeronave em comunicação com a estação aeronáutica FA1.
1 = alcance útil AB.
2 = alcance de interferência CB.
3 = distância de repetição AC.

Fig.1 — Alcance útil, alcance de interferência, distância de repetição

27/24-E 1.5. As curvas em vegetal anexas ao presente apêndice indicam, para as frequências mencionadas, o alcance de interferência, definido no n.º **27/24-B,** entre uma estação aeronáutica interferente e uma estação de aeronáutica interferente a uma estação de aeronave a funcionar no limite do seu alcance útil. Devido à variação das condições de propagação, não só de hora para hora, durante os períodos do dia e da noite, mas também de dia para dia, segundo a estação do ano, o nível de actividade solar e a localização geográfica, é de esperar uma variação notável da relação de protecção de 15 dB; como tal, poderá ser assegurada uma protecção maior durante a maior parte do tempo, especialmente quando a aeronave não funciona no limite do seu alcance útil.

27/24-F 1.6. Na documentação técnica publicada pela IFRB (por exemplo, nos textos do ciclo de estudos da IFRB sobre a gestão de frequências e a utilização do espectro de frequências: documento n.º 11/76 ou revisões) encotram-se informações suplementares sobre o alcance útil, o alcance de interferência, a distância de repetição e sobre a utilização das curvas.

27/25 1.7. Existem dois tipos de curvas a utilizar, respectivamente, com os planisférios em projecção de Mercator e com os mapas em projecção azimutal de superfícies iguais de Lambert para as zonas polares. As curvas para mapas em projecção de Mercator abrangem as regiões compreendidas entre 60° de latitude norte e 60° de latitude sul. As curvas para os mapas em projecção de Lambert abrangem as zonas situadas ao norte de 30° N. e ao sul de 30° S. Os mapas em projecção de Lambert apresentam uma zona de sobreposição com os mapas em projecção de Mercator entre os paralelos 30° N. e 60° N. e os paralelos 30° S. e 60° S.

Essas zonas de sobreposição servem para assegurar a continuidade entre as curvas dos dois sistemas.

27/26 2. *Tipos de mapas utilizados.*

As curvas referidas nos n.ºs **27/24-E** e **27/25** só podem ser utilizadas cin um planisfério ou um mapa polar cuja projecção e escala sejam idênticas em cada uma das curvas. Não devem, pois, ser utilizadas com mapas que não estejam de acordo com estas definições. Os planisférios e os mapas polares a utilizar com o presente apêndice, nos quais figuram os limites das ZLAMP, das ZLARN e das zonas de VOLMET, serão elaborados em escala que permita utilizar as curvas directamente. As zonas de aurora estão representadas nos mapas polares.

3. *Mudança de escala ou de sistema de projecção.*

27/27 3.1. Se se deseja utilizar outros mapas com uma escala ou com uma projecção diferente, é necessário desenhar, a partir das coordenadas que figuram nos quadros seguintes, novas curvas para ter em conta a mudança de escala ou de projecção.

27/28 3.2. Ao desenhar as novas curvas, o ponto de intersecção do eixo vertical, isto é, um meridiano, e do eixo perpendicular que representa um paralelo deve estar à latitude 0°, para a curva 0°, 20° N., para a curva 20°, 40 N., para a curva 40°, etc.

27/29 3.3. As coordenadas geográficas que figuram nos n.ºs **27/39** a **27/48** são dadas em relação ao meridiano 180° tomado como eixo de simetria para a construção das curvas.

4. *Condições de partilha entre as zonas.*

4.1. *Faixas compreendidas entre 3 e 11,3 MHz.*

27/30 4.4.1. As curvas foram elaboradas nas condições de partilha seguintes:

Zonas	Faixas compreendidas entre (MHz)	Condições de partilha
Entre duas ZLAMP ou duas zonas VOLMET ou entre uma ZLAMP e uma zona VOLMET.	3 e 6,6 9 e 11,3	Propagação nocturna. Propagação diurna. *Nota.* — Admite-se que as condições de partilha são as mesmas para 6,6 MHz e para 5,6 MHz.
Entre uma ZLAMP ou uma zona VOLMET e uma ZLARN.	3 e 5,6 6,6 e 11,3	Propagação nocturna. Propagação diurna.
Entre duas ZLARN	3 e 4,7 5,6 e 11,3	Propagação nocturna. Propagação diurna.

27/31 4.1.2. Curvas suplementares permitem determinar as possibilidades de repetição das frequências das faixas de 3, 3,5 e 4,7 MHz, para utilização diurna.

4.2. *Faixas compreendidas entre 13 e 18 MHz.*

27/31-A 4.2.1. O plano de adjudicação revisto para as faixas de 13 e 18 MHz baseia-se unicamente na protecção durante o dia. Dele resultam as seguintes possibilidades de partilha:

27/31-B 4.2.2. O factor de repetição é, no mínimo, igual a 3 para a faixa de 13 MHz e igual a 4 para a faixa de 18 MHz. Note-se que se poderá reduzir a separação em longitude, para permitir uma repetição de 4 (em 13 MHz) e de 6 (em 18 MHz), tendo em conta as condições de exploração e as circunstâncias locais.

27/31-C 4.2.3. A partilha é feita em função das localizações prováveis das estações aeronáuticas e não em função dos limites das zonas.

5. *Modo de utilização das curvas para as faixas compreendidas entre 3 e 11,3 MHz.*

27/32 5.1. Selecciona-se, de entre os mapas anexos ao presente apêndice, o mapa da ZLAMP, ZLARN ou zona VOLMET apropriado e escolhe-se o vegetal correspondente à ordem de grandeza da frequência e às condições de partilha que se pretende estudar.

27/33 5.2. Devem-se utilizar os mapas e os vegetais em projecção de Lambert para as zonas polares situadas a norte de 60° N. e a sul de 60 S.; os mapas e vegetais em projecção de Mercator devem-se utilizar entre 60° N. e 60° S.

27/34 5.3. Coloca-se o centro do vegetal (isto é, a intersecção do eixo de simetria e do eixo horizontal sobre a linha que delimita a zona (utilizar a linha que delimita a zona de recepção no caso de VOLMET), no ponto dessa linha mais próximo do emissor susceptível de causar interferências, ou na localização do emissor susceptível de causar interferências. Anota-se a latitude do ponto escolhido e utiliza-se a curva de alcance de interferência correspondente a essa latitude.

27/35 5.4. Para um emissor situado num ponto qualquer exterior à curva a relação de protecção definida no n.º **27/24-B** será superior a 15 dB.

27/36 5.5. Para um emissor situadao num ponto qualquer ao interior da curva, a relação de protecção obtida será inferior a 15 dB. Todavia, se o emissor está situado no interior da curva e se o trajecto da propagação atravessaa uma zona de aurora, admite-se que a atenuação do sinal no interior dessa zona resultará numa relação de protecção superior a 15 dB.

27/37 5.6. A orientação das curvas em projecção de Mercator é tal que elas são utilizáveis para o hemisfério norte; para o hemisfério sul devem inverter-se. É de ter em conta este facto quando se trata de seguir os limites de zonas que passam de um hemisfério para o outro.

27/38 *(Suprimido.)*

6. *Elementos para traçado das curvas.*

27/39 **3,0 MHz e 3,5 MHz, dia — Elementos para o traçado das curvas de interferência a 700 Km**

C) Classes de emissão e potência

1. *Classes de emissão.*

27/49 No serviço móvel aeronáutico (R) é permitido utilizar as emissões seguintes, desde que sejam respeitadas as disposições especiais aplicáveis a cada caso e desde que essa utilização não cause interferências prjudiciais aos outros utentes da via em causa.

27/50 1.1. *Telefonia — modulação de amplitude:*

Dupla faixa lateral ..... (1)A3
Faixa lateral única, onda portadora completa ..... (1)A3H
Faixa lateral única, onda portadora suprimida A3J

1.2. *Telegrafia (incluindo as transmissões automáticas de dados).*

27/51 1.2.1. *Modulação de amplitude:*

Telegrafia sem modulação por uma frequência de áudio (manipulação por tudo ou nada) (2)A1
Telegrafia por modulação por tudo ou nada de uma ou várias frequências de áudio de modulação ou manipulação por tudo ou nada da emissão modulada, incluindo a chamada selectiva, faixa lateral única, onda portadora completa A2H
Telegrafia harmónica multivias, faixa lateral única, onda portadora suprimida A7J
Outras emissões, tais como a transmissão automática de dados, faixa lateral única, onda portadora suprimida A9J

27/52 1.2.2. *Modulação de frequência:*

Telegrafia por manipulação por desvio de frequência sem modulação por uma frequência de áudio, sendo uma das duas frequências emitida num dado instante ..... (3)F1

27/53 *(Suprimido.)*

---

(1) As emissões A3 e A3H só podem ser utilizadas em 3023 kHz e 5680 kHz e no casos previstos no § 5 da Resolução n.º 402.

(2) V. o n.º **27/52**.

(3) São permitidas as classes de emissão A1 e F1 desde que não causem interferências prejudiciais às emissões das classes A2H, A3J, A7J e A9J. Além disso, as classes de emissão A1 e F1 deverão estar de acordo com as disposições dos n.º **27/65** a **27/66-C** e é necessário ter o cuidado de colocar estas emissões no centro ou próximo do centro da via. Todavia, com emissores de faixa lateral única é permitida uma frequência de áudio modulante se a onda portadora for suprimida de acordo com as disposições do n.º **27/63.**

2. *Potência.*

27/54 2.1 Salvo indicação contrária na parte II do presente apêndice, as potências de ponta fornecidas à linha de alimentação da antena não ultrapassam os valores máximos indicados no quadro a seguir; admite-se que as potências aparentes radiadas de ponta correspondentes são iguais a dois terços desses valores.

Classe de emissão	Estações	Potência de ponta máxima
A2H, A3J, A7J e A9J	Estações aeronáuticas	6 kW
A3 (*a*) e A3H (*a*)	Estações de aeronave	400 W
(Taxa de modulação 100 %)	—	–
Outras emissões, tais como A1, F1	Estações aeronáuticas	1,5 kW
	Estações de aeronave	100 W

(*a*) As emissões das classes A3 e A3H devem ser utilizadas somente em 3023 kHz e 5680 kHz assim como nos casos previstos no n.º 5 da Resolução n.º 402.

27/55 2.2 Admite-se que a potência de ponta máxima especificada no quadro anterior para as estações aeronáuticas produzirá a potência aparente radiada média de 1 kW adoptada para o traçado das curvas que indicam os alcances de interferência.

27/56 2.3. A fim de assegurar comunicações de qualidade satisfatória com as aeronaves, as estações aeronáuticas que servem as ZLAMP, as zonas VOLMET ou as zonas mundiais de adjudicação podem utilizar potências mais elevadas que as potências máximas especificadas no n.º **27/54**, excepto no caso das frequências de 3023 kHz e 5680 kHz, que estão sujeitas às disposições especiais dos n.ºs **27/208** a **27/214**. Se assim for, a administração com jurisdição sobre a estação aeronáutica interessada terá em conta as disposições do n.º **694** do Regulamento das Radiocomunicações e procederá em cada caso de modo que:

27/57 *a*) Seja efectuada uma coordenação com as administrações interessadas quando são possíveis interferências prejudiciais;

27/58 *b*) Não seja causada qualquer interferência prejudicial às estações que utilizam frequências de acordo com as disposições pertinentes do plano de adjudicação;

27/59 *c*) Nas outras ZLAMP, ZLARN ou zonas VOLMET, às quais são adjudicadas a ou as mesmas frequências, sejam mantidas as relações de protecção especificadas para essas zonas;

27/60 *d*) As características de directividade da antena sejam tais que fique reduzida ao mínimo a radiação nas direcções em que não é necessária e especialmente para as outras ZLAMP, ZLARN ou zonas VOLMET, às quais estão adjudicadas a mesma ou as mesmas frequências;

27/61 *e*) De acordo com as disposições do Regulamento das Radiocomunicações, sejam notificados à IFRB os pormenores completos relativos a cada consignação, incluindo as características da antena de emissão.

27/62 2.4. Admite-se que a potência dos emissores de aeronave pode, na prática, ultrapassar os limites especificados no n.º **27/54,** mas a utilização de uma potência mais elevada (que normalmente não deverá ultrapassar um valor de ponta de 600 W) não deve causar interferência prejudicial às estações que utilizam frequências de acordo com os princípios técnicos que servem de base ao plano de adjudicação.

D) Limites dos níveis de potência das emissões não desejadas

1. *Disposições de ordem técnica relativas à utilização de emissões de faixa lateral única.*

27/63 1.1. *Definição do nível da portadora:*

Portadora	Nível N (dB) da portadora em relação à potência de ponta
Portadora completa (por exemplo: A2H)	$0 \geq N \geq -6$
Portadora suprimida (por exemplo: A3J)	Estações de aeronave $N \leq -26$ Estações aeronáuticas $N \leq -40$

27/64 *(Suprimido)*

2. *Tolerância aplicável aos níveis das emissões fora da largura de faixa necessária.*

27/65 2.1. No caso de uma emissão de faixa lateral única, a potência média fornecida numa qualquer frequência à linha de alimentação da antena de uma estação aeronáutica ou de uma estação de aeronave será inferior à potência média (*Pm*) do emissor, de acordo com as indicações dadas no quadro do n.º **27/66**.

27/66 2.2. Para os tipos de emissor de estação de aeronave e para os emissores de estação aeronáutica instalados até 1 de Fevereiro de 1983:

Afastamento Δ em relação à frequência consignada (kHz)	Atenuação mínima em relação à potência média (P_m) (dB)
$2 \leq \Delta < 6$	25
$6 \leq \Delta < 10$	35
$10 \leq \Delta$	Estações de aeronave: 40. Estações aeronáuticas: $43 + 10 \log_{10} P_m$ (watts).

27/66-A *Nota.* — Todos os emissores postos em serviço pela primeira vez depois de 1 de Fevereiro de 1983 deverão estar de acordo com as especificações do n.º 27/66-C.

27/66-B 2.3. No caso de uma emissão de faixa lateral única, a potência de ponta (P_p) fornecida numa qualquer frequência à linha de alimentação da antena de uma estação aeronáutica ou de uma estação de aeronave é inferior à potência de ponta (P_p) do emissor, de acordo com as indicações dadas no qudro do n.º **27/66-C**.

27/66-C 2.4. Para os emissores de estação de aeronave instalados depois de 1 de Fevereiro de 1983 e para os emissores de aeronáutica utilizados depois de 1 de Fevereiro de 1983:

Afastamento Δ em relação à frequência consignada (kHz)	Atenuação mínima em relação à potência média (P_m) (dB)
$1{,}5 \leq \Delta < 4{,}5$	30
$4{,}5 \leq \Delta < 7{,}5$	38
$7{,}5 \leq \Delta$	Estações de aeronave: 43. Estações aeronáuticas: (*a*).

(*a*) Para as potências de emissão inferiores ou iguais a 50 W: $43 + 10 \log_{10}(P_p)$ (watts). Para as potências de emissão superiores a 50 W, a atenuação deve ser de, pelo menos, 60 dB.

27/67 a 27/71 *(Suprimidos.)*

E) Outras disposições de ordem técnica

1. *Frequências consignadas.*

27/72 1.1. Para uma estação que faz emissões em faixa lateral única, com excepção da classe de emissão A2H, a frequência consignada deve ser superior em 1400 Hz à frequência portadora (frequência de referência).

27/72-A 1.2. Para as estações aeronáuticas equipadas com sitemas de chamada selectiva, a classe de emissão A2H deve ser indicada na coluna «Informações suplementares» da ficha de notificação (v. o apêndice 1 ao Regulamento das Radiocomunicações).

27/72-B 1.3. Para as classes de emissão A1 e F1, a frequência consignada é escolhida de acordo com as disposições da nota relativa aos n.ºs **27/51** e **27/52**.

27/73 1.4. A frequência consignada a uma estação que utiliza emissões em faixa lateral dupla (A3) deverá ser a frequência portadora (frequência de referência).

PARTE II

Plano de adjudicação de frequências para o serviço móvel aeronáutico (R)

nas suas faixas exclusivas entre 2850 e 22 000 kHz

Secção I

Descrição dos limites das zonas e subdivisões de zonas

27/74 1. As descrições dos limites dadas a seguir referem-se às zonas a que são adjudicadas frequências de acordo com o plano de adjudicação de frequências elaborado pela Conferência.

27/75 2. Essas zonas são igualmente representadas graficamente em mapas a utilizar com o presente apêndice. Se existirem diferenças entre uma zona tal como representada no mapas e tal como descrita a seguir, fará fé a descrição.

27/76 3. A menção do nome de um país ou de uma zona geográfica nas descrições ou nos mapas, bem como o traçado de fronteiras nos mapas, não implicam, da parte da UIT, qualquer tomada de posição quanto ao estatuto político desse país ou dessa zona geográfica, nem qualquer reconhecimento oficial dessas fronteiras.

27/77 4. Na descrição dos limites das zonas de passagem das linhas aéreas mundiais principais (ZLAMP), qualquer linha que une dois pontos e que não é definida de outro modo é um arco de círculo máximo.

27/78 Na descrição dos limites das zonas das linhas aéreas regionais e nacionais (ZLARN) e das subdivisões dessas zonas, qualquer linha que une dois pontos e que não é definida de ouro modo é uma recta numa projecção de Mercator.

27/79 Na descrição dos limites das zonas VOLMET, qualquer linha que une dois pontos é um arco de círculo máximo.

ARTIGO 1

Descrição dos limites das zonas de passagem das linhas aéreas mundiais principais (ZLAMP)

27/80 *Zona de passagem das linhas aéreas mundiais principais — CARAÍBAS*

(ZLAMP-CAR)

Do ponto 20° N. 120° W., pelos pontos 35° N. 120° W., 35° N. 85° W., 43° N. 74° W., 40° N. 60° W., 00° 48° W. e 00° 80° W., até ao ponto 20° N. 120° W.

27/81 (*Suprimido.*)

27/82 *Zona de passagem das linhas aéreas mundiais principais — CENTRO ESTE DO PACÍFICO:*

(ZLAMP-CEP)

Do ponto 50° N. 122° W., pelos pontos 38° N. 120° W., 15° N. 110°W., 20° S. 145° W., 20° S. 152° W., e 30° N. 165° W., até ao ponto 50° N. 122° W.

27/83 *Zona de passagem das linhas aéreas mundiais principais — CENTRO OESTE DO PACÍFICO:*

(ZLAMP-CWP)

Do ponto 40° N. 117° E., pelos pontos 25° N. 155° W., 17° N. 155°W., 0° 165° W., 00° 170° E., 12° S. 165°E., 12° S. 136° E., 09° N. 115° E. e 23° N. 114° E., até ao ponto 40° N. 117°E.

27/84 *Zona de passagem das linhas aéreas mundiais principais — EUROPA:*

(ZLAMP-EUR)

Do ponto 33° N. 12° W., pelos pontos 54° N. 12° W., 70° N. 00°, 74° N. 40° E., 74° N. 52° E., 60° N. 52°E., 40° N. 36° E., 29° N. 35° 30' E. e 32° N. 13° E., até ao ponto 33° N. 12° W.

27/85 (*Suprimido.*)

27/85-A *Zona de passagem das linhas aéreas mundiais principais — OCEANO ÍNDICO:*

(ZLAMP-INO)

Do Pólo Sul, pelos pontos 30° S. 26° E., 20° N. 35°W., 30° N. 60° E., 30° N. 90° E., 30° S. 120°E. e 40° S. 160° E., até ao Pólo Sul.

27/86 *Zona de passagem das linhas aéreas mundiais principais — MÉDIO ORIENTE:*

(ZLAMP-MID)

Do ponto 51° N. 30° E., pelos pontos 57° N. 37° E., 50° N. 80° E., 44° N. 94° E., 08° N. 76° E., 11° 45' N. 42° E., 16° N. 42° E. e 30° N. 30° E., até ao ponto 51° N. 30° E.

27/87 *Zona de passagem das linhas aéreas mundiais principais — NORTE ATLÂNTICO:*

(ZLAMP-NAT)

Do Pólo Norte, pelos pontos 60° N. 135° W., 49° N. 120° W., 49° N. 74° W. 39° N. 78° W., 18° N. 66° W., 05° N. 55° W., 16° N. 26° W., 32° N. 08° W., 44° N. 02° E. e 60° N. 20° E., até ao Pólo Norte.

27/87-A *Zona de passagem das linhas aéreas mundiais principais — NORTE DA ÁSIA CENTRAL:*

(ZLAMP-NCA)

Do Pólo Norte, pelos pontos 75.° N. 10° E., 60° N. 25° E., 30° N. 73° E., 37° N. 73° E., 49° N. 85° E., 42° N. 97° E., 42° N. 110° E., 45° N. 113° E., 46° 30' N. 120° E., 49° N. 116° E., 54° N. 123° E., 45° N. 133° E., 40° N. 124° E., 30° N. 124° E., 25° N. 135° E. e 65° N. 170° W., até ao Pólo Norte.

27/88 a 27/93 (*Suprimidos.*)

27/94 *Zona de passagem das linhas aéreas mundiais principais — NORTE DO PACÍFICO:*

(ZLAMP-NP)

Do Pólo Norte, pelos pontos 60° N. 135° W., 47° N. 118° W., 30° N. 165° W., 30° N. 115° E., 41° N. 116° E. e 55° N. 135° E., até ao Pólo Norte.

27/95 *Zona de passagem das linhas aéreas mundiais principais — ÁFRICA:*

(ZLAMP-AFI)

Do ponto 40° N. 35° W., pelos pontos 37° N. 03° W., 37° N. 44°E., a fronteira entre a República do Iraque e o Irão, os pontos 29° N. 48° E., 26° N. 56° E., 20° N. 62° E., 22° S. 60° E., 35° S. 30° E., 35.° S. 16° E., 05° N. 03° W. e 05° N. 35° W., até ao ponto 40° N. 35° W.

27/96 e 27/97 (*Suprimidos.*)

27/98 *Zona de passagem das linhas aéreas mundiais principais — ATLÂNTICO SUL:*

(ZLAMP-SAT)

Do Pólo Sul, pelos pontos 30° S. 75° W., 19° S. 53° W., 00° 60° W., 25° N. 25° N. 25° W., 41° N. 15° W., 41° N. 03° W., 15° N. 03° W. e 20° S. 32° E., até ao Pólo Sul.

27/99 (*Suprimido.*)

27/100 *Zona de passagem das linhas aéreas mundiais principais — AMÉRICA DO SUL:*

(ZLAMP-SAM)

Do Pólo Sul, pelos pontos 15° N. 125° W., 15° N. 60° W., 10° N. 60° W., 05° S. 30° W. e 36° S. 52° W., até ao Pólo Sul.

27/101 (*Suprimido.*)

27/102 *Zona de passagem das linhas aéreas mundiais principais — SUESTE ASIÁTICO:*

(ZLAMP-SEA)

Do ponto 26° N. 130° E., pelos pontos 00° 130° E. 00° 135° E., 12° S. 145 ° E., 12° S. 160° E., 25° S. 155° E. 40° S. 150° E., 35° S. 115° E., 18° N. 62° E. e 26° N. 65° E., até ao ponto 26° N. 130° E.

27/103 *Zona de passagem das linhas aéreas mundiais principais — PACÍFICO SUL:*

(ZLAMP-SP)

Do Pólo Sul, pelos pontos 38° S. 145° E., 00° 167° E., 0° 175° W., 22° N. 158° W., 22° N. 156° W. e 00° 120° W., até ao Pólo Sul.

27/103-A *Zona de passagem das linhas aéreas mundiais principais — ÁSIA ORIENTAL:*

(ZLAMP-EA)

Do ponto 55° N. 124° E., pelos pontos 37° N. 145° E., 26° N. 130° E., 00° 130° E., 00° 80° E., 18° N. 62° E., 37° N. 67° E. e 55° N. 80° E., até ao ponto 55° N. 124° E.

ARTIGO 2

Descrição dos limites das zonas e subdivisões de zonas das linhas aéreas regionais e nacionais (ZLARN)

27/104 *Zona das linhas aéreas regionais e nacionais 1:*

(ZLARN — 1)

Esta zona é delimitada por uma linha que, partindo do Pólo Norte, segue o meridiano 15° W., passa pelos pontos 72° N. 15° W., 40° N. 50° W., 30° N., 39° W., 30° N. 10° W., 31° N. 10° W. e 31° N. 10° E., e tem, depois, o traçado seguinte: fronteira Líbia-Tunísia até ao Mediterrâneo, costas das Líbia e da República Árabe do Egipto até Alexandria, dirige-se, em seguida, para o Cairo e daí para leste, ao longo do paralelo do Cairo, até a intersecção como o meridiano 40° E., depois para o norte, ao longo deste meridiano até à margem sul do mar Negro e ao longo da costa turca para o oeste até a intersecção com o meridiano 30° E., segue este meridiano até á fronteira Roménia-URSS, depois as fronteiras da URSS com a Roménia, a

Hungria, a República Socialista da Checoslováquia, a Polónia, a costa soviética do Báltico até à fronteira entre a Finlândia e a URSS e entre a Noruega e a URSS. Passa, em seguida, pelo ponto 70° N. 32° E. e segue o meridiano 32° E. até ao Pólo Norte.

27/105 *Subdivisão de zona 1A:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 65° N. 26° W., passa pelos pontos 40° N. 50° W., 40° N., 20° W., 60° N. 20° W. e 60° N. 26° W., voltando ao seu ponto de partida 65° N. 26° W.

27/106 *Subdivisão de zona 1B:*

Esta subdivisão é delimitada por uma linha que, partindo do Pólo Norte e seguindo o meridiano 15° W., passa pelos pontos 72° N. 15° W., 65° N. 26° W., 60° N. 26° W., 60° N. 20° W., 50° N. 20° W. e 50° N. 10° W., dirige-se depois para leste, passando pelas águas territoriais entre as ilhas anglo-normandas e a costa francesa, que atinge no meridiano 03° W., para seguir ao longo da costa na direcção nordeste, depois a fronteira da França com a Bélgica, o Luxemburgo e a República Federal da Alemanha, depois a fronteira Suíça-República Federal da Alemanha e República Federal da Alemanha-Áustria. Prossegue pela fronteira entre a República Socialista da Checoslováquia e a República Federal da Alemanha, seguindo depois a fronteira entre a República Federal da Alemanha e República Democrática Alemã, em direcção ao mar Báltico, dirige-se depois para ocidente ao longo da costa da República Federal da Alemanha, até à fronteira entre a República Federal da Alemanha e a Dinamarca, Segue por esta fronteira até ao mar do Norte e daí, ao longo do paralelo 55° N., atinge o ponto 55° N. 04° E., passando, em seguida, pelos pontos 56° N. 03° E., 59° N. 02° E. e 62° N. 01° E., para, segundo o meridiano 01° E., atingir o Pólo Norte.

27/107 *Subdivisão de zona 1C:*

Esta subdivisão é delimitada por uma linha que, partindo do Pólo Norte, segue o meridiano 01° E. até ao ponto 62° N. 01° E. e passa em seguida pelos pontos 59° N. 02° E., 56° N. 03° E. e 55° N. 04° E., para seguir o paralelo 55° N. em direcção a leste e depois a fronteira que separa a Dinamarca e a República Federal da Alemanha, até ao mar Báltico. Segue então a costa da República Federal da Alemanha, ao longo do mar Báltico, até à fronteira entre a República Federal da Alemanha e a República Democrática Alemã; segue ao longo desta fronteira, das fronteiras ocidentais da República Socialista da Checoslováquia e da Áustria, da fronteira Suíça-Áustria, da fronteira Listenstaina-Áustria, depois, novamente, da Suíça-Áustria, para se dirigir em seguida para leste ao longo das fronteiras meridionais da Áustria e da Hungria; daí segue a fronteira entre a Hungria e a Roménia, depois a fronteira da URSS com a Hungria e a República Socialista da Checoslováquia e a Polónia até à costa do mar Báltico. Depois segue a costa soviética do mar Báltico, as fronteiras entre a Finlândia e a URSS, e entre a Noruega e a URSS, passa pelo ponto 70° N. 32° E., para atingir finalmente o Pólo Norte seguindo o meridiano 32° E.

27/108 *Subdivisão de zona 1D:*

Esta subdivisão é delimitada por uma linha que, parte do ponto de junção das fronteiras da URSS, da Hungria e da Roménia e se dirige para ocidente, ao longo das fronteiras meridionais da Hungria e da Áustria, até à fronteira da Suíça com a Itália; segue, depois, a fronteira França-Itália, até ao Mediterrâneo e, daí, passa pelos pontos 43° N. 10° E., 41° N. 10° E. e 41° N. 07° E., daqui segue o meridiano 07° E. até à costa da África do Norte e prossegue ao longo desta costa, passando por Tunes, Trípoli e Benghazi, até à fronteira da Líbia com a República Árabe do Egipto. Continua ao longo da Costa até Alexandria, dirige-se para o Cairo segue depois o paralelo do Cairo até ao seu ponto de intersecção com o meridiano 40° E., dirige-se, em seguida, para o norte, seguindo o meridiano 40° E. até à intersecção com a fronteira que separa a República Árabe da Síria da República do Iraque e segue esta fronteira até à fronteira turca. Prossegue depois ao longo da fronteira que separa a Turquia da República do Iraque, do Irão e da URSS, até à costa do mar Negro, Continua ao longo da costa turca do mar Negro para atingir o meridiano 30° E. e segui-lo até à fronteira da Roménia com a URSS, seguindo esta fronteira até ao ponto de junção das fronteiras da URSS, da Hungria e da Roménia.

27/109 *Subdivisão de zona 1E:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 50° N. 20° W., passa pelos pontos 40° N. 20° W., 40° N. 50° W., 30° N. 39° W., 30° N. 10° W., 31° N. 10° W. e 31 N. 10° E.; segue depois a fronteira da Líbia com a Tunísia até ao Mediterrâneo e, daí, ao longo da costa tunisina, até ao seu ponto de intersecção com o meridiano 10° E. e, ao longo deste meridiano, até ao ponto 43° N. 10° E. Segue depois as fronteiras franco-italiana e ítalo-suíça, as fronteiras que separam a Áustria da Suíça, do Listenstaina e, de novo, da Suíça. Continua pela fronteira que separa a Suíça da República Federal da Alemanha e pelas fronteiras que separam a França da República Federal da Alemanha, do Luxemburgo e da Bélgica até à costa da Mancha e, partindo daí para ocidente, atravessa as águas territoriais entre as ilhas anglo-normandas e a costa francesa, para atingir o ponto 50° N. 10° W. e voltar ao seu ponto de partida 50° N. 20° W.

27/110 *Zona das linhas aéreas regionais e nacionais 2:*

(ZLARN — 2)

Esta zona é delimitada por uma linha que, partindo do Pólo Norte, passa pelo ponto 70° N. 32° E., para seguir a fronteira entre a Noruega e a URSS e entre a Finlândia e a URSS até à costa do mar Báltico, seguindo depois as águas territoriais soviéticas ao longo da costa do mar Báltico até à fronteira que separa a URSS da Polónia, para seguir depois a fronteira que separa a URSS dos países seguintes: Polónia, República Socialista da Checoslováquia, Hungria e Roménia, até ao ponto de intersecção da costa do mar Negro com o meridiano 30° E.; segue este meridiano até à costa turca do mar Negro, segue esta costa até à intersecção das fronteiras da Turquia e da URSS, e, daí, ao longo da sua fronteira comum e da fronteira Irão-URSS, até ao mar Cáspio, e, em seguida, a costa iraniana deste mar. Daí segue a fronteira meridional da URSS até ao ponto de junção das fronteiras da Mongólia, da República Popular da China e da URSS a cerca de 49° N. 88° E., para seguir depois o meridiano 88° E. até ao paralelo 55° N., continuando por este paralelo até 60° E., e atingir o Pólo Norte seguindo o meridiano 60° E.

27/111 *Subdivisão de zona 2A:*

Esta subdivisão é delimitada por uma linha que, partindo do Pólo Norte, segue o meridiano 32° E. até ao ponto 70° N. 32° E., para seguir depois a fronteira entre a Noruega e a URSS e entre a Filândia e a URSS até à costa do mar Báltico e continuar pelas águas territoriais soviéticas do mar Báltico até ao ponto 55° N. 20° E., daí, passa por Moscovo e pelo ponto 55° N. 60° E., atinge o Pólo Norte seguindo o meridiano 60° E.

27/112 *Subdivisão de zona 2B:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 55° N. 88° E., passa pelos pontos 55° N. 60° E. e 47° N. 53° E., para seguir depois, a costa oriental do mar Cáspio até à costa do Irão e, daí, dirigindo-se para leste pela fronteira meridional da URSS até ao ponto de junção das fronteiras da Mongólia, da República Popular da China e da URSS, cerca de 49° N. 88° E., e, daí, ao longo do meridiano 88° E., para voltar ao seu ponto de partida 55° N. 88° E.

27/113 *Subdivisão de zona 2C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 55° N. 60° E., vai até Moscovo e, daí, até, ao ponto 55° N. 20° E., para se dirigir, em seguida, para sul seguindo a fronteira que separa a URSS da Polónia, depois a fronteira entre a URSS e os países seguintes: Polónia, República Socialista da Checoslováquia, Hungria e Roménia, até à costa do mar Negro no seu ponto de intersecção com o meridiano 30° E. Segue então o meridiano 30° E. até à costa turca do mar Negro e por esta costa até à sua intersecção com a fronteira entre a Turquia e a URSS; segue esta fronteira comum e a fronteira Irão-URSS até ao mar Cáspio, segue depois a costa meridional do mar Cáspio e dirige-se para norte seguinte a costa oriental deste mar e, passando pelo ponto 47° N. 53° E., volta ao seu ponto de partida, 55° N. 60° E.

27/114 *Zona das linhas aéreas regionais e nacionais 3:*

(ZLARN — 3)

Esta zona é delimitada por uma linha que, partindo do Pólo Norte, segue o meridiano 60° até ao ponto 55° N. 60° E., para seguir o paralelo 55° N. até ao ponto de intersecção com o meridiano 88° E. e, daí, este meridiano, até ao ponto de junção das fronteiras da Mongólia, da República Popular da China e da URSS a cerca de 49° N. 88° E.; segue depois a fronteira Mongólia-República Popular da China e URSS-República Popular da China, até à costa. Passa então entre as águas territoriais soviéticas e japonesas e, pelos pontos 43° N. 147° E., 50° N. 164° E. e 65° N. 170° W., atinge o Pólo Norte, seguindo o meridiano 170° W.

27/115 *Subdivisão de zona 3A:*

Esta subdivisão é delimitada por uma linha que, partindo do Pólo Norte, segue o meridiano 60° E. até ao ponto 55° N. 60° E. e continua pelo paralelo 55° N. até ao seu ponto de intersecção com o meridiano 88° E., daí passa pelos pontos 60° N. 88° E. e 60° N. 110° E. e atinge o Pólo Norte, seguindo o meridiano 110° E.

27/116 *Subdivisão de zona 3B:*

Esta subdivisão é delimitada por uma linha que, partindo do Pólo Norte, segue o meridiano 110° E. e passa em seguida pelos pontos 60° N.110° E., 60° N. 147° E., 43° N. 147° E., 50° N. 164° E. e 65° N. 170° W. atinge o Pólo Norte seguindo o meridiano 170° W.

27/117 *Subdivisão de zona 3C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 60° N. 88° E., atinge o ponto de junção das fronteiras entre a Mongólia, a República Popular da China e a URSS, cerca de 49° N. 88° E.,

para seguir a fronteira Mongólia-República Popular da China e a fronteira URSS-República Popular da China até à costa. Passa depois entre as águas territoriais soviéticas e japonesas, pelos pontos 43° N. 147° E. e 60° N. 147° E. atinge o seu ponto de partida, 60° N. 88° E.

27/118 *Zona das linhas aéreas regionais e nacionais 4:*

(ZLARN — 4)

Esta zona é delimitada por uma linha que, partindo do ponto 30° N. 39° W., passa pelos pontos seguintes: 10° N. 20° W., 05° S. 20° W. e 05° S. 12° E., segue a fronteira que separa a República Popular do Congo da República Popular da Angola, segue depois a fronteira setentrional da República Popular do Zaire, continua pela fronteira da República Popular do Congo, do Império Centro-Africano e do Sudão, e daí dirige-se para norte ao longo da fronteira ocidental do Sudão; partir daí, esta linha segue a fronteira ocidental da República Árabe do Egipto, continua para norte até ao Mediterrâneo e prossegue pelas costas mediterrânica e atlântica da África do Norte até ao ponto situado a 30° N. 10° W. Daí segue o paralelo 30° N., em direcção a ocidente, para voltar ao seu ponto de partida, 30° N. 39° W.

27/119 *Subdivisão de zona 4A:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 30° N. 39° W., passa pelo ponto 21° N. 31° W, e depois por Gao e Zinder. Desta cidade prossegue pela fronteira setentrional da Nigéria, até um ponto situado a oeste de N'Djamena; segue depois o paralelo de N'Djamena até ao ponto 12° N. 22° E. Dirige-se, em seguida, para norte, seguindo a fronteira ocidental do Sudão e a fronteira ocidental da República Árabe do Egipto até ao Mediterrâneo, para seguir as costas mediterrânica e atlântica da África do Norte, até ao ponto 30° N. 10° W., e daí o paralelo 30° N. até ao seu ponto de partida, 30° N. 39° W.

27/120 *Subdivisão de zona 4B:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 21° N. 31° W., passa pelos pontos 10° N. 20° W., 05° S. 20° W. e 05° S. 12° E. e daí segue a fronteira meridional da República Popular do Congo, do Império Centro-Africano, até ao ponto de junção das fronteiras da República do Zaire, do Sudão e do Império Centro-Africano. Daí segue a fronteira ocidental do Sudão até ao ponto 12° N. 22° E., para seguir depois o paralelo de N'Djamena até à fronteira da Nigéria. Daí, dirige-se para ocidente, seguindo esta fronteira até ao ponto 13° 12' N. 10° 45' E., passa por Zinder e Gao e volta ao seu ponto de partida, 21° N. 31° W.

27/121 *Zona das linhas aéreas regionais e nacionais 5:*

(ZLARN — 5)

Esta zona é delimitada por uma linha que, partindo do ponto 41° N. 40° E., passa pelo ponto 37° N. 40° E., para seguir a fronteira que separa a Turquia da República Árabe Síria até à costa mediterrânica, e daí continua até ao ponto em que a fronteira comum da Líbia e da República Árabe do Egipto a costa do Norte de África, ficando Chipre fora da zona. Dirige-se em seguida para sul, seguindo a fronteira ocidental da República Árabe do Egipto e do Sudão até à fronteira do Quénia. Daí dirige-se para leste pela fronteira norte do Quénia e, em direcção ao sul, segue a fronteira que separa o Quénia da Somália para atingir a costa oriental da África no ponto 02° S. 41° E. Continua passando pelos pontos 02° S. 73° E. e 37° N. 73° E., e segue em direcção a leste, pela fronteira entre a República do Afeganistão e o Paquistão; daí para ocidente, segue a fronteira meridional da URSS até ao mar Cáspio. Prossegue depois pela fronteira norte do Irão e da Turquia até ao seu ponto de partida, 41° N. 40° E.

27/122 *Subdivisão de zona 5A:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 37° N. 40° E., segue a fronteira que separa a Turquia da República Árabe Síria, até à costa mediterrânica, e daí atinge o ponto de intersecção da fronteira egipto-libanesa e da costa do Norte de África, sem passar por Chipre. Dirige-se depois para sul, ao longo da fronteira ocidental da República Árabe do Egipto, e segue para leste, a fronteira comum à República Árabe do Egipto e ao Sudão, para atingir o ponto 24° N. 37° E. Continua, passando pelos pontos 11° 45' N. 42° E., 11° 45' N. 55° E., 20° N. 52° E. e 26° N. 52° E. e segue as fronteiras que separam o Irão da República do Iraque e a República do Iraque da Turquia, para voltar ao seu ponto de partida, 37° N. 40° E.

27/123 *Subdivisão de zona 5B:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 41° N. 40° E., passa pelo ponto 37° N. 40° E. e dirige-se depois para leste, pela fronteira que separa a Turquia da República Árabe Síria e da República do Iraque, e pela fronteira que separa a República do Iraque e o Irão, até ao ponto 30° N. 49° E., e daí corta o golfo Pérsico ao meio, passando por 26° N. 52° E e 24° N. 60° E., Bombaim, e 37° N. 73° E., para seguir, em direcção a leste, a fronteira que separa a República do Afeganistão e, em direcção a ocidente, a fronteira meridional das URSS, até ao mar Cáspio. Daí segue a fronteira norte do Irão e da Turquia até 41° N. 40° E.

27/124 *Subdivisão de zona 5C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 26° N. 52° E., passa pelos pontos 13° N. 52° E., 13° N. 54° E. e 54° E, e 02° S. 73° E., Bombaim, 24° N. 60° E. e daí corta o golfo Pérsico ao meio e atinge o ponto 26° N. 52° E.

27/125 *Subdivisão de zona 5C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto de junção das fronteiras da República Árabe do Egipto, da Líbia e do Sudão, segue em direcção ao sul pela fronteira ocidental do Sudão até à fronteira norte do Quénia, continua pela fronteira norte do Quénia, para se dirigir para sul seguindo a fronteira que separa o Quénia da Somália até à costa oriental da África, num ponto situado a 02° S. 42° E., passa depois pelos pontos 02° S. 54° E., 13° N. 54° E., 13° N. 52° E. e 12° N. 44° E., e daí dirige-se para noroeste, cortando o mar Vermelho a meio até ao ponto 24° N. 37° E. Daí segue ao longo da fronteira meridional da República Árabe do Egipto, para voltar ao seu ponto de partida.

27/126 *Zona das linhas aéreas regionais e nacionais 6:*

(ZLARN — 6)

Esta zona é delimitada por uma linha que, partindo aproximadamente do ponto 49° N. 88° E., segue pela fronteira que separa a China da URSS, o Afeganistão do Paquistão, o Irão do Paquistão até ao ponto 23° N. 61° E. e daí atinge Bombaim; segue depois pelo meridiano 73° E. e passa pelos pontos 02° S. 73° E., 02° S. 92° E., 10° S. 92° E., 10° S. 141° E., 00° 160° E., 03° 30' N. 160° E., 03° 30' N. 170° W., 10° N. 170° W., 50° N. 164° E. e 43° N. 147° E. Daí, passa, em direcção a ocidente, entre as águas territoriais japonesas e soviéticas, segue as fronteiras nordeste e setentrional da China, para voltar ao seu ponto de partida, aproximadamente a 49° N. 88° E.

27/127 *Subdivisão de zona 6A:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 37° N. 75° E., segue a fronteira que separa o Paquistão da República do Afeganistão, o Irão do Paquistão, até ao ponto 23° N. 61° E., daí continua até Bombaim, em seguida até ao ponto 24° N. 80° E. e daí até Calcutá. Segue depois a costa do Bangladesh e da Birmânia até à fronteira que separa a Birmânia da Tailândia e, depois, ao longo desta fronteira e da que separa a Birmânia da República Democrática Popular do Laos, para subir ao longo da fronteira que separa a República Popular da China da Birmânia. Daí dirige-se para ocidente pela fronteira meridional da República Popular da China, para voltar ao seu ponto de partida, 37° N. 75° E.

27/128 *Subdivisão de zona 6B:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 39° 49' 41" N. 124° 10' 06" E., passa pelos pontos 39° 31' 51" N. 124° 06' 31" E. e 39° N. 124° E. e atinge o ponto 32° 30' N. 124° E. Entre o ponto 32° 30' N. 124° E. e o ponto 25° N. 123° E. o limite desta subdivisão não é definido. Do ponto 25° N. 123° E. a linha passa pelos pontos 21° N. 121° 30' E., 20° N. 120° E., 20° N. 176° W., 50° N. 164° E. e 43° N. 147° E., dirige-se depois para o ocidente, passando entre as águas territoriais japonesas e soviéticas e segue a fronteira que separa a República Popular Democrática da Coreia da URSS; continua pela fronteira que separa a República Popular da China da República Democrática Popular da Coreia, para voltar ao seu ponto de partida, 39° 49' 41" N. 124° 10' 06" E.

27/129 *Subdivisão de zona 6C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 20° N. 130° E., passa pelos pontos 04° N. 130° E. 04° N. 118° E., e daí, pelas fronteiras meridionais de Sabah e de Sarawak, até à costa, dirigindo-se depois para sul pela costa ocidental do Bornéu até ao meridiano 110° E. e por este meridiano até ao ponto 10° S. 110° E. Daí passa pelos pontos 10° S. 141° E., 00° 141° E., 00° 160° E., 03° 30' N. 160° E., 03° 30' N. 170° W., 10° N. 170° W. e 20° N. 176° W. e, deste último ponto, volta a atingir o ponto 20° N. 130° E.

27/130 *Subdivisão de zona 7D:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto de junção das fronteiras da República Popular da China, da Índia e da Birmânia, se dirige para sul pelas fronteiras que separam a Birmânia da Índia e a Birmânia do Bangladesh e atinge o golfo de Bengala; daí segue a costa da Birmânia até ao seu ponto mais meridional. Dirige-se em seguida para a ilha de Weh (ao largo da costa setentrional de Samatra) e passa pelos pontos 02° S. 92° E. e 10° S. 92° E. até ao ponto 10° S. 110° E.; daí dirige-se para leste, até ao ponto 10° S. 141° E., e sobe para norte até ao ponto 00° 141° E., passa pelo ponto 04° N. 130° E. e pelos pontos 20° N. 130° E. e 20° N. 113° E. Dirige-se depois para sul, contornando a ilha de Hainão; continua pela fronteira que separa a República Popular da China do Vietname e, depois, pelas fronteiras que separam a República Popular da China da República Democrática Popular de Laos e a República Popular da China da Birmânia, para voltar ao seu ponto de partida, no ponto de junção das fronteiras da República Popular da China, da Índia e da Birmânia.

27/131 *Subdivisão de zona 6E:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 20° N. 73° E., passa pelos pontos 02° S. 73° E. e 02° S. 92° E., depois pela ilha de Weh (ao largo da costa setentrional de Samatra), até ao ponto 10° N. 97° E.; daí segue pela costa da Birmânia, do Bangladesh e da Índia e atinge Calcutá, para continuar, pelo ponto 24° N. 80° E., até ao seu ponto de partida, 20° N. 73° E.

27/132 *Subdivisão de zona 6F:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 25° N. 123° E., passa pelos pontos 21° N. 121° 30' E., 20° N. 120° E. e 20° N. 113° E., contorna, pelo sul, a ilha de Hainão e segue depois as fronteiras entre a República Popular da China e o Vietname, a República Democrática Popular do Laos e a Birmânia, até ao ponto de junção das fronteiras da República Popular da China, da Índia e da Birmânia; dirige-se depois para sul, ao longo das fronteiras que separam a Birmânia da Índia e do Bangladesh, até ao golfo de Bengala. Continua pela costa da Birmânia até ao seu ponto mais meridional e dirige-se depois para a ilha de Weh (ao largo da costa de Samatra). Passa depois pelos pontos 02° S. 92° E., 10° S. 92° E. e 10° S. 110° E. e dirige-se para norte, seguindo o meridiano 110° E.; prossegue, em seguida, pelo limite da subdivisão 6C até aos pontos 20° N. 130° E. e 43° N. 147° E., dirige-se para ocidente entre as águas territoriais do Japão e da URSS e segue a fronteira que separa a República Democrática Popular da Coreia da URSS e depois a fronteira que separa a República Democrática Popular da China da República Democrática Popular da Coreia, até aos pontos 39° 49' 41" N. 124° 10' 06" E. 39° 31' 51" E. 124° 06' 31" E. e 39° N. 124° E. e, depois, até ao ponto 32° 30' N. 124° E.

Entre os pontos 32° 30' N. 124° E. e 25° N. 123° E. o limite desta subdivisão não é definido.

27/132-A *Subdivisão de zona 6G:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 32° 30' N. 124° E., se dirige para norte até ao ponto 39° N. 124° E., passa pelo ponto 39° 31' 51" N. 124° 06' 31" E. e atinge o ponto 39° 49' 41" N. 124° 10' 06" E. na fronteira que separa a República Popular da China e a República Popular Democrática da Coreia. Segue ao longo da fronteira da República Popular da China até ao ponto da junção das fronteiras da Índia e da Birmânia. Daí dirige-se para sul, ao longo das fronteiras que separam a Índia da Birmânia e o Bangladesh da Birmânia, até ao golfo de Bengala. Segue depois pela costa da Birmânia até ao seu ponto mais meridional, dirige-se para a ilha Weh (ao largo da costa setentrional de Samatra) para continuar pelos pontos 02° S. 92° E. e 10° S. 92° E., até ao ponto 10° S. 110° E. Dirige-se para leste até ao ponto 10° S. 141° E., em seguida para norte até ao ponto 00° 141° E. e passa pelos pontos 04° N. 130° E., 20° N. 130° E. e 20° N 120° 40' E. Daí dirige-se para norte até aos pontos 21° N. 121° 30' E. e 25° N. 123° E.

Entre os pontos 25° N. 123° E. e 32° 30' N. 124° E. o limite desta subdivisão de zona não é definido.

Nas regiões em que as subdivisões 6D, 6F e 6G são comuns, as frequências adjudicadas à subdivisão de zona 6G devem ser utilizadas unicamente pelas estações aeronáuticas da República Popular da China; as frequências adjudicadas às subdivisões de zona 6D e 6F devem ser utilizadas unicamente pelas estações aeronáuticas das administrações dos outros países situados nas regiões comuns. Igualmente nestas regiões comuns, a utilização operacional pela República Popular da China das frequências adjudicadas a subdivisão 6G deve ser limitada à zona definida por uma linha que, partindo do ponto 21° 32' 52" N. 108° E., passa pelos pontos 20° N 108° E., 20° N. 107° E., 18° N. 107° E., 18° N, 108° E., 15° N. 110° E., 10° N. 110° E., 06° N. 108° E., 03° 30' N. 112° E., 04° N. 113° E., 08° N. 116° E., 10° N. 118° E., 14° N. 119° E. e 18° N. 119° E., até ao ponto 20° N. 120° 40' E. e, daí, segue o limite da subdivisão de zona 6D até ao ponto 21° 32' 52" N. 108° E.

27/133 *Zona das linhas aéreas regionais e nacionais 7:*

(ZLARN — 7)

Esta zona é delimitada por uma linha que, partindo do Pólo Sul, segue o meridiano 20° W. até ao ponto 05° S. 20° W.; segue o paralelo 05° S. até ao ponto 05° S. 12° E., continua pela fronteira que separa a República Popular de Angola, pela fronteira setentrional da República do Zaire, pela fronteira que separa a Uganda do Sudão e pela fronteira que separa o Quénia dos seguintes países: Sudão, Etiópia e Somália.

Passa depois pelos pontos 02° S. 42° E. e 02° S. 60° E. e segue o meridiano 60° E. até ao ponto 11° S. 60° E.; volta finalmente ao Pólo Sul, passando pelos pontos 11° S. 65° E., 40° S. 65° E. 40° S. 60° E.

27/134 *Subdivisão de zona 7A:*

Esta subdivisão é delimitada por uma linha que, partindo do Pólo Sul, segue o meridiano 20° W. e passa em seguida pelos pontos 05° S. 20° W., 05° S. 10° E., 40° S. 10° E. e 40° S. 60° E. e volta a atingir o Pólo Sul, segundo o meridiano 60° E.

27/135 *Subdivisão de zona 7B:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 05° S. 10° E., passa pelo ponto 05° S. 12° E. para seguir a fronteira que separa a República Popular do Congo da República Popular de Angola

e a fronteira setentrional da República do Zaire até ao ponto de junção das fronteiras da Uganda, da República do Zaire e do Sudão; daí segue as fronteiras orientais da República do Zaire, a República de Ruanda, da República do Burundi e, de novo, da República do Zaire. Continua pelas fronteiras meridionais da República do Zaire e da República Popular de Angola até à costa do Atlântico Sul, passa pelo ponto 17° S. 10° E. e volta ao seu ponto de partida 05° S. 10° E.

27/136 *Subdivisão de zona 7C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto de junção das fronteiras da Uganda, da República do Zaire e do Sudão, segue a fronteira ocidental da Uganda e da Tanzânia e prossegue pela fronteira meridional da Tanzânia até à Costa. Daí passa pelos pontos 11° S. 41° E., 11° S. 60° E., 02° S. 60° E. e 02° S. 41° E. até à costa. Daí passa pelos 11° S. 41° E., 110 S. 60° E. e 02° S. 41° E. até à costa oriental da África, dirige-se depois para norte, seguindo as fronteiras oriental e setentrional do Quénia e a fronteira setentrional da Uganda e atinge o ponto de junção das fronteiras da República do Zaire, do Sudão e da Uganda.

27/137 *Subdivisão de zona 7D:*

Esta subdivisão é delimitada por uma linha que, partindo da fronteira que separa a Tanzânia de Moçambique, no lago Niassa, se dirige para sul ao longo de toda a fronteira ocidental de Moçambique até à costa da África; passa depois pelos pontos 27° S. 33° E., 40° S. 33° E., 40° S. 65° E., 11° S. 65° E. e 11° S. 41° E. e segue a fronteira setentrional de Moçambique até ao lago Niassa.

27/138 *Subdivisão de zona 7E:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 17° S. 10° E., passa pelos pontos 40° S. 10° E., 40° S. 33° E. e 27° S. 33° E. seguindo, depois, toda a fronteira ocidental de Moçambique e a parte da fronteira ocidental da Tanzânia até à extremidade norte do lago Niassa. Daí segue a fronteira que separa o Malawi da Tanzânia e a que separa a Zâmbia da Tanzânia e continua pelas fronteiras que separam a República do Zaire da Zâmbia, a República Popular de Angola da Zâmbia e a República Popular de Angola da Namíbia até à costa, para voltar ao seu ponto de partida, 17° S. 10° E.

27/138-A *Subdivisão de zona 7F:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 05° S. 10° E., passa pelo ponto 05° S. 12° E. e segue a fronteira que separa a República Popular do Congo e a República Popular de Angola, até ao ponto de junção das fronteiras da República Popular do Congo, da República Popular de Angola e a República do Zaire; daí segue a fronteira que separa a República Popular de Angola e a República do Zaire até à costa atlântica e segue ao longo desta costa até ao rio Zaire; continua pelas fronteiras norte, este e sul da República Popular de Angola até à costa do Atlântico Sul, passa pelo ponto 17° S 10° E. e volta ao seu ponto de partida, 05° S. 10° E.

27/139 *Zona das linhas aéreas regionais e nacionais 8:*

(ZLARN — 8)

Esta zona é delimitada por uma linha que, partindo do Pólo Sul, segue o meridiano 60° E. até ao ponto 40° S. 60° E. e passa depois pelos pontos 40° S. 65° E., 11° S. 65° E., 11° S. 60° E., 02° S. 60° E., 02° S. 92° E., 10° S. 92° E. e 10° S. 110° E., para atingir o Pólo Sul, seguindo o meridiano 110° E.

27/140 *(Suprimido.)*

27/141 *Zona das linhas aéreas regionais e nacionais 9:*

(ZLARN — 9)

Esta zona é delimitada por uma linha que, partindo do Pólo Sul segue o meridiano 160° E., até ao ponto 27° S. 160° E.; daí, passa pelos pontos 19° S. 153° E., 10° S. 145° E., 10° S. 141° E., 00° 141° E., 00° 160° E., 03° 30' N. 160° E. e 03° 30' N 120° W., para atingir o Pólo Sul, seguindo o meridiano 120° W.

27/142 *(Suprimido.)*

27/143 *Subdivisão de zona 9B:*

A linha que delimita esta subdivisão é definida pelos pontos 00° 141° E., 10° S. 141° E., 10° S. 145° E., 27° S. 160° E., 27° S. 157° W., 03° 30' N. 157° W., 03° 30' N. 160° E., 00° 160° E. e 00° 141° E.

27/144 *Subdivisão de zona 9C:*

A linha que delimita esta subdivisão parte do Pólo Sul, segue o meridiano 170° W. até 03° 30' N., passa pelo ponto 03° 30' N. 120° W., e volta a atingir o Pólo Sul, seguindo o meridiano 120° W.

27/145 *Subdivisão de zona 9 D:*

A linha que delimita esta subdivisão parte do Pólo Sul, segue o meridiano 160° E. até ao ponto 27° S. 160° E., passa pelo ponto 27° S. 170° W. e atinge o Pólo Sul, seguindo o meridiano 170° W.

27/145-A *Zona das linhas aéreas regionais e nacionais 10:*

(ZLARN—10)

Esta zona é delimitada por uma linha que, partindo do ponto 50° N. 164° E., passa pelo ponto 66° N 169° W. e segue o meridiano 169° W. até ao Pólo Norte. Passa depois pelos pontos 82° N. 30° E, 82° N. 00°, 73° N. 00° e 73° N. 15° W., segue o meridiano 15° W. até ao ponto 72° N. 15° W. Passa depois pelos pontos 40° N. 50° W., 40° N. 65° W., 44° 30' N. 73° W., 41° N. 81° W., 41° N. 88° W., 48° N. 91° W., 48° N. 127° W e 50° N. 130° W., para se dirigir, em seguida, para oeste e voltar ao seu ponto de partida, 50° N. 164° E.

27/146 *Subdivisão de zona 10A:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 50° N. 164° E., passa pelo ponto 66° N. 169° W.; daí segue o meridiano 169° W. até ao Pólo Norte, passa pelo ponto 50° N. 130° W. e volta depois para oeste, até ao seu ponto de partida, 50° N. 164° E.

27/147 *Subdivisão de zona 10B:*

A linha que delimita esta zona parte do ponto 57° N. 140° W., passa pelo Pólo Norte, depois pelos pontos 48° N. 91° W., 48° N. 127° W. e 57° N. 139° W., e volta ao seu ponto de partida, 57° N. 140° W.

27/148 *Subdivisão de zona 10C:*

A linha que delimita esta subdivisão é definida pelos pontos 57° N. 140° W., 60° N. 140° W., 60° N. 91° W., 48° N. 91° W., 48° N. 127° W., 57° N. 139° W. e 57° N. 140° W.

27/149 *Subdivisão de zona 10D:*

A linha que delimita esta subdivisão parte do ponto 48° N. 98° W., passa depois pelo Pólo Norte e pelos pontos 69° N. 45° W., 61° N. 70° W., 45° N. 72° W., 41° N. 81° W., 41° N. 88° W., 48° N. 91° W. e 48° N. 98° W.

27/150 *Subdivisão de zona 10E:*

A linha que delimita esta subdivisão passa pelos pontos 45° N. 74° W., 61° N. 72° W. e 69° N. 47° W., depois pelo Pólo Norte e pelos pontos 72° N. 15° W., 40° N. 50° W. e 40° N 65°W., para voltar ao seu ponto de partida, 45° N. 74° W.

27/150-A *Subdivisão de zona 10F:*

A linha que delimita esta subdivisão parte do Pólo Norte e passa pelos pontos 82° N. 30° E., 82° N. 0°, 73° N. 0°, 73° N. 20° W., 70° N. 20° W., 63° 30' N. 39° W., 58° 30' N. 43° W., 58° 30' N. 50° W., 63° 30' N. 55° 44' W., 65° 30' N. 58° 39' W., 74° N. 68° 18' W., 76° N. 76° W., 78° N. 75° W. e 82° N. 60° W., e volta ao seu ponto de partida no Pólo Norte.

27/150-B *Zona das linhas aéreas regionais e nacionais 11:*

(ZLARN — 11)

Esta zona é delimitada por uma linha que, partindo do seu ponto 29° N. 180°, passa pelos pontos 50° N. 164° E. e 50° N. 127° W., para seguir a fronteira que separa os Estados Unidos da América do Canadá até ao ponto 46° N. 67° W.; passa depois pelos pontos 40° N. 65° W., 40° N. 50° W., 25° N. 35° W., 25° N. 98° W., 33° N. 119° W., 33° N. 153° W. e 29° N. 153° W., para voltar ao seu ponto de partida, 29° N. 180°.

27/151 *Subdivisão de zona 11A:*

A linha que delimita esta subdivisão parte do ponto 29° N. 180°, passa depois pelos pontos 50° N. 164° E., 50° N. 130° W., 33° N. 130° W., 33° N. 153° W. e 29° N. 153° W., para voltar ao seu ponto de partida, 29° N. 180°.

27/152 *Subdivisão de zona 11B:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 50° N. 130° W., passa pelos pontos 33° N. 130° W., 33° N. 119° W., 25° N. 98° W., 25° N. 65° W., 40° N. 65° W e 46° N. 67° W. Daí segue a fronteira entre os Estados Unidos da América e o Canadá, passando pelo ponto 50° N. 127° W., para voltar ao seu ponto de partida, 50° N. 130° W.

27/152-A *Subdivisão de zona 11C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 25° N. 65° W., passa pelos pontos 40° N. 65° W., 40° N. 50° W. e 25° N. 35° W., para voltar ao seu ponto de partida, 25° N. 65° W.

27/152-B *Zona das linhas aéreas regionais e nacionais 12:*

(ZLARN — 12)

Esta zona é delimitada por uma linha que, partindo do ponto 03° 30' N. 170° W., passa pelo ponto 10° N. 170° W., para seguir depois a linha que separa as Regiões 2 e 3 da UIT até ao ponto 29° N. 180°; passa depois pelos pontos 29° N. 153° W., 33° N. 153° W., 33° N. 120° W., 35° N. 120° W., 32° N. 104° W., 25° N. 91° W., 26° N. 91° W., 26° N. 79° W., 27° N. 76° 30' W., 25° N. 70° W. e 25° N. 35° W., para seguir depois a linha que separa as Regiões 1 e 2 da UIT, até ao ponto 0° 20° W. Daí passa pelos pontos 0° 44° W. e 04° 24' N. 50° 39° W., para seguir depois as fronteiras que se separam o Brasil do Departamento Francês da Guiana, do Suriname, da Guiana, da Venezuela, da Colômbia, até ao ponto de junção das fronteiras do Brasil, do Peru e da Colômbia; segue depois as fronterias que separam o Peru da Colômbia e do Equador, até ao ponto 04° S. 93° W. Daí passa pelos pontos 05° S. 93° W., 05° S. 120° W. e 03° 30' N. 120° W., para voltar ao seu ponto de partida 03° 30' N. 170' W.

27/153 *Subdivisão de zona 12A:*

A linha que delimita esta subdivisão parte do ponto 03° 30' N. 170° W., passa pelo ponto 10° N. 170° W., segue depois a linha que separa as Regiões 2 e 3 da UIT até ao ponto 29° N. 180°; passa pelos pontos 29° N. 153° W. e 03° 30' N. 153° W., para voltar ao seu ponto de partida, 03° 30' N. 170° W.

27/154 *Subdivisão de zona 12B:*

A linha que delimita esta subdivisão parte do ponto 03° 30' N. 153° W., segue o meridiano 153° W. até ao ponto 33° N. 153° W. e passa pelos pontos 33° N. 120° W., 17° N. 115° W., 14° N. 93° W., 02° N. 86° W., 02° N. 93° W., 05° S. 93° W., 05° S. 120° W. e 03° 30' N. 120° W., para voltar ao seu ponto de partida, 03° 30' N. 153° W.

27/155 *Subdivisão de zona 12C:*

A linha que delimita esta subdivisão parte do ponto 33.° N. 120° W., passa pelos pontos 35° N. 120° W., 32° N. 104° W., 25° n. 91° W., 23° N. 83° W., 22° N. 83° W., 13° N. 90° W. e 16° N. 116° W., para voltar ao seu ponto de partida, 33° N. 120° W.

27/156 *Subdivisão de zona 12D:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 20° N. 91° W., passa pelos pontos 26° N. 91° W., 26° N. 79° W., 27° N. 76° 30' W., 26° N. 73° W., 17° N. 58° W. e 10° N. 58° W., depois pelas cidades de Panamá e Colon, pelas inhas de Cygne e pela cidade de Beliza, para voltar ao seu ponto de partida, 20° N. 91° W.

27/157 *Subdivisão de zona 12E:*

A linha que delimita esta subdivisão parte do ponto 15° N. 95° W. e passa pelos pontos 23° N. 92° W., 23° N. 85° W., 19° N. 85° W., 09° N. 77° W. e 02° N. 79° W., depois pelo ponto 01° N. 75° W., segue a fronteira oriental e meridional do Equador até ao ponto 04° S. 81° W.; daí passa pelos pontos 02° N. 81° W., 02° N. 86° W. e 14° N. 93° W., para voltar ao seu ponto de partida, 15° N. 95° W.

27/158 *Subdivisão de zona 12F:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 02° N. 79° W., passa pelo ponto 08° N. 83° W., segue a fronteira que separa o Panamá da Costa Rica, passa pelos pontos 10° N. 83° W., 13° N. 83° W.,13° N. 70° W., 08° N. 70° W., 06° N. 67° W. e 01° N. 66° W., segue a fronteira que separa o Brasil da Colômbia até ao ponto 04° S. 70° W. e daí segue a fronteira que separa a Colômbia do Peru e depois a fronteira que separa a Colômbia do Equador, para voltar ao seu ponto de partida, 02° N. 79° W.

27/159 *Subdivisão de zona 12G:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 07° N. 73° W., passa pelos pontos 14° N. 73° W., 14° N. 58°W. e 01° 31° N. 58° W.; segue depois as fronteiras do Brasil com a Guiana, a Venezuela e a Colômbia, passa pelos pontos 01° 57' N. 68° W. e 05° N. 69° W., para voltar ao seu ponto de partida, 07° N. 73° W.

27/160 *Subdivisão de zona 12H:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 05° N. 70° W., passa pelos pontos 08° 45' N. 60° W., 08°N. 58° W., 08° N. 49° W e 04° 10' N. 51° 36' W.; segue depois as fronteiras que

separam o Brasil do Departamento Francês da Guiana, do Suriname, da Guiana da Venezuela e da Colômbia, até ao seu ponto de junção das fronteiras do Brasil, da Colômbia e do Peru, para voltar ao seu ponto de partida, 05° N. 70° W.

27/161 *Subdivisão de zona 12I:*

A linha que delimita esta subdivisão parte do ponto 25° N. 70° W., passa pelo ponto 25° N. 35° W., segue depois a linha que separa as Regiões 1 e 2 da UIT, até ao ponto 00° 20° W; passa depois pelos pontos 00° 44° W., 08° N. 54° W., 08° N. 58° W. e 17° N. 58° W., para voltar ao seu ponto de partida, 25° N. 70°W.

27/161-A *Subdivisão de zona 7E:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 04° S. 93° W., passa pelos pontos 02° N. 93° W. e 02° N. 79° W., segue a fronteira que separa o Equador da Colômbia até ao ponto de junção das fronteiras da Colômbia, do Peru e do Equador, segue a fronteira que separa o Peru do Equador, para voltar ao seu ponto de partida, 04° S. 93° W.

27/161-B *Zona das linhas aéreas regionais e nacionais 13:*

(ZLARN — 13)

Esta zona é delimitada por uma linha que, partindo do Pólo Sul, segue o meridiano 120° W. até ao ponto 05° S. 120° W., daí segue o paralelo 05° S. até ao ponto 05° S. 93° W., passa pelo ponto 04° S. 82° W. e segue as fronteiras meridionais do Equador, da Colômbia, da Venezuela, da Guiana, do Suriname e do Departamento Francês da Guiana, até ao ponto 04° 24' N. 50° 39' W. Passa depois pelos pontos 04° 24' N. 47° W., 00° 32° W. e 00° 20° W., para atingir o Pólo Sul, seguindo o meridiano 20° W.

27/162 *Subdivisão de zona 13A:*

A linha que delimita esta subdivisão parte do ponto 05° S. 120° W., passa pelos pontos 05° S. 93° W., 04° S. 82° W., 19° S. 81° W., 57° S. 81° W e 57° S. 90° W., depois pelo Pólo Sul, para voltar ao seu ponto de partida, 05° S. 120° W.

27/163 *Subdivisão de zona 13B:*

A linha que delimita esta subdivisão parte do ponto 29° S. 111° W., passa pelos pontos 24° S. 111° W., 24° S. 104° W. e 29° S. 104° W., para voltar ao seu ponto de partida, 29° S. 111° W.

27/164 *Subdivisão de zona 13C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 15° S. 47° W., passa pelos pontos 20° S. 44° W., 23° 19' S. 42° W., 25° S. 45° W., 22° 30' S. 5° 39' W. e 19° 52' S. 58° W., e segue depois as fronteiras do Brasil com o Paraguai, a Bolívia, o Peru, a Colômbia, a Venezuela, a Guiana, o Suriname e o Departamento Francês da Guiana. Passa depois pelos pontos 04° 24' N. 50° 39' W. e 04° 24' N. 47° W., para voltar ao seu ponto de partida, 15° S. 47° W.

27/165 *Subdivisão de zona 13D:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 11° S. 69° 30' W., segue a fronteira entre a Bolívia e o Brasil, passa pelo ponto 20° 10' S. 58° W., segue depois a fronteira entre a Bolívia e o Paraguai até ao ponto 22° 30' S. 62° 30' W., continua pela fronteira entre a Bolívia e a Argentina e passa pelo ponto 23° S. 67° W., segue a fronteira entre a Bolívia e o Chile, passa pelo ponto 16° 30' S. 69° 30' N., segue a fronteira entre a Bolívia e o Peru e volta ao seu ponto de partida, 11° S. 69° 30' W.

27/165-A *Subdivisão de zona 13M:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 19° S. 81° W., passa pelos pontos 04° S. 82° W. e 03° S. 80° W., segue depois a fronteira entre o Peru e o Equador e entre o Peru e a Colômbia até ao ponto 11° S. 69° 30' W.; segue a fronteira entre o Peru e a Bolívia, até ao ponto 17° 30' S. 69° 30' W., e depois a fronteira entre o Peru e o Chile, para voltar ao seu ponto de partida, 19° S. 81° W.

27/165-B *Subdivisão de zona 13N:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 22° 30' S. 62° 30' W., segue a fronteira entre o Paraguai e a Bolívia até ao ponto 20° 10' S. 58° W.; segue depois a fronteira entre o Paraguai e o Brasil até ao ponto 25° 50' S. 54° 30' W. e continua pela fronteira entre o Paraguai e a Argentina, para voltar ao seu ponto de partida, 22° 30' S. 62° 30' W.

27/166 *Subdivisão de zona 13E:*

A linha que delimita esta subdivisão parte do ponto 32° S. 81° W., passa pelo ponto 19° S. 81° W., atinge o ponto de intersecção da costa com a fronteira que separa o Chile do Peru, segue depois as fronteiras que separam o Chile do Peru, da Bolívia e da Argentina até ao paralelo 32° S., para voltar ao seu ponto de partida, 32° S. 81° W.

27/167 *Subdivisão de zona 13F:*

A linha que delimita esta subdivisão parte do ponto 57° S. 81° W., passa pelo ponto 32° S. 81° W. até ao cruzamento do paralelo 32° S. com a fronteira entre o Chile e a Argentina, depois pelos pontos 52° S. 67° W., 57° S. 67° W. e 57° S. 40° W e pelo Pólo Sul, para voltar ao seu ponto de partida, 57° S. 81° W.

27/168 *Subdivisão de zona 13G:*

A linha que delimita esta subdivisão parte do ponto 36° S. 55° W., passa pelo ponto de intersecção do paralelo 32° S. com a fronteira entre a Argentina e o Chile, dirige-se para o norte seguindo a fronteira que separa a Argentina da Bolívia, do Paraguai, do Brasil e o Uruguai, para voltar ao seu ponto de partida, 36° S. 55° W.

27/169 *Subdivisão de zona 13H:*

A linha que delimita esta subdivisão parte do ponto 57° S. 90° W., passa pelos pontos 57° S. 70° W. e 52° S. 70° W., segue depois a fronteira entre o Chile e Argentina até ao cruzamento com o paralelo 32° S., passa pelos pontos 36° S. 55° W., 57° S. 55° W. e 57° S. 25° W., e pelo Pólo Sul, para voltar ao seu ponto de partida, 57° S. 90° W.

27/170 *Subdivisão de zona 13I:*

A linha que delimita esta subdivisão parte do ponto 40° S. 50° W., passa pelo ponto 36° S. 55° W., segue a fronteira que separa o Uruguai da Argentina e do Brasil, passa pelo ponto 35° S. 45° W., para voltar ao seu ponto de partida, 40° S. 50° W.

27/171 *Subdivisão de zona 13J:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 15° S. 47° W., passa pelos pontos 20° S. 44° W., 23° 19' S. 42° W., 29° S. 40° W. e 35° S. 45° W. e segue, depois, as fronteiras do Brasil com o Uruguai, a Argentina, o Paraguai e a Bolívia até ao ponto 19° 52' S. 58° W. Passa depois pelo ponto 18° S. 57° 37' W., para voltar ao seu ponto de partida, 15° S. 47° W.

27/172 *Subdivisão de zona 13K:*

Esta subdivisão delimitada por uma linha que, partindo do ponto 22° 30' S. 50° 39' W., passa pelos pontos 25° S. 45° W., 29° S. 40° W., 20° S. 32° W., 00° 32° W., 04° 24' N. 47° W. e 04° 24' N. 50° 39' W., para voltar ao seu ponto de partida, 22° 30' S. 50° 39' W.

27/173 *Subdivisão de zona 13L:*

A linha que dleimita esta subdividão parte do ponto 00° 32° W., passa pelo ponto 00° 20° W., pelo Pólo Sul, pelos pontos 57° S. 55° W., 36° S. 55° W., 40° S. 50° W. e 20° S. 32° W., para voltar ao seu ponto de partida, 00° 32° W.

27/173-A *Zona das linhas aéreas regionais e nacionais 14:*

(ZLARN — 14)

Esta zona é delimitada por uma linha que, partindo do Pólo Sul, segue o meridiano 110° E. até ao ponto 10° S. 110° E.; daí, passa pelos pontos 10° S. 145° E., 19° S. 153° E. e 27° S. 160° E., para atingir o Pólo Sul, seguindo o meridiano 160° E.

27/173-B *Subdivisão de zona 14A:*

A linha que delimita esta subdivisão parte do Pólo Sul, segue o meridiano 110° E. até ao ponto 19° S. 110° E.; daí, passa pelos pontos 19° S. 118° E., 24° S. 120° E. e 24° S. 131° E., para atingir o Pólo Sul, seguindo o meridiano 131° E.

27/173-C *Subdivisão de zona 14B*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 19° S. 110° E. passa pelos pontos 10° S. 110° E., 10° S. 131° E., 24° S. 131° E., 24° S. 120° E. e 19° S. 118° E., para voltar ao seu ponto de partida, 19° S. 110° E.

27/173-D *Subdivisão de zona 14C:*

Esta subdivisão é delimitada por uma linha que, partindo do ponto 24° S. 131° E., passa pelos pontos 10° S. 131° E., 10° S. 139° E. e 24° S. 139° E., para voltar ao seu ponto de partida, 24° S. 131° E.

27/173-E *Subdivisão de zona 14D:*

A linha que delimita esta subdivisão pate do Pólo Sul e segue o meridiano 131° E. até ao ponto 24° S. 131° E.; daí, passa pelos pontos 24° S. 139° E., 27° S. 139° E., 27° S. 142° E., 34° S. 142° E. e 34° S. 139° E., para atingir o Pólo Sul. seguindo o meridiano 139° E.

27/173-F *Subdivisão de zona 14E:*

Esta subdivisão é delimitada por uma linha que parte do ponto 24° S. 139° E., segue o meridiano 139° E. até ao ponto 10° S. 139° E. passa pelos pontos 10° S. 145° E. e 19° S. 153° E., para voltar ao seu ponto de partida, 24° S. 139° E.

27/173-G *Subdivisão de zona 14F:*

Esta subdivisão é delimitada por uma linha que parte do ponto 27° S. 139° E., segue o meridiano 139° E. até ao ponto 24° S. 139° E., passa pelos pontos 19° S. 153° E. e 27° S. 160° E., para voltar ao seu ponto de partida, 27° S. 139° E.

27/173-H *Subdivisão de zona 14G:*

A linha que delimita esta subdivisão parte do Pólo Sul, segue o meridiano 139° E. até ao ponto 34° S. 139° E., passa pelos pontos 34° S. 142° E., 27° S. 142° E. e 27° S. 160° E. e atinge o Pólo Sul, seguindo o meridiano 160° E.

ARTIGO 3

Descrição dos limites das zonas de adjudicação e das zonas de recepção VOLMET

Zona VOLMET — ÁFRICA-OCEANO ÍNDICO:

(AFI-MET)

27/174 A *zona de adjudicação AFI-MET* é delimitada por uma linha que, partindo do ponto 29° N. 20° W., passa pelos pontos 37° N. 03° W., 37° N. 36° E., 30° N. 35° E., 10° N. 52° E., 22° S. 60° E., 35° S. 35° E., 35° S. 15° E., 08° S. 15° W. e 12° N. 20° W., para atingir o ponto 29° N. 20° W.

27/175 A *zona de recepção AFI-MET* é delimitada por uma linha que, partindo do ponto 37° N. 03° W., passa pelos pontos 37° N. 36° E., 30° N. 35° E., 10° N. 52° E. e 10° N. 100° E., Pólo Sul, 29° N. 40° W. e 29° N. 20° W., para atingir o ponto 37° N. 03° W.

Zona VOLMET — ATLÂNTICO NORTE:

(NAT-MET)

27/176 A *zona de adjudicação NAT-MET* é delimitada por uma linha que, partindo do ponto 41° N. 78° W., passa pelos pontos 51° N. 55° W., 24° N. 50° W. e 24° N. 74° W., para atingir o ponto 41° N. 78° W.

27/177 A *zona de recepção NAT-MET* é delimitada por uma linha que, partindo do ponto 24° N. 97° W., passa pelos pontos 24° N. 85° W., 75° N. 85° W., 75° N. 20° W., 00° 20° W. e 00° 95° W., para atingir o ponto 24° N. 97° W.

Zona VOLMET — EUROPA:

(EUR-MET)

27/178 A *zona de adjudicação EUR-MET* é delimitada por uma linha que, partindo do ponto 33° N. 12° W., passa pelos pontos 54° N. 12° W., 70° N. 00°, 74° N. 40° E., 40° N. 36° E., 29° N. 35° 30' E. e 32° N. 13° E., para atingir o ponto 33° N. 12° W.

27/179 A *zona de recepção EUR-MET* é delimitada por uma linha que, partindo do ponto 15° N. 20° W., passa pelos pontos 40° N. 50° W., 75° N. 50° W., 75° N. 45° E e 15° N. 45° E., para atingir o ponto 15° N. 20° W.

Zona VOLMET — MÉDIO ORIENTE:

(MID-MET)

27/180 A *zona de adjudicação MID-MET* é delimitada por uma linha que, partindo do ponto 50° N. 80° E., passa pelos pontos 29° N. 80° E., 27° N. 85° E., 16° N. 78° E., 22° N. 56° E., 16° N. 42° E., 30° N. 30° E. 51° N. 30° E. e 57° N. 37° E., para atingir o ponto 50° N. 80° E.

27/181 A *zona de recepção MID-MET* é delimitada por uma linha que, partindo do ponto 50° N. 80° E., passa pelos pontos 50° N. 90° E., 35° N. 90° E., 27° N. 85° E., 16° N. 78° E., 22° N. 56° E., 16° N. 42° E., 30° N. 30° E., 51° N. 30° E. e 57° N. 37° E., para atingir o ponto 50° N. 80° E.

Zona VOLMET — NORTE DA ÁSIA CENTRAL:

(NCA-MET)

27/181-A A *zona de adjudicação NCA-MET* é delimitada por uma linha que, partindo do ponto 76° N. 32° E., passa pelos pontos 80° N. 90° E., 75° N. 168° W., 66° N. 168° W., 48° N. 160° E., 42° N. 135° E., 50° N. 130° E., 50° N. 90° E., 35° N. 70° E., 45° N. 30° E. e 60° N. 20° E., para atingir o ponto 76° N. 32° E.

27/181-B A *zona de recepção NCA-MET* é delimitada por uma linha que, partindo do Pólo Norte, passa pelos pontos 40° N. 168° W., 30° N. 140° E., 35° N. 70° E. e 30° N. 20° E., para atingir o Pólo Norte.

Zona VOLMET — PACÍFICO:

(PAC-MET)

27/182 A *zona de adjudicação PAC-MET* é delimitada por uma linha que, partindo do ponto 52° N. 132° E., passa pelos pontos 63°N. 149° W., 38° N. 120° W., 50° S. 120° W, 50° S. 145° E., 28° S. 145° E., 03°S. 129° E. e 22° N. 112° E., para atingir o ponto 52° N. 132° E.

27/183 A *zona de recepção PAC-MET* é delimitada por uma linha que, partindo do ponto 60° N. 100° E., passa pelos pontos 75° N. 160° W., 75° N. 110° W., 65° S. 110° W., 65° S. 145° E., 28° S. 145° E., 03° S. 129° E., 05° N. 80° E. e 40° N. 80° E., para atingir o ponto 60° N. 100° E.

Zona VOLMET — SUESTE ASIÁTICO:

(SEA-MET)

27/184 A *zona de adjudicação SEA-MET* é delimitada por uma linha que, partindo do ponto 55° N. 75° E., passa pelos pontos 55° N, 135° E., 45° N. 135° E., 35° N. 130° E., 10° N. 130° E., 10° S. 155° E., 35° S. 155° E., 35° S. 116° E., 08° N. 75° E. e 26° N. 65° E., para atingir o ponto 55° N. 75° E.

27/185 A *zona de recepção SEA-MET* é delimitada por uma linha que, partindo do ponto 55° N. 50° E., passa pelos pontos 55° N. 180°, 50° S. 180°, 50° S. 709° E., 08° N. 70° E. e 08° N. 50° E., para atingir o ponto 55° N. 50° E.

Zona VOLMET — CARAÍBAS:

(CAR-MET)

27/185-A A *zona de adjudicação CAR-MET* é delimitada por uma linha que, partindo do ponto 30° N. 110° W., passa pelos pontos 30° N. 75° W. e 00° 50° W., segue o Equador até ao ponto 00° 80° W., para atingir o ponto 30° N. 110° W.

27/185-B A *zona de recepção CAR-MET* é delimitada por uma linha que, partindo do ponto 40° N. 120° W., passa pelos pontos 40° N. 20° W., 25° S. 20° W. e 25° S. 120° W., para atingir o ponto 40° N. 120° W.

Zona VOLMET — AMÉRICA DO SUL:

(SAM-MET)

27/185-C A *zona de adjudicação SAM-MET* é delimitada por uma linha que, partindo do ponto 15° N. 83° W., passa pelos pontos 15° N. 60° W., 05° S. 35° W., 55° S. 60° W. e 55° S. 83° W., para atingir o ponto 15° N. 83° W.

27/185-D A *zona de recepção SAM-MET* é delimitada por uma linha que, partindo do ponto 30° N. 120° W., passa pelo ponto 30° N. 00° e pelo Pólo Sul, para atingir o ponto 30° N. 120° W.

ARTIGO 4

Zonas mundiais de adjudicação

27/185-E *Zona mundial I:*

Os limites desta zona de adjudicação correspondem aos do conjunto das ZLARN 1, 2 e 3.

27/185-F *Zona mundial II:*

Os limites desta zona de adjudicação correspondem aos do conjunto das ZLARN 10, 11, 12A, 12B, 12C e 12D.

27/185-G *Zona mundial III:*

Os limites desta zona de adjudicação correspondem aos do conjunto das ZLARN 6, 8, 9 e 14.

27/185-H *Zona mundial IV:*

Os limites desta zona de adjudicação correspondem aos do conjunto das ZLARN 12E a 12J e da ZLARN 13.

27/185-I *Zona mundial V:*

Os limites desta zona de adjudicação correspondem aos do conjunto das ZLARN 4, 5 e 7.

SECÇÃO II

Adjudicação de frequência no serviço móvel aeronáutico (R)

ARTIGO 1

27/186 Plano de adjudicação de frequências por zonas

27/187 Nota *a*) O sinal (*) indica uma restrição no emprego da frequência considerada, cuja significação é dada na coluna 3 do plano de adjudicação de frequências por ordem numérica (n.os **27/195** a **27/207**).

27/188 Nota *b*) A lista que se segue não inclui as frequências comuns no Mundo inteiro aos serviços móveis aeronáuticos (R) e (OR), 3023 kHz e 5680 kHz. A adjudicação destas frequências está indicada no artigo 2:

27/189

ARTIGO 1

Plano de adjudicação de frequências (por ordem numérica)

Notas gerais:

1. *Classe das estações — FA:*

27/192 *Classes de emissão:* v. os n.os **27/49** a **27/52.**

Potência: salvo indicações contrárias contidas no Plano, o valor das potências das estações aeronáuticas e das estações de aeronave é o que figura nos n.os **27/54** a **27/62.**

Horário: H24, salvo indicação contrária.

2. Uma frequência adjudicada com a indicação «utilização diurna» pode ser usada durante o período compreendido entre uma hora após o nascer do Sol e uma hora antes do pôr do Sol.

27/193 3. Uma «via comum» é uma via adjudicada em comum a duas ou mais zonas sem ter em conta as condições de interferência recíprocas; a sua utilização é objecto de um acordo entre as administrações

27/194 interessadas.

27/194-A 4. Com excepção das frequências portadoras (frequências de referência) de 3023 kHz e 5680 kHz, as frequências utilizáveis no Mundo inteiro e especificadas nos quadros que figuram no n.º **27/189** e nos n.os **27/195** a **27/207** são reservadas às consignações feitas pelas administrações a estações que servem uma ou mais entidades responsáveis pela exploração de aeronaves, de acordo com os direitos conferidos pela administração interessada. Estas consignações têm por objectivo o estabelecimento de comunicações entre uma estação aeronáutica adequada e uma estação de aeronave, qualquer que seja o ponto do Mundo em que esta se encontre, a fim de controlar a regularidade do voo e zelar pela segurança da aeronave. As frequências utilizáveis em todo o Mundo não deverão ser consignadas pelas administrações às ZLAMP, ZLARN ou zonas VOLMET. Sempre que uma zona de exploração fique totalmente compreendida nos limites de ZLARN ou de subdivisão de ZLARN, as frequências a utilizar são as frequências adjudicadas às ZLARN e as subdivisões de ZLARN.

C010/6G Na zona 6G, utilização apenas a leste de 118° E. e a norte de 40° N.
C011/6E Na zona 6E, utilização limitada a sul de 20° N.
C100/... A zona de adjudicação para utilização mundial é indicada a seguir ao símbolo. No que respeita a procedimento para consignação das frequências, v. o n.º **27/194-A.**

ARTIGO 3

Frequências para utilização comum

27/208 1. As frequências portadoras (frequências de referência) de 3023 kHz e 5680 kHz são destinadas à utilização comum em todo o Mundo.

27/209 2. A utilização destas frequências em todo o Mundo é autorizada:

2.1. Nas estações de aeronave, para:

a) Controle de aproximação e de aeródromo;
b) Comunicações com as estações aeronáuticas, quando as outras frequências dessas estações não estejam disponíveis ou sejam desconhecidas.

2.2. Nas estações aeronáuticas, para controle de aproximação e de aeródromo, com as seguintes reservas:

a) Com uma potência média limitada a um valor não superior a 20 W no circuito de antena;
b) Em cada caso é necessário estudar com particular atenção o tipo de antena a utilizar, a fim de evitar interferências prejudiciais;
c) A potência das estações aeronáuticas que utilizam estas frequências nas condições acima referidas poderá ser aumentada até ao valor necessário para satisfazer determinados requisitos de exploração, sob reserva de coordenação entre as administrações directamente interessadas e aquelas cujos serviços possam ser desfavoravelmente influenciados.

27/210 3. Não obstante as disposições acima referidas, a frequência de 5680 kHz pode também ser utilizada nas estações aeronáuticas para comunicações com estações de aeronave, quando as outras frequências das estações aeronáuticas não estejam disponíveis ou sejam desconhecidas. Esta utilização é, porém, limitada a determinadas zonas, e está sujeita a determinadas condições, a fim de não causar interferências prejudiciais à outras comunicações autorizadas do serviço móvel aeronáutico.

27/211 4. As reuniões da ICAO podem recomendar pormenores suplementares relativos à utilização destas vias para os fins acima mencionados.

27/212 5. As frequências de 3023 kHz e 5680 kHz podem igualmente ser utilizadas por estações de outros serviços móveis que participem em operações de busca e salvamento coordenadas, aéreas e de superfície, e também para as comunicações entre essas estações e as estações terrestres participantes. As estações aeronáuticas estão autorizadas a utilizar estas frequências para estabelecer comunicações com as estações acima referidas.

27/213 6. Estas vias podem ser utilizadas para as emissões das classes A1 ou A3, segundo acordos especiais. Não devem ser subdivididas.

27/214 7. Todas as estações que participem directamente em operações de busca e salvamento coordenadas e que utilizem as frequências de 3023 kHz e 5680 kHz devem emitir unicamente na faixa lateral superior, com excepção dos casos previstos no n.º **27/50.**

ÍNDICE

Preâmbulo.

PARTE A

Capítulo I — Terminologia:

Artigo 1 — Termos e definições.
Introdução:

Secção I — Termos gerais.
Secção II — Termos específicos ligados à gestão das frequências.
Secção III — Serviços radioeléctricos.
Secção IV — Estações e sistemas radioeléctricos.
Secção V — Termos relativos à exploração.
Secção VI — Características das emissões e dos materiais.
Secção VII — Partilha das frequências.
Secção VIII — Termos técnicos relativos ao espaço.

Artigo 2 — Nomenclatura das faixas de frequências e dos comprimentos de onda empregados em radiocomunicações.
Artigo 3 — Nomenclatura das datas e das horas empregadas em radiocomunicações.
Artigo 4 — Designação das emissões:

Secção I — Largura de faixa necessária.
Secção II — Classes.

Capítulo II:

Artigo 5 — Características técnicas das estações.

Capítulo III — Frequências:

Artigo 6 — Regras gerais de consignação e emprego das frequências.
Artigo 7 — Acordos especiais.
Artigo 8 — Atribuição das faixas de frequências.
Introdução:

Secção I — Regiões e zonas.
Secção II — Categorias de serviços e de atribuições.
Secção III — Disposição do quadro de atribuição das faixas de frequências.
Secção IV — Quadro de atribuição das faixas de frequências.

Artigo 9 — Disposições especiais relativas à consignação e ao emprego das frequências.

Capítulo IV — Coordenação, notificação e registo de frequências. Comissão Internacional do Registo de Frequência:

Artigo 10 — Comissão Internacional do Registo de Frequências:

Secção I — Funções da Comissão.
Secção II — Métodos de trabalho da Comissão.

Artigo 11 — Coordenação das consignações de frequência às estações de um serviço de radiocomunicação espacial, com excepção das estações do serviço de radiodifusão por satélite e às estações de Terra apropriadas:

Secção I — Procedimento para a publicação antecipada de informações relativas às redes de satélite em projecto.
Secção II — Coordenação das consignações de frequência a uma estação espacial a bordo de um satélite geostacionário ou a uma estação terrena que comunique com tal estação espacial, em relação às estações que pertencem a outras redes de satélite geostacionário.
Secção III — Coordenação das consignações de frequência a uma estação terrena, em relação às estações de terra.
Secção IV — Coordenação das consignações de frequência a uma estação de Terra emissora, em relação a uma estação terrena.
Secção V — Assistência especial dispensada pela IFRB.

Artigo 12 — Notificação e inscrição no Ficheiro de Referência Internacional das Frequências das consignações de frequência às estações de radiocomunicação de Terra:

Secção I — Notificação das consignações de frequência.
Secção II — Procedimento para o exame das fichas de notificação e inscrição das consignações de frequência no ficheiro de referência:

Subsecção II-A — Procedimento a seguir nos casos não tratados nas subsecções II-B a II-E do presente artigo.
Subsecção II-B — Procedimento a seguir pelas estações costeiras radiofónicas que funcionam nas faixas atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 23 000 kHz.
Subsecção II-C — Procedimento a seguir pelas estações aeronáuticas que funciona nas faixas atribuídas em exclusivo aos serviços móveis aeronáuticos entre 2850 kHz e 22 000 kHz.
Subsecção II-D — Procedimento a seguir pelas estações de radiodifusão que funcionam nas faixas atribuídas em exclusivo ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz.
Subsecção II-E — Procedimento a seguir nos casos em que estações de Terra funcionam na mesma faixa de frequências de uma estação terrena e se situam na zona de coordenação desta estação, quer se trate de uma estação terrena existente quer de uma estação terrena para a qual foi efectuada ou iniciada a coordenação.

Secção III — Inscrição de datas e das conclusões no ficheiro de referência.
Secção IV — Categoria das consignações de frequência.
Secção V — Reexame das conclusões.
Secção VI — Actualização do ficheiro de referência.
Secção VII — Estudos e recomendações.
Secção VIII — Disposições diversas.

Artigo 13 — Notificação e inscrição no Ficheiro de Referência Internacional das Frequências das consignações de frequência às estações de radioastronomia e às estações de radiocomunicação espacial, com excepção das estações do serviço de radiodifusão por satélite:

Secção I — Notificação das consignações de frequência.
Secção II — Procedimento para o exame das fichas de notificação e inscrição das consignações de frequência no ficheiro de referência.
Secção III — Inscrição das conclusões no ficheiro de referência.
Secção IV — Categorias de consignações de frequência.
Secção V — Reexame das conclusões.
Secção VI — Modificação, anulação e revisão das inscrições do ficheiro de referência.
Secção VII — Estudos e recomendações.
Secção VIII — Disposições diversas.

Artigo 14 — Procedimento suplementar a aplicar nos casos em que uma nota ao quadro de atribuição das faixas de frequência exija um acordo com uma administração.
Artigo 15 — Coordenação, notificação e inscrição de consignações de frequência às estações do serviço de radiodifusão por satélite nas faixas de frequências de 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região 1) e aos outros serviços a que estas faixas estão atribuídas, na medida em que esteja implicada a relação destes com o serviço de radiodifusão por satélite nestas faixas.
Artigo 16 — Procedimento para actualização do plano de adjudicação de frequências às estações costeiras radiotelefónicas que funcionam nas faixas exclusivas do serviço móvel marítimo entre 4000 kHz e 23 000 kHz.
Artigo 17 — Procedimento relativo às faixas atribuídas em exclusivo ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz:

Secção I — Apresentação dos horários periódicos de radiodifusão em ondas decamétricas.
Secção II — Exame preliminar e elaboração do horário provisório de radiodifusão em ondas decamétricas.
Secção III — Exame técnico e revisão do horário provisório.
Secção IV — Publicação do horário de radiodifusão em ondas decamétricas.
Secção V — Lista anual das frequências de radiodifusão em ondas decamétricas.
Secção VI — Disposições diversas.

Capítulo V — Medidas contra as interferências. Ensaios:

Artigo 18 — Interferências:

Secção I — Interferências.
Secção II — Interferências causadas por aparelhos e instalações eléctricas de qualquer espécie, com excepção dos aparelhos destinados às utilizações industriais, científicas e médicas.
Secção III — Interferências causadas pelos aparelhos destinados às utilizações industriais, científicas e médicas.
Secção IV — Casos especiais de interferência.

Artigo 19 — Ensaios.
Artigo 20 — Fiscalização internacional das emissões.
Artigo 21 — Relatórios sobre infracções.
Artigo 22 — Procedimento contra as interferências prejudiciais.

Capítulo VI — Disposições administrativas relativas às estações:

Artigo 23 — Sigilo.
Artigo 24 — Licenças.
Artigo 25 — Identificação das estações:

Secção I — Disposições gerais.
Secção II — Atribuição das séries internacionais e consignação dos indicativos de chamada.
Secção III — Formação dos indicativos de chamada.
Secção IV — Identificação das estações que utilizam a radiotelefonia.
Secção V — Números de chamada selectiva no serviço móvel marítimo.
Secção VI — Identidades do serviço móvel marítimo no serviço móvel marítimo e no serviço móvel marítimo por satélite.
Secção VII — Disposições especiais.

Capítulo VII:

Artigo 26 — Documentos de serviço:

Secção I — Títulos, conteúdo e publicação dos documentos de serviço.
Secção II — Preparação e modificação dos documentos de serviço.

Capítulo VIII — Disposições relativas a grupos de serviços, assim como a estações e a serviços particulares:

Artigo 27 — Serviços de radiocomunicação de Terra que partilham faixas de frequências com os serviços de radiocomunicação espacial de 1 GHz:

Secção I — Escolha das localizações e das frequências.
Secção II — Limites de potência.

Artigo 28 — Serviços de radiocomunicação espacial que partilham faixas de frequências com os serviços de radiocomunicação de Terra acima de 1 GHz:

Secção I — Escolha das localizações e das frequências.
Secção II — Limites de potência.
Secção III — Ângulo mínimo de elevação.
Secção IV — Limites da densidade de fluxo de potência produzida pelas estações espaciais.

Artigo 29 — Disposições especiais relativas aos serviços de radiocomunicação espacial:

Secção I — Cessação das emissões.
Secção II — Medidas contra as interferências causadas aos sistemas de satélites geostacionários.
Secção III — Manutenção em posição das estações espaciais.
Secção IV — Precisão da orientação das antenas dos satélites geostacionários.
Secção V — Densidade de fluxo de potência na órbita dos satélites geostacionários.
Secção VI — Radioastrononia na zona tranquila da Lua.
Secção VII — Limitações da potência das estações terrenas fora do eixo do feixe principal.

Artigo 30 — Serviço de radiodifusão e serviço de radiodifusão por satélite:

Secção I — Serviço de radiodifusão.
Secção II — Serviço de radiodifusão por satélite.

Artigo 31 — Serviço fixo:

Secção I — Generalidades.
Secção II — Frequências para a permuta internacional de informações da polícia.
Secção III — Frequências para a permuta internacional de informações meteorológicas sinópticas.

Artigo 32 — Serviço de amador e serviço de amador por satélite:

Secção I — Serviço de amador.
Secção II — Serviço de amador por satélite.

Artigo 33 — Serviço de frequências padrão e de sinais horários.
Artigo 34 — Estações experimentais.
Artigo 35 — Serviço de radiodeterminação e serviço de radiodeterminação por satélite:

Secção I — Disposições gerais.
Secção II — Disposições relativas ao serviço de radiodeterminação por satélite.
Secção III — Estações radiogoniométricas.
Secção IV — Estações de radiofarol.

Artigo 36 — Serviço de radioastronomia:

Secção I — Disposições gerais.
Secção II — Medidas a tomar no serviço de radioastronomia.
Secção III — Protecção do serviço de radioastronomia.

Capítulo IX — Comunicações de perigo e de segurança:

Artigo 37 — Disposições gerais.
Artigo 38 — Frequências para o perigo e a segurança:

Secção I — Frequências disponíveis.
Secção II — Protecção das frequências de perigo.
Secção III — Vigília nas frequências de perigo.

Artigo 39 — Comunicações de perigo:

Secção I — Generalidades.
Secção II — Sinal de perigo.
Secção III — Chamada de perigo.
Secção IV — Mensagens de perigo.
Secção V — Procedimentos.
Secção VI — Entendido de uma mensagem de perigo.
Secção VII — Tráfego de perigo.
Secção VIII — Transmissão de uma mensagem de perigo por uma estação que não se encontra em perigo.

Artigo 40 — Transmissões de urgência e de segurança e transportes sanitários:

Secção I — Sinal e mensagens de urgência.
Secção II — Transportes sanitários.
Secção III — Sinal e mensagens de segurança.

Artigo 41 — Sinais de alarme e de prevenção:

Secção I — Sinais de radiobalizas de localização de sinistros.
Secção II — Sinais de alarme radiotelegráfico e radiotelefónico.
Secção III — Chamada selectiva a todos os navios.
Secção IV — Sinal de aviso à navegação.

Artigo 42 — Serviços especiais relativos à segurança:

Secção I — Mensagens meteorológicas.
Secção II — Avisos à navegação marítima.
Secção III — Pareceres médicos.

Capítulo X — Serviço móvel aeronáutico:

Artigo 43 — Autoridade da pessoa responsável pelas estações móveis no serviço móvel aeronáutico.
Artigo 44 — Certificados dos operadores das estações de aeronave:

Secção I — Disposições gerais.
Secção II — Classes e categorias de certificados.
Secção III — Condições de obtenção de certificados de operador.

Artigo 45 — Pessoal das estações aeronáuticas.
Artigo 46 — Inspecção das estações de aeronave.
Artigo 47 — Horários das estações do serviço móvel aeronáutico:

Secção I — Generalidades.
Secção II — Estações aeronáuticas.
Secção III — Estações de aeronave.

Artigo 48 — Condições de funcionamento do serviço móvel aeronáutico:

Secção I — Generalidades.
Secção II — Comunicações com estações do serviço móvel marítimo e do serviço móvel marítimo por satélite.

Artigo 49 — Condições a que devem satisfazer as estações móveis do serviço móvel aeronáutico.
Artigo 50 — Disposições especiais relativas à utilização das frequências no serviço móvel aeronáutico.
Artigo 51 — Ordem de prioridade das comunicações no serviço móvel aeronáutico.
Artigo 52 — Procedimento geral radiotelegráfico no serviço móvel aeronáutico:

Secção I — Disposições gerais.
Secção II — Chamadas.
Secção III — Operações preliminares.
Secção IV — Fórmula da chamada, resposta à chamada e sinais preparatórios do tráfego.
Secção V — Escoamento do tráfego.
Secção VI — Fim do tráfego e do trabalho.
Secção VII — Orientação do trabalho.
Secção VIII — Ensaios.

Artigo 53 — Procedimento radiotelefónico no serviço móvel aeronaútico — Chamadas.

Capítulo XI — Serviço móvel marítimo e móvel marítimo por satélite:

Artigo 54 — Autoridade do comandante.
Artigo 55 — Certificados dos operadores das estações de navio e das estações terrenas de navio:

Secção I — Disposições gerais.
Secção II — Categorias de certificados para os operadores de estações de navio.
Secção III — Condições de obtenção de certificados de operador.
Secção IV — Estágios profissionais.

Artigo 56 — Pessoal das estações do serviço móvel marítimo:

Secção I — Pessoal das estações costeiras.
Secção II — Classe e número mínimo de operadores nas estações a bordo de navios.

Artigo 57 — Inspecção das estações de navio e das estações terrenas de navio.
Artigo 58 — Horário das estações do serviço móvel marítimo:

Secção I — Generalidades.
Secção II — Estações costeiras.
Secção III — Estações de navio.

Artigo 59 — Condições a satisfazer no serviço móvel marítimo e no serviço móvel marítimo por satélite:

Secção I — Serviço móvel marítimo.
Secção II — Condições a satisfazer pelas estações terrenas de navio.
Secção III — Comunicações de aeronaves com estações do serviço móvel marítimo e do serviço móvel marítimo por satélite.

Artigo 60 — Disposições especiais relativas à utilização das frequências no serviço móvel marítimo.

Secção I — Disposições gerais.
Secção II — Emprego das frequências em radiotelegrafia.
Secção III — Utilização das frequências em telegrafia de faixa estreita com impressão directa.
Secção IV — Utilização das frequências em radiotelefonia.

Artigo 61 — Ordem de prioridade das comunicações no serviço móvel marítimo e no serviço móvel marítimo por satélite.
Artigo 62 — Procedimento relativo à chamada selectiva no serviço móvel marítimo:

Secção I — Generalidades.

Secção II — Sistema sequencial a uma frequência.
Secção III — Sistema de chamada selectiva numérica.

Artigo 63 — Procedimento geral radiotelegráfico no serviço marítimo:

Secção I — Disposições gerais.
Secção II — Operações preliminares
Secção III — Chamadas em radiotelegrafia.
Secção IV — Método de chamada, resposta à chamada e sinais preparatórios do tráfego.
Secção V — Escoamento do tráfego.
Secção VI — Fim do tráfego e do trabalho.
Secção VII — Direcção do trabalho.
Secção VIII — Ensaios.

Artigo 64 — Procedimentos gerais aplicáveis à telegrafia com impressão directa de faixa estreita no serviço móvel marítimo:

Secção I — Generalidades.
Secção II — Procedimentos aplicáveis à exploração manual.
Secção III — Procedimentos aplicáveis à exploração automática.
Secção IV — Forma das mensagens.
Secção V — Procedimentos aplicáveis à exploração com «correcção de erros sem circuito de retorno».

Artigo 65 — Procedimento geral radiotelefónico no serviço móvel marítimo:

Secção I — Disposições gerais.
Secção II — Operações preliminares.
Secção III — Chamadas em radiotelefonia.
Secção IV — Método de chamada, resposta à chamada e sinais prepatórios do tráfego.
Secção V — Escoamento do tráfego.
Secção VI — Duração e orientação do trabalho.
Secção VIII — Ensaios.

Artigo 66 — Correspondência pública no serviço móvel marítimo e no serviço móvel marítimo por satélite:

Secção I — Generalidades.
Secção II — Autoridade responsável pela contabilidade.
Secção III — Contabilidade.
Secção IV — Pagamento dos saldos.
Secção V — Arquivos.

Capítulo XII — Serviço móvel terrestere.

Artigo 67 — Condições a que devem satisfazer as estações móveis do serviço móvel terrestre.
Artigo 68 — Procedimentos gerais aplicáveis à radiotelefonia no serviço móvel terrestre — Chamadas.

Capítulo XIII:

Artigo 69 — Entrada em vigor do Regulamento das Radiocomunicações.

APÊNDICES

1 — (V. o artigo 12):

Secção A — Características fundamentais a fornecer no caso de uma notificação nos termos dos n.os **1214** a **1217** do Regulamento das Radiocomunicações.
Secção B — Características fundamentais a fornecer no caso de uma notificação nos termos do n.º **1219** do Regulamento das Radiocomunicações.
Secção C — Características fundamentais a fornecer no caso de uma notificação nos termos do n.os **1223** a **1227** do Regulamento das Radiocomunicações.
Secção D — Informações a comunicar para qualquer notificação nos termos do n.º **1218** do Regulamento das Radiocomunicações.
Secção E — Modelo de ficha de notificação.
Secção F — Instruções gerais.

2 — (V. o artigo 17).
3 — Fichas de notificação relativas às estações de radiocomunicação espacial e de radioastronomia:

Secção A — Instruções gerais.
Secção B — Características fundamentais a fornecer no caso da notificação de uma frequência de emissão de uma estação terrena.
Secção C — Características fundamentais a fornecer no caso da notificação de uma frequência de recepção de uma estação terrena.
Secção D — Características fundamentais a fornecer no caso da notificação de uma frequência de emissão de estações espaciais.
Secção E — Características fundamentais a fornecer no caso da notificação de uma frequência de recepção de estações espaciais.
Secção F — Características fundamentais a fornecer no caso da notificação de uma frequência de recepção de estações de radioastronomia.
Secção G — Modelos de ficha de notificação (estação terrena).
Secção H — Modelos de ficha de notificação (estação espacial).

4 — Informações a fornecer para a publicação antecipada relativa a uma rede de satélite:

Secção A — Instruções gerais.
Secção B — Características gerais a fornecer para uma rede de satélite.
Secção C — Características da rede de satélite para o sentido «Terra para espaço».

Secção D — Características da rede de satélite no sentido «espaço para Terra».
Secção E — Características a fornecer para as ligações espaço-espaço.
Secção F — Informações suplementares (se disponíveis).

5 — Informações a fornecer em conformidade com as disposições dos n.os **1682** a **1684**.
6 — Características adicionais para a classificação das emissões. Determinação das larguras de faixa necessárias, exemplos de cálculo da largura de faixa necessária e exemplos conexos de designações das emissões.
7 — Quadro das tolerâncias de frequência dos emissores.
8 — Quadro dos níveis de potência máximos tolerados das radiações não essenciais.
9 — Documentos de serviço.
10 — Notações utilizadas nos documentos de serviço.
11 — Documentos de que devem estar providas as estações de navio e as estações de aeronave.
12 — Horas de serviço das estações de navio classificadas na 2.ª ou na 3.ª categoria.
13 — Abreviaturas e sinais diversos a empregar nas comunicações radiotelegráficas, com excepção das do serviço móvel marítimo.
14 — Abreviaturas e sinais diversos a utilizar nas radiocomunicações do serviço móvel marítimo.
15 — Código SINPO e SINPFEMO.
16 — Vias radiotelefónicas, nas faixas do serviço móvel compreendidas entre 4000 kHz e 23 000 kHz.
17 — Características técnicas dos emissores de faixa lateral única utilizados no serviço móvel marítimo para a radiotelefonia nas faixas compreendidas entre 1606,5 kHz (1605 kHz Região 2) e 4000 kHz e 23 000 kHz.
18 — Quadro das frequências de emissão para as estações do serviço móvel marítimo na faixa de 156-174 MHz.
19 — Características técnicas dos emissores e dos receptores utilizados no serviço móvel marítimo na faixa de 156-174 MHz.
20 — Características dos aparelhos utilizados para as comunicações de bordo nas faixas de frequências compreendidas entre 450 e 470 MHz.
21 — Relatórios sobre as observações de fiscalização internacional das emissões.
22 — Relatório sobre uma irregularidade ou uma infracção à Convenção ou ao Regulamento das Radiocomunicações.
23 — Relatório de interferência prejudicial.
24 — Quadro de soletração das letras e dos algarismos.
25 Mar2 — Plano de adjudicação de frequências às estações costeiras radiotelefónicas que funcionam nas faixas exclusivas do serviço móvel marítimo entre 4000 kHz e 23 000 kHz.
26 — Plano de adjudicação de frequências para o serviço móvel aeronáutico e informações correspondentes.
27 — Plano de adjudicação de frequências para o serviço móvel aeronáutico (R) e informações correspondentes entre 2850 kHz e 17 970 kHz.
27 Aer2 — Plano de adjudicação de frequências para o serviço móvel aeronáutico (R) e informações correspondentes entre 2850 kHz e 22 000 kHz.
28 — Método de determinação da zona de coordenação de uma estação terrena nas faixas de frequências compreendidas entre 1 GHz e 40 GHz partilhadas entre serviços de radiocomunicação espacial e de radiocomunicação de Terra.
29 — Método de cálculo para determinar se é necessária coordenação entre redes de satélite geostacionário que partilham as mesmas faixas de frequências.
30 — Disposições aplicáveis a todos os serviços e plano associado relativo ao serviço de radiodifusão por satélite nas faixas de frequências de 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região).
31 — Quadro das frequências a utilizar nas faixas atribuídas exclusivamente ao serviço móvel marítimo entre 4MHz e 27,5 MHz.
32 — Disposição das vias a utilizar pelos sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados nas faixas do serviço móvel marítimo compreendidas entre 4000 kHz e 23 000 kHz (frequências emparelhadas).
33 — Disposição das vias a utilizar pelos sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados nas faixas do serviço móvel marítimo compreendidas entre 4000 kHz e 27 500 kHz (frequências não emparelhadas).
34 — Quadro das frequências de chamada a consignar às estações de navio para a telegrafia morse de classe A1A, com velocidades de modulação que não excedam 40 bauds.
35 — Quadro das frequências de trabalho, em kHz, a consignar às estações de navio para a telegrafia morse de classe A1A, com velocidades de modulação que não excedam 40 bauds.
36 — Aparelhos automáticos destinados à recepção dos sinais de alarme radiotelegráfico e radiotelefónico.
37 — Características técnicas das radiobalizas de localização de sinistros que funcionam na frequência portadora de 2182 kHz.
38 — Aparelhos de faixa estreita de telegrafia com impressão directa.
39 — Sistema de chamadas selectiva a utilizar no serviço móvel marítimo internacional.
40 — Sistemas de compressores e de expansores acoplados.
41 — Procedimento para obtenção dos azimutes radiogoniométricos e das posições.
42 — Quadro de atribuição das séries internacionais de indicativos de chamada.
43 — Identidades no serviço móvel marítimo.
44 — Números de chamada selectiva das estações de navio e números das estações costeiras.

PROTOCOLO FINAL (os algarismos entre parênteses indicam a ordem por que estão dispostas as declarações no Protocolo final):

Afeganistão (República Democrática do) (11).
Alto Volta (República do) (67).
Alemanha (República Federal da) (32, 35 e 75).
Angola (República Popular de) (44).
Arábia Saudita (Reino da) (4, 36 e 74).
Argélia (República Argelina Democrática e Popular) (4 e 74).
Argentina (República da) (45).
Austrália (75).
Áustria (33, 43 e 75).
Bahrein (Estado de) (4 e 74).
Bangladesh (República Popular do) (4).
Bélgica (5, 32, 73 e 75).
Benin (República Popular de) (6).
Bielorrússia (República Socialista Soviética da) (34).
Brasil (República Federativa do) (29).
Camarões (República Unida dos) (61).
Canadá (19 e 75).
Centro Africana (República) (56).
Chade (República do) (3).
Chile (7 e 21).

China (República Popular da) (20).
Chipre (República de) (36).
Cidade do Vaticano (Estado da) (27).
Colômbia (República da) (40, 41 e 79).
Congo (República Popular do) (40, 53 e 79).
Coreia (República da) (37).
Costa do Marfim (República da) (24).
Costa Rica (65).
Cuba (8, 9 e 83).
Dinamarca (32, 33 e 75).
Emiratos Árabes Unidos (4 e 74).
Equador (40, 66 e 79).
Espanha (33 e 66).
Estados Unidos da América (32, 36, 38, 39, 72 e 75).
Filipinas (República das) (64).
Finlândia (33 e 75).
França (28, 33, 73 e 75).
Gabonesa (República) (40 e 79).
Ghana (57).
Grécia (14, 32, 36 e 75).
Guatemala (República da) (2).
Guiné (República Popular Revolucionária da) (54).
Honduras (República das) (1).
Iémene (República Democrática Popular do) (4, 46 e 74).
Índia (República da) (22).
Indonésia (República da) (42).
Irão (República Islâmica do) (4, 10, 25 e 70).
Iraque (República do) (4, 47 e 74).
Irlanda (48 e 75).
Islândia (32).
Israel (Estado de) (30).
Itália (27, 32 e 75).
Japão (16, 75 e 81).
Jordânia (Reino Hachemita da) (4, 68 e 74).
Jugoslávia (República Socialista Federativa da) (14).
Koweit (Estado do) (4 e 74).
Líbano (4, 68 e 74).
Libéria (República da) (59).
Líbia (Jamahiriya Árabe Líbia Popular Socialista) (4 e 74).
Listenstaina (Principado de) (28, 33 e 75).
Luxemburgo (32, 73 e 75).
Mali (República do) (71).
Marrocos (Reino de) (4 e 74).
Maurícia (62).
Maurítania (República Islâmica da) (12).
México (23).
Moçambique (República Popular de) (50).
Níger (República do) (52).
Nigéria (República Federal da) (17).
Noruega (32, 33 e 75).
Nova Zelândia (75).
Oman (Sultanato de) (4 e 74).
Papuásia-Nova Guiné (75 e 80).
Países Baixos (Reino dos) (32, 73 e 75).
Paquistão (República Islâmica do) (4 e 13).
Portugal (27, 32, 33 e 75).
Qatar (Estado de) (4 e 74).
Quénia (República do) (40, 69 e 79).
Reino Unido da Grã-Bretanha e Irlanda do Norte (32, 36, 48, 75, 76, 77 e 78).
República Árabe Síria (4, 47, 68 e 74).
República Socialista Soviética da Ucrânia (34).
Roménia (República Socialista da) (58).
Singapura (República de) (63).
Somália (República Democrática da) (4, 40, 74, 79 e 82).
Sri Lanka (República Socialista Democrática de) (36 e 55).
Sudão (República Democrática do) (4 e 74).
Suécia (33 e 75).
Suíça (Confederação) (28, 33, 73 e 75).
Tailândia (60).
Tanzânia (República Unida da) (49).
Tunísia (4).
Turquia (27, 31 e 32).
Uganda (República da) (40 e 79).
União das Repúblicas Socialistas Soviéticas (34).
Uruguai (República Oriental do) (15).
Venezuela (República da) (26).
Zaire (República do) (18, 40 e 79).
Zâmbia (República da) (36 e 51).

RESOLUÇÕES (*)

N.º 1 — Notificação das consignações de frequências.
N.º 2 — Utilização equitativa por todos os países, com igualdade de direitos, da órbita dos satélites geostacionários e das faixas de frequência atribuídas aos serviços de radiocomunicação espacial.
N.º 3 — Utilização da órbita dos satélites geostacionários e planificação dos serviços espaciais que utilizam essa órbita.
N.º 4 — Prazo de validade das consignações de frequência às estações espaciais que utilizam a órbita dos satélites geostacionários.
N.º 5 — Cooperação técnica com países em desenvolvimento no domínio dos estudos de propagação nas regiões tropicais.
N.º 6 — Preparação de um manual destinado a explicar e ilustar os procedimentos do Regulamento das Radiocomunicações.
N.º 7 — Desenvolvimento de uma gestão nacional das frequências radioeléctricas.
N.º 8 — Aplicação das modificações de atribuições nas faixas compreendidas entre 4000 kHz e 27 500 kHz.
N.º 9 — Revisão de certas partes do Ficheiro de Referência Internacional das Frequências nas faixas de frequências atribuídas ao serviço fixo compreendidas entre 3000 kHz e 27 500 kHz.
N.º 10 — Utilização de ligações radiotelegráficas e radiotelefónicas pelas organizações da Cruz Vermelha, do Crescente Vermelho e do Leão e Sol Vermelho.
N.º 11 — Utilização das radiocomunicações para a segurança dos navios e das aeronaves dos Estados não envolvidos num conflito armado.
N.º 12 — Novas regras de formação dos indicativos de chamada.
N.º 13 — Formação dos indicativos de chamada e atribuição de novas séries internacionais.
N.º 14 — Transferência de tecnologia.
N.º 15 — Cooperação internacional e assistência técnica no domínio das radiocomunicações espaciais.
N.º 16 — Papel das telecomunicações no desenvolvimento rural integrado.
N.º 17 — Determinação da estrutura das comissões que uma conferência administrativa das radiocomunicações possa criar em função da sua agenda.
N.º 30 — Revisão de inscrições do Ficheiro de Referência Internacional das Frequências, a pedido de conferências anteriores.
N.º 31 — Aplicação de certas disposições dos Actos Finais da Conferência Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) para ter em conta as modificações introduzidas pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) no quadro de atribuição das faixas de frequências para a Região 2 na faixa 11,7-12,7 GHz.
N.º 32 — Utilização das consignações de frequência às estações de radiocomunicação de Terra e de radiocomunicação espacial nas faixas de 11,7--12,2 GHz na Região 3 e 11,7-12,5 GHz na Região 1.
N.º 33 — Entrada em serviço de estações espaciais do serviço de radiodifusão por satélite antes da entrada em vigor de acordos e de planos associados para o serviço de radiodifusão por satélite.
N.º 34 — Estabelecimento de serviços de radiodifusão por satélite na faixa de 12,5-12,75 GHz (Região 3) e à partilha com os serviços espaciais e de Terra (Regiões 1, 2 e 3).
N.º 35 — Procedimento a seguir para pôr termo a um desacordo acerca das normas técnicas ou das regras de procedimento da Comissão Internacional de Registo de Frequências.
N.º 36 — Estabelecimento, pela Comissão Internacional do Registo de Frequências, de documentação explicativa acerca da aplicação do novo método de designação das emissões nos procedimentos de notificação e à revisão, que daí resulta, do Ficheiro de Referência Internacional das Frequências.
N.º 37 — Introdução e desenvolvimento da utilização das técnicas informáticas para facilitar a gestão do espectro radioeléctrico pelas administrações.
N.º 38 — Reconsignação de frequências às estações dos serviços fixo e móvel que funcionam nas faixas atribuídas aos serviços de radiolocalização e de amador na Região 1.
N.º 60 — Informações sobre a propagação das ondas radioeléctricas utilizadas para determinar a zona de coordenação.
N.º 61 — Divisão do Mundo em zonas climáticas para o cálculo das características de propagação.
N.º 62 — Utilização experimental das ondas radioeléctricas pelos satélites de pesquisa ionosférica.
N.º 63 — Protecção dos serviços de radiocomunicação contra as interferências causadas pela radiação dos aparelhos industriais, científicos e médicos.
N.º 64 — Estudo pela CCIR da protecção dos equipamentos radioeléctricos contra o raio.
N.º 65 — Difusão de informações actualizadas sobre os pareceres da CCIR mencionados no Regulamento das Radiocomunicações.
N.º 66 — Divisão do Mundo em regiões, tendo em vista a atribuição das faixas de frequências.
N.º 67 — Aperfeiçoamento da concepção e da utilização dos materiais radioeléctricos.
N.º 68 — Nova definição de certos termos contidos no anexo 2 à Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973) e aplicáveis ao Regulamento das Radiocomunicações.
N.º 100 — Coordenação, notificação e inscrição no Ficheiro de Referência Internacional das Frequências das consignações a estações do serviço fixo por satélite, em relação às estações do serviço de radiodifusão por satélite na Região 2.
N.º 101 — Conclusão de acordos e preparação de planos associados para ligações de conexão com estações espaciais do serviço de radiodifusão por satélite a funcionar na faixa dos 12 GHz, em conformidade com o plano adoptado pela Conferência Administrativa das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) para as Regiões 1 e 3.
N.º 102 — Coordenação entre administrações das características técnicas das ligações de conexão com as estações espaciais do serviço de radiodifusão por satélite da faixa de 11,7-12,5 GHz (Região 1) e 11,7-12,2 GHz (Região 3) para o período compreendido entre a entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) e a entrada em vigor dos actos finais da futura conferência de planificação das ligações de conexão com tais estações espaciais.

(*) As resoluções e recomendações estão agrupadas como segue:

1-99: Generalidades:

Generalidades — 1-29;
Procedimentos — 30-59;
Questões técnicas — 60-99.

100-199: Serviço fixo e serviço fixo por satélite;
200-299: Serviço móvel, Serviço móvel terrestre e serviço móvel por satélite;
300-399: Serviço móvel marítimo e serviço móvel marítimo por satélite;
400-499: Serviço móvel aeronáutico e serviço móvel aeronáutico por satélite;
500-599: Serviço de radiodifusão e serviço de radiodifusão por satélite;
600-699: Outros serviços:

Serviço de radionavegação e serviço de radiolocalização — 600-619;
Serviço de meteorologia — 620-639;
Serviço de amador — 640-699.

700-799: Textos relativos a mais de um serviço.

N.º 103 — Melhoria da assistência aos países em desenvolvimento, com vista a facilitar o acesso do seu serviço fixo às faixas das ondas decamétricas e a assegurar a protecção das suas consignações contra as interferências prejudiciais.
N.º 200 — Utilização das classes de emissão R3E e J3E para fins de perigo e de segurança na frequência portadora de 2182 kHz.
N.º 201 — Disposições de exploração, taxação e contabilidade da correspondência pública nos serviços móveis.
N.º 202 — Convocação de uma conferência administrativa mundial das radiocomunicações para os serviços móveis.
N.º 300 — Utilização e notificação das frequências emparelhadas reservadas aos sistemas de telegrafia de faixas estreitas com impressão directa e de transmissão de dados que funcionam nas faixas de ondas decamétricas atribuídas ao serviço móvel marítimo.
N.º 301 — Notificação das frequências não emparelhadas utilizadas pelas estações de navio para os sistemas de telegrafia de faixa estreita com impressão directa e de transmissão de dados.
N.º 302 — Tratamento pela IFRB das fichas de notificação de consignação de frequência às estações oceanográficas.
N.º 303 — Frequências navio-navio nas faixas compreendidas entre 1605 kHz e 3600 kHz na Região 1.
N.º 304 — Adopção da nova disposição das vias utilizadas para a telegrafia Morse da classe A1A nas faixas atribuídas ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz.
N.º 305 — Utilização das classes de emissão R3E e J3E nas frequências portadoras de 4125 kHz e 6215,5 kHz utilizadas além da frequência portadora de 2182 kHz para fins de perigo e de segurança.
N.º 306 — Emprego da técnica da faixa lateral única nas faixas do serviço móvel marítimo radiotelefónico compreendidas entre 1605 kHz e 4000 kHz.
N.º 307 — Passagem à técnica da faixa lateral única das estações radiotelefónicas do serviço móvel marítimo nas faixas compreendidas entre 1605 kHz e 4000 kHz.
N.º 308 — Espaçamento das frequências atribuídas ao serviço móvel marítimo na faixa de 156-174 MHz.
N.º 309 — Utilização não autorizada das frequências atribuídas ao serviço móvel marítimo.
N.º 310 — Frequências a prever com vista à instalação e à futura entrada em serviço de sistemas de telemedida, de telecomando e de permuta de dados para os movimentos dos navios.
N.º 311 — Introdução de um sistema de chamada selectiva numérica para fazer face às necessidades do serviço móvel marítimo.
N.º 312 — Introdução de novos procedimentos de chamada em telegrafia morse A1A em ondas decamétricas.
N.º 313 — Introdução de um novo sistema de identificação das estações do serviço móvel marítimo e do serviço móvel marítimo por satélite (identidades do serviço móvel marítimo).
N.º 314 — Estabelecimento de um sistema mundial coordenado para a reunião de dados relativos à oceanografia.
N.º 315 — Supressão eventual das taxas de estação móvel para a correspondência pública no serviço móvel marítimo.
N.º 316 — Cooperação técnica com os países em desenvolvimento no domínio das telecomunicações marítimas.
N.º 400 — Tratamento das fichas de notificação referentes às consignações de frequência a estações aeronáuticas nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz.
N.º 401 — Implementação do plano de adjudicação de frequências nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz.
N.º 402 — Implementação do novo arranjo aplicável às faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz.
N.º 403 — Utilização das frequências de 3023 kHz e 5680 kHz comuns aos serviços móveis aeronáuticos (R) e (OR).
N.º 404 — Implementação da nova disposição das faixas de frequências atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 21 924 kHz e 22 000 kHz.
N.º 405 — Utilização das frequências do serviço móvel aeronáutico (R).
N.º 406 — Utilização das faixas de frequências superiores às faixas de ondas decamétricas para as comunicações e a difusão de informações meteorológicas no serviço móvel aeronáutico (R) e no serviço móvel aeronáutico por satélite (R).
N.º 407 — Utilização não autorizada de frequências das faixas atribuídas ao serviço móvel aeronáutico (R).
N.º 500 — Modificação das frequências portadoras das estações de radiodifusão em ondas quilométricas na Região 1.
N.º 501 — Exame pela IFRB das fichas de notificação referentes a estações do serviço de radiodifusão na Região 2 que funcionam na faixa de 535-1605 kHz durante o período que precede a entrada em vigor dos Actos Finais da Conferência Administrativa Regional de Radiodifusão em Ondas Hectométricas (Região 2).
N.º 502 — Período compreendido entre a data de entrada em vigor dos Actos Finais da Conferência Administrativa Mundial de Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) e a data em que as disposições e o plano associado adoptados por essa Conferência serão incluídos, em anexo, no Regulamento das Radiocomunicações.
N.º 503 — Coordenação, notificação e inscrição no ficheiro de referência das consignações de frequência às estações do serviço de radiodifusão por satélite da Região 2.
N.º 504 — Actos Finais da Conferência Administrativa Mundial de Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) no que respeita à Região 2.
N.º 505 — Serviço de radiodifusão por satélite (radiodifusão sonora) na gama de frequências de 0,5 GHz a 2 GHz.
N.º 506 — Utilização da órbita dos satélites geostacionários, com exclusão de qualquer outra órbita, pelas estações espaciais que funcionam nas faixas de frequência dos 12 GHz atribuídas ao serviço de radiodifusão por satélite.
N.º 507 — Estabelecimento de acordos e de planos associados para o serviço de radiodifusão por satélite.
N.º 508 — Convocação de uma conferência administrativa mundial das radiocomunicações para a planificação das faixas de ondas decamétricas atribuídas ao serviço de radiodifusão.
N.º 509 — Convocação de uma conferência regional de radiodifusão encarregada de reexaminar e de rever as disposições dos Actos Finais da Conferência Africana de Radiodifusão em Ondas Métricas e Decamétricas (Genebra, 1963).
N.º 510 — Convocação de uma conferência de planificação de radiodifusão sonora na faixa 97,5-108 MHz para a Região 1 e certos países interessados da Região 3.
N.º 600 — Utilização, para o serviço de radionavegação, das faixas de frequências de 2900-3100 MHz, 5470-5650 MHz, 9200-9300 MHz, 9300-9500 MHz e 9500-9800 MHz.
N.º 601 — Normas e pareceres referentes às radiobalizas de localização de sinistros que funcionam nas frequências de 121,5 MHz e 243 MHz.
N.º 640 — Utilização internacional, em caso de catástrofe natural, das radiocomunicações nas faixas de frequências atribuídas ao serviço amador.
N.º 641 — Utilização das faixas de frequências de 7000-7100 kHz.
N.º 642 — Entrada em serviço das estações terrenas do serviço amador por satélite.
N.º 700 — Partilha entre o serviço fixo por satélite nas Regiões 1 e 3 e o serviço de radiodifusão por satélite na Região 2, na faixa de 12,2-12,7 GHz.
N.º 701 — Convocação de uma conferência administrativa regional das radiocomunicações encarregada de estabelecer um plano pormenorizado para o serviço de radiodifusão por satélite na faixa 12 GHz e as ligações de conexão associadas na Região 2.
N.º 702 — Convocação de uma conferência administrativa regional das radiocomunicações encarregada de definir critérios de partilha para a utilização das faixas das ondas métricas e decimétricas atribuídas aos serviços fixo, de radiodifusão e móvel da Região 3.
N.º 703 — Métodos de cálculo e critérios de interferência recomendados pela CCIR no que respeita à partilha das faixas de frequências entre serviços de radiocomunicação espacial e serviços de radiocomunicação de Terra ou entre serviços de radiocomunicação espacial.

RECOMENDAÇÕES

N.º 1 — Utilização de sistemas de radiocomunicações espaciais no caso de catástrofes naturais, de epidemias e de outras situações críticas análogas.
N.º 2 — Exame, pelas conferências administrativas mundiais das radiocomunicações, do estado de ocupação do espectro das frequências no domínio das radiocomunicações espaciais.
N.º 3 — Transmissão de energia eléctrica por meio de frequências radioeléctricas a partir de um engenho espacial.
N.º 4 — Forma de melhorar o agrupamento das ligações das redes nacionais e internacionais de radiocomunicação que funcionam nas faixas compreendidas entre 4000 kHz e 27 500 kHz.
N.º 5 — Relativa aos meios a adoptar para reduzir a saturação da faixa 7 (3-30 MHz).
N.º 6 — Necessidades práticas dos países que têm necessidade de assistência especial.
N.º 7 — Adopção de modelos normalizados de licenças concedidas às estações de navio e às estações de aeronave.
N.º 8 — Identificação automática das estações.
N.º 9 — Medidas a tomar para impedir o funcionamento de estações de radiodifusão a bordo de navios ou de aeronaves fora dos limites dos territórios nacionais.
N.º 10 — Apresentação de propostas de modificação dos textos do Regulamento das Radiocomunicações.
N.º 11 — Numeração que figura na margem do Regulamento das Radiocomunicações.
N.º 12 — Convocação de futuras conferências administrativas das radiocomunicações para tratar de serviços específicos.
N.º 13 — Conferência administrativa mundial das radiocomunicações para uma revisão geral ou parcial do Regulamento das Radiocomunicações.
N.º 30 — Fiscalização internacional das emissões.
N.º 31 — Manual sobre a aplicação das técnicas informáticas na gestão do espectro radioeléctrico.
N.º 60 — Normas técnicas da IFRB.
N.º 61 — Normas técnicas necessárias para a avaliação das interferências prejudiciais nas faixas de frequências superiores a 28 MHz.
N.º 62 — Características adicionais de classificação das emissões e novos exemplos de designações completas de emissões tais como figuram no apêndice 6
N.º 63 — Apresentação de fórmulas e de exemplos para o cálculo das larguras de faixa necessárias.
N.º 64 — Relações de protecção e campos mínimos necessários.
N.º 65 — Técnicas que permitam elaborar novos esquemas de partilha e de utilização das faixas de frequências.
N.º 66 — Estudos sobre os níveis máximos tolerados de radiações não essenciais.
N.º 67 — Definiçao dos termos «zona de serviço» e «zona de cobertura».
N.º 68 — Estudos e previsão da propagação dos ruídos radioeléctricos.
N.º 69 — Tolerância de frequência dos emissores.
N.º 70 — Estudo das características técnicas do material.
N.º 71 — Normalização das características técnicas e de exploração dos materiais radioeléctricos.
N.º 72 — Terminologia.
N.º 73 — Emprego do termo «canal» do Regulamento das Radiocomunicações.
N.º 74 — Emprego do sistema internacional de unidades (SI).
N.º 100 — Faixas de frequências preferenciais para os sistemas que utilizam a propagação por difusão troposférica.
N.º 101 — Ligações de conexão no serviço de radiodifusão por satélite.
N.º 102 — Estudo dos métodos de modulação para os feixes hertzianos sob o ponto de vista da partilha das faixas de frequências com os sistemas do serviço fixo por satélite.
N.º 103 — Dispersão da energia da portadora nos sistemas do serviço fixo por satélite.
N.º 200 — Data de entrada em vigor da faixa de guarda de 10 kHz para a frequência de 500 kHz no serviço móvel (perigo e chamada).
N.º 201 — Tráfego de perigo, de urgência e de segurança.
N.º 202 — Melhoria da protecção, contra interferências prejudiciais, das frequências de perigo e de segurança e das que têm relação com o perigo e a segurança.
N.º 203 — Utilização futura das faixas de 2170-2194 kHz.
N.º 204 — Relativa à aplicação dos capítulos NX, NXI e NXII da Reestruturação do Regulamento das Radiocomunicações.
N.º 300 — Planificação da utilização das frequências pelo serviço móvel marítimo na faixa de 435-526,5 kHz na Região 1.
N.º 301 — Planificação da utilização das frequências nas faixas atribuídas ao serviço móvel marítimo entre 1606,5 kHz e 3400 kHz na Região 1.
N.º 302 — Melhor utilização das vias radiotelefónicas em ondas decamétricas pelas estações costeiras nas faixas de frequências atribuídas em exclusivo ao serviço móvel marítimo.
N.º 303 — Utilização das frequências portadoras de 4125 kHz e 6215,5 kHz além da frequência portadora de 2182 kHz, para fins de perigo e de segurança, bem como para a chamada e a resposta na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N.
N.º 304 — Frequências do apêndice 16 (secção B) ao Regulamento das Radiocomunicações destinadas a ser utilizadas em todo o Mundo pelos navios de todas as categorias assim como pelas estações costeiras.
N.º 305 — Utilização das vias 15 e 17 do apêndice 18 pelas estações de comunicações de bordo.
N.º 306 — Estabelecimento de uma escuta na frequência de 156,8 MHz pelas estações costeiras para fins de perigo..
N.º 307 — Escolha, nas faixas do serviço móvel marítimo compreendidas entre 1605 kHz e 3800 kHz, de uma frequência reservada às necessidades da segurança.
N.º 308 — Designação de frequências nas faixas de ondas hectométricas a utilizar em comum pelas estações costeiras radiotelefónicas para as comunicações com as estações de navio de nacionalidades diferentes das suas.
N.º 309 — Designação de uma frequências nas faixas de 435-495 kHz ou 505-526,5 kHz (525 kHz na Região 2) numa base mundial para a emissão pelas estações costeiras de boletins meteorológicos e de avisos à navegação, com destino aos navios, utilizando a telegrafia de faixa estreita com impressão directa.
N.º 310 — Sistema automático de radiocomunicações em ondas decimétricas para o serviço móvel marítimo.
N.º 311 — Utilização de um sinal de frequência acústica consecutivo ao sinal de alarme radiotelefónico emitido pelas estações costeiras.
N.º 312 — Estudos de interligação dos sistemas de radiocomunicações móveis marítimas com as redes telefónica e telegráfica internacionais.
N.º 313 — Disposições temporárias relativas aos aspectos técnicos e de exploração do serviço móvel marítimo por satélite.
N.º 400 — Passagem do plano actual ao novo plano de adjudicação de frequências nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz.
N.º 401 — Emprego eficaz das frequências do serviço móvel aeronáutico (R) designadas para utilização mundial.
N.º 402 — Cooperação com vista ao emprego eficaz das frequências do serviço móvel aeronáutico (R) designadas para utilização mundial.
N.º 403 — Desenvolvimento de técnicas que contribuirão para reduzir a saturação das faixas de ondas decamétricas atribuídas ao serviço móvel aeronáutico (R).
N.º 404 — Utilização da faixa de 136-137 MHz pelo serviço móvel aeronáutico (R).

N.º 405 — Estudo da utilização do serviço móvel aeronáutico (R) por satélite.
N.º 406 — Revisão do plano de adjudicação das frequências para o serviço móvel aeronáutico (OR).
N.º 407 — N.º 27/123 do apêndice 27 Aer2 (subdivisão da zona 5B).
N.º 500 — Elaboração da documentação técnica necesssária para a conferência administrativa mundial das radiocomunicações para a radiodifusão em ondas decamétricas.
N.º 501 — Estudo da introdução da técnica da faixa lateral única nas faixas de ondas decamétricas atribuídas ao serviço de radiodifusão para a preparação da conferência administrativa mundial das radiocomunicações para a radiodifusão em ondas decamétricas.
N.º 502 — Especificações dos receptores de televisão de preço módico.
N.º 503 — Radiodifusão em ondas decamétricas.
N.º 504 — Preparação de um plano de radiodifusão na faixa de 1605-1705 kHz na Região 2.
N.º 505 — Estudos de propagação na faixa de 12 GHz para o serviço de radiodifusão por satélite.
N.º 506 — Harmónicas da frequência fundamental das estações de radiodifusão por satélite.
N.º 507 — Radiações não essenciais no serviço de radiodifusão por satélite.
N.º 508 — Antenas de emissão do serviço de radiodifusão por satélite.
N.º 600 — Utilização da faixa de frequência de 9300-9500 MHz.
N.º 601 — Frequências a utilizar no serviço de radionavegação aeronáutica para um sistema destinado a evitar as colisões entre aeronaves.
N.º 602 — Radiofaróis marítimos.
N.º 603 — Disposições técnicas relativas aos radiofaróis marítimos na zona africana.
N.º 604 — Utilização futura e características das radiobalizas de localização de sinistros.
N.º 605 — Características técnicas e frequências dos equipamentos de resposta a bordo dos navios.
N.º 620 — Serviço dos auxiliares da meteorologia da faixa de 28-27,7 MHz.
N.º 700 — Utilização e partilha das faixas de frequências atribuídas às radiocomunicações espaciais.
N.º 701 — Utilização da faixa de frequências de 1330-1400 MHz pelo serviço de radioastronomia.
N.º 702 — Utilização das faixas de frequências de 1400-1727 MHz, 101-120 GHz e 197-220 GHz para a pesquisa de emissões intencionais de origem extraterrestre.
N.º 703 — Necessidade de fazer cessar o funcionamento das estações dos serviços fixo e móvel nas faixas de frequências de 149,9-150,05 MHz e 399,9-400,05 MHz atribuídas ao serviço de radionavegação por satélite.
N.º 704 — Compatibilidade entre o serviço de radiodifusão na faixa de 100-108 MHz e o serviço de radionavegação aeronáutica na faixa 108-117,975 MHz.
N.º 705 — Critérios a aplicar à partilha das frequências entre o serviço de radiodifusão por satélite e o serviço de radiodifusão de Terra na faixa de 620-790 MHz.
N.º 706 — Partilha das frequências entre, por um lado, o serviço de exploração da Terra por satélite (detectores passivos) e o serviço de pesquisa espacial (detectores passivos) e, por outro lado, os serviços fixo, móvel, excepto móvel aeronáutico, e fixo por satélite na faixa de 18,6-18,8 GHz.
N.º 707 — Utilização da faixa de frequências de 32-33 GHz, partilhada entre o serviço intersatélites e o serviço de radionavegação.
N.º 708 — Faixas de frequências partilhadas pelos serviços de radiocomunicação espacial entre si, bem como entre os serviços de radiocomunicação espacial e os serviços de radiocomunicação de Terra.
N.º 709 — Partilha das faixas de frequências entre o serviço móvel aeronáutico e o serviço intersatélites.
N.º 710 — Utilização de radiodetectores aerotransportados nas faixas de frequências pelo serviço intersatélites e o serviço de radiolocalização.
N.º 711 — Coordenação das estações terrenas.
N.º 712 — Interdependência entre a concepção dos receptores, o agrupamento dos canais e os critérios de partilha no serviço de radiodifusão por satélite.

ÍNDICE ANALÍTICO

Resoluções e recomendações

Este índice analítico compreende duas partes:

PARTE A — Resoluções;
PARTE B — Recomendações.

Cada parte contém duas secções:

Secção I — Lista das resoluções e recomendações por ordem numérica com indicação dos assuntos (palavras-chaves) enumerados na secção II. Os assuntos principais que figuram em tipo mais negro são os títulos sob os quais se encontrarão os textos explicativos das resoluções ou recomendações. Os que figuram em tipo normal remetem a um ou vários assuntos principais;
Secção II — Lista das resoluções/recomendações agrupadas por assuntos (palavras-chaves) por ordem alfabética.

PARTE A

Resoluções

Secção I

Assuntos do índice analítico (palavras-chave)

Resolução n.º 1 — **Notificação das consignações de frequência:**

Gestão das frequências;
Regulamento das Radiocomunicações.

Resolução n.º 2 — **Órbita dos satélites geostacionários — serviços espaciais:**

Ficheiro de Referência Internacional das Frequências (FRIF);
União Internacional das Telecomunicações (IFRB).

Resolução n.º 3 — **Órbita dos satélites geostacionários:**

Conferências administrativas;
União Internacional das Telecomunicações (CCIR, Conselho de Administração e IFRB).

Resolução n.º 4 — **Órbita dos satélites geostacionários:**

Conferências administrativas;
Ficheiro de Referência Internacional das Frequências (FRIF);
Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (conferências administrativas e IFRB).

Resolução n.º 5 — **Propagação — cooperação técnica:**

Organizações internacionais (UAPT, UPAT e URTNA);
União Internacional das Telecomunicações (CCIR, conferências administrativas, conselho de administração e secretário-geral).

Resolução n.º 6 — **Regulamento das Radiocomunicações:**

Gestão das frequências;
União Internacional das Telecomunicações (IFRB, e secretário-geral).

Resolução n.º 7 — **Gestão das frequências — cooperação técnica:**

Conferências administrativas;
União Internacional das Telecomunicações (CCIR, conferência de plenipotenciários, conselho de administração, IFRB e secretário-geral).

Resolução n.º 8 — **Atribuição das faixas de frequência — serviço fixo:**

Regulamento das Radiocomunicações;
Serviços móveis;
União Internacional das Telecomunicações (IFRB).

Resolução n.º 9 — **Serviço fixo:**

Ficheiro de Referência Internacional das Frequências (FRIF);
União Internacional das Telecomunicações (IFRB).

Resolução n.º 10 — **Operações/organizações de socorro:**

Atribuição de faixas de frequência.

Resolução n.º 11 — **Navios e aeronaves não participantes num conflito armado:**

Organizações internacionais (OACI e OMCI);
Serviço móvel aeronáutico (R);
Serviço móvel marítimo;
União Internacional das Telecomunicações (conferências administrativas, conselho de administração e secretário-geral).

Resolução n.º 12 — **Identificação das estações:**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (conferências administrativas e secretário-geral).

Resolução n.º 13 — **Identificação das estações:**

União Internacional das Telecomunicações (conferências administrativas e secretário-geral).

Resolução n.º 14 — **Cooperação técnica:**

Organizações internacionais (ONU);
União Internacional das Telecomunicações (conferências administrativas, conselho de administração e secretário-geral).

Resolução n.º 15 — **Serviços espaciais — cooperação técnica:**

União Internacional das Telecomunicações (conferências administrativas e conselho de administração).

Resolução n.º 16 — **Cooperação técnica:**

Organizações internacionais (ONU);
União Internacional das Telecomunicações (CCIR, CCITT, conferências administrativas, conselho de administração e secretário-geral).

Resolução n.º 17 — **Conferências administrativas:**

União Internacional das Telecomunicações (CCIR, conselho de administração, IFRB e secretário-geral).

Resolução n.º 30 — **Ficheiro de referência internacional das frequências (FRIF):**

União Internacional das Telecomunicações (IFRB).

Resolução n.º 31 — **Serviço de radiodifusão por satélite — serviço fixo por satélite:**

Ficheiro de referência internacional das frequências (FRIF);
Regulamento das Radiocomunicações;
Serviços de Terra;
Serviços móveis;
União Internacional das Telecomunicações (CCIR).

Resolução n.º 32 — **Serviços espaciais:**

Ficheiro de referência internacional das frequências (FRIF);
Serviços de Terra;
União Internacional das Telecomunicações (FRIF).

Resolução n.º 33 — **Serviço de radiodifusão por satélite:**

Ficheiro de referência internacional das frequências (FRIF);
Regulamento das Radiocomunicações;
Serviços de Terra;
Serviços espaciais;
União Internacional das Telecomunicações (IFRB).

Resolução n.º 34 — **Serviço de radiodifusão por satélite:**

Regulamento das Radiocomunicações;
Serviços de Terra;
Serviços espaciais;
União Internacional das Telecomunicações (CCIR).

Resolução n.º 35 — **Gestão das frequências:**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (CCIR e IFRB).

Resolução n.º 36 — **Emissões — Ficheiro de Referência Internacional das Frequências (FRIF):**

Gestão das frequências;
União Internacional das Telecomunicações (IFRB).

Resolução n.º 37 — **Gestão das frequências — Cooperação técnica:**

União Internacional das Telecomunicações (conselho de administração e secretário-geral).
Utilização das técnicas informáticas.

Resolução n.º 38 — **Serviço fixo:**

Serviços móveis;
Serviços de radiolocalização;
União Internacional das Telecomunicações (conferências administrativas e IFRB).

Resolução n.º 60 — **Propagação:**

Conferências administrativas;
União Internacional das Telecomunicações (CCIR, conferências administrativas, conselho de administração e secretário-geral).

Resolução n.º 61 — **Divisão do mundo — propagação:**

União Internacional das Telecomunicações (CCIR).

Resolução n.º 62 — **Ionosfera.**

Resolução n.º 63 — **Equipamento:**

Conferências administrativas;
Organizações internacionais (CEI e CISPR);
União Internacional das Telecomunicações (CCIR e conferências administrativas).

Resolução n.º 64 — **Equipamento:**

União Internacional das Telecomunicações (CCIR e CCITT).

Resolução n.º 65 — **Regulamento das Radiocomunicações:**

União Internacional das Telecomunicações (CCIR e secretário-geral).

Resolução n.º 66 — **Divisão do mundo — atribuição de faixas de frequências:**

União Internacional das Telecomunicações (CCIR e conselho de administração).

Resolução n.º 67 — **Equipamento:**

Resolução n.º 68 — **Conferências administrativas — terminologia;**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (CCIR, CCITT, conferências administrativas, conferências de plenipotenciários e secretário-geral).

Resolução n.º 100 — **Serviço fixo por satélite:**

Ficheiro de Referência Internacional das Frequências (FRIF);
Serviço de radiodifusão por satélite;
União Internacional das Telecomunicações (IFRB).

Resolução n.º 101 — **Serviço fixo por satélite:**

Conferências administrativas;
Ligações de conexão;
Serviço de radiodifusão por satélite;
União Internacional das Telecomunicações (CCIR e conselho de administração).

Resolução n.º 102 — **Serviço fixo por satélite:**

Ligações de conexão;
Serviço de radiodifusão por satélite;
União Internacional das Telecomunicações (IFRB).

Resolução n.º 103 — **Serviço fixo:**

Cooperação técnica;
Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (IFRB).

Resolução n.º 200 — **Perigo e segurança:**

Organizações internacionais;
Serviço móvel marítimo;
Serviços móveis;
União Internacional das Telecomunicações (CCIR, conferências administrativas e secretário-geral).

Resolução n.º 201 — **Correspondência pública:**

Serviços móvel marítimo;
Serviços móveis;
União Internacional das Telecomunicações (CCITT e conferências administrativas).

Resolução n.º 202 — **Serviços móveis:**

Conferências administrativas;
União Internacional das Telecomunicações (CCIR, conselho de administração e IFRB).

Resolução n.º 300 — **Serviço móvel marítimo:**

Conferências administrativas;
Ficheiro de Referência Internacional das Frequências (FRIF);
União Internacional das Telecomunicações (conferências administrativas e IFRB).

Resolução n.º 301 — **Serviço móvel marítimo:**

Ficheiro de Referência Internacional das Frequências (FRIF);
Conferências administrativas;
União Internacional das Telecomunicações (IFRB).

Resolução n.º 302 — **Serviço móvel marítimo:**

Ficheiro de Referência Internacional das Frequências (FRIF);
Oceanografia;
União Internacional das Telecomunicações (conferências administrativas e IFRB).

Resolução n.º 303 — **Serviço móvel marítimo:**

Frequências navio-navio;
União Internacional das Telecomunicações (conferências administrativas e IFRB).

Resolução n.º 304 — **Serviço móvel marítimo:**

Disposição das vias;
União Internacional das Telecomunicações (conferências administrativas).

Resolução n.º 305 — **Perigo e segurança:**

Conferências administrativas;
Organizações internacionais (OMCI);
Serviço móvel marítimo;
Serviços móveis;
União Internacional das Telecomunicações (conferências administrativas e secretário-geral).

Resolução n.º 306 — **Serviço móvel marítimo:**

Emissões;
Técnicas de faixa lateral única;
União Internacional das Telecomunicações (conferências administrativas).

Resolução n.º 307 — **Serviço móvel marítimo:**

Emissões;
Técnicas da faixa lateral única;
União Internacional das Telecomunicações (conferências administrativas).

Resolução n.º 308 — **Serviço móvel marítimo:**

Disposições das vias;
União Internacional das Telecomunicações (conferências administrativas).

Resolução n.º 703 — **Serviços espaciais:**

Serviços de Terra,
União Internacional das Telecomunicaçõe (CCIR, IFRB e secretário-geral).

SECÇÃO II

Atribuição de faixas de frequências:

Eliminação dos serviços fixo e móvel de certas faixas de frequências compreendidas entre 4000 kHz e 27 500 kHz e procedimento de transição para a escolha e a aprovação de consignações de substituição (Resolução n.º 8);
Revisão da divisão do Mundo em regiões para fins da atribuição de faixas de frequências (Resolução n.º 66).

Comunicações em caso de catástrofe natural:

V. *Serviço de amador* (Resolução n.º 640).

Conferências administrativas:

Conferências de plenipotenciários, medidas a tomar pelas (Resoluções n.ºs 7 e 68).
Determinação da estrutura das comissões que poderão ser constituídas em função da agenda (Resolução n.º 17);
Outras resoluções referentes às conferências:

V. *Perigo e segurança* (Resolução n.º 305);
V. *Equipamento* (Resolução n.º 63);
V. *Órbita dos satélites geostacionários* (Resolução n.º 3 4);
V. *Propagação* (Resolução n.º 60);
V. *Serviço de radiodifusão* (Resoluções n.ºs 508, 509, 510 e 702);
V. *Serviço de radiodifusão por satélite* (Resoluções n.ºs 504, 505, 507, 700 e 701);
V. *Serviço fixo por satélite* (Resolução n.º 101);
V. *Serviço móvel marítimo* (Resoluções n.ºs 300, 301, 310 e 314);
V. *Serviços de radiodeterminação* (Resolução n.º 600);
V. *Serviços móveis* (Resolução n.º 202);

Cooperação e assistência técnica:

Assistência no domínio das radiocomunicações espaciais (Resolução n.º 15);
Assistência em matéria de utilização das técnicas informáticas para a gestão do espectro radioeléctrico (Resolução n.º 37);
Cooperação no domínio das telecomunicações marítimas (Resolução n.º 316);
Estudos de propagação em regiões tropicais (Resolução n.º 5);
Introdução de uma gestão nacional das frequências radioeléctricas (Resolução n.º 7);
Papel das telecomunicações no desenvolvimento rural integrado (Resolução n.º 16);
Transferência de tecnologia no domínio das telecomunicações (Resolução n.º 14);
V. também *Serviço fixo* (Resolução n.º 103).

Correspondência pública:

Disposições de exploração na taxação e na compatibilidade da correspondência pública no serviço móvel (Resolução n.º 201);
V. também *Serviço móvel marítimo* (Resolução n.º 315).

Perigo e segurança:

Fiscalização das emissões:

Utilização não autorizada das frequências das faixas atribuídas ao serviço móvel marítimo (Resolução n.º 309);
V. também *Serviço móvel aeronáutico (R)* (Resolução n.º 407).

Utilização das classes de emissão R3E e J3E (1):

Na frequência portadora de 2182 kHz (Resolução n.º 200);
Nas frequências portadoras de 4125 kHz e 6215,5 kHz (Resolução n.º 305);
V. também *Serviço móvel aeronáutico (R)* (Resolução n.º 403).

(1) Anteriormente A3A e A3J.

Difusão de informações meterológicas:

V. *Serviço móvel aeronáutico (R)* (Resolução n.º 406).

Disposições das vias:

V. *Serviço móvel marítimo* (Resoluções n.ºs 304 e 308).

Divisão do Mundo:

Em zonas climatéricas para o cálculo das características de propagação (Resolução n.º 61);
Revisão da divisão do Mundo em regiões para fins de atribuição da faixas de frequências (Resolução n.º 66).

Emissões:

Estabelecimento pela IFRB de documentação explicativa acerca da aplicação do novo método de designação das emissões (Resolução n.º 36);
V. também *Serviço móvel aeronaútico (R)* (Resolução n.º 402);
V. também *Serviço móvel marítimo* (Resolução n.º 306 e 307).

Equipamento:

ISM:

Protecção dos serviços de radiocomunicação contra as interferências causadas pelos aparelhos ISM (Resolução n.º 63).

Radioeléctricos:

Aperfeiçoamento da concepção dos (Resolução n.º 67);
Protecção contra o raio dos (Resolução n.º 64).

Ficheiro de Referência Internacional das Frequências (FRIF):

Estabelecimento pela IFRB de documentação explicativa sobre o novo método de designação das emissões (Resolução n.º 36);
Revisão de inscrição a solicitação de conferências anteriores (Resolução n.º 30);
V. também *Órbita dos satélites geostacionários* (Resoluções n.ºs 2 e 4);
V. também *Serviço de radiodifusão por satélite* (Resoluções n.ºs 31, 33 e 503);
V. também *Serviço fixo* (Resolução n.º 9);
V. também *Serviço fixo por satélite* (Resolução n.º 100);
V. também *Serviço móvel aeronáutico (R)* (Resoluções n.ºs 400, 401 e 404);
V. também *Serviço móvel marítimo* (Resoluções n.ºs 300, 301 e 302);
V. também *Serviços espaciais* (Resolução n.º 32).

Frequências navio-navio:

V. *Serviço móvel marítimo* (Resolução n.º 303);

Gestão das frequências:

Assistência relativa à utilização das técnicas informáticas para a (Resolução n.º 37);
Introdução de uma gestão nacional das frequências radioeléctricas (Resolução n.º 7);
Procedimento a seguir para acabar com um desacordo sobre normas técnicas ou regras de procedimento da IFRB (Resolução n.º 35);
V. também *Cooperação técnica* (Resolução n.º 7);
V. também *Emissões* (Resolução n.º 36);
V. também *Notificação das consignações de frequência* (Resolução n.º 1);
V. também *Regulamento das Radiocomunicações* (Resolução n.º 6).

Identificação das estações:

Indicativos de chamada:

Novas regras de formação dos (Resolução n.º 12);
Possibilidades de formar novas séries de indicativos de chamada (Resolução n.º 13);

Introdução de um novo sistema de identificação das estações do serviço móvel marítimo e do serviço móvel marítimo por satélite (identidades no serviço móvel marítimo) (Resolução n.º 313);
V. também *Serviço móvel marítimo* (Resolução n.º 311).

Ligação de conexão:

V. *Serviço fixo por satélite* (Resoluções n.ºs 101, 102 e 701);

Navios e aeronaves não participantes num conflito armado:

Utilização das radiocomunicações para a segurança, a identificação e a localização dos (Resolução n.º 11).

Notificação das consignações de frequência (generalidades):

A fazer pela Administração do país em cujo território a estação está situada (Resolução n.º 1).

Oceanografia:

V. *Serviço móvel marítimo* (Resoluções n.ºs 302 e 314).

Operações — organizações de socorro:

Consignações de frequência para as (Resoluções n.º 10).
V. também *Serviço de amador* (Resolução n.º 640).

Órbita dos satélites geostacionários:

Duração de validade das consignações de frequência às estações espaciais que utilizam a (Resolução n.º 4).
Utilização da órbita dos satélites geostacionários, com exclusão de qualquer outra órbita, pelas estações espaciais que funcionam nas faixas de frequências de 12 GHz atribuídas ao serviço de radiodifusão por satélite (Resolução n.º 506);
Utilização da órbita dos satélites geostacionários e planificação dos serviços espaciais que utilizam esta órbita (Resolução n.º 3);
Utilização equitativa por todos os países, com igualdade de direitos, da órbita dos satélites geostacionários, e das faixas de frequência atribuídas aos serviços de radiocomunicação espacial (Resolução n.º 2);

Organizações internacionais:

Resoluções com interesse para as seguintes organizações:

Comissão Electrónica Internacional (CEI):

V. *Equipamento* (Resolução n.º 63);

Comissão Oceanográfica Intergovernamental (COI):

V. *Serviço móvel marítimo* (Resolução n.º 314);

Comissão Internacional Especial das Perturbações Radioeléctricas (CISPR):

V. *Equipamento* (Resolução n.º 63);

Conferência das Nações Unidas para o Comércio e o Desenvolvimento (CNUCED):

V. *Cooperação técnica* (Resolução n.º 316);

Organização da Aviação Civil Internacional (OACI):

V. *Navios e aeronaves não participantes num conflito armado* (Resolução n.º 11);
V. *Radiobalizas de localização de sinistros* (Resolução n.º 601);
V. *Serviço de radiodifusão* (Resolução n.º 500);
V. *Serviços de radiodeterminação* (Resolução n.º 600);

Organização das Nações Unidas (ONU):

V. *Cooperação técnica* (Resoluções n.ºs 14 e 16).

Organização Intergovernamental Consultiva da Navegação Marítima (OMCI):

V. *Cooperação técnica* (Resolução n.º 316);
V. *Perigo e segurança* (Resoluções n.ºs 200 e 305);
V. *Navios e aeronaves não participantes num conflito armado* (Resolução n.º 11);
V. *Radiobalizas de localização de sinistros* (Resolução n.º 601);
V. *Serviço móvel marítimo* (Resolução n.º 310);
V. *Serviços de radiodeterminação* (Resolução n.º 600);

Organização Metereológica Mundial (OMM):

V. *Serviço móvel marítimo* (Resolução n.º 314);

Organizações regionais:

União Africana dos Correios e Telecomunicações (UATP), União das Radiodifusão e Televisão Nacionais de África (URTNA), União Panafricana das Telecomunicações (UPAT) e outras:

V. *Cooperação técnica* (Resolução n.º 5);

Programa das Nações Unidas para o Desenvolvimento (PNUD):

V. *Cooperação técnica* (Resolução n.º 316).

Propagação:

Cooperação técnica com os países em desenvolvimento no domínio dos estudos de propagação em regiões tropicais (Resolução n.º 5);
Divisão do mundo em zonas climatéricas para o cálculo das características de propagação (Resolução n.º 61);
Informações sobre a propagação das ondas radioeléctricas utilizadas para determinar a zona de coordenação (Resolução n.º 60);

Radiobalizas de localização de sinistros:

As radiobalizas de localização de sinistros que funcionam na frequência de 121,5 MHz ou na frequência de 243 MHz, ou nestas duas frequências, devem estar em conformidade com as normas e os paraceres da OACI e da CCIR (Resolução n.º 601);

Busca e salvamento:

V. *Radiobalizas de localização de sinistros* (Resolução n.º 601);
V. *Serviços móveis aeronáuticos (R) e (OR)* (Resolução n.º 403);

Pesquisa ionosférica:

Utilização experimental das ondas radioeléctricas pelos satélites de pesquisa ionosférica (Resolução n.º 62).

Regulamento das Radiocomunicações:

Identificação das disposições que contêm uma referência a pareceres da CCIR (Resolução n.º 65).
Manual destinado a explicar e a ilustrar os procedimentos do capítulo IV do Regulamento das Radiocomunicações (Resolução n.º 6);
V. também *Atribuição das faixas de frequências* (Resolução n.º 8);
V. também *Gestão das frequências* (Resolução n.º 35);
V. também *Identificação das estações* (Resolução n.º 12);

V. também *Notificação das consignações de frequência* (Resolução n.º 1);
V. também *Órbita dos satélites geostacionários* (Resolução n.º 4);
V. também *Serviço de radiodifusão* (Resoluções n.ºs 500 e 508);
V. também *Serviço de radiodifusão por satélite* (Resoluções n.ºs 31, 33, 34, 502, 503, 504, 507 e 700).
V. também *Serviço fixo* (Resolução n.º 103);
V. também *Serviço móvel aeronáutico (R)* (Resoluções n.ºs 402 e 403);
V. também *Terminologia* (Resolução n.º 68).

Serviço de amador:

Interdição às estações de radiodifusão de emitirem em frequências da faixa de 7000-7100 kHz reservada ao serviço de amador (Resolução n.º 641);
Utilização das faixas atribuídas ao serviço de amador para fins de comunicações internacionais em caso de catástrofes naturais (Resolução n.º 640).

Serviço de amador por satélite:

Comunicação à IFRB das informações relativas à entrada em serviço das estações terrestres do serviço amador por satélite (Resolução n.º 642).

Serviço de radiodifusão:

Convocação de conferências:

Definição dos critérios de partilha para a utilização das faixas das ondas métricas e decimétricas atribuídas aos serviços fixo, de radiodifusão e móvel na Região 3 (Resolução n.º 702);
Planificação da radiodifusão sonora na faixa de 87,5-108 MHz para a Região 1 e certos países interessados da Região 3 (Resolução n.º 510);
Planificação das faixas de ondas decamétricas (Resolução n.º 508);
Reexame e revisão das disposições dos Actos Finais da Conferência Africana de Radiodifusão em Ondas Métricas e Decimétricas (Genebra, 1963) (Resolução n.º 509);

Exame pela IFRB das fichas de notificação referentes às estações do serviço de radiodifusão da Região 2 que funcionam na faixa de 535-1605 kHz (Resolução n.º 501);
Interdição de utilizar a faixa de 7000-7100 kHz reservada ao serviço de amador (Resolução n.º 641);
Modificação das frequências portadoras das estações de radiodifusão em ondas quilométricas na Região 1 (Resolução n.º 500).

Serviço de radiodifusão por satélite:

Convocação de conferências:

Estabelecimento de acordos e de planos associados (Resolução n.º 507);
Planificação na faixa de 12 GHz e as ligações de conexão associadas na Região 2 (Resolução n.º 701);

Procedimentos a aplicar antes da entrada em vigor dos acordos e dos planos:

Aplicação de certas disposições dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) para ter em conta as modificações introduzidas pela CAMR-1959 no quadro de atribuição das faixas de frequência para a Região 2, na faixa de 11,7-12,7 GHz (Resolução n.º 31);
Coordenação, notificação e inscrição no Ficheiro de Referência Internacional das Frequências das consignações de frequência as estações da Região 2 (Resolução n.º 503);
Estabelecimento de serviços de radiodifusão por satélite na faixa de 12,5-12,75 GHz e partilhá com os serviços espaciais e de Terra nas Regiões 1, 2 e 3 (Resolução n.º 34);
Experiências e estudos relativos ao serviço de radiodifusão por satélite (radiodifusão sonora) na faixa de frequências de 0,5 GHz a 2 GHz (Resolução n.º 505);
Colocação em serviço de estações espaciais do serviço de radiodifusão por satélite; procedimentos de coordenação entre as estações espaciais deste serviço e as estações de Terra e sistemas espaciais dependentes de outras administrações; notificação, exame e inscrição na FRIP das consignações às estações espaciais do serviço de radiodifusão por satélite (Resolução n.º 33);
Procedimentos provisórios a aplicar até à inserção em anexo ao Regulamento das Radiocomunicações do Plano e das disposições adoptadas pela Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) (Resolução n.º 502);
Procedimento provisório relativo à faixa de 11,7-12,2 GHz na Região 2 (Resolução n.º 504);
Partilha entre o serviço fixo por satélite nas Regiões 1 e 3 e o serviço de radiodifusão por satélite na Região 2, na faixa de 12,2-12-7 GHz (Resolução n.º 700);

Utilização da órbitas dos satélites geostacionários, com exclusão de qualquer outra órbita, pelas estações espaciais que funcionam nas faixas de frequências de 12 GHz atribuídas ao serviço de radiodifusão por satélite (Resolução n.º 506);
V. também *Serviço fixo por satélite* (Resoluções n.ºs 100, 101 e 102).

Serviço fixo:

Assistência aos países em desenvolvimento para assegurar o acesso dos seus serviços fixos às faixas das ondas decamétricas (Resolução n.º 103);
Convocação de conferências para definir critérios de partilha para a utilização das faixas das ondas métricas e decimétricas atribuídas ao serviço fixo (e aos serviços de radiodifusão e móvel) na Região 3 (Resolução n.º 702);
Reconsignação das frequências às estações dos serviços fixo e móvel que funcionam em certas faixas atribuídas aos serviços de radiolocalização e de amador na Região 1 (Resolução n.º 38);
Remoção dos serviços fixo e móvel de certas faixas compreendidas entre 4000 kHz e 27 500 kHz e procedimento de transição relativo à escolha e à aprovação das consignações de substituição (Resolução n.º 8);
Revisão das inscrições no FRIP nas faixas atribuídas ao serviço fixo entre 3000 kHz e 27 500 kHz (Resolução n.º 9); V. também *Serviço fixo por satélite* (Resolução n.º 31).

Serviço fixo por satélite:

Aplicação de certas disposições dos Actos Finais da Conferência Mundial para a Radiodifusão por Satélite, 1977, para ter em conta as modificações introduzidas pela CAMR-79 no quadro de atribuição das faixas de frequências para a Região 2, na faixa de 11,7-12,7 GHz (Resolução n.º 31);

Conclusão de acordos e estabelecimento dos planos associados para ligações de conexão às estações do serviço de radiodifusão por satélite que funcionam na faixa de 12 GHz (Resolução n.º 101);

Convocação de uma conferência encarregada de estabelecer um plano para o serviço de radiodifusão por satélite na faixa de 12 GHz e as ligações de conexão associadas na Região 2 (Resolução n.º 701);

Coordenação das características técnicas das ligações de conexão às estações espaciais do serviço de radiodifusão por satélite da faixa de 11,7-12,5 GHz (Região 1) e de 11,7-12,2 GHz (Região 3) para o período de transição (Resolução n.º 102);

Coordenação, notificação e inscrição na FRIP das consignações a estações do serviço fixo por satélite, relativamente às estações do serviço de radiodifusão por satélite na Região 2 (Resolução n.º 100);

Partilha entre o serviço fixo por satélite nas Regiões 1 e 3 e o serviço de radiodifusão por satélite na Região 2, na faixa de 12,2-12,7 GHz (Resolução n.º 700);

V. também *Serviço de radiodifusão por satélite* (Resolução n.º 503).

Serviço móvel aeronáutico (OR):

Utilização das frequências de 34023 kHz e 5680 kHz:

Em comum pelos serviços móvel aeronáutico (R) e (OR) (Resolução n.º 403);

Serviço móvel aeronáutico por satélite:

Faixas de frequências superiores às faixas de ondas decamétricas:

Utilização para as comunicações e a difusão de informações meteorológicas no serviço móvel aeronáutico (R) e no serviço móvel aeronáutico por satélite (Resolução n.º 406).

Serviço móvel aeronáutico (R):

Faixas de frequências atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz:

Tratamento das fichas de notificação relativas às consignações de frequência (Resolução n.º 400);
Introdução do plano de adjudicação de frequências do apêndice 27 Aer2 (Resolução n.º 401);
Introdução do novo arranjo aplicável a essas faixas e passagem da exploração em DFL à exploração em FLU (Resolução n.º 402);

Faixas de frequências atribuídas em exclusivo ao serviço móvel aeronaútico (R) entre 21 924 kHz e 22 000 kHz:

Introdução da nova disposição (aditamento ao apêndice 27Aer2) (Resolução n.º 404);

Faixas de frequências superiores às faixas de ondas decamétricas:

Utilização para as comunicações e a difusão de informações meteorológicas no serviço móvel aeronaútico (R) e no serviço móvel aeronaútico por satélite (Resolução n.º 406);

Utilização das frequências de 3023 kHz e 5680 kHz:

Em comum pelos serviços móvel aeronáutico (R) e (OR) (Resolução n.º 403);

Utilização (emprego melhorado) das frequências do serviço móvel aeronáutico (R) (Resolução n.º 405);
Utilização não autorizada por outros serviços das frequências das faixas atribuídas ao serviço móvel aeronáutico (R) (Resolução n.º 407);
V. também *Navios e aeronaves não participantes num conflito armado* (Resolução n.º 11);
V. também *Radiobalizas de localização de sinistros* (Resolução n.º 601);
V. também *Serviços de radiodeterminação* (Resolução n.º 600).

Serviço móvel marítimo:

Emprego da técnica da FLU nas faixas do serviço radiotelefónico compreendidas entre 1605 kHz e 400 kHz (Resolução n.º 306);
Espaçamento das frequências na faixa de 156-174 MHz (Resolução n.º 308);
Estabelecimento de um sistema mundial coordenado para a recolha dos dados relativos à oceanografia (Resolução n.º 314);
Frequências a prever com vista ao estabelecimento e à introdução futura de sistemas de telemedida, de telecomando e de permuta de dados para os movimentos dos navios (Resolução n.º 310);
Frequências navio-navio nas faixas compreendidas entre 1605 kHz e 3600 kHz na Região 1, reexame das zonas de utilização das (Resolução n.º 303);
Identidades no serviço marítimo:

V. *Identificação das estações* (Resolução n.º 313);

Introdução de novos procedimentos de chamada em telegrafia Morse A1A em ondas decamétricas e plano associado de repartição das vias (Resolução n.º 312);
Introdução de um sistema de chamada selectiva numérica (Resolução n.º 311);
Introdução da nova disposição das vias utilizadas para a telegrafia Morse da classse A1A nas faixas compreendidas entre 4000 kHz e 27 500 kHz (Resolução n.º 304);
Notificação das frequências não emparelhadas utilizadas pelas estações de navio para os sistemas de faixas estreita de telegrafia com impressão directa e de transmissão de dados (Resolução n.º 301);
Passagem à técnica da FLU das estações radiotelefónicas nas faixas compreendidas entre 1605 kHz e 4000 kHz (Resolução n.º 307);
Supressão eventual das taxas de estação móvel pra a correspondência pública, data recomendada para a (Resolução n.º 315);
Tratamento pela IRFB das fichas de notificação de consignação de frequência às estações oceanográficas (Resolução n.º 302);
Utilização e notificação das frequências emparelhadas reservadas aos sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados funcionado nas faixas de ondas decamétricas (Resolução n.º 300);

Utilização não autorizada das frequências das faixas atribuídas ao serviço móvel marítimo (Resolução n.º 309);
V. também *Correspondência pública* (Resolução n.º 201);
V. também *Perigo e segurança* (Resoluções n.ºs 200 e 305);
V. também *Navios e aeronaves não participantes num conflito armado* (Resolução n.º 11);
v. também *Radiobalizas de localização de sinistros* (Resolução n.º 601);
V. também *Serviço móvel marítimo* (Resolução n.º 316);
V. também *Serviços de radiodeterminação* (Resolução n.º 600);
V. também *Serviços móveis* (Resolução n.º 202).

Serviço móvel marítimo por satélite:

Identidades do serviço móvel marítimo:

V. *Identificação das estações* (Resolução n.º 313);
V. também *Correspondência pública* (Resolução n.º 20).

Serviços de radiodeterminação:

Utilização pelo serviço de radionavegação de certas faixas de frequências das ondas decimétricas e centimétricas (Resolução n.º 600);
V. também *Serviço fixo* (Resolução n.º 38).

Serviços de Terra:

V. *Serviço de radiodifusão por satélite* (Resoluções n.ºs 33 e 34);
V. *Serviço fixo por satélite* (Resolução n.º 31);
V. *Serviços espaciais* (Resoluções n.ºs 32 e 703).

Serviços móveis:

Convocação de conferências encarregadas de definir critérios de partilha para a utilização das faixas das ondas métricas e decimétricas atribuídas aos serviços fixo, de radiodifusão e móvel na Região 3 (Resolução n.º 702);
Convocação de uma Conferência Administrativa Mundial das Radiocomunicações para os Serviços Móveis (Resolução n.º 202);
Reconsignação das frequências às estações dos serviços fixo e móvel funcionando em certas faixas atribuídas aos serviços de radiolocalização e de amador na Região 1 (Resolução n.º 38);
V. também *Correspondência pública* (Resolução n.º 201);
V. também *Perigo e segurança* (Resoluções n.ºs 200 e 305);
V. também *Serviço de radiodifusão por satélite* (Resolução n.º 31);
V. também *Serviço fixo* (Resolução n.º 8).

Serviços espaciais:

Cooperação internacional e assistência técnica (Resolução n.º 15);
Métodos de cálculo e critérios de interferência no que respeita à partilha de frequências entre serviços de radiocomunicação espacial e serviços de radiocomunicação de Terra ou entre serviços de radiocomunicação espacial (Resolução n.º 703);
Utilização das consignações de frequência às estações de radiocomunicação de Terra e de radiocomunicação espacial nas faixas de 11,7-12,2 GHz na Região 3 e de 11,7-12,5 GHz na Região 1 (Resolução n.º 32);
Utilização equitativa por todos os países, com igualdade de direitos, das faixas de frequências atribuídas aos serviços de radiocomunicação espacial (Resolução n.º 2);
V. também *Serviço de radiodifusão por satélite* (Resoluções n.ºs 33, 34, 503 e 506).

Técnica da faixa lateral única (FLU):

V. *Serviço de radiodifusão* (Resolução n.º 508);
V. *Serviço móvel aeromáutico (R)* (Resolução n.º 402);
V. *Serviço móvel marítimo* (Resoluções n.ºs 306 e 307).

Terminologia:

Nova definição de certos termos contidos no anexo 2 à Convenção e aplicáveis ao Regulamento das Radiocomunicações (Resolução n.º 68).

União Internacional das Telecomunicações:

Exigindo uma intervenção directa de:

Comissão Consultiva Internacional das Radiocomunicações (CCIR):

V. *Conferências administrativas* (Resolução n.º 17);
V. *Cooperação técnica* (Resolução n.º 16);
V. *Perigo e segurança* (Resolução n.º 200);
V. *Divisão do Mundo* (Resoluções n.ºs 61 e 66);
V. *Equipamento* (Resoluções n.ºs 63 e 64);
V. *Gestão das frequências* (Resoluções n.ºs 7 e 35);
V. *Identificação das estações* (Resolução n.º 313);
V. *Propagação* (Resoluções n.ºs 5 e 60);
V. *Órbita dos satélites geostacionários* (Resolução n.º 3);
V. *Regulamento das Radiocomunicações* (Resolução n.º 65);
V. *Serviço de radiodifusão* (Resoluções n.ºs 508, 509, 510 e 702);
V. *Serviço de radiodifusão por satélite* (Resoluções n.ºs 31, 34, 505, 700 e 701);
V. *Serviço fixo por satélite* (Resolução n.º 101);
V. *Serviço móvel marítimo* (Resoluções n.ºs 310 e 311);
V. *Serviços de radiodeterminação* (Resolução n.º 600);
V. *Serviços móveis* (Resolução n.º 202);
V. *Serviços espaciais* (Resolução n.º 703);
V. *Terminologia* (Resolução n.º 68);

Comissão Consultiva Internacional Telegráfica e Telefónica (CCIT):

V. *Cooperação técnica* (Resolução n.º 16);
V. *Correspondência pública* (Resolução n.º 201);
V. *Equipamento* (Resolução n.º 64);
V. *Identificação das estações* (Resolução n.º 313);
V. *Terminologia* (Resolução n.º 68);

Comissão Internacional de Registo de Frequências (IFRB):

V. *Conferências administrativas* (Resolução n.º 17);
V. *Emissões* (Resolução n.º 36);
V. *Ficheiro de Referência Internacional das Frequências (FRIP)* (Resolução n.º 30);
V. *Gestão das frequências* (Resoluções n.ºs 7 e 35);
V. *Órbita dos satélites geostacionários* (Resoluções n.ºs 2, 3 e 4);
V. *Regulamento das Radiocomunicações* (Resolução n.º 6);
V. *Serviço móvel aeronáutico (R)* (Resoluções n.ºs 400, 401, 402, 404 e 407);
V. *Serviço de amador por satélite* (Resolução n.º 642);
V. *Serviço de radiodifusão* (Resoluções n.ºs 500, 501, 508 e 509);
V. *Serviço de radiodifusão por satélite* (Resoluções n.ºs 33, 502, 503, 507 e 701);
V. *Serviço fixo* (Resoluções n.ºs 8, 9, 38 e 102);
V. *Serviço fixo por satélite* (Resoluções n.ºs 100 e 102);
V. *Serviço móvel marítimo* (Resoluções n.ºs 300, 301, 302, 309 e 314);
V. *Serviços móveis* (Resolução n.º 202);
V. *Serviços espaciais* (Resoluções n.ºs 32 e 703);

Conferências administrativas:

V. *Perigo e segurança* (Resolução n.º 305);
V. *Equipamento* (Resolução n.º 63);
V. *Órbita dos satélites geostacionários* (Resolução n.º 4);
V. *Propagação* (Resolução n.º 60);
V. *Serviço de radiodifusão* (Resoluções n.ºs 508 e 702);
V. *Serviço de radiodifusão por satélite* (Resoluções n.ºs 505 e 701);
V. *Serviço móvel marítimo* (Resoluções n.ºs 300, 310 e 314);
V. *Serviços de radiodeterminação* (Resolução n.º 600);
V. *Terminologia* (Resolução n.º 68);

Além disso, as resoluções seguintes relacionam-se de uma maneira ou de outra com as futuras conferências:

V. também *Cooperação técnica* (Resoluções n.ºs 14, 16 e 316);
V. também *Correspondência pública* (Resolução n.º 201);
V. também *Perigo e segurança* (Resoluções n.ºs 200 e 309);
V. também *Identificação das estações* (Resoluções n.ºs 12, 13 e 313);
V. também *Navios e aeronaves não participantes num conflito armado* (Resolução n.º 11);
V. também *Propagação* (Resolução n.º 5);
V. também *Radiobalizas de localização de sinistros* (Resolução n.º 601);
V. também *Serviço fixo* (Resolução n.º 38);
V. também *Serviço móvel aeronáutico (R)* (Resoluções n.ºs 400, 401, 402, 403, 404, 405 e 407);
V. também *Serviço móvel marítimo* (Resoluções n.ºs 302, 303, 304, 306, 307, 308, 311, 312 e 315);
V. também *Serviços espaciais* (Resolução n.º 15);

Conferência de plenipotenciários:

V. também *Cooperação técnica* (Resolução n.º 7);
V. também *Terminologia* (Resolução n.º 68);

Conselho de administração:

V. também *Conferências administrativas* (Resolução n.º 17);
V. também *Cooperação técnica* (Resoluções n.ºs 5, 14, 15 e 16);
V. também *Divisão do Mundo* (Resolução n.º 66);
V. também *Gestão das frequências* (Resoluções n.ºs 7 e 37);
V. também *Navios e aeronaves não participantes num conflito armado* (Resolução n.º 11);
V. também *Órbita dos satelites geostacionários* (Resolução n.º 3);
V. também *Propagação* (Resolução n.º 60);
V. também *Serviço de radiodifusão* (Resoluções n.ºs 508, 509, 510 e 702);
V. também *Serviço de radiodifusão por satélite* (Resoluções n.ºs 507 e 701);
V. também *Serviço fixo por satélite* (Resolução n.º 101);
V. também *Serviços de radiodeterminação* (Resolução n.º 600);
V. também *Serviços móveis* (Resolução n.º 202);

Secretário-geral:

V. também *Conferências administrativas* (Resolução n.º 17);
V. também *Cooperação técnica* (Resoluções n.ºs 5, 14, 16 e 316);
V. também *Perigo e segurança* (Resoluções n.ºs 200 e 305);
V. também *Gestão das frequências* (Resoluções n.ºs 7 e 37);
V. também *Identificação das estações* (Resoluções n.ºs 12, 13 e 313);
V. também *Navios e aeronaves não participantes num conflito armado* (Resolução n.º 11);

V. também *Propagação* (Resolução n.º 60);
V. também *Regulamento das Radiocomunicações* (Resoluções n.ºs 6 e 65);
V. também Serviço de *radiodifusão* (Resoluções n.ºs 502 e 701);
V. também *Serviço de radiodifusão por satélite* (Resoluções n.ºs 500 e 508);
V. também *Serviço móvel aeronáutico (R)* (Resolução n.º 404);
V. também *Serviço móvel marítimo* (Resoluções n.ºs 310, 311 e 312);
V. também *Serviços de radiodeterminação* (Resolução n.º 600);
V. também *Serviços espaciais* (Resolução n.º 703);
V. também *Terminologia* (Resolução n.º 68).

Utilização das técnicas informáticas:

V. *Gestão das frequências* (Resolução n.º 37).

PARTE B

Recomendações

SECÇÃO I

Assuntos do índice analítico (palavras-chaves)

Recomendação n.º 1 — **Comunicações em caso de catástrofes — serviços espaciais:**

Operações de socorro;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 2 — **Conferências administrativas — serviços espaciais:**

Ficheiro de Referência Internacional das Frequências (FRIP);
Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (conselho de administração).

Recomendação n.º 3 — **Transmissão de energia eléctrica:**

Organizações internacionais (ONU);
União Internacional das Telecomunicações (CCIR e secretário-geral).

Recomendação n.º 4 — **Redes de radiocomunicação (4000-27 500 kHz):**

Gestão das frequências.

Recomendação n.º 5 — **Gestão das frequências:**

Cooperação e assistência técnicas.

Recomendação n.º 6 — **Cooperação e assitência técnicas:**

União Internacional das Telecomunicações (IFRB).

Recomendação n.º 7 — **Serviço móvel aeronáutico (R) — serviço móvel marítimo:**

Licenças.

Recomendação n.º 8 — **Identificação das estações:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 9 — **Serviço de radiodifusão — serviço móvel aeronáutico (R) — serviço móvel marítimo:**

União Internacional das Telecomunicações (secretário-geral).

Recomendação n.º 10 — **Conferências administrativas:**

União Internacional das Telecomunicações (secretário-geral).

Recomendação n.º 11 — **Conferências administrativas — Regulamento das Radiocomunicações.**

Recomendação n.º 12 — **Conferências administrativas — União Internacional das Telecomunicações (conferências de plenipotenciários):**

Ligações de conexão;
Órbita dos satélites geostacionários;
Serviço de radiodifusão por satélite;
Serviço fixo;
Serviços de radiodeterminação;
Serviços móveis;
Serviços espaciais;
União Internacional das Telecomunicações (conselho de administração).

Recomendação n.º 13 — **Regulamento das Radiocomunicações — União Internacional das Telecomunicações (conselho de administração):**

União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 30 — **Fiscalização das emissões:**

Organizações internacionais (ONU);
União Internacional das Telecomunicações (CCIR e IFRB).

Recomendação n.º 31 — **Aplicação das técnicas informáticas — gestão das frequências:**

União Internacional das Telecomunicações (CCIR e IFRB e secretário-geral).

Recomendação n.º 60 — **Normas técnicas:**

União Internacional das Telecomunicações (CCIR e IFRB).

Recomendação n.º 61 — **Normas técnicas:**

Gestão das frequências;
União Internacional das Telecomunicações (CCIR e IFRB).

Recomendação n.º 62 — **Emissões:**

União Internacional das Telecomunicações (CCIR e IFRB).

Recomendação n.º 63 — **Larguras de faixa:**

União Internacional das Telecomunicações (CCIR e IFRB).

Recomendação n.º 64 — **Gestão das frequências:**

Normas técnicas;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 65 — **Gestão das frequências:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 66 — **Emissões:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 67 — **Terminologia:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 68 — **Propagação:**

Normas técnicas;
Organizações internacionais (União Radiocientífica Internacional);
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 69 — **Equipamento:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 70 — **Equipamento:**

Normas técnicas;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 71 — **Equipamento.**

Recomendação n.º 72 — **Terminologia:**

União Internacional das Telecomunicações (CCIR, CCITT, conferências administrativas e secretário-geral).

Recomendação n.º 73 — **Terminologia:**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 74 — **Unidades SI.**

Recomendação n.º 100 — **Difusão troposférica:**

União Internacional das Telecomunicações (CCIR, conferências administrativas e conselho de administração).

Recomendação n.º 101 — **Ligações de conexão — serviço de radiodifusão por satélite — serviço fixo por satélite:**

Serviços espaciais;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 102 — **Feixes hertzianos:**

Serviço fixo por satélite;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 103 — **Serviço fixo por satélite.**

Recomendação n.º 200 — **Perigo e segurança:**

Organizações internacionais (OMCI);
Serviço móvel marítimo;
Serviços móveis;
União Internacional das Telecomunicações (conferências administrativas e secretário-geral).

Recomendação n.º 201 — **Perigo e segurança:**

Organizações internacionais (OMCI);
Serviço móvel marítimo;
Serviço móvel marítimo por satélite;
União Internacional das Telecomunicações (CCIR e conferências administrativas).

Recomendação n.º 202 — **Perigo e segurança:**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 203 — **Perigo e segurança — serviço móvel marítimo:**

Organizações internacionais (OMCI);
Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (conferências administrativas e secretário-geral).

Recomendação n.º 204 — **Regulamento das Radiocomunicações — serviço móvel aeronáutico (R) — serviço móvel marítimo — serviços móveis:**

Organizações internacionais (OACI e OMCI);
União Internacional das Telecomunicações (conferências administrativas e secretário-geral).

Recomendação n.º 300 — **Serviço móvel marítimo — serviços móveis:**

Organizações internacionais (OMCI);
União Internacional das Telecomunicações (CCIR, conferências administrativas, conselho de administração e secretário-geral).

Recomendação n.º 301 — **Serviço móvel marítimo — serviços móveis:**

Organizações internacionais (OMCI);
União Internacional das Telecomunicações (CCIR, conferências administrativas, conselho de administração e secretário-geral).

Recomendação n.º 302 — **Serviço móvel marítimo:**

Gestão das frequências;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 303 — **Perigo e segurança:**

Serviço móvel marítimo.

Recomendação n.º 304 — **Serviço móvel marítimo:**

União Internacional das Telecomunicações (secretário-geral).

Recomendação n.º 305 — **Regulamento das Radiocomunicações — serviço móvel marítimo:**

União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 306 — **Perigo e segurança — serviço móvel marítimo.**

Recomendação n.º 307 — **Perigo e segurança — serviço móvel marítimo:**

União Internacional das Telecomunicações (conferências administrativas e CCIR).

Recomendação n.º 308 — **Serviço móvel marítimo:**

União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 309 — **Perigo e segurança — serviço móvel marítimo.**

Organizações internacionais (OMCI);
União Internacional das Telecomunicações (conferências administrativas e secretário-geral).

Recomendação n.º 310 — **Serviço móvel marítimo:**

Organizações Internacionais (OMCI);
União Internacional das Telecomunicações (CCIR, CCITT, conferências administrativas e secretário-geral).

Recomendação n.º 311 — **Perigo e segurança — serviço móvel marítimo.**

Recomendação n.º 312 — **Serviço móvel marítimo:**

União Internacional das Telecomunicações (CCIR e CCITT).

Recomendação n.º 313 — **Serviço móvel marítimo por satélite:**

União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 400 — **Serviço móvel aeronáutico (R):**

Organizações internacionais (OACI);
União Internacional das Telecomunicações (IFRB e secretário-geral).

Recomendação n.º 401 — **Serviço móvel aeronáutico (R).**

Recomendação n.º 402 — **Serviço móvel aeronáutico (R):**

Gestão das frequências;
Organizações internacionais (OACI);
União Internacional das Telecomunicações (IRFB e secretário-geral).

Recomendação n.º 403 — **Serviço móvel aeronáutico (R):**

Organizações internacionais (OACI);
União Internacional das Telecomunicações (IFRB).

Recomendação n.º 404 — **Serviço móvel aeronáutico (R):**

Gestão das frequências;
União Internacional das Telecomunicações (IRFB).

Recomendação n.º 405 — **Serviço móvel aeronáutico (R):**

Organizações internacionais (OACI);
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 406 — **Serviço móvel aeronáutico (OR):**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (conferências administrativas e conselho de administração).

Recomendação n.º 407 — **Serviço móvel aeronáutico (R):**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 500 — **Conferências administrativas — serviço de radiodifusão:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 501 — **Conferências administrativas — serviço de radiodifusão:**

Técnicas de faixa lateral única;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 502 — **Serviço de radiodifusão:**

Organizações internacionais (ONU, ONUDI e UNESCO);
União Internacional das Telecomunicações (CCIR e secretário-gera).

Recomendação n.º 503 — **Serviço de radiodifusão:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 504 — **Serviço de radiodifusão:**

União Internacional das Telecomunicações (CCIR, conferências administrativas e conselho de administração).

Recomendação n.º 505 — **Serviço de radiodifusão por satélite:**

Propagação;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 506 — **Serviço de radiodifusão por satélite.**

Recomendação n.º 507 — **Emissões — serviço de radiodifusão por satélite:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 508 — **Serviço de radiodifusão por satélite:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 600 — **Serviços de radiodeterminação:**

Organizações internacionais (OACI e OMCI).

Recomendação n.º 601 — **Serviços de radiodeterminação:**

Organizações internacionais (OACI).

Recomendação n.º 602 — **Serviços de radiodeterminação:**

Organizações internacionais (AISM e OMCI);
União Internacional das Telecomunicações (CCIR, conferências administrativas, conselho de administração e secretário-geral).

Recomendação n.º 603 — **Serviços de radiodeterminação.**

Recomendação n.º 604 — **Perigo e segurança — radiobalizas de localização de sinistros:**

Organizações internacionais (OACI e OMCI);
Serviço móvel aeronáutico (R);
Serviço móvel marítimo;
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 605 — **Serviços de radiodeterminação:**

Organizações internacionais (OMCI);
União Internacional das Telecomunicações (CCIR e conferências administrativas).

Recomendação n.º 620 — **Meteorologia:**

Organizações internacionais (OMM).

Recomendação n.º 700 — **Serviços espaciais.**

Recomendação n.º 701 — **Serviços de radioastronomia:**

União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 702 — **Emissões:**

União Internacional das Telecomunicações (conferências administrativas).

Recomendação n.º 703 — **Serviços de radiodeterminação — serviços móveis:**

Serviço fixo.

Recomendação n.º 704 — **Serviço de radiodifusão — serviços de radiodeterminação:**

Gestão das frequências;
Organizações internacionais (OACI);
União Internacional das Telecomunicações (CCIR).

Recomendação n.º 705 — **Serviço de radiodifusão — serviço de radiodifusão por satélite:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 706 — **Serviço fixo — serviço fixo por satélite — serviços móveis — serviços espaciais:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 707 — **Serviço intersatélites — serviços de radiodeterminação:**

Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (CCIR e conferências administrativas).

Recomendação n.º 708 — **Serviços de terra — serviços espaciais:**

União Internacional das Telecomunicações (CCIR).

Recomendação n.º 709 — **Serviço intersatélites — serviço móvel aeronáutico (R):**

União Internacional das Telecomunicações (CCIR e conferências administrativas).

Recomendação n.º 710 — **Serviço intersatélites — serviço de radiodeterminação:**

União Internacional das Telecomunicações (CCIR e conferências administrativas).

Recomendação n.º 711 — **Serviços espaciais:**

Gestão de frequências;
Regulamento das Radiocomunicações;
União Internacional das Telecomunicações (CCIR e conferências administrativas).

Recomendação n.º 712 — **Serviço de radiodifusão por satélite:**

União Internacional das Telecomunicações (CCIR).

Secção II

Aplicação das técnicas informáticas:

Manual sobre a aplicação das técnicas informáticas à gestão do espectro radioeléctrico (Recomendação n.º 31).

Comunicações em caso de catástrofes:

Utilização de sistemas de radiocomunicações espaciais em caso de catástrofes naturais, etc. (Recomendação n.º 1).

Conferências administrativas:

Convocação de futuras conferências administrativas das radiocomunicações para tratarem de assuntos determinados (Recomendação n.º 12);
Elaboração da documentação técnica necessária para a Conferência Administrativa Mundial das Radiocomunicações para radiodifusão em Ondas Decamétricas (Recomendação n.º 500);
Estudo da técnica da faixa lateral única para a Conferência Adiministrativa Mundial das Radiocomunicações para a Radiodifusão em Ondas Decamétricas (Recomendação n.º 501);
Exame, pelas conferências administrativas mundiais das radiocomunicações, do estado de ocupação do espectro das frequências no domínio das radiocomunicações espaciais (Recomendação n.º 2);
Numeração que figura na margem do Regulamento das Radiocomunicações (Recomendação n.º 11);
Apresentação de propostas de modificação aos textos do Regulamento das Radiocomunicações (Recomendação n.º 10);
Outras recomendações relativas às conferências:

V. Perigo e segurança (Recomendações n.ºs 200 e 201);
V. Difusão troposférica (Recomendação n.º 100);
V. Emissões (Recomendação n.º 702);
V. Regulamento das Radiocomunicações (Recomendações n.ºs 13 e 204);
V. Serviço de radioastronomia (Recomendação n.º 701);
V. Serviço de radiodifusão (Recomendação n.º 504);
V. serviço intersatélites (Recomendações n.ºs 707, 709 e 710);
V. Serviço móvel aeronáutico (OR) (Recomendação n.º 406);
V. Serviço móvel aeronáutico (R) (Recomendação n.º 407);
V. Serviço móvel marítimo (Recomendações n.ºs 203, 300, 301, 305, 308, 309 e 310);
V. Serviço móvel marítimo por satélite (Recomendação n.º 313);
V. Serviços de radiodeterminação (Recomendações n.ºs 602 e 605);
V. Serviços de Terra (Recomendação n.º 711);
V. Terminologia (Recomendação n.º 72).

Fiscalização das emissões:

Fiscalização internacional das emissões (Recomendação n.º 30);

Cooperação e assistência técnicas:

Necessidades práticas dos países que têm necessidade de assistência especial (Recomendação n.º 6);
V. *Gestão das frequências* (Recomendação n.º 5);

Perigo e segurança:

Data de entrada em vigor da faixa de guarda de 10 kHz para a frequência de 500 kHz no serviço móvel (perigo e chamada) (Recomendação n.º 200);
Designação de uma frequência nas faixas de 435-495 kHz ou 505-526,5 kHz para a emissão, pelas estações costeiras, dos boletins meteorológicos e dos avisos à navegação, utilizando a telegrafia de faixa estreita com impressão directa (Recomendação n.º 309);
Frequência reservada para as necessidades de segurança nas faixas do serviço móvel marítimo compreendidas entre 1605 kHz e 3800 kHz (Recomendação n.º 307);
Protecção das frequências de perigo e de segurança contra as interferências prejudiciais (Recomendação n.º 202);
Sinal de frequência acústica consecutivo ao nível de alarme radiotelefónico emitido pelas estações costeiras (Recomendação n.º 311);
Tráfego de perigo, de urgência e de segurança (Recomendação n.º 201);
Utilização de frequências suplementares além da frequência portadora de 2182 kHz para fins de perigo e de segurança (Recomendação n.º 303);
Utilização futura da faixa de 2170-2194 kHz (Recomendação n.º 203);
Utilização futura e características das radiobalizas de localização de sinistros (Recomendação n.º 604);
Escuta na frequência de 156,8 MHz pelas estações costeiras para fins de perigo (Recomendação n.º 306).

Difusão troposférica:

Faixas de frequências preferenciais para os sistemas que utilizam a propagação por difusão troposférica (Recomendação n.º 100).

Emissões:

Radiações não essenciais:

No serviço de radiodifusão por satélite (Recomendação n.º 507);
Estudos sobre os níveis máximos tolerados de radiações não essenciais (Recomendação n.º 66);

Pesquisa de emissões intencionais de origem extraterrestre (Recomendação n.º 702);
Suplemento às características adicionais de classificação das emissões — apêndice 6 (Recomendação n.º 62).

Equipamento:

Estudo das características técnicas do (Recomendação n.º 70);
Normalização das características técnicas e de exploração dos materiais radioeléctricos (Recomendação n.º 71);
Tolerância de frequência dos emissores (Recomendação n.º 69).

Feixes hertzianos:

Métodos de modulação para os feixes hertzianos sob o ponto de vista da partilha das faixas de frequências com os sistemas do serviço fixo por satélite (Recomendação n.º 102).

Ficheiro de referência internacional das frequências (FRIF):

V. *Serviços espaciais* (Recomendação n.º 2).

Gestão das frequências:

Manual sobre a aplicação das técnicas informáticas à gestão do espectro radioeléctrico (Recomendação n.º 31);
Meios a aplicar para reduzir a saturação da faixa de 3-30 MHz (Recomendação n.º 5);
Partilha do espectro e utilização das faixas de frequências (Recomendação n.º 65);
Relações de protecção e campos mínimos necessários (Recomendação n.º 64);
V. Normas técnicas (Recomendação n.º 61);
V. Redes de radiocomunicação (400-27 500 kHz) (Recomendação n.º 4);
V. Serviço de radiodifusão (Recomendação n.º 104);
V. Serviço móvel aeronáutico (R) (Recomendações n.ºs 402 e 404);
V. Serviço móvel marítimo (Recomendação n.º 302);
V. Serviços espaciais (Recomendação n.º 711).

Identificação das estações:

Identificação automática das estações (Recomendação n.º 8).

Larguras de faixa:

Cálculo das larguras de faixa (Recomendação n.º 63).

Ligações de conexão:

Ligações de conexão no serviço de radiodifusão por satélite (Recomendação n.º 101);
V. também *Conferências administrativas* (Recomendação n.º 101).

Licenças:

V. *Serviço móvel aeronáutico (R)* (Recomendação n.º 7);
V. *Serviço móvel marítimo* (Recomendação n.º 7).

Meteorologia:

Serviço dos auxiliares da meteorologia (Recomendação n.º 620).

Normas técnicas:

Normas técnicas da IFRB (Recomendação n.º 60);
Normas técnicas necessárias à avaliação das interferências prejudiciais nas faixas de frequências superiores a 28 MHz (Recomendação n.º 61);
V. *Equipamento* (Recomendação n.º 70);
V. *Gestão das frequências* (Recomendação n.º 64);
V. *Propagação* (Recomendação n.º 68).

Operações de socorro:

V. *Comunicações em caso de catástrofes* (Recomendação n.º 1).

Órbita dos satélites geostacionários:

V. *Conferências administrativas* (Recomendação n.º 12).

Organizações internacionais:

Recomendações que apresentam interesse para as seguintes organizações:

Associação Internacional de Sinalização Marítima (AISM):

V. *Serviços de radiodeterminação* (Recomendação n.º 602);

Organização das Nações Unidas (ONU):

V. *Fiscalização das emissões* (Recomendação n.º 30);
V. *Equipamento* (Recomendação n.º 502);
V. *Serviço de radiodifusão* (Recomendação n.º 502)
V. *Transmissão da energia eléctrica* (Recomendação n.º 3);

Organização das Nações Unidas para o Desenvolvimento Industrial (ONUDI):

V. *Equipament* (Recomendação n.º 502);
V. *Serviço de radiodifusão* (Recomendação n.º 502);

Organização das Nações Unidas para a Educação, a Ciência e a Cultura (UNESCO):

V. *Serviço de radiodifusão* (Recomendação n.º 502);

Organização Intergovernamental Consultiva da Navegação Marítima (OMCI):

V. *Perigo e segurança* (Recomendações n.ºs 200, 201 e 203);
V. *Radiobalizas de localização de sinistros* (Recomendação n.º 604);
V. *Regulamento das radiocomunicações* (Recomendação n.º 204);
V. *Serviço móvel marítimo* (Recomendações n.ºs 300, 301, 309 e 310);
V. *Serviços de radiodeterminação* (Recomendações n.ºs 600, 602 e 605);

Organização Internacional das Aviação Civil (OACI):

V. *Radiobalizas de localização de sinistros* (Recomendação n.º 604);
V. *Regulamento das radiocomunicações* (Recomendação n.º 204);
V. *Serviço móvel aeronáutico por satélite* (Recomendação n.º 405);
V. *Serviço móvel aeronáutico (R)* (Recomendações n.ºs 400, 402 e 403);
V. *Serviço de radiodeterminação* (Recomendações n.ºs 600, 601 e 704).

Organização Meteorológica Mundial (OMM):

V. *Meteorologia* (Recomendação n.º 620).

União Internacional Radiocientífica:

V. *Propagação* (Recomendação n.º 68).

Propagação:

Estudos e previsões da propagação e dos ruídos radioeléctricos (Recomendação n.º 68);
V. também *Serviço de radiodifusão por satélite* (Recomendação n.º 505).

Radiobalizas de localização de sinistros:

Utilização futura e características das radiobalizas de localização de sinistros (Recomendação n.º 604).

Regulamento das Radiocomunicações:

Aplicação dos capítulos NX, NXI e NXII da Reestruturação do Regulamento das Radiocomunicações (Recomendação n.º 204);
Conferência administrativa mundial das radiocomunicações para uma revisão geral ou parcial do Regulamento das Radiocomunicações (Recomendação n.º 13);
Numeração que figura na margem do Regulamento das Radiocomunicações (Recomendação n.º 11);
Utilização das vias 15 e 17 do apêndice 18 pelas estações de comunicações de bordo (Recomendação n.º 305);
V. *Perigo e segurança* (Recomendações n.ºs 202 e 203);
V. *Serviço móvel aeronáutico (OR)* (Recomendação n.º 406);
V. *Serviços de radiodeterminação* (Recomendação n.º 707);
V. *Serviços espaciais* (Recomendações n.ºs 2 e 711);
V. *Terminologia* (Recomendação n.º 73).

Redes de radiocomunicação (4000-27 500 kHz):

Melhoria do grupo das ligações das redes nacionais e internacionais de radiocomunicações que funcionam nas faixas compreendidas entre 4000 kHz e 27 500 kHz (Recomendação n.º 4).

Serviço de radioastronomia:

Utilização da faixa de frequências de 1330-1400 MHz pelo serviço de radioastronomia (Recomendação n.º 701).

Serviço de radiodifusão:

Compatibilidade entre o serviço da radiodifusão na faixa de 100-108 MHz e o serviço de radionavegação aeronáutica na faixa de 108-117,975 MHz (Recomendação n.º 705);
Critérios a aplicar à partilha das frequências entre o serviço de radiodifusão por satélite e o serviço de radiodifusão de Terra na faixa de 620-790 MHz (Recomendação n.º 705);
Elaboração da documentação técnica para a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão em Ondas Decamétricas (Recomendação n.º 500);
Estudo da técnica da faixa lateral única para a Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão em Ondas Decamétricas (Recomendação n.º 501);
Medidas a tomar para impedir o funcionamento de estações de radiodifusão a bordo de navios ou de aeronaves fora dos limites dos territórios nacionais (Recomendação n.º 9);
Plano de radiodifusão na faixa de 1605-1705 kHz na Região 2 (Recomendação n.º 504);
Radiodifusão em ondas decamétricas (Recomendação n.º 503);
Especificações dos receptores de televisão a preço módico (Recomendação n.º 502).

Serviço de radiodifusão por satélite:

Antenas de emissão (Recomendação n.º 508);
Critérios a aplicar a partilha das frequências entre o serviço de radiodifusão por satélite e o serviço de radiodifusão de Terra na faixa de 620-790 MHz (Recomendação n.º 705);
Harmónicas da frequência fundamental (Recomendação n.º 506);
Interdependência entre a concepção dos receptores, o agrupamento dos canais e os critérios de partilha (Recomendação n.º 712);
Ligações de conexão no serviço de radiodifusão por satélite (Recomendação n.º 101);
Propagação na faixa de 12 GHz (Recomendação n.º 505);
Radiações não essenciais (Recomendação n.º 507);
V. também *Conferências administrativas* (Recomendação n.º 12).

Serviços de radiodeterminação:

Compatibilidade entre o serviço de radiodifusão na faixa de 100-108 MHz e o serviço de radionavegação aeronáutica na faixa de 108-117,975 MHz (Recomendação n.º 704);

Disposições técnicas relativas aos radiofaróis marítimos na zona africana (Recomendação n.º 603);
Necessidade de fazer cessar o funcionamento das estações dos serviços fixo e móvel nas faixas de frequências de 149,9-150,05 MHz e de 399,9-400,05 MHz atribuídas ao serviço de radionavegação por satélite (Recomendação n.º 703);
Radionavegação aeronáutica — sistema destinado a evitar as colisões (Recomendação n.º 601);
Radiofaróis marítimos (Recomendação n.º 602);
Equipamentos de resposta (Recomendação n.º 605);
Utilização da faixa de frequências de 32-33 GHz, partilhada entre o serviço intersatélites e o serviço de radionavegação (Recomendação n.º 707);
Utilização da faixa de frequências de 9300-9500 MHz (Recomendação n.º 600);
Utilização de radiodetectores aerotransportados nas faixas de frequências partilhadas pelo serviço intersatélites e o serviço de radiolocalização (Recomendação n.º 710);
V. também *Conferências administrativas* (Recomendação n.º 12).

Serviço de Terra:

Faixas de frequência partilhadas pelos serviços de radiocomunicação espacial e os serviços de radiocomunicação de Terra (Recomendação n.º 708).

Serviço fixo:

Partilha das frequências entre, de um lado, o serviço de exploração da Terra por satélite (detectores passivos) e o serviço de pesquisa espacial (detectores passivos) e, do outro, os serviços fixo, móvel, excepto móvel aeronáutico, e fixo por satélite na faixa de 18,6-18,8 GHz (Recomendação n.º 706);
V. *Conferências administrativas* (Recomendação n.º 12);
V. *Serviços de radiodeterminação* (Recomendação n.º 703).

Serviço fixo por satélite:

Dispersão da energia da portadora no serviço fixo por satélite (Recomendação n.º 103);
Ligações de conexão no serviço de radiodifusão por satélite (Recomendação n.º 101);
Partilha das frequências entre, de um lado, o serviço de exploração da Terra por satélite (detectores passivos) e o serviço de pesquisa espacial (detectores passivos) e, do outro, os serviços fixo, móvel, excepto móvel aeronáutico, e fixo por satélite na faixa de 18,6-18,8 GHz (Recomendação n.º 706);
V. *Feixes hertzianos* (Recomendação n.º 102).

Serviço intersatélites:

Partilha das faixas de frequências entre o serviço móvel aeronáutico e o serviço intersatélites (Recomendação n.º 709);
Utilização da faixa de frequências de 32-33 GHz, partilhada entre o serviço intersatélites e o serviço de radionavegação (Recomendação n.º 707);
Utilização de radiodetectores aerotransportados nas faixas de frequências partilhadas pelo serviço intersatélites e o serviço de radiolocalização (Recomendação n.º 710).

Serviço móvel aeronáutico (OR):

Revisão do plano de adjudicação das frequências — apêndice 26 (Recomendação n.º 406).

Serviço móvel aeronáutico por satélite (R):

Estudo da utilização deste serviço (Recomendação n.º 405).

Serviço móvel aeronáutico (R):

Aplicação dos capítulos NX, NXI e NXII da Reestruturação do Regulamento das Radiocomunicações (Recomendação n.º 204);
Cooperação com vista ao emprego eficaz das frequências designadas para utilização mundial (Recomendação n.º 402);
Utilização eficaz das frequências designadas para utilização mundial ((Recomendação n.º 401);
Medidas a tomar para impedir o funcionamento de estações de radiodifusão a bordo de navios ou de aeronaves fora dos limites dos territórios nacionais (Recomendação n.º 9);
Introdução de técnicas que contribuirão para reduzir a saturação das faixas de ondas decamétricas (Recomendação n.º 403);
Modelos normalizados de licenças a conceder às estações de navio de aeronave (Recomendação n.º 7);
N.º 27/123 do apêndice 27 Aer2 (subdivisão de zona 5B) (Recomendação n.º 407);
Partilha das faixas de frequências entre o serviço móvel aeronáutico e o serviço intersatélites (Recomendação n.º 709);
Passagem ao novo plano de adjudicação de frequências entre 2850 kHz e 22 000 kHz (Recomendação n.º 400);
Utilização da faixa de 136-137 MHz (Recomendação n.º 404);
V. também *Perigo e segurança* (Recomendação n.º 604).

Serviços móveis:

Aplicação dos capítulos NX, NXI e NXII da Reestruturação do Regulamento das Radiocomunicações (Recomendação n.º 204);
Necessidade de fazer cessar o funcionamento das estações dos serviços fixo e móvel nas faixas de frequências de 149,9-150,05 MHz e de 399,9-400,05 MHz atribuídas ao serviço de radionavegação por satélite (Recomendação n.º 703);
Planificação da utilização das frequências na faixa de 435-526,5 kHz na Região 1 (Recomendação n.º 300);
Planificação da utilização das frequências nas faixas entre 1606,5 kHz e 3400 kHz na Região 1 (Recomendação n.º 301);
V. *Conferências administrativas* (Recomendação n.º 12);
V. *Perigo e segurança* (Recomendação n.º 200).

Serviço móvel marítimo:

Aplicação dos capítulos NX, NXI e NXII da Reestruturação do Regulamento das Radiocomunicações (Recomendação n.º 204);
Designação de frequências das faixas de ondas hectométricas utilizar em comum pelas estações costeiras radiotelefónicas para as comunicações com as estações de navio de nacionalidades diferentes das suas (Recomendação n.º 308);

Designação de uma frequência nas faixas de 435-495 kHz ou de 505-526,5 kHz para a emissão pelas estações costeiras dos boletins meteorológicos e dos avisos à navegação, por meio de telegrafia de faixa estreita com impressão directa (Recomendação n.º 309);
Estudos de interligação dos sistemas de radiocomunicações móveis marítimas com as redes telefónicas e telegráfica internacionais (Recomendação n.º 312);
Frequência reservada ás necessidades da segurança nas faixas compreendidas entre 1605 kHz e 3800 kHz (Recomendação n.º 307);
Frequências destinadas a serem utilizadas em todo o Mundo pelos navios de todas as categorias, assim como pelas estações costeiras — apêndice 16, secção B (Recomendação n.º 304);
Melhor utilização das vias radiotelefónicas em ondas decamétricas para estações costeiras (Recomendação n.º 302);
Medidas a tomar para impedir o funcionamento de estações de radiodifusão a bordo de navios ou de aeronaves fora dos limites dos territórios nacionais (Recomendação n.º 9);
Modelos normalizados de licenças a conceder às estações de navio e às estações de aeronave (Recomendação n.º 7);
Partilha das frequências entre, de um lado, o serviço de exploração da Terra por satélite (detectores passivos) e o serviço de pesquisa espacial (detectores passivos) e, de outro, os serviço fixo, móvel, excepto móvel aeronáutico, e fixo por satélite na faixa de 18,6-18,8 GHz (Recomendação n.º 706);
Planificação da utilização das frequências na faixa de 435-526,5 kHz na Região 1 (Recomendação n.º 300);
Planificação da utilização das frequências nas faixas compreendidas entre 1606,5 kHz e 3400 kHz na Região 1 (Recomendação n.º 301);
Sistema automático de radiocomunicações em ondas decimétricas para o serviço móvel marítimo (Recomendação n.º 310);
Utilização das vias 15 e 17 do apêndice 18 pelas estações de comunicações de bordo (Recomendação n.º 305);
Utilização de um sinal de frequência acústica consecutivo ao sinal de alarme radiotelefónico emitido pelas estações costeiras (Recomendação n.º 311);
Utilização futura da faixa de 2170-2194 kHz (Recomendação n.º 203);
Escuta na frequência de 156,8 MHz pelas estações costeiras para fins de perigo (Recomendação n.º 306);
V. *Perigo e Segurança* (Recomendações n.ºs 200, 201, 303 e 604);
V. Serviços de radiodeterminação (Recomendação n.º 604).

Serviço móvel marítimo por satélite:

Disposições temporárias relativas aos aspectos técnicos e de exploração (Recomendação n.º 313);
V. também *Perigo e segurança* (Recomendação n.º 201).

Serviços espaciais:

Faixas de frequências partilhadas pelos serviços de radiocomunicação espacial entre si, assim como entre os serviços de radiocomunicação espacial e os serviços de radiocomunicação de Terra (Recomendação n.º 708);
Coordenação das estações terrenas (Recomendação n.º 711);
Exame, pelas conferências administrativas mundiais das radiocomunicações, do estado de ocupação do espectro das frequências no domínio das radiocomunicações espaciais (Recomendação n.º 2);
Partilha das frequências entre, de um lado, o serviço de exploração da Terra por satélite (detectores passivos) e o serviço de pesquisa espacial (detectores passivos) e, do outro, os serviços fixo, móvel, excepto móvel aeronáutico, e fixo por satélite na faixa de 18,6-18,8 GHz (Recomendação n.º 706);
Utilização de sistemas de radiocomunicações espaciais em caso de catástrofes naturais, de epidemias e de outras situações críticas análogas (Recomendação n.º 1);
Utilização e partilha das faixas de frequências atribuídas às radiocomunicações espaciais (Recomendação n.º 700);
V. *Conferências administrativas* (Recomendação n.º 12);
V. *Ligações de conexão* (Recomendação n.º 101).

Técnicas da faixa lateral única:

V. *Serviço de radiodifusão* (Recomendação n.º 501).

Terminologia:

Definição dos termos «zona de serviço» e «zona de cobertura» (Recomendação n.º 67);
Emprego do termo «canal» no Regulamento das Radiocomunicações (Recomendação n.º 73);
Generalidades (Recomendação n.º 72).

Transmissão de energia eléctrica:

Transmissão de energia eléctrica por meio de frequências radioeléctricas a partir de um engenho espacial (Recomendação n.º 3).

União Internacional das Telecomunicações:

Exigindo uma intervenção directa da União:

Comissão Consultiva Internacional das Radiocomunicações (CCIR):

V. *Aplicação das técnicas informáticas* (Recomendação n.º 31);
V. *Fiscalização das emissões* (Recomendação n.º 30);
V. *Perigo e segurança* (Recomendação n.º 201);
V. *Difusão troposférica* (Recomendação n.º 100);
V. *Emissões* (Recomendações n.ºs 62 e 66);
V. *Equipamento* (Recomendações n.ºs 69, 70 e 605);
V. *Feixes hertzianos* (Recomendação n.º 102);
V. *Gestão de frequências* (Recomendações n.ºs 60, 64 e 605);
V. *Identificação das estações* (Recomendação n.º 8);
V. *Larguras de faixa* (Recomendação n.º 63);
V. *Normas técnicas* (Recomendações n.ºs 60 e 61);
V. *Propagação* (Recomendação n.º 68);
V. *Radiobalizas de localização de sinistros* (Recomendação n.º 604);
V. *Radiocomunicações em caso de catástrofes* (Recomendação n.º 1);

V. *Serviço de radiodifusão* (Recomendações n.os 500, 501, 502, 503 e 504);
V. *Serviço de radiodifusão por satélite* (Recomendações n.os 101, 505, 507, 508, 705 e 712);
V. *Serviço fixo* (Recomendação n.º 706);
V. *Serviço intersatélites* (Recomendações n.os 707, 709 e 710);
V. *Serviço móvel aeronáutico por satélite* (Recomendação n.º 405);
V. *Serviço aeronáutico (R)* (Recomendação n.º 709);
V. *Serviço móvel marítimo* (Recomendações n.os 300, 301, 302, 307, 310 e 312);
V. *Serviços de radiodeterminação* (Recomendações n.os 602, 704 e 707);
V. *Serviços espaciais* (Recomendações n.os 708 e 711);
V. *Terminologia* (Recomendações n.os 67, 72 e 73);
V. *Transmissão de energia eléctrica* (Recomendações n.º 3).

Comissão Consultiva Internacional Telegráfica e Telefónica (CCITT):

V. *Serviço móvel marítimo* (Recomendações n.os 310 e 312);
V. *Terminologia* (Recomendação n.º 72);

Comissão Internacional de Registo das Frequências (IFRB):

V. *Aplicação das técnicas informáticas* (Recomendação n.º 31);
V. *Fiscalização das emissões* (Recomendação n.º 30);
V. *Cooperação e assistência técnicas* (Recomendação n.º 6);
V. *Emissão* (Recomendação n.º 62);
V. *Gestão das frequências* (Recomendação n.º 60);
V. *Larguras de faixa* (Recomendação n.º 63);
V. *Normas técnicas* (Recomendações n.os 60 e 61);
V. *Serviço móvel aeronáutico (R)* (Recomendações n.os 400, 402, 403 e 404);

Conferências administrativas:

V. *Perigo e segurança* (Recomendações n.os 200, 201, 202 e 203);
V. *Difusão troposférica* (Recomendação n.º 100);
V. *Emissões* (Recomendação n.º 702);
V. *Equipamento* (Recomendação n.º 605);
V. *Regulamento das Radiocomunicações* (Recomendações n.os 13 e 204);
V. *Serviço de radioastronomia* (Recomendação n.º 701);
V. *Serviço de radiodifusão* (Recomendações n.os 500 e 504);
V. *Serviço intersatélites* (Recomendações n.os 707, 709 e 710);
V. *Serviço móvel aeronáutico (OR)* (Recomendação n.º 406);
V. *Serviço móvel aeronáutico (R)* (Recomendações n.os 204 e 407);
V. *Serviço móvel marítimo* (Recomendações n.os 204, 300, 301, 305, 307, 308, 309 e 310);
V. *Serviço móvel marítimo por satélite* (Recomendação n.º 313);
V. *Serviços de radiodeterminação* (Recomendações n.os 602 e 605);
V. *Serviços espaciais* (Recomendação n.º 711);
V. *Terminologia* (Recomendação n.º 72);
V. *União Internacional das Telecomunicações (conselho de administração)* (Recomendação n.º 13);

Conferências de plenipotenciários:

Convocação de futuras conferências administrativas das radiocomunicações tratando de serviços determinados (Recomendação n.º 12);

Conselho de administração:

Conferência administrativa mundial das radiocomunicações para uma revisão geral ou parcial do Regulamento das Radiocomunicações (Recomendação n.º 13);
V. *Conferências administrativas* (Recomendação n.º 12);
V. *Difusão troposférica* (Recomendação n.º 100);
V. *Serviço de radiodifusão* (Recomendação n.º 504);
V. *Serviço móvel aeronáutico (OR)* (Recomendação n.º 406);
V. *Serviço móvel marítimo* (Recomendações n.os 300 e 301);
V. *Serviços de radiodeterminação* (Recomendação n.º 602);
V. *Serviços espaciais* (Recomendação n.º 2);

Secretário-geral:

V. *Aplicação das técnicas informáticas* (Recomendação n.º 31);
V. *Conferências administrativas* (Recomendação n.º 10);
V. *Perigo e segurança* (Recomendações n.os 200 e 203);
V. *Regulamento das Radiocomunicações* (Recomendação n.º 204);
V. *Serviço de radiodifusão* (Recomendações n.os 9 e 502);
V. *Serviço móvel aeronáutico (R)* (Recomendações n.os 400 e 402);
V. *Serviço móvel marítimo* (Recomendações n.os 300, 301, 304, 309 e 310);
V. *Serviços de radiodeterminação* (Recomendação n.º 602);
V. *Terminologia* (Recomendação n.º 72);
V. *Transmissão de energia eléctrica* (Recomendação n.º 3).

Unidades SI:

Emprego do Sistema Internacional de Unidades (SI) (Recomendação n.º 74).

Índice ideográfico do Regulamento das Radiocomunicações (1979)

Assunto	Art., núm., ap., dec., res., rec.
Abreviaturas:	
—— e sinais diversos a empregar nas comunicações radiotelegráficas	Ap. 13
—— e sinais diversos a utilizar nas radiocomunicações de serviço móvel marítimo	Ap. 14
—— para indicação das frequências de trabalho	RR 4308
—— utilizadas em serviços que empregam a faixa de 12 GHz	Ap. 30 (anexo 9)
—— utilizadas nos documentos de serviço	Ap. 10
Outras abreviaturas:	
A — faixa lateral dupla	RR 271
A — telegrafia/recepção auditiva	RR 271
A — utilização regular no serviço fixo	RR 1222 Res. 9
Ap — apêndice do RR.	
ARQ — correcção de erros com circuito de retorno	RR 4844
Art. — artigo do RR.	
AS — espere	RR 5025
B — consignação de reserva no serviço fixo	RR 1222
B — faixas laterais independentes	RR 271
B — símbolo de consignação do serviço fixo	RES. 9
B — telegrafia/recepção automática	RR 273
BIH — Comissão Internacional da Hora	RR 15
C — consignação para utilização ocasional	RR 1222
C — Fac-símile	RR 273
C — Faixa lateral residual	RR 273
C — símbolo de consignação do serviço fixo	Res. 9
CCIR — Comissão Consultiva Internacional das Radiocomunicações	RR 15
COI — Comissão Oceanográfica Intergovernamental	Res. 314
CONV — Convenção Internacional das Telecomunicações	RR 2
CP — chamada a certas estações	RR 4753 RR 3701
CQ — chamada a todos	RR 4748 RR 4752 RR 3698 RR 3700
CQ — Transmissão repetida de —	RR 4724 RR 4726
CQK — chamada a todos	RR 3697
D — modulação de amplitude e angular	RR 271
D — transmissão de dados	RR 273
DEC — declaração do protocolo final do RR.	
DIRTLX$_{yz}$ — formato de mensagem	RR 4874
DP — dipolo	Ap. 2
E — telefonia	RR 273
EHF — ondas milimétricas	RR 208
F — modulação de frequência	RR 271
F — televisão (vídeo)	RR 271
F. cm — ondas centimétricas	RR 208
F. dam — ondas decamétricas	RR 208
F. dm — ondas decimétricas	RR 208
F. hm — ondas hectométricas	RR 208
F. km — ondas quilométricas	RR 208
F. Mam — ondas miriamétricas	RR 208
F. m — ondas métricas	RR 208
F. mm — ondas milimétricas	RR 208
G — GHz	RR 267
G — modulação de fase	RR 271
G_d — ganho em relação a um dipolo de meia onda	RR 154, *b*)
GHz — gigahertz	RR 208
G_i — ganho isotrópico ou absoluto	RR 154, *a*)
G_v — ganho em relação a uma antena vertical curta	RR 154, *c*)
H — faixa lateral única — portadora completa	RR 271
H — Hz	RR 267
H — radiobalizas tipo H	RR 3264
HF — ondas decamétricas	RR 208
HOR — antena horizontal não direccional	Ap. 2
Hz — hertz	RR 208
ICAO — Organização da Aviação Civil Internacional	Ap. 27 Aer 2
IFRB — Comissão Internacional do Registo de Frequências	Art. 10
ILS — Sistema de aterragem por instrumentos	RR 98
ISM — Utilizações industriais, científicas e médicas	RR 16
J — faixa lateral única — portadora suprimida	RR 271
K — impulsos modulados em amplitude	RR 271
K — kHz	RR 267
K — utilização depois de CQ	RR 4750
K — estação apta a receber tráfego	RR 4776
K — recepção correcta de radiotelegrama	RR 4799
K — fim de radiotelegrama	RR 4803
K — fim de transmissão de série	RR 4804
kHz — quilohertz	RR 208
L — impulsos modulados em largura/duração	RR 271
LF — ondas quilométricas	RR 208
M — impulsos modulados posição/fase	RR 271
M — MHz	RR 267
MF — ondas hectométricas	RR 208
MHz — megahertz	RR 208
N — emissão de onda não modulada	RR 271
N — nenhuma informação	RR 273
NEUTRAL — em radiotelefonia indica um transporte de país neutro	Res. 11
NID — algarismos de identificação de nacionalidade	Ap. 43
NNN — em radiotelegrafia indica um transporte de país neutro	Res. 11
NUM — número do RR.	
OMCI — Organização Intergovernamental Consultiva da Navegação Marítima	Res. 310
OMM — Organização Meteorológica Mundial	Res. 314
P — sequência de impulsos não modulados	RR 271
P. A. R. — potência aparente radiada	RR 156
P. A. R. V. — potência aparente radiada em relação a uma antena vertical curta	RR 157
P. I. R. E. — potência isotrópica radiada equivalente	RR 155
PX — potência de ponta (em dB)	RR 150
pX — potência de ponta (em W)	RR 150
PY — potência média (em dB)	RR 150
pY — potência média (em W)	RR 150
PZ — potência da portadora (em dB)	RR 150
pZ — potência da portadora (em W)	RR 150
Q — código	Ap. 13 e 14
Q — em modulação angular	RR 271
QRT — silêncio	RR 3138 e 3141
R — faixa lateral única — portadora reduzida	RR 271 RR 4806 e 5052
Racon — baliza-radar	RR 97
RCT — Red Cross Telegrams	RR 3651.2 RR 4441.2
Rec — Recomendação do RR.	
Res — Resolução do RR.	
RF — relação de protecção	RR 164
RHO — antena rômbica	Ap. 2

Assunto	Art., núm., ap., dec., res., rec.
RR — Regulamento das Radiocomunicações.	
RRR — recepção de mensagem de perigo	RR 3130
SHF — ondas centimétricas	RR 208
SI — Sistema Internacional de Unidades	Rec. 74
SOS — sinal de perigo	RR 3088
SSR — sistema de radar secundário de vigilância	Res. 11
THz — terahertz	RR 208
TLX_{yz} — formato de mensagem	RR 4875
TMG — tempo médio de Greenwhich	RR 15
TR — pedido de informação	RR 4741
	RR 3691
	RR 3802
TRO — antena para radiodifusão na zona tropical	Ap. 2
TTT — sinal de segurança	RR 3221
UAPT — União Africana dos Correios e Telecomunicações	Res. 5
UHF — ondas decimétricas	RR 208
UPAT — União Pan-Africana das Telecomunicações	Res. 5
URTNA — União das Radiodifusões e Televisões Nacionais de África	Res. 5
UTC — tempo universal coordenado	RR 15
	RR 237
	RR 238
V — impulsos modulados por outros meios	RR 271
VA — fim de trabalho	RR 5054
ER — antena vertical não direccional	Ap. 2
VHF — ondas métricas	RR 208
VLF — ondas miriamétricas	RR 208
VOLMET — zona de adjudicação ou de recepção	Ap. 27 Aer2
VVV — ensaios	RR 3767
	RR 4815
W — combinações várias	RR 273
W — modulações de impulsos (vários)	RR 271
X — modulações de impulsos (vários)	RR 271
X — outros casos	RR 272
XXX — sinal de urgência	RR 3196
YYY — transportes sanitários	RR 3210
ZLAMP — zona de passagem das linhas aéreas mundiais principais	Ap. 27 Aer2
ZLARN — zona das linhas aéreas regionais e nacionais	Ap. 27 Aer2
Acordo(s):	
Comunicação à IFRB da conclusão de um —— regional ou de serviço	RR 1233
—— especiais	Art. 7
—— especiais para Serviço Móvel Aeronáutico	RR 3569 e 3793
Adjudicação:	
—— (definição)	RR 2 e 18
Plano de —— de frequências	Ap. 27 Aer2
Uso do termo ——	RR 391
Administração(ões):	
—— (definição)	RR 3
Obrigação de as —— responderem à IFRB no caso de recomendações desta entidade	RR 1444-1450
Aeradio:	
Uso do termo ——	RR 2242
Aeronave(s):	
Comunicação de —— com navios	RR 4143
Condições de utilização da faixa 156-174 MHz por ——	RR 4148
—— em perigo — modo de proceder	RR 3000

Assunto	Art., núm., ap., dec., res., rec.
Estação de —— — definição	RR 2 e 78
Estação terrena de —— — definição	RR 2 e 79
Frequências a utilizar para evitar colisões entre ——	Rec. 601
Frequências que não devem ser usadas por ——	RR 4148
Proibição de radiodifusão a bordo de ——	Rec. 9
—— que convém equipar com instalações radioeléctricas	RR 2940
Segurança de —— de Estados neutros	Res. 11
Aerophare:	
Uso do termo ——	RR 2245
Águas interiores:	
Comunicações nas vias de ——	RR 613
Ajudas:	
——à navegação com utilização do efeito Doppler — frequências	RR 821
	RR 851
—— electrónicas à navegação aeronáutica — frequências	RR 709
	RR 732
Alarme:	
Aparelhos automáticos para sinais de ——	Ap. 36
Interferências às comunicações de ——	RR 964
	RR 3010
Sinal de ——	RR 2977
	Art. 41
Alcance:	
—— de interferência	Ap. 27 Aer2
—— de radiofaróis aeronáuticos	RR 2856
—— de radiofaróis marítimos	RR 2861
—— útil	Ap. 27 Aer2
Altitude:	
—— do apogeu ou do perigeu — (definição)	RR 2 e 179
Amador:	
—— (definição)	RR 2 e 53
Estação de ——	RR 2 e 90
Por satélite (serviço de ——)	RR 54
Serviço de ——	RR 53
	Art. 32
Utilização das faixas de —— aquando de catástrofes naturais	RR 510
Anéis:	
Sinais de identificação produzidos por ——	RR 4326
Antenas:	
—— de emissão de serviço de radiodifusão por satélite	Rec. 508
—— dos satélites geostacionários (Precisão da orientação das ——)	RR 2628 e 2630
Ganho de —— na direcção do horizonte da estação terrena para os satélites geostacionarios	Ap. 28 (anexo II)
Ganho de uma ——	RR 2 e 154
Símbolos de ——	Ap. 2
Utilização de —— direccionais para evitar interferências	RR 1807
Aparelhos:	
—— a utilizar nas estações — sua escolha, funcionalmente e emissões	RR 299-302
—— automáticos de telecomunicações	RR 3394.1
—— automáticos para recepção de sinais de alarme	Ap. 36
—— de correcção auditiva (frequências para——)	RR 506

Assunto	Art., núm., ap., dec., res., rec.
—— de faixa estreita de telegrafia com impressão directa	Ap. 38
—— receptores (energia radiada pelos ——)	RR 4099 RR 4140
Apogeu:	
Altitude do ——	RR 2 e 179
Assistência:	
—— aos países em desenvolvimento com vista a facilitar o acesso do seu serviço fixo às faixas das ondas decamétricas e assegurar protecção contra interferências	Res. 103
—— especial da IFRB a prestar às administrações	RR 1452 RR 1457
Necessidades práticas dos países que têm necessidade de —— especial	Rec. 6
—— técnica no domínio das radiocomunicações espaciais	Rec. 15
Aterragem:	
Sistema de —— por hiperfrequências	RR 796
Sistema de —— por instrumentos	RR 2 e 98
Sistema de —— por instrumentos (frequências)	RR 645
Atribuição(ões):	
—— adicionais	RR 426-429
Categorias de ——	Art. 8 (secção II)
—— das faixas de frequências	Art. 8
Definição de ——	RR 2 e 17
—— de substituição	RR 430-433
—— mundial	RR 437
—— regional	RR 437
Uso do termo ——	RR 391
Auditiva:	
Aparelhos de correcção —— (frequências)	RR 506
Aviso(s):	
—— à navegação marítima	Art. 42 (secção II)
Frequência para —— à navegação marítima	Rec. 309
Sinal de —— à navegação	RR 2978
Azimute(s):	
Classificação dos ——	Ap. 41
Procedimento para a obtenção dos ——	Ap. 41
Balizas-radar:	
—— (definição)	RR 2 e 97
—— funcionamento não autorizado	RR 775
—— frequências	RR 776 RR 825
Bóias:	
—— oceanográficas — frequências	RR 496
Busca:	
—— e salvamento de veículos espaciais habitados — frequências	RR 501
—— e salvamento:	
3023 kHz	RR 505
5680 kHz	RR 505 RR 2983
8364 kHz	RR 2987
243 MHz	RR 642
Calendário:	
—— gregoriano (Datas conforme com o ——)	RR 235

Assunto	Art., núm., ap., dec., res., rec.
Canal(ais):	
Definição do termo ——	Rec. 73
Interdependência entre a concepção de receptores, o agrupamento de —— e os critérios de partilha no serviço de radiodifusão por satélite	Rec. 712
Características:	
—— das emissões e dos materiais — definições	Art. 1 (secção VI)
—— dos aparelhos utilizados para as comunicações de bordo nas faixas 450-470 MHz	Ap. 20
—— do sistema de chamada selectiva no serviço móvel marítimo	Ap. 39
—— fundamentais a fornecer no caso de uma notificação nos termos dos n.os 1214 a 1217, 1219 e 1223 a 1227 do RR (1979)	Ap. 1
—— fundamentais das emissões	RR 270
—— técnicas das estações	Art. V
—— técnicas de radiobalizas	Ap. 37
—— técnicas dos emissores de faixa lateral única utilizados no serviço móvel marítimo	Ap. 17 e 40
—— técnicas dos emissores e dos receptores utilizados no serviço móvel marítimo entre 156 e 174 MHz	Ap. 19
—— técnicas dos equipamentos das estações de recepção	RR 310 e 311
—— técnicas dos materiais	Rec. 70 Rec. 71
Categoria(s):	
—— das consignações de frequência	Art. 12 (secção IV)
—— de serviços e de atribuições	Art. 8 (secção II)
Certificados:	
—— dos operadores das estações de aeronave	Art. 44 RR 3512 RR 3513
—— dos operadores das estações de navio e das estações terrenas de navio	Art. 55 RR 4015 RR 4016
Chamada:	
—— a várias estações	RR 4745
—— de perigo	Art. 39 (secção III)
(156,8 MHz)	RR 4386 RR 613
—— de perigo em radiotelefonia — 2182 kHz	RR 500
—— de perigo em radiotelegrafia — 500 kHz	RR 472 RR 4218
—— de perigo (prioridade da ——)	RR 3086
—— em radiotelegrafia no serviço móvel marítimo	RR 4718
—— em A1A — ondas decamétricas	Res. 312
—— e resposta	RR 4757
—— em 500 kHz	RR 4218 a 4231
—— em 1605-4000 kHz	RR 4347
—— em 2182 kHz	RR 4345 RR 4959 RR 500
—— em 4000-27 500 kHz	RR 4259-4271
—— em 4125 kHz	RR 2982
—— em 4125 kHz e 6215,5 kHz	RR 4379
—— em 156,8 MHz	RR 4387 RR 613
—— em frequências do Ap. 18	RR 4391
—— feita por estações costeiras	RR 4376 RR 4970
—— feitas por estações de navio	RR 4375
Forma da —— geral a todas as estações	RR 4727

Assunto	Art., núm., ap., dec., res., rec.
Fórmula da —— no serviço móvel aeronáutico	RR 3707
Frequência de —— suplementar a utilizar por navios (512 kHz)	RR 4239
Intervalo entre ——	RR 4756
Método de ——	Art. 63 (secção IV)
Utilização das frequências de trabalho para ——	RR 4392
Chamada selectiva:	
—— a todos os navios	RR 3283
Consignação do mesmo número de —— mais de uma vez	RR 2091
—— em H2B	RR 4342
	RR 4376.1
—— em 500 kHz	RR 4231
—— em 2182 kHz	RR 2976
—— em 1605-4000 kHz	RR 4665
Frequências a utilizar na ——	RR 4666
	RR 4679
Frequências de estações costeiras em ——	RR 4265
	Art. 60
Frequências de estações de navio em ——	RR 4286
	Art. 60
Método de ——	RR 4669
—— no serviço móvel marítimo	Art. 62
	Res. 311
—— no serviço móvel marítimo (características do sistema de ——)	Ap. 39
—— numérica (frequências de estações costeiras)	RR 4684
—— numérica (frequências de navio para ——)	RR 4683
—— numérica (uso de 156,8 MHz)	RR 4390
Números de ——	RR 2088 e 2084
	Art. 25 (secção V)
	Ap.44
Ciclones:	
Transmissão de mensagens sobre ——	RR 3331
Circular:	
A —— semanal da IFRB é meio de comunicação com as Administrações	RR 1456
Informações contidas na —— semanal da IFRB	RR 1236
	RR 1455
Classe(s) de emissão:	
—— a utilizar em 1605-4000 kHz	RR 4126
	RR 4332
	Res. 200
—— a utilizar em 2170,5 kHz	RR 4342
—— a utilizar em 2182 kHz	RR 2973
	RR 4127
	RR 4343
	Res. 200
—— a utilizar em 2191 kHz	RR 4342
—— a utilizar em radiotelefonia entre 4000 kHz e 23 000 kHz	RR 4371
—— a utilizar em 4125 kHz	RR 2982
—— a utilizar em 6215,5 kHz	RR 2986
—— a utilizar em 156,8 Mhz	RR 2994
	RR 4386
—— a utilizar para evitar interferências	RR 1811
—— a utilizar pelas estações costeiras e pelas estações de navios nas regiões de tráfego intenso	RR 4235
—— a utilizar pelas estações de navios em radiotelegrafia de 4000 kHz a 27 500 kHz	RR 4253
	RR 4254
—— a utilizar por navios em 405-535 kHz	RR 4111-3113
—— a utilizar por navios em 500 kHz	RR 4111
—— a utilizar por navios entre 156 Mhz e 174 MHz	RR 4134

—— de coordenação	RR 2 e 166
Conversação:	
—— radiotelefónica	RR 2 e 118
Cooperação:	
—— internacional no domínio das radiocomunicações espaciais	Res. 15
—— técnica com os países em desenvolvimento no domínio dos estudos de propagação nas regiões tropicais	Res. 5
—— Idem no domínio das telecomunicações marítimas	Res. 316
Coordenação:	
Contorno de —— (definição)	RR 2 e 166
—— de estações terrenas	Rec. 711
—— das consignações de frequência a uma estação de Terra emissora em relação a uma estação terrena	RR 1147 e 1188
—— das consignações de frequência a uma estação espacial a bordo de um satélite geostacionário ou a uma estação terrena	RR 1059 a 1105
—— das consignações de frequência a uma estação terrena em relação às estações de Terra	RR 1106 a 1146
—— das consignações de frequência às estações de um serviço de radiocomunicação espacial	Art. 11
Distância de ——	RR 2 e 167
—— entre estações espaciais do serviço de radiodifusão por satélite e estações de Terra	Res. 33
—— entre estações espaciais e sistemas espaciais	Res. 33
—— entre redes de satélites geostacionário (método de cálculo)	Ap. 29
—— método de determinação da zona de —— de uma estação terrena	Ap. 28
Zona de —— (definição)	RR 2 e 165
Correcção auditiva:	
Aparelhos de —— (frequências a utilizar ——)	RR 506
Correspondência:	
Exploração, taxação e contabilidade da —— pública nos serviços móveis	Res. 201
—— pública (categorias das estações de navio para o serviço de ——)	RR 4052
—— pública — definição	RR 2 e 110

Assunto	Art., núm., ap., dec., res., rec.
—— pública — disposições aplicáveis ao serviço móvel aeronáutico	RR **3570**
—— pública (em frequência do serviço móvel aeronáutico)	RR **3633**
—— pública (no serviço móvel marítimo e no serviço móvel marítimo por satélite)	Art. 66
Supressão das taxas de estação móvel para a —— pública	Res. 315
Crescente Vermelho:	
Frequências a consignar	Res. 10
Cruz Vermelha:	
Frequências a consignar	Res. 10
Dados	
Transmissão de dados (frequências)	Ap. 32 Ap. 33 Res. 310
Datas:	
—— a inscrever no Ficheiro de referência	Art. 12 (secção III) Res. 9
As —— devem estar em conformidade com o calendário gregoriano	RR **235**
—— de entrada em vigor do RR (1979)	Art. 69
Modo de representar as ——	RR **236**
Nomenclatura das ——	Art. 3
—— para alterar o espaçamento na faixa 156-174 MHz no serviço móvel marítimo	Res. 308
1-4-53 — data na coluna 2d	Res. 30
29-4-66 — data na coluna 2a	Res. 400
1-1-70 — potência de estações de navio montadas a partir de —— entre 156-174 MHz	RR **4416**
1-1-76 —— as frequências devem estar de acordo com o Ap. 35	Res. 304
5-3-78 —— data na coluna 2a ou 2b	Res. 400
6-3-78 — data na coluna 2b	Res. 400
1-1-79 — entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para o Serviço de Radiodifusão por Satélite (Genebra, 1977)	Ap. 30 (anexo 1)
Início do prazo de 15 anos do plano para a radiodifusão por satélite	Ap. 30 Art. 16
1-9-79 — entrada em vigor dos Actos Finais da CAMR do Serviço Móvel Aeronáutico (R)	Res. 402
24-9-79 — início da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979)	P. 1
1-1-81 — entrada em vigor de alguns artigos e apêndices do RR (1979)	RR **5188**
1-1-82 — os navios deixam de ser obrigados a receber em A3E e H3E	RR **4129**
Classes R3E e J3E	Res. 306
Classes de emissão A3E e H3E	RR **4337** RR **4361** RR **4364** RR **4353** RR **4127**
Entrada em vigor do RR (1979)	RR **5187**
Data a inscrever na coluna 2d para consignações da classe A	Res. 8
1-1-82 a 30-6-84 — suspensão das disposições do artigo 12 e do n.º **1242**	Res. 8
2-1-82 — data a inscrever na coluna 2d para consignação da classe B	Res. 8
1-1-83 — a faixa 156,725-156,875 MHz é substituída por 156,7625-156,8375 MHz	RR **4393.1** RR **3033.1**
Espaçamento de 25 kHz na faixa 156-174 MHz	Res. 308
Entrada em vigor de alguns artigos e apêndices do RR (1979)	RR **5189**
Proibição de transmitir entre 156,7625 MHz e 156,8375 MHz	RR **4393.1**
1-2-83 — fim do período de aplicação do procedimento de transferência às consignações do serviço fixo aeronáutico entre 21 924 kHz e 22 000 kHz	Res. 8
Entrada em vigor do Plano contido no Ap. 27 Aer2	Res. 400 Res. 401
1-7-83 — a IFRB envia listas do serviço fixo às administrações e começa o exame às respostas	Res. 8
2-2-83 — data da coluna 2b	Res. 400
1-1-84 — fim da utilização de H3E em 4125 kHz e 6215,5 kHz	RR **2982** e **2986**
1-7-84 — a IFRB termina o exame das respostas das administrações quanto a serviço fixo	Res. 8
Começam a aplicar-se as disposições do artigo 12 às faixas do serviço fixo entre 4000 kHz e 27 500 kHz	Res. 8
Data a inscrever na coluna 2d nas consignações notificadas nos termos do n.º **1218**	Res. 8
1-7-85 — data de substituição das inscrições provisórias na IFRB	Res. 8
1-2-86 — mudança no limite de faixa de 150 kHz para 148,5 kHz	RR **458** Res. 500
1-2-87 — data limite para a utilização de faixa lateral dupla no serviço móvel aeronáutico (R)	Res. 402
31-12-87 — abolição das taxas de estação móvel para correspondência pública	Res. 315
1-2-88 — mudança de portadora de estações de radiodifusão	Res. 500
1-7-89 — data limite para substituir consignações do serviço fixo superiores a 10 MHz	Res. 8
1-1-90 — protecção ao serviço móvel aeronáutico (R)	Rec. 404
Utilização da faixa 136-137 MHz pelo serviço móvel aeronáutico e outros	RR **595**
1-2-90 — mudança no limite de faixa de 285 kHz para 283,5 kHz	RR **458**
1-7-94 — data limite para substituir consignações do serviço fixo inferiores a 10 MHz	Res. 8

Estação(ões) de navio:	
Categoria de —— para o serviço de correspondência pública	RR **4052**
Classes de emissão de ——	RR **4125**
—— comunicando em frequências de estação costeira	RR **961**
—— (definição)	RR **2** e **72**
Documentos de que devem estar providas as ——	Ap. 11
Emissor de socorro de navio — definição	RR **93**
Frequências de ——	RR **4197** RR **4199-4206** RR **4211** RR **4183** RR **4132** RR **4375** RR **2975**
Horas de serviço das ——	Ap. 12
Inspecções das ——	Art. 57
—— no mar não podem efectuar serviço de radiodifusão	RR **4103**
Obrigatoriedade de as —— obedecerem às disposições dos capítulos III e XI	RR **4097**
—— entre 1605 e 2850 kHz (potência das ——)	RR **4357**
—— entre 156 e 174 MHz (potência das ——)	RR **4410**
—— que utilizam a radiotelefonia	RR **4124**
—— que utilizam a radiotelegrafia	RR **4106**
—— que utilizam a telegrafia com impressão directa de faixa estreita	RR **4123**
Estação de radioastronomia:	
—— (definição)	RR **2** e **91**
—— (notificação e inscrição no ficheiro de referência)	Art. 13
Estação de radiobaliza de localização de sinistros:	
—— (definição)	RR **2** e **88**

Assunto	Art., núm., ap., dec., res., rec.
Estação de radiodeterminação:	
—— (definição)	RR **2** e **81**
Estação de radiodifusão:	
—— (definição)	RR **2** e **80**
Modo de identificar uma ——	RR **2093**
—— por satélite na faixa 11,7-12,5 GHz (coordenação, notificação e inscrição de consignações a ——)	Art. 15
Estação de radiofarol	Art. 35 (secção IV)
—— (definição)	RR **2** e **87**
Estação(ões) de radiogoniometria	RR **2841-2845**
—— (definição)	RR **2** e **86**
Estação de recepção:	
Características técnicas de equipamento de ——	RR **310** e **311**
Estação de terra:	
—— acima de 1 GHz (potência, frequências, radiação máxima)	Art. 27
Consignação de frequências na faixa 11,7-12,5 GHz	Res. 32
—— (definição)	RR **2** e **59**
Estação(ões) espacial(ais):	
Cessação das emissões de uma ——	RR **2612**
—— consignação de frequências na faixa 11,7-12,5 GHz	Res. 32
Coordenação das consignações de frequência a uma ——	RR **1059-1105**
—— (definição)	RR **2** e **61**
Densidade de fluxo de potência de ——	Art. 28 (secção IV)
Entrada em serviço de —— antes da entrada em vigor de acordos e planos	Res. 33
Manutenção em posição de ——	RR **2615-2627**
Notificação de inscrição no ficheiro de referência de ——	Art. 13
Notificação e inscrição no ficheiro de referência de —— que entram em serviço antes da entrada em vigor de acordos e planos	Res. 33
Estação experimental	Art. 34
—— (definição)	RR **2** e **92**
Estação fixa:	
—— (definição)	RR **2** e **63**
Estação fixa aeronáutica:	
—— (definição)	RR **2** e **64**
Estação(ões) móvel(eis):	
—— comunicando em frequências da estação costeira	RR **961**
—— (definição)	RR **2** e **65**
—— de radiolocalização	RR **2** e **84**
—— de radionavegação	RR **2** e **82**
—— do serviço móvel aeronáutico (condições a que devem satisfazer as ——)	Art. 49
—— do serviço móvel aeronáutico (horário das ——)	Art. 47
—— do serviço móvel marítimo (comunicações de —— com aeronaves)	RR **3571**
—— do serviço móvel marítimo (horário das ——)	Art. 58
—— terrestre — definição	RR **2** e **69**
Estação portuária:	
—— (definição)	RR **2** e **75**

Assunto	Art., núm., ap., dec., res., rec.
Estação(ões) terrenas:	
—— (definição)	RR 2 e 60
—— acima de 15 GHz (potência isotrópica de ——)	RR 2542-2548
—— aeronáutica — definição	RR 2 e 77
Ângulo de elevação de ——	RR 2550-2551
Coordenação das consignações de frequência a uma —— em relação às estações de Terra	RR 1106-1146
Coordenação de ——	Rec. 711
—— costeira — definição	RR 2 e 71
—— de aeronave — definição	RR 2 e 79
—— de aeronave utilizando frequências do serviço móvel marítimo por satélite	RR 963
—— de navio (condições a satisfazer pelas ——)	RR 4138-4141
—— de navio — definição	RR 2 e 73
—— de navio (Inspecção das ——)	Art. 57
—— terrenas entre 1 GHz e 15 GHz (potência isotrópica de ——)	RR 2541-2547
Limitações da potência das —— fora do eixo do feixe principal	Art. 29 (secção VII)
Método de determinação da zona de coordenação de uma ——	Ap. 28
—— que funcionam em faixas de frequências acima de 1 GHz (localização e frequências das ——)	RR 2539
—— móvel	RR 2 e 66
Estação terrestre:	
—— comunicação com estações fixas ou terrenas do serviço fixo ou com outras estações terrestres	RR 958-959
—— (definição)	RR 2 e 67
—— de radiolocalização — definição	RR 2 e 85
—— de radionavegação — definição	RR 2 e 83
Estudo:	
—— de problemas de utilização de frequências a fazer pela IFRB a pedido de qualquer administração	RR 1438-1450
État prioritè	RR 3651 RR 4441
Exame:	
—— de fichas de notificação	Art. 12 Art. 13
Expansão:	
—— de largura de faixa	RR 308
Expansores:	
Sistema de ——	RR 4329-4330 Ap. 40
Experiências:	
—— em estações	RR 1842-1846
Exploração:	
—— da terra por satélite:	
(Serviço de —— definição)	RR 2 e 48
(Interferências)	RR 345
—— dúplex — definição	RR 2 e 120
—— espacial — frequência e largura de faixa	RR 608
—— espacial (serviço de ——) definição	RR 2 e 25
—— semidúplex — definição	RR 2 e 121
—— *simplex* — definição	RR 2 e 119
Fac-símile:	
Definição	RR 2 e 116
Frequências (serviço móvel marítimo)	RR 4200 RR 4209

Assunto	Art., núm., ap., dec., res., rec.
Faixa:	
—— de frequências consignadas — definição	RR 2 e 141
—— de frequências (designações a não usar)	RR 209
—— de frequências (nomenclatura das ——)	Art. 2
—— de frequências (quadro das ——)	Art. 8 (secção III)
—— de frequências (técnicas que permitam elaborar novos esquemas de partilha e de utilização das ——)	Rec. 65
—— de guarda de 500 kHz	Rec. 200
—— de guarda de 2182 kHz	RR 4188
Emissão fora de ——	RR 2 e 138-140 RR 305 RR 1812
Emprego da —— lateral única no serviço móvel marítimo entre 1605 kHz e 4000 kHz	Res. 306
—— estreita de telegrafia com impressão directa e transmissão de dados no serviço móvel marítimo	Ap. 32 Ap. 33 Ap. 38
—— lateral dupla (abandono da —— no serviço fixo)	RR 2700
—— lateral dupla — não autorização de FLD no serviço móvel marítimo entre 1605 kHz e 4000 kHz	Res. 306
—— lateral dupla [utilização da FLD no serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz]	Res. 402
—— lateral única (características dos aparelhos de ——)	RR 4328 RR 4330 Ap. 17 Ap. 40
—— lateral única com portadora completa	RR 2 e 135
—— lateral única com portadora reduzida	RR 2 e 136
—— lateral única com portadora suprimida	RR 2 e 137
—— lateral única	RR 2 e 134
—— lateral única (frequência consignada no serviço móvel marítimo)	RR 4194
—— lateral única no serviço de radiodifusão em ondas decamétricas	Rec. 501
—— lateral única (portadora a utilizar por estações costeiras em ——)	RR 4191 Res. 307
—— lateral única (portadora a utilizar por estações de navio em ——)	RR 4192 Res. 307
—— lateral única (utilização da faixa lateral superior)	RR 4181 RR 4191-4192 Ap. 17
—— lateral única [utilização da FLU no serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz]	Res. 402
—— N	RR 208
—— necessária (cálculo da largura de ——)	Ap. 6
—— necessária (largura de ——)	RR 2 e 146
—— necessária — modo de a designar	RR 266-267
Número da ——)	RR 208
—— ocupada (largura de ——)	RR 2 e 147 RR 307
Técnicas de expansão de largura de ——	RR 308
Feixes hertzianos:	
Métodos de modulação	Rec. 102
Ficha(s)	
—— de notificação relativas às estações de radiocomunicação espacial e de radioastronomia	Ap. 3
—— de notificação à IFRB	RR 1221-1222 Ap. 2
—— de notificação à IFRB (menção na circular semanal da IFRB)	RR 1235

Assunto	Art., núm., ap., dec., res., rec.
—— de notificação à IFRB (seu exame)	Art. 12 (secção II)
—— de notificação à IFRB (sua devolução)	RR 1234
Ficheiro	
—— de referência (actualização)	RR 1429-1437
—— de referência (colaboração a dar pelas administrações para a sua melhoria)	RR 1436
—— de referência (comunicação às administrações de alterações no ——)	RR 1455
—— de referência (revisão de inscrições no —— a pedido de conferências anteriores)	Res. 30
Fiscalização:	
Ajuda de outros organismos centralizadores para fins de fiscalização	RR 1884
—— de estações	RR 312
—— de estações [relatório sobre uma irregularidade ou uma infracção à Convenção ou ao RR (1979)]	Ap. 22
—— internacional das emissões	Art. 20 Rec. 30
—— internacional das emissões (nomenclatura das estações de ——)	Ap. 9
—— internacional das emissões (pedido de —— feito pela IFRB e pelas administrações)	RR 1874
—— internacional das emissões (publicações dos resultados das observações da ——)	RR 1000
—— internacional das emissões (relatório sobre as observações de ——)	Ap. 21
—— internacional das emissões	Rec. 30
Fitas:	
—— de chamada (sinais de identificação produzidos por ——)	RR 4326
Frequência(s):	
Frequências	Cap. III
—— acima de 30 MHz (proibição de utilizar —— por aeronave)	RR 4148
—— a consignar à Cruz Vermelha, ao Crescente Vermelho e ao Leão-e-Sol Vermelho	Res. 10
—— acústica (sinal de —— consecutivo ao sinal de alarme radiotelefónico emitido pelas estações costeiras)	Rec. 311
—— acústica superior a utilizar em faixa lateral única com dispositivo de segredo	Ap. 40
—— acústicas transmitidas em f. l. única — no serviço móvel marítimo	Ap. 17
—— aeronáuticas de urgência (121,5 MHz e 123,5 MHz)	RR 593
Afastamento dos limites de faixa	RR 343
As —— em faixa lateral única são designadas pela frequência portadora (excepto no que se refere às disposições do artigo 12)	RR 4325
—— a usar por transportes neutros	Res. 11
—— a utilizar para a chamada (serviço móvel marítimo)	RR 4757
—— a utilizar para evitar colisões entre aeronaves	Rec. 601
—— a utilizar pelos sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados na faixa 4 MHz a 23 MHz e 4 MHz a 27,5 MHz	Ap. 32 Ap. 33
—— Característica — definição	RR 2 e 143
Consignação de —— ao serviço móvel aeronáutico	RR 3632
Consignação e emprego de ——	Art. 6 Art. 9

Assunto	Art., núm., ap., dec., res., rec.
—— consignada — definição	RR 2 e 142
—— consignada em faixa lateral única no serviço móvel marítimo (1400 Hz acima da portadora)	RR 4194 RR 4325 RR 501
—— da busca e salvamento	
—— de chamada a consignar a estações de navio para A1A	Ap. 34
—— de emissão de faixa lateral única para exploração dúplex — serviço móvel marítimo	Ap. 16 RR 4383
—— de emissão de faixa lateral única para exploração *simplex*	Ap. 16 RR 4383
—— de estações costeiras:	
405-535 kHz	RR 4232
1605-4000 kHz	RR 4356
4000-27 500 kHz	RR 4198-4199 RR 4207-4212 RR 4382 Ap. 16
156-174 MHz	RR 4405 Ap. 18
—— de estações costeiras — chamada:	
405-535 kHz	RR 4217 RR 4241 RR 4243
1605-4000 kHz	RR 4343
4000-23 000 kHz	RR 4376
156-174 MHz	RR 4386-4387
Chamada selectiva:	
156-174 MHz	RR 4385 RR 4684 RR 4390
—— de estações de bóia	RR 4297
—— de estações de dados oceanográficos	RR 4297
—— de estações de navio — chamada	Ap. 34
405-535 kHz	RR 4217 RR 4729 RR 4239 e 4243
1605-3600 kHz	Res. 303
1605-4000 kHz	RR 4956-4965
4000-23 000 kHz	RR 4375 RR 4968-4972
156-174 MHz	RR 4385 RR 4973-4980
—— de estações de navio — chamada selectiva:	
(1605-4000 kHz)	RR 4665
Outras	RR 4680
(4000-23 000 kHz)	RR 4683
156,8 MHz	RR 4390
—— de estações de navio:	
Consignação a estações de navio	RR 4276
405-535 kHz	RR 4183 RR 4237
1605-4000 kHz	RR 4359-4368 Res. 303
4000-27 500 kHz	RR 541 RR 517 RR 4197-4211 RR 4287-4311 RR 4383
—— de perigo e segurança	Arts. 37 e 38
—— de perigo, segurança e chamada	Art. 38
(500 kHz)	RR 472 RR 2970 RR 4218 RR 4225
(2182 kHz)	RR 500 RR 4343
156,8 MHz	RR 613 RR 4386

Assunto	Art., núm., ap., dec., res., rec.
—— de radiogoniometria (410 kHz)	RR **2841**
—— de referência — definição	RR **2** e **144**
—— de resposta	RR **4266**
	RR **4768**
—— de resposta a uma chamada em 500 kHz	RR **4229**
Derrogações ao Quadro de Atribuição de Faixas de ——	RR **342**
—— de trabalho de estações de navio para A1A	Ap. 35
Disposições especiais relativas ao emprego de —— no serviço móvel marítimo	Art. 60
—— do ap. 16 (secção B, *simplex*) — utilização das —— no serviço móvel marítimo (costeiras e navios)	Rec. 304
	RR **4383**
—— do serviço móvel aeronáutico (R) designadas para utilização mundial	Rec. 401
	Rec. 402
—— do serviço móvel aeronáutico (R) (para que se usam)	RR **3630-3631**
—— em ondas hectométricas a utilizar em comum pelas estações costeiras para comunicações com navios de outras nacionalidades	Rec. 308
Estabilidade de —— das estações de amador	RR **2738**
Evitar interferências a —— utilizadas em conformidade com o quadro do artigo 8	RR **341**
Limitação do número de —— a utilizar	RR **339**
—— navio-navio entre 1605 kHz e 3600 kHz	Res. 303
Nomenclatura das faixas de ——	Art. 2
—— no serviço móvel aeronáutico (disposições especiais relativas à utilização de ——)	Art. 50
—— no serviço móvel marítimo (disposições especiais relativas à utilização de ——)	Art. 60
(obrigação de utilizar os últimos aperfeiçoamentos da técnica)	RR **339**
[obrigatoriedade de seguir prescrições do RR (1979)]	RR **340**
Ocupação do espectro de —— no domínio das radiocomunicações espaciais	Rec. 2
—— padrão e de sinais horários	RR **447**
	RR **791**
—— padrão e de sinais horários (estação de ——)	RR **2** e **89**
—— padrão e de sinais horários (serviço de ——)	RR **2** e **50**
—— padrão e de sinais horários por satélite (serviço de ——)	RR **2** e **51**
—— para a permuta internacional de informações meteorológicas sinópticas	RR **2704-2705**
—— para a polícia internacional	RR **2702-2703**
—— para estações de serviço móvel marítimo entre 4 MHz e 27,5 MHz	Ap. 31
—— para estações de serviço móvel marítimo entre 156 MHz e 174 MHz	Ap. 18
—— partilhadas entre o serviço móvel aeronáutico e o serviço intersatélites	Rec. 709
—— partilhadas pelos serviços de radiocomunicação espacial entre si, bem como entre os serviços de radiocomunicação espacial e os serviços de radiocomunicação de Terra	Rec. 708
Partilha de ——	Art. 1 (secção VII)
—— portadora a utilizar em faixa lateral única	RR **4191** e **4192**
Quadro das faixas de ——	Art. 8 (secção III)
—— que não devem ser notificadas à IFRB	RR **1220**
—— que não devem ser usadas por aeronaves	RR **4148**
—— reservadas às necessidades da segurança entre 1605 kHz e 3800 kHz	Rec. 307
Telegrafia por variação de ——	RR **2** e **115**
Tolerância de ——	RR **2** e **145**
	RR **303**
	Ap. 7
Unidades em que se exprimem as ——	RR **208**
Utilização da faixa 1606,5-3800 kHz escolha de ——	RR **4188**
Utilização de —— em radiotelefonia	RR **4324**
Utilização de equipamentos para se obter o máximo de eficácia do espectro de ——	RR **302**
Utilização de —— no serviço móvel marítimo	Art. 60
—— utilizadas pela radiolifusão na zona tropical	RR **2669**
2380 Hz — Frequência acústica superior a utilizar com inversores ou qualquer outro dispositivo de segredo	Ap. 40
148,5-283,5 kHz — Nova faixa de radiolifusão	Res. 500
405-415 kHz — A faixa —— não deve ser usada pelas estações costeiras da Região 1	RR **4185**
Utilização da faixa —— pelo serviço móvel marítimo	RR **4233**
405-535 kHz — Espaçamento entre frequências adjacentes na faixa ——	RR **4184**
Classes de emissão de estações de navio na faixa ——	RR **4110**
	RR **4315**
405-535 kHz — Radiotelegrafia na faixa ——	RR **4217-4243**
410 kHz:	
É frequência portadora em H2A e H2B	RR **4181**
Protecção de ——	RR **4185**
415-535 kHz — Frequências de estações de navio	RR **4183**
425 kHz — É frequência portadora em H2A e H2B — é frequência de trabalho de estação de navio	RR **4181**
	RR **4237**
435-495 kHz — Designação de uma frequência em base mundial para emissão de boletins meteorológicos e avisos à navegação	Rec. 309
435-526,5 kHz — Planificação da utilização das frequências pelo serviço móvel marítimo na faixa ——	Rec. 300
454 kHz — É frequência portadora em H2A e H2B — é frequência de trabalho de estação de navio	RR **4181**
	RR **4237**
468 kHz:	
É frequência portadora em H2A e H2B	RR **4181**
É frequência de trabalho de estação de navio	RR **4237**
480 kHz:	
É frequência de trabalho de estação de navio	RR **4237**
É frequência portadora em H2A e H2B	RR **4181**
490-510 kHz — Proibição de telegrafia da faixa estreita com impressão directa	RR **4316**
500 kHz:	
Chamada selectiva	RR **4680**
Chamada e resposta	RR **4218**
Utilização em radiogoniometria	RR **4236**

Assunto	Art., núm., ap., dec., res., rec.
500 kHz:	
Listas de chamadas	RR **4729**
Classes de emissão de estações de navio	RR **4111**
Vigília na frequência de ——	RR **3037**
Protecção à frequência de ——	RR **3017**
É frequência portadora em H2A e H2B	RR **4181**
Faixa de guarda	Rec. 200
505-526,5 kHz — Designação de uma frequência em base mundial para a emissão de boletins meteorológicos e de avisos à navegação	Rec. 309
512 kHz:	
Frequência de chamada suplementar	RR **4239** RR **4241** RR **4243**
É frequência portadora em H2A e H2B	RR **4181**
É frequência de trabalho de estação de navio	RR **4237** RR **4243**
1605-1705 kHz — Radiodifusão na Região 2	Rec. 504
1605-2850 kHz — Potência de estação de navio	RR **4357**
1605-3600 kHz — Navio-navio	Res. 303
1605-3800 kHz — Escolha de uma frequência reservada à segurança	Rec. 307
1605-4000 kHz:	
Características técnicas de emissores de faixa lateral única	Ap. 17
Chamada selectiva	RR **4665**
Classes de emissão de estações de navio e outras condições	RR **4125**
Utilização da FIB por estações de navio	RR **4318**
Radiotelefonia — classes de emissão, potências	RR **4331-4369**
1605-4000 kHz:	
Serviço móvel marítimo	RR **4956**
Utilização de FLU no serviço móvel marítimo	Res. 306 Res. 307
1606,5-2850 kHz — Novo plano para o serviço móvel marítimo	Res. 38
1606,5-3400 kHz — Planificação da utilização das frequências pelo serviço móvel marítimo	Rec. 301
1606,5-3800 kHz:	
Frequências a utilizar no serviço móvel marítimo	RR **4188**
Espaçamentos a utilizar	RR **4189-4190**
1625-2170 kHz — Reconsignação de frequências para os serviços fixo e móvel	Res. 38
2046 kHz — Utilização por navios	RR **4360**
2047,4 kHz — Utilização por navios	RR **4360**
2049 kHz — Utilização por navios	RR **4360** RR **4361**
2050,4 kHz — Utilização por navios	RR **4360**
2053 kHz — Utilização por navios	RR **4363**
2054,4 kHz — Utilização por navios	RR **4363**
2056 kHz — Utilização por navios	RR **4363** RR **4364**
2057,4 kHz — Utilização por navios	RR **4363**
2170-2173,5 kHz — Classes de emissão e potência	RR **4342**
2170-2194 kHz:	
Proibição de telegrafia de faixa estreita com impressão directa	RR **4319**
Utilização futura da faixa	Rec. 203
Utilização não autorizada	Res. 309
2170,5 kHz:	
Frequência portadora	RR **4342**
Chamada selectiva	RR **4680**
Classes de emissão	Res. 306
2173,5-2190,5 kHz — Faixa de guarda de 2182 kHz	RR **4188**
2182 kHz:	
Frequência de chamada de estação de navio	RR **4959**
Vigília em ——	RR **3047**
Classes de emissão em ——	RR **4127**
Ensaios em ——	RR **5060**
Faixa de guarda de ——	RR **4188**
Frequência de perigo	RR **2972**
Perigo, chamada e resposta	RR **4962-4966**
Classes de emissão	RR **4343-4356**
Protecção à frequência de ——	RR **3022**
Radiobalizas de localização de sinistros	RR **3256** Ap. 37
Utilização de R3E e J3E	Res. 200
Utilização de A3E e H3E	Res. 306
2190,5-2194 kHz — Classes de emissão e potência	RR **4342**
2191 kHz:	
Chamada	RR **4960**
Frequência portadora	RR **4342**
2192,4 kHz — Chamada	RR **4960**
2505-23 350 kHz	Ap. 26
2850-22 000 kHz — Serviço móvel aeronáutico (R) — passagem do plano actual ao novo plano	Ap. 27 Aer2 Rec. 400 Res. 400 Res. 401 Res. 402
2850-22 000 kHz — Utilização não autorizada de frequências	Res. 407
3000-27 500 kHz — Revisão do ficheiro de referência — Serviço fixo	Res. 9
3000-30 000 kHz — Redução da saturação da faixa	Rec. 5
3023 kHz:	
Busca e salvamento	RR **2979**
Serviço móvel marítimo	RR **505**
Serviço móvel aeronáutico (R) e (OR)	Res. 403
4000-23 000kHz:	
Serviço móvel marítimo — classes de emissão	RR **4371**
Potência — estações costeiras	RR **4373**
Potência — estações de navio	RR **4374**
Chamada — estações de navio	RR **4968**
Vias telefónicas	Ap. 16
Características técnicas de emissores de faixa lateral única	Ap. 17
4000-23 000 kHz:	
Serviço móvel marítimo — telegrafia com impressão directa e transmissão de dados faixa estreita	Ap. 32
Estações costeiras radiotelefónicas	Ap. 25 Aer Mar2
4000-27 500 kHz — Transferência de consignações do serviço fixo para outros serviços	Res. 8
4000-27 500 kHz — Utilização de A1A por navios	Res. 304
4000-27 500 kHz:	
Serviço móvel marítimo — utilização de frequências	RR **4252-4311** Ap. 31

Assunto	Art., núm., ap., dec., res., rec.
Intervalos de tempo entre listas de chamadas	RR 4723
Forma de anunciar listas de chamadas	RR 4730
Frequências de chamadas a utilizar por uma estação de navio	RR 4759
Condições a que devem satisfazer as estações de navio que trabalham em A1A	RR 4118
Frequências a utilizar	RR 4196
Utilização de FIB por navios	RR 4321
Agrupamento de redes nacionais e internacionais — redução da saturação da faixa ——	Rec. 4
Serviço móvel marítimo — telegrafia com impressão directa e transmissão de dados — faixa estreita	Ap. 33
4063-25 110 kHz — Utilização não autorizada	Res. 309
4125 kHz:	
Chamada de navio por estação costeira	RR 4970
Serviço móvel marítimo — chamada selectiva	RR 4680
Frequência de chamada feita por estação de navio (precauções a tomar)	RR 4379
Estações de navio devem poder emitir em ——	RR 4132
Estações costeiras — vigília em ——	RR 3053
Escuta a fazer antes de emitir em ——	RR 3029
Perigo, segurança, chamada e resposta, classe de emissão	RR 2982 Res. 305
4125 kHz:	
Utilização de ——	Rec. 303
Estação de navio — frequência de chamada	RR 4375
Estações de navio ou de aeronave caso em que não possam utilizar ——	RR 2975
Utilização da R3E e J3E	Res. 305
4187,6 kHz — Chamada selectiva numérica (navios)	RR 4683
4357 kHz — Chamada selectiva numérica (costeiras)	RR 4684
4419,4 kHz:	
Chamada selectiva	RR 4680
Chamada em radiotelefonia — estações costeiras	RR 4376
5000-30 000 kHz — Comunicações a grande distância	RR 954 RR 955
5680 kHz:	
Busca e salvamento	RR 505 RR 2983
Serviço móvel aeronáutico (R) e (OR)	Res. 403
6215,5 kHz:	
Estações costeiras — chamada em radiotelefonia	RR 4970
Tráfego de perigo — escuta antes de emitir em ——	RR 4379
Estações de navio devem poder emitir em ——	RR 4132
Utilização da R3E e J3E	Res. 305
6215,5 kHz:	
Estação costeira — vigília em ——	RR 3053
Escuta a fazer antes de emitir em ——	RR 3029
Utilização de ——	Rec. 303
Estações de navio — frequência de chamada	RR 4375
Estação de navio ou de aeronave — caso em que não possam utilizar ——	RR 2975
6281,4 kHz — Chamada selectiva (navios) ——	RR 4683
6506 kHz — Chamada selectiva (costeiras)	RR 4684
6521,9 kHz:	
Chamada selectiva	RR 4680
Estações costeiras — chamada em radiotelefonia	RR 4376
7000-7100 kHz — A radiodifusão não deve usar esta faixa	Res. 641
8257 kHz — Estações de navio — frequência de chamada	RR 4375
8364 kHz	
Busca e salvamento — engenho de salvamento	RR 2987
É frequência portadora em H2A e H2B	RR 4181
8375,2 kHz — Chamada selectiva — navios	RR 4683
8718,5 kHz — Chamada selectiva — costeiras	RR 4684
8780,9 kHz	
Chamada selectiva	RR 4680
Estações costeiras — chamada em radiotelefonia	RR 4376
12 392 kHz — Estações de navio — chamada	RR 4375
12 562,3 kHz — Chamada selectiva — navios	RR 4683
12 562,8 kHz — Chamada selectiva — navios	RR 4683
13 100 kHz — Chamada selectiva — costeiras	RR 4684
13 100,5 kHz — Chamada selectiva — costeiras	RR 4684
13 162,8 kHz:	
Chamada selectiva	RR 4680
Estações costeiras — chamada em radiotelefonia	RR 4376
16 522 kHz — Estações de navio — chamada	RR 4375
16 749,9 kHz — Chamada selectiva — navios	RR 4683
16 750,4 kHz — Chamada selectiva — navios	RR 4683
17 232 kHz — Chamada selectiva — costeiras	RR 4684
17 232,5 kHz — Chamada selectiva — costeiras	RR 4684
17 294,9 kHz:	
Chamada selectiva	RR 4680
Costeiras — chamada em radiotelefonia	RR 4376
21 924-22 000 kHz — Transferência de consignações do serviço fixo aeronáutico (R)	Res. 8
21 924-22 000 kHz — Utilização pelo serviço móvel aeronáutico (R)	Res. 404
22 062 kHz — Estações de navio — chamada	RR 4375
22 248 kHz — Chamada selectiva — navios	RR 4683
22 248,5 kHz — Chamada selectiva — navios	RR 4863
22 595 kHz — Chamada selectiva — costeiras	RR 4684

Assunto	Art., núm., ap., dec., res., rec.
22 595,5 kHz — Chamada selectiva — costeiras	RR **4684**
22 658 kHz:	
Chamada selectiva	RR **4680**
Costeiras — chamada em radiotelefonia	RR **4376**
27 500-28 000 kHz — Serviço dos auxiliares da meteorologia	Rec. 620
> 30 MHz — Frequências do serviço móvel marítimo que não devem ser utilizadas por aeronaves	RR **4148**
87,5-108 MHz — Radiodifusão sonora (conferência)	Res. 510
100-108 MHz — Compatibilidade do serviço de radiodifusão com o serviço de radiodifusão aeronáutica	Rec. 704
108-117,975 MHz — Compatibilidade do serviço de radiodifusão com o serviço de radionavegação aeronáutica	Rec. 704
121,5 MHz:	
Radiobalizas de localização de sinistros	RR **3259** Res. 601
Comunicações para fins de segurança entre estações móveis do serviço móvel marítimo e estações do serviço móvel aeronáutico	RR **2990** RR **593**
121,5 MHz — Utilização em A3E	RR **2991**
123,1 MHz:	
Comunicações para fins de segurança entre estações móveis do serviço móvel marítimo e estações do serviço móvel aeronáutico	RR **2990** RR **593**
Utilização em A3E	RR **2991**
136-137 MHz:	
Serviço móvel aeronáutico (R)	Rec. 404
Serviços de exploração espacial, meteorologia por satélite e pesquisa espacial	RR **595**
149,9-150,05 MHz — Cessação do serviço fixo e móvel na faixa	Rec. 703
156-174 MHz:	
Classes de emissão de estações de navio e outras condições	RR **4134**
Serviços de movimento de navios	RR **4214**
Estações de navio com telegrafia de impressão directa	RR **4323**
Quadro das frequências de emissão para as estações de serviço móvel marítimo	Ap. 18
Espaçamento	Res. 308
156-174 MHz:	
Características técnicas dos emissores e dos receptores utilizados no serviço móvel marítimo	Ap. 19
Frequências de chamada	RR **4973**
Utilização por aeronaves	RR **4148**
156,3 MHz:	
Utilização por aeronaves para fins de segurança	RR **2992**
Classes de emissão em estações de navio	RR **4136**
156,6 MHz — Serviço de operações portuárias	RR **4975** RR **4402**

Assunto	Art., núm., ap., dec., res., rec.
156,725-156,875 MHz — Proibição de emissões	RR **4393**
156,7625-156,8375 MHz — Proibição de emissões	RR **4393.1** RR **3033.1**
156,8 MHz:	
Perigo, segurança e chamada	RR **613**
Chamada	RR **4974**
Ensaios	RR **5060**
Chamada selectiva	RR **4680**
Perigo, segurança, chamada, classe de emissão	RR **4386-4390**
156,8 MHz:	
Classe de emissão em estações de navio	RR **4135**
Vigília na frequência de ——	RR **3056**
Utilização por aeronaves para fins de segurança	RR **2992**
Escuta por estações costeiras	Rec. 306
Duração das chamadas	RR **4394**
Precauções a tomar em ——	RR **4395**
Escuta na frequência	RR **4399-4403**
Protecção à frequência de ——	RR **3032**
243 MHz:	
Busca e salvamento	RR **501**
Radiobalizas de localização de sinistros	Res. 601
Engenhos de salvamento	RR **642**
Radiobalizas	RR **3259**
399,9-400,05 MHz — Cessação do serviço fixo e móvel na faixa ——	Rec. 703
450-470 MHz — Características dos aparelhos utilizados nas comunicações de bordo	Ap. 20
620-790 MHz:	
Partilha entre radiodifusão de Terra e radiodifusão por satélite	Rec. 705
Televisão com modulação de frequência	RR **693**
1330-1400 MHz — Utilização pela radioastronomia	RR **918** Rec. 701
1400-1427 MHz — Proibidas todas as emissões	RR **721**
1400-1727 MHz — Emissões intencionais de origem extraterrestre	Rec. 702
2690-2700 MHz — Proibidas todas as emissões	RR **768**
2900-3100 MHz — Serviço de radionavegação	Res. 600
5470-5650 MHz — Serviço de radionavegação	Res. 600
9200-9300 MHz — Serviço de radionavegação	Res. 600
9300-9500 MHz — Serviço de radionavegação	Res. 600
9300-9500 MHz — Utilização da faixa	Rec. 600
9500-9800 MHz — Serviço de radionavegação	Res. 600
0,5-2 GHz — Radiodifusão por satélite	Res. 505
10,68-10,70 GHz — Proibidas todas as emissões	RR **833**
11,7-12,2 GHz — Limites de densidade de fluxo de potência	Ap. 30 Art. 9 Art. 10
11,7-12,5 GHz:	
Plano para o serviço de radiodifusão por satélite	Ap. 30
Cálculo da densidade de fluxo de potência	Art. 11 (anexo 3)

Assunto	Art., núm., ap., dec., res., rec.
Notificação de consignações	Art. 15
Estações de Terra que afectam estações do serviço de radiodifusão por satélite	Ap. 30 Art. 6
11,7-12,5 GHz — Consignação de frequências a estações de radiocomunicação de Terra e de radiocomunicação espacial	Res. 32
11,7-12,7 GHz — Radiodifusão por satélite na Região 2 (disposições do ap. 30 a aplicar)	Res. 31
11,8-12 GHz — Harmónicas na faixa	Rec. 506
12 GHz:	
Propagação na faixa de —— para o serviço de radiodifusão por satélite	Rec. 505
Utilização da órbita dos satélites geostacionários	Res. 506
12,2-12,7 GHz — Partilha entre os serviços fixo por satélite e de radiodifusão por satélite	Res. 700
12,5-12,75 GHz — Na Região 3 — partilha com serviços especiais e de Terra das Regiões 1, 2 e 3	Res. 34
15,35-15,4 GHz — Proibidas todas as emissões	RR **864**
18,6-18,8 GHz — Partilha de frequências na faixa ——	Rec 706
23,6-24 GHz — Proibidas todas as emissões	RR **880**
31,3-31,5 GHz — Proibidas todas as emissões	RR **887**
32-33 GHz — Partilha de frequências	Rec. 707
101-120 GHz — Emissões intencionais de origem extraterrestre	Rec. 702
197-220 GHz — Emissões intencionais de origem extraterrestre	Rec. 702
Ganho:	
—— de uma antena — definição	RR **2** e **154**
—— em relação a uma antena vertical curta — definição	RR **2** e **154**, *c*)
—— em relação a um dipolo de meia onda — definição	RR **2** e **154**, *b*)
—— isotrópico ou absoluto — definição	RR **2** e **154**, *a*)

Règlement de Radiocommunications en 1979

Actes Finals de la Conférence Administrative Mondiale des Radiocommunications

(Genève, 1979)

Dans sa Résolution n° 28, la Conférence de Plénipotentiares de l'Union internationale des télécommunications (Malaga Torremolinos, 1973), considérant que diverses conférences administratives mondiales des radiocommunications réunies depuis 1959 ont apporté au Règlement des radiocommunications et au Règlement additionel des radiocommunications des amendements portant sur des points particuliers, mais n'ont pas été en mesure d'harmoniser leurs décisions en raison du caractère limité de l'ordre du jour de chacune d'elles, a décidé qu'une Conferènce administrative mondiale des radiocommunications serait convoquée en 1979 afin de réviser, en tant que de besoin, ces Règlements et elle a chargé le Conseil d'administration de prende les mesures préparatoires nécessaires pour la convocation de cette Conferénce.

A sa trentième session (1975), le Conseil d'administration a constitué, par sa Résolution n.º 768, un Groupe d'experts des administrations chargé d'ètudier le remaniement éventuel du Réglement des radiocommunications et du Règlement additionel des radiocommunications.

Le «Remaniement du Règlement des radiocommunications» proposé par le Groupe d'experts a été approuvé en principe par la Conférence administrative mondiale des radiocommunications pour la radiodiffusion par satellite (Genève, 1977) dans sa Résolution nº Sat-10, laquelle demande instamment aux pays Membres d'utiliser le Règlement des radiocommunications sous la forme remaniée et le Réglement additionel des radiocommunications sous sa forme actuelle pour présenter des propositions à la présent Conférence.

A sa trente-deuxième session (1977), le Conseil d'administration a décidé, par sa Résolution nº 801, que la Conférence administrative mondiale des radiocommunications de 1979 serait convoquée à Genève le 24 septembre 1979, pour une durée de 10 semaines, et a adopté l'ordre du jour de cette Conférence.

En conséquence, la Conférence administrative mondiale des radiocommunications (Genève, 1979) a été convoquée et, conformément à son ordre du jour et sur la base du «Remaniement du Règlement des radiocommunications » susmentionné que des propositions soumises par les administrations, elle a examiné, remanié et partiellement révisé, quant à leur contenu, les dispositions du Règlement des radiocommunications. A la suite de ces traveux, elle a adopté le Règlement des radiocommunications (Genève, 1979) dont le texte figure dans l'Annexe aux présents Acts finals.

La Conférence admininstrative mondiale des radiocommunications (Genève, 1979) autorise le Secrétaire général de l'Union internationale des télécommmunications à procéder à la numérotation finale appropriée des chapitres, articles, sections, sous-sections, paragraphes et sous-paragraphes et à la numérotation marginale, à la numérotation finale des appendices et á l'insertion des renvois nécessaires en ce qui concerne le Règlement des radiocommunications (Genève, 1979), dont il adressera une copie certifiée conforme aux Membres de l'Union.

Les Membres de l'Union informeront le Secrétaire général de leur approbation du Règlement des radiocommunications (Genève, 1979), tel qu'il a été adopté par la Conférence administrative mondiale des radiocommunications (Genève, 1979). Le Secrétaire général notifiera sans délai ces approbations aux Membres.

Les délégués des Membres de l'Union internationale des telécommunications représentés à la Conférence administrative mondiale des radiocommunications (Genève, 1979), avant signé les présents Actes finals, déclarent que, si une administration formule des réserves au sujet de l'application de l'une ou de plusieurs dispositions du Règlement des radiocommunications (Genève, 1979), aucune autre administration n'est obligée d'observer ladite ou lesdites dispositions dans ses relations avec l'administration qui a formulé de telles réserves.

En foi de quoi, les délégués des Membres de l'Union internacionale des télecommunications représentés à la Conférence administrative mondiale des radiocommunications (Genève, 1979), ont signé, au mon de leurs pays respectifs, les présents Actes final dont l'exemplaire unique restera dans les archives de l'Union internationale des télécommunications et dont une copie certifiée conforme sera remise á chacun des Membres de l'Union.

Fait à Genève, le 6 décembre 1979.

Règlement des Radiocommunications

(Géneve, 1979)

ADD

Préambule

ADD 3000 1 L'application des dispositions du présent Règlement par les organismes permanents de l'Union internationale des télècommunications n'implique de la part de l'Union aucune prise de position quant à la souveraineté ou au statut juridique d'un pays, territoire, ao zone géographique quelconque.

PARTIE A

NI

CHAPITRE I

NOC

Terminologie

N1/1

ARTICLE 1

NOC

Termes et définitions

MOD

Introduction

MOD 3001 1 2 Aux fins du présent Règlement, les termes suivants ont le sens donné par les définitions qui les accompagnent. Toutefois, ces termes et définitions ne sont pas nécessairement applicables dans autres cas. Les définitions identifiques à celles figurant dans la Convention internationale des télécommunications (Malaga-Torremolinos, 1973) sont signalées par l'indication «(Conv.)».

Remarque: Si, dans le texte d'une définition indiquée ci-dessous, un terme figure en italiques, cela signifie que ce terme est lui-même défini dans le présent article.

SECTION I

NOC

Termes généraux

ADD 3001A 3 1.1 — *Administration:* Tout service ou département gouvernemental responsable des mesurés à prendre pour exécuter les obligations de la Convention internationale des télécommunications et des Règlements (Conv.).

NOC 3002 2 4 1.2 — *Télécommunications:* Toute transmission, *émission* ou réception de signes, de signaux, d'écrits, d'images, de sons ou de renseignements de toute nature, par fil, radioélectricité, optique ou autres systèmes électromagnétiques (Conv.).

NOC 3006 8 5 1.3 — *Radio:* Préfixe s'appliquant à emploi des ondes radioélectriques (Conv.).

MOD 3005 7 6 1.4 — *Ondes radioélectriques* ou *ondes hertziennes:* ondes électromagnétiques dont la fréquence est par convention inférieure à 3000 GHz, se propageant dans l'espace sans guide artificiel.

NOC 3004 9 7 1.5 — *Radiocommunication: télécommunication* réalisée à l'aide des *ondes radioélectriques* (Conv.).

NOC 3025 21D 8 1.6 — *Radiocommunication de Terre:* toute *radiocommunication* autre que les *radiocommunications spatiales* ou la *radioastronomie.*

MOD 3024 21C 9 1.7 — *Radiocommunication spatiale:* toute *radiocommuniction* assurée au moyen d'une ou plusieurs *stations spatiales*, ou au moyen d'un ou plusieurs *satellites réflecteurs* ou autres objects spatiaux.

MOD 3026 45 10 1.8 — *Radiorepèrage:* détermination de la position, de la vitesse ou d'autres caractéristiques d'un object ou obtention de données relatives à ces paramètres, à l'aide des propriétés de propagation des onde *radioélectriques.*

NOC 3027 48 11 1.9 — *Radionavigation:* application du *radiorepérage* à la navigation, y compris le repérage d'objects gênants.

NOC 3028 54 12 1.10 — *Radiolocalisation:* application du *radiorepèrage* à d'autres fins que la *radionavigation.*

NOC **3068** 66 **13** 1.11 — *Radiogoniomètrie: radiorepèrage* utilisant la réception des *ondes radioélectriques* en vue de déterminer la direction d'une *station* ou d'un object.

3120 74 **14** 1.12 — *Radioastronomie:* astronomie fondée sur la réception des *ondes radioélectriques* d'origine cosmique.

ADD **3120A** **15** 1.13 — *Temps universel coordonné (UTC):* echelle de temps fondeé sur la seconde (SI), définie et recommandée par le CCIR (1) et maintenue par le Bureau Internacional de l'Heure (BIH).

Pour la plupart des applications pratique associées au Règlement des radiocommunications, le temps UTC est équivalent au temps solaire moyen au méridien d'origine (0° de longitude), exprimé antérieurement en TMG.

ADD **3023A** **16** 1.14 — *Utilizations industrielles, scientifiques et médicales* (de l'energie radioélectrique) *(ISM):* mise en œuvre d'appareils ou d'installations conçus pour produire et utiliser, dans un espace réduit, de l'énergie radioélectrique à des fins industrielles, scientifiques, médicales, domestiques ou analogues, à la l'exclusion de tout usage de *télécommunication.*

SECTION II

MOD

Termes spécifiques liés à la gestion des fréquences

ADD **3023B** **17** 2.1 — *Attribution* (d'une bande de fréquences): inscription dans de Tableau d'attribution des bandes de fréquences, d'une bande de fréquences déterminée, aux fins de son utilisation par un ou plusieurs *services de radiocommunication* de Terre ou spatiale, ou par le *service de radioastronomie,* dans des conditions spécifiées. Ce terme s'applique également à la bande de fréquences considérée.

ADD **3023C** **18** 2.2 — *Allotissement* (d'une fréquence ou d'un canal radioélectrique): inscription d'un canal donné dans un plan adopté par une conférence compétente, aux fins de son utilisation par une ou plusieurs administrations pour un *service de radiocommunication* de Terre ou spatiale, dans un ou plusieurs pays ou zones géographiques déterminés et selon des conditions spécifiées.

ADD **3023D** **19** 2.3 — *Assignation* (d'une fréquence ou d'un canal radioélectrique): autorisation donnée par une administration pour l'utilisation par une station radioélectrique d'une fréquence ou d'un canal radioélectrique déterminé selon des conditions spécifées.

SECTION III

MOD

Services radioélectriques

ADD **3023E** **20** 3.1 — *Service de radiocommunications:* service défini dans la présent section impliquant la transmission, l'émission ou la réception d'*ondes radioélectriques* à des fins spécifiques de *télécommunication.*

Dans de présent Règlement, sauf indication contraire, tout service de radiocommunication se rapporte aux radiocommunications de Terre.

NOC **3036** 22 **21** 3.2 — *Service fixe: service de radiocommunication* entre points fixes déterminés.

MOD **3102** 84AG **22** 3.3 — *Service fixe par satellite: service de radiocommunication* entre *stations terriennes* situées en des points fixes déterminés lorsqu'il est fait usage d'un ou plusieurs *satellites;* dans certains cas, ce service comprend des liaisons entre *satellites,* qui peuvent également être assurées au sein du *service inter-satellites;* le service fixe par satellite peut en outre comprendre des *liaisons de connexion* pour d'autres services de *radiocommunications spatiale.*

MOD **3038** 24 **23** 3.4 — *Service fixe aéronautique: service de radiocommunication* entre points fixes déterminés, prévu essentiellement pour la sécurité de la navigation aérienne et pour assurer la régularité, l'efficacité et l'economie d'exploitation des transports aériens.

NOC **3101** 84ATF **24** 3.5 — *Service inter-sattlites: service de radiocommunication* assurant des liaisons entre des *satellites* artificiels de la Terre.

MOD **3100** 84ATE **25** 3.6 — *Service d'exploitation spatiale: service de radiocommunication* destiné exclusivement à l'exploitation des *engins spatiaux,* en particulier la *poursuite spatiale,* la *télémesure spatiale* et la *télécommande spatiale.*

Ces fonctions seront normalement assurées au sein du servi-ce dans lequel fonctionne la *station spatiale.*

ADD **3120A.1** **15.1** (1) La définition complète figure dans l'Avis 460-2 du CCIR.

(MOD) **3072** 30 **26** 3.7 — *Services mobile: services de radiocommunications* entre *stations mobiles* et *station terrestres,* ou entre *stations mobiles* (Conv.).

MOD **3115** 84AGA **27** 3.8 — *Service mobile satellite: service de radicommunications:*

Entre des *stations terriennes mobiles* et une ou plusieurs *stations spatiales,* ou entre des *stations spatiales* utilisées par ce service; ou

Entre des *stations terriennes mobiles,* par l'intermédiaire d'une ou plusieurs *stations spatiales.*

Ce service peut en outre comprendere les *liaisons de connexion* nécessaires à son exploitation.

NOC **3087** 42 **28** 3.9 — *Service mobile terrestre: services mobile* entre *stations* de base et *stations mobiles terrestres,* ou entre *station mobiles terrestres.*

NOC **3119** 84AGD **29** 3.10 — *Service mobile terrestre par satellite: service mobile par satellite* dans lequel les *stations terriennes* mobiles sont situées à terre.

MOD **3079** 36 **30** 3.11 — *Service mobile maritime: service mobile* entre *stations côtières* et *stations de navire,* ou entre *stations de navire,* ou entre *stations de communications de bord* associées; les *stations d'engin de sauvetage* et les *stations de radiobalise de localisation des sinistres* peuvent également participer à ce service.

(MOD) **3117** 84AGC **31** 3.12 — *Service mobile maritime par satellite: service mobile par satellite* dans lequelles *stations terriennes mobiles* sont situées à bord de navires: les *stations d'engin de sauvetage* et les *stations de radiobalise de localisation des sinistres* peuvent également participer à ce service.

(MOD) **3084** 37 **32** 3.13 — *Service des opérations portuaires: service mobile maritime* dans un port ou au voisinage d'un port, entre *stations côtières* et *stations de navire,* ou entre *station de navire,* ayant pour object la transmission de messages traitant exclusivement de la manoeuvre, du mouvement et de la sécurité des navires et, en cas d'urgence, de la suavegarde des personnes.

Sont exclus de service les messages qui ont le caractère de *correspondance publique.*

(MOD) **3086** 37A **33** 3.14 — *Service du mouvement des navires: service de sécurité* au sein du *service mobile maritime,* au que le *service des opérations portuaires,* entre *stations côtières* et *stations de navire,* ou entre *stations de navire,* ayant pour le objet la transmission de messages traitant exclusivement du mouvement des navires.

Sont exclus de ce service les messages qui ont le caractère de *correspondance publique.*

MOD **3076** 33 **34** 3.15 — *Service mobile aéronautique: service mobile* entre *stations aéronautique* et *stations d'aéronef,* ou entre *station d'aéronef,* auquel les *stations d'engin de sauvetage* peuvent également participer; les *stations de radiobalise de localisation des sinistres* peuvent également participer à ce service sur des fréquences de détresse et d'urgence désignées.

NOC **3116** 84AGB **35** 3.16 — *Service mobile aéronautique par satellite: service mobile par satellite* dans lequel les *stations terriennes mobiles* sont situées à bord d'aéronefs; les *stations d'engin de sauvetage* et les *stations de radiobalise de localisation des sinistres* peuvent également participer à ce service.

NOC **3040** 28 **36** 3.17 — *Service de radiodifusion: service de radiocommunication* dont les *émissions* sont destinées à être reçues directement par le public en général. Ce service peut comprendre des *émissions* sonores, des *emissions de télèvision* ou d'autres genres d'*émissions* (Conv.).

(MOD) **3103** 84AP **37** 3.18 — *Service de radiodiffusion par satellite: service de radiocommunication* dans lequel des signaux émis ou retransmis par des *stations spatiales* sont destinés à être reçus directement par le public en général.

Dans le service de radiodifusion par satellite, l'expression «reçus directement» s'applique à la fois à la *réception individuelle* et à la *réception communautaire.*

(MOD) **3049** 46 **38** 3.19 — *Service de radiorepérage: service de radiocommunication* aux fins de *radiorepérage.*

MOD **3111** 84AP **39** 3.20 — *Service de radiorepérage par satellite: service de radiocommunication* aux fins de *radiorepérage* et impliquant l'utilisation d'une ou plusieurs *stations spatiales.*

(MOD) **3051** 49 **40** 3.21 — *Service de radionavigation: service de radiorepérage* aux fins de *radionavigation.*

MOD **3112** 84AQ **41** 3.22 — *Service de radionavigation par satellite: service de radiorepérage par satellite* aux fins de *radionavigation.*

Ce service peut aussi comprendre les *liaisons de connexion* nécessaires à son exploitation.

MOD 3055 42

3.23 — *Service de radionavigation maritime: service de radionavigation* pour les besoins des navires et la sécurité de leur exploitation.

MOD 3114 43
84AQB

3.24 — *Service de radionavagion maritime par satellite: service de radionavigation par satellite* dans lequel les *stations terriennes* sont situées à bord de navires.

MOD 3054 44

3.25 — *Service de radionavigation aéronautique: service de radionavigation* pour les besoins des aéronefs et la securité de leur exploitation.

MOD 3113 45
84AQA

3.26 — *Service de radionavigation aéronautique par satellite: service de radionavigation par satellite* dans lequel les *stations terriennes* sont situées à bord d'aéronefs.

MOD 3056 46
55

3.27 — *Service de radiolocalisation: service de radiorepérage* aux fins de la radiolocalisation.

NOC 3042 47
76

3.28 — *Service auxiliaires de la météorologie: service de radiocommunication* destiné aux observations et aux sondages utilisés pour la météorologie y compris l'hydrologie.

MOD 3106 48
84ASA

3.29 — *Service d'exploration de la Terre par satellite: service de radiocommunication* entre des *stations terriennes* et une ou plusieurs *stations spatiales*, que peut comprendre des liaisons entre *stations spatiales*, et dans lequel:

Des renseignements relatifs aux caractéristiques de la Terre et ses phénomènes naturels sont obtenus à partir de *détecteurs actifs* situés sur des *satellites* de la Terre;

Des renseignements analogues sont recueillis à partir de platesformes aéroportées ou situées sur la Terre;

Ces renseignements peuvent être distribues à des *stations terriennes* appartenant au méme systeme;

Les plates-formes peuvent egalement être interrogées.

Ce service peut aussi comprende les *haisons de connexion* nécessaires á son exploitation.

NOC 3107 49
84AT

3.30 — *Service de météorologie par satellite: service d'exploration de la Terre par satellite* pour les besoins de la météorologie.

MOD 3046 50
80

3.31 — *Service des fréquences étaion et des signaux horaires: service de radiocommunication* assurant, à des fins scientifiques, tecnhniques et diverses, l'émission de fréquences spécifiées, de signaux horaires ou des deux à la fois, de précision élevée et donnée, et destinée à la réception générale.

MOD 3109 51
84ATB

3.32 — *Service des fréquences étalon et des signaux horaires par satellite: service de radiocommunication* faisant usage de *stations spatiales* situées sur des *satellites* de la Terre pour les mêmes fins que le *service des fréquences étalon et des signaux horaires.*

Ce service peut aussi comprende les *liaisons de connexion* nécessaires à son exploitation.

NOC 3099 52
84ATD

3.33 — *Service de recherche spatiale: service de radiocommunication* dans lequel on utilise des *engins spatiaux* ou d'autres objects spatiaux aux fins de recherche scientifique ou technique.

MOD 3044 53
78

3.34 — *Service d'amateur: service de radiocommunication* ayant pour objet l'instruction individuelle, l'intercommunication et les études techniques, effectué par des amateurs, c'est-à-dire par des personnes dûment autorisées, s'intéressant à la technique de la radioélectricité à titre uniquement personnel et sans intérêt pécuniaire.

NOC 3108 54
84ATA

3.35 — *Service d'amateur par sattelite: service de radiocommunication* faisant usage de *stations spatiales* situées sur des *satellites* de la Terre pour les mêmes fins que le *service d'amateur.*

NOC 3121 55
75

3.36 — *Service de radioastronomie:* service comportant l'utilisation de la *radioastronomie.*

MOD 3029 56
69

3.37 — *Service de sécurité:* tout servivce radioélectrique exploité de façon permanente ou temporaire pour assurer la sécurité de la vie humaine et la sauvegarde des biens (Conv.).

(MOD) 3030 57
84

3.38 — *Service spécial: service de radiocommunication* non défini d'autre part dans la présent section, effectué exclusivement pour satisfaire des besoins déterminés d'intérêt général, et non ouvert à la *correspondance publique.*

SECTION IV

MOD

Stations et systèmes radioélectriques

NOC 3031 58
21

4.1 — *Station:* un ou plusiers émetteurs ou récepteurs, ou un ensemble d'émetteurs et de récepteurs, y compris les appareils accessoires, nécessaires pour assurer un *service de radiocommunication* ou pour le *service de radioastronomie*, en un emplacement donné.

Chaque station est classée d'aprés le service auquel elle participe d'une façon permanente ou temporaire.

MOD 3034 21E 59 4.2 — *Station de Terre: station* assurant une *radiocommunication de Terre.*

Dans le présent Règlement, sauf spécification contraire, toute *station* est une station de Terre.

MOD 3033 21B 60 4.3 — *Station terrienne: station* située soit sur la surface de la Terre, soit dans la partie principale de l'atmosphére terrestre, et destinée à communiquer:

Avec une ou plusieurs *stations spatiales;* ou

Avec une ou plusieurs *stations* de même nature, à l'aide d'un ou plusieurs *satellites réflecteurs* ou autres objects spatiaux.

NOC 3032 21A 61 4.4 — *Station spatiale: station* située sur un objet qui se trouve, est destiné à aller, ou est allé, au-delà de partie principale de l'atmosphére terrestre.

(MOD) 3075 41 62 4.5 — *Station d'engin de sauvetage: station mobile* du *service mobile maritime* ou du *service mobile aéronautique* destinée uniquement aux besoins des naufragés et placée sur une embarcation, un radeau ou tout autre équipement de sauvetage.

NOC 3037 23 63 4.6 — *Station fixe: station* du *service fixe.*

NOC 3039 25 64 4.7 — *Station fixe aéronautique: station* du *service fixe aéronautique.*

NOC 3074 32 65 4.8 — *Station mobile: station* du *service mobile* destinée à être utilisée lorsqu'elle est en mouvement, ou pendant des haltes en des points non déterminés.

ADD 3115A 66 4.9 — *Station terrienne mobile: station terrienne* du *service mobile par satellite* destinée à être utilisée lorqu'elle est en mouvemente ou pendant des haltes en des points non déterminés.

NOC 3073 31 67 4.10 — *Station terrestre: station* du *service mobile* non destinée à être utilisée lorqu'elle est en mouvement.

MOD 3088 43 68 4.11 — *Station de base: station terrestre* du *service mobile terrestre.*

NOC 3089 44 69 4.12 — *Station mobile terrestre: station mobile* du *service mobile terrestre* susceptible de se déplacer en surface, à l'intérieur des limites géographiques d'un pays ou d'un continent.

NOC 3080 38 70 4.13 — *Station côtière: station terrestre* du *service mobile maritime.*

ADD 3118A 71 4.14 — *Station terriene côtière: station terriene* du *service fixe par satellite* ou dans certains cas du *service mobile maritime par satellite,* située en un point déterminé du sol et destinée à assurer la *liaision de connexion* du *service mobile maritime par satellite.*

(MOD) 3081 39 72 4.15 — *Station de navire: station mobile* du *service mobile maritime* placée à bord d'un navire qui n'est pas amarré en permanence, autre qu'une *station d'engin de sauvetage.*

NOC 3118 84GCA 73 4.16 — *Station terrienne de navire: station terrienne mobile* du *service mobile maritime par satellite* installée à bord d'un navire.

NOC 3002 39A 74 4.17 — *Station de communications de bord: station mobile* de faible puissance du *service mobile maritime* destinée aux communications internes à bord d'un navire, ou aux communications entre un navire et ses embarcations et radeaux de sauvetage au cours d'exercices ou d'opérations de sauvetage, ou aux communications au sein d'un groupe de navires remorqués ou poussés, ainsi qu'aux communications concernant les instructions relatives à la manoeuvre des aussières et à l'amarrage.

NOC 3085 38A 75 4.18 — *Station portuaire: station côtière* du *service des opérations portuaires.*

MOD 3077 34 76 4.19 — *Stations aéronautique: station terrestre* du *service aéronautique.*

Dans certains cas, une station aéronautique peut par exemple, être placée à bord d'un navire ou d'une plate-forme en mer.

ADD 3077A 77 4.20 — *Station terriene aéronautique: station terriene* du *service fixe par satellite,* ou, dans certains cas, du *service mobile aéronautique par satellite,* située en un point déterminé du sol, et destinée à assurer la liaision de connexion du *service mobile aéronautique par satellite.*

MOD 3078 35 78 4.21 — *Station d'aéronef: station mobile* du *service mobile aéronautique* placée à bord d'un aéronef, autre qu'une *station d'engin* de sauvetage.

ADD 3116A 79 4.22 — *Station terrienne d'aéronef: station terrienne mobile* du *service mobile aéronautique par satellite* placée à bord d'un aéronef.

NOC 3041 29 80 4.23 — *Station de radiodiffusion: station* du *service de radiodiffusion.*

NOC 3050 47 81 4.24 — *Station de radiorepérage: station* du *service de radiorepérage.*

NOC	**3053** 57	**82**	4.25 — *Station mobile de radionavigation: station* du *service de radionavigation* destinée à être utilisée lorsque'elle est en mouvement ou pendant des haltes en des points non déterminés.
NOC	**3052** 50	**83**	4.26 — *Station terrestre de radionavigation: station* du *service de radionavigation* non destinée à être utilisée lorsqu'elle est en mouvement.
NOC	**3058** 57	**84**	4.27 — *Station mobile de radiolocalisation: station* du *service de radiolocalisation* destinée à être utililisée lorsqu'elle est en mouvement ou pendant des haltes en des points non déterminés.
NOC	**3057** 56	**85**	4.28 — *Station terrestre de radiolocalisation: station* du *service de radiolocalisation* non destinée à être utilisée lorsqu'elle est en mouvement.
(MOD)	**3069** 67	**86**	4.29 — *Station de radiogoniométrie: station de radiorepérage* utilisant la *radiogoniométrie.*
NOC	**3070** 68	**87**	4.30 — *Station de radiophare: station* du *service de radionavigation* dont les *émissions* sont destinées à permettre à une *station mobile* de déterminer son relèvement ou sa direction par rapport à la station de radiophare.
NOC	**3071** 68A	**88**	4.31 — *Station de radiobalise de localisation des sinistres: station* du *service mobile* dont les *émissions* sont destinées à faciliter les opérations de recherches et de sauvetage.
MOD	**3047** 81	**89**	4.32 — *Station de fréquences étalon et de signaux horaires: station* du *service des fréquences étalon et des signaux horaires.*
NOC	**3045** 79	**90**	4.33 — *Station d'amateur: station* du *service d'amateur.*
NOC	**3122** 75A	**91**	4.34 — *Station de radioastronomie: station* du *service de radioastronomie.*
NOC	**3035** 83	**92**	**4.35** — *Station expérimentale: station* utilisant les *ondes radioélectriques* pour des expériences intéressant les progrès de la science ou de la technique. Cette définition ne comprend pas les *stations d'amateur.*
NOC	**3083** 40	**93**	4.36 — *Emetteur de secours de navire:* emetteur de navire à utiliser exclusivement sur one fréquence de détresse pour les besoins de la détresse, de l'urgence ou de la sécurité.
NOC	**3059** 58	**94**	4.37 — *Radar: système de radiorepérage* fondé sur la comparaison entre des signaux de référence et des signaux radioélectriques réfléchis ou retransmis à partir de la position à déterminer.
NOC	**3060** 59	**95**	4.38 — *Radar primaire:* système de *radiorepérage* fondé sur la comparaison entre des signaux de référence et des signaux radioéletriques réfléchis à partir de la position à déterminer.
NOC	**3061** 60	**96**	4.39 — *Radar secondaire:* système de *radiorepérage* fondé sur la comparaison entre des signaux de référence et des signaux radioélectriques retransmis à partir de la position à déterminer.
MOD	**3062** 60A	**97**	4.40 — *Balise-radar (racon):* emetteur-récepteur associé à um repére fixe de navigation qui, lorsqu'il est excité par un *radar,* renvoie automatiquement un signal distinctif qui peut apparaître sur l'écran du *radar* et fournir des indications de distance, de relèvement et d'identification.
NOC	**3063** 61	**98**	4.41 — *Système d'atterrissage aux instruments (ILS):* système de *radionavigation,* qui fournit aux aéronefs un guidage horizontal et vertical immédiatement avant et pendant l'atterrissage et qui, en certains points fixes, fournit l'indication de la distance jusqu'au point d'atterrissage de référence.
NOC	**3064** 62	**99**	4.42 — *Radioalignement de piste:* système de guidage horizontal incorporé au *système d'atterissage aux instruments,* indiquant l'écart horizontal de l'aéronef par rapport à sa trajectorie de descente optimum suivant l'axe de la piste d'atterrissage.
NOC	**3065** 63	**100**	4.43 — *Radioalignement de descente:* système de guidage vertical incorporé au *système d'atterrissage aux instruments,* indiquant l'écart vertical de l'aéronef par rapport à sa trajectorie de descente optimum.
NOC	**3066** 64	**101**	4.44 — *Radioborne:* emetteur du *service de radionavigation aéronautique* qui rayonne un faisceau dans le sens vertical en vue de fournir à un aéronef une indication de position.
MOD	**3067** 65	**102**	4.45 — *Radioaltimètre*: appareil de *radionavigation* place à bord d'un aéronef ou d'un *engin spatial,* permettant de déterminer la hauteur de cet aéronef ou de cet *engin spatial* au-dessus de la surface de la Terre ou d'une autre surface.
NOC	**3043** 77	**103**	4.46 — *Radiosonde:* emetteur radioélectrique automatique du *service des auxiliaires de la météorologie,* habituellement porté par un aéronef, un ballon libre, un parachute ou un cerf-volant, et qui tansmet les données météorologiques.
NOC	**3090** 84AF	**104**	4.47 — *Système spatial*: tout ensemble de *stations terriennes* de *stations spatiales,* ou de *stations terriennes* et de *stations spatiales* coopérant pour assurer des *radiocommunications spatiales* à des fins déterminées.
(MOD)	**3091** 84AFA	**105**	4.48 — *Système à satellites: système spatial* comportant un ou plusieus *satellites* artificiels de la Terre.

NOC **3092** **106**
84AFB

4.49 — *Réseau à satellite: système à satellites* ou partie d'un *système à satellites* composé d'un seul *satellite* et des *stations terriennes* associées.

MOD **3093** **107**
84AFC

4.50 — *Liaison par satellite:* liaison radioélectrique entre une *station terrienne* émettrice et une *station terrienne* réceptrice par l'intermédiaire d'un *satellite.*

Une liaison par satellite comprend une liaison montante et une liaison descendante.

MOD **3094** **108**

4.51 — *Liaison multisatellite:* liaison radioélectrique entre une *station terrienne* émettrice et une station terrienne réceptrice par l'intermédiaire d'au moins deux *satellites,* sans aucune *station terrienne* intermédiaire.

Une liasion multisatellite comprend une liasion montante, une ou plusierus liaisons entre *satellites* et une liaison descendante.

ADD **3094A** **109**

4.52 — *Liaison de connexion:* liaison radioélectrique allant d'une *station terrienne,* située en un point fixe déterminé, à une *station spatiale,* ou vice versa, afin de transmettre des informations pour une *radiocommunication spatiale* d'un service autre que le *service fixe par satellite.*

Section V

MOD

Termes relatifs á l'exploitation

ADD **3094B** **110**

5.1 — *Correspondance publique:* toute *télécommunication* que les bureaux et *stations,* par le fait le leur mise à la disposition du public, doivent accepter aux fins de transmission (Conv.).

MOD **3007** **111**
10

5.2 — *Télégraphie* (1): forme de *télécommunication* qui intervient dans toute opération assurant la transmission et la reproduction à distance du contenu de tout document, tel qu'un écrit, un imprimé ou une image fixe, ou bien la reproduction à distance de tous genres d'informations sous cette forme. Aux fins du Réglement des radiocommunications, le terme télégraphie signifie, sauf indication contraire, une forme de *télécommunication* assurant la transmission des écrits par l'utilisation d'un code de signaux.

MOD **3010** **112**
13

5.3 — *Télégramme:* (1) ecrit destiné à être transmis par *télégraphie* en vue de sa remise au destinataire. Sauf indication contraire, ce terme comprend aussi le *radiotélégramme.*

Dans cette définition, le terme *télégraphie* a le sens général défini dans la Convention.

MOD **3011** **113**
14

5.4 — *Radiotélégramme: télégramme* originaire ou à destination d'une *station mobile* ou d'une *station terrienne mobile,* transmis, sur tout ou partie de son parcours, sur les voies de *radiocommunication* du *service mobile* ou du *service mobile par satellite.*

MOD **3012** **114**
14A

5.5 — *Communication radiotélex:* communication télex originaire ou à destination d'une *station mobile* ou d'une *station terrienne mobile,* transmise, sur tout ou partie de son parcours, sur les voies de *radiocommunication* du *service mobile* ou du *service mobile par satellite.*

MOD **3008** **115**
11

5.6 — *Télégraphie à déplacement de fréquence: télégraphie* à modulation de fréquence, dans laquelle le signal télégraphique déplace la fréquence de l'onde porteuse entre des valeurs prédéterminées.

MOD **3016** **116**
20

5.7 — *Fac-similé*: forme de *télégraphie* ayant pour le objet la transmission d'images fixes, avec ou sans demi-teintes, en vue de leur reproduction sous une forme permanente.

Dans cette définition, le terme *télégraphie* a le sens général défini dans la Convention.

MOD **3013** **117**
17

5.8 — *Téléphonie* (1): forme de *télécommunication* établie en vue de la transmis sion de la parole ou, dans certains cas, d'autres sons.

MOD **3014** **118**
18

5.9 — *Conversation radiotéléphonique*: conversation téléphonique originaire, ou à destination d'une *station mobile* ou d'une *station terrienne mobile,* transmise sur tout ou partie de son parcours, sur les voies de *radiocommunication* du *service mobile* ou du *service mobile par satellite.*

NOC **3019** **119**
4

5.10 — *Exploitation simplex:* mode d'exploitation suivant lequel la transmission estrendue possible alternativement dans les deux sensd la voie de *télécommunication,* par exemple, au moyen d'un système à commande manuelle (2).

---

(1) Voir Résolution **68.**

(MOD) **3019.1** **119.1**

(2) En général, les modes d'*exploitation duplex* et *exploitation semi-duplex* d'une voie de *radiocommunication* nécessitent l'usage de deux fréquences: le mode d'*exploitation simplex* peut être réalisé avec une ou deux fréquences.

NOC	**3020** 5	**120**	5.11 — *Exploitation duplex:* mode d'exploitation suivant lequel la transmission est possible simultanément dans le deux sens de la voie de *télécommunication* (1).
(MOD)	**3021** 6	**121**	5.12 — *Exploitation semi-duplex:* mode *d'exploitation simplex* à une extrémité de la voie de *télécommunication* et d'*exploitation duplex* a l'autre (1).
MOD	**3015** 19	**122**	5.13 — *Télévision*: forme de *télécommunication* assurant la transmission d'images non permanentes d'objects fixes ou mobiles.
(MOD)	**3104** 84APA	**123**	5.14 — *Réception individuelle* (dans le service de la radiodiffusion par satellite): réception des *émissions* d'une *station spatiale* du *service de radiodiffusion par satellite* au moyen d'installations domestiques simples et notamment d'installations munies d'antennes de faibles dimensions.
NOC	**3105** 84APB	**124**	5.15 — *Réception communautaire* (dans le service de radiodiffusion par satellite): réception des *émissions* d'une *station spatiale* du *service de radiodiffusion par satellite* au moyen d'installations réceptrices pouvant, dans certains cas, être complexes et avoir des antennes de plus grandes dimensions que celles utilisées pour la *réception individuelle*, et destinées à être utilisées: Par un groupe du public en général, en un même lieu; ou Au moyen d'un système de distribution desservant une zone limitée.
NOC	**3017** 15	**125**	5.16 — *Télémesure:* utilisation des *télécommunications* en vue d'indiquer ou d'enregistrer automatiquemente des mesures à une certaine distance de l'instrument de mesure.
NOC	**3018** 16	**126**	5.17 — *Radiomesure: télémesure* réalisé à l'aide des *ondes radioélectriques.*
NOC	**3095** 84AW	**127**	5.18 — *Télémesure spatiale: télémesure* utilisée pour la transmission, à partir d'une *station spatiale*, des résultats des mesures effectuées dans un *engin spatial* y compris celles qui concernent le fonctionnnement de l'*engin spatial.*
ADD	**3018A**	**128**	5.19 — *Télécomande:* utilisation des *télécommunications* pour la transmission de signaux pour mettre en fonctionement, modifier ou arrêter à distance le fonctionnement d'un appareil.
MOD	**3097** 84AY	**129**	5.20 — *Télécomande spatiale:* utilisation des *radiocommunications* pour les transmissions de signaux radioélectriques à une *station spatiale* pour mettre en fonctionnement, modifier ou arrêter le fonctionnement d'appareils situés sur l'objet spatial associé, y compris la *station spatiale.*
(MOD)	**3098** 84AZ	**130**	5.21 — *Poursuite spatiale:* détermination de l'*orbite*, de la vitesse ou de la position instantanée d'un object situé dans l'espace, par l'utilisation du *radiorepérage*, à la exclusion des *radars primaires*, en vue de suivre les déplacements de cet objet.

SECTION VI

MOD

Caractéristiques des émissions et des matériels

ADD	**3133B**	**131**	6.1 — *Rayonnement* (radioélectrique): flux d'energie produit sous forme d'*ondes radioélectriques* à partir d'une source quelconque, ou cette énergie elle même.
ADD	**3133C**	**132**	6.2 — *Emission: rayonnement* produit, ou production de *rayonnement*, à partir d'une *station* radioélectrique d'émission. Para exemple, l'énergie rayonnée par l'oscillateur local d'un récepteur radioélectrique ne constitue pas une émission mais un *rayonnement.*
Add	**3006A**	**133**	6.3 — *Classe de émission:* ensemble des caractéristiques d'une *émission*, telles que le type de modulation de la porteuse principale, la nature du signal de modulation, le genre d'information à transmettre, et éventuellement d'autres caractéristiques; chaque classe est designée par un ensemble de symboles normalisés.
ADD	**3021**	**134**	6.4 — *Emission à bande latérale unique:* emission en modulation d'amplitude ne comportant qu'une seule des deux bandes latérales.
ADD	**31021B**	**135**	6.5 — *Emission à bande latérale unique à porteuse complète: emission à bande latérale unique* sans affaiblissement de la porteuse.
ADD	**3021C**	**136**	6.6 — *Emission à bande latérale unique à porteuse réduite: emission à bande latérale unique* avec affaiblissement de la porteuse, mais permettant encore sa restitution pour la démodulation.

(MOD)	**3020.1** 5.1	**120.1**	(1) En général, les modes d'*exploitation duplex* et *exploitation semi-duplex* d'une voie de *radiocommunication* nécessitent l'usage de deux fréquences: le mode d'*exploitation simplex* peut être réalisé avec une ou deux fréquences.
(MOD)	**3021.1**	**121.1**	

ADD **3021D** **137** 6.7 — *Emission à bande latérale unique à porteuse supprimée: emission à bande latérale unique* dans laquelle la porteuse est virtuellement supprimée et n'est pas destinée à être utilisée pour la démodulation.

ADD **3133D** **138** 6.8 — *Emission hors bande* (*): *emission* sur une ou des fréquences situées en dehors de la *largeur de bande nécessaire* mais en son voisinage immédiat due au processus de la modulation, à l'exclusion des *rayonnements non essentiels.*

MOD **3141** **139** 6.9 — *Rayonnement non essentiel* (*): *rayonnement* sur une des fréquences situées
92 en dehors de la *largeur de bande nécessaire* et dont le niveau peut être réduit sans affecter la transmission de l'information correpondante. Ces rayonnements comprennent les rayonnements harmoniques, les rayonnements parasites, les produits d'intermodulation et de conversation de fréquence, à l'exclusion des *émissions hors bande.*

ADD **3133F** **140** 6.10 — *Rayonnements non désirés:* (*) ensemble des *rayonnements non essentiels* et des *rayonnements* provenant des *émissions hors bande.*

MOD **3138** **141** 6.11 — *Bande de fréquences assignée*: bande de fréquences à l'intérieur de laquelle
89 l'*emission* d'une *station* donnée est autorisée: la largeur de cette bande est égale à la *largeur de bande nécessaire*, augmentée du double de la valeur absolue de la *tolérance de fréquence.* Dans le cas des *stations spatiales,* la bande de fréquences assignée inclut le double du décalage maximum dû à l'effect Doppler pouvant se produire par rapport à un point queconque à la surface de la Terre.

NOC **3134** **142** 6.12 — *Fréquence assignée:* centre de la *bande de fréquences assignée* à une *station.*
85

MOD **3135** **143** 6.13 — *Fréquence caractéristique:* fréquence aisément identifiable et mesurable dans
86 une *émission* donnée.

Une fréquence portuese peut, par exemple, être désignée comme fréquence caractéristique.

NOC **3136** **144** 6.14 — *Fréquence de référence:* fréquence ayant une position fixe et bien déterminée
87 par rapport à la *fréquence assignée.* Le décalage de cette fréquence par rapport à la *fréquence assignée* est, en grandeur et en signe, le même que celui de la *fréquence caractéristique* para rapport au centre de la bande de fréquences occupée para l'*émission.*

MOD **3137** **145** 6.15 — *Tolérance de fréquence:* ecart maximal admissible entre la *fréquence assignée*
88 et la fréquence située au centre de la bande occupée par une *émission,* ou entre le *fréquence de référence* et la *fréquence caractéristique* d'une *émission.*

La tolérance de fréquences est exprimée en millionièmes ou en hertz.

MOD **3140** **146** 6.16 — *Largeur de bande nécessaire:* pour une *classe d'émission* donnée, largeur
91 de la bande de fréquences juste suffisante pour assurer la transmission de l'information à la vitesse et avec la qualité requises dans des conditions données.

MOD **3139** **147** 6.17 *Largeur de bande occupée:* largeur de la bande de fréquence telle que, au-
90 -dessous de sa fréquence limite inférieure et au-dessus de sa fréquence limite supérieure, soient émisses des *puissances moyennes* égales chacune à un pourcentage donnée ß/2 de la *puissance moyenne* totale d'une *émission* donnée.

En l'absence de spécifications du CCIR pour la *classe d'émission* considérée, la valeur ß/2 doit être prise égale à 0,5 %.

ADD **3153C** **148** 6.18 — *Onde à polarisation dextrogyre* (sens inverse des aiguilles d'une nontre): onde polarisée elliptiquement ou circulairement dont, pour un observateur regardant dans le sens de la propagation, le vecteur champ électrique tourne en fonction du temps, dans un plan fixe quelconque normal à la direction de propagation, dans le sens senestrorsum, c'est-à-dire dans le sens des aiguilles d'une montre.

ADD **3153D** **149** 6.19 — *Onde à polarisation lévogyre* (sens inverse des aiguilles d'une montre): onde polarisée elliptiquement ou circulairement dont, pour un observateur regardant dans le sens de la propagation, le vecteur champ électrique tourne en fonction du temps, dans un plan fixe quelconque normal à la direction de propagation, dans le sens senestrorsum, c'est-à-dire dans le sens contraire à celui des aiguilles d'une montre.

(*) Les termes associés aux définitions données dans les numéros **138, 139** et **140** doivent être exprimés dans les langues de travail de la façon suivante:

Numeros	En français	En englais	En espagnol
138 (6.8	Emission hors bande	Out-of-band emission	Emisión fuera de banda
139 (6.9)	Rayonnement non essentiel	Spurious emission	Emisión no esencial
140 (6.10)	Raynements non désirés	Unwantes emissions	Emisiones no deseadas

MOD 3143 150 94

6.20 — *Puissance:* chaque fois que la puissance d'un émetteur radioélectrique, etc., est mentionnée, elle doit être exprimée sous l'une des formes ci-dessous, selon la *classe d'émission*, en utilisant les symboles arbitraires indiqués:

Puissance en crête (*PX* ou *pX*);
Puissance moyenne (*PY* ou *pY*);
Puissance de la porteuse (*PZ* ou *pZ*).

Pour différentes *classes d'émission*, les rapports entre le *puissance en crête*, la *puissance moyenne* et la *puissance de la porteuse* dans les conditions de fonctionnement normal et en l'absence de modulation, sont indiqués dans des Avis du CCIR, qui peuvent être utilisés comme guides.

Dans les formules, le symbole *p* indique la puissance en watts et le symbole *P* la puissance en décibels relative à un niveau de référence.

MOD 3144 151 95

6.21 — *Puissance en crête* (d'un émetteur radioélectrique): moyenne de la puissance fournie à la ligne d'alimentation de l'antenne par un émetteur en fonctionnement normal, au cours d'un cycle de radiofréquence correspondant à l'amplitude maximale de l'enveloppe de modulation.

MOD 3145 152 96

6.22 — *Puissance moyenne* (d'un émetteur radioélectrique): moyenne de la puissance fournie à la ligne d'alimentation de l'antenne par un émetteur en fonctionnement normal, évaluée pendant un intervalle de temps relativement long par rapport à la période de la compsante de plus basse fréquence de la modulation.

MOD 3146 153 97

6.23 — *Puissance de la porteuse* (d'un émetteur radioélectrique): moyenne de la puissance fournie à la ligne d'alimentation de l'antenne par un émetteur au cours d'un cycle de radiofréquence en l'absence de modulation.

MOD 3149 154 99

6.24 — *Gain d'une antenne:* rapport généralement exprimé en décibels, entre la puissance nécessaire à l'entrée d'une antenne de référence sans pertes et la puissance fourmie à l'entrée de l'antenne donnée, pour que les deux antennes produisent dans une direction donnée le même champ ou la même puissance surfacique à la même distance. En l'absence d'indication contraire, il s'agit du gain de l'antenne dans la direction du maximum de *rayonnement*. On peut éventuellement considérer le gain pour une polarisation spécifiée.

Suivant l'antenne de référence choisie on distingue:

a) Le *gain isotrope* ou *absolu* (G_i) lorsque l'antenne de référence est une antenne isotrope isolée dans l'espace:
b) *Le gain par rapport à un doublet demi-onde* (G_d) lorsque l'antenne de référence es un doublet demi-onde, isolé dans l'espace, dont le plan équatorial continent la direction donnée:
c) Le *gain par rapport à une antenne verticale courte* (G_v) lorsque l'antenne de référence est un conducteur rectiligne beaucoup plus court que le quart de la longueur d'onde, normal à la surface d'un plan parfaitement conducteur qui contient la direction donnée.

MOD 3148 155 98A

6.25 — *Puissance isotrope rayonnée équivalente (p. i. r. e.):* produit de la puissance fournie à l'antenne par son gain dans une direction donnée par rapport à une antene isotrope (*gain isotrope ou absolu*).

MOD 3147 156 98

6.26 — *Puissance apparente rayonnée* (*p. a. r.*) (dans une direction donnée): produit de la puissance fournie à l'antenne par son *gain par rapport à un doublet demi-onde* dans une direction donnée.

ADD 3147A 157

6.27 — *Puissance apparente rayonnée sur une antenne verticale courte* (*p. a. r. v.*) (dans une direction donnée): produit de la puissance fornie à l'antenne par son *gain par rapport à une antenne verticale courte* dans une direction donnée.

NOC 3022 158 *26*

6.28 — *Diffusion troposphérique:* mode de propagation dans lequel les *ondes radioélectriques* sont diffusées par suite d'irrégularités ou de discontinuités dans les propriétés physiques de la troposphère.

NOC 3023 159 27

6.29 — *Diffusion ionosphérique:* mode de propagation dans lequel les *ondes radioélectriques* sont diffusées par suite d'irrégularités ou de discontinuités dans l'ionisation de l'ionosphère.

SECÇÃO VII

ADD

Partage de fréquences

ADD 3148A 160

7.1 — *Brouillage:* effet, sur la réception dans un système de *radiocommunication*, d'une énergie non désirée due à une émission, à un rayonnement ou à une induction (ou à une combinaison de ces *émissions, rayonnements* ou inductions), se manifestant par une dégradation de la qualité de transmission, une déformation ou une perte de l'information que l'on aurait pu extraire en l'absence de cette énergie non désirée.

ADD **3142A** **161** 7.2 — *Brouillage admissible* (1): *brouillage* observé ou prévu, qui satisfait aux niveaux de brouillage et aux critères quantitatifs de partage fixés dans le présent Règlement ou dans des Avis du CCIR ou encore dans des accords particuliers dont la possibilité est prévue dans le présent Règlement.

ADD **3140B** **162** 7.3 — *Brouillage accepté* (1): *brouillage*, supérieur à celui défini comme admissible, qui a fait l'object d'un accord entre deux ou plusieurs administrations sans porter préjudice aux autres administrations.

MOD **3142** **163** 7.4 — *Brouillage préjudiciable* (2): *brouillage* qui compromet le fonctionnement d'un *service de radionavigation* ou d'autres services de *sécurité* ou qui dégrade sérieusement, interrompt de façon répétée ou empêche le fonctionnement d'un *service de radiocommunication* utilisé conformément au présent Règlement.
93

ADD **3142** **164** 7.5 — *Rapport de protection* (R. F.): valeur minimale généralement exprimée en décibles du rapport signal utile/signal indésirable à l'entrée d'un récepteur, déterminé dans des conditions spécifiées, permettant d'obtenir une qualité de réception donnée du signal utile à la sortie du récepteur.

MOd **3157** **165** 7.6 — *Zone de coordination:* zone associée à une *station terrienne* à l'extérieur de laquelle une *station de Terre* partageant la même bande de fréquences, ne peut produire ni subir aucun *brouillage* supérieur au *brouillage admissible.*
103D

MOD **3156** **166** 7.7 — *Contour de coordination:* ligne délimitant la zone de coordination.
103C

MOd **3155** **167** 7.8 — *Distance de coordination:* dans un azimut donnée, distance à partir de la position d'une *station terrienne* au-delá de laquelle une *station de Terre* partageant la même bande de fréquences, ne peut produire ni subir aucun *brouillage* supérieur au *brouillage admissible.*
103B

MOD **3154** **168** 7.9 — *Température de bruit équivalente d'une liaison par satellite:* température de bruit rapportée à la sortie de l'antenne de réception de la *station terrienne,* correspondant à la puissance de bruit radioélectrique qui produit le bruit total observé à la sortie de la *liaison par satellite,* compte non tenu du bruit dû aux *brouillages* causés par des *liaisons par satellite* utilisant d'autres *satellites* et par des systèmes de Terre.
103A

Section VIII

ADD

Termes techniques relatifs à l'espace

NOC **3123** **169** 8.1 — *Espace lointain:* région de l'espace située à des distances de la Terre supérieures ou approximativement égales à la distance entre la Terre et la Lune.
84BA

NOC **3124** **170** 8.2 — *Engin spatial:* engin construit par l'homme et destiné à aller au-delà de la partie principale de l'atmosphère terrestre.
84BAA

(MOD) **3125** **171** 8.3 — *Satellite:* corps qui tourne autour d'un autre corps de masse prépondérante et dont le mouvement est principalment déterminé, d'une façon permanente, par la force d'attraction de ce dernier.
84BAB

MOD **3126** **172** 8.4 — *Satellite actif: satellite* portant une *station* destinée à émettre ou retransmettre des signaux de *radiocommunication.*
84BAC

MOD **3127** **173** 8.5 — *Satellite réflecteur: satellite* destiné à transmettre par réflexion des signaux de *radiocommunication.*
84BAD

ADD **3127A** **174** 8.6 — *Détecteur actif:* instrument de mesure utilisé dans le *service d'exploration de la Terre par satellite* ou dans le *service de recherche spatiale,* qui permet d'obtenir des informations par *émission* et réception d'*ondes radioélectriques.*

ADD **3127B** **175** 8.7 — *Détecteur passif:* instrument de mesure utilisé dans le *service d'exploration de la Terre par satellite* ou dans le *service de recherche spatiale,* qui permet d'obtenir des informations par réception d'*ondes radioélectriques* d'origine naturelle.

MOD **3128** **176** 8.8 — *Orbite:* trajectorie que décrit, par rapport à un système de référence spécific, le centre de gravité d'un *satellite* ou un autre object spatial soumis de façon prépondérante aux forces naturelles, essentiellement les forces de gravitation.
84BB

NOC **3129** **177** 8.9 — *Inclinaison d'une orbite* (d'un satellite de la Terre): angle formé par le plan contenant une *orbite* et le plan de l'equateur terrestre.
84BC

ADD **3142A.1** **161.1**
ADD **3140B.1** **162.1**

(1) Les termes «brouillage admissible» et «brouillage accepté» sont utilisés dans la coordination des assignations de fréquences entre administrations.

(2) Voir la Résolution **68.**

MOD 3130 84BD **178** 8.10 — *Période* (d'un satellite): intervalle de temps compris entre deux passages consécutifs d'un *satellite* en un point caractéristique de son *orbite.*

(MOD) 3131 84BE **179** 8.11 — *Altitude de l'apogée* ou du *périgée:* altitude de l'apogée ou du périgée au-dessus d'une surface de référence spécifiée servant à la représentation de la surface de la Terre.

NOC 3132 84BFA **180** 8.12 — *Satellite géosynchrone: satellite* de la Terre dont la période de révolution est égalé à la période de rotation de la Terre autour de son axe.

MOD 3133 84BG **181** 8.13 — *Satellite géostationnaire: satellite géosynchone* dont l'*orbite* circulaire et directe est située dans le plan de l'equateur terrestre et qui, par conséquent,est fixe par rapport à la Terre: par extension, *satellite* qui reste approximativement fixe par rapport à la Terre.

ADD 3133A **182** 8.14 — *Orbite des satellites géostationnaires: orbite* sur laquelle doit être placé un *satellite* pour que soit un *satellite géostationnaire.*

183 à 207 *(Non attribués.)*

ARTICLE 2

NOC

Nomenclature des bandes de fréquences et des longueurs d'onde employées dans les radiocommunications

MOD 3183 112 **208** § 1. Le spectre des fréquences radioélectriques est subdivisé en neuf bande de fréquences, désignées par des nombres entiers consécutifs conformément au tableau ci-après. L'unité de fréquence étant le hertz (Hz), les fréquences sont exprimées:

En kilohertz (kHz), jusqu'à 3000 kIIz inclus;
En mégahertz (MIIz), au-delà de 3 MGz, jusqu'à 3000 MHz inclus;
En gigahertz (GIIz), au-delà de 3 GHz, jusqu'à 3000 GHz inclus.

Pour les bandes de fréquentes supérieurs à 3000 GHz, c'est-à-dire pour les ondes centimillimétriques, les ondes micrométriques et les ondes décimicrométriques, il convient d'utiliser le térahertz (TIIz).

Toutefois, dans les cas où l'observation de ces règles donnerail lieu à de sérieuses difficultés, par exemple pour la notification et l'enregistrement des fréquences, dans les questions relatives aux listes de fréquences et dans les questions connexes, on pourra s'en écarter dans une mesure raisonnable.

Numéro de la bande	Symboles (en anglais)	Gamme de fréquences (limite inférieure exclue, limite supérieure incluse)	Subdivision métrique correspondante	Abréviations metriques pour les bandes
4	VLF	3 à 30 kHz	Ondes myriamétriques	B. Mam
5	LF	30 à 300 kHz	Ondes kilométriques	B. km
6	MF	300 à 3000 kHz	Ondes hectométriques	B. hm
7	HF	3 à 30 MIIz	Ondes décamétriques	B. dam
8	VHF	30 à 300 MHz	Ondes métriques	B. m
9	UHF	300 à 3000 MHz	Ondes décimétriques	B. dm
10	SHF	3 à 30 GHz	Ondes centimétriques	B. cm
11	EHF	30 à 300 GHz	Ondes millimétriques	B. mm
12	–	300 à 3000 GHz	Ondes décimillimétriques	–

Note 1: La «bande N» (N = numéro de la bande) s'étend de 0.3×10^NHz à 3×10^NHz.
Note 2: Préfixes: k = kilo (10^3); M = méga (10^6); G = giga (10^9); T = téra (10^{12}).

ADD 3183A **209** § 2. Dans les relations entre les administrations et l'UIT, on ne devrait pas utiliser d'appelallations, de symboles ni d'abréviations destinés à désigner les bandes de fréquences autres que ceux qui figurent au numéro **208.**

210 à 234 *(Non attribués.)*

ADD **N2A**

ARTICLE 3

Nomenclature des dates et des heures employées en radiocommunications

ADD **3168** **235** § 1. Toute date utilisée en relation avec les radiocommunications doit être conforme au calendrier grégorien.

ADD **3169** **236** § 2. Si, dans une date, le moins n'est pas indiqué en toutes lettres ou en abrégé, il doit être exprimé sous forme numérique selon une séquence déterminée de chiffres, représentant, deux par deux, le jour, le mois et l'année.

ADD **3170** **237** § 3. Chaque fois qu'une date est utilisée en relation avec le temps universel coordenné (UTC), cette date doit être celle du méridien d'origine au moment approprié, le méridien d'origine correspondant à une longitude géographique de zéro degré.

MOD **3171** **238** § 4. Sauf indication contraire, chaque fois qu'une heure spécifiée est utilisée dans des activités internationales de radiocommunication, le temps universel coordonné (UTC) est applicable; l'heure doit être présentée sous la forme d'un groupe de quatre chiffres (0000-2359). L'abréviation UTC doit être utilisée dans toutes les langues.

239 à **263** *(Non attribués.)*

MOD **N3**

ARTICLE 4

NOC

Désignation des émissions

SUP **3209** à **3216** inclus avec les titres des rubriques y relatifs.

ADD **3209A** **264** § 1. (1) Les émissions sont désignées d'après leur largeur de bande nécessaire et leur classe.

ADD **3209A** **265** (2) On trouvera des exemples d'emissions désignées conformément aux dispositions du présent article dans la partie B de l'appendice 6. D'autres exemples pourront être donnés dans les Avis le plus récents du CCIR. Ces exemples pourront aussi être publiés dans la préface de la Liste internationale des fréquences.

SECTION I

ADD

Largeur de bande nécessaire

ADD **3210A** **266** § 2. (1) La largeur de bande nécessaire, telle qu'elle est définie au numéro **146** et déterminée conformément à la partie B de l'appendice 6, doit être exprimée par trois chiffres et une lettre. La lettre occupe la position de la virgule et représente l'unité de la largeur de bande. Le premier caractère ne doit être ni le chiffre zéro, ni l'une des lettres K, M ou G.

ADD **267** (2) La largeur de bande nécessaire (1):

Entre 0,001 et 999 Hz est exprimée en Hz (lettre H);
Entre 1,00 et 999 kHz est exprimée en kHz (lettre K);
Entre 1,00 et 999 MHz est exprimée en MHz (lettre M);
Entre 1,00 et 999 GHz est exprimée en GHz (lettre G).

ADD **3210A.1** **267.1** (1) Exemples:

0,002	Hz = H002;	6	kHz = 6K00;	1,25	MHz = 1M25;
0,1	H2 = H100;	12,5	kHz = 12K5;	2	MHz = 2M00;
25,3	Hz = 25H3;	180,4	kHz = 180K;	10	MHz = 10M0;
400	Hz = 400H;	180,5	kHz = 181K	202	MHz = 202M;
2,4	kHz = 2K40;	180,7	kHz = 181K;	5,65	GHz = 5G65.

SECTION II

ADD **Classes**

ADD **3211A** **268** § 3. La classe d'émission est l'ensemble des caractéristiques mentionnées au numéro **269.**

ADD **3212A** **269** § 4. Les émissions sont classées et symbolisées d'après leurs caractéristiques fondamentales, telles qu'elles figurant au numéro **270** et d'après toutes caractéristiques additionelles facultatives décrites conformément á la partie a de l'appendice 6.

ADD **3213A** **270** § 5. Les caractéristiques fondamentales sont les suivantes (voir les numéros **271, 272, 273**):

(1) Premier symbole — type de modulation de la porteuse principale;
(2) Deuxième symbole — nature du signal (ou des signoux) modulant la porteuse principale;
(3) Troisième symbole — type d'information à transmettre.

Lorsque la modulation n'est employée que pendant de courtes périodes de temps et d'une façon occasionnelle (comme, dans bien des cas, pour les signaux d'identification ou d'appel), on peut ne pas en tenir compte, à condition que la largeur de bande nécessaire indiquée ne s'en trouve pas augmentée.

ADD **3214A** **271** § 6. (1) Premier symbole — type de modulation de la porteuse principale:

(1.1) Emission d'une onde non modulée ..... N
(1.2) Emission dont l'onde porteuse principale est modulée en amplitude (y compris les cas où il y a des sous-porteuses modulées en modulation angulaire):
(1.2.1) Double bande latérale ..... A
(1.2.2) Bande latérale unique, onde porteuse complète H
(1.2.3) Bande latérale unique, onde porteuse réduite ou de niveau variable ..... R
(1.2.4) Bande latérale unique, onde porteuse supprimée J
(1.2.5) Bandes latérales indépendentes ..... B
(1.2.6) Bande latérales résiduelle C
(1.3) Emission dont l'onde porteuse principale est modulée en modulation angulaire:
(1.3.1) Modulation de fréquence ..... F
(1.3.2) Modulation de phase ..... G
(1.4) Emission dont l'onde porteuse principale est modulée en amplitude et en modulation angulaire, soit simultanément soit dans un ordre établi d'avance ..... D
(1.5) Emission d'impulsion (1):
(1.5.1) Trains d'impulsions non modulées ..... P
(1.5.2) Trains d'impulsions:
(1.5.2.1) Modulées en amplitude ..... K
(1.5.2.2) Modulées en largeur/durée L
(1.5.2.3) Modulées en position/phase ..... M
(1.5.2.4) Dans lesquels l'onde porteuse est modulée en modulation angulaire pendant la période de l'impulsion Q
(1.5.2.5) Consistant en une combinaison de cequi precède, ou produite par d'outres moyens V
(1.6) Cas non couverts ci-dessus, dans lesquels l'émission se compose de la porteuse principale modulée, soit simultanément, soit dans un ordre établi d'avance, selon une combinaison de plusieurs des modes suivants: en amplitude, en modulation angulaire ou par impulsions ..... W
(1.7) Autres cas X

ADD **3214A.1** **271.1** (1) Les émissions dont la porteuse principale est modulée directement par un signal qui a été codé sous une forme quantifiée (par exemple, modulation par impulsions et codage) doivent être désignées conformement aux points (1.2) ou (1.3).

ADD **3215A** **272** (2) Deuxième symbole — nature du signal (ou des signaux) modulant la porteuse principale:

(2.1) Pas de signal modulant	0
(2.2) Une seule contenant de l'information quantifiée ou numérique, sans emploi d'une sous-porteuse modulante (1)	1
(2.3) Une seule voie contenant de l'information quantifiée ou numérique, avec emploi d'une sous-porteuse modulante (1)	2
(2.4) Une seule voie contenant de l'information analogique	3
(2.5) Deux voies ou plus contenant de l'information quantifiée ou numérique	7
(2.6) Deux voies ou plus contenant de l'information analogique	8
(2.7) Système composite, comportant une ou plusieurs voies contenant de l'information quantifiée ou numérique et une ou plusieurs voies contenant de l'information analogique	9
(2.8) Autres cas	X

ADD **3216A** **273** (3) Troisième symbole — type d'information à transmettre (2):

(3.1) Aucune information	N
(3.2) Télégraphie — pour réception auditive	A
(3.3) Télégraphie — pour réception automatique	B
(3.4) Fac-similé	C
(3.5) Transmission de données, télémesure, télécommande	D
(3.6) Téléphonie (y compris la radiodiffusion sonore)	E
(3.7) Télévision (vidéo)	F
(3.8) Combinaison des cas ci-dessus	W
(3.9) Autres cas	X

CHAPITRE II

N4/12

ARTICLE 5

MOD

Caractéristiques techniques des stations

(MOD) **3242** 667 **299** § 1. (1) Le choix et le fonctionnement des appareils destinés à être utilisés dans les stations, ainsi que toutes les émissions de celles-ci, doivent satisfaire aux dispositions du présent Règlement.

NOC **3243** 668 **300** (2) De même, dans la mesure compatible avec les considérations pratiques, le choix des appareils d'emission, de réception et de mesure doit être fondé sur les plus récents progrès de la technique tels qu'ils sont indiqués notamment dans les Avis du CCIR.

MOD **3244** 669 **301** § 2. Dans la conception des matériels d'emission et de réception destinés à être utilisés dans une partie donnée du spectre des fréquences, il devrait être tenu compte des caractéristiques techniques des matériels d'emission et de réception susceptibles d'être utilisés dans les régions voisines de cette partie du spectre et dans d'autres régions du spectre, à condition que toutes les mesures se justifiant du point de vue technique et économique aient été prises pour réduire le niveau des rayonnements non désirés de ces derniers matériels d'emission et pour réduire la sensibilité au brouillage de ces derniers matériels de réception.

MOD **3245** 670 **302** § 3. Il convient que, dans toute la mesure du possible, les équipements à mettre en oeuvre dans une station appliquent des méthodes de traitement des signaux qui permettent d'utiliser le spectre des fréquences avec le maximum d'efficacité, conformément aux Avis pertinents du CCIR. Ces méthodes comprennent notamment certaines techniques d'étalement du spectre et, en particulier dans les systèmes fonctionnant en modulation d'amplitude, l'utilisation de la technique de la bande latérale unique.

NOC **3246** 671 **303** § 4. (1) Les stations d'émission doivent se conformer aux tolérances de fréquence fixées à l'appendice 7.

ADD **3215A.1** **272.1** (1) Cela exclut le multiplexage par répartition dans le temps.

ADD **3216A.1** **273.1** (2) Dans ce contexte, le mot «informations» a un sens restrictif, c'est-à-dire qu'il ne s'agit pas d'une information de nature permanente et invariable comme dans le cas d'émissions de fréquences étalon, de radars à ondes entretenues ou à impulsions, etc.

MOD **3247** **304** (2) Les stations d'émission doivent se conformer aux spécifications de l'appendice 8 en ce qui concerne les niveaux de puissance maximaux tolérés des rayonnements non essentiels.
672

ADD **3247A** **305** (3) Les stations d'émission doivent se conformer aux spécifications fixées dans le présent Règlement pour certains services et classes d'émission, par exemple les appendices 17 et 27Aer2 (*), en ce qui concerne les niveaux de puisance maximaux tolérés pour les émissions hors bande. En l'absence de telles spécifications, les stations doivent, dans toute la mesure du possible, se conformer aux conditions relatives à la limitation des émissions hors bande spécifiées dans les plus récents Avis du CCIR.

MOD **3248** **306** (4) De plus, on s'efforcera de maintenir les tolérances de fréquence et le niveau des rayonnements non désirés aux valeurs les plus basses permises par l'état de la technique et la nature du service à assurer.

MOD **3249** **307** § 5. (1) Les largeurs de bande des émissions doivent également permettre d'assurer
674 l'utilisation la plus efficace possible du spectre, ce qui signifie en général que le largeurs de bandes doivent être maintenues aux valeurs les plus basses permises par l'état de la technique et la nature du service à assurer. L'appendice 6 constitue un guide pour la détermination de la largeur de bande nécessaire.

ADD **3249A** **308** (2) Lorsque l'on fait usage des techniques d'étalement du spectre, on doit employer la densité spectrale de puissance minimale compatible avec l'utilisation efficace du spectre.

ADD **3249B** **309** § 6. (1) Chaque fois que cela pourrait apparaître nécessaire pour une bonne utilisation du spectre, il conviendrait que les récepteurs utilisés par un service aient, dans la mesure du possible, les mêmes tolérances de fréquence que les émetteurs de ce service, compte tenu de l'effet Doppler dans les cas où celui-ci doit être pris en considération.

ADD **3249C** **310** (2) Les stations de réception devraient utiliser un équipement dont les caractéristiques techniques soient appropriées à la classe d'émission concernée; en particulier, la sélectivité devrait être appropriée, compte tenu du numéro **307** relatif aux largeurs de bande des émissions.

ADD **3249D** **311** (3) Les caractéristiques de fonctionnement des récepteurs devraient être telles que ceux-ci ne soient pas brouillés par des émetteurs situés à une distance raisonnable et fonctionnant conformément aux dispositions du présent Règlement.

MOD **3250** **312** § 7. Afin d'assurer le respect du présent Règlement, les administrations font en
675 sorte que les émissions des stations placées sous leur juridiction fassent l'object de mesures fréquentes; à cette fin, elles emploient, si besoin est, les moyens définis dans l'article 20. La technique à appliquer et les intervalles de mesur à respecter doivent être, selon les possibilités pratiques, conformes aux plus récents Avis du CCIR.

MOD **3251** **313** § 8. Les émissions à ondes amorties sont interdites dans toutes les stations.
677

ARTICLE 6

NOC

Règles générales d'assignation et d'emploi des fréquences

ADD **3276A** **339** § 1. Les Membres s'efforcent de limiter le nombre de fréquences et l'étendue du spectre utilisé au minimum indispensable pour assurer de manière satisfaisante le fonctionnement des services nécessaires. A cette fin, ils s'efforcent d'appliquer dans les moindres délais des derniers perfectionnements de la technique (1).

MOD **3277** **340** § 2. Les Membres s'engagent à se conformer aux prescriptions du Tableau
113 d'attribution des bandes de fréquences ainsi qu'aux autres prescriptions du présent Règlement pour assigner des fréquences aux stations qui peuvent causer des brouillages préjudiciables aux services assurés par les stations des autres pays.

MOD **3278** **341** § 3. Toute nouvelle assignation, on toute modification de la fréquence ou d'une
114 autre caractéristique fondamentale d'une assignation existante (voir l'appendice 1 ou

---

(*) *Note du Secrétarial général:* voir le numéro **5189** et la Résolution **400**.

ADD **3276A.1** **339.1** (1) Numéro 130 de la Convention internationale des télécommunications (Malaga-Torremolinos, 1973).

l'appendice 3), doit être faite de manière à éviter de causer des brouillages préjudiciables aux services qui sont assurés par des stations utilisant des fréquences conformément au Tableu d'attribution des bandes de fréquences du présent chapitre et aux autres dispositions du présent Règlement, et dont les caractéristiques sont inscrites dans le Fichier de référence international des fréquences.

MOD 3279 342 115 § 4. Les administrations des Membres ne doivent assigner à une station aucune fréquence em dérogation au Tableau d'attribution des bandes de fréquences du présent chapitre ou aux autres dispositions du présent Règlement, sauf sous la réserve expresse qu'il n'en résulte pas de brouillage préjudiciable pour un service assuré par des stations fonctionnant conformément aux dispositions de la Convention et du présent Règlement.

(MOD) 3280 343 116 § 5. La fréquence assignée à une station d'une service donné doit être suffisamment éloignée des limites de la bande attribuée à ce service, de telle sorte que, compte tenu de la bande de fréquences assignée à la station, des brouillages préjudiciales ne soient pas causés aux services auxquels sont attribuées les bandes adjacents.

(MOD) 3281 344 116A § 6. Pour le règlement des cas de brouillages préjudicables, le service de radioastronomie est traité comme um service de radiocommunication. Cependant, vis-à-vis des émissions des services fonctionnant dans d'autres bandes. Il bénéficie du méme degré de protection que celui dont bénéficient ces services le uns vis-à-vis des autres.

ADD 3281A 345 § 7. Pour le règlement des cas de brouillages préjudiciables par d'autres services fonctionnant sans d'autres bandes, le service de recherche spatiale (passive) et le service d'exploration de la Terre par satellite (passive) bénéficient du même degré de protection que celui dont bénéficient ces différents services les uns vis-à-vis des autres.

MOD 3282 346 117 Lorsque, dans des Régions ou des sous-Régions adjacents, une bande de fréquences est attribuée à des services différents de même catégorie (voir les sections I et II de l'article 8), le fonctionnement de ces services est fondé sur l'égalité des droits. En conséquence, les stations de chaque service, dans une des Régions ou des sous-Régions, doivent fonctionner de telle sorte qu'elles ne causent pas de brouillage préjudicable aux services des autres Régions ou sous-Régions.

ADD 3283 347 Aucune disposition du présent Règlement ne peut faire obstacle à l'emploi, par une station en détresse, de tous les moyens de radiocommunication dont elle dispose pour attirer l'attention, signaler son état et sa position et obtenir du secours.

ADD 3284 348 § 10. Aucune disposition du présent Règlement ne peut faire obstacle à l'emploi par une station, dans les circonstances exceptionnelles indiquées au numéro 347, de tous les moyens de radiocommunication dont elle dispose pour assister une station em détresse.

349 à 373 *(Non attribués.)*

Accords particuliers

MOD 3308 374 118 § 1. Plusieurs Membres peuvent, dans le cadre des dispositions de l'article 31 se la Convention concernant les arrangements particuliers, conclure des accords particuliers concernant la sous-répartition des bandes de fréquences entre les services intéressés de ces pays.

MOD 3309 375 119 § 2. Plusieurs Membres peuvent, dans le cadre des dispositions de l'article 31 de la Convention concernant les arrangements particuliers, conclure, sur la base des résultats d'une conférence à laquelle tous le Membres concernés ont été invités, des accords particuliers pour l'assignation des fréquences à celles de leurs stations qui participent à un ou plusiers services déterminés dans les bandes de fréquences attribuées à ces services selon l'article 8, soit au-dessous de 5060 kHz, soit au-dessus de 27 500 kHz, mais non entre ces limites.

MOD 3310 376 120 § 3. Les Membres peuvent, dans la cadre des dispositions de l'article 31 de la Convention concernant les arrangements particuliers, conclure, sur une base mondiale, à l'issue d'une conférence à laquelle tous les Membres ont été invités, des accords particuliers pour l'assignation de fréquences à celles de leurs stations qui participent à un service déterminé, à condition que ces assignations soient faites dans les limites des bandes de fréquences attribuées exclusivement à ce service selon l'articlle 8.

NOC 3311 377 121 § 4. La faculté de conclure des accords particuliers prévue aux numéros 374 à 376 n'implique pas de dérogation aux dispositions du présent Règlement.

(MOD) 3312 378 122 § 5. Le Secrétaire général est informé à l'avance de la réunion de toute conférence convoquée en vue de la conclusion d'accords particuliers; il est également informée des termes de ces accords; il avise les Membres de l'existence de tels accords.

NOC 3313 123 379 § 6. Conformément aux dispositions de l'article 10, le Comité international d'enregistrement des fréquences peut être invité à délégeur des représentants pour participer, à titre consultatif, à l'établissement d'accords particuliers et aux travaux des conférences. Il est reconnu qu'une telle participation est désirable dans la majorité des cas.

(MOD) 3314 124 380 Si, en plus des dispositions qu'ils on la faculté de prendre aux termes du numéro **375**, plusiers Membres coordonnent, dans toutes les bandes de fréquences visées à l'article 8, l'utilisation de fréquences déterminées avant de notifier les assignations de fréquences correspondantes, ils en avisent, les cas échéant, le Comité.

381 à 390 *(Non attribués.)*

N7/5

ARTICLE 8

Attribution des bandes de fréquences

ADD

Introduction

ADD 3414A 391 § 1. Dans tous les documents de l'Union où il y a lieu d'employer les termes «Attribution», «allotissement et assignation», on leur donnera de sens défini aux numéros **17** à **19** avec la correspondance indiquée ci-après dans les trois langues de travail.

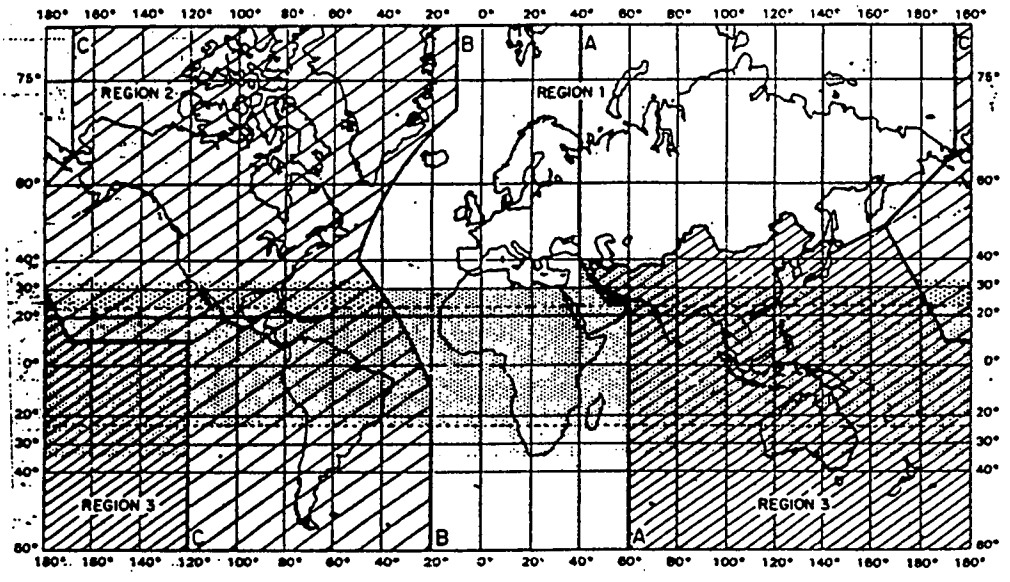
Répartition des bandes	En français	En anglais	En espagnol
Services	Attribution (Attribuer)	Allocation (To allocate)	Atribución (Atribuir)
Zones ou pays	Allotissement (Allotir)	Allotment (To allot)	Adjudicación (Adjudicar)
Stations	Assignation (Assigner)	Assignment (To assign)	Asignación

SECTION I

NOC

Règions et zones

MOD 3415 125 392 § 2. Du point de vue de l'atribution des bandes de fréquences, le monde a été divisé en trois Régions (1), comme indiqué dans le planisphère ci-dessous et dans les numéros **393** à **399**:



La partie ombrée correspond à la Zone tropicale définie aux numeros **406** à **410** et **411**.

NOC 3415.1 125.1 392.1 (1) Il convient de noter que, lorsque les mots «région» et «Régional» sont employés dans le présent Règlement sans R majuscule, ils ne concernent pas le trois Régions définies ici aux fins de l'attribution des bandes de fréquences.

NOC **3416** **393** *Région 1:*

126

La Région 1 comprend la zone limitée à l'est par la ligne A (voir ci-dessous la définition des lignes A, B, C) et à l'ouest par la ligne B, à l'exception des territoires de l'Iran situés entre ces limites. Elle comprend également la partie des territoires de la Turquie et de l'Union des Républiques Socialistes Soviétiques située en dehors de ces limites, ainsi que le territoire de la République Populaire de Mongolie et la zone au nord de l'URSS entre les lignes A et C.

NOC **3417** **394** *Région 2:*

127

La Région 2 comprend la zone limitée à l'est par la ligne B et à l'ouest par la ligne C.

NOC **3418** **395** *Région 3:*

128

La Région 3 comprend la zone limitée à l'est par la ligne C et à l'ouest par la ligne A, à exception des territoires de la République Populaire de Mongolie, de la Turquie, de l'URSS et de la zone au nord de l'URSS. Elle comprend également la partie du territoire de l'Iran située en de hours de ces limites.

NOC **3419** **396** Les lignes A, B et C sont définies comme suit:

129

NOC **3420** **397** *Ligne A:*

130

La ligne A part du Pôle Nord, suit le méridien 40° Est de Greenwich jusqu'au parallèle 40° Nord, puis l'arc de grand cercle jusqu'au point d'intersection du méridien 60° Est avec le tropique du Cancer, enfin le méridien 60° Est jusqu'au Pôle Sud.

NOC **3421** **398** *Ligne B:*

131

La ligne B part du Pôle Nord, suit le méridien 10° Ouest de Greenwich jusqu'à son intersection avec le parallèle 72° Nord, puis l'arc de grand cercle jusqu'au point d'intersection du méridiem 50° Ouest et du parallèle 40° Nord, de nouveau l'arc de grand cercle jusqu'au point d'intersection du méridien 20° Ouest et du parallèle 10° Sud, enfin le méridiem 20° Ouest jusqu'au Pôle Sud.

NOC **3422** **399** *Ligne C:*

132

La ligne A part du Pôle Nord, suit l'arc de méridien jusqu'au point d'intersection du parallèle 65° 30' Nord avec la limite internationale dans le détroit de Béring, puis l'arc de grand cercle jusqu'au point d' intersection du méridien 165° Est de Greenwich avec le parallèle 50° Nord, puis l'arc de grand cercle jusqu'au point d'intersection du méridien 170° Ouest et du parallèle 10° Nord, longe ensuite le parallèle 10° Nord jusqu'au son intersection avec le méridien 120° Ouest, enfin suit le méridien 120° Ouest jusqu'au Pôle Sud.

ADD **3422A** **400** § 3. Pour l'application du présent Règlement, le terme «Zone africaine de radiodifusion» désigne:

401 *a*) Les pays, parties de pays, territoires et groupes de territoires africains situés les paralèlles 40° Sud et 30° Nord;

402 *b*) Les îles de l'océan Indien à l'ouest du méridien 60° Est de Greenwich, situées entre le parallèle 40° Sud et l'arc de grand cercle joignant les points de coordonnées 45° Est, 11° 30' Nord et 60° Est, 15° Nord;

403 *c*) Les îles de l'océan Atlantique à l'est de la ligne B définie au numéro **398** du présent Règlement, situées entre les parallèles 40° Sud et 30° Nord.

ADD **3423** **404** § 4. La «zone européenne de radiodifusion» est délimitée: à l'ouest par les limites ouest de la Région 1, à l'est par le méridien 40° Est de Greenwich et au sud par le parallèle 30° Nord de façon à inclure la partie occidentale de l'URSS, la partie septentrionale de l'Arabie Saoudite et la partie des pays bordant la Méditerranée comprise dans lesdites limites. En outre, l'Iraq et la Jordanie sont inclus dans la Zone européenne de radiodiffusion.

133

NOC **3424** **405** § 5. La «zone européenne maritime» est délimitée: au nord par une ligne qui suit le parallèle 72° Nord, de son intersection avec le méridien 55° Est de Greenwich jusqu'au con intersection acec le méridien 5° Ouest, suit ce méridien 5° Ouest jusqu'à son intersection avec le parallèle 67° Nord, et enfin suit ce paralléle 67° Nord jusqu'au son intersection avec le méridien 30° Ouest; à l'ouest par une ligne qui suit le méridien 30°

134

Ouest jusqu'à son intersection avec le parallèle 30° Nord; au sud par une ligne qui suit le parallèle 30° Nord jusqu'à son intersection avec le méridien 43° Est; à l'est par une ligne qui suit le méridien 43° Est jusqu'à son intersection avec le parallèle 60° Nord, suit ce parallèle 60° Nord jusqu'à son intersection avec le méridien 55° Est et enfin suit ce méridien 55° Est jusqu'à son intersection avec le parallèle 72° Nord.

MOD 3425 406 § 6. (1) La «zone tropicale» (voir carte au numéro **392** est définie comme suit:
135

407 *a*) Dans la Région 2, toute la zone comprise entre les tropiques du Cancer et du Capricorne;

408 *b*) Dans l'ensemble des Régions 1 et 3, la zone comprise entre les parallèles 30° Nord et 35° Sud, et, en supplément:

409 1) La zone comprise entre les méridiens 40° Est et 80° Est de Greenwich et les parallèles 30° Nord et 40° Nord;

410 2) La partie de la Libye située au nord du parallèle 30° Nord.

MOD 3426 411 (2) Dans la Région 2, la zone tropicale peut être étendue jusqu'au parallèle 33° Nord par accords particuliers conclus entre les pays concernés de cette Région (voir l'article 7).
136

ADD 3426A 412 § 7. Une sous-Région est une zone formée par plusieurs pays d'une même Région.

SECTION II

NOC **Catégories de services et d'attributions**

MOD 3427 413 *Services primaires, permis et secondaires*

MOD 3428 414 § 8. (1) Lorsque, dans une case du Tableau qui figure à la section IV du présent article, une bande de fréquences est indiquée comme étant attribuée à plusieurs services, soit dans le monde entier, soit dans une Région, ces services sont énumérés dans l'ordre suivant:
137

415 *a*) Services dont le nom est imprimé en «majuscules» exemple: FIXE); ces services sont dénommés services «primaires»;

416 *b*) Services dont le nom est imprimé en «majuscules entre barres» (exemple: /RADIOLOCALISATION/); ces services sont dénommés services «permis» (voir le numéro **419**);

417 *c*) Services dont le nom est imprimé en «caractéres normaux» (exemple: Mobile); ces services sont dénommés services «secondaires» (voir les numéros **420** à **423**).

418 (2) Les observations complémentaires doivent être indiquées en caractéres normaux (exemple: MOBILE sauf mobile aéronautique).

NOC 3429 419 (3) Un service permis et un service ont les mêmes droits, sauf lorsqu'il s'agil de l'établissement de plans de fréquences, auquel cas, par rapport au service permis, le service primaire est le premier à choisir des fréquences.
138

(MOD) 3430 420 (4) Les stations d'un service secondaire:
139

421 *a*) Ne doivent pas causer de brouillage préjudiciable aux stations d'un service primaire ou d'un service permis auxquelles des fréquences ont été assignées antérieurement ou sont susceptibles d'être assignées ultérieurement;

422 *b*) Ne peuvent pas prétendre à la protection contre les brouillages préjudicables cuasés par les stations d'un service primaire ou d'un service permis auxquelles des fréquences ont été assignées antérieurement ou sont susceptibles d'être assignées ultérieurement;

423 *c*) Mais ont droit à la protection contre les brouillages préjudiciables causés par les stations de ce service secondaire ou des autres services secondaires auxquelles des fréquences sont susceptibles d'être assignées ultérieurement.

MOD 3431 424 (5) Lorsqu'une bande est indiquée dans un renvoi du tableau comme étant attribuée à un service «à titre secondaire» dans une zone moins étendue qu'une Région ou dans un pays déterminé, il s'agit d'un service secondaire (voir les numéros **420** à **423**).
140

NOC 3432 425 (6) Lorsqu'une bande est indiquée dans un renvoi du tableau comme étant attribuée à un service «à titre primaire» ou «à titre permis» dans une zone moins étendue qu'une Région ou dans un pays déterminé, il s'agit d'un service primaire ou d'un service permis dans cette zone ou dans ce pays seulement (voir le numéro **419**).
141

MOD 3433 426 *Attributions additionnells:*

MOD 3434 427 § 9. (1) Lorsqu'une bande est indiquée dans un renvoi du tableau comme étant «de plus attribuée» à um service dans une zone moins étendue qu'unme Région ou dans un pays déterminé, il s'agit d'une attribution «additionnelle»; c'est-à-dire d'une attribution qui s'ajoute dans cette zone ou ce pays au service ou aux services indiqués dans le tableau (voir le numéro **428**).
142

MOD 3435 428 (2) Sil le renvoi ne contient aucune restriction imposée au service ou aux services en question en dehors de l'obligation de ne fonctionner que dans une zone ou un pays déterminé, les stations de ce service ou de ces services fonctionnent sur la base de l'égalité des droits avec les stations de l'autre service ou des autres services primaires indiqués dans les tableau.
143

MOD 3436 429 (3) Si des restrictions sont inposées à une attributions additionnelle en plus de l'obligation de ne fonctionner que dans une zone ou un pays déterminé, le renvoi du tableau en fait mention.
144

NOC 3437 430 *Attributions de remplacement:*

MOD 3438 431 § 10. (1) Lorsqu'une bande est indiquée dans un renvoi du tableau comme étant «attribuée» à um service dans une zone moins étendue qu'une Région ou dans un pays dèterminé, il s'agit d'une attribution «de remplacement», c'est-à-dire d'une attribution qui remplace, dans cette-zone ou ce pays, l'attribution qui est indiquée dans le tableau (voir le numéro **432**).
145

MOD 3439 432 (2) Si le renvoi ne continent aucune restriction imposée aux stations du ou des services qui y sont mentionnés, en dehours de l'obligation de ne fonctionner que dans une zone ou en pays déterminé, les stations de ce ou de ces services fonctionnent sur la base de l'égalité des droits avec les stations des autres services primaires indiqués dans le tableau et auxquels la bande est attribuée dans d'autres zones ou d'autres pays.
146

(MOD) 3440 433 (3) Si des restrictions sont imposées aux stations d'un service qui fait l'objet d'une attribution de remplacement, en plus de l'obligation de ne fonctionner que dans une zone ou un pays déterminé, le renvoi en fait mention.
147

NOC 3441 434 *Dispositions diverses:*

(MOD) 3442 435 § 11. (1) Lorsqu'il est indiqué dans le présent Règlement qu'un service peut fonctionner dans une bande de fréquences sous réserve de ne pas causer de brouillage préjudiciable, cela signifie également que ce service ne peut pas prétendre à la protection contre les brouillages préjudiciables causés par les autres services auxquels la bande est attribuée selon le chapitre III du présent Règlement.

NOC 3443 436 (2) Sauf s'il en est disposé autrement dans un renvoi, le terme «service fixe», lorsqu'il
149 figure dans la section IV du présent article, n'inclut pas les systèmes qui utilisent la propagation par diffusion ionosphérique.

SECTION III

NOC

Disposition du tableau d'attribution des bandes de fréquences

NOC 3444 437 § 12. (1) L'en-tête du tableau qui figure à la section IV du présent article comprend
150 trois colonnes qui correspondent chacune à l'une des Régions (voir le numéro **392**). Selon qu'une attribution occupe la totalité de la largeur du tableau ou seulement une ou deux des trois colonnes, il s'agit d'une attribution mondiale ou d'une attribution Règionale, respectivement.

MOD 3445 438 (2) La bande de fréquences qui failt l'objet de chaque attribution est indiquée
151 dans l'angle supérieur gauche de la case intéressée.

NOC 3446 439 (3) Dans chacune des catégories spécifies aux numéros **415** à **417** les services sont
152 rangés dans l'ordre alphabétique de leurs noms en langue française. Leur ordre n'implique aucune priorité relative au sein de chaque catégorie.

ADD 3446A 440 (4) Lorsqu'une précision est ajoutée entre parenthèses à la suite d'une attribution dans le tableau, latide attribution est restreinte au genre d'exploitation ainsi désigné.

NOC 3447 441 (5) Les nombres qui figurent éventuellement à la partie inférieure d'une case du
153 tableau au-dessous des noms du ou des services auxquels la bande est attribuée, sont des références à des renvois placés en bas de page qui se rapportent à l'ensemble des attributions intéressées.

NOC 3448 442 (6) Les nombres qui figurent éventuellement à la droite du nom d'un service sont
154 des références à des renvois placés en bas de page qui ce se rapportent qu'à ce service.

(MOD) 3449 443 (7) Dans certains cas, les noms de pays qui figurent dans les renvois ont été simplifiés
155 afin d'abréger le texte.

SECTION IV

Tableau d'attribution des bandes de fréquences

(Voir le numéro 208

kHz

9–19,95

Attribution aux services		
Région 1	Région 2	Région 3
Inférieure à 9	(Non attribuée) 444 445	
9–14	RADIONAVIGATION	
14–19,95	FIXE MOBILE MARITIME 448 446 447	

MOD 3451 444 157 Les administrations qui autorisent l'emploi de fréquences inférieures à 9 kHz doivent s'assurer qu'il n'en résulte pas de brouillage préjudiciable aux services auxquels sont attribuées les bandes de fréquences supérieures à 9 kHz (voir le numéro **1816**).

ADD 3451A 455 Les administrations qui effectuent des recherches scientifiques sur des fréquences inférieures 9 kHz sont instamment priées d'en finformer les autres administrations qui pourraient être concernées, afin que ces recherches bénéficient de toute la protection pratiquement réalisable contre les brouillages préjudiciables.

ADD 3452A 446 *Attribution additionnelle:* dans les pays suivants: Bulgarie, Hongrie, Pologne, République Démocratique Allemande, Tchécoslovaquie et URSS, la bande 14–17 kHz est, de plus, attribuée au servie de radionavigation à titre permis.

MOD 3453 447 159 Les stations des services auxquels sont attribuées les bandes 14–19,95 kHz et 20,25–70 kHz et, deplus, en Région 1 les bandes 72–84 kHz et 86–90 kHz peuvent émettre des fréquences étalon
et des signaux horaires. Ces stations sont protégées contre les brouillages préjudiciables. En Bulgarie, Hongrie, Mongolie, Pologne, Tchécoslovaquie et URSS, les frequences 25 kHz et 50 kHz seront utilisiées à cette fin dans les mêmes conditions.

MOD 3452 448 158 L'utillisation des bandes 14–19,95 kHz, kHz, 20,05–70 kHz, 70–90 kHz (72–84 kHz et 86–90 kHz en Région 1) et 90–110 kHz par le service mobile maritime est limitée aux stations côtières radiotélégraphiques (A1A et F1B seulement). Exceptionnellement, l'utilization d'émissions de la classe J2B ou J7B est autorisée à condition que la largeur de bande nécessaire ne dépasse pas celle que correspond normalement aux émissions des classes A1A ou F1B dans les bandes considérées.

ADD 3455A 449 *Attribution additionnelle:* dans les pays suivants: Bulgarie, Hongrie, Pologne, République Démocratique Allemande, Tchécoslovaquie et URSS, la bande 67–70 kHz est, de plus, attribuée au servie de radionavigation à titre permis.

MOD 3459 450 165 *Catégorie de service différente:* au Bangladesh, en Iran et au Pakistan l'attribution des bandes 70–72 kHz et 84–86 kHz aux services fixe et mobile maritime est à titre primaire (voir le numéro **425**).

MOD 3456 451 162 *L'utilisation des bandes* 70–90 kHz (70–86 kHz en Région 1) et 110–130 kHz (112–130 kHz en Région 1) par le service de radionavigation, est limitée aux systèmes à ondes entretenues.

MOD 3458 452 164 En Région 2, les stations du service de radionavigation maritime ne pouvent être établies et fonctionner dans les bandes 70–90 kHz et 110–130 kHz que sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14, avec les administrations dont les services auxquels ces bandes sont attribuées sont susceptibles d'être affectés. Cependant, les stations des services fixe, mobile maritime et de radiolocalisation ne doivent pas causer de brouillage préjudiciable aux stations du service de radionavigation maritime lorsqu'elles établies à la suite de tels accords.

ADD **3479A** **469** *Attribution additionnelle:* dans les pays suivants: Afghanistan, Australie, Chine, Territoires français d'Outre-Mer de la Région 3, Inde, Japon et Papua-Nouvelle-Guinée, la bande 415–495 kHz est, de plus, attribuée au service de radionavigation aéronautique à titre permis.

MOD **3479** **470** L'utilisations des bandes 415–495 kHz et 505–526,5 kHz (505–510 kHz en Région 2) par le service mobile
186 maritime est limitée à la radiotélégraphie.

ADD **3479B** **471** Les bandes 490–495 kHz et 505–510 kHz sont soumises aux dispositions du numéro **3018** jusqu'à ce que les dispositions de la Recommandation 200 aient été mises en application.

NOC **3480** **472** La fréquence 500 kHz est la fréquence internationale d'appel et de détresse en radiotélégraphie. Les conditions
187 d'emploi de cette fréquence sont fixées dans l'article 38.

MOD 3481 473 Em Région 1, dans la bande 505–526,5 kHz, les administrations qui exploitent des stations du service de radionavigation aéronautique doivent prendre les mesures techniques nécessaires pour éviter que des brouillages préjudiciables soient causés au service mobile maritime.

ADD 3480A 474 Dans les pays suivants: République fédérale d'Allemagne, Belgique, Espagne, France, Islande, Italie, Norvège, Pays-Bas, Royaume-Uni, Suède et Yougoslavie, la fréquence 518 kHz est utilisée à titre expérimental pour l'émission, par les stations côtières à destination des navires, de bulletins météorologiques et d'avis aux navigateurs par télégraphie à impression directe à bande étroite.

MOD 3478 185 475 Dans la bande 515,5–526,5 kHz, l'Autriche peut continuer à exploiter uniquement les stations de radiodiffusion qui sont mentionnées dans le Protocole additionnel III aux Actes finals de la Conférence administrative de radiodiffusion à ondes kilométriques et hectométriques (Régions 1 et 3) (Genève, 1975). Cette exploitation est autorisée jusqu'à l'entrée en vigueur d'une révision du Plan de Genève, 1975, et sous réserve qu'il n'en résulte pas de brouillage préjudiciable au service mobile maritime et au service de radionavigation aéronautique.

ADD 3478A 476 *Attribution additionnelle:* au Royaume-Uni, la bande 519,5–526,5 kHz est, de plus, attribuée au service de radiodiffusion, à titre secondaire, pour la transmission de renseignements d'utilité publique.

MOD 3484 191 477 En Région 2, dans la bande 525–535 kHz, la puissance de l'onde porteuse des stations de radiodiffusion ne doit pas dépasser 1 kilowatt pendant le jour et 250 watts pendant la nuit.

MOD 3483 190 478 *Attribution additionnelle:* dans les pays suivants: Angola, Botawana, Lesotho, Malawi, Mozambique, Namibie, République Sudafricaine, Swaziland, Zambie, et Zimbabwe, la bande 526,5–535 kHz est, de plus, attribuée au service mobile à titre secondaire.

ADD 3484A 479 *Attribution additionnelle:* en Chine, la bande 526,5–535 kHz est, de plus, attribuée au service de radionavigation aéronautique à titre secondaire.

ADD 3484B 480 En Région 2, l'utilisation de la bande 1605–1705 kHz par les stations du service de radiodiffusion est subordonnée à l'élaboration d'un plan qui devra être établi par une conférence administrative régionale des radiocommunications (voir la Recommandation **504**).

ADD 3484C 481 En Région 2, jusqu'aux dates fixées par la conférence administrative régionale des radiocommunications dont il est fait mention dans la numéro **480**, la bande 1605–1705 kHz est attribuée aux services fixe, mobile et de radionavigation aéronautique, à titre primaire et au service de radiolocalisation à titre secondaire (voir la Recommandation **504**).

ADD 3492B 482 *Attribution additionnelle:* dans les pays suivants: Australie, Indonésie, Nouvelle-Zélande, Philippines, Singapour, Sri Lanka et Thaïlande, la bande 1606,5–1705 kHz est, de plus, attribuée au service de radiodiffusion à titre secondaire.

ADD 3485A 483 *Catégorie de service différente:* dans les pays suivants: Bulgarie, Hongrie, Mongolie, Nigeria, Pologne, République Démocratique Allemande, Tchad, Tchécoslovaquie et URSS, dans les bandes 1606,5–1625 kHz, 1635–1800 kHz et 2107–2160 kHz, l'attribution aux services fixe et mobile terrestre est à titre primaire (voir le numéro **425**).

MOD 3490 195A 484 Des pays de la Région 1 utilisent des systèmes de radiorepérage dans les bandes 1606,5–1625 kHz, 1635–1800 kHz, 1850–2160 kHz, 2194–2300 kHz, 2502–2850 kHz et 3500–3800 kHz. L'installation et l'exploitation de tels systèmes sont sujettes à un accord obtenu suivant la procédure prévue à l'article 14. La puissance moyenne rayonnée de ces stations ne doit pas dépasser 50 W.

ADD 3485B 485 *Attribution additionnelle:* dans les pays suivants: Angola, Bulgarie, Hongrie, Mongolie, Nigeria, Pologne, République Démocratique Allemande, Tchad, Tchécoslovaquie et URSS, les bandes 1625–1635 kHz, 1800–1810 kHz et 2160–2170 kHz sont, de plus, attribuées aux services fixe et mobile terrestre à titre primaire, sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14.

ADD **3490B** **486** En Région 1, dans les bandes 1625–1635 kHz, 1800–1810 kHz et 2160–2170 kHz (sauf dans les pays mentionnés au numéro **485** et dans les pays mentionnés au numéro **499** en ce qui concerne la bande 2160–2170 kHz), les stations existantes des services fixe et mobile, sauf mobile aéronautique [ainsi que les stations du service mobile aéronautique (OR) dans la bande 2160–2170 kHz], peuvent continuer à fonctionner à titre primaire jusqu'à ce que des assignations de remplacement satisfaisantes aient été trouvées et mises en oeuvre conformément aux dispositions de la Résolution **38**.

ADD **3490A** **487** En Régin 1, l'installation et l'exploitation de stations du service de radiolocalisation dans les bandes 1625–1635 kHz, 1800–1810 kHz et 2160–2170 kHz doivent faire l'objet d'un accord obtenu suivant la procédure prévue à l'article 14 (voir aussi le numéro **486**. La puissance moyenne rayonnée des stations de radiolocalisation ne doit pas dépasser 50 watts. Les systèmes à impulsions sont interdits.

MOD **3488** **488** Dans pays suivants: République fédérale d'Allemagne, Danemark, Finlande, Hongrie, Irlande, Israël, Jordanie, Malte, Norvège, Pologne, République Démocratique Allemande, Royaume-Uni, Suède, Tchécoslovaquie et URSS, les
194 administrations peuvent attribuer jusqu'à 200 kHz à leur service d'amateur denas les bandes 1715–1800 kHz et 1850–2000 kHz. Cependant, en procédant à ces attributions dans ces bandes, elles doivent, après consultation préalable des administrations des pays voisins, prendre les mesures éventuellement nécessaires pour empêcher que leur service d'amateur cause des brouillages préjudiciables aux services fixe et mobile des autres pays. La puissance moyeme de toute station d'antateur ne doit pas dépasser 10 watts.

254

Attribution additionnelle: dans les pays suivants: Australie, Chine, République de Corée, Philippines, République Populaire Démocratique de Corée et Samoa Occidental, la bande 68–74 MHz est, de plus, attribuée au service de radiodiffusion à titre primaire.

ADD **3550A** **567**

Attribution additionnelle: dans les pays suivants: Bulgarie, Hongrie, Mongolie, Pologne, Tchécoslovaquie et URSS, la bande 73–74 MHz est, de plus, attribuée au service de radiodiffusion à titre primaire. L'utilisation de cette bande par le service de radiodiffusion en Bulgarie, Hongrie, Mongolie, Pologne, Tchécoslovaquie et en URSS doit faire l'objet d'accords obtenus conformément à la procédure prévue à l'article 14.

ADD **3531X** **568**

En assignant des fréquences aux stations de sautres services auxquels la bande 73–74,6 MHz est attribuée, les administrations sont instamment priées de prendre toutes les mesures pratiquement réalisables pour protéger le service de radioastrononie contre les brouillages préjudiciables. Les émissions provenant de stations à bord d'engins spatiaux ou d'aéronefs peuvent constituer des sources de brouillage particulièrement importantes pour le service de radioastronomie (voir les numéros **343** et **344** et l'article 36).

MOD **3551** **569**
253A

Dans la Région 2, les services fixe, mobile et de radiodiffusion précédemment autorisés dans la bande 73–74,6 MHz pourront continuer à fonctionner jusqu'au 31 décembre 1985 à condition de ne pas causer de brouillages préjudiciables au service de radioastronomie.

MOD **3552** **570**
253B

Attribution additionnelle: dans les pays suivants: Colombie, Costa Rica, Cuba, El Salvador, Equateur, Guatemala, Guyane, Honduras et Nicaragua, la bande 73–74,6 MHz est, de plus, attribuée aux services fixe et mobile à titre secondaire.

MOD **3550** **571**
252

Attribution additionnelle: dans les pays suivants: Bulgarie, Chine, Hongrie, Mongolie, Pologne, Tchécoslovaquie et URSS, les bandes 74,6–74,8 MHz et 75,2–75,4 MHz sont, de plus, attribuées au service de radionavigation aéronautique à titre primaire, uniquement pour le émetteurs au sol.

MOD **3558** **572**
259

La fréquence 75 MHz est assignée aux radiobornes. Les administrations doivent éviter d'assigner des fréquences voisines des limites de la bande de garde à des stations d'autres services qui, du fait de leur puissance ou de leur position géographique, pourraient causer des brouillages préjudiciables aux radiobornes ou leur imposer d'autres contraintes.

Jusqu'au 31 décembre 1989, les administrations des Régions 2 et 3 devront éviter d'assigner des fréquences à des stations d'autres services dans les bandes 74,6–74,8 MHz et 75,2–75,4 MHz.

A l'avenir, il faudra s'efforcer, autant que possible, d'améliorer encore les caractéristiques des récepteurs de bord et de limiter la puissance des stations émettant sur des fréquences proches des limites 74,8 MHz et 75,2 MHz.

ADD 4646C 659 *Attribution additionnelle:* dans les pays suivants: Angola, Bulgarie, Cameroun, Congo, Gabon, Hongrie, Mali, Mongolie, Niger, Pologne, République Démocratique Allemande, Roumanie, Rwanda, Tchad, Tchécoslovaquie et URSS, la bande 430–440 MHz est, de plus, attribuée au service fixe à titre primaire.

ADD 3640B 660 *Catégorie de service différente:* dans les pays suivants: Argentine, Colombie, Costa Rica, Cuba, Guyane, Honduras, Panama et Venezuela, dans la bande 430–440 MHz, l'attribution au service d'amateur est à titre primaire (voir le numéro **425**).

ADD 3645A 661 En Région 1, sauf dans les pays mentionnés au numéro **662**, la bande 433,05-434,79 MHz (fréquence centrale 433,92 MHz) est utilisable pour les applications industrielles scientifiques et médicales (ISM). L'utilisation de cette bande de fréquences, pour les apllications ISM, est subordonnée à une autorisation particulière donnée par l'administration concernée, en accord avec les autres administrations dont les services de radiocommunication pourraient être affectés. Pour l'application de cette disposition, les administrations se reporteront aux plus récents Avis pertinents du CCIR.

MOD 3645 662 En République fédérale d'Alllemagne, en Autriche, au Liechtenstein, au Portugal, en Suisse et en Yougoslavie,
321 la bande 433,05-434,79 MHz (fréquence centrale 433,92 MHz) est utilisable pour les applications industrielles, scientifiques et médicales (ISM). Les services de radiocommunication de ces pays fonctionnant dans cette bande doivent accepter les brouillages préjudiciables qui peuvent se produire du fait de ces applications. Les appareils ISM fonctionnant dans cette bande sont soumis aux dispositions du numéro **1815**.

MOD 3642 663 *Attribution additionnelle:* au Brésil, en France et dans les Départements français d'Outre-Mer de la Région 2 et
319B en Inde, la bande 433,75-434,25 MHz est, de plus, attribuée au service d'exploitation spatiale (Terre vers espace) à titre primaire jusqu'au 1er janvier 1990, sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14. Après le 1er de janvier 1990 et dans les mêmes pays, la bande 433,75-434,25 MHz será attribué au même service à titre secondaire.

MOD 3644 664 Le service d'amateur par satellite peut fonctionner dans les bandes 435-438 MHz, 1260-1270 MHz, 2400-2450 MHz,
320A 3400-3410 MHz (dans les Régions 2 et 3 seulement) et 5650-5670 MHz, à condition qu'il n'en résulte pas de brouillage préjudiciable aux autres services fonctionnant conformément au tableau (voir le numéro **435**). Les administrations qui autoriseront cette utilisation doivent faire en sorte que tout brouillage préjudiciable causé par les émissions d'une station du service d'amateur par satellite soit inmédiatement éliminé, conformément aux dispositions du numéro **2741**. L'utilisation des bandes 1260-1270 MHz et 5650-5670 MHz par le service d'amateur par satellite est limitée au sens Terre vers espace.

ADD 3646E 665 *Attribution additionnelle:* en Autriche, la bande 438-440 MHz est, de plus, attribué aux services fixe et mobile, sauf mobile aéronautique, à titre primaire.

ADD 3640C 666 *Attribution additionnelle:* au Canada, en Nouvelle-Zélande et en Papua-Nouvelle-Guinée, la bande 440-450 MHz est, de plus, attribuée au service d'amateur à titre secondaire.

ADD 3640D 667 *Catégorie de service différente:* au Canada, dans la bande 440-450 MHZ l'attribution au service de radiolocalisation est à titre primaire (voir le numéro **425**).

MOD 3641 668 Souis réserve d'un accord obtenu suivant le procédure prévue à l'article 14, la bande 449,75-450,25 MHz peut-être
319A utilisée pour le service d'exploitation spatiale (Terre vers espace) et le service de recherche spatiale (Terre vers espace).

NOC 3638 669 Dans le service mobile maritime, les fréquences 457,525 MHz, 457,550 MHz, 457,575 MHz, 467,525 MHz,
318B 467,550 MHz et 467,575 MHz peuvent être utilisées par les stations de communications de bord. Cet usage peut être soumis à la réglementation nationale de l'administration intéressée lorsque ces fréquences sont utilisées dans les eaux territoriales de son pays. Les caractéristiques des appareils utilisés doivent être conformes aux spécifications de l'appendice **20**.

NOC 3639 670 Dans les eaux territoriales du Canada, des États-Unis et des Philippines, les fréquences à utiliser de préference
318C par les stations de communications de bord sont 457,525 MHz, 457,550 MHz, 457,575 MHz et 457,600 MHz. Ces fréquences sont appariées respectivement avec les fréquences 467,750 MHz, 467,775 MHz, 467,800 MHz et 467,825 MHz. Les caractéristiques des appareils utilisés doivent être conformes aux spécifications de l'appendice **20**.

MOD 3650 671 Les bandes 460-470 MHz et 1690-1710 MHz peuvent, de plus, être utilisées pour les applications du service
324B d'exploration de la Terre par satellite autres que celles du service de météorologie par satellite, pour les transmissions espace vers Terre, à condition de ne pas causer de brouillage préjudiciable aux stations qui fonctionnent conformément au tableau.

MOD 3637 672 *Catégorie de service différente*: dans les pays suivants: Afghanistan, Bulgarie, Chine, Cub, Hongrie, Japon,
318A Mongolie, Pologne, Tchécoslovaquie et URSS, dans la bande 460-470 MHz, l'attribution au service de météorologie par satellite (espace vers Terre) est à titre primaire (voir le numéro **425**), et sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14.

ADD **3650F** **679** *Attribution additionnelle:* en Inde, la bande 549,75-550,25 MHz est, de plus, attribuée au service d'exploitation spatiale (espace vers Terre) à titre secondaire.

ADD **3651A** **680** *Attribution additionnelle:* au Royaume-Uni, les bandes suivants sont, de plus, attribuées au service de radionavigation, aéronautique à titre primaire: 582-590 MHz jusqu'au au 31 décembre 1987; 598-606 MHz, jusqu'au au 31 décembre 1994; toutes les nouvelles assignations aux stations du service de radionavigation aéronautique dans ces bandes sont effectuées sous réserve de l'accord des Administrations des pays suivants: Rèpublique fédérale d'Allemagne, Belgique, Danemark, Espagne, France, Irlande, Luxembourg, Maroc, Norvège et Pays-Bas.

MOD **3653** 328 **681** *Attribution additionnelle:* en Belgique, la bande 582-606 MHz est, de plus, attribuée au service de radionavigation à titre primarie jusqu'au 31 décembre 1984.

ADD	3653A	682	*Attribution additionnelle:* en France et en Italie la bande 582-606 MHz est, de plus, attribuée au service de radionavigation à titre permis jusqu'au 1er janvier 1990.
ADD	3653AA	683	*Attribution additionnelle:* à Oman la bande 582-607 MHz est, de plus, attribuée au service de radionavigation à titre secondaire.
MOD	3654 329	684	*Attribution additionnelle:* en Iaraël,en Libye, en Syrie et au Soudan, la bande 582-790 MHz est, de plus, attribuée aux services fixe et mobile, sauf mobile aéronautique, à titre secondaire.
ADD	3653B	685	*Attribution additionnelle:* au Danemark et au Koweït, la bande 590-598 MHz est, de plus, attribuée au service de radionavigation aéronautique à titre primaire, jusqu'au 1er janvier 1995.
MOD	3651 325	686	*Attribution additionnelle:* au Royanne-Uni, la bande 590-598 MHz est, de plus, attribuée au service de radionavigation aéronautique à titre primaire. Toutes les nouvelles assignations aux stations du service de radionavigation aéronautique, y compris les assignations transférées des bandes adjacentes, doivent faire l'objet de coordination avec les Administrations des pays suivants: République fédéral d'Allemagne, Belgique, Danemark, Espagne, France, Luxemborg, Maroc, Norvège et Pays -Bas.
MOD	3657 330A	687	*Attribution additionnelle:* dans la Zone africaine de radiodiffusion (voir les numéros **400** à **403**), la bande 606-614 MHz est, de plus,attribuée au service de radioastrononie à titre permis.
ADD	3660A	688	*Attribution additionnelle:* en Chine, la bande 606-614 MHz est, de plus, attribuées au service de radioastronomie à titre primaire.
MOd	3660 332	689	En Région 1, à l'exception de la Zone africainede radiodiffusion (voir les numéros **400** à **403**) et dans la Région 3, la bande 608-614 MHz est, de plus, attribuée au service de radioastrononie à titre secondaire. Lorsqu'elles feront des assignations aux stations des autres services auxquels cette bande est atribuée, les administrations sont instamment priées de prendre toutes les mesures pratiquement réalisables pour protéger le service de radioastrononie contre les brouillages préjudiciables. Les émissions provenant de stations à bord d'engins spatiaux ou d'aéronefs peuvent constituer des sources de brouillage pariculièrement importantes pour le servce de radioastronomie (voir les numéros **343** et **344** et l'article 36).
MOD	3658 330B	690	*Attribution additionnelle:* en Inde, la bande 608-614 MHz est, de plus, attribuée au service de radioastromie à titre primaire.
ADD	3675A	691	*Attribution additionnelle:* en Nouvelle-Zélande, la bande 610-620 MHz est, de plus, attribuée au service d'amateur à titre secondaire.
ADD	3657B	692	*Catégorie de service différente:* au Costa Rica, El Salvador et Honduras, dans la bande 614-806 MHz l'attribution au service fixe est à titre primaire (voir e numéro **425**) sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14.
MOD	3661 332A	693	Des fréquences comprises dans la bande 620-790 MHz peuvent être assignées à des stations de télévision à modulation de fréquence du service de radiodiffusion par satellite, sous réserve d'accord entre les administrations concernées et celles dont les services fonctionnant conformément au présent Tableau sont susceptibles d'être affectés (voir les Résolutions **33** et **507**). De telles stations ne devront pas produire une puissance surfacique supérieure à — 129 dB (W/m^2) pour les angles d'arrivée inférieurs à 20° (voir la Recommandation **705**) à l'intérieur des territoires des autres pays sans le consentement des administrations de ceux-ci.
MOD	3659 331	694	*Attribution additionnelle:* dans les pay suivants: Bulgarie, Hongrie, Mongolie, Pologne, République Démocratique Allemande, Roumanie, Tchéscolovaquie et URSS, la bande 645-862 MHz est, de plus, attribuée au service de radionavigation aéronautique à titre permis.
ADD	3662A	695	*Attribution de remplacement:* en Espagne et en France, la bande 790-830 MHz est attribuée au service de radiodiffusion à titre primaire.
ADD	3661A	696	*Attribution de remplacement:* en Grèce, en Italie, au Maroc et en Tunisie, la bande 790-838 MHz est attribuée au service de radiodiffusion à titre primaire.
ADD	3662B	697	*Attribution additionnelle:* dans les pays suivants: République fédérale d'Allemagne, Danemark, Finlande, Israël, Liechtenstein, Norvège, Pays-Bas, Suède, Suisse et Yougoslavie, la bande 790-830 MHz, et dans ces mêmes pays, et en Espagne et France, la bande 830-862 MHz sont, de plus, attribuées au service mobile, sauf mobile aéronautique, à titre primaire. Toutefois, les stations du service mobile des pays mentionnés pour chaque bande indiqué dans le présent renvol ne doivent pas causer de brouillage préjudiciable aux stations des services fonctionnant conformément au tableau dans les pays autres que ceux mentionnés pour cette même bande ni demander à être protégées vis-à-vis de celles-ci.
ADD	3662BA	698	*Attribution additionnelle:* en Autriche, la bande 790-862 MHz est, de plus, attribuée au service mobile, sauf mobile aéronautique à titre secondaire.
ADD	3662CA	699	*Attribution additionnelle:* en Norvège et en Suède, les bandes 806-890 MHz et 942-960 MHz sont, de plus, attribuées au service mobile par satellite, sauf mobile aéronautique par satellite, à titre primaire. Ce service doit fonctionner à l'intérieur des frontières nationales, sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14. Ce service ne doit pas causer de brouillage préjudiciable aux services fonetionnant conformément au tableau.
ADD	3670B	700	*Attribution additionnelle:* dans la Région 2, la bande 806-890 MHz est, de plus, attribuée au service mobile par satellite, sauf mobile aéronautique par satellite, à tittre primaire. Ce service doit fonctionner à l'intérieur des frontières nationales, sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14.
ADD	3662C	701	*Attribution additionnelle:* dans la Région 3, les bandes 806-890 MHz et 942-960 MHz, sont, de plus, attribuées au service mobile par satellite, sauf mobile aéronautique par satellite, à titre primaire. Ce service doit fonctionner à l'intérieur des frontières nationales, sous réserve d'un accord obtenu suivant la procédure prévue à l'article 14. Ce service ne doit pas causer de brouillage préjudiciable aux services fonctionnant conformément au tableau.
ADD	3662DA	702	*Attribution de remplacement:* en Italie, la bande 838-854 MHz est attribuée au service de radiodiffusion à titre primaire, à partir du 1er janvier 1995.
ADD	3662A	703	En Région 1, dans la bande 862-960 MHz, les stations du service de radiodiffusion doivent fonctionner uniquement dans la Zone africaine de radiodiffusion (voir les numéros **400** à **403**), en y excluant l'Algérie, l'Egypte, la Libye et le Maroc. Ce fonctionnement doit être conforme aux Actes finals de la Conférence africaine de radiodiffusion sur ondes métriques et decimétriques (Genève, 1963).
ADD	3659B	704	*Attribution additionnelle:* dans les pays suivants: Bulgarie, Hongrie, Mongolie, Pologne, République Démocratique Allemande, Roumanie, Tchéscoslavaquie et URSS, la bande 862-960 MHz est, de plus, attribuée au service de radionavigation aéronautique à titre permis jusqu'au 1er janvier 1998. Jusqu'au à cettte date le service de radionavigation aéronautique peut utiliser la bande sous réserve d'un accord obtenu conformément aux dispositions de l'article 14. Après cette date, le service de radionavigation aéronautique peut continuer à fonctionner à titre secondaire.

ADD **3787A** **836** En Région 2, dans la bande 11,7-12,1 GHz, des répéteurs installés à bord de stations spatiales du service fixe par satellite peuvent aussi être utilisées pour des transmissions du service de radiodiffusion par satellite, à condition que la p. i. r. e. de ces répéteurs ne dépasse pas 53 dBW par canal de télévision, et qu'ils ne causent pas plus de brouillages ou n'exigent pas plus de protection que ce qui résulterait des assignations de fréquence coordonnées du service fixe par satellite. En ce qui concerne les services de radiocommunication spatiale, cette bande doit être utilisée principalement pour le service fixe par satellite. La limite supérieure de cette bande sera modifiée, conformément aux décisions de la conférence administrative régionale des radiocommunication de 1983 pour la Région 2 (voir le numéro **841**).

ADD **3787G** **837** *Catégorie de service différente:* au Canada, Mexique et aux États-Unis, dans la bande 11,7-12,2 GHz l'attribution au service fixe est à titre secondaire (voir le numéro **424**).

MOD **3785** 405BA **838** Dans la bande 11,7-12,5 GHz dans les Régions 1 et 3, les services fixe, fixe par satellite, mobile, sauf mobile aéronautique, et de radiodiffusion, selon leurs attributions respectives, ne doivent pas causer de brouillage préjudiciable aux stations de radiodiffusion par satellite fonctionnant conformément aux dispositions de l'appendice **30**.

MOD **3787** 405BC **839** L'utilisation de la bande 11,7-12,7 GHz en Région 2 par les services de radiodiffusion par satellite et fixe par satellite est limitée aux systèmes nationaux et subrégionaux et doit faire l'objet d'accord préalable entre les administrations concernées et celles dont les services fonctionnant, ou prévus pour fonctionner, confomément au présent tableau son susceptibles d'être affectés (voir les articles 11, 13, 14 et la Résolution **33**).

ADD **3785H** **840** Pour l'utilisation de la bande 11,7-12,75 GHz dans les Régions 1, 2 et 3, voir les Résolutions **31, 34, 504, 700** et **701**.

ADD **3787B** **841** La conférence administrative régionale des radiocommunications de 1983 pour la Région 2 divisera la bande 12,1-12,3 GHz en deux sous-bandes. Elle attribuera la sous-bande inférieure au service fixe par satellite et la sous-bande supérieure aux services de radiodiffusion par satellite, de radiodiffusion, mobile, sauf mobile aéronautique, et fixe, tous ces services étant à titre primaire.

ADD **3787C** **842** *Attribution additionnelle:* au Brésil et au Pérou, la bande 12,1-12,3 GHz et aux États-Unis, la bande 12,2-12,3 GHz sont, de plus, attribuées au service fixe à titre primaire.

ADD **3787E** **843** Dans la bande 12,1-12,7 GHz, les services de radiocommunication spatiale existants ou en projet en Région 2, avant la conférence administrative régionale des radiocommunciations de 1983 pour la Région 2 ne doivent pas imposer de restrictions à l'elaboration du plan de radiodiffusion par satellite en Région 2 et doivent fonctionner dans les conditions qui seront fixées par ladite conférence.

ADD **3787D** **844** En Région 2, dans la bande 12,1-12,7 GHz, les services de radiocommunication de Terre existants ou futurs ne doivent pas causer de brouillage préjudiciable aux services de radiocommunication spatiale fonctionnant conformément au plan de radiodiffusion par satellite qu'établira la conférence administrative régionale des radiocommunications de 1983 pour la Région 2 et ne doivent pas imposer de restrictions à l'élaboration de ce plan. La limite inférieure de cette bande sera modifiée conformément aux décisions de ladite conférence (voir le numéro **841**).

ADD **3785B** **845** Dans la Région 3, la bande 12,2-12,5 GHz est, de plus, attribuée au service fixe par satellite (espace vers terre), limité à des systèmes nationaux et subrégionaux. Les limites de puissance surfacique spécifiées au numéro **2574** s'appliquent à cette bande de fréquences. L'introduction de ce service doit se faire conformément aux procédures spécifiées dans l'article 7 de appendice **30**, du point de vue de ses relations avec le service de radiodiffusion par satellite en Région 1, la bande de fréquences applicable étant étendue à 12,2-12,5 GHz.

ADD **3787F** **846** En Région 2, dans la bande 12,3-12,7 GHz, les assignations aux stations du service de radiodiffusion par satellite dont on disposera conformément a plan qu'établira la conférence administrative régionale des radiocommunications de 1983 pour la Région 2 pourront aussi être utilisées pour des transmissions du service fixe par satellite (espace vers Terre) à condition que ces transmissions ne causent pas plus de brouillage ou ne nécessitent pas plus de protection contre les brouillages que les transmissions du service de radiodiffusion par satellite conformes au plan correspondant. En ce qui concerne les services de radiocommunication spatiale, cette bande doit être utilisée principalement par le service de radiodiffusion par satellite. La limite inférieure de cette bande sera modifiée conformément aux décisions de ladite conférence (voir le numéro **841**).

ADD **3785A** **847** En Région 3, dans la bande 12,5-12,75 GHz, le service de radiodiffusion par satellite est limité à la réception communautaire avec une puisance surfacique ne dépassant pas — 111 dB (W/m²) selon la définition donnée dans l'annexe 8 de l'appendice **30**.

MOD **3788** **848** 405BD *Attribution additionnelle:* dans les pays suivants: Algérie, Angola, Arabie Saoudite, Bahreïn, Cameroun, République Centrafricaine, Congo, Côte d'Ivoir, Egypte, Emirats Arabes Unis, Ethiopie, Gabon, Ghana,Guinée, Iraq, Israël, Jordanie, Kenya, Koweït, Liban, Madagascar, Mali, Maroc, Mongolie, Niger, Nigérie, Qatar, Syrie, Sénégal, Somalie, Soudan, Tchad, Togo, Yémen (RDP du) et Zaïre, la bande 12,5-12,75 GHz est, de plus, attribuée aux services fixe et mobile, sauf mobile aéronautique, à titre primaire.

MOD **3789** **849** 405BE *Attribution additionnelle:* dans les pays suivants: République fédérale d'Allemagne, Belgique, Danemark, Espagne, Finlande, France, Grèce, Liechtenstein, Luxemburgo, Monaco, Norvège, Ouganda, Pays-Bas, Portugal, Roumanie, Suède, Suisse, Tanzanie, Tunisie et Yougouslavie, la bande 12,5-12,75 GHz est, de plus, attribuée aux services fixe et mobile, sauf mobile aéronautique, à titre secondaire.

ADD **3788A** **850** *Attribution additionnelle:* dans les pays suivants: Autriche, Bulgarie, Hongrie, Pologne, République Démocratique Allemande, Tchécoslovaquie et URSS, la bande 12,5-12,75 GHz est, de plus, attribuée aux services fixe et mobile, sauf mobile aéronautique, à titre primaire. Toutefois, les stations de ces services ne doivent pas causer de brouillage préjudiciable aux stations terriennes du service fixe par satellite des pays de la Région 1 autres que ceux mentionnés au présent renvoi. Aucune coordination de ces stations terriennes n'est requise avec les stations des services fixe et mobile des pays mentionnés au présent renvoi. Les limites de puissance surfacique à la surface de la Terre prescrites au numéro **2574** pour le service fixe pour satellite doivent s'appliquer sur le territoire des pays mentionnés au présent renvoi.

ARTICLE 9

NOC

Dispositions spéciales relatives à l'assignation et à l'emploi des fréquences

ADD 3916A 953 § 1. Les Membres reconnaissent que le rôle joué en matière de sécurite par le service de radionavigation et les autres services de sécurité nécessite des dispositions spéciales pour les mettre à l'abri des brouillages préjudiciables, il est donc nécessaire de tenir compte de ce facteur en ce qui concerne l'assignation et l'emploi des fréquences.

MOD 3917 954 § 2. (1) Les Membres reconnaissant que, parmi les fréquences susceptibles de se
413 propager à grande distance, celles des bandes comprises entre 5 MHz et 30 MHz sont particulièrement utiles pour les communications à grande distance; ils conviennent de s'efforcer de réserver ces bandes pour de telles communications. Lorsque des fréquences de ces bandes sont utilisées pour des communications à courte ou moyenne distance, les émissions doivent être effectuées avec le minimum de puissance nécessaire.

(MOD) 3918 955 (2) Afin de réduire les besoins en fréquences dans les bandes comprises entre 5
414 MHz et 30 MHz et de prévenir en conséquence les brouillages préjudiciables entre les communications à grande distance, il est recommandé aux administrations d'utiliser, partout où cela est possible en pratique, tout autre moyen de communication possible.

MOD 3919 956 § 3. (1) Si une administration se trouve placée dans des circonstances qui rendent
415 indispensable pour elle l'application des méthodes de travail exceptionnelles énumérées ci-après, elle peut y avoir recours, à la condition expresse que les caractéristiques des stations restent conformes à celles qui sont inscrites dans le Fichier de référence international des fréquences:

957 *a*) Une station du service fixe ou une station terrienne du service fixe par satellite peut, dans les conditions prescrites aux numéros **420** à **423**, émettre à destination des stations mobiles sur ses fréquences normales;

958 *b*) Une station terrestre peut, dans les conditions prescrites aux numéros **420** à **423**, communiquer avec des stations fixes du service fixe ou des stations terriennes du service fixe par satellite, ou avec d'autres stations terrestres de la même catégorie.

NOC 3920 959 (2) Cependent, dans les circonstances où est en jeu la sécurité de la vie humaine
416 ou celle d'un navire ou d'un aéronef, une station terrestre peut communiquer avec des stations fixes ou des stations terrestres d'une autre catégorie.

NOC 3921 960 § 4. Toute administration peut assigner une fréquence choisie dans une bande
417 attribuée au service fixe ou au service fixe par satellite à une station autorisée à émettre unilatéralement d'un point fixe déterminé vers un ou plusieurs points fixes déterminés, pourvu que de telles émissions ne soient pas destinées à être reçues directement par le public en général.

(MOD) 3922 961 § 5. Toute station mobile dont l'émission satisfait à la tolérance de fréquence
418 exigée de la station côtière avec laquelle elle communique, peut émettre sur la même fréquence que la station côtière, à condition que cette station lui ait demandé une telle émission et que les autres stations n'en éprouvent aucun brouillage préjudiciable.

NOC 3923 962 § 6. Dans certains cas prévus aux articles 38 et 59, les stations d'aéronef sont
419 autorisées á utiliser les fréquences des bandes attribuées au service mobile maritime pour entrer en communications avec les stations de ce service (voir le numéro **4148**).

MOD 3924 963 § 7. Les stations terriennes d'aéronef sont autorisées à utiliser les fréquences des
419A bandes attribuées au service mobile maritime par satellite pour entrer en communication, par l'intermédiaire des stations de ce service, avec les réseaux télégraphique et téléphonique publics.

MOD 3925 964 § 8. Toute émission susceptible de produire des brouillages préjudiciables aux
421 communications de détresse, d'alarme, d'urgence ou de sécurité surt les fréquences internationales de détresse et d'urgence désignées á cette fin par le présent Règlement est interdite. Il convient que les fréquences de détresse supplémentaires, disponibles sur une base géographique plus restreinte que la base mondiale, béneficient d'une protection appropriée.

a) Traiter les fiches de notifications des assignations de fréquence reçues des administrations, contenant aussi des renseignements sur toute position orbitale de satellite géostationnaire associée à ces assignations, en vue de les inscrire dans le Fichier de référence international des fréquences;

ADD 3953A 993

b) Traiter les renseignements reçus des administrations en application des procédures de publication anticipée, de coordination et autres procédures spécifiées dans le Règlement des radiocommunications et dans les actes finals des conférences administratives des radiocommunications; fournir aux administrations qui en font le demande une assistence dans ce domaine;

NOC 3954 994 474

c) Traiter et coordonner les horaires saisonniers de radiodiffusion à ondes décamétriques en vue de satisfaire les besoins de toutes les administrations dans ce domaine;

NOC 3955 995 475

d) Établir, aux fins de publication par le Secrétaire général, sous une forme appropriée et à des intervalles convenables, les listes de fréquences reflétant les donnés contenues dans le Fichier de référence internacional des fréquences, ainsi que d'autres documents relatifs à l'assignation et à utilisations des fréquences;

NOC 3956 996 476

e) Reviser les inscriptions contenues dans le Fichier de référence international de fréquences, en vue de modifier ou d'eliminer, selon le cas, les inscriptions qui ne reflètent pas l'utilisation réelle du spectre des fréquences, en accord avec les administrations qui ont notifié les assignations correspondantes;

NOC 3957 997 477

f) Étudier, à long terme, l'utilisation du spectre des fréquences radioélectriques, afin de formuler des recommandations tendent à la rendre plus efficace;

NOC 3958 998 478

g) Enquêter, à la demande d'une ou de plusiers des administrations intéressées, sur les cas de brouillages nuisibles et formuler les reccomendations nécessaires;

NOC 3959 999 479

h) Donner aux administrations une assistance dans le domaine de l'utilisation du spectre des fréquences radioélectriques, notamment aux administrations qui ont besoin d'assistance spéciale, et formuler à l'intention des administrations, lorsqu'il y a lieu, des recommandations tendant au remaniement de leurs assignations de fréquence, afin d'obtenir une meilleure utilisation du spectre des fréquences radioélectriques;

NOC 3960 1000 480

i) Rassembler les résultats des observations faites au cours du contrôle des émissions, que les administrations ou les organismes de contrôle peuvent lui fournir, et prendre toures les dispositions utilies, par l'intermédiaire du Sécretaire général. pour leur publication sous une forme appropriée;

ADD **3960A** **1001** *j*) Élaborer des Normes techniques (1) conformément aux numéros **1454** et **1582** du présent Règlement et des Règles de procédure (1) destinées à l'usage interne du Comité dans l'exercice de ses fonctions;

NOC **3961** **1002** *k*) Formuler et renvoyer au CCIR toutes les questions techniques d'ordre
481 général rencontrées par le Comité au cours de l'examen des assignations de fréquence;

MOD **3962** **1003** *l*) Apporter son aide technique à la préparation et à l'organisation des
482 conférences de radiocommunications en consultant selon le cas les autres organismes permanents de l'Union, et en tenant compte de toute directive du Conseil d'administration conformément à la Convention;

NOC **3963** **1004** *m*) Participer à titre consultatif, sur l'invitation des organisations ou des
483 pays intéressés, aux conférences et réunions où sont discutées des questions relatives à l'assignation et à l'utilisation des fréquences;

ADD **3963A** **1005** *n*) Contribuer à la formation des cadres des administrations qui en font la demande, notamment ceux des pays qui en ont le plus besoin, dans le domaine de la gestion et de l'utilisation du spectre de fréquences;

ADD **3963B** **1006** *o*) Remplir les autres fonctions spécifiées dans le Règlement des radiocommunications et dans les actes finals des conférences administratives des radiocommunications.

SUP **3964**
484

MOD **3965** **1007** § 3. Le secrétariat spécialisé du Comité travaille sous la direction immédiate du
485 Comité pour lui permettre de s'acquitter des tâches et des fonctions qui lui sont confiées.

SECTION II

ADD

Méthodes de travail du Comité

NOC **3991** **1008** § 4. Le Comité se réunit aussi souvent qu'il lui est nécessaire pour rempli
659 rapidement ses fonctions, et normalement au moins une fois par semaine.

MOD **3992** **1009** § 5. (1) Conformément à la Convention, les membres du Comité élisent parm eux
660 un président et un vice-président qui remplissent leus fonctions pendant un durée d'une année. Par la suite, le vice-président succède chaque année au président et un nouveau vice-président est élu.

NOC **3993** **1010** (2) Dans le cas d'une absence inévitable du président et du vice-président les
661 membres du Comité élisent, pour la circonstance, un président temporaire chois parmi eux.

NOC **3994** **1011** § 6. (1) Chaque membre du Comité, y compris le président, dispose d'une voix.
662 Le vote par procuration ou par correspondance est interdit.

NOC **3995** **1012** (2) Les procès-verbaux indiquent si une décision a été prise á l'unanimité ou à
663 la majorité.

NOC **3996** **1013** (3) Le quorum requis pour que le Comité puisse délibérer valablement es égal
664 à la moitié du nombre de ses membres. Si, cependent, lors d'une séance dan laquelle le nombre des membres présents ne dépasse pas le quorum, l'unanimité ne peut pas être obtenue sur une question, celle-ci est renvoyée pour décision à une réunion ultérieure où les deux tiers au moins des membres sont présents. Si le calcude la moitié ou des deux tiers des membres donne un nombre fractionnaire, on l'arrondit au nombre entier immédiatement supérieur.

NOC **3997** **1014** (4) Le Comité doit s'efforcer de prendre ses décisions par accord unanime. S'il
665 n'y parvient pas, il doit prendre sa décision par un vote, à la majorité des deux tiers des membres présents et votant pour ou contre.

ADD **3977A** **1015** § 7. Le Comité peut adopter, pour ses propres besoins et pour l'accomplisement efficace de ses tâches, les dispositions internes qu'il juge nécessaires, confromément à la Convention et au Règlement des radiocommunications.

ADD **3960A.1** **1001.1** (1) Les Normes techniques et les Règles de procédure de IRFB sont communiquées à tous les Membres de l'Union et peuvent faire l'objet de commmentaire de la part de toute administration. Au cas où il subsiste un désaccord qui ne peut être résolu, la procédure à suivre est indiquée dans la Résolution 35.

NOC 3998 666 1016 § 8. Les documents du Comité, qui comprennent des archives complètes de tous ses actes officiels et les procès-verbaux de toutes ses réunions, sont tenus à jour par le Comité dans les langues de travail de l'Union, telles qu'elles sont définies dans la Convention; à cette fin, ainsi que lors des réunions du Comité, le personne linguistique et tout autre moyen matérial nécessaire lui sont fournis par le Secrétaire général. Un exemplaire de tous les documents du Comité est tenu à la dispositior du public dans les bureaux du Comité aux fins de consultation.

1017 à 1040 *(Non attribués.)*

N11

ARTICLE II

MOD **Coordination des assignations de fréquence aux stations d'une service de radiocommunications spatiale, à l'exeception des stations du service de radiodiffusion par satellite, et aux stations de Terre appropriées (1)**

SECTION I

MOD **Procédures pou r la publication anticipée de renseignements concernant les réseaux á satellite en projet (2)**

NOC 4099 1041 *Publication de renseignements:*

MOD 4100 639AA 1042 § 1. (1) Toute administration (ou toute administration agissant au nom d'un groupe d'administrations nommément désignées) qui se propose d'établir un système à satellites envoie au Comité internacional d'enregistrement des fréquences, avant d'engager, le cas échéant, la procédure de coordination décrite au numéro **1060**, au plus tôt cinq ans et de préférence au plus tard plus tard deux ans avant la mise en service de chaque réseau á satellite du système en project, les renseignements énumérés à l'appendice **4**.

NOC 4101 639AB 1043 (2) Toute modification aux renseignements communiqués conformément aux dispositions du numéro **1042** au sujet d'une système à satellites en projet est également communiquée au Comité dès le moment où elle est disponible.

MOD 4102 639AC 1044 (3) Le Comité public les renseignements dont il est question aux numéros **1042** et **1043** dans une section spéciale de sa circulaire hebdomadaire et, lorsque la circulaire hebdomadaire contient des renseignements de cette nature, il en avise les administrations par télégramme-circulaire. Ce télégrame-circulaire indique les bandes de fréquences à utiliser et, dans le cas d'un satellite géostationnaire, la position orbitale de la station spatiale.

ADD 4102A 1045 (4) Si les renseignements communiqués sont jugés incompletes, le Comité les publie conformément aux dispositions du numéro **1044** et demande immédiatement à l'administration concernée tous les éclaircissements nécessaires et tous renseignements qui n'ont pas été fournis. Dans de tels cas, la période de quatre mois spédifiée au numéro **1047** est comptée à partir de la date de la publication aux termes du numéro **1044** des renseignements complets.

NOC 4103 1046 *Observations sur les renseignements publiés:*

MOD 4104 639AD 1047 § 2. Si, après avoir étudié les renseignements publiés aux termes du numéro, **1044,** une administration quelle qu'elle soit est d'avis que des brouillages qui peuvent être inacceptables pourront être causés à ses services de radiocommunication spatiale existents ou en projet, elle communique ses observations à l'administration concernée dans le délai de quatre mois qui suit la date de la circulaire hebdomadaire dans laquelle la totalité des renseignements énumérés á l'appendice **4** on été publiés. Elle envoie également au Comité une copie de ces observations. Si l'administration concernée ne reçoit aucune observation de cette nature d'une autre administration pendant la période

---

ADD A.11.1 (1) Pour la coordination des assignations de fréquence aux stations du service de radiodiffusion par satellite et aux autres services dans les bandes de fréquence 11,7-12,2 GHz (dans les Régions 2 et 3) 11,7-12,5 GHz (dans la Région 1), voir également l'article 15.

ADD A.11.2 (2) Ces procédures peuvent être applicables aux stations à bord d'engins lanceurs de satellites.

susmentionnée, elle peut supposer que cette dernière n'a pas d'objection à formuler à l'encontre du (ou des) réseau(x) à satellite en projet du système à l'égard desquels des renseignements ont été publiés.

NOC **4105** **1048** *Résolution des difficultés:*

MOD **4106** **1049** § 3. (1) Une administration qui reçoit des observations formulées aux termes du
639AE numéro **1047** s'efforce de résoudre les difficultés de toute nature qui peuvent se présenter et elle fournit tous les renseignements supplémentaires dont elle peut disposer.

NOC **4107** **1050** (2) Dans le cas où des difficultés se présentent lorsque l'un quelconque des
639AF réseaux à satellite en projet d'une système est destiné à faire usage de l'orbite des satellites géostationnaires:

1051 *a*) L'administration responsable du système en projet recherche en premier lieu tous les moyens possibles de faire face à ses besoins, en tenant compte des caractéristiques des réseaux à satellite géostationaire faisant partie d'autres systèmes et sans prendre em considération que des resmaniements puissent être apportés à des systèmes relevant d'autres administrations. Si elle ne peut pas trouver de tels moyens, l'administration concernée peut alors s'adresser aux autres administrations concernées afin de résoudre ces difficultés;

1052 *b*) Une administration qui reçoit une requête aux termes du numéro **1051** recherche, de concert avec l'administration requérante, tous les moyens possibles de faire face aux besoins de celle-ci, par exemple en changeant l'emplacement d'une ou plusiers de ses propres stations spatiales géostationnaires en jeu ou en modifiant les émissions, l'utilisation des fréquences (y compris des changements de bande de fréquences), ou d'outres caractéristiques techniques ou d'exploitation;

1053 *c*) Si, aprês application de la procédure décrite aux numéros **1051** et **1052**, des difficultés non résolues subsistent, les administrations en cause font de concert tous les efforts possibles pour résoudre ces difficultés au moyen de remaniements acceptables par les deux parties, par example en modifiant les emplacements de stations spatiales géostationnaires ainsi que d'autres caractéristiques des systèmes en jeu afin de permettre le fonctionnement normal, à la fois du système en projet et des systèmes existants.

NOC **4108** **1054** (3) Les administrations peuvent demander l'aide du Comité dans leurs tentatives
639AG pour résoudre les difficultés mentionnées ci-dessus.

NOC **4109** **1055** *Résultats de la publication anticipée:*

MOD **4110** **1056** § 4. Toute administration au nom de laquelle des renseignements sur les réseaux à
639AI satellite en projet ont été publiés conformément aux dispositions des numéros **1042** à **1044** fait connaître au Comité á l'expiration de la période de quatre mois spécifiée au numéro **1047**, si elle a reçu ou non les observations dont il est question dans les dispositions du numéro **1047** et elle lui communique l'état d'avancement du règlement des difficultés éventuelles. Des renseignements supplémentaires sur l'état d'avancement de ces difficultés doivent être envoyes au Comité à des intervalles de temps ne dépassant pas six mois avant le début de la coordination ou avant l'envoi des fiches de notification au Comité. Le Comité publie ces renseignements dans une section spéciale de sa circulaire hebdomadaire et, lorsque la circulaire hebdomadaire contient des renseignements de cette nature, il en avise les administrations par télégramme-circulaire.

NOC **4111** **1057** *Commencement des procédures de coordination ou de notification:*

MOD **4112** **1058** § 5. En se conformant aux dispositions des numéros **1049** à **1054**, une admi-
639AH nistration responsable d'un système à satellites en projet diffère, si c'est nécessaire, le début de la procédure de coordination ou, si celle-ci n'est pas applicable, l'envoi de ses fiches de notification au Comité, jusqu'à une date postérieure de six mois à la date de la circulaire hebdomadaire contenant les renseignements énumérés à l'appendice **4** et concernant le réseau à satellite pertinent. Cependent, vis-à-vis des administrations avec lesquelles les difficultés ont été résolues on qui ont répondu favorablement, la procédure de coordination peut, le cas échéant, être engagée avant l'expiration du délai de six mois précité.

SECTION II

NOC

Coordination des assignations de fréquence à une station spatiale à bord d'une satellite géostationnaire ou à une station terrienne communiquant avec une telle station spatiale, vis-á-vis des stations appartenant à d'autres réseuax à satellite géostationnaire

NOC 4113 1059 *Conditions régissant la coordination:*

MOD 4114 639AJ 1060 § 6. (1) Avant de notifier au Comité ou de mettre en service une assignation de fréquence à une station spatiale installée à bord d'un satellite géostationnaire ou à une station terrienne destinée à communiquer avec une telle station spatiale, toute administration (ou, dans le cas d'une station spatiale, toute administration agissant au nom d'un groupe d'administrations nommément désignées) coordonne, sauf dans les cas fixées aux numéros **1066** à **1071**, l'utilisation de cette assignation de fréquence avec toute autre administration dont une assignation de fréquence, concernant une station spatiale instalée à bord d'un satellite géostationnaire ou une station terrienne qui communique avec une telle station spatiale, pourrrait être affectée.

ADD 4114A 1061 (2) Les assignations de fréquence auxquelles s'appliquent des dispositions du numéro **1060** sont celles:

1062 *a*) Situées dans la même bande de fréquences que l'assignation en projet et conformes aux dispositions du numéro **1503**; *et*

1063 *b*) Soit inscrites dans le Fichier de référence ou ayant fait l'objet de la coordination prévue dans la présente section;

1064 *c*) Soit à prendre en considération pour la coordination à compter de la date de réception par le Comité conformément aux dispositions du numéro **1074**, des renseignements pertinents tels que spécifiés dans l'appendice 3;

1065 *d*) Soit notifiées au Comité sans aucune coordination dans les cas où les dispositions des numéros **1066** à **1071** s'appliquent.

MOD 4115 639AK 1066 (3) Aucune coordination aux termes du numéro **1060** n'est requise:

1067 *a*) Lorque, du fait de l'utilisation d'une nouvelle assignation de fréquence, la température de bruit du récepteur de toute station spatiale ou terrienne ou la température équivalente de bruit de toute liaison par satellite, selon le cas, relevant d'une autre administration, subit un accroissement qui, calculé conformément à la méthode prévue à l'appendice **29**, ne dépasse pas la valeur de seuil définie dans cetter méthode;

1068 *b*) Lorsque le bouillage résultant de la modification d'une assignation de fréquence, ayant déjà été coordonnée, n'excède pas la valeur convenue au cours de la coordination;

ADD 1069 *c*) Lorsqu'une administration se propose de notifier ou de mettre en service une nouvelle station terriene à l'intérieur d'une zone de service d'un réseau à satellite existant, à condition que la nouvelle station terrienne ne cause pas de brouillage d'un niveau supérieur à celui qui serait causé par une srtation terrienne appartenant au même réseau à satellite et dont les caractéristiques ont été publiées conformément aux dispositions du numéro **1078**, en même temps que les renseignements concernant la station spatiale;

ADD 1070 *d*) Lorsque, pour une nouvelle assignation de fréquence à une station de réception, l'administration notificatrice déclare qu'elle accepte le brouillage résultant des assignations de fréquence citées aux numéros **1061** à **1065**;

ADD 1071 *e*) Entre des stations terriennes utilisant des assignations de fréquence dans le même sens (soit Terre vers espace soit espace vers Terre).

NOC 4116 1072 *Données concernant la coordination:*

MOD 4117 639AJ 1073 § 7. (1) En vue d'effectuer la coordination, l'administration qui recherche la coordination envoie à toute autre administration visée dans le numéro **1060** tous les renseignements énumérés à l'appendice **3** et nécessaires à la coordination. La demande de coordination concernant une station spatiale ou une station terrienne associée peut comprendre toutes ou certaines des assignations de frequénce qu'elle prévoit d'utiliser pour cette station spatiale, mais par la suite, chaque assignation est traitée séparément.

MOD 4118 639AL 1074 (2) En même temps qu'une administration engage la procédure de coordination, elle envoie au Comité une copie de la demande de coordination, accompagnée de tous les renseignements énumérés á l'appendice **3** nécessaires à la coordination ainsi que le

nom de la ou des administrations auprès de laquelle ou desquelles elle recherche la coordination. Une administration qui est d'avis que les dispositions des numéros **1066** à **1071** s'appliquent à son assignation em projet peut envoyer au Comité les renseignements pertinents énumérés à l'appendice **3**, soit aux termes de la présent disposition, soit conformément aux dispositions des numéros **1488** à **1491**. Dans ce dernier cas, le Comité en avise immédiatement toutes les administrations par télégramme-circulaire.

ADD **4118A** **1075** § 8. Au reçu des renseignements dont il est question au numéro **1074**, le Comité:

ADD **4118B** **1076** *a*) Examine immédiatement ces renseignements du point de vue de leur conformité avec les dispositions du numéro **1503** et envoie le plus rapidement possible un télégramme á toutes les administrations, indiquant l'identité du réseau à satellite, les conclusions qu'il a formulées relativement au numéro **1503** et la date de réception des renseignements; cetter date est prise en compte comme la date à partir de laquelle l'assgination est prise en considération pour la coordination;

ADD **4118C** **1077** *b*) Examine des renseignements reçus en vue d'identifier les administrations dont les services peuvent être affectés aus termes des dispositions du numéro **1060** est informe par télégramme les administrations concernées;

ADD **4118D** **1078** *c*) Publie dans une section spéciale de sa circulaire hebdomadaire les renseignements reçus em application du numéro **1074** et le résultat de l'examen effectué conformément aux numéros **1076** et **1077** ainsi qu'une référence à la circulaire hebdomadaire dans laquelle les renseignements concernant le réseau à satellite ont été publiés aux termes de la section I du présent article. Lorsque la circulaire hebdomadaire contient des renseignements de cette nature, le Comité en avise toutes les administrations par télégrame-circulaire.

NOC **4119** **1079** *Demandes de participation à la procédure de coordination:*

MOD **4120** 639AM **1080** § 9. Toute administration qui estime qu'elle aurait dû être incluse dans la procédure de coordenation dont il est question au numéro **1060** a le droit de demander à être partie à la procédure de coordination. Cette demande est envoyée à l'administration ayant engagé la procédure de coordenation, avec copie au Comité, le plus rapidement possible.

NOC **4121** **1081** *Accusé de réception des données concernant la coordination:*

MOD **4122** 639AO **1082** § 10. Toute administration auprès de laquelle la coordination est recherchée aux termes du numéro **1060** accuse immédiatement réception, par télégrame, des données concernant la coordination. Si l'adiministration qui recherche la coordination ne reçoit pas d'accusé de réception dans le délai de trente jours qui suit la date de la circulaire hebdomadaire dans laquelle les renseignements pertinents ont été publiés conformément aux dispositions du numéro **1078**, elle envoie un télégramme demandant cet accusé de réception, télégramme auqeul l'administration qui le reçoit répond dans un nouveau délai de quinze jours.

NOC **4123** **1083** *Examen des données concernant la coordination et accord entre les administrations:*

MOD **4124** 639AO **1084** § 11. (1) Au reçu des renseignements concernant la coordination, l'administration auprès de laquelle la coordination est recherchée étudie rapidement la question, du point de vue des brouillages (1) qui seraient causés au service assuré par celles de ses stations pour lesquelles la coordination est recherchée aux termes du numéro **1060** on causés par ces stations. Ce faisant, elle prendra en considération la date prévue de mise en service de l'assignation pour laquelle la coordination est recherchée. Puis elle communique son accord, dans le délai de quatre mois qui suit la date de la circulaire hebdomadaire pertinente, à l'administration qui recherche la coordination. Si l'administration auprès de laquelle la coordination est recherchée ne communique pas son accord, elle envoie dans le même délai à l'administration qui recherche la coordination des renseignements techniques indiquant les raisons qui motivent son désaccord y compris les caractéristiques pertinentes contenues dans l'appendice **3** qui n'ont pas été précédemment notifiées au

---

MOD **4124.1** 639AO.I **1084.1** (1) Les mèthodes de calcul et les critères à utiliser pour évaluer le brouillage devraient être fondés sur les Avis pertinents du CCIR acceptés par les administrations concernées en application de la Résolution **703** ou d'une autre façon. En cas de désaccord sur un Avis du CCIR ou en l'absence de tels Avis, les méthodes et les critères font l'objet d'accords entre les administrations concernées. Ces accords doivent être conclus sans porter préjudice aux autres administrations.

Comité et elle lui présente les suggestions qu'elles peut faire, le cas échéant, en vue d'arriver à une solution satisfaisante du probléme. Une copie de ces observations est envoyée également au Comité.

MOD **4125** **1085** (2) L'administration qui recherche la coordination, ou toute administration auprès de laquelle la coordination est recherchée, peuvent demander les renseignements supplémentaires dont elles estiment avoir besoin pour évaluer le brouillage causé aux services concernés.
639AT

ADD **4125A** **1086** *Résultats de la coordination:*

ADD **4125B** **1087** § 12. Toute administration qui a engagé une procédure de coordination conformément aux dispositions des numéros **1060** à **1074** fait connaître au Comité, á l'issue du délai de quatre mois qui suit la date de la circulaire hebdomadaire pertinente mentionnée au numéro **1078**, les noms des administrations avec lesquelles un accord est obtenu ainsi que les modifications des caractéristiques de ses assignations de fréquence. Elle fait également connaître au Comité l'état d'avancement du règlement de la coordination avec les autres administrations ou les difficultés éventuelles. Une telle communication est faite au Comité tous les six mois après le délai mentionné ci-dessus. Le Comité publie ces renseignements dans une section spéciale de sa circulaire hebdomadaire et, lorsque celle-ci contient de tels renseignements sur les modifications aux caractéristiques publiées, il en avise les administrations par télégramme-circulaire.

NOC **4126** **1088** *Assistance demandée à l'IFRB en vue d'effectuer la coordination:*

MOD **4127** **1089** § 13. (1) L'administration qui recherche la coordination peut demander au Comité de s'effectuer cette coordination dans les circonstances suivantes:
639AS

1090 *a*) Une administration auprès de laquelle la coordination est recherchée aux termes du numéro **1060** n'envoie pas d'accusé de réception, aux termes du numéro **1082**, dans un délai de quarante-cinq jours à partir de la date de la circulaire hebdomadaire dans laquelle les renseignements relatifs à la demande de coordination ont été publiés;

1091 *b*) Une administration a envoyé un accusé de réception aux termes du numéro **1082**, mais ne communique pas sa decision dans un délai de quatre mois à partir de la date de la circulaire hebdomadaire pertinente;

1092 *c*) L'administration qui recherche la coordination et l'administration auprès de laquelle la coordination est recherchée sont en désaccord en ce qui concerne le brouillage acceptable;

1093 *d*) Ou encore la coordination n'est pas possible pour toute autre raison.

1094 (2) En présentant sa demande au Comité, l'administration concernée lui communique les renseignements nécessaires pour lui permettre de s'efforcer d'effectuer la coordination.

NOC **4128** **1095** *Mesures à prendre par l'IFRB:*

MOD **4129** **1096** § 14. (1) Lorsque le Comité reçoit une demande aux termes du numéro **1090**, il envoie sans délai un télégramme à l'administration concernée en lui demandant d'en accuser réception immédiatement.
639AU

MOD **4130** **1097** (2) Lorsque le Comité reçoit un accusé de réception à la suite de la mesure qu'il prise aux termes du numéro **1096** ou lorsqu'il reçoit une demande aux termes du numéro **1091**, il envoie sans délai un télégramme à l'administration concernée en lui demandant de prendre rapidement une décision sur la question.
639AV

MOD **4131** **1098** (3) Lorsque le Comité reçoit une demande aux termes du numéro **1093**, il s'efforce d'effectuer la coordination conformément aux dispositions du numéro **1060**. Le Comité prend également les mesures prévues aux numéros **1075** à **1078**. Lorsque le Comité ne reçoit pas d'accusé de réception à sa demande de coordination dans le délai spécifié au numéro **1082**, il agit conformément aux dispositions du numéro **1096**.
639AW

MOD **4132** **1099** (4) S'il y a lieu, le Comité évalue le brouillage, au titre de la procédure spécifiée aux numéros **1089** à **1094**. En tout état de cause, il communique aux administrations concernées les résultats obtenus.
639AY

MOD **4133** **1100** (5) Le Comité peut demander les renseignements supplémentaires dont il estime avoir besoin pour évaluer le brouillage causé aux services concernés.
639AT

(MOD) **4134** **1101** (6) Lorsqu'une administration ne répond pas dans un délai de trente jours qui suit l'envoi du télégramme que le Comité lui a envoyé aux termes du numéro **1096** en lui demandant un accusé de réception, ou lorsqu'elle ne communique pas sa décision sur la question dans le délai de trente jours qui suit l'envoi du télégramme du Comité aux
639AX

termes du numéro **1097**, l'administration auprés de laquelle la coordination a été recherchée est réputée s'être engagée:

1102 *a*) À ne pas formuler de plainte concernant les brouillages préjudiciables qui pourraient être causés au service assuré pas ses stations de radiocommunication spatiale par l'utilisation de l'assignation de fréquence pour laquelle la coordination a été recherchée;

1103 *b*) À faire en sorte que ses stations de radiocommunications spatiale ne causeront pas de brouillages préjudiciables à l'utilisation de l'assignation de fréquence pour laquelle la coordenation a été recherchée.

NOC **4135** **1104** *Notification des assignations de fréquence en cas de désaccord persistant:*

MOD **4136** 639AZ **1105** § 15. En cas de désaccord persistant entre l'administration qui recherche la coordination et l'administration auprès de laquelle la coordination a été recherchée, l'administration qui recherche la coordination diffère, excepté dans les cas ou l'assistance du Comité a été demandée, l'envoi au Comité de sa fiche de notification concernant l'assignation en projet, de six mois à compter de la date de publication de la demande de coordination aux termes du numéro **1078** en prenant en considération les dispositions du numéro **1496**.

SECTION III

NOC **Coordination des assignations de fréquence à une station, vis-à-vis des stations de Terre**

NOC **4137** **1106** *Conditions régissant la coordination:*

MOD **4138** 639AN **1107** § 16. (1) Avant de notifier au Comité ou de mettre en service une assignation d'une fréquence d'émission ou de réception à une station terrienne dans une bande déterminée, attribuée avec égalité des droits à des services de radiocommunication saptiale et à des services de radiocommunication de Terre dans le gamme de fréquences située au-delà de 1 GHz, toute administration coordonne, sauf dans les cas visés aux numéros **1108 à 1111**, l'utilisation de cette assignation avec l'administration de chaque pays dont le territoire est situé en tout ou en partie à l'intérieur de la zone de coordination (1) de la station terrienne en projet. La demande de coordination concernant une station terrienne peut comprendre toutes ou certaines des assignations de fréquence à la station spatiale associée mais, par la suite, chaque assignation est traitée séparément.

MOS **4139** 639AR **1108** (2) Aucune coordination aux termes du numéro **1107** n'est requise lorsqu'une administration se propose:

1109 *a*) De mettre en service une station terrienne dont la zone de coordination est entièrement extérieure au territoire de tout autre pays;

1110 *b*) De modifier les caractéristiques d'une assignation existante de telle sorte que les brouillages causés à ou par des stations de radiocomunication de Terre d'autres administrations ne s'en trouvent pas accrus;

1111 *c*) De faire fonctionner une station terrienne mobile. Cependant, si la zone de coordination liée au fonctionnement d'une telle station terrienne mobile dans l'une des bandes de fréquences auxquelles référence est faite au numéro **1107** recouvre tout ou partie du territoire d'un autre pays, le fonctionnement de cette station fait l'objet d'un accord de coordination entre les administrations concernées. Cet accord porte sur les caractéristiques de la ou des stations terriennes mobiles ou sur les

---

MOD **4138.1** 639AN.1 **1107.1** (1) L'appendice **28**, qui est utilisé pour calculer la zone de coordination, contient les critères relatifs uniquement à la coordination entre les stations terriennes et les stations du service fixe ou du service fixe ou du service mobile. Les critères relatifs aux autres services de radiocommunication de Terre devraient être fondés sur les Avis pertinents du CCIR acceptés par les administrations concernées en application de la Résolution **703** ou d'autres dispositions.

En cas de désaccord sur un Avis du CCIR ou en l'absence de tel Avis, les méthodes et critères à utiliser font l'objet d'accords entre les administrations concernées. Ces accords doivent être conclus sans porter préjudice aux autres administrattions.

SUP **4138.2** 639AN.2

caractéristiques d'une station terrienne mobile type, et est conclu pour une zone de service donnée. Sauf dispositions contraires de l'acoord, celui-ci s'applique à toute station terrienne mobile se déplaçant dans la zone de service considérée, sous réserve que le brouillage causé par elle ne soit pas plus élevé que dans le cas de la station terrienne type dons les caractéristiques techniques figurent sur la fiche de notification ou dont la notification a été faite ou est en cours aux termes du numéro **1494**.

NOC **4140** **1112** *Données concernant la coordination:*

MOD **4141** 639AN **1113** § 17. L'administration qui recherche la coordination envoie à cet effet à chacune des administrations concernées aux termes des dispositions du numéro **1107**, une copie d'un schéma établi à l'échelle convenable, indiquant, pour l'émission et la réception, l'emplacement de la station terrienne et de ces zones de coordination associées, ou la zone de coordination correspondant à la zone de service dans laquelle il est prévu d'exploiter la station terrieenne mobile, ainsi que les paramètres sur lesquels le calcul de ces zones est fondé, et tous les renseignements pertinents concernant l'assignation de fréquence en projet, tels qu'ils sont énumérés à l'appendice **3**, et une indication de la date approximative à laquelle il est prévu qu'elle commencera à fonctionner. Une copie de ces renseignements, avec la date d'expédition de la demande de coordination est, de plus, envoyée au Comité pour information.

NOC **4142** **1114** *Accusé de réception des données concernant la coordination:*

MOD **4143** 639AP **1115** § 18. Toute administration auprès de laquelle la coordination est recherchée aux termes du numéro **1107** accuse immédiatement réception, par télégramme, des données concernant la coordination. Si l'administration qui recherche la coordination ne reçoit pas d'acussé de réception dans un délai de trente jours à partir de l'envoi des données concernant la coordination, elle envoie un télégramme demandant cet accusé de réception, télégramme auquel l'administration qui le reçoit répond dans un nouveau délai de quinze jours.

NOC **4144** **1116** *Examen des données concernant la coordination et accord entre les administrations:*

MOD **4145** 639AP **1117** § 19. (1) Au reçu des données concernant la coordination, l'administration auprès de laquelle la coordination est recherchée étudie rapidement la question eu égard à la date prévue de mise en service de l'assignation pour laquelle la coordination est recherchée, à la fois du point de vue:

1118 *a*) Des brouillages (1) qui seraient causés au service assuré par ses stations de radiocommunication de Terre fonctionnat conformémente aux dispositions de la Convention et du présent Règlement, ou destinées à fonctionner ainsi avant la date prévue de mise en service de l'assignation à la station terrienne, ou encore dans les trois années à venir, selon celle de ces dates qui est la plus tardive; *et*

1119 *b*) Des brouillages (1) qui seraient causés à la réception à la station terrienne par le service assuré par ses stations de radiocommunication de Terre fonctionnant conformément aux dispositions de la Convention et du présent Règlement, ou destinées à fonctionner ainsi avant la date prévue de mise en service de l'assignation à la station terrienne, ou encore dans les trois années à venir, selon celle de ces dates que est la plus tardive.

1120 (2) Les périodes dont il est question dans les numéros **1118** et **1119** peuvent être prolongées par accord entre les administrations concernées afin de tenir compte des réseaux de Terre planifiés.

SUP **4141.2** 639AN.2

MOD **4145.1** 639AP.1 **1118.1** **1119.1** (1) Les méthodes de calcul et les critères à utiliser pour évalur le brouillage devraient être fondés sur les Avis pertinents du CCIR acceptés par les administrations concernées en application de la Résolution **703** ou d'autres dispositions. En cas de désaccord sur un Avis du CCIR ou en l'absence de tels Avis, les méthodes et les critères font l'objet d'accords entre les administrations concernées. Ces accords doivent être conclus sans porter préjudice aux autres administrations.

ADD **4145A** **1121** (3) Puis, dans un délai de quatre mois à partir de l'envoi des données concernant la coordination, l'administration auprès de laquelle la coordination est recherchée communique à l'administration qui recherche la coordination:

1122 *a*) Soit son accord sur la coordination, avec copie au Comité indiquant, le cas échéant, la partie de la bande de fréquences attribuée comprenant les assignations de fréquence coordonnés;

1123 *b*) Soit une demande tendant à inclure dans la coordination ses stations de radiocommunication de Terre visées aux numéros **1118** et **1119**;

1124 *c*) Soit son désaccord.

1125 (4) Dans le cas des numéros **1123** et **1124**, l'administration auprès de laquelle la coordination est recherchée communique à la administration qui recherche la coordination un graphique à échelle convenable indiquant l'emplacement de celles de ses stations de radiocommunication de Terre qui sont ou seront à l'intérieur de la zone de coordination de la station terrienne d'emisson ou de récepcion selon le cas, ainsi que toutes les autres caractéristiques fondamentales pertinentes et lui présente les suggestions qu'elle peut faire, le cas échéant, en vue d'arriver à une solution satisfaisante du problème.

MOD **4146** **1126** (5) Lorsque l'administration auprès de laquelle la coordination est recherchée envoie
639AQ à l'administration qui recherche la coordination les renseignements requis dans le cas du numéro **1124**, elle envoie aussi une copie de ces renseignements au Comité. Celui-ci considère comme notifications aux termes de la section I de l'article 12 seulement ceux de ces renseignements qui concernent des assignations à des stations de radiocommunication de Terre existantes ou qui seront mises en service dans le trois mois à venir.

ADD **4146A** **1127** (6) Lorsqu'un accord sur la coordination a été conclu suite à l'application des numéros **1121** à **1125**, l'administration responsable des sations de Terre peut envoyer au Comité les renseignements concernant celles de ses stations de Terre converts par l'accord et qu'elle désire notifier aux termes de la section I de l'article 12. Le Comité considère comme notifications aux termes de la latide section seulement ceux de ces renseignements qui concernent des assignations à des stations de radiocommunication de Terre existantes ou qui seront mises en service dans les trois années à venir.

MOD **4147** **1128** (7) L'administration qui recherche la coordination, ou toute administration auprès de
639AT laquelle la coordination est recherchée, peuvent, demander les renseignements supplémentaires dont elles estiment avoir besoin pour évaluer le brouillage causé aux services concernés.

NOC **4148** **1129** *Assintance demandée à l'IFRB en vue d'effectuer la coordination:*

MOD **4149** **1130** § 20. (1) L'administration qui recherche la coordination peut demander au Comité
639AS de s'efforcer d'effectuer cette coordination dans les circonstances suivantes:

1131 *a*) Une administration auprès de laquelle la coordination est recherchée aux termes du numéro **1107** n'envoie pas d'accusé de réception, aux termes du numéro **1115** dans un délai de quarante-cinq jours à partir de l'envoi des donnés concernant la coordination;

1132 *b*) Une administration a envoyé un accusé de réception aux termes du numéro **1115**, mais ne communique pas sa décision dans un délai de quatre mois à partir de l'envoi des données concernant la coordination aux termes du numéro **1113**;

1133 *c*) L'administration qui recherche la coordination et l'administration auprès de laquelle la coordination est recherchée sont en désaccord en ce qui concerne le brouillage acceptable;

1134 *d*) Ou encore la coordination n'est pas possible pour toute autre raison.

1135 (2) En présentant sa demande au Comité, l'administration concernée lui communique les renseignements nécessaires pour lui permettre de s'efforcer d'effectuer la coordination.

NOC **4150** **1136** *Mesures à prendre par l'IFRB:*

(MOD) **4151** **1137** § 21. (1) Lorsque le Comité reçoit une demande aux termes de numéro **1131**, il
639AU envolve sans un télegramme à l'administration concernée en lui demandant d'en accuser réception immédiatement.

(MOD) **4152** **1138** (2) Lorsque le Comité reçoit un accusé de réception à la suite de la mesure qu'il
639AV a prise aux termes du numéro **1137** ou lorsqu'il reçoit une demande aux termes du numéro **1132**, il envoie sans délai un télegramme à l'administration concernée en lui demandant de prendre rapidement une décision sur la question.

MOD 4153 639AW 1139 (3) Lorsque le Comité reçoit une demande aux termes du numéro **1134**, il s'efforce d'effectuer la coordination conformément aux dispositions du numéro **1107**. Lorsque le Comité ne reçoit pas d'accusé de réception à sa demande de dispositions du numéro **1137**.

MOD 4154 639AY 1140 (4) S'il y a lieu, le Comité évalue le brouillage, au titre de la procédure spécifié aux numéros **1130** à **1135**, En tout état de cause, il communique aux administrations concernées les résulats obtenus.

MOD 4155 639AT 1141 (5) Le Comité peut demander les renseignements supplémentaires dont il estime avoir bessoin pour évalour le brouillage cause aux services concernés.

MOD 4156 639AX 1142 (6) Lorsqu'une administration ne répond pas dans un délai de trente jours qui suit envoi du télégramme que le Comité lui a envoyé aux termes du numéro **1137** en lui demandant un accusé de réception, ou lorsqu'elle ne communique pas sa décision sur la question dans le délai de trente jours qui suit l'envoi du télegramme du Comité aux termes du numéro **1138**, l'administration auprès de laquelle la coordionation a été recherchée est réputée s'être engagée:

1143 *a*) À ne pas formuler de plainte concernant les brouillages préjudiciables qui pourraient être causés au service assuré par ses sations de radiocommucation de Terre par l'utilisation de l'assignation de fréquence pour laquelle la coordinatio a été receherchée;

1144 *b*) À faire en sorte que ses sations de radiocommucations de Terre ne causeront pas de brouillages préjudiciables à l'utilisation de l'assigantion de fréquice pour laquelle la coordination a été recherchée.

NOC 4157 1145 *Notification des assignations de fréquence en cas de désaccord persistant:*

MOD 4158 639AZ 1146 § 22. En cas de désaccord persistant entre l'administration qui recherche la coordination et l'adminsitration auprés de laquelle la coordination a été recherchée, l'administration qui recherche la coordination diffère, excepté dans les cas ou l'assistance du Comité a été demandée, l'envoi au Comité de sa fiche de notification concernant l'assignation en projet, de six mois à compter de la demande de coordination, en prenant en considération les dispositions du numéro **1496**.

SECTION IV

NOC

Coordination des assignations de fréquence à une station de Terre émettrice vis-à-vis d'une station terrienne

NOC 4159 1147 *Conditions régissant la coordiantion:*

MOD 4160 492A 1148 § 23. (1) Avant de notifier au Comité ou de mettre en service une assignation de fréquence à une station de Terre située à l'intérieuer de la zone de coordination (1) d'une station terrienne, dans une bande de fréquences au -dessus de 1GHz, attribuée avec égalité des droits aux services de radiocommunication de Terre et aux services de radiocommunication spatiale (espace vers Terre), à l'exception du service de radiodiffusion par satellite, toute administration coordonne, sauf dans les cas visés aux numéros **1155** à **1158**, l'assignation en projet avc l'administration responsable de la station terrienne en ce qui concerne les assignations de fréquence qui sont:

1149 *a*) Conformes aux dispositions du numéro **1503**; *et*

1150 *b*) Soit coordonnés aux termes du numéro **1107**;

1151 *c*) Soit à prendre en considération pour la coordinarion à compter de la date de communication des renseigneiments dont il est question au numéro **1107**;

1152 *d*) Soit inscrites dans le Fichier de référence avec une conclusion favorable relativement au numéro **1505**;

MOD 4160.1 492A.1 1148.1 (1) L'appendice **28**, qui est utilisé pour calculer la zone de coordination, contient les critères relatifs uniquement à la coordination entre les stations terriennes et les stations du service fixe ou du service fixe ou du service mobile. Les critères relatifs aux autres services de radiocommunication de Terre devraient être fondés sur les Avis pertinents du CCIR acceptés par les administrations concernées en application de la Résolution **703** ou d'autres dispositions.

En cas de désaccord sur un Avis du CCIR ou en l'absence de tel Avis, les méthodes et les critères à utiliser font l'objet d'accords entre les administrations concernées. Ces accords doivent être conclus sans porter préjudice aux autres administrations.

1153 *e)* Soit inscrites dans le Fichier de référence avec une conclusion défavorable relativement au numéro **1505** et une conclusion favorable relativement au numéro **1509**;

1154 *f)* Soit inscrites dans le Fichier de référence avec une conclusion défavorable relativement aux numéros **1505** et **1509**, l'administration notificatrice ayant déclaré qu'elle a accepté le brouillage résultant des stations de Terre existantes, situées à l'intérieur de la zone de coordination de la station terrienne à la date de son inscription.

(MOD) **4161** 492C **1155** (2) Aucune coordination aux termes des numéros **1148** à **1154** n'est requise lorsqu'une administration se propose:

1156 *a)* De mettre en service une station de Terre située en dehors de la zone de coordination d'une station terrienne;

1157 *b)* De modifier les caractéristiques d'une assignation existante de telle sorte que les brouillages causés à des stations terriennes d'autres administrations ne s'en trouvent pas accrus;

ADD **1158** *c)* De mettre en service une station de Terre à l'intérieur de la zone de coordination d'une station terrienne, à condition que l'assigntion projetée pour la station de Terre se trouve à l'extérieur d'une partie quelconque d'une bande de fréquences ayant fait l'objet d'une coordinatin en application des dispositions du numéro **1122** pour la réception par cette station terrienne.

NOC **4162** **1159** *Données concernant la coordination:*

MOD **4163** 492A **1160** § 24. Pour effectuer cette coordination, l'administrative qui recherche la coordiantion envoie à chacune des administrations visés aux numéros **1148** à **1154**, par le moyen le plus rapide possible, un graphique à échelle convenable indiquant l'emplacement de la stations de Terre et lui communique tous les autres détails pertinents concernant l'assignation de fréquence en projet, ainsi qu'une indication de la date approximative prévue pour la mise service de la station. Le demande de coordination peut comprendre toutes ou certaines des assignations de fréquence dont l'utilisation est prévue dans les trois années à venir pour des stations d'un réseau de Terre, situées entièrement ou en partie à l'intérieur de la zone de coordination d'une station terrienne. Cette période peut être prolongée par accord entre les administrations concernées. Par la suite, chaque assignation est traitée séparément.

NOC **4164** **1161** *Accusé de réception des données concernant la coordination:*

MOD **4165** 492B **1162** § 25. Toute administration auprès de laquelle la coordination est recherchée aux termes des numéros **1148** à **1154** accuse immédiatement réception, par télégramme, des données concernant la coordination. Si l'administration qui recherche la coordination ne reçoit pas d'accusé de réception dans le délai de trente jours qui suit l'envoi des données concernant la coordination, elle peut envoyer un télégramme demandant cet accusé de réception, télégramme auquel l'administration qui l'a reçu répond dans un nouveau délai de quinze jours.

NOC **4166** **1163** *Examen des données concernant la coordination et acoord entre les administrations:*

MOD **4167** 492B **1164** § 26. (1) Au reçu des données concernant la coordination, l'administration auprès de laquelle la coordination est recherchée étudie rapidement la question du point de vue des brouillages (1) qui seraint causés au service assuré par sus stations terriennes visées aux numéros **1148** à **1154** qui fonctionnent ou sont destinnés à fonctionner dans les trois années à venir.

1165 (2) Ce faisant, l'administration peut prendre en considération toute assignation de fréquence qui lui est communiquée et destinée à être utilisée plus de trois ans à l'avance.

1166 (3) Dans un délai global de quatre mois (2) à partir de l'envoi des données concernant la coordination, l'administration auprès de laquelle la coordination est recherchée ou bien

---

MOD **4167.1** 492B.1 **1164.1** (1) Les méthodes de calcul et les critères à utiliser pour évalur le brouillage devraient être fondés sur les Avis pertinents du CCIR acceptés par les administrations concernées en application de la Résolution **703** ou d'autres dispositions. En cas de désaccord sur un Avis du CCIR ou en l'absence de tels Avis, les méthodes et les critères font l'objet d'accords entre les administrations concernées. Ces accords doivent être conclus sans porter préjudice aux autres administrations.

ADD **4167.2** **1166.1** (2) Cette période peut, être prolongée avec l'accord de l'administration qui a recherché la coordination.

communique à l'administration qui recherche la coordination son accord sur l'assignation en projet, ou bien, en cas d'impossibilité, lui indique les motifs de son désaccord et lui présent les suggestions qu'elle peut faire, le cas échéant, en vue d'arriver à une solution satisfaisante du problème.

MOD **4168** **1167** § 27. L'administration qui recherche la coordination, ou toute administration auprès
492E de laquelle la coordination est recherchée, peuvent demander les renseignements supplémentaires dont elles estiment avoir besoin pour évaluer le brouillage causé aux services concernés.

NOC **4169** **1168** *Assistance demandée à l'IFRB en vue d'effectuer la coordination:*

MOD **4170** **1169** § 28. (1) L'administration qui recherche la coordination peut demander au Comité
492D de s'efforcer d'effectuer cette coordination dans les circonstances suivantes:

1170 *a*) Une administration auprès de laquelle le coordination est recherchée aux termes des numéros **1148** à **1154** n'envoie pas d'accusé de réception, aux termes du numéro **1162**, dans un délai de trente jours à partie de la date de l'envoi des donnés concernant la coordination;

1171 *b*) Une administration a envoyé un accusé de réception conformément aux dispositions du numéro **1162** mais ne communique pas sa décision dans un délai de quatre mois à partie de l'envoi des données concernant la coordination;

1172 *c*) L'administration qui recherche la coordination et une administration auprès de laquelle la coordination est recherchée sont en désaccord en ce qui concerne le brouillage acceptable;

1173 *d*) Ou encore la coordination n'est pas possible pour toute autre raison.

1174 (2) en présentant sa demande au Comité, l'administreation concernée lui communique les renseignements nécessaires pour lui permettre de s'efforcer d'effectuer la coordination.

NOC **4171** **1175** *Mesures à prendre par l'IFRB:*

(MOD) **4172** **1176** § 29. (1) Lorsque le Comité reçoit une demande aux termes du numéro **1170**, il
492F envoie sans délai un télégramme à l'administration concernée en lui demandant d'en accuser réception immédiatement.

(MOD) **4173** **1177** (2) Lorsque le Comité reçoit un accusé de rèception à la suite de la mesure qu'il
492FA a prise aux termes du numéro **1176**, ou lorsque le Comité reçoit une demande aux termes du numéro **1171**, il envoie sans délai un télégramme à l'administration concernée en lui demandant de prendre rapidement une décision sur la question.

NOC **4174** **1178** (3) Lorsque le Comité reçoit une demande aux termes du numéro **1173**, il s'efforce
492FB d'effectuer la coordination conformément aux dispositions des numéros **1148** à **1154**. Lorsque le Comité ne reçoit pas d'accusé de réception à sa demande de coordination dans le délai spécifié au numéro **1162**, il agit conformément aux dispositions du numéro **1176**.

MOD **4175** **1179** (4) S'il a lieu, le Comité évalue le brouillage, au titre de la procédure spéficiée aux
492G numéros **1169** à **1174**. En tout état de cause il communique aux administrations concernées les résultants obtenus.

MOD **4176** **1180** (5) Le Comité peut demander les renseignements supplémentaires dont il estime
492E avoir besoin pour évaluer le brouillage cause aux services concernés.

(MOD) **4177** **1181** (6) Lorsqu'une administration ne répond pas dans un délai de trente jours qui suit
492FC l'envoi du télégramme que le Comité lui a envoyé aux termes du numéro **1176** en lui demandant un accusé de réception, ou lorsqu'elle ne communique pas sa décision sur la question dans le délai de deux mois qui suit l'envoi du télégramme du Comité aux termes du numéro **1177**, l'administration auprès de laquelle la coordination est recherchée est réputée s'être engagée à ne pas formuler de plainte concernant les brouillages préjudiciables qui pourraient être causés par la station de Terre e voie de coordination au service assuré par sa station terrienne.

NOC **4178** **1182** *Notification des assignations de fréquences en cas de désaccord persistant:*

MOD **4179** **1183** § 30. En cas de désaccord persistant entre l'administration qui recherche la coor-
492GA dination et l'administration auprès de laquelle la coordination a été recherchée, l'administration qui recherche la coordination différe, excepté dans les cas où l'assistance

du Comité a été demandée, l'envoi au Comité de sa fiche de notification concernant l'assignation en projet, de six mois à comter de la demande de coordination, en prenant en considération, en prenant en considération les dispositions des numéros **1230** et **1496**.

SECTION V

Assistance spéciale fournie par l'IFRB

ADD **1184** § 31. (1) Si la demande lui en est faite par une administration quelconque et, en particulier par l'administration d'un pays qui a besoin d'assistance spéciale, le Comité, utilisant à cet effet les moyens dont il dispose et qui conviennent aux circonstances, fournit l'assitance suivante:

1185 *a*) Calcul des accroissements de température de bruit, selon le numéro **1066**;

1186 *b*) Établissement de graphiques représentant les zones de coordination, selon le numéro **1113**;

1187 *c*) Toute autre assistance de caractère tecnique afin que les procédures décristes dans le présent article puissent être menées à bien.

ADD **4179B** **1188** (2) En présentant sa demande au Comité aux termes des numéros **1184** à **1187**, l'administration lui fournit les renseignements nécessaires.

1189 à **1213** *(Non attribués.)*

N12/9

ARTICLE 12

Notification et inscription dans le Fichier de référence international des assignations de fréquence (1) aux stations de radiocommunication de Terre (2) (3)

SECTION I

Notification des assignations de fréquence

MOD **4280** 486 **1214** § 1. (1) Toute assignation de fréquence (4) à une station fixe, terrestre, de radiodiffusion (5), terrestre de radionavegation, terrestre de radiolocalisation, de fréquences étalon et de signaux horaires, ou à une station à terre du service des auxiliaires de la météorologie, doit être notifiée au Comité international d'enregistrement des fréquences:

1215 *a*) Si l'utilisation de la fréquence en question est susceptible d'entrainer des brouillages préjudiciables à un service quelconque d'une autre administration (6);

1216 *b*) Ou si la fréquence doit être utilisée pour des radiocommunications internationales;

1217 *c*) Ou encore si l'on désire obtenir une reconnaissance internationale de l'utilisation de cette fréquence (6).

NOC **A.12.1** (1) L'expression *assignation de fréquence*, partout où elle figure dans le présent article, doit être entendue comme se référent soit à une nouvelle assignation de fréquence, soit à une modification à une assignation déjà inscrite dans le Fichier de référence international des fréquences (dénommé ci-après le *Fichier de référence*).

NOC **A.12.2** (2) En ce qui concerne la notification et l'inscription dans le Fichier de référence des assignations de fréquence aux stations de radioastronomie et aux stations de radiocommunication spatiale, voie l'article 13.

ADD **A.12.3** (3) En ce qui concerne la notification et l'incription des assignations de fréquence aux stations de Terre dans les bandes de fréquences 11,7-12,2 GHz (dans les Régions 2 et 3) et 11,7-12,5 GHZ (en Région 1), dans la mesure où leurs relations avec le service de radiodiffusion par satellite dans ces bandes sont impliquées, voir également l'article 15.

(MOD) **4280.1** **1214.1** (4) Dans les as où de noimbreuses stations relevant d'une même administration utilisent la même fréquence, voir l'appendice 1 (section F, II, colone 5a, paragraphes 3 et 4).

NOC **4280.2** **1214.2** (5) En ce qui concerne les assignations aux stations de radiodiffusion dans les bandes attribuées en exclusivité au service de radiodiffusion entre 5950 kHz et 26 100 kHz, voir l'article 17.

NOC **4280.3** **1215.1** **1217.1** (6) L'attention des administrations est particulièrement attirée sur l'application des dispositions des numéros **1215** et **1217** dans les cas où elles font une assignation de fréquence à une station de Terre située à l'intérieur de la zone de coordination d'une station terrienne (voir les numéros **1148** à **1154**, dans une bande que les services de radiocommunication de Terre partagent, avec égalité des droits, avec les services de radiocommunication spatiale dans la gamme des fréquences supérieures à 1 GHz.

ADD **4280A** **1218** (2) Une notification analogue (1) doit être faite lorsqu'une administration désire demander l'assistance du Comité concernant le choix d'une assignation de fréquence à une station du service fixe dans l'une quelconque des bandes attribuées en exclusivité ou en partage à ce service entre 3000 kHz et 27 500 kHz, ou lorsqu'elle désire utiliser pour le même type de station, une assignation de fréquence prédéterminée; dans ce dernier cas, elle indique les raisons qui motivent sa demande ainsi que les modifications éventuelles qu'elle pourrait apporter aux caractéristiques de son assignation et le Comité tiendra compte de cette information dans la recherche d'une solution satisfaisante. A cet effect, une fiche individuelle de notification est établie dans la forme spécifiée à la section D de l'appendice **1**. Il est recommendé que l'administration notificatrice communique au Comité les autres renseignements indiqués dans cet appendice, ainsi que tout autre renseignement qu'elle peut juger utile. La procédure à suivre est décrite dans les numéros **1275** à **1304**.

NOC **4281** **1219** 487 (3) Une notification analogue doit être faite dans le cas de toute fréquence destinée à être utilisée à la réception des émissions de stations mobiles par une station terrestre déterminée, chaque fois que l'une au moins des circonstances spécifiées aux numéros **1214** à **1217** se présente.

MOD **4282** **1220** 488 (4) Les fréquences énumérées à la Préface à la Liste internationale des fréquences qui sont prescrites dans le présent Règlement comme devant être utilisées en commun par les stations d'un service déterminé (par example les fréquences internationales de détress 500 kHz et 2182 kHz, les fréquences des stations radiotélégraphiques de navire fonctionnant en ondes décamétriques dans leurs bandes exclusives, etc.) ne doivent pas faire l'object de notification.

NOC **4283** **1221** 489 § 2. (1) Toute assignation de fréquence notifiée en exécution des numéros **1214** à **1217** ou **1219** doit faire l'objet d'une fiche individuelle de notification établie dans la forme prescrite à l'appendice **1**, dont les sections A ou B spécifient les caractéristiques fondamentales à fournir selon le cas. Il est recommandé que l'administration notificatrice communique également au Comité les autres renseignements indiqués dans cet appendice, ainsi que tout autre renseignement qu'elle peut juger utile.

ADD **4283A** **1222** (2) Les fiches de notification relatives aux assignations de fréquence á des stations du service fixe dans les bandes attribuées à ce service entre 3000 kHz et 27 500 kHz présentées aux termes des números **1214** à **1217** ou **1218** doivent indiquer, à l'aide des symboles suivants, la classe de fonctionnement de l'assignation:

Symbole A — assignation destinée à être utilisée pour exploitation régulière qui n'est pas assurée par un autre moyen satisfaisant de télécommunication; ou

Symbole B — assignation destinée à être utilisée comme assignation de réserve pour un autre moyen de télécommunication; *ou*

Symbole C — assignation pour utilisation occasionnelle en réserve n'exigeant pas de protection internationalement reconnue contre les brouillages préjudiciables.

MOD **4284** **1223** 490 (3) Lorsque des stations d'une même servie, tel le service mobile terrestre, utilisent une bande de fréquences au-dessus de 28 000 kHz dans ou plusieurs zones déterminés, il convient d'établir pour chaque fréquence assignée à des stations dans cetter bande une fiche de notification dans la forme prescrite à l'appendice **1** dont la section C fixe les caractéristiques fondamentales à fournir, mais les caractéristiques notifiées doivent se rapporter à une station type. Cette disposition ne s'applique pas:

1224 *a*) Aux stations de radiodiffusion;

1225 *b*) Aux autres stations de Terre auxquelles les dispositions de la sous section II-E du présent article s'appliquent;

1226 *c*) Aux stations des services fixe ou mobile qui fonctionnent dans les bandes de fréquences énumérées au tableau II de l'appendice **28** avec une puissance isotrope rayonnée équivalent supérieure à la valeur pertinente indiquée dans ce tableau;

1227 *d*) Aux stations de Terre dans les bandes de fréquences énumérées aux numéros **2509**, **2510** et **2511**.

MOD **4285** **1228** § 3. (1) Chaque fiche de notification présenté aux termes des numéros **1214** à **1217** **1219** ou **1223** à **1227** doit, autant que faire se peut, parvenir au Comité avant la date de mise en service de l'assignation de fréquence intéressée. Elle doit lui parvenir au plus tôt trois mois avant cette date, mais en tout cs au plus tard trente jours après cette date.

ADD **4280A.1** **1218.1** (1) Voir la Résolution **103**.

ADD **4285A** **1229** (2) Une fiche de notification présentée aux termes du numéro **1218** doit parvenir au Comité au plus tôt une année avant la date de mise en servie de la fréquence faisant l'objet de la demande.

ADD **4285B** **1230** (3) Une fiche de notification concernant une assignation de fréquence aux stations de Terre auxquelles s'appliquent les dispositions de la sous-section II-E du présent article doit parvenir au Comité au plus tôt trois ans et au plus tard trois mois avant la date de mise en service de l'assignation de fréquence intéressée.

MOD **4286** **1231** 492 (4) A l'exception des cas couverts dans les numéros **1218** et **1229**, une assignation de fréquence dont la notification parvient au Comité plus de trente jours après la date de mise en service notifiée ou, dans le cas d'une station de Terre dont il est question à la sous-section II-E du présent article, une assignation de fréquence dont la notification parvient au Comité moins de trois mois avant la date de mise en service notifiée, porte, lorsqu'il y a lieu de l'inscrite dans le Fichier de référence, une observation indiquant que la fiche de notification n'est pas conforme aux dispositions des numéros **1228** ou **1230**. Toutefois, cette observation n'est pas à inscrire dans le Fichier de référence en regard d'une assignation à une station de Terre qui n'a pas été notifiée aux termes des numéros **1214** à **1217**, mais qui doit être notifiée après sa mise en service à la suite d'une coodination ou d'une notification relative à une assignation à une station terrienne.

SUP **4287** 492GB

NOC **4288** **1232** 493 § 4. Quel que soit le moyen de communication, y compris le télégraphe, par lequel une fiche de notification est transmise au Comité, elle est considérée comme complète lorsqu'elle contient au moins les caractéristiques fondamentales appropriées, telles que'elles sont spécifiées à l'appendice **1.**

SUP **4289** 494

NOC **4290** **1233** 495 § 5. Lorsqu'un accord régional de service a été conclu, le Comité doit être informé des détails de cet accord.

SECTION II

NOC

Procédure pour l'examen des fiches de notification et l'inscription des assinagtions de fréquence dans de Fichier de référence

MOD **4291** **1234** 496 § 6. Lorque le Comité recçoit une fiche de notification, soumise aux termes des numéros **1214** à **1217**, **1219** ou **1223** à **1227** qui ne contient pas au moins les caractéristiques fondamentales spécifiées à l'appendice **1,** il la retourne par poste aérienne à l'administration dont elle émane, accompagnée des motifs de ce renvoi, sauf si les renseignements que n'avaient pas été fournis sont reçus immédiatement en réponse á une demande du Comité. Le Comité informe l'administration par télégramme lorsqu'une fiche de notification est retournée aux termes de la présente disposition.

MOD **4292** **1235** 497 § 7. Lorsque le Comité reçoit une fiche de notification complète, il inclut les renseignements qu'elle contient, avec sa date de réception, dans une circulaire hebdomadaire que est publiée dans un délai de quarante jours après la réception de la fiche et qui est envoyée par poste aérienne à toutes les administrations. Si le Comité n'est pas en mesure de respecter ce délai, il en informe dès que possible les administrations concernées, en indiquant les motifs.

MOD **4293** **1236** 498 § 8. La circulaire contient les renseignements complets relatifs à toutes les fiches de notification de cette catégorie reçues depuis la publication de la circulaire précédente; elle tient lieu d'accusé de réception par le Comité, à l'administration notificatrice, d'une fiche notification complète.

ADD **4293A** **1237** § 9. Aux fins des numéros **1235** et **1236**, les fiches de notification soumises aux termes du número **1218**, sous la forme d'une demande d'assistance du Comité, sont groupées et spécialement identifiées.

MOD **4294** **1238** 499 § 10. Les fiches de notification complètes sont examinées par le Comité dans l'ordre où il les reçoit; cependant, les fiches de notification présentées aus termes du numéro **1218** sont traitées immédiatement dès leur réception. Le Comité ne peut pas ajourner la conclusion, à moins qu'il ne manque de renseignements suffisants pour prendre une décision à cet égard; de plus, le Comité ne statue pas sur une fiche de notification ayant des relations techniques avec une fiche reçue antérieurement, et encore en cours d'examen, avant d'avoir pris une décision en ce qui concerne cette dernière.

SOUS-SECTION II-A

NOC

Procédure à suivre dans les cas non traités dans les sous-section II-A à II-E du présent article

MOD **4295** 500 **1239** § 11. (1) A l'exception des fiches de notification dont il est question au numéro **1218**, lesquelles font l'object de la procédure prévue aux numéros **1275** à **1304**, le Comité examine chaque fiche de notification du point de vue de:

MOD **4296** 501 **1240** *a)* Sa conformité avec les clauses de la Convention, le Tableau d'attribution des bandes de fréquences et les autres clauses du Règlement des radiocommunications à l'exception de celles qui sont relatives à la probabilité de brouillages préjudiciables, lesquelles font l'objet des dispositions des numéros **1241** et **1242**;

MOD **4297** 502 **1241** *b)* La probabilité dún brouillage préjudiciable au détriment du service assuré par une station pour laquelle a déjà été inscrite dans le Fichier de référence une assignation de fréquence:

1) Qui porte une date dans la colonne 2a (voir de numéro **1416**);
2) Ou qui est conforme aux dispositions du numéro **1240** et porte une date dans la colonne 2b (voir le número **1417**), mais n'a pas, en fait, causé de brouillage prédudiciable à une assignation de fréquence quelconque portant une date dans la colonne 2a ou à une assignation de fréquence quelconque conforme au numéro **1240** et portant dans la colonne 2b une date antérieure;

NOC **4298** 503 **1242** *c)* La probabilité d'un brouillage préjudiciable au détriment du service assuré par une station pour laquelle a déjà été inscrite, dans le Fichier de référence, une assignation de fréquence:

1) Qui est conforme aux dispositions du número **1240** et a été inscrite dans le Fichier de référence avec une date dans la colonne 2d à la suite d'une conclusion favorable relativement au numéro **1242**;
2) Ou qui est conforme aux dispositions du numéro **1240** a été inscrite dans le Fichier de référence avec une date dans la colonne 2d après une conclusion défavorable relativement au número **1242**, mais n'a pas, en fait, causé de brouillage préjudiciable à une assignation de fréquence quelconque antérieurement inscrite dans le Fichier de référence et conforme au numéro **1240**.

ADD **4298A** **1243** (2) En procédant à l'examen prévu aux números **1241** ou **1242** le Comité applique pour la classe de fonctionnement A des critères de protection plus stricts que pour la classe de fonctionnement B (1). Le Comité ne tient compte de la probabilité de brouillage aux assignations de fréquence de la classe de fonctionnement C.

MOD **4299** 504 **1244** (3) Lorsqu'il s'agit d'une fiche de notification concernant une fréquence supérieure à 28 000 kHz, le Comité ne procède à l'examen spécifie au numéro **1242** qu'à la demande d'une administration directement intéressée ou dont les services sont affectés lorsqu'une coordination n'a pas été entre les administrations en cause.

MOD **4300** 505 **1245** (4) Lorsqu'il y a lieu, le Comité examine aussi la fiche du point de vue de sa conformité avec un accord régional ou de service. La procédure à suivre à l'égard des assignations de fréquence faites en applications d'un tel accord est conforme aux dispositions des numéros **1240** et **1241** ou **1242**, sauf que le Comité n'examine pas la question des probabilités de brouillages préjudiciables entre les parties contractantes de l'accord. De même, le Comité n'examine pas la question des probabilités de brouillages préjudiciables causés aux assignations de toute administration avec laquelle l'administration notificatrice a coordonné l'utilisation de la fréquence intéressée.

MOD **4301** 506 **1246** § 12. Selon les conclusions auxquelles le Comité parvient à la suite de l'examen prévu aux numéros **1240** et **1241** ou **1242** et le résultat de l'action entreprise par le Comité aux termes des numéros **1275** à **1278** et **1279**, la procédure se poursuit comme suit.

SUP **4298.1** 503.1

ADD **4298A.1** **1243.1** (1) Les différents critères de protection devant être appliqués par le Comité pour les classes de fonctionnement A et B sont publiés dans les Normes techniques du Comité (voir le numéro **1001**).

NOC **4302** **1247** § 13. (1) *Conclusion favorable relativement* **1240** *dans des cas où les dispositions des numéros* **1241** *ou* **1242** *ne sont pas applicables (voir le numéro* **1248**).
507

NOC **4303** **1248** (2) L'assignation est inscrite dans le Fichier de référence. La date à inscrire dans la partie appropriée de la colonne 2, selons les dispositions pertinentes de la section III du présent article, est la date de réception par le Comité de la fiche de notification.
508

NOC **4304** **1249** § 14. (1) *Conclusion favorable relativament aux numéros* **1240** *et* **1241** *ou* **1242**.
509

NOC **4305** **1250** (2) L'assignation est inscrite dans le Fichier de référence. La date à inscrire dans la partie appropriée de la colonne 2, selon les dispositions pertinentes de la section III du présent article, est la date de réception par le Comité de la fiche de notification.
510

MOD **4306** **1251** (3) Cependant s'il résulte de l'examen qu'a certaines heures, certaines saisons ou certaines phases du cycle de l'activité solaire la probabilité de brouillages préjudiciables est légèrement plus élevée que celle que est tenue pour souhaitable, une observation est insérée dans le Fichier de référence afin d'indiquer qu'une faible probabilité de brouillages préjudiciables existe et qu'en conséquence des précautions doivent être prises dans l'utilisation de cette assignation pour éviter les brouillages préjudiciables aux assignations déjà inscrites dans le Fichier de référence.
511

NOC **4307** **1252** § 15. (1) *Conclusion favorable relativement au numéro* **1240** *mais défavorable relativement aux numéros* **1241** *ou* **1242**.
512

MOD **4308** **1253** (2) La fiche est retournée immédiatement par poste aérienne à l'administration dont elle émane, avec un exposé des raisons qui motivent la conclusion du Comité, et avec les sugestions qu'il peut faire en vue d'arriver à une solution satisfaisante du problème du point de vue des administrations qu'il a identifiées.
513

NOC **4309** **1254** (3) Si l'administration notificatrice présent à nouveau sa fiche avec des modifications qui, aprés nouvel examen, entrainent de la part du Comité une conclusion favorable relativement aux numéros **1241** ou **1242**, l'assignation est inscrite dans le Fichie de référence. La date à inscrire dans la partie appropriée de la colonne 2 selon les dispositions pertinentes de la section III du présent article est la date de réception par le Comité de la première de notification. La date de réception par le Comité de la deuxième fiche est indiquée dans la colonne Observations.
514

MOD **4310** **1255** (4) L'administration notificatrice peut présenter de nouveau sa fiche, soit non modifiée, soit avec des modifications dont l'effect est de diminuer la probabilité de brouillages préjudiciables. Lorsqu'il n'existe aucune modification ou lorsque les modifications ne permettent pas d'appliquer les dispositions du numéro **1254** et que la conclusion du Comité demeure inchangée, si l'administration notificatrice insiste pour que sa fiche soit examinée une nouvelle fois, en indiquant qu'elle a mis son assignation en service, le Comité:
515

ADD **4310A** **1256** *a*) Publie les renseignements contenus das la fiche de notification, reçus aux termes du numéro **1255** dans la circulaire hebdomadaire, en y indiquant toutes les administrations qui risquent d'être affectées;

ADD **4310B** **1257** *b*) Adresse, dans le même temps, un télégramme à chacune des administrations visées au numéro **1256** avec une référence à la fiche de notification en question, en leur demandant:

1258 1) De lui faire connaître si l'assignation inscrite est encore utilisée et, dans l'affirmative, si elle est utilisée avec les caractéristiques fondamentales notifiées;

1259 2) De lui signaler tout brouillage préjudiciable qui est survenu dans un délai de deux mois à compter de la date de publication de la circulaire hebdomadaire mentionnée au numéro **1256**;

ADD **4310BA** **1260** *c*) Prend les mesures appropriées conformément aux numéros **1964** à **1996**, si l'assignation à la'origine de la conclusion défavorable a été présentée en application du numéro **1218**;

ADD **4310C** **1261** *d*) Inscrit l'assignation dans le Fichier de référence si, à l'expiration du délai dont il est question au numéro **1259**, il n'a pas reçu d'information concernant um brouillage préjudiciable; la date à inscrire dans la partie appropriée de la colonne 2, selon les dispositions pertinentes de la section III du présent article, est la date de réception par le Comité de la fiche de notification initiale;

ADD **4310D** **1262** *e*) Dans le cas où il reçoit des informations concernant un brouillage préjudiciable qui est apparu pendant la période de deux mois mentionnée au numéro **1259**, il retourne immédiatement la fiche de notification à l'administration notificatrice en l'informant du brouillage ayant fait l'object du rapport, avec les suggestions qu'il peut faire en vue d'eliminer le brouillage.

ADD **4310E** **1263**
§ (5) Si le Comité reçoit des informations concernant un brouillage préjudiciable qui est survenu après l'inscription d'une assignation aux termes du numéro **1261**, celui-ci réexamine la question et, s'il y a lieu, il inscrit, en regard de l'assignation, une observation spéciale signifiant qu'il ne tiendra pas compte de cette assignation lors de l'examen de fiches de notification reçues ultérieurement.

MOD **4311** **1264**
516
(6) Si, à la suite des renseignements reçus aux termes des numéros **1257** à **1259**, le Comité est en mesure de formuler une conclusion favorable relativement aux numéros **1241** ou **1242** à l'égard d'une assignation inscrite dans le Fichier de référence aux termes des numéros **1255** et **1261**, les modifications convenables sont apportées à l'inscription dans le Fichier de référence. Si la conclusion reste défavorable, le Comité insère dans le Fichier de référence, en regard des assignations intéressées, des observations décrivant la situation telle qu'elle lui apparaît.

SUP **4312**
517

MOD **4313** **1265**
518
(7) Dans le cas où l'administration notificatrice présent pour la deuxième fois sa fiche avec des modifications dont l'effect est d'accroître la probabilité de brouillages préjudiciables et où les conclusions du Comité restent les mêmes, cette deuxième fiche est traitée selon les dispositions du numéro **1253**.

NOC **4314** **1266**
519
§ 16. (1) *Conclusion défavorable relativement au numéro* **1240** *dans les cas où les dispositions des numèros* **1241** *ou* **1242** *ne sont pas applicables (voir le numéro* **1244**).

MOD **4315** **1267**
520
(2) Lorsque la fiche comporte une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342** du présent Règlement, l'assignation est inscrite dans le Fichier de référence sous réserve des dispositions des numéros **1419** ou **1420**. La date à inscrire dans la partie appropriée de la colonne 2 selon les dispositions pertinentes de la section III du présent article est la date de réception par le Comité de la fiche de notification.

(MOD) **4316** **1268**
521
(3) Lorsque la fiche ne comporte aucune référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342** du présent Règlement, cette fiche est retournée immédiatement par post aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent la conclusion du Comité, et avec les suggestions qu'il peut faire en vue d'arriver à une solution satisfaisante du problème.

SUP **4317**
522

NOC **4318** **1269**
523
§ 17. (1) *Conclusion défavorable relativement au numéro* **1240** *dans le cas où les dispositions des numéros* **1241** *ou* **1242** *sont applicables.*

NOC **4319** **1270**
524
(2) Lorsque la fiche comporte une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342** du present Règlement, elle est examinée immédiatement du point de vue des numéros **1241** ou **1242** et les dispositions des numéros **1271** ou **1272**, selon le cas, sont appliquées.

MOD **4320** **1271**
525
(3) Si la conclusion est favorable relativement aux números **1241** ou **1242**, l'assignation est inscrite dans le Fichier référence sous réserve des dispositions du numéro **1419**. La date à inscrire dans la partie appropriée de la colonne 2 selon les dispositions pertinentes de la section III du présent article est la date de réception par le Comité de la fiche de notification.

MOD **4321** **1272**
526
(4) Si la conclusion est défavorable relativement aux numéros **1241** ou **1242**, la fiche est retournée immédiatement par poste aérienne à l'administration notificatrice. Si cette administration insiste pour un nouvel examen de la fiche, l'assignation de fréquence est inscrite pour information seulement avec une observation appropriée se référant au número **1419**.

MOD) **4322** **1273**
527
(5) Lorsque la fiche ne porte aucune référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342** du présent Règlement, cette fiche est retournée immédiatement par poste aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent la conclusion du Comité, et avec les suggestions qu'il peut faire en vue d'arriver à une solution satisfaisante du problème.

SUP **4326**
531

ADD **4326bis** **1274**
§ 18. *Procédure à suivre pour le traitement des fiches de notification présentées aux termes du numéro* **1218**.

ADD **4326A** **1275** (1) Dans le cas d'une fiche de notification présentée aux termes du numéro **1218** concernant de choix d'une assignation de fréquence destinée à être utilisée pour exploitation régulière (classe de fonctionnement A), le Comité choisit, aussi rapidement que possible, une fréquence qui soit:

1276 *a*) Capable de fournir le service requis;

1277 *b*) Conforme aux numéros **1240** et **1241** ou **1242**, selon de cas, afin d'assurer une conclusion favorable;

1278 *c*) Exempte de brouillage préjudiciable causé par toute assignation inscrite dans le Fichier de référence, et conforme au numéro **1240**.

ADD **4326AA** **1279** (2) Dans le cas d'une fiche de notification présentée aux termes du numéro **1218** concernant la notification d'une assignation de fréquence prédéterminée, l'administration notificatrice peut demander au Comité d'effectuer, en plus de l'examen visé aux numéros **1240** et **1241** ou **1242**, le calcul de la probabilité de brouillage préjudiciable qui serait causé à cette assignation par des assignations inscrites dans le Fichier de référence. Le Comité avise l'administration notificatrice des résultats de cet examen et il formule si nécessaire des suggestions visant à eviter tout brouillage préjudiciable éventuel à l'assignation.

ADD **4326B** **1280** (3) Si l'application des dispositions des numéros **1275** à **1278** et **1279**. soulève des difficultés, la procédure décrite ci-dessous doit être suivie:

ADD **4326BA** **1281** *a*) Le Comité recherche d'abord l'accés à l'une des parties les moins chargées d'une bande appropriée, sans considérer la possibilité de modifier une assignation déjà inscrite;

ADD **4326BB** **1282** *b*) Si nécessaire, le Comité consulte l'administration ayant présenté une fiche de notification conformément au numéro **1218**, en vue de modifier éventuellement les caractéristiques de cette assignation;

ADD **4326BC** **1283** *c*) Au cas où des mesures prises aux termes des disposition des numéros **1281** et **1282** ci-dessus n'aboutiraient pas, et si l'administration demanderesse juge que la fréquence choisie est acceptable, le Comité déterminé si l'assignation qui fait l'objet de la demande pourrait être insérée par annulation ou déclassement d'une assigantion déjà inscrite. Les enquêtes à efectuer en pareil cas sont celles qui sont décrires dans la section VII du présent article;

ADD **4326BD** **1284** *d*) Au cas où les mesures prises aux termes des dispositions du numéro **1283** n'aboutiraient pas, le Comité cherche d'autres moyens d'insérer l'assignation demandée, de manière à ne modifier qu'au minimum les característiques de toute assignation déjà inscrite;

ADD **4326BE** **1285** *e*) Aux fins des mesures envisagées au numéro **1284**, le Comité axe se enquêtes sur les plus anciennes assignations inscrites et pour lesquelles le Comité pense qu'il existe des moyens de télécommunication satisfaisants à titre de remplacement;

ADD **4326BF** **1286** *f*) Après avoir identifié en pareil cas les modifications minimales des caractéristiques qu'il faudrait apporter à une assignation déjà inscrite pour insérer une nouvelle assignation demandée aux termes du número **1218**, le Comité invoque les dispositions pertinentes de la Convention pour rechercher l'assistance de l'administration appropriée afin que celle-ci accepte, le moment venu, d'effectuer la modification de l'assignation déjà inscrite à son nom;

ADD **4326BG** **1287** *g*) Aux cas où les mesures prises aux termes des dispositions du numéro **1286** n'aboutiraient pas, le Comité attire l'attention de l'administration intéressée sur le fait qu'en pareil cas, celle-ci est alors dans l'obligation de réduire la largeur de la bande de fréquences assignée, si cela est possible du point de vue de l'exploitation, ou de déplacer la fréquence assignée d'une valeur n'excédant pas la largeur de bande de l'assignation de fréquence inscrite, à condition de ne pas causer de brouillage préjudiciable aux assignations de fréquence adjacentes;

ADD **4326BH** **1288** *h*) L'administration intéressée doit:

1289 1) Donner son accord en vue d'apporter les modifications nécessaires à son assignation existante inscrite, en indiquant la date à laquelle la modification sera effective; *ou*

1290 2) Indiquer les raisons pour lesquelles une telle modification ne peut être apportée;

ADD **4326BI** **1291**

i) Si un tel cas n'est pas résolu dans un délai de trois mois suivant la demande d'assignation présentée aux termes du numéro **1218**, le Comité publie, pour information de tout les Membres de l'Union, un rapport sur la question;

ADD **4326BJ** **1292**

j) En temps approprié au cours de la procédure, le Comité consulte l'administration qui a demandé une assignation conformément aux dispositions du numéro **1218** pour savoir si la fréquence choisie est acceptable;

ADD **4326BK** **1293**

k) Si, en application du présent paragraphe, une administration accepte une modification aux caractéristiques fondamentales de son assignation de fréquence, cette modification est inscrite dans de Fichier de référence sans toucher à la date ou aux dates initiales.

ADD **4326C** **1294**

(4) Les administrations sont instamment priées de fournir au Comité toute l'assistance possible au moyen de leurs stations de contrôle des émissions en vue de lui permettre de s'acquitter avec succès des tâches prévues dans la présente sous-section.

ADD **4326D** **1295**

§ 19. (1) *Résultat des mesures prises par le Comité en application des dispositions des numéros* **1275** *à* **1278** *et relatives à une demande d'assistance présentée aux termes du numéro* **1218**.

ADD **4326E** **1296**

(2) Aprés avoir choisi une fréquence en application des números **1275** à **1278**, le Comité soumet immédiatement, par télégramme, la fréquence choisie à l'approbation de l'administration notificatrice et insère une inscription provisoire dans de Fichier de référence conformément au numéro **1311**. La date de récéption de la demande adressée au Comité, conformément au numéro **1218**, est inscrite dans la partie appropriée de la colonne 2.

ADD **4326F** **1297**

(3) A la réception du télégramme mentionnée au numéro **1296**, l'administration notificatrice étudie rapidement la question et, en cas de non acceptation de la fréquence choisie, en informe le Comité en donnant les motifs de son refus.

ADD **4326G** **1298**

(4) Dans les conditions mentionnées au numéro **1297**, le Comité annule l'inscription et porte cette annulation à la connaissance de l'administration concernée. En pareil cas, si l'administration notificatrice le demande, le Comité s'efforce à nouveau de choisir une fréquence acceptable; toutefois, la demande est considérée comme une nouvelle notification aux termes du numéro **1218**.

ADD **4326H** **1299**

(5) Lorsque l'administration notificatrice accepte une fréquence choisie par le Comité, elle en informe celui-ci dès que possible.

ADD **4326I** **1300**

(6) Si le Comité ne reçoit pas de réponse dans les deux mois qui suivent l'envoi du télégramme visé au numéro **1296** demandant l'approbation de la fréquence choisie, l'inscription provisoire est annulée et le Comité porte cette annulation à la connaissance des autres administrations.

ADD **4326J** **1301**

§ 20. (1) *Résultat des mesures prises par le Comité en application des dispositions du numéro* **1280** *au sujet d'une demande d'assistance présentée aux termes du numéro* **1218**.

ADD **4326K** **1302**

(2) Après avoir choisi une fréquence en application du numéro **1280**, si les modifications nécessaires à l'assignation insrite antérieurement ont été acceptées, conformément aux dispositions du número **1289**, le Comité traite l'assignation choisie conformément aux dispositions du numéro **1295**.

ADD **4326L** **1303**

(3) Après avoir choisi une fréquence en application du numéro **1280**, si les modifications nécessaires ne peuvent être apportées à l'assignation inscrite antérieurement par suite de mesures prises conformément aux dispositions du numéro **1290**, et si la fréquence choisie est toujours acceptable pour l'administration qui a demandé une assignation, le Comité procedé à une inscription dans de Fichier de référence au nom de l'administration dont émane la demande. La date de réception de la demande adressée au Comité aux termes du numéro **1218** est inscrite dans la partie appropriée de la colonne 2.

ADD **4326M** **1304**

(4) Les brouillages préjudiciables susceptibles de résulter de l'utilisation simultanée des deux assignations font l'objet de consultations entre les administrations intéressées.

NOC **4327** **1305**
532

§ 21. (1) *Modifications aux caractérisiques fondamentales des assignations déjà inscrites dans le Fichier de référence.*

MOD **4328** **1306**
533

(2) Toute notification de modification aux caractéristiques fondamentales d'une assignation déjà inscrite dans le Fichier de référence, telles qu'elles sont définies à l'appendice **1** (à l'exception toutefois de celles qui figurent dans les colonnes 2c, 3, 4a et 11 du Fichier de référence), et examinée par le Comité selon des dispositions des numéros **1240** et **1241**, **1242** ou **1244**, selon le cas, et les dispositions des numéros **1247** à **1273** inclus sont appliquées. Lorsqu'il y a lieu d'inscrire la modification dans le Fichier de référence, l'assignation originale est modifiée selon la notification.

(MOD) **4329** **1307**
534

(3) Cepedant, dans le cas d'une modification aux caractéristiques fondamentales d'une assignation conforme aux dispositions du numéro **1240** (à l'exception d'un changement de la fréquence assignée qui excède la moitié de la bande de fréquences

primitivement assignée, telle qu'elle est définie au numéro **141**), et où le Comité formule une conclusion favorable relativement aux numéros **1241** ou **1242**, ou conclut que cette modification n'accroît pas la propabilité de brouillages préjudiciables au détriment d'assignations de fréquence déjà inscrites dans de Fichier de référence, l'assignation de fréquence modifiée conserve la date primitivement inscrite dans la partie appropriée de la colonne 2. De plus, la date de réception par le Comité de la fiche de notification concernant la modification est inscrite dans la colonne Observations.

ADD **4329A** **1308** (4) La date prévue de mise en servie d'une assignation de fréquence peut être prorogée de trois mois á la demande de l'administration notificatrice. Au cas où l'administration déclare que des circonstances exceptionnelles motivent une nouvelle prolongation de ce délai, cette nouvelle prolongation peut être accordée mais ne doit en aucun cas dépasser six mois à compter de la date initiale prévue pour la mise en service.

MOD **4330** **1309** § 22. *Dans l'application des dispositions des sous-sections* II-A à II-C, toute fiche
535 de notification présentée de nouveau au Comité et reçue par lui plus de six mois après la date à laquelle il a renvoyé la fiche à l'administration notificatrice est considérée comme une nouvelle fiche de notification.

NOC **4331** **1310** § 23. (1) *Inscription des assignations de fréquence notifiées avant leur mise en*
536 *service.*

NOC **4332** **1311** (2) Si une assignation de fréquence notifié avant sa mise en service est l'objet de con-
537 clusions favorables formulées par le Comité relativement aux numéros **1240** et **1241** ou **1242**, elle est inscrit: provisoirement dans le Fichier de référence avec, dans la colonne Observations, un symbole spécial indiquant le caractère provisoire de cette inscription.

MOD **4333** **1312** (3) Dans un délai de trente jours (voirs le numéro **1228**) après la date prévue pour la mise en service initialement notifiée aux termes du numéro **1308**, l'administration
538 notificatrice confirme que l'assignation de fréquence a été mise en servie. Lorsque le Comité est avisé que l'assignation a été mise en service, il biffe symbole spécial dans la colonne Observations.

MOD **4334** **1313** (4) Si le Comité ne reçoit pas la confirmation dans le délai prévu au numéro **1312**,
539 l'inscription en question est annulée. Le Comité consulte l'administration concernée avant de prendre cette mesure.

MOD **4335** **1314** (5) Les dispositions des numéros **1311** à **1313** ne s'appliquent pas aux assignations
540 de fréquence conformes aux Plans d'allotissement figurant dans des appendices 25 Mar2, 26, 27 (*) et 27 Aer2 (*) au présent Règlement; le Comité inscrit ces assignations de fréquence dans le Fichier de référence dès réception de la fiche de notification.

SOUS-SECTION II-B

NOC

Procédure à suivre par les stations côtières radiotéléphoniques fonctionnant das les bandes attribuées en exclusivité au service mobile maritime entre 4000 kHz et 23 000 kHz

MODD **4336** **1315** § 24. (1) *Examen des fiches de notification concernant les assignations de fréquence*
541 *aux stations côtières radiotéléphoniques dans les bandes attribuées en exclusivité au service mobile maritime entre 4000 kHz et 23 000 kHz pour les stations côtières radiotéléphoniques (voir le numéro* **1239**).

NOC **4337** **1316** (2) Le Comité examine chacune des fiches de notification dont il est question au
542 numéro **1315**:

NOC **4338** **1317** *a*) Relativement aux dispositions du numéro **1240** et en particulier à celles
542A du número **4373**;

NOC **4339** **1318** *b*) Afin de déterminer si l'assignation notifiée est conforme à un allotissement
542B du Plan d'allotissement qui figure à l'appendice 25 Mar2 au présent Règlement.

NOC **4340** **1319** (3) Toute assignation de fréquence qui fait l'objet d'une conclusion favorable
543 relativement aux dispositions des numéros **1317** et **1318** est inscrite dans le Fichier de référence (voir également le numéro **1314**). La date à inscrire dans la colonne 2a est celle qui est déterminée selon les dispositions pertinentes de la section III du présent article.

SUP **4336.1**
541.1

(*) Note du Secrétariat général: voir le numéro **5189** et la Résolution **400**.

NOC 4341 543A 1320 (4) Toute assignation de fréquence qui fait d'une conclusion défavorable relativement aux dispositions du numéro **1317** est examinée selon les dispositions des numéros **1267** et **1268**. La date à inscrire la colonne 2b est déterminée selon les dispositions pertinentes de la section III du présent article.

(MOD) 4342 545 1321 (5) Dans le cas d'une fiche de notification qui fait l'objet d'une conclusion favorable relativement aux disposition du número **1317**, mais défavorable relativement à celles du número **1318**, le Comité examine cette fiche du point de vue de probabilité d'un brouillage préjudiciable au détriment du service assuré par une station côtière radiotéléphonique pour laquelle une assignation de fréquence:

1322 *a*) Est conforme à l'un des allotissements du Plan et est déjà inscrite dans le Fichier de référence ou est susceptible d'y être inscrite dans l'avenir;

1323 *b*) Ou bien a été inscrite dans le Fichier de référence sur une fréquence spécifiée à l'appendice **16**, à la suite d'une conclusion favorable relativement aux numéros **1231** à **1324**;

1324 *c*) Ou encore a été inscrite dans le Fichier de référence sur une fréquence spécifiée à l'appendice **16**, après une conclusion défavorable relativement aux numéros **1321** à **1324**, mais n'a pas, en fait, crée de brouillage préjudiciable à une assignation de fréquence quelconque à une station côtiére radiotéléphonique antérieurement inscrite dans le Fichier de référence.

(MOD) 4343 546 1325 (6) Conformément aux conclusions du Comité relativement aux numéros **1321** à **1324**, la procédure se poursuit selon les dispositions des numéros **1249** á **1265** inclus ou **1305** à **1307** inclus, selon de cas, étant entendu que dans le texte de ces dispositions les numéros **1321** à **1324** doivent être lus au lieu du numéro **1241**.

(MOD) 4344 547 1326 § 25. (1) *Examen des fiches de notification concernant les fréquences de réception utilisées par les stations côtières radiotéléphoniques dans les bandes attribuées en exclusivité au servie mobile maritime entre 4000 kHz et 23 000 KHz pour les stations radiotéléphoniques de navire (voir les numéros* **1219** et **1239**).

NOC 4345 548 1327 (2) Le Comité examine chacune des fiches de notification dont il est question au numéro **1326**:

NOCV 4346 548A 1328 *a*) Relativement aux dispositions du numéro **1240** et en particulier à celles du numéro **4374**;

NOC 4347 548B 1329 *b*) Afin de déterminer si l'assignation notifiée correspond à une fréquence associée, selon l'appendice 16, à une fréquence allotie à l'administration notificatrice dans le Plan d'allotissement qui figure à l'appendice 25 Mar2 au présent Règlement.

NOC 4348 549 1330 (3) Toute assignation de fréquence de réception à une satation côtière radiotéléphonique qui fais l'objet d'une conclusion favorable relativement aux numéros **1328** et **1329** est inscrite dans le Fichier de référence. La date à inscrire dans la colonne 2a est celle qui est déterminée selon les dispositions pertinentes de la section III du présente article.

(MOD) 4349 549A 1331 (4) Tout assignation de fréquence de réception à une station côtière radiotéléphonique qui fait l'objet d'une conclusion défaborable relativement au numéro **1328** est examinée selon les dispositions des numéros **1267** et **1268**. La date à inscrire dans la colonne 2b est celle qui est déterminée selon les dispositions pertinentes de la section III du présent article.

(MOD) 4350 551 1332 (5) Toute assignation de fréquence de réception à une station côtière radiotéléphonique qui fait l'objet d'une conclusion favorable relativement au numéro **1238** mais défavorable relativement au numéro **1329** est inscrite dans le Fichier de référence. La date à inscrire dans la colonne 2b est celle qui est déterminée selon les dispositions pertinentes de la section III du présent article.

SOUS-SECTION II-C

Procédure à suivre par les stations aéronautiques fonctionnant dans les bandes attribuées en exclusivité aux services mobiles aéronautiques entre 2850 kHz et 22 000 kHz

NOC 4351 552 1333 § 26. (1) *Examen des fiches de notification concernant les assignations de fréquence aux stations aéronautiques du service mobile aéronautique (R) dans les bandes attribuées en exclusivité à ce service entre 2850 kHz et 22 000 kHz (voir le numéro* **1239**).

SUP 4344.1 547.1

NOC 4352 553 **1334** (2) Le Comité examine chacune des fiches de notification dont il est question au numéro **1333** afin de déterminer:

NOC 4352A 553A **1335** *a*) Si la fiche de notification est conforme aux dispositions du numéro **1240**;

NOC 4353 554 **1336** *b*) Si la fréquence notifiée corresponde à l'une des fréquences spécifiées dans la colonne 1 du Plan d'allotissement des fréquences pour le service mobile aéronautique (R) qui figure á l'appendice 27 Aer2 (*) (partie II, section II, article 2), ou si l'assignation résulte d'une modification permise de la classe d'emission, la largeurs de bande nécessaire à la nouvelle émission satisfaisant à la disposition des voies, telle qu'elle est donnée à l'appendice 27 Aer2 (*);

NOC 4354 555 **1337** *c*) Si les limitations d'utilisation spécifiées dans la colonne 3 du Plan sont dûment observées;

NOC 4355 556 **1338** *d*) Si la fiche de notification est conforme aux principes techniques du Plan tels qu'ils sont exposés à l'appendice 27 Aer2 (*);

NOC 4356 557 **1339** *e*) Si la zone d'utilisation est comprise à l'intérieur des zones indiquées dans la colonne 2 du Plan.

NOC 4356A 557A **1340** (3) Une fiche de notification non, conforme aux dispositions du numéro **1335** est examinée selon les dispositions des numéros **1267** et **1268**. La date à inscrire dans la colonne 2b est déterminée selon dispositions pertinentes de la section III du présent article.

NOC 4357 558 **1341** (4) Dans le cas d'une fiche de notification conforme aux dispositions des numéros **1335** à **1338**, mais non à celles du numéro **1339**, le Comité examine si la protection spécifiée à l'appendice 27 Aer 2 (*) (partie 1, section II-A, paragraphe 5) est assurée aux allotissements du Plan. Ce faisant, le Comité admet que la fréquence sera utilisée selon les «Conditions de partage entre les zones» telles qu'elles sont spécifiées dans l'appendice 27 Aer2 (*) partie I, section II-B, paragraphe 4.

NOC 4358 560 **1342** (5) Toutes les assignations de fréquence dont il est question au numéro **1333** sont inscrites dans le Fichier de référence selon les conclusions du Comité. La date à inscrire dans la colonne 2a ou la colonne 2b est celle qui est déterminée selon les dispositions pertinentes de la section III du présent article.

NOC 4359 561 **1343** § 27. (1) *Examen des fiches de notification concernant les assignations de fréquence à des stations aéronautiques du service mobile aéronautique (OR) dans les bandes attribuées en exclusivité à ce service entre 3025 kHz et 18 030 kHz (voir le numéro* **1239**).

NOC 4360 562 **1344** (2) Le Comité examine chacune des fiches de notification dont il est question au numéro **1343** afin de déterminer:

NOC 4361 563 **1345** *a*) Si l'assignation est conforme à l'un des allotissements primaires du Plan d'allotissement des fréquences du service mobile aéronautique (OR) qui figure á l'appendice **26**, ainsi qu'aux conditions spécifiées dans cet appendice (parties III et IV);

NOC 4362 564 **1346** *b*) Si l'assignation est conforme à l'un des allotissements secondaires du Plan d'allotissement des fréquences du service mobile aéronautique (OR) qui figure à l'appendice **26** ou satisfait aux conditions requises pour les allotissements secondaires, ainsi, qu'aux conditions spécifiées dans ce même appendice [partie III, section II, paragraphe 4, sous-paragraphe *d*), et partie IV]. En appliquant ces dispositions, le Comité admet que la fréquence est utilisées le jour;

NOC 4363 565 **1347** *c*) Si l'assignation résulte d'une modification permise de la classe d'emission, si la largeur de bande occupée par la nouvelle émission satisfait à la définition des voies, telle que'elle figure à l'appendice **26** (partie III, section II, paragraphes 1 et 2), et si l'assignation satisfait à toutes les conditions requises pour un allotissement primaire ou un allotissement secondaire du Plan, à cela près que la fréquence ne correspond pas du point de vue numérique à l'une des fréquences spécifiées dans le Plan.

NOC 4364 566 **1348** (3) Les critères techniques à utiliser par le Comité au cours de l'examen des fiches de notification sont ceux qui figurent à l'appendice **26** (partie III).

(*) Note du Secrétarial général: voir le numéro **5189** et la Résolution **400**.

NOC **4365** 567 **1349**

(4) Toutes les assignations de fréquence dont il est question au numérmo **1343** sont inscrites dans le Fichier de référence selon les conclusions du Comité. La date à inscrire dans la colonne 2a ou la colonne 2b est celle qui est déterminée selon les dispositions pertinentes de la section III du présent article.

SOUS-SECTION II-D

Procédure à suivre par les stations de radiodifusion fonctionnant das les bandes attribuées en exclusivité au service de radiodifusion entre 5950 kHz et 26 100 kHz

MOD **4366** 568 **1350**

§ 28. Les assignations de fréquence aux stations de radiodifusion dans les bandes attribuées en exclusivité au service de radiodiffusion entre 5950 kHz et 26 100 kHz sont traitées conformément aux dispositions de l'article 17 et ne sont incluses que dans la liste annuelle mentionnée au numéro **1769**, qui est considérée comme un supplément à la Liste internacionale des fréquences.

SUP **4367** 569

SUP **4368** 570

NOC

SOUS-SECTION II-E

Procédure à suivre dans les cas où des stations de Terre fonctionnent dans la même bande de fréquences qu'une station terrienne et sont situées dans la zone de coordination de cette station, qu'il s'agisse d'une station terrienne existante ou d'une station terrienne pour laquelle la coordination a été effectuée ou engagée

NOC **4369** 570AA **1351**

§ 29. Le Comité examine chaque fiche de notification:

MOD **4370** 570AB **1352**

a) Du point de vue de sa conformité avec les clauses de la Convention, le Tableau d'attribution des bandes de fréquences et les autres clauses du Règlement des radiocommunications, à l'exception de celles qui sont relatives à la procédure de coordination et à la probabilité de brouillage préjudiciables, lesquelles font l'objet des dispositions des numéros **1353** et **1354**;

NOC **4371** 570AC **1353**

b) Du point de vue de sa conformité avec les dispositions des numéros **1148** à **1154**, lesquelles concernent la coordination de l'utilisation de l'assignation de fréquence avec les autres administrations intéressées;

NOC **4372** 570AD **1354**

c) Le cas échéant, du point de vue de la probabilité d'un brouillage préjudiciable au détriment du service assuré par une station terrienne de réception pour laquelle a déjà été inscrite dans le Fichier de référence une assignation de fréquence conforme aux dispositions du numéro **1503**, si l'assignations de fréquence correspondant á la station spatiale d'émission n'a pas, en fait, causé de brouillage préjudiciable à une assignation quelconque antérieurement inscrite dans le Fichier de référence et conforme aux numéros **1240** ou **1352**, selon le cas.

NOC **4373** 570AE **1355**

§ 30. Selon les conclusions auxquelles le Comité parvient à la suite de l'examen prévu aux numéros **1352**, **1353** et **1354**, la procédure se poursuit comme suit.

NOC **4374** 570AF **1356**

§ 31. (1) *Conclusion défavorable relativement au numéro* **1352**.

MOD **4375** 570AG **1357**

(2) Lorsque la fiche comporte une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342** et que la conclusion est favorable relativement aux numéros **1353** ou **1354**, selon le cas, l'assignation est inscrite dans le Fichier de référence sous réserve des dispositions du numéro **1420**. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

SUP **4376** 570AGA

MOD **4377** 570AGB **1358**

(3) Si la conclusion est défavorable relativement aux numèros **1353** ou **1354**, selon le cas, la fiche est retournée immédiatement par poste aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent la conclusion du Comité. Si l'administration notificatrice insiste pour un nouvel examen de la fiche de notification,

l'assignation est inscrite dans le Fichier de référence, sous réserve que les dispositions du numéro **1420** soient applicables. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d.

SUP **4378** 570AGC

(MOD) **4379** **1359** (4) Lorsque la fiche ne comporte aucune rèférence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342**, cette fiche est retournée immédiatement par poste aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent la conclusion du Comité, et avec les suggestions qu'il peut faire en vue d'arriver à une solution satisfaisante du problème.

SUP **4380** 570AI

MOD **4381** **1360** (5) Si l'administration notificatrice présente à nouveau sa fiche avec une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342**, la fiche de notification est traitée comme une nouvelle fiche de notification.

SUP **4382** 570AK

NOC **4383** **1361** § 32. (1) *Conclusion favorable relativement au numéro* **1352**.

MOD **4384** **1362** (2) Lorsque le Comité conclut que la procédure de coordination dont il est question au numéro **1353** a été appliquée avec succès en ce qui concerne toutes les administrations dont les stations terriennes peuvent être affectées, l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

MOD **4385** **1363** (3) Lorsque le Comité conclut que la procédure de coordination dont il est question au numéro **1353** n'a pas été appliquée et:

ADD **4385A** **1364** *a*) Si l'administration notificatrice lui demande d'effectuer la coordination requise, le Comité prend les mesures nécessaires à cet effet; si les tentatives du Comité en vue d'aboutir à un accord sont couronnées de succès, il en informe les administrations intéressées et traite la fiche de notification conformément aux dispositions du numéro **1362**;

ADD **4585B** **1365** *b*) Si les tentatives du Comité en vue à un accord en application des numéros **1364** ou **1169** à **1174** échouent, ou si, lorsqu'elle notifie l'assignation, l'administration déclare qu'elle n'a pas eu de succès et qu'elle ne lui demande pas d'effectuer la coordination requise, le Comité examine la fiche de notification relativement au numéro **1354**. Simultanément, il en informe les administrations intéressées;

MOD **4386** **1366** *c*) Si l'administration notificatrice ne lui demande pas d'effectuer la coordination requise, la fiche de notification est retournée immédiatement par poste aérienne à l'administration notificatrice avec un exposé des raisons qui motivent ce renvoi, et avec les suggestions que le Comité peut faire, en vue d'arriver à une solution satisfaisante du problème.

NOC **4387** **1367** (4) Lorsque l'administration notificatrice présent à nouveau sa fiche de notification, et si le Comité conclut que la procédure de coordination dont il est question au numéro **1353** a été appliquée avec succés en ce qui concerne toutes les administration dont les stations terriennes peuvent être défavorablement influencées, l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d. La date de réception par le Comité de la fiche de notification présentée à nouveau est indiquée dans la colonne Observations.

MOD **4388** **1368** (5) Lorsque l'administration notificatrice présente à nouveau sa fiche de notification en demandant au Comité d'effectuer la coordination requise, la fiche de notification est traitée conformément aux dispositions des numéros **1363, 1364** ou **1365**. S'il y a lieu ultérieurement d'inscrire l'assignation dans le Ficher de référence, la date de réception par le Comité de la fiche de notification présentée à nouveau est indiquée dans la colonne Observations.

SUP **4389** 570AR

NOC **4390** **1369** § 33. (1) *Conclusion favorable relativement aux numéros* **1352** *et* **1354**.

NOC **4391** **1370** (2) L'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

NOC **4392** **1371** § 34. (1) *Conclusion favorable relativement ao numéro* **1352**, *mais défavorable relativement au numéro* **1354**.

(MOD) **4393** 570AV **1372** (2) La fiche est retournée immédiatement par poste aérienne à l'administration don elle émane, avec un exposé des raisons qui motivent la conclusion du Comité, et avec les suggestions qu'il peut faire en vue d'arriver à une solution satisfaisante du problème.

NOC **4394** 570W **1373** (3) Si l'administration notificatrice présente à nouveau sa fiche avec des modifications qui, après nouvel examen, entrainent de la part du Comité une conclusion favorable relativement au numéro **1354,** l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d. La date de réception par le Comité de la fiche de notification présentée à nouveau est indiquée dans la cologne Observations.

MOD **4395** 570AX **1374** (4) Dans le cas ou l'administration notificatrice présente de nouveau sa fiche, soit non modifiée, soit avec des modifications dont l'effect est de diminuer la probabilité de brouillages préjudiciables, mais dans des proportions insuffisantes pour permettre l'application des dispositions du numéro **1373,** et ou cette administration insiste pour un nouvel examen de la fiche, mais ou les conclusions du Comité restent les mêmes, l'assignation est inscrite dans le Fichier de référence. Mais cette inscription n'est faite qui si l'administration notificatrice avise le Comité que l'assignation a été en service pendant au moins quatre mois à compter de la date à laquellle les deux stations sont en service sans qu'aucune plainte en brouillage préjudiciable en soit résultée. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d. La date à laquelle le Comité reçoit l'avis selon lequel aucune plainte en brouillage préjudiciable n'a eu lieu est indiquée dans la colonne Observations.

ADD **4395A** **1375** (5) Lorsque l'administration notificatrice n'est pas en mesure d'aviser le Comité au sujet du brouillage mentionné au numéro **1374** parce que l'assignation suceptible d'être brouillée n'est pas encore mise en service, elle peut demander au Comité d'inscrire provisoirement son assignation dans le Fichier de référence. Le Comité inscrit alors cette assignation avec un symbole spécial dans la colonne Observations indiquant le caratère provisoire de cette inscription.

NOC **4396** 570AZ **1376** § 35. (1) *Modifications aux caractéristiques fondamentales des assignations déjà inscrites dans le Fichier de référence.*

MOD **4397** 570BA **1377** (2) Toute notification de modification aux caractéristiques fondamentales d'une assignation notifiée aux termes du numéro **1221** et déjà inscrite dans le Fichier de référence, telles qu'elles sont définies à l'appendice **1,** sections A ou B (à l'exception toutefois de cellles qui figurent dans les colonnes 2c, 3 et 4 du Ficher de référence), ou une notification conforme au numéro **1221** concernant une assignation déjà inscrite aux termes des numéros **1223** à **1227** (appendice **1,** section C) est examinée par le Comité selon les dispositions des numéros **1352** à **1353** et, le cas échéant, **1354,** et les dispositions des numéros **1356** à **1374** sont appliquées. Lorsqu'il y a lieu d'inscrire la modification dans le Ficher de référence, l'assignation originale est modifiée selon la notification.

(MOD) **4398** 570BB **1378** (3) Cependant, dans les cas d'une modification aux caractéristiques fondamentales d'une assignation conforme aux dispositions du numéro **1352,** et où le Comité formule une conclusion favorable relativement au numéro **1353,** et au numéro **1354** lorsque les dispositions de celui-ci sont applicables, ou conclut que cette modification n'accroit pas le probabilité de brouillages préjudiciables au détriment d'assignations de fréquence dejà inscrites dans le Fichier de référence, l'assignation de fréquence modifiée conserve la data primitivement inscrite dans la colonne 2d. De plus, la date de réception par le Comité de la fiche de notification concernant la modification est inscrite dans la colonne Observations.

ADD **4398A** **1379** (4) La date prévue pour la mise en service d'une assignation de fréquence peut être prorogée de trois mois à la demande de l'administration notificatrice. Au cas où l'administration déclare que des circonstances execeptionnelles notivent une nouvelle prolongation de ce délai, cette nouvelle prolongation peut être accordée mais elle ne doit en aucun cas dépasser six mois à compter de la date initiale prévue pour la mise en service.

NOC **4399** 570BC **1380** § 36. Dans l'application des dispositions de la présente sous-section, toute fiche de notification présentée de nouveau au Comité et reçue par lui plus de deux ans aprés la date à laquelle il a renvoyé la fiche à l'administration notificatrice est considerée comme une nouvelle fiche de notification.

NOC **4400** 570BD **1381** § 37. (1) *Inscription des assignations de fréquence notifiées avant leur mise en service.*

NOC **4401** 570BE **1382** (2) Si une assignation de fréquence notifiée avant sa mise en service est l'objet de conclusions favorables formulées par le Comité relativement aux numéros **1352** et **1353** et, les cas échéant, **1354,** elle est inscrite provisoirement dans le Ficher de référence avec, dans la colonne Observations, un symbole spécial indiquant le caractére provisoire de cette inscription.

MOD **4402** **1383** (3) Dans un délai de trente jours après la date prévue pour la mise en service, initialement notifiée (voir le numero **1230**) ou modifiée aux termes du numéro **1379**, l'administration notificatrice confirme que l'assignation de fréquence a été mise en service. Lorsque le Comité est avisé que l'assignation a été mise en service, il biffe le symbole spécial dans la colonne Observations.
570BF

ADD **4402A** **1384** (4) Si le Comité ne reçoit pas la confirmation dans le délai prévu au numéro **1383**, l'inscription en question est annulée. Le Comité consulte l'administration concernée avant de prende cette mesure.
570BH

MOD **4403** **1385** (5) Lorsque, á l'expiration de la période définie au numéro **1374**, le Comité est avisé
570BG de l'absence de plainte en brouillage préjudiciable, il biffe le symbole inscrit en application du numéro **1375**.

SUP **4404**

NOC

SECTION III

Inscription de dates et des conclusions dans le Fichier de référence

MOD **4405** **1386** § 38. Chaque fois que le Comité inscrit une assignation de fréquence dans le Fichier de référence, il indique sa conclusion par un symbole placé dans la colonne appropriée. De plus, il insère dans la colonne Observations les motifs qui donnent lieu à une conclusion défavorable.
571

MOD **4406** **1387** § 39. La procédure à appliquer pour l'inscription de dates dans la partie appropriée de la colonne 2 du Ficher de référence, selon les bandes de fréquences et les services intéressées, est décrite ci-dessous dans les numéros **1388** à **1413** pour ce qui concerne les assignations de fréquence dont il est question dans les sous-sections II-A à II-C.
572

NOC **4407** **1388** § 40. (1) *Bandes de fréquences:*
573

9-2850 KHz;
3155-3400 KHz;
3500-3900 KHz dans la Région 1;
3500-4000 KHz dans la Région 2;
3500-3950 KHz dans la Région 3;
4219,4-4349,4 KHz;
6325,4-6493,9 KHz;
8435,4-8704,4 KHz;
12 652,3-13 070,8 KHz;
16 859,4-17 196,9 KHz;
22 310,5-22 561 KHz.

MOD **4408** **1389** (2) En regard de toute assignation à laquelle des dispositions des numéros **1250**, **1251** ou **1254** sont applicables, la date pertinente est inscrite dans la colonne 2a du Fichier de référence; toutefois, pour les assignations de la classe de fonctionnement B à des stations du service fixe, la date pertinente est inscrite dans la colonne 2b.
574

MOD **4409** **1390** (3) En regard de toute assignation à laquelle les dispositions des numéros **1255**, **1265**, **1267**, **1271** ou **1272** sont applicables, la date pertinente est inscrite dans la colonne 2b du Fichier de référence.

SECTION IV

NOC

Catégories d'assignations de fréquence

MOD **4439** 607 **1416** § 48. (1) Toute assignation de fréquence portant une date dans la colonne 2a du Fichier de référence a droit à la protection internacionale contre les brouillages préjudiciables, il en va de même pour les assignations de classe de fonctionnement A à des stations du service fixe dans les bandes appropriées comprises entre 3000 kHz et 27 500 kHz inscrites avec une date la colonne 2d à la suite d'une conclusion favorable relativement aux numéros **1240** et **1242,** en particulier celles résultant de l'application du numéro **1218.**

NOC **4440** 608 **1417** (2) Toute assignation de fréquence portant une date dans la colonne 2b est inscrite dans la Fichier de référence en vue de donner aux administrations la possibilité de tenir compte de fait que l'assignation de fréquence en question est en service. Cette inscription ne donne assignation de fréquence aucun droit à une protection internacionale, sauf dans le cas prevú à l'alinéa 2) du numéro **1241.**

NOC **4441** 609 **1418** (3) En ce qui concerne les assignations de fréquence qui portent des dates dans deux des parties de la colonne 2, la date inscrite dans la colonne 2c est donnée à titre d'information seulement.

SUP **4442** 610

MOD **4443** 611 **1419** (4) Si l'utilisation d'une assignation de fréquence non conforme aux dispositions des numéros **1240** ou **1352** cause effectivement un brouillage préjudiciable à la réception d'une station quelconque fonctionnant conformémemt à ces dispositions, la station utilisant d'assignation de fréquences non conforme à ces dispositions doit immédiatement éliminer le brouillage préjudiciable lorsqu'elle est avisée dudit brouillage.

MOD **4444** 611A **1420** (5) Si l'utilisation d'une assignation de fréquence non conforme aux dispositions des numéros **1240** ou **1352** cause effectivement un brouillage préjudiciable à la réception d'une station quelconque fonctionnant conformément aux dispositions du numéro **1503,** la station utilisant l'assignation de fréquence non conforme aux dispositions des numéros **1240** ou **1352** doit immédiatement éliminer le brouillage préjudiciable lorsqu'elle est avisée dudit brouillage.

SECTION V

NOC

Réexamen des conclusions

(MOD) **4445** 612 **1421** § 49. (1) Une conclusion peut être réexaminée par le Comité:

a) À la demande de l'administration notificatrice;
b) À la demande de toute autre administration intéressée à la question mais uniquement en raison d'un brouillage préjudiciable constaté;
c) Sur la propre initiative du Comité lui-même lorsqu'il estime cette mesure justifiée.

NOC **4446** 613 **1422** (2) Le Comité, se fondant sur tous les renseignements dont il dispose, réexamine la question en tenant compte des dispositions des numéros **1240** ou **1352** et des numéros **1241, 1242, 1353** ou **1354,** selon le cas, et il formule une conclusion appropriée, puis informe de cette conclusion l'administration notificatrice, soit avant de publier la conclusion, soit, le cas échéant, avant de la reporter dans le Fichier de référence.

(MOD) **4447** 614 **1423** § 50. Si l'administration notificatrice demande le réexamen d'une conclusion défavorable, à titre d'assistance spéciale, afin de faire face à un besoin urgent et essentiel dans un cas ou un brouillage préjudiciable a eu lieu, le Comité consulte immédiatement les administrations intéressées et leur présente des suggestions de nature à faciliter à l'administration qui a demandé l'assistance spéciale l'utilisation de son assignation; les modifications résultant de cette consultation sont apportées au Ficher de référence.

NOC **4448** 615 **1424** §51. (1) Aprés utilisation réelle pendant une période raisonnable d'une assignation de fréquence inscrite dans le Fichier de référence sur l'insistance de l'administration notificatrice, à la suite d'une conclusion défavorable relativement aux numéros **1241, 1242** ou **1354** selon le cas, cette administration peut demander au Comité de réexaminer la conclusion. Le Comite réexaminc alors la question après avoir consulté les administrations intéressées.

NOC **4449** 616 **1425** (2) Si la conclusion du Comité est alors favorable, il apporte au Fichier de référence les modifications requises pour que l'inscription y figure désormais comme si la conclusion initiale avait été favorable.

(MOD) **4450** **1426** (3) Si la conclusion relative à la probabilité d'un brouillage préjudiciable reste
617 défavorable, l'inscription initiale n'est pas modifiée.

SUP **4451**
618

ADD **4451A** **1427** § 52. (1) Dans le cas de la supression ou de la modification de toute assignation de fréquence inscrite dans le Fichier de référence qui avait été à l'origine d'une conclusion défavorable et avait conduit à l'inscription conformément au número **1255** d'une assignation notifiée ultérieurement, le Comité réexamine celle-ci et, s'il y a lieu, révise sa conclusion du point de vue des numéros **1241** ou **1242.**

ADD **4451B** **1428** (2) En vue d'obtenir un critère permettant la révision d'une inscription dans le Fichier de référence faite en application des dispositions du numéro **1255,** le Comité, en examinant la fiche de notification en question, détermine la date à laquelle il doit réexaminer cette assignation de fréquence. Si, jusqu'à cette date, aucune plainte en brouillage préjudiciable n'a été reçue par l'administration concernée, le Comité modifique automatiquement l'inscription dans le Fichier de référence de manière que celle-ci y figure à l'avenir comme si la conclusion originale avait été favorable relativement aux numéros **1241** ou **1242.**

Section VI

MOD

Mise à jour du Fichier de référence

ADD **4451C** **1429** § 53. *Modification, annulation et révision des inscriptions du Fichier de référence.*

NOC **4452** **1430** § 54. Si l'utilisation d'une assignation de fréquence inscrite au Fichier de référence
619 vient à être abandonnée définitivement, l'administration notificatrice doit en informer le Comité dans un délai de trois mois, à la suite de quoi l'inscription au Fichier de référence est annulée.

NOC **4453** **1431** § 55. Chaque fois qu'il apparaît au Comité, d'après les renseignements dont il
620 dispose, qu'une assignation inscrite dans le Fichier de référence n'a pas été mise en service régulier conformément aux caractéristiques fondamentales notifiées ou n'est pas utilisée conformément à ces caractéristiques, le Comité consulte l'administration notificatrice et, sous réserve de son accord, il anule l'inscription ou lui apporte les modifications qui conviennent.

(MOD) **4454** **1432** § 56. Si, à la suite d'une enquête faite par le Comité aux termes des numéros **1264**
621 ou **1431,** l'administration notificatrice n'a pas fourni au Comité dans un délai de trois mois les renseignements nécessaires ou pertinents, le Comité ne tient dorénavant plus compte de l'assignation en question lorsqu'il statue sur les fiches de notification qu'il reçoit ultérieurement, jusqu'à ce qu'il ait été informé que l'assignation est utilisée selon les caractéristiques notifiées ou jusqu'à ce qu'il ait reçu les renseignements requis. Le Comité insère dans la colonnne Observations du Fichier de référence des observations indiquant la situation, et en particulier le période pendant laquelle l'assignation n'a pas été prise en considération par le Comité.

SUP **4455**
622

ADD **4454A** **1433** § 57. (1) *Examens périodiques du Fichier de référence.*

ADD **4454B** **1434** (2) Le Comité établit un programme à long terme d'examens périodiques de chaque section du Fichier de référence en vue d'améliorer et de maintenir la précision dudit Fichier.

AD **4454C** **1435** (3) Pour les examens mentionnés au numéro **1434,** le Comité envoie à chaque administration, pour révision et renvoi, en extrait national du Fichier de référence relatif à la section à l'étude. Le Comité attire em même temps l'attention des administrations sur toute assignation à une station du service fixe fonctionnant dans les bandes de fréquences comprises entre 3000 kHz et 27 500 kHz, pour laquelle en estime que d'autres moyens de télécommunicaton sont disponibles.

ADD **4454D** **1436** (4) Les administrations collaborent, en vue d'améliorer et de maintenir la précision du Fichier de référence, aux examens périodiques en notifiant la suppression de toute assignation inutilisée et, si nécessaire, la modification des autres inscriptions.

ADD **4454E** **1437** (5) Le Comité ajoute à son rapport annuel aux administrations une section relative aux travaux effectués en application des dispositions du présent paragraphe 57, aux résultats obtenus et au programme de l'année suivante.

SECTION VII

Études et recommandations

NOC

(MOD) **4456** **1438** § 58. (1) Si la demande lui en est faire par une administration quelconque, en
623 particulier, s'il s'agit de l'administration d'un pays qui a besoin d'assistance spéciale, le Comité, utilisant à cet effet les moyens dont il dispose et qui conviennent aux circonstances, procède à une étude de tout problème d'utilisation des fréquences entrant dans les catégories suivants:

(MOD) **4457** **1439** *a*) Recherche d'une fréquence de remplacement permettant d'éviter un
624 brouillage préjudiciable probable, dans les cas visés au numéro **1252**;

NOC **4458** **1440** *b*) Nécessité éventuelle d'inclure des assignations de fréquence supplémen-
625 taires dans une fraction déterminée du spectre des fréquences radioélectriques;

(MOD) **4459** **1441** *c*) Cas où, en raison de brouillages préjudiciables, plusieurs fréquences du
626 même ordre de grandeur sont utilisées tour à tour pour maintenir une liaison en fonctionnement alors que celle-ci ne requiert qu'une seule fréquence de l'ordre de grandeur en question;

(MOD) **4460** **1442** *c*) Présomption de contravention au présent Règlement ou de non-observa-
627 tion de ce Règlement, ou cas de brouillage préjudiciable.

NOC **4461** **1443** (2) Le Comité établit ensuite un rappport qu'il communique aux administrations
628 intéressées et dans lequel il consigne ses conclusions et ses recommandations pour la solution du problème.

ADD **4461A** **1444** (3) Lorsqu'elle reçoit les recommandations du Comité pour la solution du problème, une administration en accuse promptement réception par télégrame et fait savoir par la suite les mesures qu'elle compte prendre. Dans le cas où les suggestions ou les recommendations du Comité ne peuvent être acceptées par les administrations concernées, le Comité s'efforce à nouveau de trouver pour le problème une solution acceptable.

NOC **4462** **1445** § 59. Si, em particulier à la suite d'une demande de l'administration d'un pays qui
629 a besoin d'assistance spéciale, le Comité constate qu'une modification des caractéristiques fondamentales, y compris une modification de fréquence dans une gamme de fréquences donnée, d'une ou plusieurs assignations conformes aux dispositions du numéro **1240** doit permettre:

NOC **4463** **1446** *a*) Soit de loger une nouvelle assignation;
630

(MOD) **4464** **1447** *b*) Soit de faciliter la solution d'un problème de brouillage préjudiciable;
631

NOC **4465** **1448** *c*) Soit, de toute autre manière, de concourir à améliorer l'utilisation d'une
632 fraction déterminée du spectre des fréquences radioélectriques;

NOC **4466** **1449** et si une telle modification est acceptée par la ou les administrations intéressées, cette
633 modification des caractéristiques fondamentales est inscrite dans le Fichier de référence sans changement de la date ou des dates primitives.

NOC **4467** **1450** § 60. Dans le cas où, à la suite d'une étude, le Comité présente à une ou plusieurs administrations des propositions ou recommandations tendant à la solution d'une question, et où, dans un délai de trente jours, il n'a pas reçu de réponse d'une ou plusieurs de ces administrations, il considère que ses propositions ou recommandations ne sont pas acceptables para la ou les administrations qui n'ont pas répondu. Si l'administration requérante elle-même n'a pas répondu dans ce délai, al Comité ne poursuit pas l'étude.

SECTION VIII

Dispositions diverses

NOC

NOC **4468** **1451** § 61. Les dispositions des sections V, VI (à la exception du numéro **1430**) et VII
635 du présent article ne s'appliquent pas aux assignations de fréquence conformes aux Plans d'allotissement qui figurent aux appendices 25 Mar 2, 26, 27 (*) et 27 Aer 2 (*) au présent Règlement.

(*) Note du Secrétariat général: Voir le numéro **5189** et la Résolution **400**.

MOD 4469 635A 1452 § 62. (1) Si la demande lui en est faite par une administration quelconque et, en particulier, par l'administration d'un pays qui a besoin d'assistance spéciale, le Comité, utilisant à cet effet les moyens dont il dispose et qui conviennent aux circonstances, fournit l'assistance suivante:

a) Vérification du graphique indiquant la zone de coordination dont il est question au numéro **1113;**
b) Calcul des niveaux de brouillage dont il question aux numéros **1164** à **1166;**
c) Toute autre assistance de caractère technique afin que les procédures décrites dans le présent article puissent être menées à bien.

NOC 4470 635B 1453 (2) En présentant sa demande au Comité aux terms du numéro **1452,** l'administration lui fournit les renseignements nécessaires.

MOD 4471 636 1454 § 63. Les Normes techniques du Comité sont fondées sur les dispositions pertinentes du présent Règlement et de ses appendices, sur les décisions, le cas échéant, des conférences administratives de l'Union, sur les Avis du CCIR, su l'état d'avancement de la technique radioélectrique et sur les perfectionnements de nouvelles techniques de transmission compte tenu des conditions de propagation exceptionnelles qui peuvent dominer dans certaines régions (par exemple, en effet de conduit particulièrement marqué).

MOD 4472 637 1455 § 64. (1) Le Comité porte à la connaissance des administrations ses conclusions et l'exposé de leurs motifs, ainsi que toutes les modifications apportées au Fichier de référence, au moyen de la circulaire hebdomadaire. Ces renseignements sont publiés dans un délai de quarante-cinq jours à compter de la date de publication de la fiche complète dans la circulaire hebdomadaire dont il est question au numéro **1235.** Lorsque le Comité n'est pas en mesure de se conformer au délai mentionné ci-dessus, il en informe aussitôt que possible les administrations concernées en donnant les raisons.

ADD 4472A 1456 (2) La circulaire hebdomadaire de l'IFRB est publiée dans les langues de travail de l'Union, telles qu'elles sont définies dans la Convention. En appliquant les diverses procédures spécifiées dans le présent Règlement des radiocommunications, le Comité utilise dans toute la mesure du possible cette circulaire hebdmadaire comme moyen de communication avec les administrations.

NOC 4473 638 1457 § 65. Le Comité informe les administrations, à intervalles convenables, des cas d'assistance spéciale qu'il a étudies aux termes des numéros **1423** et **1438** à **1450** inclus du présent Règlement.

MOD 4474 639 1458 § 66. Si un Membre a recours aux dispositions de l'article 50 de la Convention, le Comité, si la demande lui en est faite, met ses documents à la disposition des parties intéresées pour l'application de toute procédure prescrite dans la Convention en vue d'apporter une solution aux différends internationaux.

1459 à 1487 *(Non attribués.)*

(MOD) N13/9A

ARTICLE 13

Notification et inscription dans le Fichier de référence international des fréquences des assignations de fréquence (1) aux stations de radioastronomie et aux stations de radiocommunication spatiale à l'exception des stations du service de radiodiffusion par satellite (2)

SECTION I

NOC

Notification des assignations de fréquence

MOD 4575 639BA 1488 § 1. (1) Toute assignation de fréquence destinée à être utilisée pour l'émission ou la réception par une station terrienne ou par une station spatiale doit être notifiée au Comité:

1489 *a*) Si l'utilisation de la fréquence en question est susceptible d'entrainer des brouillages préjudiciables à un service quelconque d'une autre administration;

NOC A.13.1 (1) L'expression *assignation de fréquence,* partout ou elle figure dans le présente article, doit être entendue comme se référant soit à une nouvelle assignation de fréquence, soit à une modification à une assignation déjà inscrite dans le Fichier de référence international des fréquences (dénommé ci-après le *Fichier de référence*).

ADD A.13.2 (2) Pour la notification et l'inscription des assignations de fréquence aux stations du service de radiodiffusion par satellite et aux autres services dans les bandes 11,7-12,2 GHz (dans la Région 2 et 3) et 11,7-12,5 GHz (dans la Région 1), voir également l'article 15.

1490 *b*) Ou si la fréquence doit être utilisée pour des radiocommunications internacionales;

1491 *c*) Ou encore si l'on désire obtenir une reconnaissance internacionale officielle de l'utilisation de cette fréquence.

SUP **4576** 639BB

MOD **4577** 639BC **1492** (2) Toute fréquence ou bande de fréquences destinée à être utilisée à la réception par une station de radioastronomie déterminée, peut être notifiée si l'on désire que ce renseignement soit inscrit dans le Fichier de référence.

ADD **4577A** **1493** (3) Lorsque le Comité reçoit d'une administration une fiche de notification relative à la modification ou l'annulation d'une assignation à une station spatiale déjà inscrite dans le Fichier de référence au nom d'un groupe d'administrations, il considère, sauf avis contraire, que la fiche de notification est présentée au nom de toutes les administrations qui étaient associées à la notification originale.

MOD **4578** 639BD **1494** (4) Une notification faite aux termes des numéros **1488** à **1491** et concernant une assignation de fréquence à des stations terriennes mobiles d'un système satellites comporte les caractéristiques techniques soit de chaque station terrienne mobile, soit d'une station terrienne mobile type, ainsi que l'indication de la zone de service dans laquelle ces stations sont destinées à fonctionner.

MOD **4579** 639BE **1495** § 2. Toute assignation de fréquence notifiée en exécution des numéros **1488** à **1492** ou **1494** doit faire l'objet d'une fiche de notification établie dans la forme prescrite à l'appendice **3**, dont les diverses sections spécifient les caractéristiques fondamentales à fournir selon le cas. Il est recommandé que l'administration notificatrice communique également au Comité les autres renseignements indiqués à la section A dudit appendice, ainsi que tout autre renseignement qu'elle peut juger utile.

(MOD) **4580** 639BF **1496** § 3. (1) Lorsqu'il s'agit d'une assignation de fréquence à une station terrienne ou spatiale, la fiche de notification doit parvenir au Comité au plus trois ans avant la date de mise en service de l'assignation de fréquence intéressée. Elle doit lui parvenir en tout cas au plus tard trois mois (1) avant cette date, sauf en ce qui concerne une assignation de fréquence à une station du service de recherche spatiale dans une bande attribuée en exclusivité à ce service ou une bande partagée dans laquelle il est le seul service primaire. Dans le cas d'une telle assignation à une station du service de recherche spatiale, la fiche de notification doit, autant que faire se peut, parvenir au Comité avant la date de mise en service de l'assignation de fréquence intéressée, mai elle doit, en tout cas, lui parvenir au plus tard trente jours après la date à laquelle l'assignation de fréquence est effectivement mise en service.

NOC **4581** 639BG **1497** (2) Toute assignation de fréquence à une station terrienne ou spatiale dont la notification parvient au Comité après l'expiration des délais voulus spécifiés au numéro **1496** porte, lorsqu'il y a lieu de l'inscrire dans le Fichier de référence, une observation indiquant que la fiche de notification n'est pas conforme aux dispositions du numéro **1496**.

SECTION II

NOC

Procédure pour l'examen des fiches de notification et l'inscription des assignations de fréquence dans le Fichier de référence

MOD **4582** 639BH **1498** § 4. Lorsque le Comité reçoit une fiche de notification qui ne contient pas au moins les caractéristiques fondamentales spécifiées à l'appendice **3**, il la retourne par poste aérienne á l'administration dont elle émane, accompagnée des motifs de ce renvoi, sauf si les renseignements qui n'avaient pas été fournis sont reçus immédiatement en réponse à une demande du Comité. Le Comité informe l'administration par télégramme lorsqu'une fiche de notification est retournée aux termes de la présente disposition.

MOD **4583** 639BI **1499** § 5. Lorsque de Comité reçoit une fiche de notification compléte, il inclut les renseignements qu'elle contient, y compris les diagrammes, avec sa date de réception, dans la circulaire hebdomadaire dont il est question au numéro **1235,** qui est publiée dans une délai de quarente jours après la réception de la fiche de notification. Lorsque

---

NOC **4580.1** 639BF.1 **1496.1** (1) L'administration notificatrice engage, le cas échéant, la ou les procédures de coordination en temps voulu pour que cette date limite soit respectée.

le Comité n'est pas en mesure de se conformer à ce délai, il en informe aussitôt que possible les administrations concernées en donnant les raisons.

MOD 4584 639BJ 1500 § 6. La circulaire contient tous les renseignements figurant dans toutes les fiches de notification complètes reçues par le Comité depuis la publication de la circulaire précédente et elle tient lieu, pour chaque administration notificatrice, d'accusé de réception par le Comité d'une fiche de notification complète.

MOD 4585 639BK 1501 § 7. Le Comité examine les fiches de notification complètes dans l'ordre où il les reçoit en tenant compte du délai mentionné au numéro **1583**. Il ne peut pas ajourner la conclusion, à moins qu'il ne manque de renseignements suffisants pour prendre une décision à cet égard; de plus, le Comité ne statue pas sur une fiche de notification ayant des relations techniques avec une fiche reçue antérieurement et encore le cours d'examen, avant d'avoir pris une décision en ce qui concerne cette dernière.

NOC 4586 639BL 1502 § 8. Le Comité examine chaque fiche de notification:

MOD 4587 639BM 1503 *a*) Du point de vue de sa conformité avec les clauses de la Convention, le tableau d'attribution des bandes de fréquences et les autres clauses du Règlement des radiocommunications, à l'exception de celles qui sont relatives aux procédures de coordination et à la probabilité de brouillages préjudiciables et qui font l'objet des alinéas suivants;

MOD 4588 639BN 1504 *b*) Du point de vue de sa conformité avec les dispositions relatives à la coordination de l'utilisation de l'assignation de fréquence avec les autres administrations concernées, vis-à-vis, des stations de radiocommunication spatiale, dans les cas où les dispositions des numéros **1060** ou **1066** à **1071** sont applicables;

MOD 4589 639BO 1505 *c*) Du point de vue de sa conformité aves les dispositions relatives à la coordination de l'utilisation de l'assignation de fréquence avec les autres administrations concernées, vis-à-vis des stations de radiocommunication de Terre, dans le cas où les dispositions du numéro **1107** sont applicables;

MOD 4590 639BP 1506 *d*) Du point de vue de la probabilité d'un brouillage préjudiciable lorsque la coordination aux termes du numéro **1060** n'a pas été appliquée avec succés; dans cet examen (1), il est tenu compte des assignations de fréquence pour l'emission ou la réception déjà inscrites dans le Fichier de référence:

1507 1) Soit en application des dispositions des numéros **1526, 1531, 1534** ou **1543**;

1508 2) Soit en application des dispositions du numéro **1544** si cette assignation de fréquence n'a pas, en fait, causé de brouillage préjudiciable à une assignation quelconque antérieurement inscrite dans le Fichier de référence et qui est conforme au numéro **1503**;

MOD 4591 639BQ 1509 *e*) Du point de vue de la probabilité d'un brouillage préjudiciable lorsque la coordination aux termes du numéro **1107** n'a pas été appliquée avec succés; dans cet examen, il est tenu compte des assignations de fréquence pour l'emission ou la réception déjà inscrites dans le Fichier de référence:

1510 1) Soit en application des dispositions du numéro **1248**;

1511 2) Soit en application des dispositions des numéros **1362, 1367, 1370** ou **1373**;

1512 3) Soit en application des dispositions du numéro **1374** si cette assignation de fréquence n'a pas, en fait, causé de brouillagge préjudiciable à une assignation quelconque antérieurement inscrite dans le Fichier de référence et qui est conforme au numéro **1503**.

SUP 4592 639BR

(MOD) 4593 639BS 1513 § 9. Lorsque, à la suite de l'examen d'une fiche de notification relativement aux numéros **1506** à **1508,** le Comité formule une conclusion défavorable en se fondant sur la probabilité de brouillages préjudiciables au détriment d'une assignation de fréquence

---

ADD 4590.1 1506.1 (1) L'examen d'une telle fiche de notification relativement à toute autre assignation de fréquence publiée aux termes du numéro **1078,** mais pas encore notifiée est différé jusqu'à ce que les deux assignation aient été notifiées; le Comité les examine ensuite dans l'ordre de leur publication aux termes du numéro **1078**.

inscrite au Fichier de référence et concernant une station spatiale dont le Comité a des raisons de croire qu'elle peut n'être pas régulièrement en service, par exemple comme conséquence des dispositions du numéro **1569,** le Comité consulte sans délai l'administration responsable de cette assignation. Si, après cette consultation, il est établi, d'après les renseignements disponibles, que cette assignation inscrite au Fichier de référence n'a pas été utilisée depuis deux ans, il n'en est plus tenu compte lors de l'examen en cours ni lors de l'examen de toute autre fiche de notification auquel il sera procédeé ultérieurement, aux terms des numéros **1506 à 1508,** avant la date à laquelle l'assignation de fréquence sera remise en service. Avant sa remise en service, l'assignation de fréquence est l'objet, selon le cas, d'une nouvelle coordination conformément aux dispositions du numéro **1060** ou d'un nouvel examen par le Comité relativement aux numéros **1506** à **1508.** La date de remise en service est alors inscrite dans le Fichier de référence.

(MOD) **4594** 639BT **1514** § 10. Selon les conclusions auxquelles le Comité parvient à la suite de l'examen prévu aux numéros **1503, 1504, 1505, 1506** à **1508** et **1509** à **1512,** selon le cas, la procédure se poursuit comme suit.

MOD **4595** 639BU **1515** § 11. (1) *Conclusion favorable relativement au numéro* **1503** *dans le cas où les dispositions des numéros* **1504** *et* **1505** *ne sont pas applicables (station spatiale à bord d'un satellite non géostationnaire).*

NOC **4596** 639BV **1516** (2) L'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

ADD **4596A** **1517** § 12. (1) *Conclusion défavorable relativement au numéro* **1503** *dans les cas où les dispositions des numéros* **1504** *et* **1505** *ne sont pas applicables (station spatiale à bord d'un satellite non géostationnaire).*

ADD **4596B** **1518** (2) Lorsque la fiche de notification comporte une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342,** l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

ADD **4596C** **1519** (3) Lorsque la fiche ne comporte aucune référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342,** cette fiche est retournée immédiatement par poste aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent la conclusion du Comité ainsi que les suggestions qu'il peut faire en vue d'arriver à une solution satisfaisante du problème.

MOD **4597** 639BW **1520** § 13. (1) *Conclusion défavorable relativement au numéro* **1503** *dans les cas où les dispositions des numéros* **1504** *et* **1505** *sont applicables.*

MOD **4598** 639BX **1521** (2) Lorsque la fiche comporte une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342** et que la conclusion est favorable relativement aux numéros **1504, 1505, 1506** à **1508** et **1509** à **1512,** selon le cas, l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

MOD **4599** 639BY **1522** (3) Lorsque la fiche comporte une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342** et que la conclusion est défavorable relativement aux numéros **1504, 1505, 1506** à **1508** ou **1509** à **1512,** selon le cas, la fiche est retournée immédiatement par post aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent la conclusion du Comité. Si l'administration notificatrice insiste pour un nouvel examen de la fiche de notification, l'assignation est inscrite dans le Fichier de référence, étant entendu que les dispositions du numéro **1560** s'appliquent. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d.

SUP **4600** 639BZ

MOD **4601** 639CA **1523** (4) Lorsque lafiche ne comporte aucune référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342,** cette fiche est retournée immédiatement par poste aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent la conclusion du Comité, ainsi que les suggestions qu'il peut faire, en vue d'arriver à une solution satisfaisante du problème.

NOC **4602** 639CB **1524** (5) Si l'administration notificatrice présente de nouveau sa fiche non modifiée, celle-ci est traitée selon les dispositions du numéro **1523.** Si l'administration notificatrice présente à nouveau sa fiche avec une référence selon laquelle la station fonctionnera conformément aux dispositions du numéro **342,** la fiche de notification est traitée conformément aux dispositions des numéros **1521** ou **1522,** selon le cas. Si la fiche est présentée à nouveau avec les modifications telles que, après un nouvel examen, la conclusion du Comité devient favorable relativement au numéro **1503,** la fiche est traitée comme une nouvelle fiche de notification.

NOC **4603** 639CC **1525** § 14. (1) *Conclusion favorable relativement au numéro* **1503** *dans les cas où les dispositions des numéros* **1504** *ou* **1505** *sont applicables.*

(MOD) **4604** **1526**
639CD

(2) Lorsque le Comité conclut que les procédures de coordination dont il est question aux numéros **1504** ou **1505** on été appliqquées avec succès en ce qui concerne toutes les administrations dont les stations de radiocommunication spatiales ou de Terre peuvent être affectées, l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

MOD **4605** **1527**
639CE

(3) Lorsque le Comité conclut que l'une ou l'autre des procédures de coordination dont il est question aux numéros **1504** et **1505** n'ont pas été appliquées, et:

ADD **4605A** **1528**

a) Si l'administration notificatrice demande au Comité d'effectuer la coordination, le Comité prend les mesures nécessaires á cet effet; si les tentatives du Comité en vue d'aboutir à un accord sont couronnées de succès, il en informe les administrations concernées et la fiche de notification est traitée conformément aux dispositions du numéro **1526**;

ADD **4605B** **1529**

b) Si les tentatives du Comité en vue d'aboutir à un acord en application des dispositions des numéros **1528** ou **1089** à **1094** ou **1130** à **1135** ne sont pas couronnées de succès, ou si, en notifiant l'assignation, l'administration déclare qu'elle n'a pas eu de succès et qu'elle ne demande pas au Comité d'effectuer la coordination requise, le Comité examine la fiche de notification du point de vue des dispositions des numéros **1506** à **1508** et **1509** à **1512,** selon le cas. En même temps, le Comité en informe les administrations concernées;

MOD **4606** **1530**
639CF

c) Si l'administration ne lui demande pas d'effectuer la coordination requise, la fiche de notification est renvoyée immédiatement par poste aérienne à l'administration notificatrice, avec un exposé des raisons qui motivent ce renvoi que les suggestions que le Comité peut faire, en vue d'arriver à une solution satisfaisante du problème.

(MOD) **4607** **1531**
639CG

(4) Lorsque l'administration notificatrice présente à nouveau sa fiche de notification, et si le Comité conclut que les procédures de coordination dont il est question aux numéros **1504** et **1505** ont été appliquées avec succès en ce qui concerne toutes les administrations dont les stations de radiocommunication spatiale ou de Terre peuvent être affectées, l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d. La date de réception par le Comité de la fiche de notification présentée à nouveau est indiquée dans la colonne Observations.

MOD **4608** **1532**
639CH

(5) Lorsque l'administration notificatrice présente à nouveau sa fiche de notification en demandant au Comité d'effectuer la coordination requise aux termes des numéros **1060** ou **1107,** la fiche de notification est traitée conformément aux dispositions des numéros **1527, 1528** ou **1529**. S'il y a lieu ultérieurement d'inscrire l'assignation dans le Fichier de référence, la date de réception par le Comité de la fiche de notification présentée à nouveau est indiquée dans la colonne Observations.

SUP **4609**
639CI

MOD **4610** **1533**
639CJ

§ 15. (1) *Conclusion favorable relativement aux numéros* **1503, 1506** à **1508** et **1509** *à* **1512**, *selon le cas.*

NOC **4611** **1534**
639CK

(2) L'assignation est inscrit dans le Fichier de référence. La date de réception par le Comité de la fiche de notification est inscrite dans la colonne 2d.

MOD **4612** **1535**
639CL

(3) Cependent, s'il résulte de l'examen que le brouillage et le pourcentage de temps pendent lequel celui-ci est susceptible de se produire ont des valeurs légèrement plus élevées que celles qui sont utilisées pour évaluer la probabilité de brouillages préjudiciables (conditions particulières de propagation, humidité anormale de l'atmosphère, etc.), une observation est insérée dans le Fichir de référence afin d'indiquer qu'un faible risque de brouillages préjudiciables peut exister et qu'en conséquence des précautions supplémentaires doivent être prises dans l'utilisation de l'assignation pour éviter les brouillages préjudiciables aux assignations déjà inscrites dans le Fichier de référence.

ADD **4612A** **1536**

(4) En plus de l'examen de l'assignation de fréquence à une station terrienne du point de vue des dispositions des numéros **1509** à **1512,** le Comité, dans les cas d'un désaccord persistant, examine cette assignation de fréquence du point de vue de la probabilité d'un brouillage préjudiciable, causé aux stations de Terre ou produit par les stations de Terre dont les assignations ont été communiquées au Comité en application des dispositions du numéro **1126** et qui seront mises en service dans les trois années à venir.

ADD **4612B** **1537** (5) A la suite de l'examen aux termes du numéro **1536**, le Comité, selon le cas:

1538 *a*) Informe les administrations concernées de toute conclusion défavorable;

1539 *b*) Insère une observation indiquant une telle conclusion défavorable dans le Fichier de référence en regard de l'assignation à la station terrienne;

1540 *c*) Inscrit les assignations aux stations de Terre dans le Fichier de référence avec une observation indiquant toute conclusion défavorable; la date de réception des renseignements communiquées aux termes du numéro **1126** est inscrite dans la colonne 2d.

MOD **4613** **1541** § 16. (1) *Conclusion favorable relativement au numéro* **1503**, *mais défavorable relativement aux numéros* **1506** à **1508** ou **1509** à **1512**, *selon le cas.*
639CM

MOD **4614** **1542** (2) La fiche de notification est retournée immédiatement par poste aérienne à
639CN l'administration dont elle émane, avec un exposé des raisons qui motivent la conclusion du Comité ainsi que les suggestions qu'il peut faire, en vue d'arriver à une solution satisfaisante du problème.

MOD **4615** **1543** (3) Si l'administration notificatrice présente à nouveau sa fiche avec des modifications
639CO qui, après nouvel examen, entraînent de la part du Comité une conclusion favorable relativement aux numéros **1506** à **1508** ou **1509** à **1512**, selon le cas, l'assignation est inscrite dans le Fichier de référence. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d. La date de réception par de Comité de la fiche de notification présentée à nouveau est indiquée dans la colonne Observations.

MOD **4616** **1544** (4) Dans le cas où l'administration notificatrice présente de nouveau sa fiche de
639CP notification, soit non modifiée, soit avec des modifications dont l'effet est de diminuer la probabilité de brouillages préjudiciables, mais dans des proportions insuffisantes pour permettre l'application des dispositions du numéro **1543**, et où cette administration insiste pour un nouvel examen de la fiche de notification, mais où les conclusions du Comité restent les mêmes, l'assignation est inscrite dans le Fichier de réference. Mais cette inscription n'est faite que si le Comité est informé que la nouvelle assignation a été en service en même temps que l'assignation de fréquence à la station qui est à l'origine de la conclusion défavorable, pendent au moins quatre mois sans qu'aucune plainte en brouillage préjudiciable en soit résultée, à la condition que la plus ancienne des assignations de fréquence ait été mise en service durant le délai additionnel mentionné au numéro **1550**. La date de réception par le Comité de la fiche de notification originale est inscrite dans la colonne 2d. La date à laquelle le Comité reçoit l'avis selon lequel aucune plainte en brouillage préjudiciable n'a eu lieu est indiquée dans la colonne Observations.

NOC **4617** **1545** § 17. (1) *Fiches de notification concernant les stations de radioastronomie.*
639CQ

MOD **4618** **1546** (2) Une fiche de notification concernant une station de radioastronomie est
639CR examinée par le Comité du point de vue des dispositions du numéro **1503** seulement. Quelle que soit la conclusion, l'assignation est inscrite dans le Fichier de référence avec une date dans la colonne 2c. La date de réception par le Comité de la fiche de notification est indiquée dans la colonne Observations.

NOC **4619** **1547** § 18. (1) *Modifications aux caractéristiques fondamentales des assignations déjà*
639CS *inscrites dans le Fichier de référence.*

MOD **4620** **1548** (2) Toute notification de modification aux caractéristiques fondamentales d'une assignation déjà inscrite dans le Fichier de référence, telles qu'elles sont définies à l'appendice **3** (à l'exception toutefois du nom de la station ou du nom de la localité dans laquelle elle est située ou la date de mise en service), est examinée par le Comité selon les dispositions des numéros **1503**, et, le cas échéant, **1504**, **1505**, **1506** à **1508** et **1509** à **1512** et les dispositions des numéros **1515** à **1546** inclus sont appliquées. Lorsqu'il y a lieu d'inscrire la modification dans le Fichier de référence, l'assignation inscrite est modifiée selon la notification.

MOD **4621** **1549** (3) Cependent, dans le cas d'une modification aux caractéristiques d'une assigna-
639CU tion conforme aux dispositions du numéro **1503** et où le Comité formule une conclusion favorable relativement aux numéros **1504**, **1505**, **1506** à **1508** et **1509** à **1512**, selon le cas, ou conclut que cette modification n'accroît pas la probabilité de brouillages préjudiciables au détriment d'assignations de fréquence déjà inscrites dans le Fichier de référence, l'assignation de fréquence modifiée conserve la date primitivement inscrite dans la colonne 2d. De plus, la date de réception par le Comité de la fiche de notification concernant la modification est indiquée dans la colonne Observations.

ADD **4621A** **1550** (4) La date prévue de mise en service d'une assignation de fréquence peut être prorogée de quatre mois à la demande de l'administration notificatrice. Au cas où l'administration déclare que des circonstances exceptionnelles motivent une nouvelle prolongation de ce delai, cette nouvelle prolongation peut être accordée mais ne doit en aucun cas dépasser dix-huit mois à compter de la date initiale prévue pour la mise en service.

NOC **4622** **1551** § 19. Dans l'application des dispositions de la présent section, toute fiche de notification présentée de nouveau au Comité est reçue par lui plus de deux ans après la date à laquelle il a renvoyé la fiche à l'administration notificatrice est considérée comme une nouvelle fiche de notification.
639CV

NOC **4623** **1552** § 20. (1) *Inscription des assignations de fréquence notifiées avant leur mise en service.*
639CW

MOD **4624** **1553** (2) Si une assignation de fréquence notifiée avant sa mise en service est l'objet de conclusions favorables formulées par le Comité relativement aux numéros **1503** et, le cas échéant, **1504, 1505, 1506** à **1508** et **1509** à **1512,** elle est inscrite provisoirement dans le Fichier de référence avec, dans la colonne Observations, un symbole spécial indiquant le caractère provisoire de cette inscription.
639CX

MOD **4625** **1554** (3) Dans un délai de trente jours après la date prévue pour la mise en service initialement notifiée ou modifiée aux termes du numéro **1550,** l'administration notificatrice confirme que l'assignation de fréquence a été mise en service. Lorsque le Comité est avisé que l'assignation a été mise en service, il biffe le symbole spécial dans la colonne Observations.
639CY

ADD **4625A** **1555** (4) Si le Comité ne reçoit pas la confirmation dans le délai prévu au numéro **1554,** l'inscription en question est annulée. Le Comité consulte l'administration concernée avant le prendre cette mesure.

MOD **4626** **1556** (5) Dans le cas prévu aux numéros **1522** et **1544,** et aussi longtemps qu'une fiche de notification ayant fait l'objet d'une conclusion défavorable ne peut être présentée de nouveau au Comité accompagnée d'une déclaration relative au fonctionnement sans brouillage, l'administration notificatrice peut demander au Comité d'inscrire provisoirement l'assignation de fréquence en question dans le Fichier de référence. Un symbole spécial indiquant le caractère provisoire de cette inscription est alors inséré dans la colonne Observations. Le Comité biffe ce symbole lorsque l'administration notificatrice l'avise, à l'expiration de la période définie au numéro **1544,** de l'absence de plainte en brouillage préjudiciable.
639CZ

SUP **4627**
639DA

SECTION III

NOC

Inscription des conclusions dans le Fichier de référence

NOC **4628** **1557** § 21. Chaque fois que le Comité inscrit une assignation de fréquence dans le Fichier de référence, il indique sa conclusion par un symbole placé dans la colonne appropriée. De plus, il insère dans la colonne Observations une observation indiquant les motifs de toute conclusion défavorable.
639DB

NOC

SECTION IV

NOC

Cátegories d'assignations de fréquence

NOC **4629** **1558** § 22. (1) La date à inscrire dans la colonne 2c est la date de mise en service notifiée par l'administration concernée. Elle est donnée à titre d'information seulement.
639DC

MOD **4630** **1559** (2) Si l'utilisation d'une assignation de fréquence à une station de radiocommunications spatiales qui a été inscrite au Fichier de référence conformément aux dispositions du numéro **1544** cause effectivement un brouillage préjudiciable à le réception d'une station de radiocommunications spatiales pour laquelle une assignation de fréquence a été antérieurement inscrite dans le Fichier de référence à la suite d'une conclusion favorable relativement aux numéros **1503, 1504, 1505, 1506** à **1508** et **1509** à **1512,** selon le cas, la station utilisant l'assignation de fréquence inscrite conformément aux dispositions du numéro **1544** doit faire cesser immédiatement le brouillage préjudiciable lorsqu'elle est avisée dudit brouillage.
639DD

NOC **4631** **1560** (3) Si l'utilisation d'une assignation de fréquence non conforme aux dispositions du numéro **1503** cause effectivement un brouillage préjudiciable à la réception d'une station quelconque fonctionnant conformément aux dispositions des numéros **1240, 1352** ou **1503,** selon le cas, la station utilisant l'assignation de fréquence non conforme aux dispositions du numéro **1503** doit faire cesser immédiatement le brouillage préjudiciable lorsqu'elle est avisée dudit brouillage.
639DE

NOC

SECTION V

Réexamen des conclusions

NOC **4632** **1561** § 23. (1) Une conclusion peut être réexaminée par le Comité:
639DF

1562 *a*) À la demande de l'administration notificatrice;

1563 *b*) À la demande de toute autre administration intéressée à la question, mais uniquement en raison d'un brouillage préjudiciable constaté;

1564 *c*) Sur la propre initiative du Comité lui même lorsqu'ill estime cette mesure justifiée.

MOD **4633** **1565** (2) Le Comité, se fondant sur tous les renseignements dont il dispose, réexamine la question en tenant compte des dispositions du numéro **1503** et, le cas échéant , des dispositions des numéros **1504, 1505, 1506** à **1508** et **1509** à **1512** et il formule une conclusion approprié, puis informe de cette conclusion l'administration notificatrice, soit avant de publier la conclusion, soit avant de la reporter dans le Fichier de référence.
639DG

MOD **4634** **1566** § 24. (1) Après utilisation réelle pendant une période raisonnable d'une assignation de fréquence inscrite dans le Fichier de référence sur l'insistance de l'administration notificatrice, à la suite d'une conclusion défavorable relativement aux numéros **1506** à **1508** ou **1509** à **1512**, cette administration peut demander au Comité de réexaminer la conclusion. Le Comité réexamine alors la question après avoir consulté les administrations concernées.
639DH

NOC **4635** **1567** (2) Si la conclusion du Comité est alors favorable, il apporte au Fichier de référence les modifications requises pour que l'inscription y figure désormais comme si la conclusion initiale avait été favorable.
639DI

NOC **4636** **1568** (3) Si la conclusion relative à la propabilité d'un brouillage préjudiciable reste défavorable, l'inscription initiale n'est pas modifiée.
639DJ

SECTION VI

NOC

Modification, annulation et révision des inscriptions du Fichier de référence

ADD **4636A** **1569** § 25. Le Comité demande à l'administration notificatrice de confirmer, à des intervalles ne dépassant pas deux ans, que son assignation a été et continue à être régulièrement utilisée avec des caractéristiques identiques à celles inscrites dans le Fichier de référence.

NOC **4637** **1570** § 26. (1) Lorsque l'utilisation d'une assignation de fréquence à une station spatiale inscrite au Fichier de référence est suspendue pendant une période de dix-huit mois, l'administration notificatrice informe le Comité, au cours de cette période de dix-huit mois, de la date à laquelle cette utilisation a été suspendue et de la date à laquelle l'utilisation réguliére de cette assignation reprendra.
639DK

NOC **4638** **1571** (2) Chaque fois qu'il apparaît au Comité, qu'ill s'agisse ou non du résultat des mesures prises aux termes du numéro **1570,** qu'une assignation de fréquence à une station spatiale inscrite au Fichier de référence n'a pas été utilisée régulièrement pendant plus de dix-huit mois, le Comité s'enquiert auprès de l'administration notificatrice de la date à laquelle l'utilisation régulière de cette assignation reprendra.
639DL

NOC **4639** **1572** (3) Si, dans un délai de six mois, le Comité ne reçoit aucune réponse à sa demande de renseignements aux termes du numéro **1571,** ou si la réponse qu'il reçoit ne confirme pas que l'utilisation régulière de cette assignation à une station spatiale reprendra dans un délai de six mois, un symbole est inséré dans le Fichier de référence en regard de l'inscription. Dorénavant, l'assignation est traitée conformément aux dispositions du numéro **1513** comme une assignation à l'égard de laquelle il a été établi qu'elle n'a pas été effectivement utilisée depuis deux ans.
639DM

(MOD) **4640** **1573** § 27. Si l'utilisation d'une assignation de fréquence inscrite au Fichier de référence vient à être abandonnée définitivement, l'administration notificatrice doit en informer le Comité dans un délai de trois mois, à la suite de quoi l'inscription au Fichier de référence est annulée.

MOD **4641** **1574** § 28. Chaque fois qu'il apparaît au Comité, d'après les renseignements dont il dispose, qu'une assignation inscrite dans le Fichier de référence n'a pas été mise en service régulier conformément aux caractéristiques fondamentales notifiées, ou n'est pas utilisée conformément à ses caractéristiques fondamentales, le Comité consulte l'administration notificatrice et, sous réserve de son accord, il annule l'inscription ou lui apporte les modifications qui conviennent ou maintient ses caractéristiques fondamentales.
639DO

MOD 4642 639DP 1575 § 29. Si, à la suite d'une enquête faite par le Comité aux termes du numéro **1574**, l'administration notificatrice n'a pas fourni au Comité dans le trois mois qui suivant la date de ladite enquête les renseignements nécessaires ou pertinents, le Comité insère dans la colonne Observations du Fichier de référence des observations indiquant la situation.

SECTION VII

NOC

Études er recommandations

(MOD) 4643 639DQ 1576 § 30. (1) Si la demande lui en est faire par une administration quelconque, le Comité utilisant à cet effet les moyens dont il dispose et qui conviennent aux circonstances, procède à une étude des cas de présomption de contravention au présent Règlement ou de non-observations de ce Règlement, ou des cas de brouillage préjudiciable.

(MOD) 4644 639DR 1577 (2) Le Comité établit ensuite un rapport qu'ill communique aux administrations concernées et dans lequel il consigne ses conclusions et ses recommandations pour la solution du problème.

ADD 4644A 1578 (3) A la réception des recommandations du Comité pour la solution du problème, une administration en accuse réception dans les meilleurs délais par télégramme et indique par la suite les mesures qu'elle entend prendre. Lorsque ces propositions ou recommandations ne sont pas considérées comme étant acceptables par les administrations en cause, le Comité poursuivra ses efforts afin de trouver une solution acceptable.

MOD 4645 639DS 1579 § 31. Dans le cas où, à la suite d'une étude, le Comité présente a une ou plusieurs administrations des propositions ou recommandations tendant à la solution d'une question, et où, dans un délai de quatre mois, il n'a pas reçu de réponse d'une ou de plusieurs de ces administrations, il considère que ses propositions ou recommandations ne sont pas acceptables par la ou les administrations qui n'ont pas répondu. Si l'administration requérante elle-même n'a pas répondu dans ce délai, le Comité ne poursuit pas l'étude.

SECTION VIII

NOC

Dispositions diverses

MOD 4646 639DT 1580 § 32. (1) Si la demande lui en est faite par une administration quelconque et, en particulier, par l'administration d'un pays qui a besoin d'assistance spéciale, le Comité, utilisant à cet effet les moyens dont il dispose et qui conviennent aux circonstances, fournit toute assistance de caractère technique dans l'application des dispositions de cet article.

NOC 4647 639DU 1581 (2) En présentant sa demande au Comité aux termes du numéro **1580**, l'administration lui fournit les renseignements nécessaires.

MOD 4648 639DV 1582 § 33. Les Normes techniques du Comité sont fondées sur les dispositions pertinentes du présent Règlement et de ses appendices, sur les décisions, le cas échéant, des conférences administrative de l'Union, sur les Avis du CCIR, sur l'état d'avancement de la technique radioélectrique et sur les perfectionnements de nouvelles techniques de transmission compte tenu des conditions de propagation exceptionelles qui peuvent dominer dans certaines régions (par exemple, un effet de conduit particulièrement marque).

MOD 4649 639DW 1583 § 34. Le Comité porte à la connaissance des administrations ses conclusions et l'exposé de leurs motifs, ainsi que toutes les modifications apportées au Fichier de référence, au moyen de sa circulaire hebdomadaire. Ces renseignements sont publiés dans un délai de quarente-cinq jours à compter de la date de publication de la fiche complète dans la circulaire hebdomadaire dont il est question au numéro **1235**. Lorsque le Comité n'est pas en mesure de se conformer au délai mentionné ci-dessus, il en informe aussitôt que possible les administrations concernées en en donnant les raisons.

MOD 4650 639DX 1584 § 35. Si un Membre a recours aux dispositions de l'article 50 de la Convention, le Comité, si la demande lui en est faite, met ses documents à la disposition des parties intéressées pour l'application de toute procédure prescrite dans la Convention en vue d'apporter une solution aux différends internationaux.

1585 à 1609 *(Non attribués.)*

ADD N13A

ARTICLE 14

Procédure supplémentaire à appliquer dans les cas où un accord avec une administration est requis par un renvoi du tableau d'attribution des bandes de fréquences

ADD 4730 1610 § 1. (1) Avant de notifier au Comité une assignation de fréquence conforme à un renvoi du tableau d'attribution des bandes de fréquences contenant une référence au présent article, l'administration intéressée doit obtenir l'accord de toute autre administration dont les services sont susceptibles d'être affectés. Lorsque le renvoi concerne un service de radiocommunication spatiale, cette procédure peut être engagée avant l'application des dispositions de l'article **11** ou en même temps.

ADD 4731 1611 (2) L'administrations qui recherche un tel accord doit communiquer au Comité, assez longtemps avant la date prévue de mise en service de l'assignation:

ADD 4732 1612 *a*) Pour les services de radiocommunication de Terre, les caractéristiques fondamentales de l'assignation en projet, tellles qu'elles sont énumérées dans la section pertinente de l'appendice **1**;

ADD 4733 1613 *b*) Pour les services de radiocommunication spatiale, les caractéristiques de l'assignation en projet, telles qu'elles sont énumérées dans l'appendice **4**, ou l'appendice **3** lorsque celles-ci sont disponibles (1).

ADD 4734 1614 (3) L'administration qui recherche un accord peut indiquer au Comité, en même temps qu'elle lui communique les caractéristiques susmentionnées, les administrations dont, á son avis, certains services sont susceptibles d'être affectés.

ADD 4735 1615 § 2. (1) Le Comité publie les renseignements communiqués en application des numéros **1611** á **1614** dans une section spétiale de sa circulaire hebdomadaire (2); en outre, lorsqu'une circulaire hebdomadaire contient des renseignements de cette nature.

ADD 4736 1616 (2) Le Comité s'efforce d'identifier les administrations dont les services sont susceptibles d'être affectés et il indique le nom de celles qu'il a pu identifier dans la section spéciale de da circulaire hebdomadaire ainsi que dans le télégramme-circulaire dont il est question au numéro **1615**.

ADD 4737 1617 § 3. (1) Au reçu de ces renseignements, toute administration qui estime que l'assignation en projet est susceptible d'affecter ses services fonctionnant conformément au tableau d'attribution des bandes de fréquences ou destinées à fonctionner ainsi, en informe, dans un délai de quatre mois à compter de la date de publication de la circulaire hebdomadaire, l'administration qui recherche l'accord, ainsi que le Comité.

ADD 4738 1618 (2) Une administration qui n'a pas formulé de commentaire dans le délai spécifié au numéro **1617** est réputée n'être pas affectée par l'assignation en projet.

ADD 4739 1619 (3) Une administration qui répond à une demande d'accord, en application du numéro **1617**, communique, si possible en même temps, au moins les caractéristiques fondamentales de ses stations relevant de services susceptibles d'être affectés, ainsi que les suggestions qu'elle peut formuler pour aboutir à un règlement satisfaisant du problème. Elle envoie simultanément au Comité copie de tous ces renseignements.

ADD 4740 1620 § 4. L'administration qui recherche un accord en application des numéros **1611** à **1613** et l'administration qui répond en application du número **1617** doivent s'efforcer de résoudre en commun (3) le problème avant la date de mise en service de l'assignation en projet.

ADD 4741 1621 § 5. Chacune d'elles peut demander à l'autre des renseignements supplémentaires qui peuvent conduire à la solution du problème. Copie de la demande et de tout renseignement donné en réponse et communiquée au Comité.

ADD 4742 1622 § 6. Chacune des administrations peut demander l'aide du Comité en vue de résoudre le problème.

ADD 4743 1623 § 7. Une fois le problème résolu, l'administration que a recherché l'accord en informe le Comité.

ADD 4733.1 1613.1 (1) Les renseignements énumérés dans les appendices **3** ou **4** et communiqués au Comité en application de l'article **11** peuvent aussi être utilisés aux fins de la présente procédure.

ADD 4735.1 1615.1 (2) Dans le cas d'un service de radiocommunication spatiale, l'administration qui présent les renseignements énumérés dans les appendices **3** ou **4** conformément aux dispositions de l'article **11** peut demander au Comité d'utiliser également ces renseignements dans l'application de la présent procédure; en pareil cas, le Comité indique dans la section spéciale appropriée de sa circulaire hebdomadaire, qu'un accord est également recherché au titre du présent article.

ADD 4740.1 1620.1 (3) En l'absence d'Avis pertinents du CCIR ou de Normes techniques de l'IFRB, les critères techniques à appliquer en pareil cas doivent avoir fail l'object d'un accord entre les administrations concernées.

ADD **4744** **1624** § 8. Une administration qui a recherché un accord en application des numéros **1611** à **1613** et qui n'a reçu de réponse d'aucune administration en application du numéro **1617** en informe le Comité; elle est alors réputée avoir appliqué avec succès la procédure du présent article.

ADD **4745** **1625** § 9. Une administration qui a recherché un accord en application des numéros **1611** à **1613**, qui a reçu une ou plusieurs réponses en application du numéro **1617** et qui a informé le Comité, conformément au numéro **1623**, que le problème était résolu, est réputée avoir obtenu l'accord requis par le renvoi pertinent du tableau d'attribution des bandes de fréquences.

ADD **4746** **1626** § 10. Le Comité, une fois avisé aux termes du numéro **1624** ou du numéro **1625**, de l'application complète de la présente procédure, publie ce renseignement dans la section spétiale appropriée de sa circulaire hebdomadaire.

ADD **4747** **1627** § 11. Une administration qui rechercher un accord ou auprès de laquelle un accord recherché, ou toute autre administration dont les services sont susceptibles d'être affectés, peut demander l'aide du Comité dans l'application des différentes étapes de la présente procédure, particulièrement pour:

ADD **4748** **1628** *a*) Identifier les administrations dont les services sont susceptibles d'être affectés;

ADD **4749** **1629** *b*) Évaluer les niveaux de brouillage;

ADD **4750** **1630** *c*) Définir, avec l'accord des administrations impliquées, les critères techniques à utiliser (1).

ARTICLE 16

Procédure de mise à jour du Plan d'allotissement (2) de fréquences aux stations côtières radiotéléphoniques fonctionnant dans les bandes exclusives du service mobile maritime entre 4000 kHz et 23 000 kHz.

(Appendice 25 Mar2)

4751 639DY **1682** § 1. (1) Avant de notifier au Comité international d'enregistrement des fréquences ou de mettre en service une assignation de fréquence à une station côtière radiotéléphonique pour laquelle aucun allotissement correspondant ne figure dans le Plan d'allotissement de fréquences contenu dans l'appendice 25 Mar2, toute administration qui:

1683 *a*) Se propose de mettre en service une station côtière radiotéléphonique et n'a aucun allotissement dans le Plan; *ou*

ADD **4750.1** **1630.1** (1) En l'absence d'Avis pertinents du CCIR ou de Normes techniques de l'IFRB, les critères techniques à appliquer en pareil cas doivent avoir fait l'objet d'un accord entre les administrations concernées.

(MOD) **A.16.1** (2) Voir le numéro **18.**

1684 *b*) Se propose de développer le service radiotéléphonique assuré par sa ou ses stations côtières et a besoin d'un allotissement additionel;

envoie au comité au plus tôt deux années dans le cas mentionné au numéro **1683,** ou au plus tôt six mois dans le cas mentionné au numéro **1684,** mais en tout cas au plus tard trois mois avant la date prévue de mise en service de son service radiotéléphonique en projet, les renseignements énumérés à l'appendice **5**.

4752 639DZ **1685** (2) Le Comité publie dans une section spéciale de sa circulaire hebdomadaire les renseignements dont il est question aux numéros **1682** à **1684,** accompagnés des cas d'incompatibilité apparente que le Comité peut déceler entre l'allotissement en projet faisant l'object de la publication et toute autre allotissement existent ou en projet. Le Comité fournit également toute information de caractère technique et toute suggestion qu'il peut présenter en vue d'éviter ces incompatibilités.

(MOD) **4753** 639EA **1686** (3) Si la demande lui en est faite par une administration quelconque et, en particulier, par une administration d'un pays qui a besoin d'assistance spéciale, et si les circonstances paraissent le justifier, le Comité, utilisant à cet effet les moyens dont il dispose et qui conviennent aux circonstances, fournit l'assistance suivante:

1687 *a*) Détermination d'une ou de plusieurs voies qui conviennent le mieux pour le service projeté par l'administration avant que celle-ci communique les renseignements à publier;

1688 *b*) Application de la procédure prévue au numéro **1690**;

1689 *c*) Toute autre assistance de caractère technique afin que les procédures décrites dans le présent article puissant être menées à bien.

4754 639EB **1690** § 2. (1) Em même temps qu'elle envoie au Comité les renseignements énumérés à l'appendice **5** en vue de leur publication, l'administration concernée recherche, relativement à l'allotissement en question, l'accord des administrations auxquelles la voie est allotie. Elle envoie au Comité une copie de toute la correspondance y afférente.

4755 639EC **1691** (2) Si, après avoir étudie les renseignements publiés par le Comité, une administration est d'avis que ses services existants ou ses services en project destinés à être mis en service dans les délais mentionnés aux numéros **1682** à **1684** pourraient être défavorablement influencés, elle a le droit d'être partie à la procédure entamée aux termes du numéro **1690.**

4756 639ED **1692** § 3. (1) Toute administration qui reçoit une demande aux termes du numéro **1690** en accuse immédiatement réception par télégramme. Si l'administration qui a envoyé la demande n'a pas reçu d'accusé de réception dans le délai de trente jours qui suit la date de la circulaire hebdomadaire dans laquelle les renseignements pertinents ont été publiés conformément aux dispositions du numéro **1685,** elle envoie un télégramme demandant cet accusé de réception, télégramme auquel l'administration qui le reçoit répond dans un nouveau délai de quinze jours.

4757 639EE **1693** (2) Au reçu de la demande faite aux termes du numéro **1690,** l'administration interessée étudie rapidement la question, eu égard à la date prévue de mise en service de la ou des assignations correspondant à l'allotissement pour lequel l'accord est demandé, du point de vue du brouillage préjudiciable qui serait causé au service assuré par sa ou ses station(s) côtière(s):

1694 *a*) Qui utilise(nt) une assignation de fréquence conforme à un allotissement figurant dans le Plan; *ou*

1695 *b*) Qui sera (seront) mise(s) en service, dans le délai prescrit au numéro **1720**, et pour laquelle (lesquelles) un allotissement figure dans le Plan; *ou*

1696 *c*) Qui sera (seront) mise(s) en service dans le délai prescrit au numéro **1720,** et pour laquelle (lesquelles) un allotissement en project a été communiqué au Comité aux termes des numéros **1682** à **1684,** aux fins de publication conformément au numéro **1685.**

4758 639EF **1697** (3) Toute administration qui reçoit une demande aux termes du numéro **1690** et qui considère que le projet d'utilisation d'une voie ne causera pas un brouillage préjudiciable au service assuré pas ses stations côtières dont il est question aux numéros **1693** à **1696,** communique son accord à l'administration qui le lui a demandé, le plus rapidement possible et au plus tard deux mois après la date de la circulaire hebdomadaire pertinente.

(MOD) 4759 639EG 1698 (4) Toute administration qui reçoit une demande aux termes du numéro **1690** et qui considère que le projet d'utilisation d'une voie pourrait causer un brouillage préjudiciable au service assuré pas ses stations côtières dont il est question aux numéros **1693** à **1696,** communique à l'administration qui lui a envoyé la demande les raisons de son désaccord le plus rapidement possible et au plus tard deux mois après la date de la circulaire hebdomadaire pertinente. Elle lui fournit également toute information et suggestion en vue d'arriver à une solution satisfaisante du problème. L'administration recherchant l'accord s'efforce d'adapter ses besoins, dans la mesure du possible, en prenant en considération les observations qu'elle a reçues.

4760 639EH 1699 (5) Dans le cas où une administration recherchant un accord n'a pas d'allotissement dans la bande considérée, toute administration à laquelle la demande d'accord est adressée recherche, de concert avec l'administration requérante, tous les moyens de faire face aux besoins de celle-ci.

(MOD) 4761 639EI 1700 § 4. (1) L'administration qui recherche un accord peut demander au Comité de s'efforcer d'obtenir cet accord dans les circonstances suivantes:

1701 *a*) Une administration à laquelle une demande d'accord a été envoyée aux termes du numéro **1690** n'envoie pas d'accusé de réception de cette demande dans un délai de quarante-cinq jours à partir de la date de la circulaire hebdomadaire dans laquelle les renseignements pertinents ont été publiés;

1702 *b*) Une administration a envoyé un accusé de réception aux termes du numéro **1692** mais ne communique pas sa décision dans un délai de deux mois à partir de la date de la circulaire hebdomadaire dans laquelle les renseignements pertinents ont été publiés;

1703 *c*) L'administration qui recherche un accord et l'administration auprès de laquelle l'accord est recherché sont en désaccord sur les possibilités de partage;

1704 *d*) Il n'est pas possible d'arriver à un accord pour toute autre raison.

4762 639EJ 1705 (2) L'administration qui recherche un accord, on toute administration à laquelle une demande d'accord a été adressée, on bien le Comité, peuvent demander des renseignements supplémentaires dont ils estiment avoir besoin pour l'étude des problèmes relatifs à cet accord.

4763 639EK 1706 (3) Lorsque le Comité reçoit une demande aux termes du numéro **1701**, il envoie sans délai un télégramme à l'administration intéressée en lui demandant d'en accuser réception immédiatement.

4764 639EL 1707 (4) Lorsque le Comité reçoit un accusé de réception à la suite de la mesure qu'il a prise aux termes du numéro **1706** ou lorsque le Comité reçoit une demande aux termes du numéro **1702,** il envoie sans délai un télégramme à l'administration intéressée en lui demandant deprendre rapidement une décision sur la question.

4765 639EM 1708 (5) Lorsque le Comité reçoit une demande aux termes du numéro **1704,** il s'efforce d'obtenir l'accord mentionné au numéro **1690**. Lorsque le Comité ne reçoit pas d'une administration un accusé de réception à la demande qu'il a formulée en application des dispositions du numéro **1690** dans le délai spécifié au numéro **1692,** il agit, en ce qui concerne cette administration, conformément aux dispositions du numéro **1706.**

(MOD) 4766 639EN 1709 (6) Lorsqu'une administration ne répond pas dans le délai de quinze jours qui suit l'envoie du télégramme que le Comité lui a envoyé aux termes du numéro **1706** en lui demandant un accusé de réception, ou lorsqu'elle ne communique pas sa décision sur la question dans le délai de trente jours qui suit l'envoie du télégramme du Comité aux termes du numéro **1707,** l'administration est réputée s'être engagée, une fois que l'allotissement en projet est inséré dans le Plan:

1710 *a*) À ne pas formuler de plainte concernant les brouillages préjudiciables qui pourraient être causés au service assuré pas ses stations côtières radiotéléphoniques par l'utilisation d'assignations de fréquence conformes à l'allotissement pour lequel l'accord a été recherché;

1711 *b*) Et à faire en sorte que ses stations côtières radiotéléphoniques existantes ou en projet ne causeront pas de brouillages préjudiciables à l'utilisation d'assignations de fréquence conformes à l'allotissement pour lequel l'accord a été recherché.

1712 (7) Le Comité inscrit dans le Fichier de référence en regard de l'allotissement et des assignations qui en découlent une observation dans le colonne Observations indiquant

que ces assignations ne bénéficient pas des dispositions du numéro **1416** du présent Règlement en ce qui concerne les assignations de l'administrations qui recherche l'accord.

(MOD) **4767** 639EO **1713** /(8) Le Comité examine l'allotissement en projet du point du vue de la probabilité du brouillage préjudiciable que cet allotissement serait susceptible de subir de la part d'un allotissement figurant dans le Plan au nom de l'administration qui n'a pas répondu à la demande du Comité, ou qui a communiqué son désaccord sans en fournir les raisons; si sa conclusion est favorable et si l'application de la présent procédure aux autres administrations concernées le permet, il insère l'allotissement en projet dans le Plan.

4768 639EP **1714** (9) Dans le cas d'une conclusion défavorable, le Comité informe l'administration concernée du résultat de son examen; si cette dernière insiste et, si l'application de la présent procédure aux autres administrations concernées le permet, il insère l'allotissement en projet dans le Plan.

4769 639EQ **1715** (10) Lorsque le Comité reçoit une demande aux termes du numéro **1703,** il évalue les possibilités de partage et il communique aux administrations intéressées les résultats obtenus.

(MOD) **4770** 639ER **1716** (11) En cas de désaccord persistant, le Comité examine l'allotissement en projet du point de vue du brouillage préjudiciable qui serait causé au service assuré par les stations de l'administrations ayant manifesté son désaccord. Dans la cas où la conclusion du Comité est favorable et si l'application de présent procédure aux autres administrations concernées le permet, il insère l'allotissement en projet dans le Plan.

(MOD) **4771** 639ES **1717** (12) Si, à la suite de l'examen dont il est question au numéro **1716,** le Comité aboutit à une conclusion défavorable, il examine l'allotissement en projet du point de vue du brouillage préjudiciable suscepitble d'être causé aux services assurés dans les différentes voies dans la bande considerée. Si la Comité formule une conclusion défavorable dans tous le cas, il choisit la voie le moins défavorablement influencée et, si l'administration qui recherche l'accord lui en fait la demande, il insère l'allotissement en projet dans cette voie du Plan.

4772 639ET **1718** § 5. L'administration qui recherche l'accord pour un allotissement informe le Comité des résultats de ses consultations avec les administrations concernées. Lorsque le Comité conclut que la procédure décrite dans le présent article a été appliquée à l'égard de toutes les administrations concernées, il publie sa conclusion dans une section spéciale de sa circulaire hebdomadaire et, selon le cas, il met le Plan à jour.

4773 639EU **1719** § 6. Nonobstant les dispositions qui précèdent et si les circonstances le justifient, une administration peut, dans de cas exceptionnels, notifier au Comité, en vue de son inscription provisoire dans le Fichier de référence, une assignation de fréquence non couverte par un allotissement. Ele doit cependant commencer en même temps la procédure décrite au présent article.

4774 639EV **1720** § 7. Lorsque, dans le délai de douze mois qui suit la date d'insertion d'un allotissement dans le Plan, le Comité ne reçoit pas la notification d'une première assignation de fréquence relative à cet allotissement ou lorsque cette première assignation notifiée n'a pas été mise en service dans les délais prescrits dans le présent Règlement, avant de procéder à la suppression de l'allotissement dans de Plan, il consulte l'administration concernée sur l'opportunité d'une telle suppression et publie cette information dans le cadre de la mise à jour du Plan. Cependant, au cas où à la suite d'une demande reçue de l'administration concernée, le Comité conclut que des circonstances exceptionnelles motivent un délai supplémentaire, ce dernier ne doit en aucun cas dépasser six mois, sauf dans le cas d'une administration qui n'a pas de station côtière en service, administration pour laquelle ce délai peut être étendu à dix-huit mois.

4775 639EW **1721** § 8. Toute administration au nom de laquelle un allotissement figure dans le Plan et qui a besoin, en vue d'améliorer son service, de remplacer cet allotissement par un autre dans la même bande de fréquences, applique la procédure décrite dans le présent article. Dans le cas où cette administration aboutit dans l'application de cette procédure à un résultat positif, le Comité remplace, à sa demande, l'allotissement existant dans le Plan par l'allotissement en projet.

4776 639EX **1722** § 9. Le Comité tient à jour un Plan de référence, tel qu'il résulte de l'application de la présente procédure. Il établit sous une forme appropriée, aux fins de publication par le Secrétaire général, tout ou partie d'une revisée du Plan chaque fois que les circonstances le justifient, et en tout cas une fois par an.

1723 à 1747 *(Non attribués.)*

N15/10

ARTICLE 17

Procédure relative aux bandes en exclusivité au service de radiodiffusion entre 5950 kHz et 26 100 kHz

SECTION I

Présentation des horaires saisonniers de radiodiffusion à ondes décamétriques

(MOD) **4877** 640 **1748** § 1. A intervalles réguliers, les administrations présentent au Comité international d'enregistrement des fréquences les projets d'horaires saisonniers de leurs stations de radiodiffusion dans les bandes attribuées en exclusivité au service de radiodiffusion entre 5950 kHz et 26 100 kHz. Les horaires ainsi notifiés sont relatifs à chacune des saisons suivantes, déterminées d'après les conditions de propagation, et ils sont mis en application le premier dimanche de chacune des saisons intéressées, à 0100 UTC:

Horaire de mars — mars et avril;
Horaire de mai — mai, juin, juillet et août;
Horaire de septembre — septembre et octobre;
Horaire de novembre — novembre, décembre, janvier et février.

4878 641 **1749** § 2. Les premiers horaires sont entrés en viguer le 4 septembre 1960 pour être appliqués pendant la période septembre-octobre 1960. Les dates limites avant lesquelles il convient que les horaires parviennent au Comité sont déterminées par celui-ci de telle manière que l'avance laquelle les horaires devront lui parvenir soit progressivement réduite jusqu'au minimum que le Comité aura estimé convenable. Celles des assignations qui figurent dans un horaire déterminé et dont les caractéristiques sont susceptibles de ne pas subir de modification peuvent être présentées au Comité au plus tôt un à l'avance, et elles doivent être confirmées au plus tard à la data limite de réception par le Comité des horaires relatifs aux saisons intéressées. Le Comité prend les mesures nécessaires pour rappeler aux administrations en temps opportun les diverses étapes de la présente procédure.

4879 642 **1750** § 3. Plusiers administrations peuvent présenter au Comité des horaires coordonées dans lesquels est indiquée l'utilisation projetée des fréquences sur laquelle eles sont tombées d'accord.

4880 643 **1751** § 4. Les fréquences indiquées fans les horaires doivent être les fréquences qui seront effectivement utilisées pendant la saison considérée et il convient que leur nombre soit le nombre minimum nécessaire pour assurer une réception satisfaisante du programme intéressé dans chacune des zones auxquells il est destiné. Il convient que chaque administration, en établissant ses horaires de saison en saison, utilise dans toute la mesure du possible, dans une bande donnée, les fréquences qu'elle a utilisées dans ses horaires précédents.

4881 644 **1752** § 5. Les horaires sont présentés au Comité dans la forme prescrite à l'appendice 2 où sont spécifiées les caractéristiques à fournir pour chaque assignation.

4882 645 **1753** § 5. Les fréquences indiquées dans les horaires doivent satisfaire aux dispositions du numéro **1240** du présent Règlement et il convient que les fréquences choisies correspondent autant que pratiquement possible à des inscriptions figurant dans le Fichier de référence internacional des fréquences. Les administrations au nom desquelles aucune inscription qui convienne ne figure dans le Fichier de référence peuvent suggérer toute fréquence qu'elles julgent convenable ou, si elles le désirent, se contenter d'indiquer la bande de fréquences.

SECTION II

Examen préliminaire et établissement de l'Horaire provisoire de radiodiffusion à ondes décamétriques

4883 646 **1754** § 7. (1) Au reçu des horaires saisonniers, y compris, le cas échéant, la confirmation que certaines assignations comprises dans l'horaire de la saison précédente continueront à être utilisées, le Comité incorpore les données concernant l'utilisation des fréquences projetée par toutes les administrations dans un horaire combiné, et il procède à l'examen technique préliminaire requis pour l'établissement de l'«Horaire provisoire de radiodiffusion à ondes décamétriques» (ci-aprés dénommé *Horaire provisoire*) pour la saison considérée. Cet Horaire provisoire comprend:

1755 *a*) Toutes les assignations de fréquence, dans le cas où l'administration ne propose aucune variante;

1756 *b*) Les choix faits par le Comité, dans le cas où l'administration a proposé une ou plusieurs variantes;

1757 *c*) Les fréquences que propose le Comité pour tous les services pour lesquels aucune fréquence déterminée n'a été incluse dans l'horaire présenté: en formulant ces suggestions, le Comité tient dûment compte des dispositions du numéro **1759**, de la compatibilité de l'Horaire provisoire et des modifications qu'il pourrait y avoir intérêt à apporter à l'utilisation projetée des fréquences afin de satisfaire plus équitablement les demandes des administrations;

1758 *d*) Les cas d'incompatibilité apparente que le Comité peut déceler pendant le laps de temps dont il dispose, entre des assignations de fréquence.

4884 647 **1759** (2) A la demande des administrations, particulièrement des administrations des pays qui ont besoin d'assistance spéciale et au nom desquels aucune inscription qui convienne ne figure dans le Fichier de référence, le Comité accorde une attention particulière aux demandes de ces administrations dans l'établissement de l'Horaire provisoire.

4885 648 **1760** (3) Le Comité commence les travaux spécifiés aux numéros **1754** à **1758** suffisamment tôt pour que l'Horaire provisoire relatif à une saison donnée puisse être envoyé aux administrations deux mois au plus tard avant le début de cette saison.

SECTION III

Examen technique et révision de l'Horaire provisoire

(MOD) 4886 649 **1761** § 8. (1) Le Comité poursuit l'examen technique de l'Horaire provisoire en vue non seulement de déceler et de corriger, chaque fois qu'il le peut, d'autres cas d'incompatibilité entre assignations de fréquence qu'aura révélés l'examen technique, mais encore d'améliorer du point de vue technique l'Horaire provisoire en y apportant des modifications à l'égard desquelles il doit, à la suite de consultations obtenir l'assentiment des administrations concernées.

4887 650 **1762** (2) En présentant des recommandations aux administrations, le Comité tient compte des résultats du contrôle des émissions et de toute autre donnée dont il dispose. Cependant, lorsqu'il apparaît qu'une utilisation de fréquence n'est pas conforme aux assignation figurant dans l'horaire présenté par une administration, le Comité s'adresse à cette administration afin d'en obtenir confirmation.

4888 650 **1763** (3) Lorsque les administrations ont examiné l'Horaire provisoire ainsi que les recommandations éventuelles du Comité, il convient qu'elles notifient au Comité, aussitôt que possible, et de préférence avant le début de la saison en question, toutes les modifications à l'Horaire provisoire qu'elles ont l'intention de mettre en application.

4889 652 **1764** (4) Les modifications aux assignations des stations de radiodiffusion qui sont mises en application après le début de la saison considérée doivent être notifiées au Comité dès qu'elles sont prévues.

(MOD) 4890 653 **1765** (5) Le Comité applique aux modifications qui lui sont notifiées aux termes des numéros **1763** et **1764** la procédure spécifiée aux numéros **1759**, **1761** et **1762**. Toutes les modifications à l'Horaire provisoire qui résultent de l'application de la procédure spécifiée dans la présente section sont publiées dans les circulaires hebdomadaires de l'IFRB afin que les administrations soient en mesure de tenir à jour leurs exemplaires de l'Horaire provisoire.

SECTION IV

Publication de l'Horaire de radiodiffusion à ondes décamétriques

4891 654 **1766** § 9. Après la fin de chaque période, le Comité publie l'Horaire de radiodiffusion à ondes décamétriques, lequel reflète l'Horaire provisoire tel qu'il a été modifié à la suite de tous les changements notifiés au Comité depuis sa publication. Dans cet Horaire de radiodiffusion a ondes décamétriques, sont indiquées au moyen de symboles:

1767 *a*) Les assignations à l'égard desquelles les administrations ont fait connaître au Comité qu'elles ne les avaient pas jugées satisfaisantes en pratique;

1768 *b*) Les assignations non incluses dans l'Horaire provisoire et dont le Comité a tenu compte dans l'examen auquel il a procédé aux termes de la section III du présent article.

SECTION V

Liste annuelle des fréquences de radiodiffusion à ondes décamétriques

4892 655 **1769** § 10. Une Liste des fréquences de radiodiffusion à ondes décamétriques sera publiée à la fin de la première année pendant laquelle la procédure spécifiée dans le présent article aura été en vigueur. Cette liste comprendra toutes les assignations de fréquence qui ont figuré pendant l'année écoulée dans les Horaires de radiodiffusion à ondes décamétriques. Elle sera publiée à titre de supplément à la Liste international des fréquences et dans la même forme d'ensemble. Elle comportera également des symboles indiquant les assignations dont le Comité a eu connaissance qu'elles ne s'étaient pas révélées satisfaisantes en pratique, et d'autres symboles indiquant les saisons pendant lesquelles chaque assignation a été utilisée. Une liste récapitulative sera ensuite publiée chaque année.

SECTION VI

Dispositions diverses

4893 656 **1770** § 11. Il convient que les normes techniques utilisées par le Comité dans l'application des dispositions du présent article soient fondées, non seulement sur les bases indiquées au numéro **1454**, mais encore sur l'expérience du passé en matière d'établissement de plans de radiodiffusion et sur l'expérience acquise par le Comité dans l'application des dispositions du présent article.

4894 657 **1771** § 12. En vue de l'évolution ultérieure vers des plans techniquement compatibles pour les bandes de fréquences intéressées, le Comité prend toutes les mesures nécessaires pour procéder à des études techniques à long terme. Il utilise à cet effet tous les renseignements sur l'utilisation des fréquences mis à sa disposition au cours de l'application de la procédure décrite dans le present article. Le Comité tient les administrations informées, à intervalles réguliers, des progrès et des résultats de ces études.

(MOD) **4895** 658 **1772** § 13. En appliquant les dispositions de l'article 22 du présent Règlement, les administrations doivent faire preuve du maximum de bonne volonté et d'entraide dans la solution des problèmes de brouillages préjudiciables dans les bandes en question; elles doivent prendre dûment considération tous les facteurs pertinents, tant techniques que d'exploitation.

CHAPITRE V

Mesures contre les brouillages — Essais

N16

ARTICLE 18

NOC

Brouillages

4996 676 **1798** § 1. Les administrations doivent coopérer à la recherche et à l'élimination des brouillages préjudiciables en utilisant, le cas échéant, les moyens décrits à l'article 20 et en suivant le procédure décrite à l'article 22.

SECTION I

NOC

Brouillages généraux

(MOD) **4997** 693 **1799** § 2. Sont interdites à toutes les stations:

1800 *a*) Les transmissions inutiles;

1801 *b*) La transmission de signaux et de correspondance superflus;

SUP **4997.1** 693.1

1802 *c*) La transmission de signaux faux ou trompeurs;
1803 *d*) La transmision de signaux dont l'identité n'est pas donnée (sauf dans les cas prévus à l'article 25).

NOC **4998** 694 **1804** § 3. Toutes les stations sont tenues de limiter leur puissance rayonnée au minimum nécessaire pour assurer un service satisfaisant.

MOD **4999** 695 **1805** § 4. Afin d'éviter les brouillages:

1806 *a*) Les emplacements des stations d'émission et, lorsque la nature du service le permet, ceux des stations de réception doivent être choisis avec un soin particulier;

1807 *b*) Le rayonnement dans des directions inutiles, de même que la réception de rayonnements provenant de directions inutiles doivent être réduits le plus possible en tirant le meilleur parti des propriétés des antennes directives, chaque fois que la nature du service le permet;

1808 *c*) Le choix et l'utilisation des émetteurs et des récepteurs doivent satisfaire aux dispositions de l'article 5;

1809 *d*) Les conditions spécifiées au numéro **2612** doivent être remplies.

ADD **4999A** **1810** § 5. Il faut particulièrement veiller à éviter les brouillages sur les fréquences de détresse et de sécurité, ainsi que sur les fréquences qui ont un rapport avec la détresse et la sécurité, qui sont indiquées dans l'article 38.

MOD **5000** 696 **1811** § 6. Il convient que la classe d'émission à utiliser par une station entraîne le minimum de brouillage et assure l'utilisation efficace du spectre. En général, cela implique qu'en choisissant à cet effet la classe d'émission, tous les efforts doivent être faits pour réduire le plus possible la largeur de bande occupée, compte tenu des considérations techniques et d'exploitation concernant le service à assurer.

ADD **5000A** **1812** § 7. Il convient que les émissions hors bande des stations d'émission ne causent pas de brouillage préjudiciable aux services qui fonctionnent dans des bandes adjacentes conformément aux dispositions du présent Règlement et qui utilisent des récepteurs conformes aux numéros **301, 309, 310, 311** et aux Avis pertinents du CCIR.

(MOD) **5001** 697 **1813** § 8. Si, tout en satisfaisant aux dispositions de l'article 5, une station cause des brouillages préjudiciables du fait de ses rayonnements nen essentiels, des mesures particulières doivent être prises afin d'éliminer ces brouillages.

SECTION II

(MOD)

Brouillages causés par des appareils et installations électriques de toute espèce à l'exception des appareils destinés aux utilisations industrielles, scientifiques et médicales

MOD **5002** 698 **1814** § 9. Les administrations doivent prendre toutes les mesures pratiques nécessaires pour que le fonctionnement des appareils et installations électriques de toute espéce, y compris les réseaux de distribution d'énergie ou de télécomunication, mais à l'exception des appareils destinés aux utilisations industrielles, scientifiques et médicales, ne puisse pas causer de brouillage préjudiciable à un service de radiocommunication, et en particulier aux services de radionavigation et autres services de sécurité, exploité conformément au présent Règlement (1).

SECTION III

ADD

Brouillages causés par les appareils destinés aux utilisations industrielles, scientifiques et médicales

ADD **5002A** **1815** § 10. Les administrations doivent prendre toutes les mesures pratiques nécessaires pour que les rayonnements provenant des appareils destinés aux utilisations industrielles, cientifiques et médicales soient réduits au minimum et que, en dehors des bandes utilisables par ces appareils, le niveau des rayonnements ne puisse pas causer de brouillage préjudiciable à un service de radiocommunication, et en particulier aux services de radionavigation et autres services de sécurité, exploité conformément au présent Règlement (1).

ADD **5002.1** **1814.1**
ADD **5002A.1** **1815.1**

(1) A cet égard, les administrations doivent se fonder sur les Avis pertinents du CCIR les plus récents.

SECTION IV

(MOD)

Cas particuliers de brouillage

MOD **5003** 699 **1816** § 11. Les administrations qui autorisent l'emploi de fréquences inférieures à 9 kHz doivent d'assurer qu'il n'en résulte pas de brouillage préjudiciable aux services auxquels sont atribuées les bandes de fréquences supérieures à 9 kHz.

1817 à 1841 *(Non attribués.)*

ARTICLE 19

(MOD)

Essais

NOC **5029** 700 **1842** § 1. (1) Avant d'autoriser des essais et des expériences dans une station, chaque administration prescrit, afin d'éviter des brouillages préjudiciables, que toutes les précautions possibles soient prises telles que: choix de la fréquence et de l'horaire, réduction et, dans tous les cas où c'est possible, suppression du rayonnement. Tout brouillage préjudiciable résultant d'essais et d'expériences doit être éliminé dans les moindres délais.

MOD **5030** 701 **1843** (2) En ce qui concerne l'identification des émissions faites pendant les essais, les réglages ou les expériences, voir l'article 25.

ADD **5030A** **1844** (3) Dans les service de radionavigation aéronautique, il n'est pas souhaitable, pour des raisons de sécurité, de transmettre l'identification normale lorsqu'on effectue des émissions en vue de vérifications ou de réglagles du matériel déjà en service. Les émissions sans identification devraient toutefois être limitées à un minimum.

(MOD) **5031** 702 **1845** (4) Les signaux d'essai et de réglage doivent être choisis de manière à ne causer aucune confusion avec un signal, une abréviation, etc., d'une signification particulière définie dans le présent Règlement ou dans le Code international de signaux.

NOC **5032** 703 **1846** (5) En ce qui concerne les essais dans les stations su service mobile, voir les **3766, 3767** et **5058** à **5060.**

1847 à 1871 *(Non attribués.)*

ARTICLE 20

NOC

Contrôle international des émissions

MOD **5058** 678 **1872** § 1. Pour faciliter dans la mesure pratiquement possible l'application des dispositions du présent Règlement, notamment pour tendre à une utilisation efficace et économique du spectre des fréquences radioélectriques et contribuer à l'élimination rapide des brouillages préjudiciables, ils administrations conviennent de continuer à étendre les moyens de contrôle des émissions et de coopérer, dans la mesure pratiquement possible au perfectionnement progressif d'un système de contrôle international des émissions.

MOD **5059** 679 **1873** § 2. Le système de contrôle international des émissions ne comprend que les stations de contrôle des émissions qui ont été désignées comme telles par les administrations dans les renseignements envoyés au Secrétaire général conformément au numéro **1879**. Ces stations peuvent être exploitées par une administration ou, en vertu d'une autorisation accordée par l'administration concernée, par une entreprise publique ou privée, par un service de contrôle établi en commun par plusieurs pays, ou par une organisation internationale.

(MOD) **5060** 680 **1874** §3. Les administrations effectuent, dans la mesure où elles l'estiment possible, les contrôles de caractère général ou particulier qui peuvent leur être demandés par le Comité international d'enregistrement des fréquences ou par d'autres administrations. En demandant des observations de contrôle, il convient que le Comité et les administrations tiennent compte des installations de contrôle mentionnées dans la Nomenclature des stations de contrôle international des émissions (Liste III voir l'article 26), et indiquent clairement, d'une part à quelle fin les observations sont demandées, d'autre part quels sont les paramètres (y compris les programmes appropriés) du contrôle désiré. Les résultats des contrôles de cette nature transmis à d'autres administrations peuvent également être communiqués au Comité, si une telle comunication paraît indiquée.

NOC **5062** 681 **1875** § 4. Chaque administration, chaque service de contrôle établi en commun par plusieurs pays et chaque organisation internationale qui participe au système de contrôle international des émissions désigne un bureau centralisateur auquel doivent être adressées

toutes les demandes de contrôle et par l'intermédiaire duquel les résultats de contrôle sont transmis au Comité ou aux bureaux centralisateus des autres administrations.

NOC **5062** 682 **1876** § 5. Les administrations conviennent que les demandes de contrôle émanant d'organisations internationales ne participant pas au système de contrôle international des émissions doivent être coordonnées par le Comité et transmises par lui aux administrations, s'il y a lieu.

NOC **5063** 683 **1877** § 6. Les dispositions du présent article n'affectent pas les accords de contrôle privés, conclus à des fins déterminées par des administrations, des organisations internationales ou des entreprises publiques ou privées.

(MOD) **5064** 684 **1878** § 7. Les normes techniques dont le CCIR recommande l'observation par les stations de contrôle sont reconnues par le Comité comme normes pratiques optimales pour les stations de contrôle international des émissions. Toutefois, pour répondre au besoin de certaines données, les stations qui observent des normes techniques moins élévées peuvent, si leur administration le désire, participer au système de contrôle international des émissions.

MOD **5065** 685 **1879** § 8. Après avoir déterminé si les normes techniques observées par les stations de contrôle sont suffisantes, les administrations notifient au Secrétaire général, les renseignements utiles concernant les bureaux centralisateurs et les stations qu'elles souhaitent faire inclure dans le Liste VIII, en identifiant clairement les stations susceptibles de participer au système de contrôle international des émissions (voir l'article 26 et l'appendice **9**).

NOC **5066** 686 **1880** § 9. (1) Les résultats de mesure transmis au Comité ou à d'autres administrations doivent comporter l'estimation de la précision obtenu au moment de la mesure.

NOC **5067** 687 **1881** (2) Lorsque le Comité estime douteux ou insuffisants pour ses besoins les résultats fournis par une station de contrôle, il en avise l'administration ou l'organisation internationale intéressée en donnant les détails utiles.

NOC **5068** 688 **1882** § 10. Lorsque des mesures urgentes sont requises, les communications entre le Comité et les bureaux centralisateurs, ainsi qu'entre les bureaux centralisateurs eux-mêmes, doivent être acheminées par les moyens de transmission le plus rapides.

MOD **5069** 689 **1883** § 11. Les administrations font tout leur possible pour que les observations de contrôle (voir l'appendice **21**) soient communiquées au Comité dans les moindres délais.

NOC **5070** 690 **1884** § 12. Les bureaux centralisateurs peuvent demander l'aide d'autres bureaux centralisateurs pour appliquer les dispositions du présent article et celles de l'article 22.

MOD **5071** 691 **1885** § 13. Le Comité tient un relevé des résultats qui lui sont transmis par les stations de contrôle qui participent au système de contrôle international des émissions et établit périodiquement, aux fins de publication par le Secrétaire général, des résumés des résultats de contrôle utiles reçus par lui, auxquels il joint une liste des stations qui ont fourni ces résultats.

ADD **5071A** **1886** § 14. Lorsqu'une administration, en fournissant des observations établies par une de ses stations de contrôle participant au système de contrôle international des émissions, déclare au Comité qu'une émission indetifiée sans ambiguïté n'est pas conforme aux dispositions du présent Règlement, le Comité attire l'attention de l'administration concernée sur ces observations.

ARTICLE 22

NOC

Procédure contre les brouillages préjudiciables

(MOD) **5126** 704 **1943** § 1. Pour résoudre les problèmes de brouillages préjudiciables, el est essentiel que les Membres fassent preuve du maximum de bonne volonté et d'entraide dans l'application des dispositions de l'article 35 de la Convention et de celles du présent article.

NOC **5127** 705 **1944** § 2. pour résoudre ces problèmes, el est dûment tenu compte de tous les facteurs en cause, y compris les facteurs techniques et d'exploitation appropriés, par exemple: ajustement des fréquences, caractéristiques des antennes d'emission et de réception, partage dans le temps, changement de voie dans les transmissions muitivoies.

(MOD) **5128** 706 **1945** § 3. Lorsqu'un brouillage préjudiciable est signalé par une station de réception, elle communique à la station d'emission est brouillée tous les renseignements pouvant contribuer à identifier l'origine et les caractéristiques du brouillage.

MOD **5129** 707 **1946** § 4. Lorsque cela est possible en pratique, et sous réserve d'accord entre les administrations intéressées, les problèmes de brouillages préjudiciables peuvent être traités directement par leurs stations de contrôle spécialement désignées ou à l'échelon de leurs services d'exploitation.

ADD **5129A** **1947** § 5. Dans le présent article, le terme «administration» peut comprendre le bureau centralisateur désigné par l'administration conformément au numéro **1875**.

MOD **5130** 708 **1948** § 6. Si un cas de brouillage préjudiciable justifie semblable démarche, l'administration dont dépend la station de réception qui a constaté le brouillage en informe celle dont dépend la station d'émission dont l'émisson est brouillée, en lui communiquant le maximum de renseignements possible.

MOD **5131** 709 **1949** § 7. Si des Observations et des mesures complémentaires sont nécessaires peut déterminer l'origine et les caractéristiques du brouillage préjudiciable, l'administration dont dépend la station d'émission dont l'émission est brouillée peut demander à cet effet la collaboration d'autres administrations, et en particulier de celle dont dépend la station de réception qui a constaté le brouillage, ou d'autres organisations.

MOD **5132** 710 **1950** § 8. Après avoir déterminé l'origine et les caractéristiques du brouillage préjudiciable, l'administration dont dépend la station d'émission dont l'émission est brouillée communique à l'administration dont dépend la station brouilleuse tous les renseignements utiles pour que cette administration puisse prendre les mesures nécessaires en vue d'éliminer le brouillage.

MOD **5133** 711 **1951** § 9. Lorsqu'un brouillage préjudiciable est causé à un service de sécurite, l'administration dont dépend la station de réception qui a constaté le brouillage peut également intervenir directement auprès de l'administration dont dépend la station brouilleuse. Elle peut aussi le faire dans l'autres cas, sous réserve de l'approbation préalable de l'administration dont dépend la station d'émission dont l'émission est brouillée.

ADD **5133A** **1952** § 10. Une administration qui reçoit un avis aux termes duquel l'une de ses stations cause des brouillages préjudiciables à un service de sécurité doit étudier promptement l'affaire et s'il y a lieu prendre les mesures nécessaires qui s'imposent.

MOD **5134** 711A **1953** Lorsqu'un brouillage préjudiciable est causé au service assuré par une station terrienne, l'administration dont dépend la station de réception qui a constaté ce brouillage peut également intervenir directement auprès de l'administration dont dépend la station brouilleuse.

ADD **5134A** **1954** § 12. Une administration dont dépend une station qui est estimée avoir causé un brouillage préjudiciable doit, dès que possible, après en avoir été informée, accuser réception de cette information par télégramme, sans pour autant engager sa responsabilité.

MOD **5135** 711B **1955** § 13. Si les émissions de station spatiales causent des brouillages préjudiciables, les administrations dont dépendent ces stations brouilleuses doivent, à la demande de l'administration dont dépend la station brouillée, fournir les données des éphémérides nécessaires pour déterminer la position de ces stations spatiales quand cette position n'est pas connue par ailleurs.

MOD **5136** 712 **1956** § 14. Pour traiter des cas de brouillage préjudiciable qui exigent des décisions d'urgence, les administrations communiquent entre elles par le voies les plus rapides; sous réserve de l'autorisation préalable des administrations intéressées, les stations du système de contrôle des émissions spécialement désignées peuvent communiquer directement entre elles.

MOD **5136A** **1957** § 15. Reconnaissant aux émissions des fréquences de détresse et de sécurité (voir l'article 38) la nécessité d'une protection internationale absolue et que, par conséquent, l'élimination de tout brouillage préjudiciable affectant ces émissions est impérative, les administrations conviennent de traiter en priorité tout brouillage préjudiciable de cette nature porté à leur connaissance.

MOD **5137** **1958** § 16. Les renseignements détaillées relatifs au brouillage préjudiciable sont, chaque
713 fois que c'est possible, fournis sous la forme indiquée à l'appendice **23.**

(MOD) **5138** **1959** § 17. Si le brouillage préjudiciable persiste malgré la mise en oeuvre de la procédure
714 prévue ci-dessus, l'administration dont dépend la station d'émission dont l'émission est brouillée peut adresser à celle dont dépend la station d'émission brouilleuse un rapport sur l'irrégularité ou l'infraction conformément aux dispositions de l'article 21.

MOD **5139** **1960** § 18. Lorsqu'il existe une organisation international spécialisée pour un service
715 déterminé, les rapports concernant des irrégularités ou des infractions relatives à des brouillages préjudiciables causés ou subis par les stations de ce service peuvent être addressés á cette organisation en même temps qu'à l'administration intéressée.

NOC **5140** **1961** § 19. En cas de nécessité, en particulier si les interventions précédents n'ont pas
716 produit de résultat satisfaisant, l'administration intéressée communique, pour information, les détails de l'affaire au Comité internacional d'enregistrement des fréquences.

(MOD) **5141** **1962** (2) En pareil cas, l'administration intéressée peut aussi demander l'intervention du
717 Comité, conformément aux dispositions des sections VII et VIII de l'article 12 et des sections VII et VIII de l'article 13, mais elle doit alors porter à la connaissance du Comité tous les faits, y compris tous les détails techniques, les renseignements d'exploitation et des copies de la correspondance.

SUP **5142**
718

ADD **5143** **1963** § 20. (1) Lorsqu'une administration éprouve des difficultés à determiner l'origine d'une brouillage préjudiciable et désire d'urgence l'assistance du Comité, dans les cas où l'assignation affectée a été choisie par le Comité en réponse à une demande présentée aux termes du numéro **1218,** elle signale à bref délai le cas au Comité.

ADD **5144** **1964** (2) Au reçu de cette information, le Comtié sollicite immédiatement la coopération des administrations inéressées ou des stations spécialement désignées du système internacional de contrôle des émissions susceptibles de l'aider à déterminer l'origine du brouillage préjudiciable.

ADD **5145** **1965** (3) Le Comité réunit tous les rapports reçus en réponse aux demandes présentées aux termes du numéro **1964** et, utilisant toute autre renseignement à sa disposition, s'efforce rapidement de déterminer l'origine du brouillage préjudiciable.

ADD **5146** **1966** (4) Les Comité communique ensuite, par télégramme à l'administration avant signalé le cas de brouillage préjudiciable ses conclusions et recommandations. Celles-ci sont également communiquées par télégramme à l'administration supposée responsable de l'origine du brouillage préjudiciable, lui demandant en même temps de prendre rapidement des mesures appropriées.

ARTICLE 24

NOC

Licences

MOD **5221** **2020** § 1. (1) Aucune station d'émission ne peut être établie ou exploitée par un particulier, ou par une entreprise quelconque, sans une licence délivrée sous une forme appropriée et en conformité avec les dispositions du présent Règlement par le gouvernement du pays dont relève la station en question (voir cependent les numéros **2021, 2027** et **2030.**
725

(MOD) **5222** **2021** (2) Cependent, le gouvernement d'un pays peut conclure, avec le ou les gouvernements d'un ou de plusieurs pays limitrophes, un accord particulier concernant une ou plusieurs stations de son service de radiodifussion ou de ses services mobiles terrestres, fonctionnant sur les fréquences supérieures à 41 MHz, situées sur le territoire d'un pays limitrophe et destinées à améliorer sa couverture nationale. Cet accord, qui doit être compatible avec les dispositions du présent Règlement ainsi qu'avec celles des accords régionaux dont le pays intéressés sont signataires, peut prévoir des exceptions aux dispositions du numéro **2020** et doit être communiqué au Secrétaire général afin d'être porté à la connaissance des administrations à titre d'information.
726

NOC **5223** **2022** (3) Les stations mobiles qui sont immatriculées dans un territoire ou groupe de territoires n'ayant pas l'entière responsabilité de ses relations internationales, peuvent être considérées, en ce qui concerne la délivrance des licences, comme dépendant de l'autorité de ce territoire ou groupe de territoires.
727

MOD **5224** **2023** § 2. Le titulaire d'une licence est tenu de garder le secret des télécommunications, comme il est prévu dans les dispositions pertinentes de la Convention. De plus, la licence doit mentionner expressément ou par référence que, si la station comporte un récepteur, il est interdit de capter les correspondances de radiocommunications autres que celles qu'elle est autorisée à recevoir et que, dans le cas où de telles correspondances sont involontairement reçues, elles ne doivent être ni reproduites, ni communiquées à des tiers, ni utilisées pour une fin quelconque, et leur existence même ne doit pas être révélée.
728

MOD **5225** **2024** § 3. Afin de faciliter la vérification des licences délivrées á des stations mobiles, il est ajouté, s'il y a lieu, au texte rédigé dans la langue nationale, une traduction dans l'une des langues de travail de l'Union.
729

MOD **5226** **2025** § 4. (1) Le gouvernement qui délivre une licence à une station mobile y mentionne de façon précise l'état signalétique de la station, y compris son nom, son indicatif d'appel et, s'il y a lieu, la catégorie dans laquelle est classée du point de vue de la correspondance publique, ainsi que les caractéristiques générales de l'installation.
730

MOD **5227** **2026** (2) Pour les stations mobiles terrestres, y compris les stations ne comportant qu'un ou plusieurs récepteurs, une disposition sera insérée dans la licence mentionnant expressément ou par référence que l'exploitation de ces stations sur les territoires de pays autres que celui dans lequel la licence est délivrée est interdite, sauf accord particulier entre les gouvernements des pays intéressés.
731

NOC **5228** **2027** § 5. (1) En cas de nouvelle immatriculation d'un navire ou d'un aéronef, dans des circonstances telles que la délivrance d'une licence par le pays dans lequel il sera immatriculé serait vraisembleblement de nature à causer un retard, l'administration du pays á partir duquel la station mobile désire entreprendre sa traversée ou son vol peut, à la demande de la compagnie exploitante, délivrer une attestation indiquant que la station satisfait aux stipulations du présent Règlement. Ce certificat, établi sous une forme déterminée par l'administration qui le délivre, doit comporter l'état signalétique mentionné au numéro **2025** et n'est valable que pour la traversée ou le vol à destination du pays où le navire ou l'aéronef sera immatriculé; en tout état de cause, sa validité expire au bout d'une période de trois mois.
732

ADD **5228A** (Devenu **5230A**)

NOC **5229** **2028** (2) L'administration qui délivre l'attestation doit aviser des mesures qu'elle a prises l'administration à laquelle il appartient de délivrer la licence.
733

MOD **5230** **2029** (3) Le titulaire de l'attestation doit satisfaire aux dispositions du présent Règlement applicables au titulaire d'une licence.
734

ADD **5230A** **2030** § 6. En cas le location, d'affrètement ou d'échange d'aéronef, l'administration dont dépend l'exploitant d'aeronef qui reçoit l'appareil lors d'opérations de cette nature peut, en accord avec l'administration du pays dans lequel l'aéronef est enregistré, délivrer une licence conforme à celle qui est définie au numéro **2025** et qui se substitue temporairement à la licence initiale.

2031 à **2054** *(Non attribués.)*

N23

ARTICLE 25

Identification des stations

SECTION I

Dispositions générales

ADD 5330 2055 § 1. Toutes les émissions doivent pouvoir être identifiées par des signaux d'identification ou par d'autres moyens (1).

MOD 5331 735 2056 § 2. (1) Il est interdit à toute station d'émettre en utilisant un signal d'identification faux ou trompeur.

ADD 5331A 2057 (2) Lorsque cela est possible pratiquement et dans les services appropriés, les signaux d'identification doivent être émis automatiquement, conformément aux Avis pertinents du CCIR.

ADD 5331B 2058 (3) Toutes les émissions des services suivants devraient, à l'exception des cas prévus aux numéros **2066** à **2068**, compreendre des signaux d'identification:

2059 *a*) Service d'amateur;

2060 *b*) Service de radiodiffusion;

2061 *c*) Service fixe dans les bandes inférieures á 28 000 kHz;

2062 *d*) Service mobile;

2063 *e*) Service des fréquences étalon et des signaux horaires.

ADD 5331C 2064 (4) Toutes les émissions opérationnelles par radiobalises doivent comprendre des signaux d'identification. Toutefois, il est admis que pour les radiobalises et pour certains autres services de radionavigation qui émettent normalement des signaux d'identification, pendant les périodes de fonctionnement défectueux ou non opérationnel, la suppression délibérée des signaux d'identification est un moyen convenu pour avertir les utilisateurs que les émissions ne peuvent être utilisées en toute sécurité aux fins de navigation.

ADD 5331D 2065 (5) Les signaux d'identification émis doivent être conformes aux dispositions du présent article.

ADD 5332 736 2066 (6) Cependant, l'obligation faite à certaines émissions de comprendre des signaux d'identification n'est imposée:

2067 *a*) Ni aux stations d'engin sauvetage lorsqu'elles émettent automatiquement le signal de détresse;

2068 *b*) Ni aux radiobalises de localisation des sinistres.

MOD 5333 737 2069 § 3. Dans le cas des émissions qui comprennent des signaux d'identification, une station est identifiée par un indicatif d'appel, par une identité du service mobile maritime conformément à l'appendice **43** (2) ou par tout outre procédé admis d'identification qui peut être une ou plusieurs des indications suivants: nom de la station, emplacement de la station, nom de l'exploitant, marques officielles d'immatriculation, numéro d'identification du vol, numéro ou signal d'appel sélectif, numéro ou signal d'identification pour l'appel sélectif, signal caractéristique, caractéristiques de l'émission, ou toute autre caractéristique distinctive susceptible d'être aisément identifiée internationalement.

SUP 5334

MOD 5335 738 2070 § 4. Dans le cas des émissions qui comprennent des signaux d'identification, pour pouvoir être aisément identifiée, chaque station doit transmettre son signal d'identification aussi souvent qu'il est possible en pratique, pendant ses émissions, y compris ses émissions d'essai, de réglage ou expérimentales. Cependent, pendant ces émissions, les signaux d'identification doivent être transmis au moins une fois par heure, de préference au cours de la période qui s'étend de cinq minutes avant á cinq minutes après chaque heure ronde (UTC), à moins qu'il n'en résulte une interruption inacceptable du trafic, auquel cas l'identification sera donnée au début et à la fin des émissions.

ADD 5330.1 2055.1 (1) Dans l'état actuel de la technique, il est reconnu néanmoins que la transmission de signaux d'identification n'est pas toujours possible pour certains systèmes radioélectriques (radiorepérage, faisceaux hertziens et systèmes spatiaux par exemple).

SUP 5331.1 735.1

ADD 5333.1 2069.1 (2) En ce qui concerne l'application de l'appendice **43**, voir la Résolution **313**.

ADD 5335A 2071 § 5. Les signaux d'identification doivent, lorsque c'est possible, avoir l'une des formes suivants:

2072 *a*) Signaux vocaux, utilisant la simple modulation d'amplitude ou de fréquence;

2073 *b*) Singaux du code Morse international transmis à vitesse manuelle;

2074 *c*) Signaux émis selon un code télégraphique compatible avec l'équipement d'impression conventionnel;

2075 *d*) Toute autre forme recommandée par le CCIR.

MOD 5336 739 2076 § 6. Dans le mesure du possible, le signal d'identification devrait être transmis conformément aux Avis pertinents du CCIR.

ADD 5336A 2077 § 7. Les administrations doivent veiller à ce que, lorsque c'est possible, les méthodes d'identification par superposition soient employées conformément aux Avis du CCIR.

SUP 5337

NOC 5338 2078 § 8. Lorsque plusieurs stations travaillent simultanément sur une même liaison, soit comme stations de relais, soit en parallèle sur différents fréquences, chacune d'elles doit, dans la mesure où c'est possible en pratique, émettre son propre signal d'identification ou bien ceux de toutes les stations intéressées.

ADD 5338A 2079 § 9. Les administrations doivent veiller à ce que, sauf dans les cas indiqués aux numéros **2066** à **2068,** toutes les émissions qui ne comprennent pas de signaux d'identification puissent être identifiées par d'autres moyens, quand elle peuvent causer des brouillages préjudiciables aux services d'une autre administration exploités selon les dispositions du présent Règlement.

ADD 5338B 2080 § 10. Les administrations doivent, compte tenu des dispositions du présent Règlement relatives à la notification d'assignations de fréquence pour inscription dans le Fichier de référence, adopter leurs propres mesures pour se conformer aux dispositions du numéro **2079**.

(MOD) 5339 742 2081 § 11. Chaque Membre se réserve le droit d'établir ses propes procédés d'identification pour les stations qu'il utilise pour les besoins de sa défense nationale. Néanmoins, il doit employer à cet effet, dans la mesure du possible, des indicatifs d'appel reconnaissables comme tels et contenant les caractères distinctifs de sa nationalité.

SECTION II

NOC

Atribution des séries internationales et assignation des indicatifs d'appel

(MOD) 5340 743 2082 § 12. (1) Toutes les stations ouvertes à la correspondance publique internationale, toutes les stations d'amateur et toutes les autres stations susceptibles de causer des brouillages préjudiciables au-delà des frontières des pays dont elles dépendent doivent être dotées des indicatifs d'appel de la série internationale attribuée à leur pays dans le tableau d'attribution des séries internationales d'indicatifs d'appel qui figure dans l'appendice **42**.

ADD 5340A 2083 (2) A toutes les stations de navire et à toutes les stations terriennes de navire auxquelles s'appliquent les dispositions du chapitre XI et à toutes les stations côtières ou stations terriennes côtières capables de communiquer avec ces stations de navire sont assignées des identités du service mobile maritime conformes à l'appendice 43 (1).

MOD 5341 744 2084 (3) Il n'est pas obligatoire d'assigner des indicatifs d'appel de la série internationale, aux stations identifiées par des identités du service mobile matitime ou qui peuvent être facilement identifiées par d'autres procédés (voir le numéro **2069**) et dont les signaux d'identification ou les caractéristiques d'émission sont publiés dans des documents internationaux.

MOD 5342 748 2085 § 13. Dans le cas où les disponibilités de l'appendice **42** seraient épuisées, de nouvelles séries d'inficatifs d'appel pourront être attribuées selon les principes énoncés dans la Résolution **13** relative à la formation des indicatifs d'appel et à l'attribution de nouvelles séries internationales.

NOC 5343 749 2086 § 14. Dans l'intervalle entre deux conférences administratives des radiocommunications, le Secrétaire général est autorisé à traiter, à titre provisoire et sous réserve de confirmation par la prochaine conférence, les questions relatives aux changements dans l'attribution des séries d'indicatifs d'appel (voir aussi le numéro **2085**).

ADD 5340A.1 2083.1 (1) En ce qui concerne l'application de l'appendice **43**, voir la Résolution **313**.

ADD 5343A 2087 § 15. Pour le système d'identification utilisé dans le service mobile maritime le Secrétaire général est chargé d'attribuer les séries de chiffres d'identification de nationalité aux pays qui ne figurent pas dans le tableau des chiffres d'identification de nacionalité [voir l'appendice **43** (1)].

MOD 5344 749A 2088 § 16. Le Secrétaire général est chargé, à la demande des administrations intéressées, de fournir des séries de numéros ou de signaux d'appel sélectif (voir les numéros **2143** à **2146.**

(MOD) 5345 750 2089 § 17. (1) Chaque pays choisit les indicatifs d'appel et, si le système d'appel sélectif utilisé est conforme aux dispositions de l'appendice **39,** les numéros d'appel sélectif de ses stations de navire et les numéros d'identification de ses stations côtières dans les séries internationales qui lui sont attribuées ou fournies: conformément à l'article 26, il notifie ces renseignements au Secrétaire général en les groupant avec les renseignements à faire figurer dans des listes I, II, IV, V, VI et VIII-A. Cette dernière disposition ne concerne pas les indicatifs d'appel assignés aux stations d'amateur et aux stations expérimentales.

ADD 5345A 2090 (2) Chaque pays assigne à ses stations des identités du service mobile maritime choisies dans les séries de chiffres d'identification de nationalité qui lui sont attribuées et notifie ces informations au Secrétaire général pour qu'elles figurent dans les listes pertinentes, comme prévu dans l'article 26.

MOD 5346 751 2091 (3) Le Secrétaire général veille à ce qu'un même indicatif d'appel, une même identité du service mobile maritime, un même numéro d'appel sélectif ou um même numéro d'identification ne soit pas assigné plus d'une fois et à ce que les indicatifs d'appel qui pourraient être confondus avec les signaux de détresse ou avec d'autres signaux de même nature ne soient pas assignés.

NOC 5347 752 2092 § 18. (1) Lorsqu'une station fixe emploie, dans le service international, plus d'une fréquence, chaque fréquence peut être identifiée par un indicatif d'appel distinct utilisé uniquement pour cette fréquence.

NOC 5348 753 2093 (2) Lorsqu'une station de radiodiffusion emploie, dans le service international, plus d'une fréquence, chaque fréquence peut être identifiée, soit par un indicatif d'appel distinct utilisé uniquement pour cette fréquence, soit par d'autres procédés appropriés, tels que l'énoncé du lieu géographique et de la fréquence employée.

NOC 5349 754 2094 (3) Lorqu'une station terrestre emploie, plus d'une fréquence, chaque fréquence peut, à titre facultatif, être identifiée par un indicatif d'appel distinct.

NOC 5350 755 2095 (4) Il convient que les stations côtières utilisent, lorsque cela est possible en pratique, un indicatif d'appel commun pour chaque série de fréquences (2).

SECTION III

NOC

Formation des indicatifs d'appel

NOC 5351 756 2096 § 19. (1) Les vingt-six lettres de l'alphabet ainsi que les chiffres dans les cas spécifiés ci-après peuvent être employés pour former les indicatifs d'appel. Les lettres accentuées sont exclues.

NOC 5352 757 2097 (2) Toutefois, les combinaisons indiquées ci-après ne doivent pas être employées comme indicatifs d'appel:

NOC 5353 758 2098 *a*) Les combinaisons qui pourraient être confondues avec des signaux de détresse ou avec d'autres signaux de même nature;

NOC 5354 759 2099 *b*) Les combinaisons réservées pour les abréviations à employer dans les services de radiocommunication (voir les appendices **13** et **14**);

(MOD) 5355 761 2100 *c*) Pour les stations d'amateur, les combinaisons commençant par un chiffre et dont le deuxième caractère est la lettre O ou la lettre I.

MOD 5356 762 2101 § 20. Les indicatifs d'appel des séries internationales sont formés comme il est indiqué aux numéros **2102** à **2122**. Les deux premiers caractères peuvent être deux lettres ou une lettre suivie d'un chiffre ou un chiffre suivi d'une lettre. Les deux premiers caractères ou, dans certains cas le premier caractère d'un indicatif d'appel, constituent l'indication de nationalité (3).

ADD 5343A.1 2087.1
NOC 5350.1 2095.1 755.1

(1) En ce qui concerne l'application de l'appendice **43**, voir la Résolution **313.**

(2) Par «série de fréquences», on entend un groupe de fréquences dont chacune appartient à l'une des différentes bandes comprises entre 4000 kHz et 27 500 kHz et attribuées en exclusivité au service mobile maritime.

ADD 5356.1 2101.1

(3) Pour les séries d'indicatifs d'appel commençant par B, F, G, I, K, M, N, R et W, seul le premier caractère est requis pour l'identification de nationalité. Dans le cas demi-séries, les trois premiers caractères sont requis pour l'indication de nationalité.

NOC 5357 **2102** *Stations terrestres et stations fixes:*
SUP 5358
763

MOD 5359 **2103** § 21. (1):
764

Deux caractères et une lettre; *ou*
Deux caractères et une lettre suivis de trois chiffres au plus (celui qui suit immédiatement les lettres n'étant ni 0 ni 1).

2104 (2) Toutefois il est recommandé que, dans toute la mesure du possible, les indicatifs d'appel des stations fixes soient composés de:

Deux caractères et une lettre suivis de deux chiffres (celui qui suit immédiatement les lettres n'etant ni 0 ni 1).

NOC 5360 **2105** *Stations de navire:*

MOD 5361 **2106** § 22. (1):
765

Deux caractères et deux lettres; *ou*
Deux caractères, deux lettres et un chiffre (autre que 0 ou 1).

MOD 5362 **2107** (2) Toutefois, les stations de navire faisant seulement usage de la radiotéléphonie
766 peuvent aussi employer un indicatif d'appel composé de:

Deux caractères (à condition que le second soit une lettre) suivis de quatre chiffres (celui qui suit immédiatement les lettres n'étant ni 0 ni 1); *ou*
Deux caractères et une lettre suivis de quatre chiffres (celui qui suit immédiatement les lettres n'étant ni 0 ni 1).

NOC 5363 **2108** *Stations d'aéronef:*

MOD 5364 **2109** § 23:
767

Deux caractères et trois lettres.

NOC 5365 **2110** *Stations d'engin de sauvetage de navire:*

NOC 5366 **2111** § 24:
768

Indicatif d'appel du navire de base suivi de deux chiffres (celui qui suit immédiatement les lettres n'étant ni 0 ni 1).

NOC 5367 **2112** *Stations de radiobalise de localisation des sinistres:*

NOC 5368 **2113** § 25:
768A

La lettre B en code Morse ou l'indicatif d'appel du navire auquel appartient la radiobalise, ou ces deux informations.

NOC 5369 **2114** *Stations d'engin de sauvetage d'aéronef:*

NOC 5370 **2115** § 26:
769

Indicatif d'appel complet de l'aéronef de base (voir le numéro **2109**) suivi d'un chiffre autre que 0 ou 1.

NOC 5371 **2116** *Stations mobiles terrestres.*

SUP 5372
770

MOD 5373 **2117** § 27:
771

Deux caractères (à condition que le second soit une lettre) suivis de quatre chiffres (celui qui suit immédiatement les lettres n'étant ni 0 ni 1), *ou*
Deux caractères et une ou deux lettres suivis de quatre chiffres (celui qui suit immédiatement les lettres n'étant ni 0 ni 1).

NOC 5374 **2118** *Stations d'amateur et stations expérimentales:*

MOD 5375 **2119** § 28. (1):
772

Un caractére (voir le numéro **2101.1** et un seul chiffre (autre que 0 ou 1) suivis d'un groupe de trois lettres au plus; *ou*

Deux caractères et un chiffre (autre que 0 ou 1), suivis d'un groupe de trois lettres au plus.

NOC **5376** **2120** (2) Toutefois, l'interdiction d'employer les chiffres 0 et 1 ne s'applique pas aux
773 stations d'amateur.

NOC **5377** **2121** *Stations du service spatial:*

MOD **5378** **2122** § 29. Lorsque des indicatifs d'appel sont employés par des stations du service
773A spatial, il est recommandé qu'ils soient composés de:

Deux caractères suivis de deux ou trois chiffres (celui qui suit immédiatement les lettres n'étant ni 0 ni 1).

SECTION IV

NOC **Identification des stations faisant usage de la radiotéléphonie**

NOC **5379** **2123** § 30. Les stations faisant usage de la radiotéléphonie sont identifiées comme il est
774 indiqué aux numéros **2124** à **2133.**

(MOD) **5380** **2124** § 31. (1) *Stations côtières:*
775

Soit par un indicatif d'appel (voir le numéro **2103**);
Soit par le nom géographique di lieu, tel qu'il figure dans la Nomenclature des stations côtières, suivi de préférence du mot RADIO ou de toute autre indication appropriée.

NOC **5381** **2125** (2) *Stations de navire:*
776

Soit par un indicatif d'appel (voir les numéros **2106** et **2107;**
Soit par le nom officiel du navire, précédé, si c'est nécessaire, du nom du propriétaire et à la condition qu'il n'en résulte aucune confusion possible avec des signaux de détresse, d'urgence et de sécurité;
Soit par son numéro ou signal d'appel sélectif.

NOC **5382** **2126** (3) *Stations d'engin de sauvetage de navire:*
777

Soit par un indicatif d'appel (voir le numéro **2111**);
Soit par un signal d'identification constitué du nom du navire de base suivi de deux chiffres.

NOC **5383** **2127** (4) *Stations de radiobalise de localisation des sinistres:*
777A

Dans le cas d'émissions vocales (voir le numéro **3265**):

Le nom ou l'indicatif d'appel du navire auquel appartient la radiobalise, ou ces deux informations.

NOC **5384** **2128** § 32. (1) *Stations aéronautiques:*
778

Par le nom de l'aéroport ou le nom géographique du lieu, suivi, si c'est nécessaire, d'un mot approprié précisant la fontion de la station.

NOC **5385** **2129** (2) *Stations d'aéronef:*
779

Soit par un indicatif d'appel (voir le número **2109**), que peut être précédé d'un mot désignant le propriétaire ou le type de l'aéronef;
Soit par une combinaison de caractéres correspondant à la marque d'immatriculation officiellement attribuées à l'aéronef;
Soit par un mot désignant l'entreprise de transport aérien, suivi du numéro d'identification du vol.

NOC **5386** **2130** (3) Dans les bandes attribuées en exclusivité ao service mobile aéronautique, les
780 stations d'aéronef faisant usage de la radiotéléphonie peuvent, après accord particulier entre les gouvernements, employer d'autres méthodes d'idenfication, sous réserve qu'elles soient connues internationalement.

NOC 5387 781 **2131** (4) *Stations d'engin de sauvatage d'aéronef:*

Par um indicatif d'appel (voir de numéro **2115**).

(MOD) 5388 782 **2132** § 33. (1) *Stations de base:*

Soit par um indicatif d'appel (voir le numéro **2103**);
Soit par le nom géographique du lieu suivi, le cas échéant, de toute autre indication nécessaire.

(MOD) 5389 783 **2133** (2) *Stations mobiles terrestres:*

Soit par un indicatif d'appel (voir le numéro **2117**);
Soit par l'indication de l'identité du véhicule ou toute autre indication appropriée.

SECTION V

NOC **Numéros d'appel sélectif dans le service mobile maritime**

NOC 5390 783A **2134** § 34. Lorsque les stations du service mobile maritime font usage de dispositifs d'appel sélectif conformes aux dispositions des appendices **38** et **39**, les numéros d'appel leur sont assignés conformément aux dispositions ci-dessous par les administrations dont elles dépendent.

NOC **5391** **2135** *Formation des numéros d'appel sélectif de station de navire et des numéros d'identification de station côtière:*

NOC 5392 783B **2136** § 35. (1) Les dix chiffres 0 à 9 inclus doivent être utilisés pour former les numéros d'appel sélectif.

NOC 5393 783C **2137** (2) Toutefois, les combinaisons qui commencent par les chiffres 00 (zéro, zéro) ne doivent pas être employées pour former les numéros d'identification des stations côtières.

NOC 5394 783D **2138** (3) Les numéros d'appel sélectif des stations de navire et les numéros d'identification des stations côtières, formés a partir des séries internationales, doivent être conformes aux dispositions des numéros **2139**, **2140** et **2141**.

NOC 5395 783E **2139** (4) *Numéros d'identification de station côtière:*

Quatre chiffres (voir le numéro **2137**).

NOC 5396 783F **2140** (5) *Numéros d'appel sélectif de station de navire:*

Cinq chiffres.

NOC 5397 783G **2141** (6) *Groupes prédéterminés de station de navire:*

Cinq chiffres:

Soit le même chiffre répété cinq fois;
Soit deux chiffres différents répétés alternativement.

NOC **5398** **2142** *Assignation des numéros d'appel sélectif de station de navire et des numéros d'identification de station côtière:*

MOD 5399 783H **2143** § 36. (1) Dans les cas où des numéros d'appel sélectif de station de navire et des numéros d'identification de station côtière sont requis, aux fins d'utilisation dans le service mobile maritime, pour le système d'appel sélectif conforme aux dispositions de l'appendice **39**, ces numéros d'appel sélectif et ces numéros d'identification seront fournis, sur demande, par le Secrétaire général. Lorqu'une administration notifiera l'introduction de l'appel sélectif aux fins d'utilisation dans le service mobile maritime:

2144 *a*) Les numéros d'appel sélectif de station de navire lui seront fournis, selon les besoins, par tranches de 100 (cent);

2145 *b*) Les numéros d'identification de station côtière lui seront fournis par tranches de 10 (dix), pour répondre aux besoins réels;

2146 *c*) Les numéros d'appel sélectif pour l'appel de groupes prédéterminés de stations de navire (voir le numéro **2141**) lui seront fournis dans les mêmes conditions que s'il s'agissait de numéros pour des stations individuelles.

NOC **5400** **2147** (2) Chaque administration choisi les numéros d'appel sélectif à assigner à ses stations
783I de navire dans les tranches de séries qui lui sont fournies.

NOC **5401** **2148** (3) Chaque administration choisit les numéros d'identification à assigner à ses sta-
783J tions côtières dans les tranches de séries qui lui sont fournies.

SECTION VI

ADD

Identités du service mobile maritime dans le service mobile maritime et le service mobile maritime par satellite

ADD **5401A** **2149** § 37. Quand une station du service mobile maritime ou du service mobile maritime par satellite doit utiliser une identité du service mobile maritime, l'administration responsable assigne à cette station une identité conforme aux dispositions contenues dans l'appendice **43** et la Résolution **313**, en tenant compte des Avis pertinents du CCIR et du CCITT.

SECTION VII

MOD

Dispositions particulières

NOC **5402** **2150** § 38. (1) Dans le service mobile aéronautique, après quie la communication a été
784 établie au moyen de l'indicatif d'appel complet, la station d'aéronef peut employer, si tout risque de confusion est exclu, un indicatif ou un signal d'identification abrégé constitué:

MOD **5403** **2151** *a*) En radiotélégraphie, par le premier caractère et les deux dernières lettres
785 de l'indicatif d'appel complet (voir le numéro **2109**);

MOD **5404** **2152** *b*) En radiotéléphonie:
786

Soit par le premier caractère de l'indicatif d'appel complet;
Soit par l'abréviation du nom du propriétaire de l'aéronef (compagnie ou particulier);
Soit par le type de l'aéronef;

suivi des deux dernières lettres de l'indicatif complet (voir le numéro **2109**) ou des deux derniers caractères de la marque d'immatriculation.

NOC **5405** **2153** (2) Les dispositions des numéros **2150**, **2151** et **2152** peuvent être complétées ou
787 modifiées par des accords entre administrations intéressées.

NOC **5406** **2154** § 39. Les signaux distinctifs alloués aux navires pour la signalisation par moyens
788 visuel ou sonore doivent, en général, concorder avec les indicatifs d'appel des stations de navire.

2155 à 2179 *(Non attribués.)*

ARTICLE 26

NOC

Documents de service

SECTION I

ADD

Titres, contenu et publication des documents de service

MOD **5507** **2180** § 1. Les documents suivants sont publiés par le Secrétaire général. Pour faire face
789 aux circonstances et répondre aux demandes particulières des administrations, l'information publiée est disponible également sous les formes suivants: relevés imprimés par ordinateur, supports pouvant être lus par machine, films, microfiches ou par d'autres moyens appropriés.

MOD 5508 790 **2181** § 2. Liste I. *Liste internationale des fréquences*:

2182 (1) Cette list est basée sur les renseignements préparés par l'IFRB et contient:

MOD 5509 791 **2183** *a*) Les états signalétiques des assignations de fréquence inscrites dans le Fichier de référence international des fréquences;

MOD 5510 792 **2184** *b*) Les fréquences (par example 500 kHz ou 2182 kHz) prescrites dans le présent Règlement pour l'usage commun dans certains services;

MOD 5511 793 **2185** *c*) Les allotissements figurant dans les Plans d'allotissement qui font l'objet de l'appendice 25 Mar2 (voir le numéro **4212** ainsi que des appendices 26, 27 (*) et 27 Aer (*).

NOC 5512 794 **2186** (2) Une mention de l'emploi des fréquences et des allotissements mentionnés dans les numéros **2184** et **2185** est incluse dans les inscriptions correspondantes.

NOC 5513 795 **2187** (3) Les assignations de fréquence figurant dans la liste internationale des fréquences sont rangées dans l'ordre numérique croissant des fréquences assignées.

NOC 5514 796 **2188** (4) Au-dessus de 28 MHz, la liste internationale des fréquences est formée de quatre parties distinctes:

NOC 5515 797 **2189** *a*) Assignations de fréquence dans les bandes comprises entre 28 MHz et 50 MHz, à l'exclusion des stations de radiodiffusion;

MOD 5516 798 **2190** *b*) Assignations de fréquence de la Région 1 dans les bandes au-dessus de 50 MHz, et assignations de fréquence (1) aux stations de radiodiffusion de la Région 1 dans les bandes comprises entre 28 MHz et 50 MHz;

MOD 5517 799 **2191** *c*) Assignations de fréquence de la Région 2 dans les bandes au-dessus de 50 MHz;

MOD 5518 800 **2192** *d*) Assignations de fréquence de la Région 3 dans les bandes au-dessus de 50 MHz, et assignations de fréquence aux stations de radiodiffusion de la Région 3 dans les bandes comprises entre 28 MHz et 50 MHz.

ADD 5518A **2193** (5) La liste internationale des fréquences est rééditée à intervalles à déterminer par le Secrétaire général, mais ne dépassant pas deux ans. Elle est tenue à jour au moyen de suppléments récapitulatifs trimestriels publiés sous la même forme que la liste elle-même. Toute nouvelle inscription ou toute modification d'une inscription introduite dans le Fichier après la publication du dernier supplément récapitulatif et paraissant dans un nouveau supplément récapitulatif ou dans une nouvelle édition de la liste, doivent être indiquées de maniére appropriée.

ADD 5518B **2194** (6) Les suppléments récapitulatifs sont divisés en deux sections:

ADD 5518C **2195** *a*) La section A contient les nouvelles inscriptions et les modifications aux inscriptions qui figurent déjà dans la liste internationale des fréquences;

ADD 5518D **2196** *b*) La section B contient les inscriptions de la liste internationale des fréquences qui ont été entièrement annulées.

(MOD) 5519 **2197** Liste II. *Nomenclature des stations fixes qui assurent des liaisons internationales:*

801 **2198** (1) Cette liste contient les états signalétiques des stations fixes qui assurent des liaisons internationales dont les fréquences figurent dans la liste I.

ADD 5519A **2199** (2) La liste II est rééditée à des intervalles que détermine le Secrétaire général. Elle est tenue à jour au moyen de suppléments récapitulatifs trimestriels.

MOD 5520 802 **2200** § 4. Liste III. *(Disponible.)*

SUP 5521 803

SUP 5522 804

NOC 5523 805 **2201** § 5. Liste IV. *Nomenclature des stations côtières:*

2202 (1) A cette liste sont annexés un tableau et une carte indiquant, suivant les zones, les horaires de service à bord des navires dont les stations sont classées dans les deuxième et troisième catégories (voir l'appendice **12**) et un tableau des taxes télégraphiques intérieures et limitrophes, etc. Cette liste comprend une annexe donnant des renseignements sur les systèmes mobiles maritimes à satellites, qui pourront être communiqués au Secrétaire général par les administrations participantes.

(*) Note do Secrétariat général: voir le numéro **5189** et la Résolution **400**.

NOC 5516.1 798.1 **2190.1** (1) En ce qui concerne les stations de télévision de la Région 1, des inscriptions distinctes figurent dans la Liste I pour les fréquences des ondes porteuses du son et de l'image respectivement.

ADD 5523A 2203 (2) La liste IV est rééditée tous les deux ans. Elle est tenue à jour au moyen de suppléments récapitulatifs semestriels.

NOC 5524 806 2204 § 6. Liste V. *Nomenclature des stations de navire:*

2205 (1) Cette liste contient les états signalétiques:

2206 *a*) Des stations de navires pourvus d'installations radiotélégraphiques;

2207 *b*) Des stations des navires pourvus d'installations radiotélégraphiques et radiotéléphoniques;

2208 *c*) Des stations des navires pourvus uniquement d'installation radiotéléphoniques, lorsque ces stations communiquent avec des stations du service mobile maritime autres que celles de leur propre nationalité, ou lorsque ces navires effectuent des voyages internationaux;

2209 *d*) Des stations des navires équipés de stations terriennes mobiles.

2210 (2) Cette liste est complétée par un tableau et une carte indiquant, suivant les zones, les horaires de service à bord des navires dont les stations sont classées dans les deuxième et troisième catégories (voir l'appendice **12**), et par une annexe donnant des renseignements sur les systèmes mobiles maritimes à satellites, qui pourront être communiqués au Secrétaire général par les administrations participantes.

ADD 5524A 2211 (3) La liste V est rééditée chaque année. Elle est tenue à jour au moyen d'un supplément trimestriel publié en plus du supplément récapitulatif semestriel.

MOD 5525 807 2212 § 7. Liste VI. *Nomenclature des stations de radiorepérage et des stations effectuant des services spéciaux:*

2213 (1) Cette liste comprend les états signalétiques des stations radiogoniométriques et de radiophare du service de radionavegation maritime, y compris les stations de radiophare du service de radionavegation aéronautique susceptibles d'être utilisées pour la navigation maritime, ainsi que les états signalétiques des systèmes de radiorepérage par satellite, disponibles pour l'utilisation maritime, des navires-stations océaniques, des stations émettant des signaux pour l'étalonage des goniomètres ainsi que des stations émettant des fréquences étalon et des signaux horaires, des bulletins météorologiques réguliers, des avis aux navigateurs, des avis médicaux, des bulletins épidémiologiques et des ursigrammes. Dans cette liste, une section spéciale est consacrée à chaque classe de stations.

ADD 5525A 2214 (2) La liste VI est rééditée à des intervalles que détermine le Secrétaire général. Elle est tenue à jour au moyen de suppléments récapitulatifs semestriels.

MOD 5526 808 2215 § 8. Liste VII. *Liste alphabétique des indicatifs d'appel des séries internationales assignés aux stations figurant dans les listes I, II, IV, V, VI et VIII-A.*

Cette liste est publiée en deux volumes.

MOD 5527 809 2216 (1) Liste VII-A. *Liste alphabétique des indicatifs d'appel et ou tableau numérique des identités des stations utilisées dans le service mobile maritime et le service mobile maritime par satellite (stations côtières, stations côtières terriennes, stations de navire, stations terriennes de navire, stations de radiorepérage et stations effectuant des services spéciaux), des numéros ou signaux d'appel sélectif de station de navire et de station terrienne de navire, des identités du service mobile maritime pour les stations de navire et les stations terrienes de navire, des numéros ou signaux d'identifications de station côtière et de station côtière terrienne et des identités du service mobile maritime pour les stations côtières et les stations côtières terriennes:*

2217 *a*) Cette liste est précédée du tableau d'attribution des séries internationales d'indicatifs d'appel et du tableau des séries de chiffres d'identification de nationalité figurant dans les appendices **42** et **43** respectivement ainsi que d'un tableau des signaux caractérisant les émissions des radiophares utilisés dans le service mobile maritime;

ADD 5527A 2218 *b*) La liste VII-A est rééditée tous les deux ans. Elle est tenue à jour au moyen des suppléments récapitulatifs trimestriels.

(MOD) 5528 810 2219 (2) Liste VII-B. *Liste alphabétique des indicatifs d'appel des stations autres que les stations d'amateur, les stations expérimentales et les stations du service mobile maritime:*

a) Cette liste est précédée du tableau d'attribution des séries internationales d'indicatifs d'appel figurant à l'appendice **42** et d'un tableau indiquant la forme des indicatifs d'appel assignés par chaque administration à ses stations d'amateur et à ses stations expérimentales;

ADD **5528A** **2221** *b*) La liste VII-B est rééditée à des intervalles que détermine le Secrétaire général. Elle est tenue à jour au moyen de suppléments récapitulatifs trimestriels.

MOD **5529** **2222** § 9. Liste VIII. *Nomenclature des stations de contrôle international des émissions:*
811

2223 (1) Cette liste contient sous forme de tableaux, l'état signalétique des stations de contrôle qui participent au système de contrôle international des émissions.

ADD **5529A** **2224** (2) La liste VIII est publiée à des intervalles que détermine le Secrétaire général. Elle est tenue à jour au moyen de suppléments récapitulatifs publiés à des intervalles déterminés par le Secrétaire général.

(MOD) **5530** **2225** § 10. Liste VIII-A. *Nomenclature des stations des services de radiocommunication spatiale et du service de radioastronomie:*
811A

2226 (1) Cette liste comprend les états signalétiques des stations terriennes, des stations spatiales et des stations de radioastronomie. Le Comité établit et tient à jour le contenu de cette liste, en groupe ses rubriques de telle façon que les administrations puissent identifier plus facilement toutes les stations faisant partie d'un réseau à satellite donné. De plus, le Comité apporte les améliorations nécessaires à la présentation de la liste, sans modifier de quelque manière que ce soit les données fondamentales spécifiées dans le présent Règlement. Toutefois, les stations terriennes mobiles du service mobile maritime par satellite ne doivent pas y être inscrites. Mais un renvoi général à la Nomenclature des stations de navire doit figurer dans la liste VIII-A.

ADD **5530A** **2227** (2) La liste VIII-A est rééditée à des intervalles que détermine le Secrétaire général. Elle est tenue à jour au moyen de suppléments récapitulatifs semestriels.

MOD **5531** **2228** § 11. *Carte des stations côtières ouvertes à la correspondance publique ou participant au service des opérations portuaires:*
812

La Carte est rééditée sous une forme et à des intervalles que détermine le Secrétaire général.

NOC **5532** **2229** § 12. *Graphique en couleurs indiquant la répartition des bandes de fréquences*
813 telle qu'elle est spécifiée dans l'article 8.

SUP **5533**
814

ADD **5533A** **2230** § 13. *Manuel à l'usage des services mobile maritime et mobile maritime par satellite:*
814A

2231 (1) Ce Manuel doit contenir les extraits pertinents:

2232 *a*) De la Convention internationale des télécommunications en vigueur;

2233 *b*) Du Règlement des radiocommunications en vigueur;

2234 *c*) Du Règlement télégraphique en vigueur, de la version actuelle de l'«Instruction pour l'exploitation du service télégraphique public international» et des Résolutions et Avis du CCITT;

2235 *d*) Du Règlement téléphonique en vigueur, de la version actuelle de l'«Instruction sur le service téléphonique international» et des Résolutions et Avis du CCITT.

ADD **5533B** **2236** (2) Le Manuel devrait être révisé, si nécessaire, notamment après les conférences
814B administratives et les Assemblées plénières du CCITT ou du CCIR. De nouvelles éditions seront publiées à des intervalles que devra déterminer le Secrétaire général.

SECTION II

ADD **Établissement et modifications des documents de service**

MOD **5534** **2237** § 14. (1) Le Secrétaire général publie les modifications à apporter aux documents
815 énumérées dans la section I du présent article. Les administrations prennent les dispositions voulues pour notifier immédiatement au Secrétaire général les modifications apportées aux renseignements relatifs à l'exploitation qui figurent dans les listes IV, V et VI, étant donné l'intérêt que présentent ces renseignements particulièrement en ce qui concerne la sécurité. Une fois par mois au minimum, les administrations portent à la connaissance du Secrétaire général, dans la forme indiqué pour les listes elles-mêmes á l'appendice **9**, les additions, modifications et suppressions à apporter aux listes IV, V et VI en utilisant les symboles appropriés figurant à l'appendice **10**. Il utilise d'autre part, pour apporter aux

listes I, II et VIII-A les additions, modifications et suppressions nécessairs, les renseignements que lui fournit l'IFRB et qui proviennent des informations reçues en applications des dispositions des articles 11, 12, 13 et 17. Il apporte à la liste VII les modifications nécessaires en utilisant les renseignements qu'il reçoit à propos des listes I, II, IV, V, VI, et VIII-A. Les renseignements contenus dans les listes IV et V sont coordonées avec ceux qui figurent dans la liste I. Le Secrétaire général signale toute divergence aux administrations intéressées.

NOC **5535** **2238** (2) En ce qui concerne les modifications permanentes du fonctionnement des stations de radiorepérage (liste VI), voir le numéro **2833.**

MOD **5551** **2239** § 15. (1) Les modèles d'après lesquels les listes II, IV, V, VI, VIII et VIII-A doivent être établies, sont indiqués à l'appendice **9**. Les préfaces à ces documents et à la liste I donnent toutes les indications nécessaires sur la façon de les utiliser. Chaque inscription doit comprendre le symbole approprié indiqué à l'appendice **10** pour désigner la catégorie de la station dont il s'agit. Le Secrétaire général peut choisir des symboles supplémentaires si nécessaire; il doit alors les notifier aux administrations.
831

MOD **5552** **2240** (2) Dans les documents de service, les noms des stations côtières, aéronautiques, radiogoniométriques et de radiophare sont suivis des mots:
832

NOC **5553** **2241** *a*) RADIO pour les stations côtières;
833

ADD **5553A** **2242** *b*) AERORADIO pour les stations aéronautiques;

NOC **5554** **2243** *c*) GONIO pour les stations radiogoniométriques maritimes;
834

NOC **5555** **2244** *d*) PHARE pour les stations de radiophare maritime;
835

NOC **5556** **2245** *e*) AEROPHARE pour les stations de radiophare aéronautique.
836

NOC **5557** **2246** § 16. En ce qui concerne les documents de service, il y a lieu d'entendre par le mot «pays» le territoire dans les limits duquel se trouve la station; un territoire n'ayant pas l'entiére responsabilité de ses relations internationales est également considéré à cet effet comme un «pays».

CHAPITRE VIII

Dispositions relatives à des groupes de services, ainsi qu'à des stations et des services particuliers (*)

N25

ARTICLE 1

NOC

Services de radiocommunication de Terre partageant des bandes de fréquences avec les services de radiocommunication spatiale au-dessus de 1 GHz

SECTION I

NOC

Choix des emplacements et des fréquences

NOC **6001** 470A **2501** § 1. Les emplacements et les fréquences des stations de Terre fonctionnant dans les bandes de fréquences partagées, avec égalité des droits, entre les services de radiocommunication de Terre et les services de radiocommunication spatiale doivent être choisis conformément aux Avis pertinents du CCIR relatifs à la séparation géographique entre stations de Terre et stations terriennes.

MOD **6002** 470AA **2502** § 2. (1) Dans toute la mesure pratiquement possible, les emplacements des stations d'émission (1) du service fixe ou du service mobile dont les puissances isotropes rayonnées équivalentes (p. i. r. e.) ont des valeurs maximales supérieures à + 35 dBW dans les bandes de fréquences comprises entre 1 GHz et 10 GHz doivent être choisis de telle manière que la direction du rayonnement maximal d'une antenne quelconque s'écarte d'au moins 2° de l'orbite des satellites géostationnaires, compte tenu des effets de la réfraction atmosphérique (2).

MOD **6003** 470AB **2503** (2) Dans toute la mesure pratiquement possible, les emplacements des stations d'émission (3) du service fixe ou du service mobile dont les puissances isotropes rayonnées équivalents (p. i. r. e.) ont des valeurs maximales supérieures à + 45 dBW dans les bandes de fréquences comprises entre 10 GHz et 15 GHz doivent être choisis de telle manière que la direction du rayonnement maximal d'une antenne quelconque s'écarte d'au moins 1,5° de l'orbite des satellites géostationnaires, compte tenu des effects de la réfraction atmosphérique (4).

MOD **6004** 470AC **2504** (3) Dans les bandes de fréquences supérieurs à 15 GHz, il n'y a pas de restriction (5) quant à la direction du rayonnement maximal des stations du service fixe ou mobile.

(*) Pour les dispositions régissent les services mobiles et les services spéciaux intéressant la sécurité, voir:

Services spéciaux intéressant la sécurité — chapitre IX;
Service mobile aéronautique — chapitre X;
Service mobile maritime — chapitre XI;
Service mobile maritime par satellite — chapitre XI;
Service mobile terrestre — chapitre XII.

NOC **6002.1** 470AA.1 **2502.1** (1) Pour leur propre protection, il convient que les stations de réception du service fixe ou du service mobile qui fonctionnent dans des bandes partagées avec les services de radiocommunication spatiale (dans le sens espace vers Terre) évitent d'orienter leurs antennes dans la direction de l'orbite des satellites géostationnaires, si leur sensibilité est suffisamment élevée pour qu'il puisse en résulter des brouillages importants de la part des émissions des stations spatiales.

NOC **6002.2** 470AA.2 **2502.2** (2) Des renseignements sur ce sujet figurent dans la version la plus récente du Rapport 393 du CCIR.

NOC **6003.1** 470AB.1 **2503.1** (3) Pour leur propre protection, il convenient que les stations de réception du service fixe ou du service mobile qui fonctionnent dans des bandes partagées avec les services de radiocommunication spatiale (dans le sens espace vers Terre) évitent d'orienter leurs antennes dans la direction de l'orbite des satellites géostationnaires, si leur sensibilité est suffisamment élevée pour qu'il puisse en résulter des brouillages importants de la part des émissions des stations spatiales.

NOC **6003.2** 470AB.2 **2503.2** (4) Des renseignements sur ce sujet figurent dans la version la plus recent du Rapport 393 du CCIR.

ADD **6004.1** **2504.1** (5) Les dispositions du numéro **2504** sont applicabbles jusqu'à ce que le CCIR emette un Avis relatif à la nécessité d'appliquer des restrictions dans les bandes de fréquences spécifiées au numéro **2511**; tous ls systèmes mis en service aprés le 1er janvier 1982 devraient dés lors respecter, dans la mesure pratiquement possible, les restritions spécifiées.

SECTION II

Limites de puissance

NOC

MOD **6005** **2505**
470B

§ 3. (1) Le niveau maximal de la puissance isotrope rayonnée équivalent (p. i. r. e.) d'une station du service fixe ou du service mobile ne doit pas dépasser + 55 dBW.

MOD **6006** **2506**
470BA

(2) Dans le cas où il n'est pas pratiquement possible de se conformer aux dispositions du numéro **2502,** le niveau maximal de la puissance isotrope rayonnée équivalente (p. i. r. e.) d'une station du service fixe ou du service mobile ne doit pas dépasser:

+ 47 dBW dans toute direction d'écartant de moins de 0,5° de l'orbite des satellites géostationnaires, ou

+ 47 dBW à + 55 dBW, sel o n une variation linéaire en décibles (8 dB par degré), dans toute direction comprise entre 0,5 et 1,5° par rapport à l'orbite des satellites géostationnaires, compte tenu des effects de la réfraction athmosphérique (1).

NOC **6007** **2507**
470C

(3) Le niveau de la puissance fournie à l'antenne par un émetteur du service fixe ou du service mobile, dans les bandes de fréquences comprises entre 1 GHz et 10 GHz, ne doit pas dépasser + 13 dBW.

NOC **6008** **2508**
470CA

(4) Le niveau de la puissance fournie à l'antenne par un émetteur du service fixe ou du service mobile, dans les bandes de fréquences supérieures à 10 GHz, ne doit pas dépasser + 10 dBW.

MOD **6009** **2509**
470D

(5) Les limites spécifiées aux numéros **2502, 2505, 2506** et **2507** s'appliquent dans les bandes de fréquences ci-aprés qui sont attribuées au service fixe par satellite, au service de météorologie par satellite et au service mobile par satellite, pour la réception par les stations spatiales, lorsque ces bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile:

1626,5-1645,5 MHz (pour les pays énumérés au numéro **730**);
1646,5-1660 MHz (pour les pays énumérés au numéro **730**);
2665-2690 MHz (2) (pour les Régions 2 et 3);
5725-5755 MHz (2) (pour les pays de la Région 1 énumérés aux numéros **803** et **805**);
5755-5850 MHz (2) (pour les pays de la Région 1 énumérés aux numéros **803, 805** et **807**);
5850-7075 MHz;
7900-8400 MHz.

MOD **6010** **2510**
470DA

(6) Les limites spécifiées aux numéros **2503, 2505** et **2508** s'appliquent dans les bandes de fréquences ci-après qui sont attribuées, pour la réception par les stations spatiales, au service fixe par satellite lorsque ces bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile:

10,7-11,7 GHz (2) (3) (pour la Région 1);
12,5-12,75 GHz (2) (pour les pays énumérés aux numéros **848** et **850**);
12,7-12,75 GHz (2) (pour la Région 2);
12,75-13,25 GHz;
14,0-14,25 GHz (pour les pays énumérés au numéro **857**);
14,25-14,3 GHz (pour les pays énumérés aux numéros **857, 860** et **861**);
14,3-14,4 GHz (2) (pour les Régions 1 et 3);
14,4-14,5 GHZ;
14,5-14,8 GHZ (3).

MOD **6011** **2511**
470DB

(7) Les limites spécifiées aux numéros **2505** et **2508** s'appliquent dans les bandes de fréquences ci-après qui sont attribuées, pour la réception par les stations spatiales, au service fixe para satellite lorsque ces bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile:

17,7-18,1 GHz (3);

MOD **6006.** **2506.1**
470BA.1

(1) Voir le numéro **2503.2.**

ADD **6009.1** **2509.1**

ADD **6010.1** **2510.1**

(2) L'égalité des droits en matière d'exploitation des services, lorsqu'une bande de fréquences est attribuée à des services différents de même catégorie dans des Régions différents, est stipulée au numéro **346.** En ce qui concerne les brouillages entre Régions, il convient donc que les administrations respectent, dans la mesure pratiquement possible, toutes les limites qui peuvnet être spécifiées dans le Avis du CCIR.

ADD **6010.2** **2510.2**

ADD **6011.1** **2511.1**

(3) L'application des limites dans cette bande est provisoire (voir la Résolution **101**).

27,0-27,5 GHz (1) (pour les Régions 2 et 3);
27,5-29,5 GHz.

2512 à 2538 *(Non attribués.)*

ARTICLE 28

NOC

Services de radiocommunication spatiale partageant des bandes de fréquences avec les services de radiocommunication de Terre au-dessus de 1 GHz

SECTION I

NOC

Choix des emplacements et des fréquences

NOC **6037** 470E **2539** § 1. Les emplacements et les fréquences des stations terriennnes fonctionnant dans des bandes de fréquences partagées, avec égalité des droits, entre les services de radiocommunication de Terre et les services de radiocommunication spatiale, doivent être choisis conformément aux Avis pertinents du CCIR relatifs à la séparation géographique entre stations terriennes et stations de Terre.

SECTION II

NOC

Limites de puissance

NOC **6038** 470F **2540** § 2. (1) Stations terriennes.

(MOD) **6039** 470G **2541** (2) Le niveau de la puissance isotrope rayonnée équivalent (p. i. r. e.) émise dans une direction quelconque vers l'horizon par une station terrienne fonctionnant dans les bandes de fréquences comprises entre 1 GHz et 15 GHz, ne doit pas dépasser les limites ci-après, sauf dans les cas ou les dispositions des numéros **2544** ou **2546** sont applicables:

+ 40 dBW dans une bande quelconque large de 4 kHz, pour $\theta \leq 0°$;
+ 40 + 3 θ dBW dans une bande quelconque large de 4 kHz, pour $0 < \theta \leq 5°$;

θ étant, en degrés, l'angel de site de l'horizon vu du centre de rayonnement de l'antenne de la station terrienne. Cet angle ext exprimé par une valeur positive au-dessus du plan horizonal et par une valeur négative au-dessous de ce plan.

MOD **6040** 470GA **2542** (3) Le niveau de la puissance isotrope rayonnée équivalent (p. i. r. e.) émise dans une direction quelconque vers l'horizon par une station terriennne fonctionnant dans les bandes de fréquences supérieures à 15 GHz, ne doit pas dépasser les limites ci-après, sauf dans les cas ou les dispositions des numéros **2545** ou **2546** sont applicables:

+ 64 dBW dans une bande quelconque large de 1 MHz, pour $\theta \leq 0°$;
+ 64 + 3 θ dBW dans une bande quelconque large de 1 MHz pour $0° < \theta \leq 5°$;

θ étant défini comme au numéro **2541.**

(MOD) **6041** 470GB **2543** (4) Pour les angles de site de l' horizon supérieurs a 5°, il n'y a pas de restriction quant à la valeur de la puissance isotrope rayonnée équivalent (p. i. r. e.) émise par une station terrienne en direction de l'horizon.

(MOD) **6042** 470GC **2544** (5) Par dérogation aux limites spécifiées au numéro **2541,** la puissance isotrope rayonnée équivalent (p. i. r. e.) émise vers l'horizon par une station terrienne du service de recherche spatiale (espace lointain) ne doit pas dépasser + 55 dBW dans une bande quelconque large de 4 kHz.

(MOD) **6043** 470GD **2545** (6) Par dérogation aux limites spécifiées au numéro **2542,** la puissance isotrope rayonnée équivalent (p. i. r. e.) émise vers l'horizon par une station terrienne du service de recherche spatiale (espace lointain) ne doit pas dépasser + 79 dBW dans une bande quelconque large de 1 MHz.

NOC **6044** 470H **2546** (7) Les limites spécifiées aux numéros **2541, 2542, 2544** et **2545,** selon le cas peuvent être dépassées d'une valeur maximale de 10 dB. Cependant, si la zone de coordination qui en résulte empiète sur le territorie d'un autre pays, ce dépassement doit être soumis à l'accord de l'administration de ce pays.

ADD **6011.2** **2511.2** (1) Voir le numéro **2509.1.**

MOD **6045** **2547** (8) Les limites spécifiées au numéro **2541** s'appliquent dans les bandes de fréquences ci-après, qui sont attribuées, pour l'émission par les stations terriennes au service fixe par satellite et au service d'exploration de la Terre par satellite, et en particulier au service de météorologie par satellite, au service mobile par satellite et au service de recherche spatiale, lorsque ces bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile:
470J

5670-5725 MHz (pour les pays énumérés au numéro **804** vis-à-vis des pays énumérés aux numéros **803** et **805**);
5725-5755 MHz (1) (pour la Région 1 vis-à-vis des pays énumérés aux numéros **803** et **805**);
5755-5850 MHz (1) (pour la Région 1 vis-à-vis des pays énumérés aux numéros **803, 805** et **807**);
5850-7075 MHz;
7900-8400 MHz;
10,7-11,7 GHz (1) (Région 1);
12,5-12,75 GHz (1) (pour la Région 1 vis-à-vis des pays énumérés au numéro **848**);
12,7-12,75 GHz (1) (Région 2);
12,75-13,25 GHz;
14,0-14,25 GHz (par rapport aux pays énumérés au numéro **857**);
14,25-14,3 GHz (para rapport aux pays énumérés aux numéros **857, 860** et **861**);
14,3-14,4 GHz (1) (Régions 1 et 3);
14,4-14,8 GHz.

NOC **6046** **2548** (9) Les limites spécifiées au numéro **2542** s'appliquent dans les bandes de fréquences ci-après qui sont attribuées, pour le émission par les stations terrienne, au service fixe par satellite, service d'exploration de la Terre par satellite au service mobile par satellite et au service de recherche spatiale, lorsque ces bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile:
470JA

17,7-18,1 GHz;
27,0-27,5 GHz (1) (Région 2 et 3),
27,5-29,5 GHz;
31,0-31,3 GHz (tous les pays énumérés au numéro **885**);
34,2-35,2 GHz (tous les pays énumérés aux numéros **895** et **896** par rapport aux pays énumérés au numéro **894**).

SECTION III

NOC

Angle minimal de site

NOC **6047** **2549** § 3. (1) Stations terriennes.
470K

MOD **6048** **2550** (2) Les antennes des stations terriennes ne doivent pas être employées, à l'émission, sous des angles de site inférieus à 3°, mesurés à partie du plan horizontal dans la direction du rayonnement maximal, sauf accord des administrations intéréssées et de celles dont les services peuvent être affectés. Dans les cas de la réception par une station terrienne, la valeur ci-dessus doit être utilisée aux fins de la coordination si l'angle de site de fonctionnement est inférieur à cette valeur.
470L

NOC **6049** **2551** (3) Par dérogation aux dispositions du numéro **2550,** les antennes des stations terriennes du service de recherche spatiale (au voisinage de la Terre) ne doivent pas être employées, à l'émission, sous des angles de site inférieus à 5°, et les antennes des stations terriennes du service de recherche spatiale (espace lointain) ne doivent pas être employées, à l'émission, sous des angles de site inférieurs à 10°, ces deux angles étant mesurés à partir du plan horizontal dans la direction du rayonnement maximal. Dans le cas de la réception par une station terrienne, les valeurs ci-dessus doivent être utilisées aux fins de la coordination si l'angle de site de fonctionnement est inférieur à ces valeurs.
470LA

ADD **6045.1** **2547.1**
ADD **6046.1** **2548.1**

(1) L'égalité des droits en matière d'exploitation des services lorsqu'une bande de fréquences est attribuée à des services différents de même catégorie dans des Régions différentes, est stipulée au numéro **346**. En ce qui concerne les brouillages entre Régions, il convient donc que les administrations respectent, dans la mesure pratiquement possible, toutes les limites qui peuvent être spécifiées dans les Avis du CCIR.

SECTION IV

NOC **Limites de puissance surfacique produite par les stations spatiales**

NOC **6050** **2552** 4. (1) Limites de la puissance surfacique entre 1670 MHz et 1700 MHz.
470N

MOD **6051** **2553** *a*) La puissance surfacique produite à la surface de la Terre par les émissions d'une station spatiale, y compris celles provenant d'un satellite réflecteur, dans toutes les conditions et pour toutes les méthodes de modulation, ne doit pas dépasser — 133 dB (W/m^2) dans une bande quelconque large de 1,5 MHz. Cette limite s'applique à la densité surfacique de puissance que l'on obtiendrait en supposant une propagation en espace libre.
470NA

NOC **6052** **2554** *b*) La limite spécifiée au numéro **2553** s'aplique dans la bande de fréquences indiquée au numéro **2555,** qui est attribuée, pour l'émission par les stations spatiales, au service d'exploitation de la Terre par satellite et en particulier au service de météorologie par satellite, lorsque ladite est partagée, avec égalité des droits, avec le service des auxiliaires de la météorologie:
470NB

MOD **6053** **2555** 1670-1700 MHz.
470NC

MOD **6054** **2556** (2) Limites de la puissance surfacique entre 1525 MHz et 2500 MHz.
470ND

MOD **6055** **2557** *a*) La puissance surfacique produite à la surface de la Terre pas les émissions d'une station spatiale, y compris celles provenant d'un satellite réflecteur, dans toutes les conditions et pour toutes les méthodes de modulation, ne doit pas dépasser les limites suivantes:
470NE

— 154 dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angles d'arrivée compris entre 0° et 5° au-dessus du plan horizontal;
— 154 + 0,5 (δ – 5) dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angles d'arrivés δ (en degrés) compris entre 5° et 25° au-dessus du plan horizontal;
— 144 dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angles d'arrivé compris entre 25° et 90° au-dessus du plan horizontal.

Ces limites s'appliquent à la puissance surfacique que l'on obtiendrait en supposant une propagation en espace libre.

(MOD) **6056** **2558** *b*) Les limites spécifiées au número **2557** s'appliquent dans les bandes de fréquences énumérées au numéro **2559,** qui sont attribuées, pour l'émission par les stations spatiales aux services de radiocommunication spatiale suivants:
470NF

Service de météorologie par satellite (espace vers Terre);
Service de recherche spatiale (espace vers Terre);
Service d'exploitation spatiale (espace vers Terre);

lorsque lesdites bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile.

MOD **6057** **2559** 1525-1530 MHz (1) (Régions 1 et 3);
470NG 1530-1535 MHz (1) (Régions 1 et 3, jusqu'au 1er janvier 1990);
1670-1690 MHz;
1690-1700 MHz (sur le territoire des pays énumérés aux numéros **740** et **741**);
1700-1710 MHz;
2290-2300 MHz.

(MOD) **6058** **2560** *c*) Les valeurs de la puissance surfacique spécifiées au numéro **2557** ont été calculées en prenant comme objectif la protection du service fixe fonctionnant en visibilité directe. Lorsque le service fixe utilise des techniques de diffusion troposphérique fonctionne dans les bandes énumérées au numéro **2559** et que la séparation de fréquence est insuffisante, il faut prévoir une séparation angulaire suffisante entre la direction de la station spatiale et celle du rayonnement maximal de l'antenne de la station réceptrice du service fixe
470NGA

ADD **6057.1** **2559.1** (1) L'égalité des droits en matière d'exploitation des services lorsqu'une bande de fréquences est attribuée à des services différents de même catégorie dans des Régions différentes, est stipulée au numéro **346**. En ce qui concerne les brouillages entre Régions, il convient donc que les administrations respectent, dans la mesure pratiquement possible, toutes les limites qui peuvent être spécifiées dans les Avis du CCIR.

utilisant les techniques de diffusion troposphérique, afin que la puissance de brouillage à l'entrée du récepteur de la station du service fixe ne dépasse pas — 168 dBW dans une bande qualconque large de 4 kHz.

NOC **6059** **2561**
470NH
(3) Limites de la puissance surfacique entre 2500 MHz et 2690 MHz.

MOD **6060** **2562**
470NI
a) La puissance surfacique produite à la surface de la Terre par les émissions d'une station spatiale du service de radiodiffusion par satellite ou du service fixe par satellite, dans toutes les conditions et pour les méthodes de modulation, ne doit pas dépasser les limites suivantes:

— 152 dB (W/m²) dans une bande quelconque large de 4 kHz, pour les angles d'arrivée compris entre 0° et 5° au-dessus du plan horizontal;
— 152 + 0,75 (δ – 5) dB (W/m²) dans une bande quelconque large de 4 kHz, pour les angles d'arrivée δ (en degrés) compris entre 5° et 25° au-dessus du plan horizontal;
— 137 dB (W/m²) dans une bande quelconque large de 4 kHz pour les angles d'arrivée compris entre 25° et 90° au-dessus du plan horizontal.

Ces limites s'appliquent à la puissance surfacique que l'on obtiendrait en supposant une propagation en espace libre.

MOD **6061** **2563**
470NJ
b) Les limites spécifiées au numéro **2562** s'appliquent dans la bande de fréquences:

2500-2690 MHz;

qui est partagé entre, d'une part le service de radiodiffusion par satellite ou le service fixe par satellite, et d'autre part le service fixe ou le service mobile.

NOC **6062** **2564**
470NK
c) Les valeurs de la puissance surfacique spécifiées au numéro **2562** ont été calculées en prenant comme objectif la protection du service fixe fonctionnant en visibilité directe. Lorsque le service fixe utilisant les techniques de diffusion troposphérique fonctionne dans la bande indiquée au numéro **2563** et que la séparation de fréquence est insuffisante, il faut prévoir une séparation angulaire suffisante entre la direction de la station spatiale et celle du rayonnement maximal de l'antenne de la station réceptrice du service fixe utilisant les techniques de diffusion troposphérique, afin que la puissance de brouillage à l'entrée du récepteur de la station du service fixe ne dépasse pas — 168 dBW dans une bande quelconque large de 4 kHz

NOC **6063** **2565**
470NL
(4) Limites de la puissance surfacique entre 3400 MHz et 7750 MHz.

MOD **6064** **2566**
470NM
a) La puisance surfacique produite à la surface de la Terre par les émissions d'une station spatiale, y compris celles provenant d'un satellite réflecteur dans toutes les conditions et pour les méthodes de modulation, ne doit pas dépasser les limites suivantes:

— 152 dB (W/m²) dans une bande quelconque large de 4 kHz, pour le angles d'arrivée compris entre 0° et 5° au-dessus du plan horizontal;
— 152 + 0,5 (δ –5) dB (W/m²) dans une bande quelconque large de 4 kHz, pour les angles d'arrivé δ (en degrés) compris entre 5° et 25° au-dessus du plan horizontal;
— 142 dB (W/m²) dans une bande quelconque large de 4 kHz, pour les angles d'arrivé compris entre 25° et 90° au-dessus du plan horizontal;

Ces limites s'appliquent à la puissance surfacique que l'on obtiendrait en supposant une propagation en espace libre.

MOD **6065** **2567**
470NN
b) Les limites spécifiées au numéro **2556** s'appliquent dans les bandes de fréquences énumérées au numéro **2568,** qui ont attribuées, pour l'émission par les stations spatiales, aux services de radiocommunication spatiale suivants:

Service fixe par satellite (espace vers Terre);
Service de mé[illegible] par satellite (espace vers Terre);
Service mobile par satellite;
Service de recherche spatiale;

lorsque lesdites bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile.

NOC **6066** **2568**
470NO
3400-4200 MHz;
4500-4800 MHz;
5670-5725 MHz (sur le territorie des pays énumérés aux numéros **803** et **805**);
7250-7750 MHz.

NOC **6067** **2569** (5) Limites de la puissance surfacique entre 8025 MHz et 11,7 GHz.
470NP

MOD **6068** **2570** *a*) La puissance surfacique produite à la surface de la Terre par les émissions d'une
470NQ station spatiale, y compris celles provenant d'un satellite réflecteur, dans toutes les conditions et pour toutes les méthodes de modulation, ne doit pas dépasser les valeurs suivantes:

— 150 dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angels d'arrivée compris entre 0° et 5° au-dessus du plan horizontal;
— 150 + 0,5 (δ –5) dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angles d'arrivé δ (en degrés) compris entre 5° et 25° au-dessus du plan horizontal;
— 140 dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angels d'arrivée compris entre 25° et 90° au-dessus du plan horizontal.

Ces limites s'appliquent à la puissance surfacique que l'on obtiendrait en supposant une propagation en espace libre.

(MOD) **6069** **2571** *b*) Les limites spécifiées au numéro **2570** s'appliquent dans les bandes de fréquences
470NR énumérées au numéro **2572,** qui sont attribuées, pour l'émission par les stations spatiales, aux services de radiocommunication spatiale suivants:

Service d'exploration de la Terre par satellite (espace vers Terre);
Service de recherche spatiale (espace vers Terre);
Service fixe par satellite (espace vers Terre);

lorsque lesdites bandes sont partagées, avec égalité des droits, avec le service fixe ou le service mobile.

NOC **6070** **2572** 8025-8500 MHz;
470NS 10,7-11,7 GHz.

NOC **6071** **2573** (6) Limites de la puissance surfacique engre 12,2 GHz et 12,75 GHz,
470NT

NOC **6072** **2574** *a*) La puissance surfacique produite à la surface de la Terre pas les émissions d'une
470NU station spatiale, y compris celles provenant d'un satellite réflecteur, dans toutes les conditions et pour les méthodes de modulation, ne doit pas dépasser les limites suivantes:

— 148 dB (W/m^2) dans une bande quelconque large de 4 kHz, pour le angles d'arrivée compris entre 0° et 5° au-dessus du plan horizontal;
— 148 + 0,5 (δ –5) dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angles d'arrivé δ (en degrés) compris entre 5° et 25° au-dessus du plan horizontal;
— 138 dB (W/m^2) dans une bande quelconque large de 4 kHz, pour les angles d'arrivé compris entre 25° et 90° au-dessus du plan horizontal;

Ces limites s'appliquent à la puissance surfacique que l'on obtiendrait en supposant une propagation en espace libre.

(MOD) **6073** **2575** *b*) Les limites spécifiées au numéro **2574** s'apliquent dans les bandes de fréquences
470NV indiqueés au numéro **2576,** qui sont attribuées, pour l'émisision par les stations spatiales au service fixe par satellite, lorsque lesdites bandes sont partagées avec égalité des droits, avec le service fixe ou la service mobile.

MOD **6074** **2576** 12,2-12,5 GHz (1) (Région 3);
470NW 12,5-12,75 GHz (2) (Région 3 et dans la Région 1 sur le territoire des pays énumérés aux numéros **848** et **850**).

NOC **6075** **2577** (7) Limites de la puissance surfacique entre 17,7 GHz et 19,7 GHz.
470NX

MOD **6076** **2578** *a*) La puissance surfacique produite à la surface de la Terre par les émissions d'une
470NY station spatiale, y compris celles provenant d'un satellite réflecteur, dans toutes les conditions et pour toutes les méthodes de modulation, ne doit pas dépasser les limites suivantes:

— 115 dB (W/m^2) dans une bande quelconque large de 1 MHz, pour le angles d'arrivée compris entre 0° et 5° au-dessus du plan horizontal;

ADD **6074.1** **2576.1** (1) L'égalité des droits en matière d'exploitation des services lorsqu'une bande de fréquences est attribuée à des services différents de même catégorie dans des Régions différentes, est stipulée au numéro **346**. En ce qui concerne les brouillages entre Régions, il convient donc que les administrations respectent, dans la mesure pratiquement possible, toutes les limites qui peuvent être spécifiées dans les Avis du CCIR.

ADD **6074.2** **2576.2** (2) Voir le numéro **2576.1** et les Résolutions **31, 34** et **700.**

— 115 + 0,5 (δ –5) dB (W/m²) dans une bande quelconque large de 1 MHz, pour les angles d'arrivé δ (en degrés) compris entre 5° et 25° au-dessus du plan horizontal;
— 105 dB (W/m²) dans une bande quelconque large de 1 MHz, pour les angles d'arrivée compris entre 25° et 90° au-dessus du plan horizontal;

Ces limites s'appliquent à la puissance surfacique que l'on obtiendrait en supposant une propagation en espace libre.

(MOD) **6077** **2579** 470NZ *b*) Les limites spécifiées au numéro **2578** s'appliquent dans la bande de fréquences énumérée au numéro **2580,** qui est attribuée, pour l'émission par les stations spatiales, aux services de radiocommunication spatiale suivants:

Service fixe par satellite (espace vers Terre);
Service d'exploration de la Terre par satellite, y compris le service météorologique par satellite (espace vers Terre);

lorsque ladite bande est partagée, avec égalité des droits, avec le service fixe ou le service mobile.

MOD **6078** **2580** 470NZA 17,7-19,7 GHz (1).

ARTICLE 29

(MOD)

Dispositions spéciales relatives aux services de radiocommnication spatiale

SECTION I

NOC

Cessation des émissions

NOC **6015** **2612** 470V § 1. Les stations spatiales doivent être dotées de dispositifs permettant de faire immédiatemment, par télécommande, leurs émissions radioélectriques chaque fois que cette cessation est requise en vertu des dispositions du présent Règlement.

ADD **6078.1** **2580.1** (1) L'égalité des droits en matière d'exploitation des services lorsqu'une bande de fréquences est attribuée à des services différents de même catégorie dans des Régions différentes, est stipulée au numéro **346**. En ce qui concerne les brouillages entre Régions, il convient donc que les administrations respectent, dans la mesure pratiquement possible, toutes les limites qui peuvent être spécifiées dans les Avis du CCIR.

ADD **6079B.1** **2582.1** (2) Les dispositions du numéro **2582** s'appliquent jusqu'à ce que le CCIR adopte un Avis indiquant les limies de puissance surfacique qui doivent s'appliquer dans les bandes de fréquences spécifiées au numéro **2584,** tous les systèmes devant alors respecter les limites de puissance surfacique recommandés par le CCIR et approuvées par une conférence administrative mondiale de radiocommunication compétente.

SECTION II

MOD

Mesures contre les brouillages causés aux systèmes à satellites géostationnaires

MOD **6016** **2613**
470VA

§ 2. Les stations spatiales non géstationnaires doivent cesser leus émissions ou les réduire à un niveau négligeable, et les stations terriennes qui communiquent avec elles ne doivent plus émettre à leur intention, lorsqu'il n'y a pas une séparation angulaire suffisante entre satellites non géostationnaires et satellites géostationnaires, et que des brouillages inacceptables (1) sont causés à des systèmes spatiaux à satellites géostationnaires du service fixe par satellite fonctionnant conformément aux dispositions du présent Règlement.

ADD **6106A** **2614**

§ 3. Dans la bande de fréquences 29,95-30 GHz, les stations spatiales du service d'exploration de la Terre par satellite, installés à bord de satellites géostationnaires et fonctionnant avec des stations spatiales du même service installées à bord de satellites non géostationnaires, doivent observer la restrition suivante:

Chaque fois que les émissions provenant des satellites géostationnaires sont dirigées vers l'orbite des satellites géostationnaires et qu'elles causent des brouillages inacceptables (1) à un système spatial à satellites géostationnaries du service fixe par satellite, ces émissions doivent être réduites à un niveau égal ou inférieur au niveau de brouillage accepté (1).

SECTION III

NOC

Maintien en position des stations spatiales (2)

MOD **6107** **2615**
470VB

§ 4. (1) Les stations spatiales installées à bord de satellites géostationnaires qui utilisent une bande de fréquences quelconque attribuée au service fixe par satellite ou au service de radiodiffusion par satellite (3):

MOD **6108** **2616**
470VC

a) Doivent pouvoir être maintenues en position à moins de ± 0,1°de longitude de leur position nominale;

MOD **6109** **2617**
470VD

b) Doivent être maintenues en position à moins de ± 0,1° de longitude de leur position nominale;

ADD **6109A** **2618**

c) Cependant, les stations expérimentales installées à bord de satellites géostationnaires ne sont pas tenues d'observer les dispositions des numéros **2616** et **2617,** mais elles doivent être maintenues en position à moins de ± 0,5° de longitude de leur position nominale;

MOD **6110** **2619**
470VE

d) Les stations spatiales ne sont cependant pas tenues d'observer les dispositions du numéro **2617** ou au numéro **2618,** selon le cas, tant, que le réseau à satellite auquel elles appartiennent ne cause pas de brouillage inacceptable (4) à tout autre réseau à satellite sont la station spatiale respecte les limites fixées aux numéros **2617** et **2618.**

ADD **6110A** **2620**

(2) Les stations spatiales installées à bord de satellites géostationnaires qui n'utilisent aucune bande de fréquences attribuée au service fixe par satellite ou au service de radiodiffusion par satellite:

ADD **6110B** **2621**

a) Doivent pouvoir être maintenues en position à moins de ± 0,5° de longitude de leur position nominale;

ADD **6110C** **2622**

b) Doivent être maintenues en position à moins de ± 0,5° de longitude de leur position nominale;

ADD **6110D** **2623**

c) Cependant, elles ne sont pas tenues d'observer les dispositions du numéro **2622,** tant que le réseau à satellite auquel elles appartiennent ne cause pas de brouillage innaceptable (4) à toute autre réseau à satellite dont la station spatiale respecte les limites fixées au numéro **2622.**

ADD **6106.1** **2613.1**
ADD **6106A.1** **2614.1**

(1) Le niveau de brouillage accepté est fixé par accord entre les administrations intéressées, sur la base des Avis pertinents du CCIR.

NOC **A.N27** **A.29**
S.III S.III.1

(2) Dans le cas de stations spatiales installées à bord de satelites géosynchrones dont l'orbite a une inclinaison supérieure à 5°, les tolérances de position se rapportent au point nodal.

ADD **6107.1** **2615.1**

(3) Les stations spatiales du service de radiodiffusion par satellite installées à bord de satellites géostationnaires fonctionnant dans la bande 11,7-12,7 GHz ne sont pas tenues d'observer ces dispositions, mais elles doivent être maintenues en position conformément à l'appendice **30.**

MOD **6110.1** **2619.1**
470VE.1

ADD **6110D.1** **2623.1**

(4) Le niveau de brouillage accepté est fixé par accord entre les administrations intéressées, sur la base des Avis pertinents du CCIR.

ADD **6110E** **2624** (3) Les stations spatiales (1) installées à bord de satellites géostationnaires au sont mises en service avant le 1er janvier 1987, la publication anticipée des renseignements relatifs au réseau ayant été effectuée avant le 1er janvier 1982, ne sont pas tenues d'observer les dispositions des numéros **2615** à **2623;** cependant:

ADD **6110F** **2625** *a*) Elles doivent pouvoir être maintenues en position à moins de ± 1° de longitude de leur position nominale, mais on doit s'efforcer d'être en mesure de réduite cette tolérance à ± 0,5° au moins;

ADD **6110G** **2626** *b*) Elles doivent être maintenues en position à moins de ± 1° de longitude de leur position nominale;

ADD **6110H** **2627** *c*) Toutefois, elles ne sont pas tenues d'observer les dispositions du numéro **2626** ant que le réseau à satellite auquel elles appartiennent ne cause pas de brouillage inacceptable (2) à tout autre réseau à satellite dont la station spatiale respecte les limites fixées au numéro **2626.**

SECTION IV

NOC

Précision de pointage des antennes des satellites géostationnaires

MOD **6111** **2628** § 5. (1) On doit avoir la possibilité de maintenir la direction de pointage du rayonnement maximal d'un faisceau quelconque, dirigé vers la Terre, d'une antenne de satellite géostationnaire (3) à moins de:
470VF

a) 10 % de l'ouverture du faisceau à demi-puissance par rapport à la direction de pointage nominale; ou

b) 0,3° par rapport à la direction de pointage nominale;

la plus élévée de ces deux valeurs étant seule retenue. Cettre disposition s'applique uniquement lorsque le faisceau est destiné à une couverture inférieure à la couverture mondiale.

2629 (2) Au ces où le faisceau ne présente pas une symétrie de révolution autour de l'axe de rayonnement maximal, la tolérance dans un plan quelconque contenant cet axe doit être rapportée à l'ouverture du faisceau à demi-puissance dans ce plan.

2630 (3) Cette précision ne doit être maintenue que si cela nécessaire pour éviter de causer des brouillages inacceptables (4) à d'autres systèmes.

SECTION V

NOC

Puissance surfacique sur l'orbite des satellites géostationnaires

NOC **6112** **2631** § 6. Dans la bande de fréquences 8025-8400 MHz, que le service d'exploration de la Terre par satellite utilisant des satellites non géostationnaires partage avec le service fixe par satellite (Terre vers espace) ou avec le service de météorologie par satellite (Terre vers espace), la puissance surfacique maximale produite sur l'orbite des satellites géostationnaires par une station spatiale quelconque du service d'exploration de la Terre par satellite ne doit pas dépasser — 174 dB (W/m²) dans une bande quelconque large de 4 kHz.
470VG

ADD **6110E.1** **2624.1** (1) Voir le numéro **2615.1.**

ADD **6110H.1** **2627.1** (2) Le niveau de brouillage accepté est fixé par accord entre les administraions intéressées, sur la base des Avis prertinents du CCIR.

ADD **6111.1** **2628.1** (3) Les antennes d'émissions des stations spatiales du service de radiodiffusion par satellite fonctionnant dans la bande 11,7-12,7 GHz ne sont pas tenues d'observer ces dispositions, mais elles doivent conserver la précision de pointage spécifée au paragraphe 3.14.1 de l'annexe 8 à l'appendice **30.**

MOD **6111.2** **2630.1** (4) Voir le numéro **2627.1.**
470VF.1

SECTION VI

ADD **Radioastronomie dans la zone tranquile de la Lune**

ADD **6113** **2632** § 7. (1) Dans la zone tranquille de la Lune (1) les émissions causant un brouillage préjudiciable aux observations de la radioastronomie (2) ou à autres utilisateurs de services passifs sont interdites dans la totalité du spectre des fréquences à l'exception des bandes de fréquences suivantes:

2633 *a*) Les bandes de fréquences attribuées au service de recherche spatiale utilisant des détecteurs actifs;

2634 *b*) Les bandes de fréquences attribuées au service d'exploitation spatiale, au service d'exploration de la Terre par satellite utilisant des détecteurs actifs et au service de radiolocalisation utilisant des stations installées sur des engins spatiaux, qui sont nécessaires comme auxiliaires de la recherche spatiale, et pour les radiocommunications et les émissions de la recherche spatiale dans la zone tranquille de la Lune.

ADD **6114** **2635** (2) Dans les bandes de fréquences où les émissions ne sont pas interdites par les dispositions des numéros **2632** à **2634,** les observations de la radioastronomie et de la recherche spatiale (passive) dans la zone tranquille de la Lune peuvent être protégées des brouillages préjudiciables par accord entre les administrations intéressés.

SECTION VII

ADD **Limitations de la puissance des stations terriennes en dehors de l'axe du faisceau principal**

ADD **6115** **2636** § 8. Le niveau de puissance isotrope rayonnée équivalent (p. i. r. e.) émis par une station terrienne en dehors de l'axe du faisceau principal en direction de l'orbite des satellites géostationnaires exerce une influence significative sur les brouillages causés aux autres réseaux à satellite géostationnaire. La réduction à un minimum des rayonnements hors-axe assurerait une utilisation plus efficace de l'orbite des satellites géostationnaires et faciliterait le coordination; les administrations sont invitées à obtenir, à cet égard, les valeurs le plus faibles pratiquement possibles, compte tenu des Avis du CCIR les plus récents. La réduction à un minimum de ces niveaux est particulièrement importante dans les bandes de fréquences utililisées de façon intensive pour les liaisons montantes.

ARTICLE 30

NOC **Service de radiodiffusion et service de radiodiffusion par satellite**

SECTION I

Service de radiodiffusion

NOC **6213** **2664** *A*) Généralités

MOD **6214** **2665** § 1. (1) Il est interdit d'établir et d'exploiter des stations de radiodiffusion (radiodiffusion sonore et télévision) à bord de navires, d'aéronefs ou de tout object flottant ou aéroporté hors des territoires nationaux.
422

NOC **6215** **2666** (2) En principe, la puissance des stations de radiodiffusion qui utilisent des fréquences
423 inférieures à 5060 kHz ou supérieures à 41 MHz ne doit pas dépasser (excepté dans la bande 3900-400 kHz) la valeur nécessaire pour assurer économiquement un service national de bonne qualité à l'intérieur des frontières du pays considéré.

ADD **6113.1** **2632.1** (1) La zone tranquille de la Lune comprend la partie de la surface de la Lune et le volume d'espace adjacent qui sont protégés des émissions provenant d'un point situé à moins de 100 000 km du centre de la Terre.

ADD **6113.2** **2632.2** (2) Le niveau de brouillage préjudiciable est fixé par accord entre les administrations intéressées compte tenu des Avis pertinents du CCIR.

NOC **6216** **2667** *B*) Radiodiffusion dans la Zone tropicale

NOC **6217** **2668** § 2. (1) Dans le présent Règlement, l'expression «radiodiffusion dans la Zone tropicale» désigne un type particulier de radiodiffusion pour l'usage intérieur nationale les pays inclus dans la zone définie aux numéros **406** à **411** où l'on peut constater qu'en raison du niveau élevé des parasites atmosphériques et des difficultés de propagation il n'est pas possible de réaliser économiquement un service de meilleure qualité par l'emploi des ondes kilométriques, hectométriques ou métriques.
424

NOC **6218** **2669** (2) L'utilisation par le service de radiodiffusion des bandes de fréquences énumérées ci-après limitée à la Zone tropicale:
425

2300-2498 kHz (Région 1);
2300-2495 kHz (Régions 2 et 3);
3200-3400 kHz (toutes les Régions);
4750-4995 kHz (toutes les Régions);
5005-5060 kHz (toutes les Régions).

ADD **6218A** **2670** (3) La puissance de l'onde porteuse des émetteurs fonctionnant dans ce service, dans les bandes énumérées au numéro **2669,** ne doit pas dépasser 50 kW.

NOC **6219** **2671** (4) Dans la Zone tropicale, le service de radiodiffusion a priorité sur les autres services qui partagent avec lui les bandes de fréquences énumérées au numéro **2669.**
426

NOC **6220** **2672** (5) Toutefois, dans le partie de la Libye située au nord du parallèle 30° Nord, le service de radiodiffusion, dans les bandes énumérées au numéro **2669,** fonctionne sur la base de l'égalité des droits avec autres services avec lesquels il partage ces bandes dans la Zone tropicale.
427

NOC **6221** **2673** (6) Le service de radiodiffusion à l'intérieur de la Zone tropicale et les autres services à l'extérieur de cette doivent fonctionner conformément aux dispositions du numéro **346.**
428

SECTION II

NOC **Service de radiodiffusion par satellite**

NOC **6222** **2674** § 3. Lorsqu'on définit les caractéristiques d'une station spatiale du service de radiodiffusion par satellite, tous les moyens techniques disponibles sont utilisées pour réduire au maximum le rayonnement sur le territoire d'autres pays, sauf accord préalable de ces derniers.
428A

ARTICLE 32

MOD

Service d'amateur et service d'amateur par satellite

SECTION I

MOD

Service d'amateur

MOD **6354** **2731** § 1. Les radiocommunications entre stations d'amateur de pays différents sont
1560 interdites lorsque l'administration de l'un des pays intéressés a notifié son opposition.

MOD **6355** **2732** § 2. (1) Lorsqu'elles sont permises, les transmissions entre stations d'amateur de
1561 pays différents doivent se faire en langage clair et se limiter á des messages d'ordre technique ayant trait aux essais et á des remarques d'un caractère purement personnel qui, en raison de leur faible importance, ne justifient pas le recours au service public de télécommunications.

ADD **6355A** **2733** (2) Il est absolument interdit d'utiliser les stations d'amateur pour transmettre des communications internationales en provenance ou à destination de tierces personnes.

NOC **6356** **2734** (3) Les dispositions qui précèdent peuvent être modifiées par des arrangements
1562 particuliers entre les administrations des pays intéressés.

MOD **6357** **2735** § 3. (1) Toute personne qui souhaite obtenir une licence pour manœuvrer les
1563 appareils d'une station d'amateur doit prouver qu'elle est apte à la transmission manuelle correcte et à la réception auditive correcte de textes en signaux du code Morse. Cependant, les administrations intéressées peuvent ne pas exiger l'application de cette prescription lorsqu'il s'agit de stations utilisant exclusivement des fréquences supérieures à 30 MHz.

MOD **6358** **2736** (2) Les administrations prennent les mesures qu'elles jugent nécessaires pour vérifier
1564 les aptitudes opérationnelles et techniques de toute personne qui souhaite manœuvrer les appareils d'une station d'amateur.

MOD **6359** **2737** § 4. La puissance maximale des stations d'amateur est fixée par les administrations
1565 intéressées, en tenant compte des aptitudes techniques des opérateurs et des conditions dans lesquelles ces stations doivent fonctionner.

MOD **6360** **2738** § 5. (1) Toutes les règles générales fixées dans la Convention et dans le présent
1566 Règlement s'appliquent aux stations d'amateur. En particulier, la fréquence émise doit être aussi stable et aussi exempte de rayonnements non essentiels que l'état de la technique le permet pour les stations de cette nature.

MOD **6361** **2739** (2) Au cours de leurs émissions, les stations d'amateur doivent transmettre leur
1567 indicatif d'appel à de courts intervalles.

SECTION II

(MOD)

Service d'amateur par satellite

ADD **6361A** **2740** § 6. Les dispositions de la section I du présent article s'appliquent, s'il y a lieu, de la même manière au service d'amateur par satellite.

NOC 6362 1567A **2741** § 7. Les stations spatiales du service d'amateur par satellite qui fonctionnent dans les bandes partagées avec d'autres services sont équipées de dispositifs appropriés à la commande de leurs émissions, pour le cas où des brouillages préjudiciables seraient signalés conformément à la procédure spécifiée à l'article **22**. Les administrations qui autorisent de telles stations spatiales en informent l'IFRB et font en sorte que des stations terriennes de commande suffisantes soient installées avant le lancement, afin de garantir que tout brouillage préjudiciable qui serait signalé puisse être éliminé par lesdites administrations (voir le numéro **2612**).

2742 à 2766 *(Non attribués.)*

ARTICLE 33

MOD

Service des fréquences étalon et des signaux horaires

MOD 6389 1623 **2767** § 1. (1) Pour permettre une utilisation plus efficace du sprectre des fréquences radioeléctriques et pour favoriser d'autres activités techniques et scientifiques, les administrations qui assurent ou envisagent d'assurer un service de fréquences étalon et de signaux horaires doivent coordonner, conformément aux dispositions du présent article, l'établissement et l'exploitation de ce service au plan mondial, en veillant à l'étendre aux régions du monde qui sont insuffisamment desservies.

NOC 6390 1624 **2768** (2) A cet effet, les administrations prennent les mesures voulues pour coordonner avec le concours du Comité international d'enregistrement des fréquences toute nouvelle émission de fréquences étalon ou de signaux horaires ou toute modification apportée aux émissions existantes dans les bandes des fréquences étalon. Elles échangent entre elles et communiquent au Comité tous renseignements utiles à ce sujet. Le Comité consulte en cette matière le Directeur du CCIR, qui continue lui-même à s'assurer l'avis et la coopération du Bureau international de l'heure (BIH), de l'Union radio-scientifique internationale (URSI) et des autres organisations internationales ayant un intérêt direct et essential dans ce domaine.

(MOD) 6391 1625 **2769** (3) Autant que possible, aucune nouvelle fréquence n'est assignée dans les bandes du service des fréquences étalon, ni notifiée au Comité avant qu'ait été effectuée la coordination dont il est fait état ci-dessus.

NOC 6392 1626 **2770** § 2. En vue de réduire les brouillages dans les bandes du service des fréquences étalon, les administrations coopèrent entre elles en se conformant aux Avis du CCIR.

NOC 6393 1627 **2771** § 3. Les administrations qui assurent ce service coopèrent entre elles, par l'intermédiaire du CCIR, pour rassembler et distribuer les résultats des mesures de fréquences étalon et de signaux horaires, ainsi que les valeurs des ajustements des fréquences et des signaux horaires.

NOC 6394 1628 **2772** § 4. En choisissant les caractéristiques techniques des émissions de fréquences étalon et des signaux horaires, les administrations s'inspireront des Avis pertinents du CCIR.

Stations expérimentales

NOC 6420 1568 **2798** § 1. (1) Une station expérimentale ne peut entrer en communication avec des stations expérimentales d'autres pays qu'avec l'accord de l'administration dont elle relève. Chaque administration notifie aux administrations intéressées les autorisations ainsi délivrées.

NOC 6421 1569 **2799** (2) Les administrations intéressées fixent par des arrangements particuliers les conditions dans laquelles les communications peuvent être établies.

NOC 6422 1570 **2800** § 2. (1) Dans les stations expérimentales, toute personne manœuvrant des appareils radiotélégraphiques, pour son propre compte ou pour celui de tiers, doit avoir prouvé qu'elle est apte à la transmission manuelle et à la réception auditive de textes en signaux du code Morse.

MOD 6423 1571 **2801** (2) Les administrations prennent les mesures qu'elles jugent nécessaires pour vérifier les aptitudes opérationnelles et techniques de toute personne qui souhaite manœuvrer les appareils d'une station expérimentale.

MOD 6424 1572 2802 § 3. La puissance maximale des stations expérimentales est fixée par les administrations intéressées en tenant compte du but pour lequel leur création a été autorisée et des conditions dans lesquelles ces stations doivent fonctionner.

MOD 6425 1573 2803 § 4. (1) Toutes le règles générales fixées dans la Convention et dans le présent Règlement s'appliquent aux stations expérimentales. De plus, ces stations doivent satisfaire aux conditions techniques imposées aux émetteurs qui travaillent dans les mêmes bandes de fréquences, sauf lorsque le principe technique même des expériences s'y oppose. Dans ce cas, l'administration qui autorise l'exploitation de ces stations peut accorder une dispense sous une forme appropriée.

MOD 6426 1574 2804 (2) Au cours de leurs émissions, les stations expérimentales doivent transmettre à de courts intervalles leuf indicatif d'appel ou toute autre forme d'identification reconnue (voir l'article **25**).

NOC 6427 1575 2805 § 5. Pour une station expérimentale non susceptible de créer un brouillage préjudiciable à un service d'un autre pays, l'administration intéressée peut, si elle l'estime désirable, adopter des dispositions différentes de celles qui sont contenues dans le présent article.

NOC

Service de radiorepérage et service de radiorepérage par satellite

SECTION I

NOC

Dispositions générales

NOC 6453 1576 2831 § 1. Les administrations qui ont organisé un service de radiorepérage prennent toutes les dispositions nécessaires pour en assurer l'efficacité et la régularité. Cependant, elles n'acceptent aucune responsabilité quant aux conséquences éventuelles tant de l'inexactitude des informations fournies que du fonctionnement défectueux ou de l'arrêt du fonctionnement de leurs stations.

NOC 6454 1577 2832 § 2. En cas de mesure douteuse ou inexploitable, la station qui détermine un relèvement ou une position doit, si possible, aviser de cette incertitude la station mobile à laquelle fournir cette information.

NOC 6455 1578 2833 § 3. Les administrations notifient au Secrétaire général les caractéristiques de chaque station de radiorepérage assurant un service international intéressant le service mobile maritime, et notamment, si c'est nécessaire, pour chaque station ou groupe de stations, les secteurs dans lesquels les informations fournies sont normalement sûres. Ces renseignements sont publiés dans la Nomenclature des stations de radiorepérage et des stations effectuant des services spéciaux et tout changement de caractère permanent est notifié au Secrétaire général.

NOC 6456 1579 2834 § 4. Les procédés d'identification des stations de radiorepérage doivent être choisis de façon à éviter toute incertitude lorsqu'il s'agit de reconnaître une station.

NOC 6457 1580 2835 § 5. Les signaux émis par les stations de radiorepérage doivent permettre des mesures exactes et précises.

NOC 6458 1581 2836 § 6. Toute information concernant une modification ou une irrégularité du fonctionnement d'une station de radiorepérage doit être diffusée sans délai. A cet effet:

NOC 6459 1582 2837 *a)* Les stations terrestres des pays où fonctionne une service de radiorepérage émettent chaque jour, en cas de besoin, des avis de modification ou d'irrégularité de fonctionnement jusqu'au moment où le fonctionnement normal a repris ou, si une modification permanente est survenue, jusqu'au moment où l'on peut raisonnablement admettre que tous les navigateurs intéressés en ont été avisés;

NOC 6460 1583 2838 *b)* Les modifications permanentes ou les irrégularités de longue durée sont publiées dans les avis aux navigateurs dans le délai le plus bref.

SUP 6461 1584

ADD **6462A** **2839** § 7. (1) Les dispositions des numéros **2831** à **2838** à l'exception du numéro **2832** s'appliquent au service de radionavigation maritime par satellite.

ADD **6462B** **2840** (2) Les dispositions des numéros **2831** à **2838** à l'exception des numéros **2832** et **2833** s'appliquent au service de radionavegation aéronautique par satellite.

SECTION III

NOC

Stations radiogoniométriques

NOC **6463** **2841** § 8. (1) Dans le service de radionavigation maritime, la fréquence 410 kHz est la
1585 fréquence normale de radiogoniométrie en radiotélégraphie. Toutes les stations radiogoniométriques du service de radionavigation maritime faisant usage de la radiotélégraphie doivent pouvoir l'utiliser. Elles doivent, de plus, être en mesure de prendre des relèvements sur la fréquence de 500 kHz, notamment pour relever les stations émettant des signaux de détresse, d'alarme et d'urgence.

NOC **6464** **2842** (2) Lorsqu'il existe un service de radiogoniométrie dans les bandes autorisées entre
1586 1605 kHz et 2850 kHz, il convient que les stations radiogoniométriques soient en mesure de prendre des relèvements sur la fréquence d'appel et de détresse radiotéléphonique 2182 kHz.

NOC **6465** **2843** § 9. La procédure à suivre par les stations radiogoniométriques et définie à
1587 l'appendice **41**.

(MOD) **6466** **2844** § 10. En l'absence d'accord préalable, une station d'aéronef qui s'adresse à une
1588 station radiogoniométrique pour obtenir un relèvement doit faire usage à cette fin d'une fréquence sur laquelle veille normalement la station appelée.

NOC **6467** **2845** § 11. Dans le service de radionavigation aéronautique, la procédure visée dans la
1589 présente section pour la radiogoniométrie est applicable, sauf lorsque des procédures particulières résultant d'arrangements conclus par les administrations intéressées sont en vigueur.

SECTION IV

NOC

Stations de radiophare

NOC **6468** **2846** A) Généralités

NOC **6469** **2847** § 12. Lorsqu'une administration juge utile, dans l'intérêt de la navigation, d'organiser
1590 un service de stations de radiophare, elle peut employer à cette fin:

(MOD) **6470** **2848** *a*) Des radiophares proprement dits, établis sur la terre ferme ou sur des
1591 navires amarrés de façon permanente ou, exceptionnellement, sur des navires naviguant dans une zone restreinte dont les limites sont connues et publiées. Le diagramme de l'émission de ces radiophares peut être directif ou non directif;

NOC **6471** **2849** *b*) Des stations fixes, des stations côtières ou des stations aéronautiques
1592 désignées pour fonctionner comme radiophares à la demande des stations mobiles.

NOC **6472** **2850** § 13. (1) Les radiophares proprement dits emploient les fréquences des bandes qui
1593 leur sont attribuées aux termes du chapitre III.

NOC **6473** **2851** (2) Les autres stations notifiées comme radiophares utilisent, à cet effet, leur
1594 fréquence normale de travail et leur classe normale d'émission.

NOC **6474** **2852** (3) La puissance rayonnée par chaque radiophare proprement dit doit être réglée à
1595 la valeur nécessaire pour que l'intensité de champ ait la valeur stipulée à la limite de portée requise (voir les numéros **2855** et **2860**).

NOC **6475** **2853**

B) Radiophares aéronautiques

MOD **6476** **2854**
433

§ 14. (1) L'assignation des fréquences de radiophares aéronautiques fonctionnant dans les bandes comprises entre 160 kHz et 435 kHz est fondée sur un rapport de protection contre les brouillages d'au moins 15 dB dans toute la zone de service de chaque radiophare.

MOD **6477** **2855**
434

(2) Il convient que la puissance rayonnée soit maintenue à la valeur minimale nécessaire pour que le champ ait la valeur voulue à la limite de portée.

(MOD) **6478** **2856**
435

(3) La limite de portée de jour des radiophares visés au numéro **2854** est définie par les valeurs de champ spécifiées ci-après:

NOC **6479** **2857**
436

(4) Régions 1 et 2:

70 microvolts par mètre pour les radiophares situés au nord du parallèle 30° N;
120 microvolts par mètre pour les radiophares situés entre les parallèles 30° N et 30° S;
70 microvolts par mètre pour les radiophares situés au sud du parallèle 30° S.

NOC **6480** **2858**
437

(5) Région 3:

70 microvolts par mètre pour les radiophares situés au nord du parallèle 40° N;
120 microvolts par mètre pour les radiophares situés entre les parallèles 40° N et 50° S;
70 microvolts par mètre pour les radiophares situés au sud du parallèle 50° S.

NOC **6481** **2859**

C) Radiophares maritimes

NOC **6482** **2860**
458

§ 15. (1) Les valeurs des rapports de protection applicables aux radiophares maritimes fonctionnant dans les bandes comprises entre 283,5 kHz et 335 kHz sont déterminées en admettant que la puissance rayonnée et maintenue à la valeur nécessaire pour obtenir l'intensité de champ voulue à la limite de portée.

(MOD) **6483** **2861**
459

(2) La limite de portée de jour des radiophares visés au numéro **2860** est définie par la condition qu'à cette limite, des champs soient les suivants:

NOC **6484** **2862**
460

(3) Région 1:

50 microvolts par mètre pour les radiophares situés au nord du parallèle 43° N;
75 microvolts par mètre pour les radiophares situés entre les parallèles 43° N et 30° N;
100 microvolts par mètre pour les radiophares situés entre les parallèles 30° N et 30° S;
75 microvolts par mètre pour les radiophares situés entre les parallèles 30° S et 43° S;
50 microvolts par mètre pour les radiophares situés ao sud du parallèle 43° S.

NOC **6485** **2863**
461

(4) Région 2:

50 microvolts par mètre pour les radiophares situés au nord du parallèle 40° N;
75 microvolts par mètre pour les radiophares situés entre les parallèles 40° N et 31° N;
100 microvolts par mètre pour les radiophares situés entre les parallèles 31° N et 30° S;
75 microvolts par mètre pour les radiophares situés entre les parallèles 30° S et 43° S;
50 microvolts par mètre pour les radiophares situés au sud du parallèle 43° S.

NOC **6486** **2864**
462

(5) Région 3:

75 microvolts par mètre pour les radiophares situés au nord du parallèle 40° N;

100 microvolts par mètre pour les radiophares situés entre les parallèles 40° N et 50° S;
75 microvolts par mètre pour les radiophares situés au sud du parallèle 50° S.

NOC **6487** **2865** (6) Dans la Région 1, l'assignation de fréquences aux radiophares maritimes est établie sur la base d'un espacement de 2,3 kHz entre fréquences adjacentes utilisées pour des émissions de classe A2A.
463

NOC **6488** **2866** (7) Dans la Région 1, il convient que le taux de modulation des émissions des radiophares maritimes soit d'au moins 70 %.

ARTICLE 36

ADD

Service de radioastronomie

SECTION I

ADD

Dispositions générales

ADD **6579** **2892** § 1. Les administrations coopèrent pour protéger le service de radioastronomie contre les brouillages, en tenant compte:

2893 *a*) De la sensibilité exceptionnellement élevée des stations de radioastronomie;

2894 *b*) De la nécessité fréquente de longues périodes d'observation exemples de brouillages préjudiciables;

2895 *c*) Du fait que le petit nombre de stations de radioastronomie dans chaque pays et la connaissance de leur emplacement permettent souvent d'accorder une attention particulière à la manière d'éviter les brouillages.

ADD **6580** **2896** § 2. Les emplacements des stations de radioastronomie à protéger et les fréquences d'observation qu'elles utilisent sont notifiés à l'IFRB conformément au numéro **1492** et publiés par le Secrétaire général conformément au numéro **2237** pour communication aux Membres.

SECTION II

ADD

Mesures à prendre dans le service de radioastronomie

ADD **6581** **2897** § 3. Les emplacements des stations de radioastronomie sont choisis en tenant compte des possibilités de brouillages préjudiciables à ces stations.

ADD **6582** **2898** § 4. Tous les moyens techniques pratiquement réalisables sont adoptés dans les stations de radioastronomie pour réduire leur susceptibilité aux brouillages. Le développement de techniques améliorées pour réduire la susceptibilité aux brouillages doit être poursuivi, y compris la participation à des études en commun par l'entremise du CCIR.

SECTION III

ADD

Protection du service de radioastronomie

ADD **6583** **2899** § 5. Les statut du service de radioastronomie dans les diverses bandes de fréquences est spécifié au tableau d'attribution des bandes de fréquence (article **8**). Les administrations assurent la protection des stations du service de radioastronomie contre les brouillages sur la base du statut de ce service dans les bandes considérées (voir aussi les numéros **344, 2632** à **2634** et **2635**).

ADD **6584** **2900** § 6. Lorsqu'elles assurant la protection du service de radioastronomie contre les brouillages à titre permanent ou temporaire, les administrations utilisent, selon le cas, des moyens tels que la séparation géographique, l'effet d'écran du terrain, la directivité de l'antenne, l'utilisation du partage dans le temps et de la plus faible puissance d'émission pratiquement réalisable.

ADD 6585 2901 § 7. En assignant des fréquences aux stations des autres services dans les bandes adjacentes à celles que le service de radioastronomie utilise pour ses observations conformément aux dispositions du présent Règlement les administrations sont instamment priées de prendre toutes des mesures pratiquement réalisables pour protéger le service de radioastronomie contre les brouillages préjudiciables conformément au numéro **343**. Outre les mesures mentionnées au numéro **2900**, il convient d'examiner particulièrement les moyens techniques permettant de ramener au minimum la puissance rayonnée aux fréquences comprises dans la bande utilisée pour la radioastronomie (voir aussi le número **344**).

ADD 6586 2902 § 8. En assignant des fréquences à des stations dans d'autres bandes, les administrations sont instamment priées, dans la mesure pratiquement possible, de tenir compte de la nécessité d'éviter les rayonnements non essentiels susceptibles de causer des brouillages préjudiciables au service de radioastronomie exploité conformément au présent Règlement (voir aussi le numéro **344**).

ADD 6587 2903 § 9. En appliquant les dispositions définies dans la présente section, les administrations sont instamment priées de ne pas perdre de vue que le service de radioastronomie est extrêmement sensible aux brouillages causés par les émissions provenant de stations spatiales ou d'aéronef.

ADD 6588 2904 § 10. Les administrations doivent prendre note des Avis pertinents du CCIR afin de limiter les brouillages causés par d'autres services au service de radioastronomie.

ARTICLE 37

NOC

Dispositions générales

MOD 6589 1380 2930 § 1. La procédure fixée dans le présent chapitre est obligatoire dans le service mobile maritime ainsi que pour les communications entre stations d'aéronef et stations du service mobile maritime. Les dispositions du présent chapitre sont également applicables dans le service mobile aéronautique, sauf en cas d'arrangements particuliers conclus par les gouvernements intéressés.

MOD 6590 1380A 2931 § 2. La procédure fixée dans le présent chapitre est obligatoire dans le service mobile maritime par satellite ainsi que pour les communications entre les stations à bord des aéronefs et les stations du service mobile maritime par satellite dans tous les cas où ce service ou ces stations sont expressément mentionnés. Les dispositions des numéros **3086, 3090, 3095, 3096, 3097, 3098, 3200, 3203** et **3223** s'appliquent également.

NOC 6591 1381 2932 § 3. (1) Aucune disposition du présent Réglement ne peut faire obstacle à l'emploi, par une station mobile ou une station terrienne de navire en détresse, de tous les moyens dont elle dispose pour attirer l'attention, signaler sa situation et obtenir de secours.

(MOD) 6592 1381A 2933 (2) Aucune disposition du présent Réglement ne peut faire obstacle à l'emploi, par des stations à bord des aéronefs ou de navires participant à des opérations de recherche et de sauvetage, dans les circonstances exceptionnelles, de tous le moyens dont elles disposent pour assistir une station mobile en détresse.

MOD 6593 1382 2934 (3) Aucune disposition du présent Règlement ne peut faire obstacle à l'emploi, par une station terrestre, dans les circonstances exceptionnelles, de tous les moyens dont elles dispose pour assister une station mobile en détresse (voir également le numéro **959**).

NOC 6594 1384 2935 § 4. Dans les cas de détresse, d'urgence ou de sécurité, les transmissions:

NOC 6595 1385 2936 *a)* En radiotélégraphie, ne doivent en général pas dépasser le vitesse de seize mots par minute;

NOC 6596 1386 2937 *b)* En radiotéléphonie, doivent être effectuées lentement et distinctement, chaque mot étant prononcé nettement afin de faciliter sa transcription.

NOC **6597** **2938** § 5. Il convient d'utiliser, le cas échéant, les abréviations et les signaux de l'appendice **14** ainsi que les tables d'épellation des lettres et de chiffres de l'appendice **24**; de plus, en cas de difficultés de langage, l'utilisation du Code international de signaux est recommandée.
1386A

NOC **6598** **2939** § 6. (1) La Convention internationale pour la sauvegarde de la vie humaine en mer
965 détermine les navires et ceux de leurs engins de sauvetage qui doivent être équipés d'installations radioeléctriques ainsi que les navires qui doivent être équipés d'appareils radioeléctriques portatifs à utiliser par les engins de sauvatage. Elle prescrit également les conditions que doivent remplir de tels appareils.

NOC **6599** **2940** (2) Les annexes à la Convention relative à l'aviation civile internationale définissent
966 les aéronefs qu'il convient d'équiper d'installations radioélectriques ainsi que les aéronefs qu'il convient d'équiper d'appareils radioélectriques portatifs à utiliser par les engins de sauvatage. Elles définissent également les conditions qu'il convient que de tels appareils remplissent.

NOC **6600** **2941** § 7. Cependant, les prescriptions du présent Règlement doivent être observées par
967 tous les appareils de cette nature.

NOC **6601** **2942** § 8. Les stations mobiles du service mobile maritime peuvent communiquer à des
968 fins de sécurité avec les stations du service mobile aéronautique.

(MOD) **6602** **2943** § 9. Toute station établie à bord d'un aéronef et astreinte par une réglementation
992 nationale ou internationale à entrer en communication pour des raisons de détresse, d'urgence ou de sécurité avec les stations du service mobile maritime doit être en mesure, ou bien de faire des émissions de préférence de la classe A2A ou H2A et de recevoir des émissions de préférence des classes A2A et H2A sur la fréquence porteuse 500 kHz, ou bien de faire des émissions de la classe A3E ou H3E et de recevoir des émissions des classes A3E et H3E sur la fréquence porteuse 2182 kHz, ou bien de faire et de recevoir des émisssions de la classe G3E sur la fréquence 156,8 MHz.

ARTICLE 38

Fréquences pour la détresse et la sécurité

SECTION I

Fréquences disponibles

NOC **6629** **2969** *A)* 500 kHz

MOD **6630** **2970** § 1. (1) La fréquence 500 kHz est la fréquence internationale de détresse en radiotélé-
1107 graphie (voir également le numéro **472**; elle doit être utilisée à cet effet par les stations de navire, d'aéronef et d'engin de sauvetage qui font usage des fréquences comprises entre 405 kHz et 535 kHz, lorsque ces stations demandent l'assistence des services maritimes. Elle est utilisée pour l'appel et le trafic de détresse ainsi que pour le signal et les messages d'urgence, pour le signal de sécurité et en dehors des régions à trafic intense, pour de brefs messages de sécurité. Lorsque cela est possible en pratique, les messages de sécurité sont émis sur la fréquence de travail, après une annonce préliminaire sur la fréquence 500 kHz (voir aussi le numéro **4236**).

(MOD) **6631** **2971** (2) Il convient toutefois que les stations de navire et d'aéronef qui ne peuvent pas
1108 émettre sur la fréquence 500 kHz utilisent toute autre fréquence disponible sur laquelle elles pourraient attirer l'attention.

NOC **6632** **2972** *B)* 2182 kHz

MOD **6633** **2973** § 2. (1) La fréquence 2182 kHz (1) est la fréquence internationale de détresse en
1323 radiotéléphonie (voir également les numéros **500** et **501**): elle doit être employée à cet

---

NOC **6633.1** **2973.1** (1) Lorsque les administrations font assurer par leurs stations côtières une veille sur 2182 kHz pour
1323.1 recevoir des émissions des classes R3E et J3E ainsi que des émissions des classes A3E et H3E, les stations de navire se trouvant au-delà de la distance à laquelle elles pourraient communiquer avec ces stations côtières au moyen d'émissions des classes A3E ou H3E peuvent appeler, aux fins de sécurité, les stations côtières en utilisant les classes d'émission R3E ou J3E. Cette utilisation n'est autorisée que lorsque les appels effectués avec des émisssions des classes A3E et H3E ont été infructeux.

effet par les stations de navire, d'aéronef et d'engin de sauvetage et par les radiobalises de localisation des sinistres qui font usage des bandes autorisées comprises entre 1605 kHz lorsque ces stations demandent l'assistance des services maritimes. Elle est employée et 4000 kHz pour l'appel et le trafic de détresse, pour les signaux de radiobalise de localisation des sinistres, pour le signal et les messages d'urgence ainsi que pour le signal de sécurité. Les messages de sécurité doivent être transmis, lorsque c'est possible en pratique, sur une fréquence de travail après une annonce préalable sur la fréquence 2182 kHz. La classe d'émission à utiliser en radiotéléphonie sur la fréquence 2182 kHz est la classe A3E ou H3E (voir le numéro **4127**. La classe d'émission à utiliser par les radiobalises de localisation des sinistres est celle qui est spécifiée à l'appendice **37** (voir également le numéro **3265**).

MOD **6634** **2974** (2) Dans la zone des Régions 1 et 2 située au sud du parallèle 15° Nord, y compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, si un message de détresse transmis sur la fréquence porteuse 2182 kHz n'a pas fait l'objet d'un accusé de réception, on peut, lorsque c'est possible, transmettre de nouveau le signal d'alarme radiotéléphonique suivi de l'appel et du message de détresse sur l'une ou l'autre, selon de cas, des deux fréquences porteuses 4125 kHz ou 6215,5 kHz (voir les numéros **2982, 2986** et **3054**).
1323A

MOD **6635** **2975** (3) Il convient cependant que les stations de navire et d'aéronef qui ne peuvent pas émettre sur la fréquence porteuse 2182 kHz ni, dans les conditions du numéro **2974**, sur les fréquences porteuses 4125 kHz ou 6215,5 kHz, utilisent toute autre fréquence disponible sur laquelle elles pourraient attirer l'attention.
1324

NOC **6636** **2976** (4) Des appels sélectifs régis par le dispositions de l'article 62 peuvent être émis sur la fréquence porteuse 2182 kHz dans les sens côtière vers navire et navire vers côtière et entre navires: ils doivent être limités sur cette fréquence aux cas de détresse et d'urgence et aux avis d'une grande importance pour la navigation. Cette procédure ne peut en aucun cas se substituer à celles qui sont décrites aux numéros **3101, 3102, 3116, 3117** et **3270.**
1325A

NOC **6637** **2977** (5) Toute station côtière faisant usage de la fréquence porteuse 2182 kHz à des fins de détresse doit pouvoir transmettre le signal d'alarme radiotéléphonique décrit au numéro **3270** (voir aussi les numéros **3277, 3278** et **3279**).
1326

NOC **6638** **2978** (6) Il convient que toute station côtière autorisée à émettre des avis pour la navigation puisse transmettre le signal d'avis aux navigateurs décrit aux numéros **3284, 3285** et **3286.**
1326AA

NOC **6639** **2979** *C)* 3023 kHz

MOD **6640** **2980** § 3. La fréquence porteuse (fréquence de référence) aéronautique 3023 kHz peut être utilisée pour établir des communications entre les stations mobiles qui participent à des opérations de recherche et de sauvetage coordonnées, ainsi que des communications entre ces stations et les stations terrestres participantes, conformément aux dispositions des appendices 27 (*) et 27 Aer2 (*) (voir également les numéros **501** et **505**.
1326C

SUP **6641**
969A

MOD **6642** **2981** *D)* 4125 kHz

MOD **6643** **2982** § 4. Dans la zone des Règions 1 et 2 située au sud du parallèle 15° Nord, y compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, la fréquence porteuse 4125 kHz est désignée, en plus de la fréquence porteuse 2182 kHz, pour la détresse et la sécurité ainsi que pour l'appel et la réponse (voir également le numéro **520**). Les stations qui utilisent cette fréquence 4125 kHz peuvent continuer à utiliser la classe d'émission H3E jusqu'au 1er janvier 1984.
1351E

SUP **6644**
1351l

NOC **6645** **2983** *E)* 5680 kHz

MOD **6646** **2984** § 5. La fréquence porteuse (fréquence de référence) aéronautique 5680 kHz peut être utilisée pour établir des communications entre les stations mobiles qui participent à
1353B

(*) Note du Secrétariat général: voir de numéro **5189** et la Résolution **400.**

des opérations de recherche et de sauvatage coordonnées, ainsi que des communications entre ces stations et les stations terrestres participantes, conformément aux dispositions des appendices 27 (*) et 27 Aer2 (*) (voir également les numéros **501** et **505**).

MOD **6647** **2985** *F)* 6215,5 kHz

MOD **6648** **2986** § 6. Dans la zone de la Région 3 située au sud du parallèle 25° N, la fréquence porteuse 6215,5 kHz est désignée, en plus de la fréquence porteuse 2182 kHz, pour la détresse et la sécurité ainsi que pour l'appel et la réponse (voir également le numéro **523**). Les stations qui utilisent cette fréquence 6215,5 kHz peuvent continuer à utiliser la classe d'émission H3E jusqu'au 1er janvier 1984.
1351F

NOC **6649** **2987** *G)* 8364 kHz

MOD **6650** **2988** § 7. La fréquence 8364 kHz est désignée pour être utilisée par les stations d'engin de sauvetage, si elles sont équipées pour émettre sur les fréquences des bandes comprises entre 4000 kHz et 27 500 kHz et si elles désirent établir avec les stations des services mobiles maritime et aéronautique des communications relatives aux opérations de recherche et de sauvetage (voir également le numéro **501**).
1179

NOC **6651** **2989** *H)* 121,5 MHz et 123,1 MHz

NOC **6651A** **2990** § 8. (1) Les stations mobiles du service mobile maritime peuvent communiquer à des fins de sécurité avec les stations du service mobile aéronautique.
968

MOD **6652** **2991** (2) C'est seulement dans ces occasions qu'elles peuvent utiliser la fréquence aéronautique d'urgence 121,5 MHz et la fréquence aéronautique auxiliaire 123,1 MHz en émission de classe A3E pour les deux fréquences (voir également les numéros **501** et **593**). Elles doivent alors se conformer aux arrangements particuliers conclus par les gouvernements intéressés et régissant le service mobile aéronautique.
969

MOD **6653** **2992** *I)* 156,3 MHz et 156,8 MHz

MOD **6654** **2993** § 9. Les fréquences 156,3 MHz et 156,8 MHz peuvent être utilisées par les stations d'aéronef, mais uniquement à des fins relatives à la sécurité (voir également la remarque *h)* de l'appendice **18**).
953

SUP **6655**

MOD **6656** **2994** § 10. (1) La fréquence 156,8 KHz est la fréquence internationale de détresse, de sécurité et d'appel en radiotéléphonie pour les stations du service mobile maritime lorsqu'elles font usage de fréquences des bandes autorisées comprises entre 156 MHz et 174 MHz (voir également les numéros **501** et **613**). Elle est employée pour le signal, les appels et le trafic de détresse, pour le signal et le trafic d'urgence et pour le signal de sécurité (voir également le numéro **2993**). Les messages de sécurité doivent être transmis, lorsque c'est possible en pratique, sur une fréquence de travail après annonce préliminaire sur la fréquence 156,8 MHz. La classe d'émission à utilisar pour la radiotéléphonie sur la fréquence 156,8 MHz est la classe G3E (voir l'appendice **19**).
1359

NOC **6657** **2995** (2) Toutefois, il convient que les stations de navire qui ne peuvent pas émettre sur la fréquence 156,8 MHz utilisent toute autre fréquence disponible sur laquelle elles pourraient attirer l'attention.
1359AA

MOD **6658** **2996** *J)* 243 MHz

(Voir les numéros **501** et **642**.)

MOD **6659** **2997** *K)* Bande 406-406,1 MHz

(Voir le numéro **649**.)

(*) Note du Secrétariat général: voir de numéro **5189** et la Résolution **400**.

ADD **6659A** **2998** *L)* Bande 1544-1545 MHz et bande 1645,5-1646,5 MHz

(Voir le numéro **728**.)

NOC **6660** **2999** *M)* Aéronef en détresse
SUP **6661**
1208

MOD **6662** **3000** § 11. Tout aéronef en détresse transmet l'appel de détresse sur la fréquence sur laquelle les stations terrestres ou mobiles susceptibles de lui porter secours assurent la veille. Si cet appel est destiné à des stations du service mobile maritime, les dispositions des numéros **2970** et **2971** ou des numéros **2973** et **2975** ou **2994** et **2995** doivent être observées.
1321

NOC **6663** **3001** *N)* Station d'engin de sauvetage

NOC **6664** **3002** § 12. Les appareils à utiliser dans les stations d'engin de sauvetage doivent, s'ils peuvent employer des fréquences:
994

NOC **6665** **3003** *a) Dans les bandes comprises entre 405 kHz et 535 kHz*, pouvoir faire des émissions des classes A2A et A2B (*) ou H2A et H2B (*) sur la fréquence porteuse 500 kHz. Si l'installation comporte um récepteur pour l'une de ces bandes, celui-ci doit pouvoir recevoir des émissions des classes A2A et H2A sur la fréquence porteuse 500 kHz;
995

NOC **6666** **3004** *b) Dans les bandes comprises entre 1605 kHz et 2850 kHz*, pouvoir faire des émissions de la classe A3E ou H3E sur la fréquence porteuse 2182 kHz. Si l'installation comporte un récepteur pour l'une de ces bandes, celui-ci doit pouvoir recevoir des émissions des classes A3E et H3E sur la fréquence porteuse 2182 kHz;
996

NOC **6667** **3005** *c) Dans les bandes comprises entre 4000 kHz et 27 500 kHz*, pouvoir faire des émissions de la classe A2A ou H2A sur la fréquence porteuse 8364 kHz. Si l'installation comporte un récepteur pour l'une de ces bandes, celui-ci doit pouvoir recevoir des émissions des classes A1A, A2A et H2A dans toute la bande 8341,75-8728,5 kHz;
997

MOD **6668** **3006** *d) Dans les bandes comprises entre 118 MHz et 136 MHz*, pouvoir faire des émissions sur la fréquence 121,5 MHz, en utilisant de préférence la modulation d'amplitude. Si l'installation comporte un récepteur pour l'une de ces bandes, celui-ci doit pouvoir les émissions de la classe A3E sur 121,5 MHz;
998

NOC **6669** **3007** *e) Dans les bandes comprises entre 156 MHz et 174 MHz*, pouvoir faire des émissions sur la classe G3E sur la fréquence 156,8 MHz. Si l'installation comporte um récepteur pour l'une de ces bandes, celui-ci doit pouvoir recevoir des émissions de la classe G3E sur la fréquence 156,8 MHz;
998A

NOC **6670** **3008** *f) Dans les bandes comprises entre 1235 MHz et 328,6 MHz*, pouvoir faire des émissions sur la fréquence 243 MHz.
999

SECTION II

NOC **Protection des fréquences de détresse**

NOC **6671** **3009** *A)* Généralités

NOC **6672** **3010** § 13. Toute émission susceptible de produire des brouillages préjudiciables aux communications de détresse, d'alarme, d'urgence ou de sécurité sur les fréquences internationales de détresse 500 kHz ou 2182 kHz est interdite (voir les numéros **472, 500, 3018** et **3023.** Toute émission causant des brouillages préjudiciables aux communications de détresse, de sécurité et d'appel sur la fréquence 156,8 MHz est interdite (voir les numéros **613, 3033** et **4414.**
421

MOD **6673** **3011** § 14. (1) Les émissions d'essai doivent être réduites au minimum en particulier:
1295

3012 *a)* Sur la fréquence porteuse 2182 kHz;

(*) Ceci pourvoit à la réception automatique de signaux radiotélégraphiques d'alarme.

3013 *b*) Sur la fréquence 156,8 MHz;

3014 *c*) Sur la fréquence porteuse 4125 kHz dans la zone des Régions 1 et 2 située au sud du parallèle 15° Nord, y compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord;

3015 *d*) Sur la fréquence porteuse 6215,5 kHz dans la zone de la Région 3 située au sud du parallèle 25° Nord.

NOC **6674** 1295A **3016** (2) Il est interdit de faire des émissions d'essai du signal d'alarme radiotéléphonique sur la fréquence porteuse 2182 kHz et sur la fréquence 156,8 MHz, sauf s'il s'agit d'un matérial de secours qui ne peut émetre que sur ces fréquences: dans ce cas, il y a lieu de prendre les mesures qui s'imposent pour éviter le rayonnement. Il faut également prendre des mesures visant à empêcher le rayonnement provenant des essais du signal d'alarme radiotéléphonique sur les fréquences autres que les fréquences 2182 kHz et 156,8 MHz

NOC **6675** **3017** *B*) 500 kHz

NOC **6676** 1112 **3018** § 15. (1) Exception faite des émissions autorisées sur la fréquence 500 kHz, et sous réserve des dispositions du numéro **4226**, toute émission est interdite dans la bande 490-510 kHz (voir numéro **471** et Recommandation **200**).

NOC **6677** 1113 **3019** (2) Afin de faciliter la réception des appels de détresse, les autres émissions sur la fréquence 500 kHz doivent être réduites au minimum et leur durée ne doit pas dépasser une minute.

NOC **6678** 1113A **3020** (3) Avant d'émettre sur la fréquence 500 kHz, une station du service mobile doit écouter sur cette fréquence pendant un laps de temps suffisant, afin d'être certaine qu'aucun trafic de détresse n'est en cours (voir le numéro **3702** ou **4713**).

NOC **6679** 1113B **3021** (4) Les dispositions du numéro **3020** ne s'appliquent pas aux stations en détresse.

NOC **6680** **3022** *C*) 2182 kHz

NOC **6681** 1325 **3023** § 16. (1) Exception faite des émissions autorisées sur la fréquence porteuse 2182 kHz, toute émission est interdite sur les fréquences comprises entre 2173,5 kHz et 2190,5 kHz.

NOC **6682** 1326A **3024** (2) Avant d'émettre sur la fréquence porteuse 2182 kHz, une station du service mobile doit écouter sur cette fréquence pendant un laps de temps suffisant, afin d'être certaine qu'aucun trafic de détresse n'est en cours (voir le numéro **4915**).

NOC **6683** 1326B **3025** (3) Les dispositions du numéro **3024** ne s'appliquent pas aux stations en détresse.

NOC **6684** 1331 **3026** (4) Afin de faciliter la réception des appels de détresse, toutes les émissions sur la fréquence 2182 kHz doivent être réduites au minimum.

NOC **6685** 1466B **3027** (5) Pour limiter les émissions inutiles de signaux d'alarme, les essais du signal d'alarme radiotéléphonique sur la fréquence porteuse 2182 kHz sont interdits (voir le numéro **3016**).

NOC **6686** 1466C **3028** (6) A titre d'exception, ces essais sont autorisés pour les appareils radiotéléphoniques de secours qui disposent uniquement de la fréquence internationale de détresse 2182 kHz à condition que soit utilisée une antenne artificielle appropriée.

MOD **6687** **3029** *D*) 4125 kHz et 6215,5 kHz

MOD **6688** 1351G **3030** § 17. (1) Dans la zone des Régions 1 et 2 située au sud du parallèle 15° Nord, y compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, avant d'émettre sur la fréquence porteuse 4125 kHz ou 6215,5 kHz les stations écoutent sur cette fréquence pendant un laps de temps suffisant afin d'être certaines qu'aucun trafic de détresse n'est en cours (voir le numéro **4915**.

NOC **6689** 1351H **3031** (2) Les dispositions du numéro **3030** ne s'appliquent pas aux stations en détresse.

NOC **6690** **3032** *E*) 156,8 MHz

NOC **6691** 1363 **3033** § 18. (1) Toute émission dans la bande 156,725-156,875 MHz (1) pouvant causer des brouillages préjudiciables aux émissions autorisées des stations du service mobile maritime sur 156,8 MHz est interdite.

NOC **6691.1** 1363.1 **3033.1** (1) A partir du 1er janvier 1983, cette bande deviendra: 156,7625-156,8375 MHz (voir la Résolution **308**.

NOC 6692 3034 (2) Avant d'émettre sur la fréquence 156,8 MHz, il convient que les stations du service mobile écoutent sur cette fréquence pendant un laps de temps suffisant afin d'être certaines qu'aucun trafic de détresse n'est en cours (voir le numéro **4915**).
1363A

NOC 6693 3035 (3) Les dispositions du numéro **3034** ne s'appliquent pas aux stations en détresse.
1363B

NOC 6694 3036 (4) Afin de faciliter la réception des appels de détresse, toutes les émissions sur la fréquence 156,8 MHz doivent être réduites au minimum et ne pas dépasser une minute.
1363C

SECTION III

NOC

Veille sur les fréquences de détresse

NOC 6695 3037 *A)* 500 kHz

(MOD) 6696 3038 § 19. (1) En vue d'augmenter la sécurité de la vie humaine sur mer et au-dessus de la mer, toutes les stations du service mobile maritime qui écoutent normalement sur les fréquences des bandes autorisées entre 405 kHz et 535 kHz doivent, pendant leurs vacations, prendre les mesures utiles pour que la veille sur la fréquence de détresse 500 kHz soit assurée, deux fois par heure, pendant trois minutes commençant à X h 15 et X h 45, temps universel coordonné (UTC), par un opérateur utilisant un casque ou un haut-parleur.
1130

MOD 6697 3039 (2) Pendant les intervalles de temps indiqués ci-dessus, à lexception des émissions prévues au présent chapitre:
1131

NOC 6698 3040 *a)* Les émissions doivent cesser dans les bandes comprises entre 485 kHz et 515 kHz;
1132

NOC 6699 3041 *b)* Hors de ces bandes, les émissions des stations du mobile peuvent continuer. Les stations du service mobile maritime peuvent les écouter, à la condition expresse d'assurer d'abord la veille sur la fréquence de détresse, comme il est prescrit au numéro **3038.**
1133

NOC 6700 3042 § 20. (1) Les stations du service mobile maritime ouvertes ou service de la correspondance publique et utilisant les fréquences des bandes autorisées entre 405 kHz et 535 kHz doivent, pendant leurs vacations, rester à l'écoute sur la fréquence 500 kHz. Cette veille n'est obligatoire que pour les émissions des classes A2A et H2A.
1134

NOC 6701 3043 (2) Ces stations, tout en observant les prescriptions du numéro **3038,** ne sont autorisées à abandonner cette veille que lorsqu'elles sont engagées dans une communication sur d'autres fréquences.
1135

NOC 6702 3044 (3) Pendant qu'elles sont engagées dans une telle communication:
1136

3045 *a)* Les stations de navire peuvent maintenir la veille sur la fréquence 500 kHz au moyen d'un opérateur utilisant un casque ou un haut-parleur, ou au moyen de tout autre dispositif convenable, tel qu'un récepteur automatique d'alarme;

3046 *b)* Les stations côtières peuvent maintenir la veille sur la fréquence 500 kHz au moyen d'un opérateur utilisant un casque ou un haut-parleur; dans ce dernier cas, une mention peut être portée dans la Nomenclature des stations côtières.

NOC 6703 3047 *B)* 2182 kHz

NOC 6704 3048 § 21. (1) Toutes les stations côtières qui sont ouvertes à la correspondance publique et qui constituent um élément essentiel de la protection en cas de détresse dans leur zone, doivent assurer la veille sur la fréquence 2182 kHz pendant leurs vacations.
1332

NOC 6705 3049 (2) Ces stations assurent cette veille grâce à un opérateur utilisant des moyens auditifs: casque, casque à deux écouteurs indépendants ou haut-parleur.
1333

NOC 6706 3050 (3) Il convient, en outre, que les stations de navire assurent une veille aussi étendue que possible sur la fréquence porteuse 2182 kHz pour pouvoir recevoir, par tous les moyens appropriés, le signal d'alarme radiotéléphonique décrit au numéro **3270** et le signal d'avis aux navigateurs décrit aux numéros **3284, 3285** et **3286,** ainsi que les signaux de détresse, d'urgence et de sécurité.
1334

NOC 6707 3051 § 22. Il convient que les stations de navire ouvertes à la correspondance publique assurent autant que possible la veille sur la fréquence 2182 kHz pendant leurs vacations.
1335

NOC 6708 3052 § 23. En vue d'accroitre la sécurité de la vie humaine en mer et au-dessus de la mer, toutes les stations du service mobile maritime qui écoutent normalement sur les
1335A

fréquences des bandes autorisées comprises entre 1605 kHz et 2850 kHz prennent, autant que possible, les mesures utiles pour assurer pendant leurs vacations la veille sur la fréquence internationale de détresse 2182 kHz deux fois par heure, pendant trois minutes commençant à X h 00 et X h 30, temps universel coordonné (UTC).

MOD **6709** **3053** *C)* 4125 kHz et 6215,5 kHz

MOD **6710** **3054** 1354A § 24. (1) Dans la zone des Régions 1 et 2 située au sud du parallèle 15° Nord, y compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, toutes les stations côtières qui sont ouvertes à la correspondance publique et qui constituent um élément essentiel de la protection en cas de détresse dans la zone desservie peuvent maintenir une veille, pendant leurs vacations, sur les fréquences porteuses 4125 kHz et ou 6215,5 kHz (voir les numéros **2982** et **2986**). Il convient que cette veille soit mentionnée dans la Nomenclature des stations côtières.

NOC **6711** **3055** 1354B (2) Il convient que les stations assurent cette veille grâce à un opérateur utilisant des moyens auditifs: casque, casque à deux écouteurs indépendants ou haut-parleur.

NOC **6712** **3056** *D)* 156,8 MHz

NOC **6713** **3057** 1364 § 25. (1) Il convient que toute station côtière du service mobile maritime international radiotéléphonique dans la bande 156-174 MHZ, lorqu'elle constitue un élément essenciel de la protection en cas de détresse dans la zone desservie, assure, pendant ses vacations dans cette bande, une veille efficace par des moyens auditifs sur la fréquence 156,8 MHz (voir la Recommandation **306**).

NOC **6714** **3058** 1367 (2) Lorsqu'elles se trouvent dans la zone de service de stations côtières du service mobile maritime radiotéléphonique dans les bandes comprises entre 156 MHz et 174 MHz, et lorsque c'est possible en pratique, il convient que les stations de navire assurent la veille sur la fréquence 156,8 MHz. Il convient que celles qui ne sont pourvues que d'appareils radiotéléphoniques fonctionnant dans les bandes autorisées comprises entre 156 MHz et 174 MHz, assurent, lorsqu'elles sont en mer, une veille sur la fréquence 156,8 MHz.

NOC **6715** **3059** 1367A (3) Lorsqu'elles sont en liaison avec une station portuaire, les stations de navire peuvent, à titre exceptionnel et sour réserve de l'accord de l'administration intéressée, continuer à maintenir la veille seulement sur la fréquence prévue pour les opérations portuaires, à condition que la station portuaire maintienne la veille sur la fréquence 156,8 MHz.

NOC **6716** **3060** 1367B (4) Lorsqu'elles sont en liaison avec une station côtière du service du mouvement des navires, les stations de navire peuvent, sous réserve de l'accord des administrations intéressées, continuer à maintenir la veille seulement sur la fréquence appropriée du service du mouvement des navires, à condition que cette station côtière maintienne la veille sur la fréquence 156,8 MHz.

3061 à 3085 *(Non attribués.)*

N36/36

ARTICLE 39

NOC **Communications de détresse**

SECTION I

NOC **Généralités**

NOC **6767** **3086** 1394 § 1. L'appel de détresse a priorité absolue sur toutes les autres communications. Toutes les stations qui l'entendent doivent cesser immédiatement toute émission susceptible de troubler le trafic de détresse et continuer d'écouter sur la fréquence d'émission de l'appel de détresse. Cet appel ne doit pas être adressé à une station déterminée, et il ne doit pas en être accusé réception avant que le message de détresse qui le suit ait été transmis.

NOC **6768** **3087** 1383 § 2. L'appel et le message de détresse ne sont émis que sur ordre du commandant ou de la personne responsable du navire, de l'aéronef ou de toute autre véhicule portant la station mobile ou la station terrienne de navire.

SECTION II

NOC

Signal de détresse

NOC 6769 1389 **3088** § 3. (1) Le signal de détresse radiotélégraphique est constitué par le groupe ...— — —... symbolisé par SOS émis comme un seul signal dans lequel les traits sont accentués de manière à être distingués nettement des points.

NOC 6770 1390 **3089** (2) Le signal de détresse radiotéléphonique est constiué par le mot MAYDAY prononcé comme l'expression française «m'aider».

NOC 6771 1391 **3090** (3) Ces signaux de détresse indiquent qu'un navire, un aéronef ou tout autre véhicule est sous la menace d'un danger grave et imminent et demande une assistance immédiate.

SECTION III

NOC

Appel de détresse

NOC 6772 1392 **3091** § 4. (1) L'appel de détresse émis en radiotélégraphie comprend:

Le signal de détresse SOS (émis trois fois);
Le mot DE;
L'indicatif d'appel de la station mobile en detrésse (émis trois fois).

NOC 6773 1393 **3092** (2) L'appel de détresse émis en radiotéléphonie comprend:

Le signal de détresse MAYDAY (prononcé trois fois);
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);
L'indicatif d'appel ou toute autre forme d'identification de la station mobile en detrésse (prononcé trois fois).

SECTION IV

NOC

Messages de detrésse

NOC 6774 1395 **3093** § 5. (1) Le message de détresse radiotélégraphique comprend:

Le signal de détresse SOS;
Le nom ou toute autre forme d'identification de la station mobile em détresse;
Les renseignements relatifs à sa position;
La nature de la détresse et la nature du secours demandé;
Tout autre renseignement qui pourrait faciliter ce secours.

NOC 6775 1396 **3094** (2) Le message de détresse radiotéléphonique comprend:

Le signal de détresse MAYDAY;
Le nom ou toute autre forme d'identification de la station mobile en détresse;
Les renseignements relatifs à sa position;
La nature de la détresse et la nature du secours demandé;
Tout autre renseignement qui pourrait faciliter ce secours.

NOC 6776 1397 **3095** § 6. (1) En règle générale, un navire signale sa position en latitude et longitude (Greenwich), en employant des chiffres pour les degrés et les minutes, accompagnés de l'un des mots NORTH ou SOUTH et de l'un des mots EAST ou WEST. En radiotélégraphie, le signal . — . — . — sépare les degrés des minutes; toutefois cela ne doit pas nécessairement s'appliquer au service mobile maritime par satellite. Lorsque c'est possible en pratique, le relèvement vrai et la distance em milles marins par rapport à un point géographique connu peuvent être indiqués.

(MOD) 6777 1398 **3096** (2) En règle générale, un aéronef transmet dans son message de détresse, s'il en a le temps, les renseignements suivants:

Position estimée et heure de l'estimation;
Cap en degrés (en indiquant s'il s'agit du cap magnétique ou du cap vrai);

Vitesse à l'indicateur par rapport à l'air;
Altitude;
Type de l'aéronef;
Nature de la détresse et genre d'assistance désirée;
Tous autres renseignements pouvant faciliter le sauvetage (notamment l'intention du commandant de bord faire, par exemple, un amérissage forcé ou un atterrissage à tous risques).

NOC 6778 1399 **3097** (3) En règle générale, un aéronef en vol signale sa position en radiotéléphonie ou en radiotélégraphie:

Soit par sa latitude et sa longitude (Greenwich), en employant des chiffres pour les dégrés et minutes, accompagnés de l'un des mots NORTH ou SOUTH et de l'un des des mots EAST ou WEST;
Soit par le nom de la localité la plus proche et sa distance approximative par rapport à celle-ci, accompagnée, selon le cas, de l'un des mots NORTH, SOUTH, EAST ou WEST, ou éventuellement, lorsque c'est possible en pratique, les mots indiquant les directions intermédiaires.

NOC 6779 1400 **3098** (4) Cependent, en radiotéléghaphie, les mots NORTH ou SOUTH et EAST ou WEST indiqués aux números **3095** et **3097** peuvent être rempláces par les lettres N ou S et E ou W.

SECTION V

NOC **Procédures**

NOC 6780 **3099** *A) Radiotélégraphie*

NOC 6781 1401 **3100** § 7. (1) La procédure de détresse radiotélégraphique comprend:

NOC 6782 1402 **3101** Le signal d'alarme suivi, dans l'ordre, de;

NOC 6783 1403 **3102** L'appel de détresse et un intervalle de deux minutes;

NOC 6784 1404 **3103** L'appel de détresse;

NOC 6785 1405 **3104** Le message de détresse;

NOC 6786 1406 **3105** Deux traits de dix à quinze secondes chacun;

NOC 6787 1407 **3106** L'indicatif d'appel de la station en détresse.

NOC 6788 1408 **3107** (2) Cependent, quand le temps a une importance vitale, la deuxiéme étape de cette procédure (numéro **3102** ou même la première et la deuxième étape (numéros **3101** et **3102**) peuvent être omises ou raccourcies. La première et la deuxième étape peuvent également omises dans las circonstances où la transmission du signal d'alarme n'est pas jugée nécessaire.

NOC 6789 1409 **3108** § 8. (1) Le message de détresse, précédé de l'appel de détresse, est répété à intervalles, notamment pendant les périodes de silence prévues au numéro **3038** pour la radiotélégraphie, jusqu'à ce qu'une réponse soit reçue.

NOC 6790 1410 **3109** (2) Toutefois, les intervalles doivent être suffisamment longs pour que les stations qui se préparant á répondre aient le temps de mettre en marche leurs appareils émetteurs.

NOC 6791 1411 **3110** (3) Le signal d'alarme peut également être répété si c'est nécessaire.

NOC 6792 1412 **3111** § 9. Les transmissions indiqueés aux numéros **3105** et **3106**, dont le but est de permettre aux stations radiogoniométriques de déterminer la position de la station en détresse, peuvent être répétées à des intervalles fréquents en cas de nécessité.

NOC 6793 1413 **3112** § 10. Dans le cas où la station mobile en détresse ne reçoit pas de réponse à un message de détresse transmis sur la fréquence de détresse, le message peut être répété sur toute autre fréquence disponible à l'aide de laquelle l'attention pourrait être attirée.

NOC 6794 1414 3113 § 11. Immédiatement avant un atterrissage à tous risques ou avant un atterrissage ou un amerrissage forcé d'un aéronef, ainsi qu'avant l'abandon total d'un navire ou d'un aéronef, ill convient que les appareils radioélectriques soient, si cela semble nécessaire et si les circonstances le permettent, placés en position d'émission continue.

NOC 6795 3114 *B)* Radiotéléphonie

NOC 6796 1415 3115 § 12. La procédure de détresse radiotéléphonique comprend:

NOC 6797 1416 3116 Le signal d'alarme (chaque fois que possible) suivi, dans l'ordre;

NOC 6798 1417 3117 De l'apple de détresse;

NOC 6799 1418 3118 Du message de détresse.

NOC 6800 1419 3119 § 13. Aprés la transmission de son message de détresse en radiotéléphonie, la station mobile peut être invitée à émettre des signaux appropriès suivis de son indicatif d'appel ou de toute autre forme d'identification, afin de permettre aux stations radiogoniométriques de déterminer sa position. Cette demande peut être répétée à des intervalles rapprochés en cas de nécessité.

NOC 6801 1420 3120 § 14. (1) Le message de détresse, précédé de l'appel de détresse, est répété à intervalles, notamment pendant les périodes de silence prévues au numéro **3052** pour la radiotéléphonie, jusqu'à ce qu'une réponse soit reçue.

NOC 6802 1421 3121 (12) Toutefois, les intervalles doivent être suffisamment longs pour que les stations qui se préparent à répondre aient le temps de mettre en marche leurs appareils émetteurs.

NOC 6803 1422 3122 (3) Cette répétition est précédée, chaque fois que possible, du signal d'alarme.

NOC 6804 1423 3123 § 15. Dans le cas où la station mobile en détresse ne reçoit pas de réponse à un message de détresse transmis sur la fréquence de détresse, le message peut être répété sur toute autre fréquence disponible à l'aide de laquelle l'attention pourrait être attirée.

NOC 6805 1424 3124 § 16. Immédiatement avant un atterrissage à tous risques ou avant un atterrissage ou un amerrissage forcé d'un aéronef, ainsi qu'avant l'abandon total d'un navire ou d'un aéronef, il convient que les appareils radioélectriques soient, si cela semble nécessaire et si les circonstances le permettent, placés en position d'émission continue.

NOC

SECTION VI

Accusé de réception d'un message de détresse

NOC 6806 1425 3125 § 17. (1) Les stations du service mobile qui reçoivent un message de détresse d'une station mobile se trouvant, sans soute possible, dans leur voisinage, doivent en accuser réception immédiatement.

NOC 6807 1426 3126 (2) Cependant, dans les zones ou des liaisons sûres peuvent être établies avec une ou plusieurs stations côtières, il convient que les stations de navire laissent s'écouler un court intervalle de temps avant d'accuser réception, de sorte qu'une stations côtière puisse transmettre son accusé de réception.

NOC 6808 1427 3127 (3) Les stations du service mobile qui reçoivent un message de détresse d'une station mobile qui, sans doute possible, n'est pas dans leur voisinage, doivent laisser s'écouler un court intervalle de temps avant d'en accuser réception, afin de permettre à des stations plus proches de la station mobile en détresse d'accuser réception sans brouillage.

NOC 6809 1427A 3128 (4) Cependant, les stations du service mobile maritime qui reçoivent un message de détresse d'une station mobile qui, sans aucun doute possible, est très éloignée, ne sont pas tenues d'accuser réception, sauf dans le cas prévu au numéro **3160.**

NOC 6810 1428 3129 § 18. L'accusé de réception d'un message de détresse est donnée sous la forme suivante:

NOC 6811 1429 3130 *a)* En radiotélégraphie:

Le signal de détresse $\overline{\text{SOS}}$;
L'indicatif d'appel de la station qui émet le message de détresse (émis trois fois);
Le mot DE;

L'indicatif d'appel de la station qui accuse réception (émis trois fois);
Le groupe RRR;
Le signal de détresse SOS;

NOC **6812** **3131** *b*) En radiotéléphonie:
1430

Le signal de détresse MAYDAY;
L'indicatif d'appel ou toute autre identification de la station qui émet le message de détresse (prononcé trois fois);
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de language);
L'indicatif d'appel ou toute autre identification de la station qui accuse réception (prononcé trois fois);
Le mot REÇU (ou RRR épelé à l'aide des mots de code ROMEO ROMEO ROMEO en cas de difficultés de langage);
Le signal de détresse MAYDAY.

NOC **6813** **3132** § 19. (1) Toute station mobile qui accuse réception d'un message de détresse doit, sur l'ordre du commandant ou de la personne responsable du navire, de l'aéronef ou du véhicule, donner aussitôt que possible les renseignements suivants, dans l'ordre indiqué:
1431

Son nom;
Sa position dans la forme prescrite aux numéros **3095, 3097** et **3098,** la vitesse avec laquelle elle dirige vers station mobile en détresse et le délai approximatif qui lui sera nécessaire pour la rejoindre;
De plus, si la position du navire en détresse semble douteuse, il convient que les stations de navire transmettent également, si elles le connaissent, le relèvement vrai du navire en détresse, précédé de l'abréviation QTE (pour la classification du relèvement, voir l'appendice **41**).

NOC **6814** **3133** (2) Avant de transmettre le message décrit au numéro **3132,** la station doit s'assurer
1432 qu'elle ne brouillera pas les émissions d'autres stations mieux placées pour porter un secours immédiat à la station en détresse.

NOC

SECTION VII

Trafic de détresse

NOC **6815** **3134** § 20. Le trafic de détresse comprend tous les messages concernant le secours
1433 immédiat nécesssaire à la station mobile en détresse.

NOC **6816** **3135** § 21. Dans un trafic de détresse, le signal de détresse est transmis avant l'appel et
1434 au début du préambule de tout radiotélégramme.

MOD **6817** **3136** § 22. La direction du trafic de détresse appartient à la station mobile en détresse ou
1435 à la station qui, par application des dispositions de la section VIII du présent article, a émis le message de détresse. Ces stations peuvent toutefois céder à une autre station la direction du trafic de détresse.

NOC **6818** **3137** § 23. La station en détresse ou la station qui dirige le trafic de détresse peut imposer
1436 le silence soit à toutes les stations du service mobile de la région, soit à une station qui brouillerait le trafic de détresse. Suivant le cas, elle adresse ces instructions «à tous» (CQ) ou à une station seulement. Dans les deux cas, elle fait usage:

NOC **6819** **3138** *a*) En radiotélégraphie, de l'abréviation QRT, suivie du signal de détresse
1437 SOS;

(MOD) **6820** **3139** *b*) En radiotéléphonie, du dignal SILENCE MAYDAY, prononcé comme
1438 les mots français «silence, m'aider».

NOC **6821** **3140** § 24. Lorsqu'elle le juge indispensable, toute station du service mobile proche du
1439 navire, de l'aéronef ou du véhicule en détresse peut également imposer le silence. Elle emploie à cet effet:

NOC **6822** **3141** *a*) En radiotélégraphie, l'abréviation QRT, suivie du mot DÉTRESSE et de
1440 son propre indicatif d'appel:

(MOD) **6823** **3142** *b*) En radiotéléphonie, le mot SILENCE, prononcé comme le mot français
1441 «silence», suivi du mot DÉTRESSE et de son propre indicatif d'appel.

NOC 6824 1442 **3143** § 25. (1) En radiotélégraphie, l'emploi du signal QRT $\overline{SOS}$ dot être réservé à la station mobile en détresse et à la station qui exerce la direction du trafic de détresse.

NOC 6825 1443 **3144** (2) En radiotéléphonie, l'emploi du signal SILENCE MAYDAY est réservé à la station mobile en détresse et à la station qui exerce la direction du trafic de détresse.

NOC 6826 1444 **3145** § 26. (1) Toute station du service mobile qui a connaissance d'un trafic de détresse et qui ne peut elle-même porter secours à la station en détresse doit néanmoins suivre ce trafic jusqu'au ce qu'elle acquière la certitude qu'un secours a été assuré.

NOC 6827 1445 **3146** (2) Tant qu'elles n'ont pas reçu un message leur indiquant qu'elles peuvent reprendre le travail normal (voir le numéro **3150**), il est interdit à toutes les stations qui ont connaissance de ce trafic, mais qui n'y participent pas, d'émettre sur les fréquences sur lesquelles a lieu le trafic de détresse

NOC 6828 1446 **3147** § 27. Une station du service mobile qui, tout en suivant un trafic de détresse, est en mesure de continuer son service normal, peut le faire lorsque le trafic de détresse est bien établi, et à condition d'observer les dispositions du numéro **3146** et de ne pas troubler le trafic de détresse.

NOC 6829 1447 **3148** § 28. Dans des cas tout à fait exceptionnels et à condition qu'il n'en résulte aucun brouillage ou retard dans l'écoulement du trafic de détresse, des messages d'urgence et de sécurité peuvent être annoncés pendant en temps mort du trafic de détresse, de préference par des stations côtières, et cela sur une fréquence de détresse. Cette annonce doit être accompagnée de l'indication de la fréquence de travail sur laquelle sera transmis le messsage d'urgence ou de sécurité; dans ce cas, il convient que les signaux prévus aux numéros **3196, 3197, 3221** et **3222** ne soient transmis qu'une fois (exemple: XXX DE ABC QSW ...).

NOC 6830 1448 **3149** § 29. Une station terrestre ou une station terrienne du service mobile maritime par satellite située en un point fixe déterminé et qui reçoit un message de détresse, doit prendre sans délai les mesures nécessaires pour aviser les autorités compétentes responsables de la mise en œuvre des moyens de sauvetage.

NOC 6831 1449 **3150** § 30. (1) Lorsque le trafic de détresse est terminé sur une fréquence qui a été utilisée pour le trafic de détresse, la station qui a exercé la direction de ce trafic transmet sur cette même fréquence un message adressé «à tous» (CQ) indiquant que le travail normal peut être repris.

NOC 6832 1449A **3151** (2) Lorsqu'il n'est plus nécessaire d'observer un silence complet surt une fréquence qui est utilisée pour le trafic de détresse, la station qui exerce la direction de ce trafic transmet sur cette même fréquence un message adressé «à tous» (CQ) indiquant qu'un travail restreint peut être repris.

NOC 6833 1450 **3152** (3):

a) En radiotélégraphic, le message mentionnée au numéro **3150** présente la forme suivante:

Le signal de détresse $\overline{SOS}$;
L'appel «à tous» CQ (émiss trois fois);
Le mot DE;
L'indicatif d'appel de la station qui émet le message;
L'heure de dépôt du message;
Le nom et l'indicatif d'appel de la station mobile qui était en détresse;
L'abreviation réglementaire QUM.

3153 *b*) En radiotélégraphie, le message mentionnée au numéro **3151** présente la forme suivante:

Le signal de détresse $\overline{SOS}$;
L'appel «à tous» CQ (émis trois fois);
Le mot DE;
L'indicatif d'appel de la station qui émet le message;
L'heure de dépôt du message;
Le nom et indicatif d'appel de la station mobile qui est en détresse;
L'abréviation réglementaire QUZ.

NOC 6834 1451 **3154** (4):

a) En radiotéléphonie, le message mentionnée au numéro **3150** présente la forme suivante:

Le signal de détresse MAYDAY;
L'appel «à tous» ou CQ (épelé à l'aide des mots de code CHARLIE QUEBEC) prononcé trois fois;

Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage;
L'indicatif d'appel ou toute autre identification de la station qui émet le message;
L'heure de dépôt du message;
Le nom et indicatif d'appel de la station mobile qui était en détresse;
Les mots SILENCE FINI prononcés comme les mots français «silence fini».

3155 *b*) En radiotéléphonie le message mentionné au numéro **3151** présente la forme suivante:

Le signal de détresse MAYDAY;
L'appel «à tous » ou CQ (épelé à l'aide des mots de code CHARLIE QUEBEC) prononcés trois fois;
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);
L'indicatif d'appel ou toute autre identification de la station qui émet le message;
L'heure de dépôt du message;
Le nom et l'indicatif d'appel de la station mobile qui est en détresse;
Le mot PRUDENCE prononcé comme le mot français «prudence».

NOC 6835 1451A **3156** § 31. Si la personne responsable d'une station en détresse qui a cedé à une autre station la direction du trafic de détressse considére que la observation du silence n'est plus justifiée, elle doit immédiatement en informer la station qui dirige le trafic de détresse, laquelle agira alors conformément aux dispositions du numéro **3150.**

SECTION VIII

NOC **Transmissions d'un message de détresse par une station qui n'est pas elle-même en détresse**

NOC **6836** 1452 **3157** § 32. Une station mobile ou une station terrestre qui apprend qu'une station mobile est en détresse doit transmettre un message de détresse dans chacun de cas suivants:

NOC **6837** 1453 **3158** *a*) La station en détresse n'est pas en mesure de transmettre elle-même le message de détresse;

NOC **6838** 1454 **3159** *b*) Le commandant ou la personne responsable du navire, de l'aéronef ou de tout autre véhicule non en détresse, ou encore la personne responsable de la station terrestre estime que d'autres secours sont nécessaires;

NOC **6839** 1455 **3160** *c*) Bien que n'étant pas mesure d'apporte du secours, ellle a entendu un message de détresse dont il n'a pas été accusée réception.

NOC **6840** 1456 **3161** § 33. (1) La transnission d'un message de détresse dans les conditions décrites aux numéros **3158** à **3160** a lieu sur une ou plusieurs des fréquences internationales de détressse (500 kHz, 2182 kHz, 156,8 MHz) ou sur toute fréquences pouvant être utilisée en cas de détresse (voir les numéros **2970, 2971, 2973, 2975, 2994, 2995** et **3000**).

NOC **6841** 1457 **3162** (2) La transmission du message de détresse est toujours précédée de l'appel défini ci-après. En outre, chaque fois que c'est possible, cet appel est lui-même précédé du signal d'alarme radiotélégraphique ou radiotéléphonique.

NOC **6842** 1458 **3163** (3) Cet appel comprend:

NOC **6843** 1459 **3164** *a*) En radiotélégraphie:

Le signal $\overline{\text{DDD}}$ $\overline{\text{SOS}}$ $\overline{\text{SOS}}$ $\overline{\text{SOS}}$ $\overline{\text{DDD}}$;
Le mot DE;
L'indicatif d'appel de la station qui transmet (émis trois fois);

NOC **6844** 1460 **3165** *b*) En radiotéléphonie:

Le signal MAYDAY RELAY, prononcé comme l'expression française «m'aider relais» (prononcé trois fois);
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);
L'indicatif d'appel ou toute autre identification de la station qui transmet (prononcé trois fois).

NOC 6845 1461 **3166** § 34. Lorqu'il est fait usage du signal d'alarme radiotélégraphique, un intérvalle de deux minutes sépare, quand cela est jugé nécessaire, l'appel mentionné au numéro **3164** du signal d'alarme.

NOC **6846** 1462 **3167** § 35. Lorsqu'une station du service mobile transmet un message de détresse dans les conditions spécifiées au numéro **3160,** elle doit prendre toute disposition afin d'en informer les autorités susceptibles d'apporter du secours.

NOC **6847** 1462A **3168** § 36. Une station de navire ne doit pas accuser réception d'un message de détresse transmis par une station côtière dans les conditions indiquées aux numéros **3157** à **3160,** avant que le commandant ou la personne responsable ait confirmé que cette station de navire est en mesure d'apporter du secours.

MOD

Transmission d'urgence et de sécurité, et transports sanitaires

SECTION I

NOC

Signal et messages d'urgence

NOC **6873** 1477 **3196** § 1. (1) En radiotélégraphie, le signal d'urgence consiste en trois répétitions du groupe «XXX», transmis en séparant bien les lettres de chaque groupe et les groupes successifs. Il est transmis avant l'appel.

NOC **6874** 1478 **3197** (2) En radiotéléphonie, le signal d'urgence consiste en trois répétitions du groupe «PAN PAN», le not PAN étant prononcé comme le mot français «panne». Il est transmis avant l'appel.

NOC **6875** 1479 **3198** § 2. (1) Le sinal d'urgence ne peut être transmis qu'avec l'autorisation du commandant ou de la personne responsable du navire, de l'aéronef et de tout autre véhicule portant la station mobile ou la station terrienne mobile du service mobile maritime par satellite.

NOC **6876** 1480 **3199** (2) Le signal d'urgence ne peut être transmis par une station terrestre ou une station terrienne du service mobile maritime par satellite située en un point fixe déterminé qu'avec l'approbation de l'autorité responsable.

NOC **6877** 1481 **3200** § 3. (1) Le signal de urgence indique que la station appelante a un message très urgent à transmettre concernant la sécurité d'un navire, d'un aéronef, d'un autre véhicule ou d'une personne.

NOC **6878** 1482 **3201** (2) Le signal d'urgence et le message qui le suit sont transmis sur one ou plusieurs des fréquences internationales de détresse (500 kHz, 2182 kHz, 156,8 MHz) ou sur toute autre fréquence pouvant être utilisée en cas de détresse.

NOC **6879** 1482A **3202** (3) Toutefois, dans le service mobile maritime, le message est transmis sur une fréquence de travail:

a) S'il d'agit d'un message long ou d'un avis médicale: *ou bien,*

b) Dans les zones à trafic intense, s'il s'agit de la répétition d'un message transmis conformément aux dispositions du numéro **3201.**

Une indication à cet effect est donnée à la fin de l'appel.

NOC **6880** 1483 **3203** (4) Le signal d'urgence a la priorité sur toutes les autres communications, sauf sur celles de détresse. Toutes les stations qui entendent le signal d'urgence doivent prendre soin de ne pas brouiller la transmission du message qui le suit.

NOC **6881** 1483A **3204** (5) Dans le service mobile maritime, les messages d'urgence peuvent être adressés, soit à toutes les stations, soit à une station déterminée.

NOC **6882** 1484 **3205** § 4. Les messages que précède le signal d'urgence doivent, en règle générale, être émis en langage clair.

NOC **6883** 1485 **3206** § 5. (1) Les stations mobiles qui entendent le signal d'urgence doivent rester à l'écoute pendant trois minutes au moins. Passé ce délai, si aucun message d'urgence n'a été entendu, une station terrestre doit, si possible, être avisée de la réception du signal d'urgence. Le service normal peut reprendre ensuite.

NOC **6884** 1486 **3207** (2) Toutefois, les stations terrestres et mobiles qui sont en communication sur des fréquences autres que celles utilisées pour la transmission du signal d'urgence et de l'appel qui le suit peuvent continuer sans arrêt leur travail normal, à moins qu'il ne s'agisse d'un message «à tous» (CQ).

(MOD) 6885 1487 3208 § 6. Lorsque le signal d'urgence a précédé l'émission d'un message «à tous» (CQ) comportant des mesures à prendre par les stations recevant ce message, la station responsable de l'émission doit l'annuler dès qu'elle sait qu'il n'est plus, nécessaire d'y donner suite. Ce message d'annulation est également un messsage «à tous» (CQ).

SECTION II

ADD **Transports sanitaires**

ADD 6885A 3209 § 7. L'expression «transports sanitaires», définie dans les Conventions de Génève de 1949 et les Protocoles Additionnels, recouvre tout moyen de transport, par terre, par eau ou par air, militaire ou civil, permanent ou temporaire, affecté exclusivement au transport sanitaire placé sous la direction d'une autorité compétente d'une Partie à un conflit.

ADD 6885B 3210 § 8. Aux fins d'annonce et d'identification de transports sanitaires qui sont protégées conformément aux Conventions susmentionnées, une transmission complète des signaux d'urgence décrits aux numéros **3196** et **3197** est suivie par l'adjonction du seul groupe «YYY» en radiotélégraphie et par l'adjonction du seul mot «MEDICAL» prononcé comme en français, en radiotéléphonie.

ADD 6885C 3211 § 9. Les fréquences spécifiées au numéro **3201** peuvent être utilisées par les transports sanitaires aux fins d'auto-identification et d'établissement des communications. La communication doit, dès que possible en pratique, être transférée sur une fréquence de travail appropriée.

ADD 6885D 3212 § 10. L'utilisation des signaux décrits dans le numéro **3210** indique que le message qui suit concerne un transport sanitaire protégé. Le messsage doit contenir les données suivants:

3213 *a*) L'indicatif d'appel ou tout autre moyen reconnu d'identification du véhicule de transport sanitaire;

3214 *b*) La position du véhicule de transport sanitaire;

3215 *c*) Le nombre et le type de véhicules de transport sanitaire;

3216 *d*) L'itinéraire prévu;

3217 *e*) La durée estimée du déplacement, et les heures de départ et d'arrivée prévues, selon le cas;

3218 *f*) Toute autre information, telle que l'atitude de col, les fréquences radioélectriques de veille, langues utilisées, modes et codes des systèmes de radar secondaires de surveillance.

ADD 6885E 3219 § 11. Les dispositions de la section I du présent article s'appliquent, s'il y a lieu, à l'utilisation des signaux d'urgence par des transports sanitaires.

ADD 6885F 3220 § 12. L'utilisation des radiocommunications pour annoncer et identifier les transports sanitaires est facultative; cependant, si elles sont employées, les dispositions du présent Règlement et, en particulier, celles de la présente section et des articles **37** et **38** s'appliquent.

SECTION III

NOC **Signal et messages de sécurité**

NOC 6886 1488 3221 § 13. (1) En radiotélégraphie, le signal de sécurité consiste en trois répétitions du groupe TTT. Les lettres de chaque groupe et les groupes sucessifs sont nettement séparés les uns des autres. Le signal de sécurité est transmis avant l'appel.

NOC 6887 1489 3222 (2) En radiotéléphonie, le signal de sécurité consiste en trois répétitions du mot SECURITÉ prononcé distinctement comme en français. Il est transmis avant l'appel.

NOC 6888 1490 3223 § 14. (1) Le signal de sécurité annonce que la station va transmettre un avis important aux navigateurs ou un avertissement météorologique important.

NOC 6889 1491 3224 (2) Le signal de sécurité et l'appel sont transmis sur une ou plusieurs des fréquences internationales de détresse (500 kHz, 2182 kHz, 156,8 MHz) ou sur toute autre fréquence pouvant être utilisée en cas de détresse.

NOC 6890 1492 3225 (3) Il convient que le message de sécurité qui suit l'appel soit transmis sur une fréquence de travail, une indication appropriée doit être donnée à cet effet à la fin de l'appel.

NOC 6891 1492A 3226 (4) Dans le service mobile maritime, les messages de sécurité sont, en règle générale, adressés à toutes les stations. Ils peuvent cependant, dans certains cas, être adressés à une station déterminée.

NOC **6892** 1493 **3227** § 15. (1) A l'éxception des messages transmis à heure fixe, le signal de sécurité, lorsqu'il est employé dans le service mobile maritime, doit être transmis vers la fin de la première période de silence qui se présente (voir le numéro **3038** pour la radiotélégraphie et le numéro **3052** pour la radiotéléphonie); le message est transmis immédiatement après la période de silence.

NOC **6893** 1494 **3228** (2) Dans les cas prévus aux numéros **3328, 3331** et **3335,** le signal de sécurité et le message qui le suit doivent être transmis dans le plus bref délai possible, mais ils doivent être répétés à la fin de la première période de silence suivante.

NOC **6894** 1495 **3229** § 16. Toutes les stations qui perçoivent le signal de sécurité doivent écouter le message de sécurité jusqu'à ce qu'elles aient acquis la certitude que ce message ne les concerne pas. Elles ne doivent faire aucune émission susceptible de brouiller le message.

ARTICLE 41

NOC

Signaux d'alarme et d'avertissement

SECTION I

NOC

Signaux des radiobalises de localisation des sinistres

SUP **6920** 1388A

NOC **6921** 1476A **3255** § 1. Le signal d'une radiobalise de localisation des sinistres se compose:

NOC **6922** 1476B **3256** *a*) En ondes hectométriques, c'est-à-dire sur la fréquence 2182 kHz (1):

3257 1) D'une émission modulée par la fréquence acoustique 1300 Hz, manipulée de façon que la rapport entre la durée d'émission et la durée de silence soit égal ou supérieur à l'unité; la durée d'émission est comprise entre une et cinq secondes; *ou*

NOC **6923** 1476C **3258** 2) Du signal d'alarme radiotélephonique (voir le numéro **3270**) suivi de la lettre B en code Morse, ou de l'indicatif d'appel du navire auquel appartient la radiobalise, ou des deux informations, transmis par manipulation d'une porteuse modulée par la fréquence acoustique 1300 Hz ou 2200 Hz;

(MOD) **6924** 1476D **3259** *b*) Em ondes métriques, c'est-à-dire sur les fréquences 121,5 MHz et 243 MHz, d'un signal dont les caractéristiques, doivent être conformes à celles qui sont recommandées para les organisations mentionnées dans la Résolution **601.**

NOC **6925** 1476H **3260** § 2. (1) Les signaux des radiobalises de localisatiom des sinistres ont pour but essentiel de faciliter le repérage de la position de naufragés au cours des opérations de recherche et de sauvetage.

NOC **6926** 1476I **3261** (2) Ces signaux indiquent qu'une ou plusieurs personnes sont en détresse qu'elles ne se trouvent peut-être plus à bord d'un navire ou d'un aéronef et qu'elles ne disposent peut-être plus d'appareil récepteur.

NOC **6927** 1476J **3262** (3) Toute station du service mobile qui reçoit l'un de ces signaux alors qu'aucun trafic de détresse ou d'urgence n'est en cours considère que les dispositions des numéros **3157** et **3158** sont applicables.

(MOD) **6928** 1476E **3263** § 3. (1) Les radiobalises de faible puissance (Type L) n'utilisent que le signal défini au numéro **3257,** qu'elles émettent continuellement.

NOC **6929** 1476F **3264** (2) Les radiobalises de grand puissance (Type H) peuvent émettre soit le signal défini au numéro **3257,** soit celui défini au numéro **3258,** selon un cycle de manipulation constitué par un signal de manipulation d'une durée comprise entre trente et cinquante secondes, suivi d'une période de silence d'une durée de trente à soixante secondes.

NOC **6922.1** 1476B.1 **3256.1** (1) Au Japon, il existe des radiobalises de localisation des sinistres qui utilisent des émissions de la classe A1A pour émettre des signaux de détresse et l'identification sur des fréquences comprises entre 2089,5 kHz et 2092,5 kHz.

NOC 6930 1476G 3265 (3) Toutefois les cycles de manipulation spécifiés aux numéros **3263** et **3264** peuvent, si les administrations le désirent, être interrompus pour permetre des émissions vocales.

NOC 6931 1476K 3266 § 4. (1) Le matériel destiné à transmettre des signaux des radiobalises de localisation des sinistres sur la fréquence porteuse 2182 kHz doit être conforme aux spécifications données à l'appendice **37.**

NOC 6932 1476L 3267 (2) Le matériel destiné à émettre sur les fréquences 121,5 MHz et 243 MHz les signaux des radiobalises de localisation des sinistres doit être conforme aux recommandations et normes des organisations mentionnées dans la Résolution **601.**

SECTION II

NOC

Signaux d'alarme radiotélégraphique et radiotéléphonique

SUP 6933 1387

NOC 6934 1463 3268 § 5. (1) Le signal d'alarme radiotélégraphique se compose d'une série de douze traits transmis en une minute, la durée de chaque trait étant de quatre seconds et l'intervalle entre deux traits consécutifs d'une second. Il peut être transmis à la main, mais sa transmission à l'aide d'un appareil automatique est recommandée.

NOC 6935 1464 3269 (2) Toute station de navire fonctionnant dans les bandes comprises entre 405 kHz et 535 kHz, qui ne dispose pas d'un appareil automatique pour l'émission du signal d'alarme radiotélégraphique, doit être pourvue en permanence d'une pendule indiquant nettement la second, de préférence au moyen d'une aiguille trotteuse faisant un tour par minute. Cette pendule doit être placée en un point suffissamment visible de la table d'exploitation pour que l'opérateur puisse, en la suivant du regard, donner sans difficulté aux différents signaux élémentaires du signal d'alarme leur durée normale.

SUP 6936 1388

NOC 6937 1465 3270 § 6 (1) Le signal d'alarme radiotéléphonique se compose de deux signaux sensiblement sinusoïdaux à fréquence audible transmis alternativement, L'un d'eux a une fréquence de 2200 Hz, l'autre une fréquence de 1300 Hz. Chacun d'eux est émis pendant une durée de 250 millisecondes.

NOC 6938 1466 3271 (2) Lorsqu'il est produit automatiquement, le signal d'alarme radiotéléphonique doit être émis d'une façon continue pendant une durée de trente secondes au moins et d'une minute au plus; s'il est produit par d'autres moyens, ce signal doit être émis d'une façon aussi continue que pratiquement possible pendant une durée de l'ordre d'une minute.

NOC 6939 1466AA 3272 (3) Le signal d'alarme radiotéléphonique émis par une station côtière doit être celui qui est décrite aux numéros **3270** et **3271,** il peut être suivi par un signal unique à 1300 Hz d'une durée de dix secondes.

SUP 6940 1466A

SUP 6941 1473A

NOC 6942 1467 3273 § 7. Ces signaux spéciaux ont pour but:

NOC 6943 1468 3274 *a*) En radiotélégraphie, de faire fonctionnner les dispositifs automatiques d'alarme, dont l'objet est d'attirer l'attention de l'opérateur lorsque l'écoute sur la fréquence de détresse n'est pas assurée;

NOC 6944 1469 3275 *b*) En radiotélégraphie, d'attirer l'attention de la personne qui assure la veille ou de faire fonctionner les dispositifs automatiques donnant l'alarme ou mettant en marche un haut-parleur silencieux pour lui permettre de diffuser le message qui doit suivre.

NOC 6945 1470 3276 § 8. (1) Ces signaux doivent être employés uniquement pour annoncer:

NOC 6946 1471 3277 *a*) Soit qu'un apple ou un message de détresse va suivre;

NOC 6947 1472 3278 *b*) Soit l'émission d'un avis urgent de cyclone, lequel doit être précedé du signal de sécurité (voir les numéros **3221** et **3222**). Dans ce cas, ils ne peuvent être employés que par les stations côtières dûment autorisées par leur gouvernement;

NOC 6948 1473 3279 *c*) Soit qu'une ou plusieurs personnes sont tombées par-dessus bord. Dans ce cas, ils ne peuvent être employés qui si l'aide d'autres navires est nécessaire et si l'emploi du seul signal d'urgence ne permet pas d'obtenir

cette aide dans les conditions satisfaisantes, mais le signal d'alarme ne doit pas être répété par d'autres stations. Le message doit être précédé du signal d'urgence (voir les numéros **3196** et **3197**).

NOC **6949** 1474 **3280** (2) Dans les cas prévus aux numéros **3278** et **3279,** il convient qu'un intervalle de deux minutes sépare, si possible, la fin du signal d'alarme radiotélégraphique du début de l'avis ou du message.

NOC **6950** 1475 **3281** § 9. Les dispositifs automatiques destinés à la réception des signaux d'alarme radiotélégraphique et radiotéléphonique doivent satisfaire aux conditions spécifiées dans l'appendice **36.**

NOC **6951** 1476 **3282** § 10. Avant qu'un tel dispositif automatique soit approuvé pour l'usage des navires, l'administration dont relèvent ces navires doit s'assurer, par des essais pratiques faits dans des conditions équivalentes à celles qui se présentent dans la pratique (brouillage, vibrations, etc.), que le appareil satisfait aux prescriptions du présent Règlement.

SECTION III

NOC

Appel sélectif à tous les navires

NOC **6952** 1388AA **3283** § 11. Les caractéristiques de l'«appel à tous les navires» dans le système d'appel sélectif, qui est réservé exclusivement pour l'alarme, sont données à l'appendice **39.**

SECTION IV

NOC

Signal d'avis aux navigateurs

NOC **6953** 1476AA **3284** § 12. (1) Le signal d'avis navigateurs est constitué d'une fréquence acoustique sensiblement sinusoïdale de 2200 Hz interrompue de telle sorte que les durées du signal acoustique et de l'intervalle sont, chacune, de 250 millisecondes.

NOC **6954** 1476AB **3285** (2) Il convient que ce signal soit transmis par les stations côtières de façon continue pendant une durée de 15 secondes pour précéder la transmission des avis d'une grande importance pour la navigation dans les bandes d'ondes hectométriques du service mobile maritime radiotéléphonique.

NOC **6955** 1476AC **3286** (3) Ce signal a pour objet d'attirer l'attention de la personne qui assure la veille au moyen d'un haut-parleur ou d'un haut-parleur à filtres, ou de faire fonctionner un dispositif automatique mettant en marche un haut-parleur silencieux pour lui permettre de diffuser le message qui doit suivre.

ARTICLE 42

Services spéciaux relatifs à la sécurité

SECTION I

NOC

Messages météorologiques

NOC **6981** 1596 **3312** § 1. (1) Les messages météorologiques comprennent:

NOC **6982** 1597 **3313** *a*) Des messages destinés aux services de météorologie qui sont chargés officiellement de la prévision du temps utilisée plus particulièrement pour la protection des navigations maritime et aéronautique;

NOC **6983** 1598 **3314** *b*) Des messages émanant de ces services météorologiques et destinés spécialement:

NOC **6984** 1599 **3315** Aux stations de navire;

NOC **6985** 1600 **3316** À la protection des aéronefs;

NOC **6986** 1601 **3317** Au public.

NOC 6987 3318 (2) Les renseignements contenus dans ces messages peuvent être:
1602

NOC 6988 3319 *a*) Des observations à heure fixe;
1603

NOC 6989 3320 *b*) Des avis de phénomènes dangereux;
1604

NOC 6990 3321 *c*) Des prévisions et avertissements;
1605

NOC 6991 3322 *d*) Des exposés de la situation météorologique générale.
1606

NOC 6992 3323 § 2. (1) Les différents services météorologiques nationaux s'entendent pour établir
1607 des programmes communs d'émissions, de manière à utiliser les émetteurs les mieux placés pour desservir les régions intéressées.

MOD 6993 3324 (2) Il convient que les observations météorologiques comprises dans les catégories
1608 mentionées aux numéros **3313** à **3316** soient rédigées dans un code météorologique international, qu'elles soient transmises par des stations mobiles ou qu'elles leur soient destinées.

MOD 6994 3325 § 3. Pour la transmission des messages d'observation destinés à un service officiel
1609 de météorologie, il doit être fait usage des fréquences mises à sa disposition pour les besoins de la météorologie, conformément aux accords régionaux établis par les services intéressés pour l'emploi de ces fréquences.

NOC 6995 3326 § 4. (1) Les messages météorologiques destinés spécialement à l'ensemble des
1610 stations de navire sont émis, en principe, d'après un horaire déterminé et, autant que possible, aux heures où ils peuvent être reçus par les stations de navire pourvues d'un seul opérateur. En radiotélégraphie, la vitesse de transmission ne doit pas dépasser seize mots par minute.

NOC 6996 3327 (2) Pendant les transmissions «à tous» des messages météorologiques destinés aux
1611 stations du service mobile maritime, toutes les stations de ce service dont les transmissions brouilleraient la réception de ces messages doivent observer le silence, afin de permettre à toutes les stations qui le désirent de recevoir lesdits messages.

MOD 6997 3328 (3) Les messages d'avertissements météorologiques à l'intention du service mobile
1612 maritime sont transmis immédiatement. Ils doivent être répétés à la fin de la première période de silence qui suit leur réception (voir les numéros **3038** et **3052**), ainsi qu'au cours de la période de diffusion suivante prévue dans la Nomenclature des stations de radiorepérage et des stations effectuant des services spéciaux. Ils sont précédés du signal de sécurité et sont transmis sur les fréquences appropriées (voir le numéro **3224**).

NOC 6998 3329 (4) En plus des services réguliers d'information prévus dans les alinéas précédents,
1613 les administrations prennent les dispositions nécessaires pour que certaines stations communiquent, sur demande, des messages météorologiques aux stations du service mobile maritime.

NOC 6999 3330 (5) Les dispositions des numéros **3326** à **3329** sont applicables au service mobile
1614 aéronautique, dans la mesure où elles ne sont pas en contradiction avec des accords particuliers plus précis assurant à la navigation aérienne une protection au moins égale.

NOC 7000 3331 § 5. (1) Les messages provenant de stations mobiles et contenant des renseignements
1615 sur la présence de cyclones doivent être transmis, dans le plus bref délai possible, aux autres stations mobiles voisines et aux autorités compétentes du premier point de la côte avec lequel le contact peut être établi. Leur transmission est précédée du signal de sécurité.

NOC 7001 3332 (2) Toute station mobile peut écouter son propre usage, les messages d'observations
1616 météorologiques émis par d'autres stations mobiles, même lorsqu'ils sont adressés à un service météorologique national.

NOC 7002 3333 (3) Les stations des services mobiles qui transmettent des observations
1617 météorologiques adressées à un service météorologique national ne sont pas tenues de les répéter à d'autres stations. Cependant, l'échange, sur demande, de renseignements relatifs à l'état du temps est autorisé entre stations mobiles.

SECTION II

NOC

Avis aux navigateurs maritimes

NOC 7003 3334 § 6. Les prescriptions des numéros **3326** à **3330** inclus sont applicables aux avis
1618 aux navigateurs maritimes.

NOC 7004 3335 § 7. Les messages contenant des reinseignements sur la présence de glaces
1619 dangereuses, d'épaves dangereuses, ou de tout autre danger imminent pour la navigation

maritime doivent être transmis, dans le plus bref délai possible, aux autres stations de navire voisines et aux autorités compétentes du premier point de la côte avec lequel le contact peut être établi. Ces transmissions doivent être précédées du signal de sécurité.

NOC **7005** 1620 **3336** § 8. Lorsqu'elles le jugent utile, et à condition que l'expéditeur y consente, les administrations peuvent autoriser leurs stations terrestres à communiquer des renseignements concernant les avaries ou sinistres maritimes, ou présentant un intérêt général pour la navigation, aux agences d'information maritime agrées par elles, et suivant des contitions fixées également par elles.

SECTION III

NOC

Avis médicaux

NOC **7006** 1621 **3337** § 9. Les stations mobiles qui désirent recevoir un avis médical peuvent l'obtenir par l'intermédiaire des stations terrestres indiquées comme assurant un tel service dans la Nomenclature des stations de radiorepérage et des stations effectuant des services spéciaux.

NOC **7007** 1622 **3338** § 10. Les radiotélégrammes et les conversations radiotéléphoniques relatifs aux avis médicaux peuvent être précédés du signal d'urgence approprié (voir les numéros **3198** à **3208**).

Certificats des opérateurs des stations d'aéronef

SECTION I

NOC

Dispositions générales

MOD **7136** 848 **3392** § 1. (1) Le service de toute station radiotélégraphique d'aéronef doit être assuré par un opérateur titulaire d'un certificat délivré ou reconnu par le gouvernement dont dépend cette station.

MOD **7137** 849 **3393** (2) Le service de toute station radiotéléphonique d'aéronef doit être dirigé par un opérateur titulaire d'un certificat délivré ou reconnu par le gouvernement dont dépend cette station. Sous réserve de cette disposition, d'autres personnes que le titulaire du certificat peuvent utiliser l'installation radiotéléphonique.

MOD **7138** 850 **3394** (3) Le service des appareils automatiques de télécommunication (1) installés dans une station d'aéronef doit être dirigé par un opérateur titulaire d'un certificat délivré ou reconnu

---

NOC **7138.1** 850.1 **3394.1** (1) Le terme «appareils automatiques de télécommunication» comprend les appareils tels que les téléimprimeurs, les appareils de transmission de données, etc.

par le gouvernement dont dépend cette station. Sous réserve de cette disposition, d'autres personnes que le titulaire du certificat peuvent utiliser ces appareils. Si le fonctionnement de ces appareils repose essentiellement sur l'utilisation des signaux du code Morse décrits dans l'Instruction pour l'exploitation du service télégraphique public international, le service doit être assuré par un opérateur titulaire d'un certificat d'opérateur radiotélégraphiste. Toutefois, cette dernière condition ne s'applique pas aux appareils automatiques qui peuvent utiliser les signaux du code Morse uniquement à des fins d'identification.

NOC **7139** **3395** (4) Toutefois, pour le service des stations radiotéléphoniques opérant uniquement
851 sur des fréquences supérieures à 30 MHz, chaque gouvernement détermine lui-même si un certificat est nécessaire et, cas échéant, définit les conditions à remplir pour son obtention.

MOD **7140** **3396** (5) Les dispositions du número **3395** ne sont pas applicables aux stations d'aéronef
852 fonctionnant sur des fréquences assignées pour une utilisation internationale.

MOD **7141** **3397** § 2. (1) Dans le cas d'indisponibilité absolue de l'opérateur au cours d'un vol, la
853 personne responsable de la station peut autoriser, mais à titre temporaire seulement, un opérateur titulaire d'un certificat délivré par le gouvernement d'un autre Membre de l'Union à assurer le service des radiocommunications.

MOD **7142** **3398** (2) Lorsqu'il est nécessaire d'employer comme opérateur provisoire une personne
854 ne possédant pas de certificat, ou un opérateur n'ayant pas de certificat suffisant, son intervention doit se limiter uniquement aux signaux de détresse, d'urgence et de sécurité, aux messages qui s'y rapportent, aux messages intéressant directement la sécurité de la vie humaine et aux messages essentiels relatifs à la navigation et à la sécurité de la marche de l'aéronef. Les personnes ainsi employées sont astreintes au secret des correspondances prévu au numéro **3402**.

NOC **7143** **3399** (3) Dans tous les cas, l'opérateur provisoire doit être remplacé aussitôt que possible
855 par un opérateur titulaire du certificat prévu au paragraphe 1 du présent article.

NOC **7144** **3400** § 3. (1) Chaque administration prend les dispositions nécessaires pour éviter,
856 dans la plus grande mesure possible, l'emploi frauduleux des certificats. A cet effet, ceux-ci portent la signature du titulaire et sont authentifiés par l'administration qui les a délivrés. Les administrations peuvent employer, à leur gré, d'autres moyens d'identification, tels que photographies, empreintes digitales, etc.

(MOD) **7145** **3401** (2) Afin de faciliter la vérification des certificats, ceux-ci portent, s'il y a lieu, en
857 plus du texte rédigé dans la langue nationale, une traduction de ce texte dans l'une des langues de travail de l'Union.

NOC **7146** **3402** § 4. Chaque administration prend les mesures nécessaires pour soumettre les
858 operateurs à l'obligation du secret des correspondances prévue au numéro **2023.**

SECTION II

NOC

Classes et catégories de certificats

NOC **7147** **3403** § 5. (1) Il existe deux classes de cetificats, ainsi qu'un certificat spécial, pour les
859 opérateurs radiotélégraphistes (1).

(MOD) **7148** **3404** (2) Il y a deux catégories de certificats pour les opérateurs radiotéléphonistes, le
860 certificat général et le certificat restreint (1).

NOC **7149** **3405** § 6. (1) Le titulaire d'un certificat d'opérateur radiotélégraphiste de première ou
861 deuxième classe peut assurer le service radiotélégraphique ou radiotéléphonique de toute station d'aéronef.

NOC **7150** **3406** (2) Le titulaire d'un certificat général de radiotéléphoniste peut assurer le service
862 radiotéléphonique de toute station d'aéronef.

NOC **7151** **3407** (3) Le titulaire d'un certificat restreint de radiotéléphoniste peut assurer le service
863 radiotéléphonique de toute station d'aéronef lorsqu'elle fonctionne sur les fréquences attribuées au service mobile maritime à condition:

3408 *a*) Que la puissance en crête de l'émetteur ne dépasse pas 200 watts, *ou bien*

3409 *b*) Que la commande de l'émetteur comporte seulement la manœuvre d'organes de commutation externes et simples, sans qu'il soit nécessaire d'effectuer aucun réglage manuel des éléments qui déterminent la fréquence, l'émetteur lui-même maintenant la stabilité des fréquences dans les limites des tolérances spécifiées à l'appendice **7** et la puissance en crête de l'émetteur ne dépassant pas 1 kilowatt.

NOC **7147.1** **3403.1**
859.1

(MOD) **7148.1** **3404.1**
860.1

(1) Pour l'emploi des opérateur titulaires des différents certificats, voir l'article 45.

NOC 7152 3410 (4) Le titulaire d'un certificat restreint de radiotéléphoniste peut assurer le service radiotéléphonique de toute station d'aéronef fonctionnant sur des fréquences attribués exclusivement au service mobile aéronautique, à condition que la commande de l'émetteur comporte seulement la manœuvre d'organes de commutation externes et simples, sans qu'il soit nécessaire d'effectuer aucun réglage manuel des éléments qui déterminent la fréquence, l'émetteur lui-même maintenant la stabilité des fréquences dans les limites des tolérances spécifiées à l'appendice **7**.
864

NOC 7153 3411 (5) Le service radiotéléphonique des stations d'aéronef pour lesquelles le certificat restreint de radiotéléphoniste est seul exigé peut être assuré par un opérateur titulaire du certificat spécial de radiotélégraphiste.
865

NOC 7154 3412 § 7. Exceptionnellement, le certificat d'opérateur radiotélégraphiste de deuxième classe ainsi que le certificat spécial d'opérateur radiotélégraphiste peuvent être limités exclusivement au service radiotélégraphique. Dans ce cas, mention de cette limitation doit être portée sur le certificat.
866

SECTION III

(MOD)

Conditions d'obtention des certificats d'opérateur

NOC 7155 3413

A) Généralités

NOC 7156 3414 § 8. (1) Les conditions à imposer pour l'obtention des différents certificats sont spécifiées dans les paragraphes suivants. Elles doivent être considérées comme des conditions minima.
867

NOC 7157 3415 (2) Chaque administration reste libre de fixer le nombre des examens qu'elle juge nécessaires pour l'obtention de chaque certificat.
868

MOD 7158 3416 § 9. (1) L'administration qui délivre un certificat peut, avant d'autoriser son titulaire à assurer le service à bord d'un aéronef, exiger que cet opérateur remplisse d'autres conditions (par exemple: connaissance des appareils automatiques de télécommunication; connaissances techniques et professionelles complémentaires, relatives notamment à la navigation; aptitudes physiques; avoir accompli comme opérateur un certain nombre d'heures de vol, etc.).
869

NOC 7159 3417 (2) Il convient que les administrations prennent toutes les mesures qu'elles jugent nécessaires pour contrôler les aptitudes des opérateurs lorsque ceux-ci n'ont pas exercé leurs fonctions pendant une durée prolongée.
870

NOC 7160 3418

B) Certificat d'opérateur radiotélégraphiste de première classe

NOC 7161 3419 § 10. Le certificat de première classe est délivré aux candidats qui ont fait preuve des connaissances et aptitudes techniques et professionnelles énumérées ci-après:
871

NOC 7162 3420 *a*) La connaissance tant des principes généraux de l'électricité que de la théorie de la radioélectricité, la connaissance du réglage et du fonctionnement pratique des différents types d'appareils radiotélégraphiques et radiotéléphoniques utilisés dans le service mobile, y compris les appareils utilisés pour la radiogoniométrie et la prise des relèvements radiogoniométriques, ainsi que la connaissance générale des principes du fonctionnement des autres appareils habituellement employés pour la radionavigation;
872

NOC 7163 3421 *b*) La connaissance théorique et pratique du fonctionnement et de l'entretien des appareils tels que les groupes électrogènes, les accumulateurs, etc., qui sont utilisés pour la mise en œuvre et le règlage des appareils radiotélégraphiques, radiotéléphoniques et radiogoniométriques mentionnés au numéro **3420**;
873

MOD 7164 3422 *c*) Les connaissances pratiques nécessaires pour réparer par les moyens du bord les avaries susceptibles de survenir aux appareils radiotélégraphiques, radiotéléphoniques et radiogoniométriques en cours de vol;
874

NOC 7165 3423 *d*) L'aptitude à la transmission manuelle correcte et à la réception auditive correcte en code Morse, de groupes de code (mélange de lettres, de chiffres et de signes de ponctuation) à la vitesse de vingt groupes par minute, et d'un texte en langage clair à la vitesse de vingt-cinq mots par minute. Chaque groupe de code doit comprendre cinq caractères, chaque chiffre ou signe de ponctuation comptant pour deux caractères. Le mot moyen du texte en langage clair doit comporter cinq caractères. La durée de chaque épreuve de transmission et de réception est, en général, de cinq minutes;
875

NOC 7166 876 3424 *e*) L'aptitude à la transmission correcte et à la réception correcte en radio--téléphonie;

NOC 7167 877 3425 *f*) La connaissance détaillée des Règlements applicables aux radiocommunications, la connaissance des documents relatifs à la taxation des radiocommunications, la connaissance des dispositions de la Convention pour la sauvegarde de la vie humaine en mer qui se rapportent à la radioélectricité, et, dans le cas de la navigation aérienne, la connaissance des dispositions spéciales qui régissent les services fixe et mobile aéronautiques ainsi que la radionavigation aéronautique. Dans ce dernier cas, le certificat stipule que le titulaire a subi avec succés les épreuves portant sur ces dispositions spéciales;

NOC 7168 878 3426 *g*) Des connaissances suffisantes de la géographie du monde, notamment des principales lignes de navigation maritime et aérienne et des voies de télécommunication les plus importantes;

NOC 7169 879 3427 *h*) La connaissance suffisante de l'une des langues de travail de l'Union. Les candidats doivent être capables de s'exprimer dans cette langue d'une manière convenable tant verbalement que par écrit. Chaque administration indique elle-même la ou les langues qui sont imposées.

NOC 7170 3428 *C*) Certificat d'opérateur radiotélégraphiste de deuxième classe

NOC 7171 880 3429 § 11. Le certificat de deuxième classe est délivré aux candidats qui ont fait preuve des connaissances et aptitudes techniques et profissionnelles énumérées ci-après:

NOC 7172 881 3430 *a*) La connaissance élémentaire théorique et pratique de l'électricité et de la radioélectricité, la connaissance du réglage et du fonctionnement pratique des différents types d'appareils radiotélégraphiques et radiotéléphoniques utilisés dans le service mobile, y compris les appareils utilisés pour la radiogoniométrie et la prise des relèvements radiogoniométriques, ainsi que la connaissance élémentaire des principes du fonctionnement des autres appareils habituellement employés pour la radionavigation;

NOC 7173 882 3431 *b*) La connaissance élémentaire théorique et pratique du fonctionnement et de l'entretien des appareils tels que les groupes électrogénes, les accumulateurs, etc., qui sont utilisés pour la mise en oeuvre et le réglage des appareils radiotélégraphiques, radiotéléphoniques et radiogoniométriques mentionnés au numéro **3430**;

MOD 7174 883 3432 *c*) Les connaissances pratiques suffisantes pour pouvoir réparer les petites avaries susceptibles de survenir aux appareils radiotélégraphiques, radiotéléphoniques et radiogoniométriques en cours de vol;

NOC 7175 884 3433 *d*) L'aptitude à la transmission manuelle correcte et à la réception auditive correcte, en code Morse, de groupes de code (mélange de lettres, de chiffres et de signes de ponctuation à la vitesse de seize groupes par minute, et d'un texte en langage clair à la vitesse de vingt mots par minute. Chaque groupe de code doit comprendre cinq caractères, chaque chiffre ou signe de ponctuation comptant pour deux caractères. Le mot moyen du texte en langage clair doit comporter cinq caractères. La durée de chaque épreuve de transmission et de réception est, en général, de cinq minutes;

NOC 7176 885 3434 *e*) L'aptitude à la transmission correcte et à la réception correcte en radiotéléphonie, sauf dans le cas prévu au numéro **3412**;

NOC 7177 886 3435 *f*) La connaissance des Règlements applicables aux radiocommunications, la connaissance des documents relatifs à la taxation des radiocommunications, la connaissance des dispositions de la Convention pour la sauvegarde de la vie humaine em mer qui se rapportent à la radioélectricité, et, dans le cas de la navigation aérienne, la connaissance des dispositions spéciales qui régissent les services fixe et mobile aéronautiques ainsi que la radionavigation aéronautique. Dans ce dernier cas, le certificat stipule que le titulaire a subi avec succès les épreuves portant sur ces dispositions spéciales;

NOC 7178 887 3436 *g*) Des connaissances suffisantes de la géographie du monde, notamment des principales lignes de navigation maritime et aérienne et des voies de télécommunication les plus importantes;

NOC 7179 888 3437 *h*) S'il y a lieu, la connaissance élémentaire d'une des langues de travail de l'Union. Les canditats doivent être capables de s'exprimer dans cette langue d'une manière convenable, tant verbalement que par écrit. Chaque administration indique elle-même la ou les langues qui sont imposées.

NOC 7180 3438 *D)* Certificat spécial d'opérateur radiotélégraphiste

NOC 7181 889 3439 § 12. (1) Le certificat spécial de radiotélégraphiste est délivré aux candidats qui ont fait preuve des connaissances et aptitudes professionnelles énumérées ci-après:

NOC 7182 890 3440 *a)* L'aptitude à la transmission manuelle correcte et à la réception auditive correcte, en code Morse, de groupes de code (mélange de lettres, de chiffres et de signes de ponctuation) à la vitesse de seize groupes par minute, et de texte en langege clair à la vitesse de vingt mots par minute. Chaque groupe de code doit comprendre cinq caractères, chaque signe de ponctuation étant compté pour deux caractères. Le mot moyen du texte en langage clair doit comporter cinq caractères;

NOC 7183 891 3441 *b)* La connaissance du réglage et du fonctionnement des appareils radiotélégraphiques;

NOC 7184 892 3442 *c)* La connaissance des Règlements applicables aux radiocommunications télégraphiques et notamment de la partie de ces Règlements relative à la sécurité de la vie humaine en mer.

NOC 7185 893 3443 (2) Il appartient à chaque administration intéressée de fixer les autres conditions pour l'obtention de ce certificat. Cependant, sauf dans le cas prévu au numéro **3412**, les conditions fixées aux numéros **3450, 3451, 3452** et **3453** ou **3454**, selon le cas, doivent être satisfaites.

NOC 7186 3444 *E)* Certificat d'opérateur radiotéléphoniste

MOD 7187 894 3445 § 13. Le certificat général d'opérateur radiotéléphoniste est délivré aux candidats qui ont fait preuve des connaissances et aptitudes professionelles énumérées ci-après (voir également les numéros **3405** et **3406**):

NOC 7188 895 3446 *a)* La connaissance des principes élémentaires de la radiotéléphonie;

NOC 7189 896 3447 *b)* La connaissance détaillée du réglage et du fonctionnement pratique des appareils de radiotéléphonie;

NOC 7190 897 3448 *c)* L'aptitude à la transmission correcte et à la réception en radiotéléphonie;

NOC 7191 898 3449 *d)* La connaissance détaillée des Règlements applicables aux radiocommunications téléphoniques et notamment de la partie de des Règlements relative à la sécurité de la vie humaine.

NOC 7192 899 3450 § 14. (1) Le certificat restreint de radiotéléphoniste est délivré aux candidats que ont fait preuve des connaissances et aptitudes professionnelles énumérées ci-après:

NOC 7193 900 3451 *a)* La connaissance pratique de l'exploitation et de la procédure radiotéléphoniques;

NOC 7194 901 3452 *b)* L'aptitude à la transmission correcte et à la réception correcte en radiotéléphonie;

NOC 7195 902 3453 *c)* La connaissance générale des Règlements applicables aux radiocommunications téléphoniques et notamment de la partie de ces Règlements relative à la sécurité de la vie humaine.

MOD 7196 903 3454 (2) Pour les stations radiotéléphoniques d'aéronef fonctionnant sur des fréquences attribuées en exclusivité au service mobile aéronautique, chaque administration peut fixer elle-même les conditions d'obtention d'un certificat restreint de radiotéléphoniste, sous réserve que le fonctionnement de l'émetteur n'exige que l'emploi de dispositifs extérieurs de commutation de conception simple, à l'exclusion de tout réglage manuel des éléments déterminant la fréquence, et que la stabilité des fréquences soit maintenue par l'émetteur lui-même dans les limites des tolérences fixées à l'appendice **7**. Toutefois, en fixant ces conditions, les administrations s'assurent que l'opérateur possède une connaissance suffisante de l'exploitation et des procédures du service radiotéléphonique, notamment en ce qui concerne la détresse, l'urgence et la sécurité. Les dispositions ci-dessus ne contredisent en rien celles du numéro **3457**.

NOC 7197 904 3455 (3) Les administrations des pays de la Région 1 ne délivrent pas de certificats correspondant aux dispositions du numéro **3454**.

NOC 7198 905 3456 § 15. Dans un certificat de radiotéléphoniste, il doit être indiqué si celui-ci est un certificat général ou un certificat restreint et, dans ce dernier cas, s'il a été délivré conformément aux dispositions du numéro **3454**.

(MOD) 7199 906 3457 § 16. Pour satisfaire à des besoins spéciaux, des accords particuliers entre administrations peuvent fixer les conditions à remplir pour l'obtention d'un certificat de

radiotéléphoniste destiné à être utilisé dans des stations radiotéléphoniques remplissant certaines conditions techniques et certaines conditions d'exploitation. De tels accords ne peuvent être conclus que sous réserve qu'aucun brouillage préjudiciable aux services internationaux ne résulte de leur application. Ces conditions et ces accords sont mentionnés sur les certificats ainsi délivrés.

N43/21 ARTICLE 46

MOD **Inspection des stations d'aéronef**

MOD **7255** 838 **3509** § 1. (1) Les gouvernements ou les administrations compétentes des pays où une station d'aéronef fait escale peuvent exiger le production de la licence pour l'examiner. L'opérateur de la station, ou la personne responsable de la station, doit se prêter à cette vérification. La licence doit être conservée de façon à pouvoir être produite sur demande. Dans toute la mesure du possible, la licence, ou une copie certifiée conforme par l'autorité qui l'a délivrée, doit être affichée à demeure dans la station.

MOD **7256** 839 **3510** (2) Les inspecteurs doivent être en possession d'une carte ou d'un insigne d'identité délivré par les autorités compétentes, qu'ils doivent montrer à la demande de personne responsable de l'aéronef.

NOC **7257** 840 **3511** (3) Lorsque la licence ne peut pas être produite, ou lorsque des anomalies manifestes sont constatées, les gouvernements ou administrations peuvent faire procéder à l'inspection des installations radioélectriques, afin de s'assurer qu'elles répondent aux stipulations du présent Règlement.

NOC **7258** 841 **3512** (4) De plus, les inspecteurs sont en droit d'exiger la production des certificats des opérateurs, mais ils ne peuvent demander aucune justificaction de connaissances professionnelles.

SUP **7229.1** 920.1

MOD **7259** **3513** § 2. (1) Lorsqu'un gouvernement ou une administration s'est trouvé dans l'obligation
842 de recourir à la mesure prévue au numéro **3511,** ou lorsque les certificats d'opérateur n'ont pas pu être produits, le gouvernement ou l'administration dont dépend la station d'aéronef en cause doit être informé sans retard. De plus, il est fait application, le cas échéant, des dispositions de l'article 21.

MOD **7260** **3514** (2) Avant de quitter l'aéronef, l'inspecteurs doit faire part de ses constatations à
843 la personne responsable. En cas d'infraction aux stipulations du présent Règlement, l'inspecteur présente son rapport par écrit.

MOD **7261** **3515** § 3. Les Membres d'engagent à ne pas imposer aux stations d'aéronef étrangères
843 qui se trouvent temporairement dans leurs limites territoriales ou s'arrêtent temporairement sur leur territoire, des conditions techniques et d'exploitation plus rigoureuses que celles prévues dans le présent Règlement. Cette prescription n'affecte en rien les dispositions qui relèvent d'accords internationaux relatifs à la navigation aérienne et qui ne sont pas prévues dans le présent Règlement.

N47

ARTICLE 50

NOC

Dispositions spéciales relatives à l'emploi des fréquences dans les service mobile aéronautique

(MOD) 7376 429 **3630** § 1. Les fréquences de toutes les bandes attribuées au service mobile aéronautique (R) sont réservées aux communications entre tous les aéronefs et les stations aéronautiques principalement chargées d'assurer la sécurité et la régularité des vols le long des routes nationales ou internationales de l'aviation civile.

NOC 7377 430 **3631** § 2. Les fréquences de toutes les bandes attribués au service mobile aéronautique (OR) sont réservées aux communications entre tous les aéronefs et les stations aéronautiques autres que celles principalement chargées du service mobile aéronautique le long des routes nationales ou internacionales de l'aviation civile.

MOD 7378 431 **3632** § 3. Les fréquences des bandes attribuées au service mobile aéronautique entre 2850 kHz et 22 000 kHz (voir l'article 8) sont assignées conformément aux dispositions des appendices 26, 27 (*) et 27 Aer2 (*) et aux autres dispositions pertinentes du présent Règlement.

(*) Note du Secrètariat général: voir le numéro **5189** et la Résolution **400.**

MOD 7379 3633 § 4. Les administrations ne doivent pas autoriser le correpondance publique dans les bandes de fréquences attribuées en exclusivité au service mobile aéronautique, à moins qu'il n'en soit disposé autrement dans des règlements particuliers au service aéronautique, approuvés par une conférence de l'Union à laquelle tous les Membres intéressés sont invités. Ces réglements doivent reconnaître une priorité absolue aux communications de sécurité et de contrôle.
432

MOD 7380 3634 § 5. Afin de réduire les brouillages, les stations d'aéronef doivent, dans la mesure des moyens dont elles disposent, s'efforcer de choisir pour l'appel la bande dont les fréquences présentent les caractéristiques de propagation les plus favorables pour établir une communication satisfaisante. En l'absence de données plus précises, toute station d'aéronef doit, avant d'émettre un appel, écouter les signaux de la station avec laquelle elle désire entrer en communication. La force et l'intelligibilité des signaux reçus donnent des renseignement utilies sur les conditions de propagation et indiquent dans quelle bande il est préférable de faire l'appel.
1162

(MOD) 7381 3635 § 6. Les gouvernements peuvent, par voir d'accords, décider des fréquences à utiliser pour l'appel et pour la réponse dans le service mobile aéronautique.

ARTICLE 51

MOD

Ordre de priorité des communications dans le service aéronautique

MOD 7408 3651 L'ordre de priorité des communications (1) dans le service mobile aéronautique doit être l'ordre donné ci-après, sauf impossibilité pratique dans un système entièrement automatisé, cependant, même dans ce cas, la priorité doit être donnée aux communications de la première catégorie:
1496

1) Appels de détresse, messages de détresse et trafic de détresse;
2) Communications précédées du signal d'urgence;
3) Communications précédées du signal de sécurité;
4) Communications relatives aux relèvements radiogoniométriques;
5) Communications relatives à la navigation et à la sécurité des mouvements des aéronefs participant à des opérations de recherche et de sauvetage;
6) Communications relatives à la navigation, aux mouvements et aux besoins des aéronefs et des navires, et messages d'observation météorologique destinés à un service météorologique officiel;
7) ETATPRIORITENATIONS — Radiotélégrammes relatifs à l'application de la Charte des Nations Unies;
8) ETATPRIORITE — Radiotélégrammes d'État avec priorité et communications d'État pour lesquelles le droit de priorité a été expressément demandé;
9) Communications de service relatives au fonctionnement du service de télécommunication ou à des communications précédemment écoulées;
10) Communications d'État autres que celles indiquées à l'alinéa 8 ci-dessus, communications privées ordinaires, radiotélégrammes RTC (2) et radiotélégrammes de presse.

3652 à 3676 *(Non attribués.)*

ADD 7408.1 3651.1 (1) Le terme *communications* employé dans le présent article englobe les radiotélégrammes, les conversations radiotéléphoniques ainsi que les communications radiotélex.

ADD 7408.2 3651.2 (2) RCT (Red Cross Telegrams): Télégrammes concernant les personnes protégées en temps de guerre para les Conventions de Génève du 12 août 1949.

ARTICLE 52

NOC

Procédure générale radiotélégraphique dans le service mobile aéronautique

NOC

SECTION I

Dispositions générales

MOD **7434** **3677**
1000

§ 1. La procédure détaillée dans le présent article est obligatoire, sauf dans le cas de détresse, d'urgence ou de sécurité, auxquells sont applicables les dispositions du chapitre IX.

MOD **7435** **3678**
1001

(2) La procédure fixée dans les sections IV, V et VI du présent article n'est applicable qu'en l'absence d'arrangements particuliers prévoyant des dispositions contraires et conclus par les gouvernements intéressés.

MOD **7436** **3679**
1003

§ 2. L'emploi des signaux du code Morse figurant sans l'Instruction pour l'exploitation du service télégraphique public international est obligatoire dans le service mobile aéronautique. Toutefois pour les radiocommunications d'un caractère spécial, l'usage d'autres signaux n'est pas exclu.

MOD **7437** **3680**
1004

§ 3. Pour faciliter les radiocommunications, les stations utilisent les abréviations reglementaires définies à l'appendice **13.**

SECTION II

NOC

Appels

NOC **7438** **3681**

A) Généralités

NOC **7439** **3682**
1063

§ 4. Les dispositions du présent article ne sont pas applicables au service mobile aéronautique lorsque des accords particuliers ont été conclus par les gouvernements intéressés.

MOD **7440** **3683**
1065

§ 5. (1) Em règle générale, il incombe à la station d'établir la communication avec la station aéronautique. A cet effect, la station d'aéronef ne peut appeler la station aéronautique qu'aprés être arrivée dans sa zone de service, c'est-à-dire dans la zone où, en utilisant une fréquence appropriée, la station d'aéronef peut être entendue par la station aéronautique.

MOD **7441** **3684**
1066

(2) Toutefois, une station aéronautique qui a du trafic pour une station d'aéronef peut appeler cette station si elle a des raisons de croire que ladite station d'aéronef se trouve dans sa zone de service et assure l'écoute.

MOD **7442** **3685**
1076

§ 6. Lorsqu'une station aéronautique reçoit pratiquement em même temps des appels de plusieurs stations d'aéronef, elle décide de l'ordre dans lequel ces stations pourront lui transmettre leur trafic. Sa décision est fondée sur l'ordre de priorité (voir le numéro **3651)** des radiotélégrammes en instance dans les stations d'aéronef et sur la nécessité de permettre à chacune des stations appelantes d'écouler le plus grand nombre possible de communications.

NOC **7443** **3686**
1077

§ 7. (1) Lorsqu'une station appelée ne répond pas à l'appel émis trois fois à des intervalles de deux minutes, l'appel doit cesser il ne doit pas être renouvelé avant quinze minutes.

NOC **7444** **3687**
1079

(2) Avant de renouveler l'appel, la station appelante doit s'assurer que la station appelée n'est pas en communication avec une autre station.

MOD **7445** **3688**
1080

(3) S'il n'y a pas de raison de craindre que des brouillages préjucidiables n'affectent des communications en cours, les dispositions du numéro **3686** ne sont pas applicables. Dans ce cas, l'appel émis trois fois à des intervalles de deux minutes peut être renouvelé après un intervalle de durée inférieure à quinze minutes mais au moins égale à trois minutes.

MOD **7446** **3689**
1081

§ 8. Les stations d'aéronef ne doivent pas émettre leur onde porteuse entre les appels.

MOD **7447** **3690**
1082

§ 9. Lorsque le nom et l'adresse de l'administration ou de l'exploitation privée dont dépend une station d'aéronef ne sont pas mentionnnés dans la nomenclature appropriée ou ne sont plus en concordance avec les indications de celle-ci, la station d'aéronef a le devoir de donner d'office à la station aéronautique à laquelle elle transmet du trafic tous les reseignements nécessaires à cet égard.

MOD 7448 3691 § 10. (1) La station aéronautique peut, au moyen de l'abréviation TR, demander à
1083 la station d'aéronef de lui fournir les renseignements suivants:

MOD 7449 3692 *a*) Position et, autant que possible, cap et vitesse;
1084

MOD 7450 3693 *b*) Prochaine destination.
1085

MOD 7451 3694 (2) Il convient que les renseignements indiqués aux numéros **3691 à 3693,** précédés
1086 de l'abreviation TR, soient fournis par les stations d'aéronef, chaque fois que cela semble approprié, sans demande préalable de la station aéronautique. Ces renseignements ne sont fournis qu'après autorisation de la personne responsable de l'aéronef.

NOC 7452 3695 *B*) Appels à plusieurs stations

NOC 7453 3696 § 11. Deux types de signaux d'appel «à tous» sont reconnus:
1088

MOD 7454 3697 *a*) Appel CQ suivi de la lettre K (voir le numéro **3699**);
1089

NOC 7455 3698 *b*) Appel CQ non suivi de la lettre K (voir le numéro **3700**).
1090

NOC 7456 3699 § 12. Les stations qui désirent entrer en communication avec des stations du service
1091 mobile, sans toutefois connaître le nom de celles de ces stations qui sont dans leur zone de service, peuvent employer le signal de recherche CQ pour remplacer dans l'appel l'indicatif de la station appelée. L'appel doit alors être suivi de la lettre K (appel général à toutes les staions du service mobile, avec demande de réponse).

NOC 7457 3700 § 13. L'appel CQ non suivi de la lettre K (appel général à toutes les stations sans
1093 demande de réponse) est employé avant le transmission des renseignements de toute nature destinés à être lus ou utilisés par quiconque peut les capter.

NOC 7458 3701 § 14. L'appel CP suivi de deux ou plusieurs indicatifs d'appel ou d'un mot con-
1094 ventionnel (appel à certaines stations réceptrices sans demande de réponse) n'est employé que pour la transmission des renseignements de toute nature destinés à être lus ou utilisés par les personnes autorisées.

Section III

NOC **Opérations préliminaires**

NOC 7459 3702 § 15. (1) Avant d'émettre, une station prend les précautions voulues pour s'assurer
1007 que ses émissions ne brouilleront pas des transmissions en cours: su un tel brouillage est probable, la station attend un arrêt opportun de la transmission qu'ele pourrait brouiller. Cette obligation ne s'applique pas aux stations qui peuvent fonctionner sans surveillance par des moyens automatiques (voir le numéro **3394**) sur des fréquences destinées aux systèmes à bande étroite de télégraphie à impression directe.

NOC 7460 3703 (2) Dans le cas ou, même en opérant ainsi, l'émission de cette station vient à
1008 brouiller une transmission déjà en cours, on applique les règles suivantes:

MOD 7461 3704 *a*) La station d'aéronef dont l'émission brouille la communication entre une
1009 station mobile d'une part, et une station terrestre d'autre part, doit cesser d'émettre à la première demande de la station terrestre intéressée;

MOD 7462 3705 *b*) La station d'aéronef dont l'émission brouille les communications entre
1010 des stations mobiles doit cesser d'émettre à la première demande de l'une quelconque de ces stations;

(MOD) 7463 3706 *c*) La station qui demande cette cessation doit indiquer la durée approximative
1011 de l'attente imposée à la station dont elle fait suspendre l'émission.

Section IV

NOC **Forme de l'appel, réponse à l'appel et signaux préparatoires au trafic**

NOC 7464 3707 *A*) Forme de l'appel

NOC 7465 3708 § 16. (1) L'appel est constitué comme suit:
1012

Trois fois, au plus, l'indicatif d'appel de la station appelée;
Le mot DE;
Trois fois, au plus, l'indicatif d'appel de la station appelante.

NOC **7466** **3709** (2) Toutefois, dans les bandes comprises entre 4000 kHz et 27 500 kHz, les indicatifs d'appel peuvent, lorsque les conditions d'établissement du contact sont difficiles, être émis plus de trois fois, mais pas plus de dix. Dans ce cas, les indicatifs d'appel de la station appelée et de la station appelante doivent être émis à tour de rôle (exemple ABC ABC de WXYZ WXYZ ... ou ABC ABC ABC de WXYZ WXYZ WXYZ ...) jusqu'au concurrence d'un maximun de vingt indicatifs. Cet appel peut être émis trois fois à des intervalles de deux minutes. Il ne peut être repris ensuite que quinze minutes plus tard.
1013

NOC **7467** **3710** § 17. Pour faire l'appel, ainsi que pour transmettre les signaux préparatoires, la station appelante utilise une fréquence sur laquelle veille la station appelée.
1014

NOC **7468** **3711** *B*) Indication de la fréquence à utiliser pour le trafic

MOD **7469** **3712** § 18. (1) L'appel tel qui'il des défini aux numéros **3708** et **3709** doit être suivi de l'abréviation réglementarie indiquant la fréquence de travail, et, si c'est utile, la classe d'émission que la station appelante se propose d'utiliser pour transmettre son trafic.
1016

MOD **7470** **3713** (2) Lorsque, par exception à cette règle, l'appel n'est pas suivi de l'indication de la fréquence à utiliser pour le trafic, cela signifie que:
1017

MOD **7471** **3714** *a*) Si la station appelante est une station aéronautique, elle se propose d'utiliser pour le trafic sa fréquence normale de travail indiquée dans le document approprié;
1018

MOD **7472** **3715** *b*) Si la station appelante est une station d'aéronef, la fréquence à utiliser pour le trafic est à choisir par la station appelée parmi les fréquences sur lesquelles la station appelante peut émettre.
1019

NOC **7473** **3716** *C*) Indication de priorité du motif de l'appel et de la transmission des radiotélégrames par séries

MOD **7474** **3717** § 19. (1) Lorsque la station appelante a plusieurs radiotélégrammes à transmettre à la station appélée, les signaux préparatoires précédents sont suivis de l'abréviation réglementaire et du chiffre spécifiant le nombre de ces radiotélégrammes.
1020

NOC **7475** **3718** (2) De plus, lorsque la station appelante désire transmettre ses radiotélégrammes par séries, elle l'indique en ajoutant l'abréviation réglementaire pour demander le consequentement de la station appelée.
1021

NOC **7476** **3719** *D*) Forme de la réponse à l'appel

MOD **7477** **3720** § 20. La réponse à l'appel est constituée comme suit:
1022

Trois fois, au plus, l'indicatif d'appel de la station appelante;
Le mot DE;
Une fois seulement, l'indicatif d'appel de la station appelée.

NOC **7478** **3721** *E*) Fréquence de réponse

NOC **7479** **3722** § 21. Sauf indication contraire dans le présent Règlement, pour transmettre la réponse aux appels et aux signaux préparatoires, la station appelée emploie la fréquence sur laquelle veille la station appelante, à moins que la station appelante n'ait désigné une autre fréquence pour la réponse.
1023

NOC **7480** **3723** *F*) Accord sur la fréquence à utiliser pour le trafic

NOC **7481** **3724** § 22. (1) Si la station appelée est d'accord avec la station appelante, elle transmet:
1027

NOC **7482** **3725** *a*) La réponse à l'appel;
1028

NOC **7483** **3726** *b*) L'abréviation réglementaire indiquant qu'à partir de ce moment elle écoute sur la frequênce de travail annoncé par la station appelante;
1029

NOC **7484** **3727** *c*) Éventuellement, les indications prévues au numéro **3736**;
1030

NOC **7485** **3728** *d*) Si c'est utile, l'abréviation réglementaire et le chiffre indiquant la force et ou l'intelligibilité des signaux reçus (voir l'appendice **13**);
1031

NOC **7486** **3729** *e*) La lettre K, si la station appelée est prête à recevoir le trafic de la station appelante.
1032

NOC 7487 1033 3730 (2) Si la station appelée n'est pas d'accord avec la station appelante sur la fréquence de travail à employer, elle transmet:

NOC 7488 1034 3731 *a*) La réponse à l'appel;

NOC 7489 1035 3732 *b*) L'abréviation réglementaire indiquant la fréquence de travail à utiliser par la station appelante et, s'il y a lieu, la classe d'émission;

NOC 7490 1036 3733 *c*) Éventuellement, les indications prévues au numéro **3736.**

NOC 7491 1037 3734 (3) Lorsque l'accord est réalisé sur la fréquence de travail que la station appelante doit employer pour son trafic, la station appelée transmet la lettre K à la suite des indications contenues sans sa réponse.

NOC 7492 3735 *G*) Réponse à la demande de transmission par séries

NOC 7493 1038 3736 § 23. La station appelée, répondant à une station appelante qui a demandé à transmettre ses radiotélégrammes par séries (voir le numéro **3718**) indique, au moyen de l'abréviation réglementaire, son acceptation ou son refus. Dans le premier cas, elle spécifie, s'il y a lieu, le nombre des radiotélégrammes quLelle est prête à recevoir en une série.

NOC 7494 3737 *H*) Difficultés de réception

NOC 7495 1039 3738 § 24. (1) Si la station appelée n'est pas en mesure de recevoir le trafic immédiatement, elle réponde à l'appel comme il est indiqué aux numéros **3724** à **3729,** mais elle replace la lettre K par le signal . — ... (attente) suivi d'un nombre indiquant en minutes la durée probable de l'attente. Si cette durée probable dépasse dix minutes (cinq minutes dans le cas d'une station d'aéronef communiquant avec une station du service mobile maritime) l'attente doit être motivée.

NOC 7496 1040 3739 (2) Lorsqu'une station reçoit un appel sans être qu'il lui est destiné, elle ne doit pas répondre avant que cet appel ait été répété et compris. Lorsque, d'autre part, une station reçoit un appel qui lui est destiné, mais a des doutes sur l'indicatif d'appel de la station appelante, elle doit répondre immédiatement en utilisant l'abréviation réglementaire au lieu de l'indicatif d'appel de cette dernière station.

Section V

NOC **Ecoulement du trafic**

NOC 7497 3740 *A*) Fréquence de trafic

MOD 7498 1041 3741 § 25. (1) En règle générale, une station du service mobile aéronautique transmet son trafic en employant l'une de ses fréquences de travail de la bande dans laquelle l'appel a eu lieu.

MOD 7499 1043 3742 (2) A l'exception du trafic de détresse (voir le chapitre IX), l'emploi des fréquences réservées à l'appel est interdit pour le trafic.

NOC 7500 1044 3743 (3) Si la transmission d'un radiotélégramme a lieu sur une autre fréquence et ou autre classe d'émission que celles utilisées pour l'appel, cette transmission est précédée:

De, deux fois au plus, l'indicatif d'appel de la station appelée;
Du mot DE;
De l'indicatif d'appel de la station appelante, une fois seulement.

NOC 7501 1045 3744 (4) Si la transmission a lieu sur les mêmes fréquence et classe d'émission que l'appel, la transmission du radiotélégramme est précédée, si c'est nécessaire:

De l'indicatif d'appel de la station appelée;
Du mot DE;
De l'indicatif d'appel de la station appelante.

NOC 7502 3745 *B*) Numérotage par séries quotidiennes

MOD 7503 1046 3746 § 26. (1) En règle générale, les radiotélégrammes de correspondence publique transmis par les stations d'aéronef sont numérotés par séries quotidiennes, en donnant le numéro **1** au premier radiotélégramme transmis chaque jour à chaque station différente.

NOC **7504** **3747** (2) Il convient qu'une série de numéros commencée en radiotélégraphie soit
1047 continuée en radiotéléphonie et inversement.

(MOD) **7505** **3748** *C*) Radiotélégrammes longs

NOC **7506** **3749** § 27. (1) Dans le cas où deux stations sont pourvues de dispositifs leur permettant
1048 de passer de l'émission à la réception sans manœuvre de commutation, la station transmettrice peut poursuivre sa transmission jusqu'à la fin du message ou jusqu'à ce que la station réceptrice l'interrompe au moyen de l'abréviation réglementaire BK. Au préalable, les deux statins se mettent généralement d'accord sur une telle méthode de travail au moyen de l'abréviation réglementaire QSK.

(MOD) **7507** **3750** (2) Si cette méthode de travail ne peut pas être employée, les radiotélégrammes
1049 longs, tant ceux en langage clair que ceux en langage secret sont, en règle générale, transmis par tranches, chaque tranche contenant cinquante mots dans les cas du langage clair vingt mots ou groupes dans le cas du langage secret.

NOC **7508** **3751** (3) A la fin de chaque tranche, le signal . . __ __ . . (?) signifiant «Avez-vous bien
1050 reçu le radiotélégramme jusqu'ici?» est transmis. Si la tranche a été correctement reçue, la station réceptrice répond en transmettant la lettre K, et la transmission du radiotélégramme est poursuivie.

NOC **7509** **3752** *D*) Suspension du trafic

MOD **7510** **3753** § 28. Lorsqu'une station d'aéronef transmet sur une fréquence de travail d'une
1051 station aéronautique et brouille la transmission de ladite station aéronautique, elle doit suspendre son travail à la premiére demande de cette dernière.

SECTION VI

NOC **Fin du trafic et du travail**

NOC **7511** **3754** *A*) Signal de fin de transmission

NOC **7512** **3755** § 29. (1) La transmission d'un radiotélégramme se termine par le signal . __ . __ .
1052 (fin de transmission), suivi de la lettre K.

NOC **7513** **3756** (2) Dans le cas d'une transmission par séries, la fin de chaque radiotélégramme est
1053 indiquée par le signal . __ . __ . (fin de transmission) et la fin de chaque série par la lettre K.

NOC **7514** **3757** *B*) Accusé de réception

NOC **7515** **3758** § 30. (1) L'accusé de réception d'un radiotélégramme ou d'une série de radio-
1054 télégrammes est donée sous la forme suivante:

L'indicatif d'appel de la station transmettrice;
Le mot DE;
L'indicatif d'appel de la station réceptrice;
La lettre R suivie du numéro du radiotélégramme; ou
La lettre R suivie du numéro du dernier radiotélégramme d'une série.

MOD **7516** **3759** (2) L'accusé de réception est transmis par la station réceptrice sur la fréquence de
1055 trafic (voir le numéro **3741**).

NOC **7517** **3760** *C*) Fin du travail

NOC **7518** **3761** § 31. (1) La fin du travail entre deux stations est indiquée par chacune d'elles au
1056 moyen du signal . . . __ . __ (fin du travail).

NOC **7519** **3762** (2) Le signal . . . __ . __ (fin du travail) est aussi utilisé:
1057

À la fin de toute transmission de radiotélégrammes d'information générale, d'avis généraux de sécurité et d'informations météorologiques;
À la fin de la transmission dans le service des radiocommunications à grande distance avec accusé de réception différé ou sans accusé de réception.

SECTION VII

Direction du travail

(MOD)	**7520** 1058	**3763**	§ 32. Les dispositions de la présente section ne s'appliquent pas aux cas de détresse, d'urgence o de sécurité (voir le numéro **3677**).
MOD	**7521** 1059	**3764**	§ 33. Dans le communications entre station aéronautique et station d'aéronef, la station d'aéronef se conforme aux instrutions données par la station aéronautique pour tout ce que a trait à l'ordre et à l'heure de transmission, au choix de la fréquence et de la classe d'émission, à la durée et à la suspension du travail.
MOD	**7522** 1060	**3765**	§ 34. Dans le communications entre stations d'aéronef, la station appelée a la direction du travail selon les indications du numéro **3764**. Cependent, si une station aéronautique estime nécessaire d'intervenir, ces stations se conforment aux instructions qui leur sont données par la station aéronautique.

SECTION VIII

Essais

MOD	**7523** 1061	**3766**	§ 35. Lorsqu'il est nécessaire pour une station d'aeronef d'émettre des signaux d'essai ou de réglage susceptibles de brouiller le travail des stations côtières ou aéronautiques voisines, le consentement de ces stations doit être obtenu avant d'effectuer de telles émissions.
MOD	**7524** 1062	**3767**	§ 36. Lorsqu'il est nécessaire pour une station du service mobile aéronautique d'émettre des signaux d'essai, soit pour le réglage d'un émetteur avant de transmettre un appel, soit pour le réglage d'un récepteur, ces signaux ne doivent pas durer plus de dix secondes. Ils doivent être constitués par une série de VVV suivie de l'indicatif d'appel de la station qui émet pour essais.
		3768 à **3792**	*(Non attribués.)*

ARTICLE 53

Procédure radiotéléphonique dans le service mobile aéronautique — Appels

NOC	**7550** 1296	**3793**	§ 1. Les dispositions du présent article ne sont pas applicables au service mobile aéronautique lorsque des accords particuliers ont été conclus par les gouvernements intéressés.
MOD	**7551** 1298	**3794**	§ 2. (1) En règle générale, il incombe à la station d'aéronef d'établir la communication avec la station aéronautique. A cet effet, la station d'aéronef ne peut appeler la station aéronautique qu'après être arrivée dans sa zone de service, c'est-à-dire dans la zone où, en utilisant une fréquence appropriée, la station d'aéronef peut être entendue par la station aéronautique.
MOD	**7552** 1299	**3795**	(2) Toutefois, une station aéronautique qui a du trafic pour une station d'aéronef peut appeler cette station si elle a des raisons de croire que ladite station d'aéronef se trouve dans sa zone de service et assure l'écoute.
MOD	**7553** 1307	**3796**	§ 3. Lorsqu'une station aéronautique reçoit pratiquement en même temps des appels de plusiers stations d'aéronf, elle décide de l'ordre dans lequel ces stations pourront lui transmettre leur trafic. Sa décision est fondée sur l'ordre de priorité (voir le numéro **3651**) des radiotélégrammes ou des conversations radiotéléphoniques en instance dans les stations d'aéronef, et sur la nécessité de permettre à chacune des stations appelantes d'écouler le plus grand nombre possible de communications.
NOC	**7554** 1308	**3797**	§ 4. (1) Lorsqu'une station appelée ne répond pas à l'appel émis trois fois à des intervalles de deux minutes, l'appel doit cesser et il ne doit pas être renouvelé avant quinze minutes.
NOC	**7555** 1310	**3798**	(2) Avant le renouveler l'appel, la station appelante doit s'assurer que la station appelée n'est pas en communication avec une autre station.

MOD 7556 1311 3799 (3) S'il n'y a pas de raison de craindre que des brouillages préjudiciables n'affectent des communcations en cours, les dispositions du numéro **3797** ne sont pas applicables. Dans ces cas, l'appel émis trois fois à des intervalles de deux minutes, peut être renouvelé après un intervalle de durée inférieure à quinze minutes mais ou moins égale à trois minutes.

MOD 7557 1312 3800 § 5. Les stations d'aéronef ne doivent pas émettre leur onde porteuse entre les appels.

MOD 7558 1313 3801 § 6. Lorsque le nom et l'adresse de l'administration ou de l'exploitation privée dont dépend une station d'aéronef ne sont pas mentionnés dans la nomenclature appropriée ou ne sont plus en concordance avec les indications de celle-ci, la station d'aéronef a le devoir de donner d'office à la station aéronautique à laquelle elle transmet du trafic touts les renseignements nécessaires à cet égard.

MOD 7559 1314 3802 § 7. (1) La station aéronautique peut, au moyen de l'abréviation TR (épelée à l'aide des mots de code TANGO ROMEO), demander à la station d'aéronef de lui fournir les renseignements suivants:

MOD 7560 1315 3803 *a*) Position et, autant que possible, cap et vitesse;

MOD 7561 1316 3804 *b*) Prochaine destination.

MOD 7562 1317 3805 (2) Il convient que les renseignements visés aux numéros **3802** à **3804,** précédés de l'abréviation TR, soient fournis par les stations d'aéronef, chaque fois que cela semble approprié, sans demande préalable de la station aéronautique. Ces renseignements ne sont fournis qu'après de la personne responsable de l'aéronef.

MOD

Certificats des opérateurs des stations de navire et des stations terriennes de navire

SECTION I

NOC

Dispositions générales

MOD 7692 848 3860 § 1. (1) Le service de toute station radiotélégraphique de navire doit être assuré par un opérateur titulaire d'un certificat délivré ou reconnu par le gouvernement dont dépende cette station.

MOD 7693 3861 (2) Le service de toute station radiotéléphonique de navire doit être dirigé par un
849 opérateur titulaire d'un certificat délivré ou reconnu par le gouvernement sont dépend cette station. Sous réserve de cette disposition, d'autres personnes que le titulaire du certificat peuvent utiliser l'installation radiotéléphonique.

MOD 7694 3862 (3) Le service de toute station terrienne de navire doit être dirigé par une personne
849A titulaire d'un certificat délivré ou reconnu par le gouvernemnt dont dépend cette station. Sous réserve de cette disposition, d'autres personnes que le titulaire du certificat peuvent utiliser l'installation.

MOD 7695 3863 (4) Le service des appareils automatiques de télécommunication (1) installés dans une
850 station de navire doit être dirigé par un opérateur titulaire d'un certificat délivré ou reconnu par le gouvernement dont dépend cette station. Sous réserve de cette disposition, d'aures personnes que le titulaire du certificat peuvent utiliser ces appareils. Sil le fonctionnement de ces appareils repose essentiellement sur l'utilisation des signaux du code Morse décrits dans l'Instruction pour l'exploitation du service télégraphique public international, le service doit être assuré par un opérateur titulaire d'un certificat d'opérateur radiotélégraphiste.Toutefois, cette dernière condition ne s'applique pas aux appareils automatiques qui peuvent utiliser les signaux du code Morse uniquement à des fins d'identification.

NOC 7696 3864 (5) Toutefois, pour le service des stations radiotéléphoniques opérant uniquement
851 sur des fréquences supérieures à 30 MHz, chaque gouvernement détermine lui-même si un certificat est nécessaire et, le cas échéant, définit les conditions à remplir pour son obtention.

MOD 7697 3865 (6) Les dispositions du numéro **3864** ne sont applicables aux stations de navire
852 fonctionnent sur des fréquences assignées pour une utilisation internationale.

MOD 7698 3866 § 2. (1) Dans le cas d'indisponibilité absolue de l'opérateur au cours d'une traversée,
853 le commandant ou la personne responsable de la station peut autoriser, mais à titre temporaire seulement, un opérateur titulaire d'un certificate délivré par le gouvernement d'un autre Membre à assurer le service de radicommunication.

MOD 7699 3867 (2) Lorsqu'il est nécessaire d'employer comme opérateur provisoire une personne
854 ne possédant pas de certificat, ou un opérateur n'ayant pas de certificat suffisant, son intervention doit se limiter uniquement aux signaux de détresse, d'urgence et de sécurité, aux messages qui s'y rapportent, aux messages intéressant directement la sécurité de la vie humanie et aux messages urgents relatifs à la marche du navire. Les personnes ainsi employées astreintes au secret des correpondances prévu au numéro **3877.**

NOC 7700 3868 (3) Dans tous le cas, l'opérateur provisoire doit être remplacé aussitôt que possible
855 par un opérateur titulaire du certificat prévu au paragraphe 1 du présent article.

NOC 7701 3869 § 3. (1) Chaque administration prend les dispositions nécessaires pour éviter, dans
856 la plus grande mesure possible, l'emploi frauduleux des certificats. A cet effect, ceux-ci portent la signature du titulaire et sont authentifiés par l'administration qui les a délivrés. Les administrations peuvent employer, à leur gré, d'autres moyens d'identification, tels que photographies, empreintes digitales, etc.

MOD 7702 3870 (2) Dans le service mobile maritime, les certificats délivrés aprés le 1er janvier
856A 1978 doivent porter la photographie et la date de naissance du titulaire.

MOD 7703 3871 (3) Afin de faciliter la vérification des certificats, ceux-ci portent, s'il y a lieu, en
857 plus du texte rédigé dans la langue nationale, une traduction de ce texte dans l'une des langues de travail de l'Union.

MOD 7704 3872 (4) Dans le service mobile maritime, tous les certificats qui ne sont pas rédigés
857A dans l'une des langues de travail de l'Union et qui ont été délivrés, après le 1er janvier 1978 doivent comporter au moins les renseignements suivants, rédigés dans l'une de ces langues de travail:

3873 *a*) Nom et date de naissance du titulaire;
3874 *b*) Titre du certificat et date à laquelle il a été délivré;
3875 *c*) Le cas échéant, numéro et durée de validité du certificat;
3876 *d*) Nom de l'administration qui a délivré le certificat.

NOC 7705 3877 § 4. Chaque administration prend les mesures nécessaires pour soumettre les
858 opérateurs à l'obligation du secret des correspondances prévue au numéro **2023.**

NOC 7695.1 3863.1 (1) Le terme «appareils automatiques de télécommunication» comprend els appareils tels que les
850.1 téléimprimeurs, les appareils de transmission de données, etc.

SECTION II

Catégories de certificats pour les opérateurs des stations de navire

NOC **7706** **3878** § 5. (1) Il existe quatre catégories de certificats pour les opérateurs radiotélégraphistes (1), à savoir:
866A

3879 *a*) Le certificat général d'opérateur des radiocommunications;
3880 *b*) Le certificat d'opérateur radiotélégraphiste de première classe;
3881 *c*) Le certificat d'opérateur radiotélégraphiste de deuxième classe;
3882 *d*) Le certificat spécial d'opérateur radiotélégraphiste.

NOC **7707** **3883** (2) Il existe deux catégories de certificats pour les opérateurs radiotéléphonistes (1), le certificat général et le certificat restreint.
866B

NOC **7708** **3884** § 6. (1) Le titulaire d'un certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première ou de deuxième classe peut assurer le service radiotélégrahique ou radiotéléphonique de toute station de navire.
866C

NOC **7709** **3885** (2) Le titulaire d'un certificat général d'opérateur radiotélephoniste peut assurer le service radiotéléphonique de toute station de navire.
866D

NOC **7710** **3886** (3) Le titulaire d'un certificat restreint d'opérateur radiotéléphoniste peut assurer le service radiotéléphonique de toute station de navire, à condition que la commande de l'émetteur comporte seulement la manœuvre d'organes de commutation externes et simples, sans qu'il soit nécessaire d'effectuer aucun réglage manuel des éléments qui déterminent le fréquence, l'émetteur lui-même maintenant la stabilité des fréquences dans les limites des tolérances spécifiées à l'appendice 7 et la puissance en crête de l'émetteur ne dépassant pas 1,5 kilowatt.
866E

NOC **7711** **3887** (4) Le certificat d'opérateur radiotélephoniste peut être limité exclusivement à une ou plusieurs des bandes de fréquences du service mobile maritime. Dans ce cas, mention de cette limitation doit être portée sur le certificat.
866F

NOC **7712** **3888** (5) Le service radiotélégraphique des navires auxquels une installation radiotélégraphique n'est pas imposé par des accords internationaux, ainsi que le service radiotéléphonique des stations de navire pour lesquelles le certificat restreint de radiotéléphoniste est seul exigé, peuvent être assurés par le titulaire d'un certificat spécial d'opérateur radiotélegraphiste.
866G

NOC **7713** **3889** (6) Toutefois, lorsque les conditions précisées au numéro **3934** son remplies le service radiotélegraphique des navires auxquels une installation radiotélégraphique n'est pas imposée par des accords internationaux, ainsi que le service radiotéléphonique de toute station de navire, peuvent être assurés par le titulaire d'un certificat spécial d'opérateur radiotélégraphiste.
866H

NOC **7714** **3890** § 7. Exceptionnellement, le certificat d'opérateur radiotélégraphiste de deuxième classe ainsi que le certificat spécial d'opérateur radiotélégraphiste peuvent être limités exclusivement au service radiotélegraphique. Dans ce cas, mention de cette limitation doit être portée sur le certificat.
866I

SECTION III

Conditions d'obtention des certificats d'opérateur

MOD

NOC **7715** **3891** *A*) Généralités

NOC **7716** **3892** § 8. (1) Le conditions à imposer pour l'obtention des différents certificats sont spécifiées dans les paragraphes suivants. Elles doivent être considérées comme des conditions minima.
867

NOC **7717** **3893** (2) Chaque administration reste libre de fixer le nombre des examens qu'elle juge nécessaire pour l'obtention de chaque certificat.
868

NOC **7706.1** **3878.1**
866A.1
NOC **7707.1** **3883.1**
866B.1

(1) Pour l'emploi des opérateurs titulaires des différentes certificats, voir le article 56.

MOD 7718 869 3894 § 9. (1) L'administration qui délivre un certificat peut, avant d'autoriser son titulaire à assurer le service à bord d'un navire, exiger que cet opérateur remplisse d'autres conditions (par example: connaissance des appareils automatiques de télécommunication; connaissances techniques et professionelles complémentaires, relatives notamment à la navigation; aptitudes physiques, etc.).

NOC 7719 870 3895 (2) Il convient que les administrations prennent toutes les mesures qu'elles jugent nécessaires pour contrôler les aptitudes des opérateurs lorsque ceux-ci n'ont par exercé leurs fonctions pendant une durée prolongée.

NOC 7720 870A 3896 (3) Toutefois, en ce qui concerne le service mobile maritime, il convient que les administrations prennent également toutes les mesures qu'elles jugent nécessaires pour contrôler les aptitudes des opérateurs en cours de service.

NOC 7721 3897 *B*) Certificat général d'opérateur des radiocommunications du service mobile maritime

NOC 7722 870B 3898 § 10. Le certificat général d'opérateur des radiocommunications du service mobile maritime est délivré aux candidats qui ont fait preuve des connaissances et aptitudes techniques et professionnelles énumérées ci-après:

NOC 7723 870C 3899 *a*) La connaissance tant des principes généraux de l'électricité que de la théorie de la radioélectricité et de l'électronique permettant de satisfaire aux conditions stipulées aux numéros **3900, 3901** et **3902;**

NOC 7724 870D 3900 *b*) La connaissance théorique des équipements modernes de radiocommunication, notamment des émetteurs, des récepteurs et des systèmes d'antennes utilisés dans le service mobile maritime radiotélégraphique et radiotéléphonique, des appareils automatiques d'alarme, des appareils radioélectriques des embarcations et autres engins de sauvetage, des appareils utilisés pour la radiogoniométrie et de tout le matériel auxiliaire, y compris le dispositifs d'alimentation en énergie électrique (moteurs, alternateurs, générateurs, convertisseurs, redresseurs et accumulateurs), ainsi que des connaissances générales de tout autre équipement habituellement utilisé pour la radionavigation, particulièrement en vue d'assurer la maintenance des appareils;

NOC 7725 870E 3901 *c*) La connaissance pratique du fonctionnement, du réglage et de l'entretien des appareils mentionnés au numéro **3900,** y compris les connaissances pratiques nécessaires pour la prise de relèvements radiogoniométriques et la connaissance des principes de l'étalonnage des radiogoniomètres;

(MOD) 7726 870F 3902 *d*) Les connaissances pratiques nécessaires pour localiser et réparer, au moyen des appareils de mesure et des outils appropriés, les avaries suceptibles de survenir en cours de traversé aux appareils mentionnés au numéro **3900;**

NOC 7727 870G 3903 *e*) L'aptitude à la transmission manuelle correcte et à la réception auditive correcte en code Morse, de groupes de code (mélange de lettres, de chiffres et de signes de ponctuation) à la vitesse de seize groupes par minute, et d'un texte en langage clair à la vitesse de vingt mots par minute. Chaque groupe de code doit comprendre cinq caractères, chaque chiffre ou signe de ponctuation comptant pour deux caractères. Le mot moyen du texte en langage clair doit comporter cinq caractères. La durée de chaque épreuve de transmission et de réception est, en général, de cinq minutes;

NOC 7728 870H 3904 *f*) L'aptitude à la transmission correcte et à la réception correcte radiotéléphonie;

NOC 7729 870I 3905 *g*) La connaissance des Règlements applicables aux radiocommunications, des documents relatifs à la taxation des radiocommunications et des dispositions de la Convention pour la sauvegarde de la vie humaine en mer qui se rapportent à la radioélectricité;

NOC 7730 870J 3906 *h*) Des connaissances suffisantes de la géographie du monde, notamment des principales lignes de navigation maritime et des voies de télécommunication les plus importantes;

NOC 7731 870K 3907 *i*) La connaissance de l'une des langues de travail de l'Union. Les canditats devraient être capables de s'exprimer dans cette langue d'une manière convenable tant verbalement que par écrit. Chaque administration indique elle-même la ou les langues qui sont imposées.

NOC **7732** **3908** *C*) Certificat d'opérateur radiotélégraphiste de première classe

NOC **7733** 871 **3909** § 11. Le certificat de première classe est délivré aux candidats qui ont fait preuve des connaissances et aptitudes techniques et professionnelles énumérées ci-après:

NOC **7734** 872 **3910** *a*) La connaissance tant des principes généraux de l'électricité que de la théorie de la radioélectricité, la connaissance du réglage et du fonctionnement pratique des différentes types d'appareils radiotélégraphiques et radiotéléphoniques utilisés dans les service mobile, y compris les appareils utilisés pour la radiogoniométrie et la prise des relèvements radiogoniométriques, ainsi que la connaissance générale des principes du fonctionnement des autres appareils habituellement employés, pour la radionavigation;

NOC **7735** 873 **3911** *b*) La connaissance théorique et pratique du fonctionnement et de l'entretien des appareils tels que les groupes électrogènes, les accumulateurs, etc., qui sont utilisés pour la mise en œuvre et le réglage des appareils radiotélégraphiques, radiotéléphoniques et radiogoniométriques mentionnés au numéro **3910;**

(MOD) **7736** 874 **3912** *c*) Les connaissances pratiques nécessaires pour réparer par les moyens du bord les avaries susceptibles de survenir aux appareils radiotélégraphiques, radiotéléphoniques et radigoniométriques en cours de traversée;

NOC **7737** 875 **3913** *d*) L'aptitude à la transmission manuelle correcte et à la réception auditive correcte en code Morse, de groupes de code (mélange de lettres, de chiffres et de signes de ponctuation) à la vitesse de vingt groupes par minute, et d'un texte em langage clair à la vitesse de vingt-cinq mots par minute. Chaque groupe de code doit comprendre cinq caractères, chaque chiffre ou signe de pontuation comptant pour deux caractères. Le mot moyen du texte en langage clair doit comporter cinq caractères. La durée de chaque épreuve de transmission et de réception est, en général, de cinq minutes;

NOC **7738** 876 **3914** *e*) L'aptitude à la transmission correcte et à la réception correcte en radiotéléphonie;

MOD **7739** 877 **3915** *f*) La connaissance détaillée des Règlements applicables aux radiocommunications, la connaissance des documents relatifs à la taxation des radiocommunications et la connaissance des dispositions de la Convention pour la sauvegarde de la vie humaine en mer qui se rapportent à la radioélectricité;

NOC **7740** 878 **3916** *g*) Des connaissances suffisantes de la géographie du monde, notamment des principales lignes de navigation maritime et aérienne et des voies de télécommunication le plus importantes;

NOC **7741** 879 **3917** *h*) La connaissance suffisante de l'une des langues de travail de l'Union. Les candidats doivent être capables de s'exprimer dans cette langue d'une manière convenable tant verbalement que par écrit. Chaque administration indique elle-même la ou les langues qui sont imposées.

NOC **7742** **3918** *D*) Certificat d'opérateur radiotélégraphiste de deuxième classe

NOC **7743** 880 **3919** § 12. Le certificat de deuxième classe est délivré aux candidats qui ont fait preuve des connaissances et aptitudes techniques et professionnelles énumérées ci-après:

NOC **7744** 881 **3920** *a*) La connaissance élémentaire théorique et pratique de électricité et de la radioélectricité, la connaissance du réglage et du fontionnement pratique des différentes types d'appareils radiotélégraphiques et radiotéléphoniques utilisés dans le service mobile, y compris les appareils utilisés pour la radiogoniométrie et la prise des relévements radiogoniométriques, ainsi que la connaissance elémentaire des principes du fonctionnemnt des autres appareils habituellement employés pour la radionavigation;

NOC **7745** 882 **3921** *b*) La connaissance élémentaire théorique et pratique du fonctionnment et de l'entretien des appareils tels que les groupes électrogènes, les accumulateurs, etc., qui sont utilisés pour la mise en œuvre et le réglage des appareils radiotélégraphiques, radiotéléphoniques et radiogoniométriques mentionnés au numéro **3920;**

(MOD) **7746** 883 **3922** *c*) Les connaissances pratiques suffisantes pour pouvoir réparer les petites avaries susceptibles de survenir aux appareils radiotélégraphiques, radiotéléphoniques et radiogoniométriques en cours de traversée;

NOC **7747** 884 **3923** *d*) L'aptitude à la transmission manuelle correcte et à la réception auditive correcte, en code Morse, de groupes de code (mélange de lettres, de chiffres et de signes de ponctuation) à la vitesse de seize groupes par minute, et d'un text en langage clair à la vitesse de vingt mots par minute. Chaque groupe de code doit comprendre cinq caractères, chaque chiffre ou signe de ponctuation comptant pour deux caractères. Le mot moyen du texte en langage clair doit comporter cinq caractères. La durée de chaque épreuve de transmission et de réception est, en général, de cinq minutes;

MOD **7748** 885 **3924** *e*) L'aptitude à la transmission correcte et à la réception correcte en radiotéléphonie, sauf dans le cas prévu au numéro **3890**;

MOD **7749** 886 **3925** *f*) La connaissance des Règlements applicables aux radiocommunications, la connaissance des documents relatifs à la taxation des radiocommunications et la connaissance des dispositions de la Convention pour la sauvegarde de la vie humanie en mer qui se rapportent à la radioélectricité;

NOC **7750** 887 **3926** *g*) Des connaissances suffissantes de la géographie du monde, notamment des principales lignes de navigation maritime et aérienne et des voies de télécommunication le plus importantes;

NOC **7751** 888 **3927** *h*) S'il y a lieu, la connaissance élémentaire d'une des langues de travail de l'Union. Les candidats doivent être capables de s'exprimer dans cette langue d'une manière convenable, tant verbalement que par écrit. Chaque administration indique elle-même la ou les langues qui sont imposés.

NOC **7752** **3928** *E*) Certificat spécial d'opérateur radiotélégraphiste

NOC **7753** 889 **3929** § 13. (1) Le certificat spécial de radiotélégraphiste est délivré aux candidats qui ont fait preuve des connaissances et aptitudes professionnelles énumérées ci-après:

NOC **7754** 890 **3930** *a*) L'aptitude à la transmission manuelle correcte et à la réception auditive correcte, en code Morse, de groupes de code (mélange de lettres, de chiffres et de signes de ponctuation) à la vitesse de seize groupes par minute, et de texte en langage clair à la vitesse de vingt mots par minute. Chaque groupe de code doit comprendre cinq caractères, chaque signe de ponctuation étant compté pour deux caractères. Le mot moyen du texte en langage clair doit comporter cinq caractères;

NOC **7755** 891 **3931** *b*) La connaissance du réglage et du fonctionnement des appareils radiotélégraphiques;

NOC **7756** 892 **3932** *c*) La connaissance des Règlements applicables aux radiocommunications télégraphiques et notamment de la partie de ces Règlements relative à la securité de la vie humaine en mer.

MOD **7757** 893 **3933** (2) Il appartient à chaque administration intéressée de fixer les autres conditions pour l'obtention de ce certificat. Cependant, les conditions fixées aux numéros **3941, 3942, 3943** et **3944** ou **3945**, selon le cas, doivent être satisfaites.

NOC **7758** 893A **3934** (3) Dans le service mobile maritime, il appartient à chaque administration intéressée de fixer les autres conditions pour l'obtention de ce certificat. Cependant sauf dans le cas prévus au numéro **3890**, les conditions fixées aux numéros **3936, 3937, 3938, 3939** et **3940** doivent être satisfaites pour un tel certificat délivré aux opérateurs de station de navire après le 1er janvier 1976.

NOC **7759** **3935** *F*) Certificats d'opérateur radiotéléphoniste

MOD **7760** 894 **3936** § 14. Le certificat général d'opérateur radiotéléphoniste est délivré aux candidats qui ont fait preuve des connaissances et aptitudes professionnelles énumérées ci-après (voir également les numéros **3884, 3885, 3888** et **3889**):

NOC **7761** 895 **3937** *a*) La connaissance des principes élémentaires de la radiotéléphonie;

NOC **7762** 896 **3938** *b*) La connaissance détaillée du réglage et du fonctionnement pratique des appareils de radiotéléphonie;

NOC **7763** 897 **3939** *c*) L'aptitude à la transmission correcte et à la réception correcte en radiotéléphonie;

NOC **7764** 898 **3940** *d*) La connaissance détaillée des Règlements applicables aux radicommunications téléphoniques et notamment de la partie de ces Règlemens relative à la sécurité de la vie humaine.

NOC **7765** 899 **3941**

§ 15. (1) Le certificat restreint de radiotéléphoniste est délivré aux candidats qui ont fait preuve des connaissances et aptitudes professionnelles énumérées ci-aprés:

NOC **7766** 900 **3942**

a) La connaisance pratique de l'exploitation et de la procédure radiotéléphoniques;

NOC **7767** 901 **3943**

b) L'aptitude à la transmission correcte et à la réception correcte téléphoniques;

NOC **7768** 902 **3944**

c) La connaissance générale des Règlements applicables aux radiocommunications téléphoniques et notamment de la partie de ces Règlements relative à la sécurité de la vie humaine.

MOD **7769** 903 **3945**

(2) Pour les stations radiotéléphoniques de navire dont la puissance de crête de l'émetteur ne dépasse pas 400 watts, chaque administration peut fixer ell-même les conditions d'obtention d'un certificat restreint de radiotéléphoniste, sous réserve que le fonctionnement de l'émetteur n'exige que l'emploi de dispositifs extérieures de commutation de conception simple, à l'exclusion de tout réglage manuel des éléments déterminant la fréquence et que la stabilité des fréquences soit maintenue par l'émetteur lui-même dans les limites des tolérances fixées à l'appendice **7.** Toutefois, en fixant ces conditions, les administrations s'assurent quie l'opérateur possède une connaissance suffisante de l'exploitation et des procédures du service radiotélephonique, notamment en ce qui concerne la détresse, l'urgence et la sécurité. Les dispositions ci-dessus ne contredisent en rien celles du numéro **3949.**

NOC **7770** 904 **3946**

(3) Les administrations des pays de la Règion 1 ne délivrent pas de certificats correspondant aux dispositions du numéro **3945.**

NOC **7771** 905 **3947**

§ 16. Dans un certificat de radiotéléphoniste, il doit être indiqué si celui-ci est un certificat général ou un certificat restreint et, dans ce dernier cas, s'il a été délivré conformément aux dispositions du numéro **3945.**

MOD **7772** 905A **3948**

§ 17. Dans le service mobile maritime, un certificat restreint d'opérateur radiotéléphoniste doit, s'il y a lieu, faire mention également de la limitation prévue au numéro **3887.**

(MOD) **7773** 906 **3949**

§ 18. Pour satisfaire à des besoins spéciaux, des accords particuliers entre administrations peuvent fixer les conditions à remplir pour l'obtention d'un certificat de radiotéléphoniste destiné à être utilisé dans des stations radiotéléphoniques remplissant certaines conditions techniques et certaines conditions d'exploitation. De tels accords ne peuvent être conclus que sous réserve qu'aucun brouillage préjudiciable aux services internatiaux ne résulte de leur application. Ces conditions et ces accords sont mentionnés sur les certificats ainsi délivrés.

SECTION IV

NOC

Stages professionnels

NOC **7774** 907 **3950**

§ 19. (1) Le titulaire d'un certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première ou de deuxième classe est autorisé à embarquer comme chef de poste sur un navire dont la station est classée dans la quatrième catégorie (voir le numéro **4056**).

NOC **7775** 907A **3951**

(2) Toutefois, avant de pouvoir embarquer comme chef de poste ou comme seul opérateur sur un navire dont la station est classée dans la quatrième catégorie (voir le numéro **4056**) et qui, aux termes des accords internationaux, doit compter un opérateur radiotélégraphiste, le titulaire d'un certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première ou de deuxième classe doit avoir une expérience suffisante comme opérateur à bord d'un navire en mer.

NOC **7776** 908 **3952**

(3) Avant de pouvoir embarquer comme chef de post d'une station de navire de la deuxième ou de la troisième catégorie (voir les numéros **4054** et **4055**), le titulaire d'un certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première ou de deuxième classe doit avoir au moins six mois d'experience comme opérateur à bord d'un navire ou dans une station côtière, dont trois mois au moins à bord d'un navire.

NOC **7777** 909 **3953**

(4) Avant de pouvoir embarquer comme chef de poste d'une station de navire de la première catégorie (voir le numéro **4053**), le titulaire d'un certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première classe doit avoir au moins une année d'expérience comme opérateur à bord d'un navire ou dans une staion côtière, dont six mois au moins à bord d'un navire.

NOC

Personnel des stations du service mobile maritime

SECTION I

NOC

Personnel des stations côtières

MOD 7803 948 **3979** § 1. Les administrations prennnet les mesures nécessaires pour garantir que, dans les stations côtières, le personnel possède les aptitudes professionnelles lui permettant d'assurer efficacement le service de ces stations.

SECTION II

NOC

Classe et nombre minimum d'opérateurs dans les stations à bord des navires

MOD 7804 912 **3980** § 2. Du point de vue du service de la correpondance publique, il appartient à chaque gouvernement du prendre les mesures nécessaires pour que les stations à bord des navires de sa nationalité soient pourvues du personnel suffisant pour assurer un service efficace.

MOD 7805 913 **3981** § 3. Compte tenu des dispositions de l'article 55, le personnel des stations de navire du service de correpondance publique doit comporter au moins:

NOC 7806 914 **3982** *a*) Pour les stations de navire de la première catégorie, sauf dans le cas prévu au numéro **3986:** un chef de poste titulaire du certificat général d'opérateur des radiocommunications ou du certificat d'opérateur radiotélégraphiste de première classe;

NOC 7807 915 **3983** *b*) Pour les stations de navire des deuxième et troisième catégories, sauf dans les cas prévus au numéro **3986:** un chef de poste titulaire du certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première ou de deuxième classe;

NOC 7808 916 **3984** *c*) Pour les stations de navire de la quatrième catégorie, sauf dans les cas prévus aux numéros **3985** et **3986:** un opérateur titulaire d'un certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première ou de deuxième classe;

NOC 7809 917 **3985** *d*) Pour les stations de navire pourvues d'une installation radiotélégraphique qui ne leur est pas imposée par des accords internationaux: un opérateur titulaire du certificat général d'opérateur des radiocommunications ou d'un certificat d'opérateur radiotélégraphiste de première ou de deuxième classe ou d'un certificate spécial d'opérateur radiotélégraphiste;

NOC 7810 918 **3986** *e*) Pour les stations de navire munies uniquement d'une installation radiotéléphonique: um opérateur titulaire soit d'un certificat de radiotélephoniste soit d'un certificat de radiotélégraphiste.

3987 à 4011 *(Non attribués.)*

N54/21

ARTICLE 57

MOD

Inspection des stations de navire et des stations terriennes de navire

MOD 7836 838 **4012** § 1. (1) Les gouvernements ou les administrations compétentes des pays ou une station de navire ou une station terrienne de navire fait escale peuvent exiger la production de la licence pour examiner. L'opérateur de la station, ou la personne responsable de la station, doit se prêter à cette vérification. La licence doit être conservée de façon à pouvoir être produite sur demande: Dans toute la mesure du possible, la licence, ou une copie certifiée conforme par l'autorité qui l'a délivrée, doit être affichée à demeure dans la station.

MOD 7837 939 **4013** (2) Les inspecteurs doivent être, en posssession d'une carte ou d'un insigne d'identité délivré par les autorités compétentes, qu'ils doivent montrer à la demande du commandant ou de la personne responsable du navire ou de toute autre bâtiment portant la station de navire ou la station terrienne de navire.

NOC 7838 840 **4014** (3) Lorsque la licence ne peut pas être produite, ou lorsque des anomalies manifestes sont constatées, les gouvernements ou administrations peuvent faire procéder à l'inspection des installations radioélectriques, afin de s'assurer qu'elles répondent aux stipulations du présent Règlement.

NOC 7839 841 **4015** (4) De plus, les inspecteurs sont en droit d'exiger la production des certificats des opérateurs, mais ils ne peuvent demander aucune justification de connaissances professionnelles.

MOD 7840 842 **4016** § 2. (1) Lorsqu'un gouvernement ou une administration s'est trouvé dans l'obligation de recourir à la mesure prévue au numéro **4014,** ou lorsque les certificats d'opérateur n'ont pas pu être produits, le gouvernement ou l'administration dont dépend la station de navire ou la station terrienne de navire en cause doit être informé sans retard. De plus, il est fait application, le cas échéant, des dispositions de l'article 21.

MOD 7841 843 **4017** (2) Avant de quitter le navire, ou tout autre bâtiment portant la station de navire ou la station terrienne de navire, l'inspecteur doit faire part de ses constatations au commandant ou à la personne responsable. En cas d'infraction aux stipulations du présent Règlement, l'inspecteur présente son rapport par écrit.

MOD 7842 844 **4018** § 3. Les Membres de l'Union s'engagent à ne pas imposer aux stations de navire étrangères ou aux stations terriennes de navire étrangères qui se trouvent temporairement dans leurs eaux territoriales ou s'arrêtent temporairement sur leur territoire, des conditions techniques et d'exploitation plus rigoureuses que celles prèvues dans le présent Règlement. Cette prescription n'affecte en rien les dispositions qui relèvent d'accords internationaux relatifs à la navigation maritime et qui ne sont pas prévues dans le présent Règlement.

NOC

Vocations du service mobile maritime

SECTION I

NOC

Généralités

MOD 7866 921 **4044** § 1. Afin de permettre l'application des règles suivantes relatives aux heures de veille, toute station du service mobile maritime doit être munie d'une montre précise correctement réglée sur le Temps universel coordonné (UTC).

MOD 7867 922 **4045** § 2. Le Temps universel coordonné (UTC), compté de 00.00 à 23.59 heures à partir de minuit, doit être employé pour toutes les inscriptions dans le journal du service de radiocommunication et dans tous les autres documents analogues des navires obligatoirement munis d'appareils de radiocommunication en exécution d'un accord international. Il en est, autant que possible, de même pour les autres navires.

SECTION II

NOC

Stations côtières

NOC 7868 923 **4046** § 3. (1) Le service des stations côtières est, autant que possible, permanent de jour et de nuit. Toutefois, le service de certaines stations côtières peut être de durée limitée. Chaque administration ou exploitation privée reconnue dûment autorisée à cet effet fixe les vacations des stations placées sous son autorité.

NOC 7869 924 **4047** (2) Ces vocations sont notifiées au Secrétaire général qui publie dans la Nomenclature des stations côtières.

(MOD) 7870 925 **4048** § 4. Les stations côtières dont le service n'est pas permanent ne peuvent pas clore une vacation avant d'avoir:

(NOC) 7871 926 **4049** *a*) Terminé toutes les opérations motivées par un appel de détresse ou un signal d'urgence ou de sécurité;

MOD 7872 927 **4050** *b*) Écoulé tout le trafic originaire ou à destination des stations de navire qui se trouvent dans leur zone de service et qui ont signalé leur présence avant la cessation effective du travail;

NOC 7873 927A **4051** *c*) Adressé un appel général à toutes les stations pour annoncer la fermeture du service et indiquer l'heure de la réouverture, si elle diffère de leurs heures normales de service.

SECTION III

Stations de navire

NOC

NOC 7874 929 4052 § 5. (1) Pour le service international de la correspondance publique, les stations de navire sont classées en quatre catégories:

NOC 7875 930 4053 *a*) Stations de première catégorie: ces stations assurent un service permanent;

NOC 7876 931 4054 *b*) Stations de deuxième catégorie: ces stations assurent un service de 16 heures par jour;

NOC 7877 931A 4055 *c*) Stations de troisième catégorie: ces stations assurent un service de 8 heures par jour;

NOC 7878 932 4056 *d*) Stations de quatrième catégorie: ces stations assurent un service de durée plus limitée que celui des stations de troisième catégorie ou un service dont la durée n'est pas fixée dans le présent Règlement.

NOC 7879 933 4057 (2) Chaque administration détermine elle-même les règles suivant lesquelles les stations de navire placées sous son autorité sont réparties entre les quatre catégories ci-dessus définies.

NOC 7880 934 4058 § 6. (1) Les stations de navire classées dans le deuxième catégorie assurent le service pendant les heures suivantes:

00.00-04.00
08.00-12.00
16.00-18.00
20.00-22.00 } heure locale du navire ou heure du fuseau horaire;

et pendant quatre heures fixées par l'administration, le commandant ou la personne responsable, afin de répondre aux besoins essentiels du navire en matière de communications et de tenir compte des conditions de propagation et des besoins du trafic.

NOC 7881 934A 4059 (2) Les stations de navire classées dans la troisième catégorie assurent le service pendant les heures suivantes:

08.00-12.00 — heure locale du navire ou heure du fuseau horaire;

et deux heures de suite entre 18.00 heures et 22.00 heures, heure locale du navire ou du fuseau horaire, fixées par l'administration, le commandant ou la personne responsable, ainsi que pendant deux heures fixées par l'administration, le commandant ou la personne responsable, afin de répondre aux besoins essentiels du navire en matière de communications et de tenir compte des conditions de propagation et des besoins du trafic.

NOC 7882 934B 4060 (3) Chaque administration décide si l'heure locale du navire observée par ses navires doit être ou non l'heure du fuseau horaire, comme indiqué dans l'appendice **12** (voir les numéros **4058** et **4059**).

NOC 7883 935 4061 (4) Dans le cas de courtes traversées, ces stations assurent le service suivant l'horaire fixé par les administrations dont elles dépendent.

NOC 7884 935A 4062 § 7. Il est recommandé aux stations de navire de la quartième catégorie d'assurer le service de 08.30 à 09.30 heure locale du navire ou heure du suseau horaire.

MOD 7885 939 4063 § 8. (1) Les stations de navire dont le service n'est pas permanent ne peuvent clore une vacation qu'après avoir:

NOC 7886 940 4064 *a*) Terminé toutes les opérations motivées par un appel de détresse ou un signal d'urgence ou de sécurité;

MOD 7887 941 4065 *b*) Écoulé, autant qu'il soit possible en pratique, tout le trafic originaire ou à destination des stations côtières qui se trouvent dans leur zone de service, et des stations de navire qui, se trouvant dans leur zone de service, ont signalé leur présence avant la cessation effective du travail.

NOC 7888 942 4066 (2) Une station de navire qui n'a pas de vacations déterminées doit informer la ou les stations côtières avec lesquelles elle est en communication des heures de clôture et de réouverture de son service.

MOD 7889 943 4067 § 9. (1) Toute station de navire arrivant dans un port et dont le service est, par suite, sur le point de cesser, doit:

NOC 7890 944 4068 *a*) En avertir la station côtière la plus proche et, si c'est utile, les autres stations côtières avec lesquelles elle correspond en général;

(MOD) 7891 945 4069 *b*) Ne clore sa vacation qu'aprés liquidation du trafic en instance, à moins que les dispositions en vigueur dans le pays où elle fait escale ne le permettent pas.

NOC 7892 946 4070 (2) Lorsqu'elle quitte un port, la station de navire doit informer de sa réouverture la ou les stations côtières intéréssées, dès que cette réouverture lui est permise par les dispositions en vigueur dans le pays du port de départ. Toutefois, une station de navire dont les vacations ne sont pas fixées dans le présent Règlement, peut attendre le moment même de sa réouverture après son départ du port pour en informer la ou les stations côtières intéressées.

4071 à 4095 (*Non attribués.*)

ARTICLE 59

NOC

Conditions à remplir dans le service mobile maritime et dans le service mobile maritime par satellite

SECTION I

NOC

Service mobile maritime

NOC 7918 4096 *A*) Dispositions générales

MOD 7919 955 4097 § 1. Les stations de navire doivent être établies de manière à être conformes aux dispositions des chapitres III et XI em ce qui concerne les fréquences et les classes d'émission.

MOD 7920 957 4098 § 2. Les fréquences d'émission des stations de navire doivent être vérifiées le plus souvent possible par le service d'inspection dont ces stations relèvent.

NOC 7921 958 4099 § 3. L'énergie rayonnée par les appareils récepteur doit être aussi réduite que possible et ne doit pas causer de brouillage préjudiciable aux autres stations.

MOD 7922 959 4100 § 4. Les administrations prennent les mesures pratiques nécessaires pour que le fonctionnement des appareils électriques ou électroniques de toute nature installés dans les stations de navire ne cause pas de brouillage préjudiciable aux services radioélectriques assentiels des stations fonctionnant conformément aux dispositions du présent Règlement.

MOD 7923 960 4101 § 5. (1) Les changements de fréquence dans les appareils émetteurs et récepteurs de toute station de navire doivent pouvoir être effectués aussi rapidement que possible.

MOD 7924 961 4102 (2) Les installations de toute station de navire doivent permettre, une fois la communication établie, de passer de l'émission à la réception, et vice versa, dans un temps aussi court que possible.

MOD 7925 962 4103 § 6. Il est interdit aux stations de navire en mer d'effectuer un service de radiodiffusion (voir le numéro **36**). (Voir également le numéro **2665**.)

MOD 7926 963 4104 § 7. Les stations de navire autres que les stations d'engin de sauvetage doivent être pourvues des documents énumérés à la section pertinent de l'appendice **11**.

NOC 7927 964 4105 § 8. Lorsqu'un émetteur d'une station de navire n'est pas susceptible d'être réglé de façon que sa fréquence satisfasse à la tolérance dans l'appendice **7**, la station de navire doit munie d'un dispositif lui permettant de mesurer la fréquence d'émission avec une précision au moins égale à la moitié de cette tolérance.

NOC 7928 4106 *B*) Stations de navire utilisant la radiotélégraphie

NOC 7929 970 4107 § 9. Les stations de navire pourvues d'appareils radiotélégraphiques destinés à être utilisés pour le trafic normal en télégraphie Morse doivent être équipées de dispositifs permettant de passer de l'émission à la réception et vice versa sans manœuvre de commutation. Il convient, de plus, que les stations de navire puissent écouter sur la fréquence de réception au cours des périodes d'émission.

NOC 4108 **B1) Bandes comprises entre 405 kHz et 535 kHz**

NOC 7930 972 4109 § 10. Les émetteurs utilisés par les stations de naviore fonctionnant dans les bandes autorisées comprises entre 405 kHz et 535 kHz doivent être pourvus de dispositifs permettant, d'une manière facile, d'en réduire notablement la puissance.

NOC 7931 973 4110 § 11. Toute station de navire pourvue d'appareils radiotélégraphiques destinés à fonctionner dans le bandes autorisées comprises entre 405 kHz et 535 kHz doit pouvoir:

NOC 7932 974 4111 *a*) Faire des émissions des classes soit A2A et A2B (*) ou H2A et H2B (*) et recevoir des émissions des classes A2A, A2B (*) sur la fréquence porteuse 500 kHz;

NOC 7933 975 4112 *b*) Faire en outre des émissions de la classe A1A et de la classe A2A ou H2A sur deux fréquences de travail au moins;

NOC 7934 976 4113 *c*) Recevoir en outre des émissions des classes A1A, A2A et H2A sur toutes les autres fréquences nécessaires à lexécution de son service.

NOC 7935 977 4114 § 12. Les dispositions des numéros **4112** et **4113**, ne s'appliquent pas aux appareils prévues uniquement pour les cas de détresse, d'urgence et de sécurité.

NOC 4115 **B2) Bandes comprises entre 1605 kHz et 2850 kHz**

NOC 7936 978 4116 § 13. Dans la Région 2, toute station radiotélégraphique installée à bord d'un navire utilisant la bande 2089,5-2092,5 kHz pour l'appel et la réponse doit disposer d'au moins une autre fréquence dans les bandes autorisées comprises entre 1605 kHz et 2850 kHz.

NOC 4117 **B3) Bandes comprises entre 4000 kHz et 27 500 kHz**

NOC 7937 979 4118 § 14. Tous les appareils de station de navire utilisant les émissions de la classe A1A sur les fréquences des bandes autorisées comprises entre 4000 kHz et 27 500 kHz doivent satisfaire aux conditions suivantes:

NOC 7938 980 4119 *a*) Dans chacune des bandes nécessaires à l'exécution de leur service, ils doivent permettre l'emploi, en plus d'une fréquence de la bande d'appel, de deux fréquences de travail au moins (voir le numéro **4306**);

NOC 7939 981 4120 *b*) Les changements de fréquence des appareils émetteurs doivent pouvoir être effectués aussi rapidement que possible et, en tout état de cause, en moins de quinze secondes;

NOC 7940 982 4121 *c*) Les appareils récepteurs doivent présenter les mêmes qualités que les appareils émetteurs en matière de changement de fréquence.

NOC 7941 4122 *C)* Stations de navire utilisant la télégraphie à impression directe à bande étroite

NOC 7942 999G 4123 § 15. Les caractéristiques des appareils de télégraphie à impression directe à bande étroite doivent être conformes aux dispositions de l'appendice **38**.

NOC 7943 4124 *D)* Stations de navire utilisant la radiotéléphonie

NOC 4125 **D1) Bandes comprises entre 1605 kHz et 4000 kHz**

NOC 7944 983 4126 § 16. Toute station de navire pourvue d'appareils radiotéléphoniques destinés à fonctionner dans les bandes autorisées comprises entre 1605 kHz e 2850 kHz doit pouvoir:

NOC 7945 948 4127 *a*) Faire des émissions de la classe A3E sur la fréquence porteuse 2182 kHz, et recevoir des émissions des classes A3E et H3E sur la fréquence porteuse 2182 kHz. Cependant, à partir du 1er janvier 1982, les émissions de la classe A3E ne sont plus autorisées sur la fréquence porteuse 2182 kHz, sauf pour les appareils dont il est question au numéro **4130**;

NOC 7946 985 4128 *b*) Faire, en outre, des émissions des classes:

1) A3E; *ou*
2) H3E, R3F et J3E (1),

sur deux fréquences de travail au moins (2). Cependant, à partir du 1er janvier 1982, les émissions des classes A3E et H3E ne sont plus autorisées sur les fréquences de travail;

(*) Ceci pourvoit à la réception automatique de signaux radiotélégraphiques d'alarme.

NOC 7946.1 985.1 4128.1 (1) Jusqu'au 1er janvier 1982, les administrations peuvent, dans certains zones, restreindre cette clause aux émissions des classes H3E et J3E sur les fréquences de travail.

NOC 7946.2 985.2 4128.2 (2) Dans certaines zones, les administrations peuvent restreindre cette clause à une seule fréquence de travail.

NOC **7947** **4129** *c*) Recevoir, en outre, des émissions des classes:
986

1) A3E et H3E, *ou*
2) A3E, H3E, R3E et J3E,

sur toutes les fréquences nécessaires à l'exécution de son service. Cependant, après le 1er janvier 1982 l'aptitude à recevoir des émissions des classes A3E et H3E n'est plus exigée.

NOC **7948** **4130** § 17. Les dispositions des numéros **4128** et **4129** ne s'appliquent pas aux appareils
987 prévus uniquement pour les cas de détresse, d'urgence et de sécurité.

NOC **4131** **D2) Bandes comprises entre 4000 kHz et 23 000 kHz**

MOD **7949** **4132** § 18. Dans la zone des Régions 1 et 2 située au sud du parallèle 15° Nord, y
987A compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, il convient que toutes les stations de navire pourvues d'appareils radiotéléphoniques destinés à fonctionner dans les bandes autorisées comprises entre 4000 kHz et 23 000 kHz puissent émettre et recevoir sur les fréquences porteuses 4125 kHz et 6215,5 kHz (voir les numéros **2982** et **2986**).

NOC **4133** **D3) Bandes comprises entre 156 MHz et 174 MHz**

NOC **7950** **4134** § 19. Toute station de navire pourvue d'appareils radiotéléphoniques destinés à
988 fonctionner dans les bandes autorisées comprises entre 156 MHz et 174 MHz (voir le numéro **613** et l'appendice **18**) doit pouvoir faire et recevoir des émissions de la classe G3E (voir la Résolution **308**):

NOC **7951** **4135** *a*) Sur la fréquence de détresse, de sécurité et d'appel 156,8 MHz;
989

NOC **7952** **4136** *b*) Sur la première fréquence «navire-navire» 156,3 MHz;
990

NOC **7953** **4137** *c*) Sur toutes les fréquences nécessaires à l'exécution de son service.
991

SECTION II

MOD **Conditions à remplir par les stations terriennes de navire**

MOD **7954** **4138** § 20. Les stations terriennes de navire doivent être établies de manière à être
1379AA conformes aux dispositions du chapitre III en ce qui concerne les fréquences.

MOD **7955** **4139** § 21. Les fréquences des émissions des stations terriennes de navire doivent être
1379AB vérifiées aussi souvent que cela est pratiquement possible par le service d'inspection dont elles relèvent.

NOC **7956** **4140** § 22. L'énergie rayonnée par les appareils récepteurs doit être aussi réduite que
1379AC cela est pratiquement possible et ne doit pas causer de brouillage préjudiciable aux autres stations.

MOD **7957** **4141** § 23. Les administrations prennent toutes les mesures pratiques nécessaires pour
1379AD que le fonctionnement des appareils électriques ou électroniques de toute nature installés dans les stations terriennes de navire ne cause pas de brouillage préjudiciable aux services radioélectriques essentiels de ces stations lorsqu'elles fonctionnent conformément aux dispositions du présent Règlement.

SECTION III

NOC **Communications des aéronefs avec des stations du service mobile maritime et du service mobile maritime par satellite**

NOC **7958** **4142** *A*) Dispositions générales

NOC **7959** **4143** § 24. (1) Les stations à bord d'aéronefs peuvent communiquer avec les stations du
951 service mobile maritime ou du service mobile maritime par satellite. Elles doivent alors se conformer aux dispositions du présent Règlement relatives à ces services.

MOD **7959A** **4144**
952

(2) Il convient qu'à cette occasion les stations à bord d'aéronefs utilisent les fréquences attribuées au service mobile maritime ou au service mobile maritime par satellite.

MOD **7960** **4145**
954

(3) Lorsqu'elles transmettent ou reçoivent de la correspondance publique par l'intermédiaire des stations du service mobile maritime ou du service mobile maritime par satellite, les stations à bord des aéronefs doivent se conformer à toutes les dispositions applicables à la transmission de la correspondance publique dans le service mobile maritime ou le service mobile maritime par satellite (voir notamment les articles **61, 62, 63, 65** et **66**).

SUP **7961**
(devenu **7959A**)

MOD **7972** **4147**

B) Dispositions relatives à l'emploi des fréquences comprises entre 156 MHz et 174 MHz

MOD **7973** **4148**
952

§ 26. (1) En raison des brouillages que peuvent causer les stations d'aéronef à des altitudes élevées, les fréquences du service mobile maritime comprises dans les bandes supérieures à 30 MHz ne doivent pas être utilisées par les stations d'aéronef à l'exception des fréquences comprises entre 156 MHz et 174 MHz qui sont spécifiées dqans l'appendice **18** et dont l'emploi est soumis aux conditions suivantes:

NOC **7974** **4149**
952A

a) L'altitude des stations d'aéronef ne doit pas dépasser 300 mètres (1000 pieds), sauf pour les aéronefs de reconnaissance participant aux opérations des brise-glace, auxquels une altitude de 450 mètres (1500 pieds) est autorisée;

NOC **7975** **4150**
952B

b) La puissance moyenne des émetteurs des stations d'aéronef ne doit pas dépasser 5 watts; toutefois, une puissance au plus égale à un watt doit être utilisée dans la mesure du possible;

NOC **7976** **4151**
952C

c) Les stations d'aéronef doivent utiliser les voies désignées à cet effet dans l'appendice **18;**

NOC **7977** **4152**
952D

d) Sauf pour ce qui est prévu au numéro **4150**, les émetteurs des stations d'aéronef doivent satisfaire aux caractéristiques techniques figurant à l'appendice **19;**

NOC **7978** **4153**
952E

e) Les communications d'une station d'aéronef doivent être brèves et se limiter aux opérations où les stations du service mobile maritime jouent de rôle principal et où il est nécessaire d'établir des communications directes entre l'aéronef et la station de navire ou la station côtière.

NOC **7979** **4154**
953

(2) Les fréquences 156,3 MHz et 156,8 MHz peuvent être utilisées par les stations d'aéronef, mais uniquement à des fins relatives à la sécurité.

ARTICLE 60

NOC

Dispositions spéciales relatives à l'emploi des fréquences dans le service mobile maritime

SECTION I

NOC

Dispositions générales

NOC **8031** **4180**

A) Emissions radiotélégraphiques à bande latérale unique

NOC **8032** **4181**
437A

§ 1. Les stations qui font des émissions radiotélégraphiques à bande latérale unique utilisent à cette fin la bande latérale supérieure. Les fréquences spécifiées dans le présent Règlement pour des émissions des classes H2A et H2B (*) telles que les fréquences 410 kHz, 425 kHz, 454 kHz, 468 kHz, 480 kHz, 500 kHz, 512 kHz, et 8364 kHz, sont utilisées comme fréquences porteuses.

NOC **8033** **4182**

B) Bandes comprises entre 505 kHz et 535 kHz

MOD **8034** **4183**
438

§ 2. Les stations de navire autorisées à fonctionner dans les bandes comprises entre 415 kHz et 535 kHz doivent émettre sur les fréquences indiquées dans le présent article (voir le numéro **4237**), sauf dans les cas prévus au numéro **961**.

NOC **8035** **4184**
438A

§ 3. En règle générale, l'espacement minimal entre fréquences adjacentes utilisées respectivement par des stations côtières d'une part et des stations de navire d'autre part est de 4 kHz.

NOC **8036** **4185**
439

§ 4. Dans la Région 1, aucune fréquence de la bande 405-415 kHz n'est assignée aux stations côtières, afin de protéger la fréquence 410 kHz désignée pour le service de radionavigation maritime (radiogoniométrie).

NOC **8037** **4186**
440

§ 5. Dans la Zone africaine de la Région 1, l'assignation des fréquences aux stations côtières fonctionnant dans les bandes 415-490 kHz et 510-525 kHz est établie, en règle générale, sur la base d'un espacement de 3 kHz entre fréquences adjacentes. Cependant, afin que les fréquences puissent coincider avec celles qui sont utilisées dans la Zone européenne dans les mêmes bandes, cet espacement est réduit dans certains cas.

NOC **8038** **4187**

C) Bandes comprises entre 1605 kHz et 4000 kHz

MOD **8039** **4188**
442

§ 6. (1) Dans la Région 1, il convient que les fréquences assignées aux stations fonctionnant dans les bandes comprises entre 1606,5 kHz et 3800 kHz (voir l'article 8) soient choisies, dans la mesure du possible, dans les bandes suivantes:

1606,5-1625 kHz: radiotélégraphie exclusivement;
1625-1670 kHz: radiotéléphonie à faible puissance;
1670-1950 kHz: stations côtières;
1950-2053 kHz: emissions des stations de navire à destination des stations côtières;
2053-2065 kHz: communications des navires entre eux;
2065-2170 kHz: emissions des stations de navire à destination des stations côtières;
2170-2173,5 kHz: appel des stations de navire par les stations côtières (y compris l'appel sélectif) et, à titre exceptionnel, transmission de messages de sécurité par les stations côtières;
2173,5-2190,5 kHz: *bande de garde de la fréquence de détresse et d'appel 2182 kHz.*
2190,5-2194 kHz: appel des stations côtières par les stations de navire;
2194-2440 kHz: communications des navires entre eux;
2440-2578 kHz: emissions des stations de navire à destination des stations côtières;
2578-2850 kHz: stations côtières;
3155-3340 kHz: emissions des stations de navire à destination des stations côtières;
3340-3400 kHz: communications des navires entre eux;
3500-3600 kHz: communications des navires entre eux;
3600-3800 kHz: stations côtières.

(*) Ceci pourvoit à la réception automatique de signaux radiotélégraphique d'alarme.

MOD **8040** **4189**
443

(2) Dans toute la mesure du possible, les fréquences de ces bandes assignées dans la Région 1 sont espacées de:

7 kHz, lorsque les deux fréquences adjacents sont utilisées pour la radiotéléphonie à double bande latérale;
3 kHz, lorsque les deux fréquences adjacents sont utilisées pour la radiotélégraphie;
5 kHz, lorsque les deux fréquences adjacents sont utilisées l'une pour radiotéléphonie à double bande latérale, l'autre pour la radiotélégraphie.

NOC **8041** **4190**
444

(3) Cependent, dans les bandes attribuées dans la Région 1 aux communications entre navires, l'espacement entre fréquences adjacentes utilisées pour la radiotéléphonie à double bande latérale est ramené à 5 kHz.

NOC **8042** **4191**
444A

(4) Lorsque ces bandes sont utilisées pour la radiotéléphonie à bande latérale unique, une station fonctionnnant dans la moitié inférieure d'une voie à double bande latérale utilise la bande latérale supérieure avec une fréquence porteuse inférieure de 3 kHz à la fréquence centrale de cette voie.

NOC **8043** **4192**
444B

(5) Cependent, dans les bandes attribuées aux communications entre navires, la fréquence porteuse d'une station fonctionnant dans la moitié inférieure d'une voie à double bande latérale est inférieure de 2,5 kHz seulement à la fréquence centrale de cette voie.

NOC **8044** **4193**
445

§ 7. Dans le Régions 2 et 3, les fréquences porteuses 2635 kHz (fréquence assignée 2636,4 kHz) et 2638 kHz (fréquence assignée 2639,4 kHz) sont utilisées, en plus des fréquences prescrites pour l'usage commun dans certains services, comme fréquences de travail navire-navire par les stations radiotéléphoniques de navire à bande latérale unique. La fréquence porteuse 2635 kHz peut être utilisée seulement pour des émissions des classes R3E et J3E. La fréquence porteuse 2638 kHz peut être utilisée pour des émissions des classes A3E, H3E, R3E et J3E. Cependent, les émissions des classes A3E et H3E ne sont plus autorisées après le 1er janvier 1982. Dans la Région 3, ces fréquences sont protégées par une bande de garde comprise entre 2634 kHz et 2642 kHz.

MOD **8045** **4194**
445A

§ 8. La fréquence assignée d'une voie radiotéléphonique à bande latérale unique est supérieure de 1400 kHz á la fréquence porteuse.

NOC **8046** **4195**

D) Bandes comprises entre 4000 kHz et 27 500 kHz

NOC **8047** **4196**
446

§ 9. (1) Les bandes attribuées en exclusivité au service mobile maritime entre 4000 kHz et 27 500 kHz (voir l'article 8) sont subdivisées comme suit:

MOD **8048** **4197**
447

a) *Stations de navire*, téléphonie, exploitation duplex (voies à deux fréquences):

4063- 4143,6 kHz;
6200- 6218,6 kHz;
8195- 8291,1 kHz;
12 330-12 429,2 kHz;
16 460-16 587,1 kHz;
22 000-22 124 kHz;

MOD **8049** **4198**
448

b) *Stations côtières*, téléphonie, exploitation duplex (voies à deux fréquences):

4357,4- 4438 kHz;
6506,4- 6525 kHz;
8718,9- 8815 kHz;
13 100,8-13 200 kHz;
17 232,9-17 360 kHz;
22 596 -22 720 kHz;

MOD **8050** **4199**
449

c) *Stations de navire et stations côtières*, téléphonie, exploitation simplex (voies à une fréquence) et exploitation à bandes croisées entre navires (deux fréquences):

4143,6- 4146,6 kHz;
6218,6- 6224,6 kHz;
8291,1- 8297,3 kHz;
12 429,2-12 439,5 kHz;
16 587,1-16 596,4 kHz;
22 124 -22 139,5 kHz;

NOC **8051** **4200**
451

d) Stations de navire, télégraphie á large bande, fac-similé et systèmes spéciaux de transmission:

4146,6- 4162,5 kHz;
4166 - 4170 kHz;
6224,6- 6244,5 kHz;
6248 - 6256 kHz;
8300 - 8328 kHz;
8331,5- 8343,5 kHz;
12 439,5-12 479,5 kHz;
12 483 -12 491 kHz;
16 596,4-16 636,5 kHz;
16 640 -16 600 kHz;
22 139,5-22 160,5 kHz;
22 164 -22 192 kHz;

MOD **8052** **4201**
451A

e) Stations de navire, transmission de données océanographiques [voir le renvoi *c*) de l'appendice **31**]:

4162,5- 4166 kHz;
6244,5- 6248 kHz;
8328 - 8331,5 kHz;
12 479,5-12 483 kHz;
16 636,5-16 640 kHz;
22 160,5-22 164 kHz;

MOD **8053** **4202**
451B

f) Stations de navire, systèmes à bande étroite de télégraphie à impression directe et de transmission de données, à des rapidités de modulation de dépassant pas 100 bauds (fréquences appariées avec celles indiquées au numéro **4207**);

4170 - 4177,25 kHz;
6256 - 6267,75 kHz;
8343,5- 8357,25 kHz;
12 491 -12 519,75 kHz;
16 660 -16 694,75 kHz;
22 192 -22 225,75 kHz;

NOC **8054** **4203**
451C

g) Stations de navire, systèmes à bande étroite de télégraphie à impression directe et de transmission de données, à des rapidités de modulation ne dépassant pas 100 bauds (fréquences non appariées):

4177,25- 4179,75 kHz;
6267,75- 6269,75 kHz;
8297,3 - 8300 kHz;
8357,25- 8357,75 kHz;
12 519,75-12 526,75 kHz;
16 694,75-16 705,8 kHz;
22 225,75-22 227 kHz;
25 076 -25 090,1 kHz;

NOC **8055** **4204**
452

h) Stations de navire, télégraphie Morse de classe A1A, appel:

4179,75 - 4187,2 kHz;
6269,75 - 6280,8 kHz;
8359,75 - 8374,4 kHz;
12 539,6 -12 561,6 kHz;
16 719,8 -16 748,8 kHz;
22 227 -22 247 kHz;
25 070 -25 076 kHz;

NOC **8056** **4205**
452A

i) Stations de navire, appel séléctif numérique:

4187,2- 4188 kHz;
6280,8- 6282 kHz;

8374,4- 8376 kHz;
12 561,6-12 564 kHz;
16 748,8-16 752 kHz;
22 247 -22 250 kHz;

MOD **8057** **4206**
452B

j) Stations de navire, télégraphie Morse de classe A1A, travail:

4188 - 4219,4 kHz;
6282 - 6325,4 kHz;
8357,75- 8359,75 kHz;
8376 - 8435,4 kHz;
12 526,75-12 539,6 kHz;
12 564 -12 652,2 kHz;
16 705,8 -16 719,8 kHz;
16 752 -16 859,4 kHz;
22 250 -22 310,5 kHz;
25 090,1 -25 110 kHz;

NOC **8058** **4207**
452C

k) Stations côtières, systèmes à bande étroite de télégraphie à impression directe et de transmission de données, à des rapidités de modulation ne dépassant pas 100 bauds (fréquences appariées avec celles indiquées au numéro **4202**):

4349,4- 4356,75 kHz;
6493,9- 6505,75 kHz;
8704,4- 8718,25 kHz;
13 070,8-13 099,75 kHz;
17 196,9-17 231,75 kHz;
22 561 -22 594,75 kHz;

NOC **8059** **4208**
452D

l) Stations côtières, appel sélectif numérique:

4356,75- 4357,4 kHz;
6505,75- 6506,4 kHz;
8718,25- 8718,9 kHz;
13 099,75-13 100,8 kHz;
17 231,75-17 232,9 kHz;
22 594,75-22 596 kHz;

NOC **8060** **4209**
453

m) Stations côtières, télégraphie Morse de classe A1A et télégraphie à large bande, fac-similé, systèmes spécieux de transmission, transmission de données et télégraphie à impression directe:

4219,4- 4349,4 kHz;
6325,4- 6493,9 kHz;
8435,4- 8704,4 kHz;
12 652,3-13 070,8 kHz;
16 859,4-17 196,9 kHz;
22 310,5-22 561 kHz;

NOC **8061** **4210**
453A

(2) Les fréqueces des bandes 25 010-25 070 kHz, 25 110-25 600 kHz et 26 100-27 500 kHz peuvent être assignées aux stations côtières.

MOD **8062** **4211**
456

§ 10. (1) L'appendice **16** indique les voies radiotéléphoniques dans les bandes de fréquences définies aux numéros **4197, 4198** et **4199.**

MOD **8063** **4212**
457

(2) Le Plan d'allotissement de fréquences aux stations côtières radiotéléphoniques à ondes décamétriques fait l'object de l'appendice 25 Mar2.

NOC **8064** **4213**

E) Bandes comprises entre 156 MHz et 174 MHz

NOC **8065** **4214**
457A

§ 11. Il convient que le service du mouvement des navires soit exploité uniquementsur les fréquences attribuées au service mobile maritime dans la bande 156-174 MHz.

SECTION II

NOC

Emploi des fréquences en radiotélégraphie

NOC **8066** **4215**

A) Généralités

NOC **8067** **4216**
1094A

§ 12. Chaque fois qu'il est question dans le présent Règlement, en ce qui concerne le service mobile maritime, de la classe d'émission A2A, A2B (*), H2A ou H2B (**) le type de transmission considéré est, sauf aux fins d'appel sélectif, la télégraphie par manipulation par tout ou rien de l'émission modulée, à l'exclusion de la manipulation par tout ou rien des seules fréquences acoustiques de modulation.

NOC **8068** **4217**

B) Bandes comprises entre 405 kHz et 535 kHz

NOC

B1) Appel et réponse

(MOD) **8069** **4218**
1107

§ 13. (1) La fréquence 500 kHz et la fréquence internationale de détresse en radiotélégraphie (voir le numéro **2970** pour les détails de son utilisation pour les communications de détresse, de sécurité et d'urgence).

NOC **8070** **4219**
1109

(2) En dehors de cet usage, la fréquence 500 kHz ne peut être employée que:

NOC **8071** **4220**
1110

a) Pour l'appel et la réponse (voir les numéros **4225** et **4229**);

NOC **8072** **4221**
1111

b) Par les stations côtières pour annoncer l'émission de leurs listes d'appels, dans le conditions prévues aux numéros **4727, 4728** et **4729.**

NOC **8073** **4222**
1113

(3) Afin de faciliter la réception des appels de détresse, les autres émissions sur la fréquence 500 kHz doivent être réduites au minimum et leur durée ne doit pas dépasser une minute.

MOD **8074** **4223**
1113A

(4) Avant d'émettre sur la fréquence 500 kHz, une station doir écouter sur cette fréquence pendant un laps de temps suffisant, afin d'être certaine qu'aucun trafic de détresse n'est en cours (voir le numéro **4713**).

NOC **8075** **4224**
1113B

(5) Les dispositions du numéro **4223** ne s'appliquent pas aux stations en détresse.

NOC **8076** **4225**
1114

§ 14. (1) La fréquence générale d'appel qui doit, sauf dans le cas visé au numéro **4849,** être employée par toute station de navire ou toute station côtière fonctionnant en radiotélégraphie dans les bandes autorisées entre 405 kHz et 535 kHz, ainsi que par les aéronefs qui désirent entrer en communication avec une station du service mobile maritime faisant usage de fréquences de ces bandes, est la fréquence 500 kHz.

NOC **8077** **4226**
1115

(2) Cependent, afin de réduire les brouillages dans le régions à trafic intense, les administrations peuvent considérer comme satisfaites les dispositions du numéro **4225** lorsque les fréquences d'appel assignées aux stations côtières ouvertes à la correspondance publique ne s'écartent pas de plus de 3 kHz de la fréquence générale d'appel 500 kHz.

NOC **8078** **4227**
1115A

§ 15. (1) Une station de navire qui appelle une station côtière doit, chaque fois que cela est possible, et notamment dans les zones à trafic intense, indiquer à la station côtière qu'elle est prête à recevoir sur la fréquence de travail de cette station.

NOC **8079** **4228**
1115B

(2) La station ne navire doit s'assurer au préalable que cette fréquence n'est pas déjà utilisée par la station côtière.

NOC **8080** **4229**
1116

§ 16. (1) La fréquence de réponse à un appel émis sur la fréquence générale d'appel (voir le numéro **4225**) est:

Soit la fréquence 500 kHz;
Soit la fréquenc indiquée par la station appelante (voir les numéros **4227** et **4769**).

NOC **8081** **4230**
1117

(2) Dans les régions à trafic intense, une station côtière peut répondre aux appels des navires de sa propre nationalité conformément à des arrangements spéciaux faits par l'administration intéressée (voir le numéro **4769**).

NOC **8082** **4231**
1117A

§ 17. Des appels sélectifs régis par les dispositions de l'article 62 peuvent être émis sur la fréquence 500 kHz dans les sens côtière-navire et navire-côtière et entre navires.

(*) Ceci pourvoit à la réception automatique de signaux rafiotélégraphiques d'alarme.

(**) Ceci pourvoit à la réception automatique de signaux rafiotélégraphiques d'alarme et à l'appel sélectif.

NOC

B2) Trafic

NOC **8083** **4232** § 18. (1) Les stations côtières fonctionnant dans les bandes autorisées entre 405 kHz
1118 et 535 kHz doivent être en mesure de faire usage d'au moins une fréquence en plus de la fréquence 500 kHz. L'une de ces fréquences additionnelles, imprimée en caractères gras dans la Nomenclature des stations côtières, et la fréquence normale de travail de la station.

MOD **8084** **4233** (2) En plus de leur fréquence normale de travail, les stations côtières peuvent
1119 employer, dans les bandes autorisées, des fréquences supplémentaires mentionnées en caractères ordinaires dans la Nomenclature des stations côtières. Toutefois, la bande 405-415 kHz est attibuée à la radiogoniométrie et ne peut être utilisée par le service mobile maritime que dans les conditions fixées au chapitre III.

NOC **8085** **4234** (3) Les fréquences de travail des stations côtières doivent être choisies de maniére
1120 à éviter de brouiller les stations voisines.

NOC **8086** **4235** (4) Il convient que, dans les régions à trafic intense, les stations côtières et les
1121 stations de navire fassent usage d'émissions de la classe A1A sur leurs fréquences de travail.

NOC **8087** **4236** § 19. Par exception aux dispositions des numéros **2970, 4219, 4220** et **4221** et à
1122 conditions de ne pas brouiller les signaux de détresse, d'urgence, de sécurité, d'appel et de réponse, la fréquence 500 kHz peut être utilisée avec discrétion pour la radiogoniométrie en dehors des régions à trafic intense.

NOC **8088** **4237** § 20. (1) Les stations de navire qui fonctionnent dans les bandes autorisées entre
1123 405 kHz et 535 kHz doivent utiliser des fréquences de travail choisies parmi les suivantes: 425 kHz, 454 kHz, 468 kHz, 480 kHz et 512 kHz, sauf dans les cas où les conditions spécifiés au número **961** remplies.

NOC **8089** **4238** (2) Aucune station côtière n'est autorisée à émettre sur les fréquences de travail
1124 réservées à l'usage des stations de navire dans le monde entier.

NOC **8090** **4239** (3) Les stations de navire peuvent utiliser la fréquence 512 kHz comme fréquence
1125 d'appel supplémentaire lorsque la fréquence 500 kHz est employée pour la détresse.

NOC **8091** **4240** (4) Durant ces périodes, les stations côtières peuvent:
1126

NOC **8092** **4241** *a*) Utiliser la fréquence 512 kHz comme fréquence supplémentaire d'appel
1127 et de réponse; *ou*

NOC **8093** **4242** *b*) Appliquer, pour l'appel et la réponse, d'autres arrangements qui doivent
1128 être spécifiés dans la Nomenclature des stations côtières.

NOC **8094** **4243** (5) Lorsque la fréquence 500 kHz est utilisée pour la détresse, les stations de navire
1129 ne doivent pas employer la fréquence 512 kHz comme fréquence de travail dans les zones où elle est utilisée comme fréquence d'appel supplémentaire.

NOC **8095** **4244**

C) Bandes comprises entre 2605 kHz et 4000 kHz

NOC

C1) Région 2

(MOD) **8096** **4245** § 21. Dans la Région 2, les fréquences de la bande 2068,5-2078,5 kHz sont assignées
1138 aux stations de navire munies de systèmes télégraphiques à large bande, fac-similé et systèmes spéciaux de transmission. Les dispositions du numéro **4254** sont applicables.

NOC

C2) Dispositions supplémentaires applicables seulement dans les zones de la Région 3 situées au nord de l'equateur

MOD **8097** **4246** § 22. (1) La bande 2089,5-2092,5 kHz est la bande des fréquences d'appel et de
1139 sécurité en radiotélégraphie dans les bandes comprises entre 1605 kHz et 2850 kHz dans lesquelles la radiotélégraphie est admise.

NOC **8098** **4247** (2) Les fréquences de la bande 2089,5-2092,5 kHz peuvent être utilisées pour l'appel,
1140 la réponse et la sécurité. Ces fréquences peuvent aussi être utilisées pour la transmission de messages précédés des signaux d'urgence ou de sécurité.

NOC **8099** **4248** (3) Toute station côtière faisant usage de la bande d'appel 2089,5-2092,5 kHz doit,
1141 autant que possible, assurer la veille dans cette bande pendant ses vacations.

NOC **8100** **4249** (4) Les stations côtières qui utilisent des fréquences de la bande 2089,5-2092,5 kHz
1142 pour l'appel doivent être en mesure de faire usage d'au moins une autre fréquence choisie dans les bandes comprises entre 1605 kHz et 2850 kHz dans lesquelles la radiotélégraphie est admise.

NOC **8101** **4250** (5) L'une de ces fréquences, imprimée en caractères gras dans la Nomenclature des
1143 stations côtières, est la fréquence normale de travail de la station. Les fréquences supplémentaires éventuelles figurent en caractères ordinaires.

NOC **8102** **4251** (6) Les fréquences de travail des stations côtières doivent être choisies de manière
1144 à éviter de brouiller d'autres stations.

NOC **8103** **4252** D) Bandes comprises entre 4000 kHz et 27 500 kHz

NOC D1) Généralités

MOD **8104** **4253** § 23. (1) Les stations de navire équipées pour fonctionner en radiotélégraphie dans
1145 les bandes spécifiées aux numéros **4204** et **4206** doivent faire uniquement des émissions de télégraphie Morse de classe A1A avec une rapidité de modulation ne dépassant pas 40 bauds. Les stations d'engin de sauvetage peuvent employer dans ces bandes des émissions de la classe A2A ou H2A (voir les numéros **3002** et **3005**).

MOD **8105** **4254** (2) Les stations de navire équipées de systèmes télégraphiques à large bande, de
1146 fac-similé ou de systèmes spéciaux de transmission peuvent employer, dans les bandes réservées à cet effet, n'importe quelle classe d'émission, pourvu que leurs émissions puissent être contenues dans les voies à large bande spécifiées dans l'appendice **31**. Toutefois, elles ne peuvent faire usage ni de la télégraphie Morse de classe A1A ni de la téléphonie, sauf pour permettre le réglage des circuits.

NOC **8106** **4255** (3) Sous réserve des dispositions du numéro **4376,1**, les stations côtières radioté-
1147 légraphiques qui fonctionnent dans les bandes attribuées en exclusivité au service mobile maritime entre 4000 kHz et 27 500 kHz ne doivent pas faire de transmissions du type 2 (voir le numéro **4216**).

NOC **8107** **4256** (4) Les stations côtières radiotélégraphiques qui utilisent des émissions de la classe
1148 A1A ou FIB à une seule voie et que fonctionnent dans les bandes attribuées en exclusivité au service mobile maritime entre 4000 kHz et 27 500 kHz ne doivent en aucun cas utiliser une puissance moyenne supérieure aux valeurs suivantes:

Bandes	Puissance moyenne maximum
4 MHz	5 kW
6 MHz	5 kW
8 MHz	10 kW
12 MHz	15 kW
16 MHz	15 kW
22 MHz	15 kW

NOC **8108** **4257** (5) Les stations côtières radiotélégraphiques qui utilisent des émissions télégraphiques
1148A multivoies et qui fonctionnent dans les bandes attribuées en exclusivité au service mobile maritime entre 4000 kHz et 27 500 kHz ne doivent en aucun cas utiliser une puissance moyenne supérieure à 2,5 kW par largeur de bande de 500 Hz.

MOD **8109** **4258** § 24. Les numéros **4200** à **4209** et les colonnes correspondantes de l'appendice **31**
1149 indiquent celles des parties des bandes attribuées en exclusivité au service mobile maritime entre 4000 kHz et 27 500 kHz qui sont à utiliser pour la radiotélégraphie par les stations côtières et les stations de navire.

NOC D2) Appel et réponse

MOD **8110** **4259** § 25. (1) Pour entrer en communication avec une station côtière, toute station de
1160 navire emploie une fréquence d'appel appropriée de l'une des bandes énumérées au numéro **4204**.

MOD **8111** **4260** (2) Les fréquences des bandes d'appel en télégraphie Morse de classe A1A sont
1161 assignées à chaque station de navire conformément aux dispositions des numéros **4277** à **4285**.

MOD **8112** **4261** § 26. Afin de réduire les brouillages, les stations de navire doivent, dans la mesure
1162 des moyens dont elles disposent, s'efforcer de choisir pour l'appel la bande dont les fréquences présentent les caractéristiques de propagation les plus favorables pour établir une communication satisfaisante. En l'absence de données plus précises, toute station de navire doit, avant d'émettre un appel, écouter les signaux de la station avec laquelle elle désire entrer en communication. La force et l'intelligibilité des signaux reçus donnent alors des renseignements utiles sur les conditions de propagation et indiquent dans quelle bande il est préférable de faire l'appel.

NOC **8113** **4262** § 27. Afin de réduire les brouillages sur le voies communes d'appel, celles-ci ne
1162A doivent être utilisées que lorsqu'un navire ne peut pas employer une fréquence d'appel du groupe approprié dèsigné comme voie de réception pour la station côtière avec laquelle le navire désire entrer en communication, ou lorsque la station côtière a indiqué qu'elle n'assure l'écoute que sur les voies d'appel communes.

MOD 8114 4263 § 28. (1) Dans chacune des bandes dans lesquelles son équipement lui permet de travailler, une station côtière utilise pour l'appel sa fréquence normale de travail indiquée en caractères gras dans la Nomenclature des stations côtières (voir les numéros **4207** et **4209**).
1163

NOC 8115 4264 (2) Une station côtière, lorsque c'est possible en pratique, transmet ses appels à des heures déterminées, sous forme de listes d'appels, sur la ou les frèquences indiquées dans la Nomenclature des stations côtières (voir les numéros **4722** et **4726**).
1164

SUP 8116
1164A

MOD 8117 4265 § 29. Les fréquences exclusives pour l'appel sélectif numérique comprises dans les bandes indiquées au numéro **4208** (voir le numéro **4684**) peuvent être assignées à une station côtière quelconque: ces fréquences sont à utiliser conformément aux dispositions du numéro **4681.**
1164B

MOD 8118 4266 § 30. A moins que la station appelante n'en ait désigné une autre, la fréquence de réponse à un appel est:
1165

MOD 8119 4267 *a*) Pour une station de navire, l'une des fréquences d'appel qui lui ont été assignées dans la même bande, compte tenu des dispositions du numéro **4262;**
1166

NOC 8120 4268 *b*) Pour une station côtière, sa fréquence normale de travail de la bande dans laquelle elle a été appelée.
1167

NOC 8121 4269 § 31. Pour chaque station côtière, les administrations indiquent quelles sont les bandes d'appel de navires et les voies de réception de stations côtières sur lesquelles cette station fait l'écoute, et, autant que possible, l'horaire approximatif de cette écoute en Temps universel coordonné (UTC). Ces renseignements sont insérés dans la Nomenclature des stations côtières.
1168

NOC 8122 4270 § 32. Exceptionnellement, une station côtière peut indiquer qu'elle fait l'écoute sur les fréquences d'appel autres que celles qui sont définies comme étant ses propres fréquences de réception.
1168A

NOC 8123 4271 § 33. Afin de réduire les brouillages sur les fréquences d'appel, les stations côtières doivent prendre les mesures voulues pour assurer, dans des conditions normales, la réception rapide des appels (voir le numéro **4755**).
1168B

NOC

D3) Trafic

MOD 8124 4272 § 34. (1) Une station de navire, après avoir établi la communication sur une fréquence d'appel (voir le numéro **4259**), passe sur l'une de ses fréquences de travail pour transmettre son trafic. Les fréquences des bandes d'appel ne doivent pas être utilisées pour d'autres émissions que pour l'appel.
1169

MOD 8125 4273 (2) Les fréquences de travail sont assignées aux stations de navire conformément aux dispositions des numéros **4288** à **4306** inclus.
1170

NOC 8126 4274 § 35. (1) Toute station côtière transmet son trafic sur sa fréquence normale de travail ou sur les autres fréquences de travail qui lui sont assignées.
1171

NOC 8127 4275 (2) Il convient que les pays qui partagent une voie dans l'une des bandes exclusives attribuées au service mobile maritime entre 4000 kHz et 27 500 kHz, accordent une attention spéciale à ceux d'entre eux qui ne disposeraient pas d'une autre voie dans cette bande et s'efforcent d'utiliser leur voie principale dans la plus large mesure possible, afin de permettre à ces derniers de satisfaire aux besoins minimums de leur exploitation.

SUP 8129
1173A

SUP 8130
1173B

MOD 8131 4276 *E*) Assignation des fréquences aux stations de navire

NOC

E1) Fréquences d'appel des stations de navire

SUP 8132
1174

MOD 8133 4277 § 36. Chacune des bandes d'appel comprises entre 4000 kHz et 23 000 kHz et indiquées au numéro **4204** est divisée en quatre groupes de voies et deux voies communes. La bande des 25 MHz est divisée en trois voies, dont l'une est une voie commune (voir l'appendice **34**).
1176A

NOC **8134** **4278** § 37. (1) Lorsqu'elles assurent un service international indiqué dans la Nomenclature des stations côtières, les stations côtières assurent la veille sur les voies d'appel communes de chaque bande pendant toute la durée de leur vacation dans cette bande, et sur la ou les voies correspondant à leur groupe pendant les heures chargées. Les périodes pendant lesquelles l'écoute est faite sur la ou les voies du groupe sont indiquées, pour chaque pays, dans la Nomenclature des stations côtières.
1176B

NOC **8135** **4279** (2) Si c'est nécessaire, les stations côtières indiquent dans leurs émissions les voies sur lesquelles elles assurent la veille.
1176C

NOC **8136** **4280** § 38. Dans les bandes comprises entre 4000 kHz et 23 000 kHz, l'administration dont relève une station de navire lui assigne au moins deux fréquences d'appel dans chacune des bandes que la station peut utiliser (1). Dans chaque bande, l'une des fréquences d'appel doit être comprise dans l'une des voies communes de réception des stations côtières dont la liste figure à l'appendice **34;** une autre doit être choisie parmi les autres voies dont la liste figure à l'appendice **34,** compte tenu de la ou des voies de réception de la station côtière avec laquelle la station de navire entre le plus fréquemment en communication. Dans la bande des 25 MHz, les administrations assignent aux stations de navire relevant de leur juridiction une fréquence dans la voie commune. Dans cette bande, une autre fréquence d'appel doit être choisie dans la voie A ou B de l'appendice **34**, compte tenu de la voie de réception de la station côtière avec laquelle la station de navire entre le plus fréquemment en communication.
1177

NOC **8137** **4281** § 39. Chaque fois que c'est possible, il convient d'assigner à une station de navire des fréquences d'appel supplémentaires (voir le numéro **4262**).
1177A

NOC **8138** **4282** § 40. Afin d'obtenir une répartition uniforme des appels, les administrations qui n'ont pas l'intention de faire assurer la veille sur toutes voies de réception de leur groupe fixent la ou les voies sur lesquelles elles feront assurer la veille, mais seulement après coordination, dans toute la mesure du possible, avec les autres administrations faisant partie du même groupe (voir la Résolution **312**).
1177B

NOC **8139** **4283** § 41. Les administrations qui assignent à leurs station de navire des fréquences dans plusieurs voies d'appel de leur groupe, prennent les mesures nécessaires pour répartir ces assignations de manière uniforme dans l'ensemble des voies qu'elles utilisent.
1177C

(MOD) **8140** **4284** § 42. Afin d'assurer une répartition uniforme des appels sur les voies d'appel communes, il convient que les administrations autant que pratiquement possible assignent des fréquences de chacune des deux voies à un nombre égal de stations de navire.
1177D

NOC **8141** **4285** § 43. Les administrations doivent autant que possible faire en sorte que les stations de navire relevant de leur juridiction soient capables de maintenir leurs émissions dans les limites de la voie qui leur est assignée (voir l'appendice **7**).
1177E

SUP **8142**
1179A

MOD **8143** **4286** § 44. Les fréquences exclusives pour l'appel sélectif numérique, comprises dans les bandes indiquées au numéro **4205** (voir le numéro **4683**), peuvent être assignées à une station de navire quelconque; ces fréquences sont à utiliser conformément aux dispositions du numéro **4681**.
1179B

MOD **E2) Fréquences de travail des stations de navire**

NOC **4287** *a) Espacement des voies et assignation des fréquences:*

MOD **8144** **4288** § 45. Dans toutes les bandes, les fréquences de travail des stations de navire équipées de systèmes télégraphiques à large bande, de fac-similé ou de systèmes spéciaux de transmission sont espacées de 4 kHz. Les fréquences à assigner sont spécifiées à l'appendice **31**.
1180

NOC **8136.1** **4280.1** (1) Jusqu'au 1er janvier 1980, les stations de navire dont les émetteurs ne peuvent utiliser que trois fréquences dans chacune des bandes comprises entre 4000 kHz et 23 000 kHz peuvent exceptionnellement se voir assigner une seule fréquence d'appel dans chacune des bandes dans lesquelles elles peuvent émettre. Cette exception ne peut être faite que si l'administration intéressée considère que l'assignation à la station de navire, d'au moins deux fréquences de travail dans chaque bande est nécessaire pour assurer son service.
1177.1

MOD **8145** **4289**
1180A

§ 46. Dans toutes les bandes, les fréquences à assigner pour les transmissions de données océanographiques sont espacées de 0,3 kHz. Les fréquences à assigner sont spécifiées à l'appendice **31**.

MOD **8146** **4290**
1180B

§ 47. Dans toutes les bandes, les fréquences de travail des stations de navire qui utilisent des systèmes à bande étroite de télégraphie à impression directe et de transmission de données, à des rapidités de modulation ne dépassant pas 100 bauds, y compris les fréquences appariées avec les fréquences de travail à assigner aux stations côtières (voir le numéro **4207**), sont espacées de 0,5 kHz. Les fréquences à assigner aux stations de navire et qui sont appariées avec les fréquences utilisées par les stations côtières, sont spécifiées à l'appendice **32** (voir aussi le numéro **4202**). Les fréquences à assigner aux stations de navire, et qui ne sont pas appariées avec les fréquences utilisées par les stations côtières, sont spécifiées à l'appendice **33** (voir aussi le numéro **4203**).

MOD **8147** **4291**
1182

§ 48. Dans toutes les bandes, sauf dans celle des 6 MHz, les fréquences de travail des stations de navire qui utilisent la télégraphie Morse de classe A1A à des rapidités de modulation ne dépassant pas 40 bauds, sont espacées de 0,5 kHz: dans la bande des 6 MHz, elles sont espacées de 0,75 kHz. [Voir aussi la note *e*) de l'appendice **31**.] Les fréquences extrêmes à assigner dans chacune de ces bandes sont spécifiées à l'appendice **31**.

NOC **8148** **4292**
1183

§ 49. Dans les bandes des 4, 6, 8, 12 et 16 MHz, un certain nombre de fréquences sont en relation harmonique, ainsi qu'il est indiqué à l'appendice **35**.

NOC **4293**

b) Fréquences de travail des stations de navire qui sont équipées de systèmes télégraphiques à large bande, de fac-similé ou de systèmes spéciaux de transmission:

SUP **8149**
1188

MOD **8150** **4294**
1189

§ 50. (1) Chaque administration assigne à chacune des stations de navire qui relèvent de son autorité et qui emploient des systèmes spéciaux de transmission, de fac-similé ou des systèmes télégraphiques à large bande, au moins une série des fréquences de travail réservées à cet effet (voir l'appendice **31**). Le nombre des séries à assigner à chaque navire doit être déterminé en fonction des besoins de son trafic.

NOC **8151** **4295**
1190

(2) Aux stations de navire équipées de systèmes spéciaux de transmission, de fac-similé ou de systèmes télégraphiques à large bande, auxquelles toutes les fréquences de travail d'une bande ne sont pas assignées, les administrations intéressées assignent des fréquences de travail selon un système ordonné de permutation tel que toutes les fréquences soient assignées approximativement le même nombre de fois.

MOD **8152** **4296**
1191

(3) Toutefois, dans les limites des bandes spécifiées au numéro **4200** les administrations peuvent, pour satisfaire les besoins de systèmes déterminés, assigner des fréquences différentes de celles qui sont spécifiées à l'appendice **31**. Cependant, les administrations tiennent alors compte, dans la mesure du possible, des dispositions de l'appendice **31** qui concernent la distribution des voies et l'espacement de 4 Hz.

NOC **4297**

c) Fréquences de travail des stations de données océanographiques:

SUP **8153**
1191A

MOD **8154** **4298**
1191B

§ 51. Les bandes de fréquences spécifiées au numéro **4201** peuvent également être utilisées par les stations de bouée pour les transmissions de données océanographiques et par les stations qui interrogent ces bouées.

MOD **8155** **4299**
1191C

§ 52. Chaque administration peut assigner à chacune des stations des types enumérés aux numéros **4201** et **4298** qui relèvent de son autorité, une ou plusieurs des fréquences à assigner qui sont spécifiées à l'appendice **31**.

NOC **4300**

d) Fréquences de travail (appariées avec celles qui sont indiquées au numéro **4207***) des stations de navire qui utilisent des systèmes à bande étroite de télégraphie à impression directe et de transmission de données, à des rapidités de modulation ne dépassant pas 100 bauds:*

SUP **8156**
1191D

NOC **8157** **4301**
1191DA

§ 53. Les fréquences appariées à assigner aux stations côtières et aux stations de navire qui utilisent des systèmes à bande étroite de télégraphie à impression directe et de transmission de données, sont indiquées à l'appendice **32**.

NOC **8158** **4302**
1191E

§ 54. Lorsqu'elles assignent les fréquences énumérées à l'appendice **32** pour la télégraphie à impression directe à bande étroite et la transmission de données, les administrations appliquent la procédure décrite dans la Résolution **300**.

NOC **4303** *e) Fréquences de travail (non appariées) des stations de navire qui utilisent des systèmes à bande étroite de télégraphie à impression directe et de transmission de données, à des rapidités de modulation ne dépassant pas 100 bauds:*

SUP **8159** 1191F

NOC **8160** 1191G **4304** § 55. Lorsqu'elles assignent les fréquences énumérées à l'appendice **33** pour des systèmes à bande étroite de télégraphie à impression directe et de transmission de données, les administrations doivent tenir dûment compte des renseignements inscrits au Fichier de référence en application de la procédure de notification décrite dans la Résolution **301.**

NOC **4305** *f) Fréquences de travail des stations de navire qui utilisent la télégraphie Morse de classe A1A:*

SUP **8161** 1196

NOC **8162** 1200 **4306** § 56. Chaque administration assigne à chacune des stations de navire qui relèvent de son autorité des fréquences de travail choisies dans les bandes des 4, 6, 8, 12, 16, 22 et 25 MHz, en nombre suffisant pour répondre aux besoins du navire. Dans chaque bande ainsi utilisée, il convient d'assigner de préférence au moins deux fréquences de travail à chaque navire. Les administrations doivent assurer une répartition uniforme des assignations dans l'ensemble des bandes.

MOD **8163** 1200A **4307** § 57. Aux fins exclusives des communications avec des stations du service mobile maritime, une ou plusieurs fréquences de travail peuvent être assignées à une station d'aéronef dans les bandes indiquées au numéro **4206**. L'assignation de ces fréquences s'effectue selon le même principe de répartition uniforme que pour les stations de navire.

NOC **4308** *g) Abreviations pour l'indication des fréquences de travail:*

NOC **8164** 1203 **4309** § 58. Dans les bandes comprises entre 4000 kHz et 27 500 kHz, on peut, pour désigner une fréquence de travail, utiliser les abréviations suivantes:

NOC **8165** 1204 **4310** *a)* Si la fréquence, exprimée en kHz, ne comporte pas de décimales, on en transmet les trois derniers chiffres;

NOC **8166** 1204A **4311** *b)* Si la fréquence, exprimée en kHz, comporte des décimales, on transmet les trois derniers chiffres de sa partie entière, suivis du premier chiffre décimal.

SECTION III

NOC **Emploi des fréquences en télégraphie à impression directe à bande étroite**

NOC **8167** **4312** *A)* Généralités

NOC **8168** 999H **4313** § 59. Les fréquences assignées aux stations côtières sont indiquées dans la Nomenclature des stations côtières (Liste IV). Cette Nomenclature contient en outre tous les renseignements utiles concernant le service assuré par chacune de ces stations.

NOC **8169** **4314** *B)* Bandes comprises entre 405 kHz et 535 kHz

NOC **8170** 999I **4315** § 60. (1) Toute station de navire pourvue d'appareils de télégraphie à impression directe à bande étroite destinés à fonctionner dans les bandes autorisées comprises entre 405 kHz et 535 kHz doit pouvoir faire et recevoir des émissions de la classe F1B sur au moins deux fréquences de travail (voir le numéro **4237**) (1).

NOC **8171** 999J **4316** (2) La télégraphie à impression directe à bande étroite est interdite dans la bande 490-510 kHz.

NOC **8170.1** 999I.1 **4315.1** (1) Dans la Zone européenne maritime, l'emploi de ces émissions de la classe F1B est subordonné à des arrangements particuliers entre les administrations intéressées et celles dont les services sont susceptibles d'être défavorablement influencés.

NOC **8172** **4317** *C*) Bandes comprises entre 1605 kHz et 4000 kHz

NOC **8173** **4318** § 61. (1) Toute station de navire pourvue d'appareils de télégraphie à impression directe à bande étroite destinés à fonctionner dans les bandes autorisées comprises entre 1605 kHz et 4000 kHz doit pouvoir faire et recevoir des émissions de la classe F1B sur au moins deux fréquences de travail.
999K

NOC **8174** **4319** (2) La télégraphie à impression directe à bande étroite est interdite dans la bande 2170-2194 kHz.
999L

NOC **8175** **4320** *D*) Bandes comprises entre 4000 kHz et 27 500 kHz

NOC **8176** **4321** § 62. Toute station de navire pourvue d'appareils de télégraphie à impression directe à bande étroite destinées à fonctionner dans les bandes autorisées comprises entre 4000 kHz et 27 500 kHz doit pouvoir faire et recevoir des émissions de la classe F1B sur au moins deux fréquences de chaque bande nécessaire à l'exécution de son service. Les fréquences à assigner sont indiquées aux appendices **32** et **33.**
999M

NOC **8177** **4322** *E*) Bandes comprises entre 156 MHz et 174 MHz

NOC **8178** **4323** § 63. Toute station de navire pourvue d'appareils de télégraphie à impression directe à bande étroite peut fonctionner dans les bandes autorisées comprises entre 156 MHz et 174 MHz en se conformant aux dispositions de l'appendice **18.**
999N

SECTION IV

NOC

Emploi des fréquences en radiotélégraphie

NOC **8179** **4324** *A*) Généralités

SUP **8180**
1319

NOC **8181** **4325** § 64. Sauf en ce qui concerne les dispositions de l'article 12 relatives à la notification et l'enregistrement des fréquences, les fréquences destinées aux émissions radiotéléphoniques à bande latérale unique doivent toujours être désignées par la fréquence porteuse. La fréquence assignée est déterminée conformément aux dispositions du numéro **4194.**
1321A

MOD **8182** **4326** § 65. Les stations côtières ne doivent pas occuper de voies radiotéléphoniques libres en émettant des signaux d'identification produits, par exemple, par des boucles ou des bandes d'appel. A titre exceptionnel et à la demande d'une station de navire, une station côtière peut, en vue d'établir une communication radiotéléphonique, émettre des signaux de réglage de récepteur pendant une durée maximale de dix secondes.
1321B

NOC **8183** **4327** § 66. La Nomenclature des stations côtières mentionne les fréquences d'émission (et de réception lorsque ces fréquences sont associées par paires comme dans le cas de la radiotéléphonie duplex) assignées à chaque station côtière. Elle donne, de plus, toutes les autres informations utiles sur le service assuré par chaque station côtière.
1322

NOC **8184** **4328** § 67. Les appareils à bande latérale unique des stations radiotéléphoniques du service mobile maritime qui fonctionnent dans les bandes attribuées à ce service entre 1605 kHz et 4000 kHz et dans les bandes attribuées en exclusivité à ce service entre 4000 kHz et 23 000 kHz doivent satisfaire aux conditions techniques et d'exploitation spécifiées à l'appendice **17** et à la Résolution **307.**
1322A

NOC **8185** **4329** § 68. Lorsqu'il est fait usage de systèmes à compresseurs et extenseurs couplés, leurs caractéristiques doivent être conformes aux spécifications du paragraphe *a*) de l'appendice **40.**
1322AA

NOC **8186** **4330** § 69. Les caractéristiques des appareils à bande latérale unique associés à des systèmes à compresseurs et extenseurs couplés doivent être conformes aux spécifications de l'appendice **17**; il convient qu'ils soient en outre conformes à celles du paragraphe *b*) de l'appendice **40.**
1322AB

NOC **8187** **4331** *B*) Bandes comprises entre 1605 kHz et 4000 kHz

NOC

B1) Mode de fonctionnement des stations

MOD **8188** **4332** § 70. (1) Excepté dans les cas spécifiés aux numéros **2973, 4127** et **4342,** les classes d'émission à utiliser dans les bandes comprises entre 1605 kHz et 4000 kHz sont:
1322B

4333 *a*) La classe A3E; *ou*
4334 *b*) Les classes H3E, R3E et J3E.

4335 Cependant, sauf spécifications contraires contenues dans le présent Réglement (voir les numéros **2973, 3004, 4127, 4342** et **4354**):

4336 La classe d'émission A3E ne doit pas être utilisée par les stations côtières; *et*

4337 Après le 1er janvier 1982, la classe d'émission H3E n'est plus autorisée pour les stations côtières et les classes d'émission A3E et H3E ne sont plus autorisées pour les stations de navire.

(MOD) **8189** 1322BA **4338** (2) La puissance en crête des stations côtières radiotéléphoniques qui fonctionnent dans bandes autorisées comprises entre 1605 kHz et 4000 kHz ne doit pas dépasser les valeurs suivantes:

4339 5 kW pour les stations situées au nord du parallèle 32° Nord;

4340 10 kW pour les stations situées au sud du parallèle 32° Nord.

NOC **8190** 1322C **4341** (3) Le mode normal de fonctionnement de chaque station côtière est indiqué dans la Nomenclature des stations côtières.

NOC **8191** 1322D **4342** (4) Les émissions dans les bandes 2170-2173,5 kHz et 2190,5-2194 kHz faites respectivement sur les fréquences porteuses 2170,5 kHz et 2191 kHz sont limitées aux classes d'émission R3E et J3E et à une puissance en crête de 400 watts. Cependant, la fréquence 2170,5 kHz est également utilisée, avec la même limite de puissance, par les stations côtières, pour des émissions de classe H2B, lorsqu'on utilise le système d'appel sélectif défini à l'appendice **39** et, de plus, à titre exceptionnel, dans les Régions 1 et 3 et au Groenland pour des émissions de classe H3E afin de transmettre des messages de sécurité.

NOC

B2) Appel et réponse

MOD **8192** 1323 **4343** § 71. (1) La fréquence 2182 kHz (1) est la fréquence internationale de détresse en radiotéléphonie (voir le numéro **2973** pour les détails de son utilisation pour les communications de détresse, d'urgence, de sécurité et pour les appels des radiobalises de localisation des sinistres). La classe d'émission à utiliser en radiotéléphonie sur la fréquence 2182 kHz est la classe A3E ou H3E (voir le numéro **4127**).

NOC **8193** 1327 **4344** (2) La fréquence 2182 kHz peut également être utilisée:

NOC **8194** 1328 **4345** *a*) Pour l'appel et la réponse conformément aux dispositions de l'article **65**;

NOC **8195** 1329 **4346** *b*) Par les stations côtières pour annoncer l'émission de leurs listes d'appels sur une autre fréquence (voir les numéros **4925** à **4929**).

SUP **8196** 1329A

NOC **8197** 1330 **4347** (3) De plus, toute administration peut assigner à ses stations d'autres fréquences à utiliser pour l'appel et la réponse.

NOC **8198** 1331 **4348** § 72. Afin de faciliter la réception des appels de détresse, toutes les émissions sur la fréquence 2182 kHz doivent être réduites au minimum.

NOC **8199** 1335 **4349** § 73. Il convient que les stations de navire ouvertes à la correspondance publique assurent autant que possible da veille sur la fréquence 2182 kHz pendant leurs vacations.

MOD **8200** 1326A **4350** § 74. (1) Avant d'émettre sur la fréquence porteuse 2182 kHz, une station doit écouter sur cette fréquence pendant um laps de temps suffisant, afin d'être certaine qu'aucun trafic de détresse n'est en cours (voir le numéro **4915**).

NOC **8201** 1326B **4351** (2) Les dispositions du numéro **4350** ne s'appliquent pas aux stations en détresse.

SUP **8191.1** 1322D.2

NOC **8192.1** 1323.1 **4343.1** (1) Lorsque les administrations font assurer par leurs stations côtières une veille sur 2182 kHz pour recevoir des émissions des classes R3E et J3E ainsi que des émissions des classes A3E et H3E, les stations de navire se trouvant au-delà de la distance à laquelle elles pourraient communiquer avec ces stations côtières au moyen d'émission des classes A3E ou H3E peuvent appeler, aux fins de sécurité, les stations côtières en utilisant les classes d'émission R3E ou J3E. Cette utilisation n'est autorisée que lorsque les appels effectués avec des émissions des classes A3E et H3E ont été infructueux.

NOC

B3) Trafic

NOC **8202** **4352** § 75. (1) Les stations côtières qui utilisent pour l'appel la fréquence 2182 kHz
1336 doivent être en mesure de faire usage d'au moins une autre fréquence clhoisie dans les bandes autorisées comprises entre 1605 kHz et 2850 kHz.

MOD **8203** **4353** (2) Les satations côtières à faire des émissions radiotéléphoniques sur une ou
1336A plusieurs fréquences autres que la frequence 2182 kHz dans les bandes autorisées comprises entre 1605 kHz et 2850 kHz doivent être en mesure de faire, sur ces fréquences, des émissions de la classe A3E ou des émissions des classes H3E, R3E et J3E. Cependant, après le 1er janvier 1982, les émissions de la classe H3E ne sont plus autorisées, sauf sur la fréquence 2182 kHz (voir le également le numéro **4342**).

NOC **8204** **4354** (3) Les stations côtières ouvertes au service de la correspondance publique sur
1337 une ou plusieurs fréquences comprises entre 1605 kHz et 2850 kHz doivent pouvoir, de plus, faire des émissions de la classe H3E sur la fréquences porteuse 2182 kHz et recevoir des émissions des classes A3E et H3E sur la fréquence porteuse 2182 kHz.

NOC **8205** **4355** (4) L'une des fréquences que les stations côtières doivent être en mesure
1338 d'utiliser conformément au numéro **4352** est imprimée en caractères gras dans la Nomenclature des stations côtières pour indiquer qu'ele est la fréquence normale de travail de la station. Les fréquences supplémentaires éventuelles sont indiquées en caractères ordinaires.

NOC **8206** **4356** (5) Les fréquences de travail des stations côtières doivent être choisies de
1339 manière à éviter des brouillages avec les autres stations.

NOC

B4) Dispositions additionnelles applicables à la Région 1

SUP **8207**
1340

MOD **8208** **4357** § 76. La puissance en crête des émetteurs des stations radiotéléphoniques de
1341 navire qui fonctionent dans les bandes autorisées comprises entre 1605 kHz et 2850 kHz ne doit pas dépasser 400 watts.

NOC **8209** **4358** § 77. (1) Il convient que toutes les stations de navire effectuant des voyages
1343 internationaux soient en mesure d'utiliser:

NOC **8210** **4359** *a*) Les fréquences de travail navire-côtière suivantes, si les nécessités de leur service l'exigent:

4360 La fréquence porteuse 2046 kHz (fréquence assignée 2047,4 kHz et la fréquences porteuse 2049 kHz (fréquence assigné 2050,4 kHz) pour des émissions des classes R3E et J3E;

4361 La fréquence porteuse 2049 kHz également pour des émissions des classes A3E et H3E jusqu'au 1er janvier 1982;

NOC **8211** **4362** *b*) Les fréquences navire-navire suivantes, si les nécessités de leur service l'exigent:

4363 La fréquence porteuse 2053 kHz (fréquence assignée 2054,4 kHz) et la fréquence porteuse 2056 kHz (fréquence assignée 2057,4 kHz) pour des émissions des classes R3E et J3E;

4364 La fréquence porteuse 2056 kHz également pour des émissions des classes A3E et H3E jusqu'au 1er janvier 1982.

4365 Ces fréquences peuvent être utilisées comme fréquences supplémentaires navire--côtière.

NOC **8212** **4366** (2) Ces fréquences ne sont pas utilisées pour le trafic entre stations de même
1346 nationalité.

NOC **8213** **4367** § 78. (1) Les navires qui échangent fréquemment de la correspondance avec une
1348 station côtière d'une nationalité autre que la leur peuvent utiliser les mêmes fréquences que les navires ayant la nationalité de cette station lorsque les administrations intéressés en sont ainsi convenues.

NOC **8214** **4368** (2) Dans des circonstances exceptionnelles, si l'utilisation des fréquences
1348A conformément aux dispositions des numéros **4358** à **4365** ou du numéro **4367** se révèle impossible, une station de navire peut utiliser l'une des fréquences navire-côtière qui lui sont assignées à l'échelon national pour communiquer avec une station côtière d'une autre nationalité, sous la réserve expresse que la station côtière aussi bien que la station de navire, en appliction des dispositions du numéro **4915,** prennent les précautions voulues pour que l'utilisation de ladite fréquence ne cause pas de brouillage préjudiciable au service pour lequel l'emploi de cette fréquences est autorisé.

NOC

B5) Dispositions additionnelles applicables aux Régions 2 et 3

NOC **8215** **4369** § 79. Il convient que toutes les stations de navire effectuant des voyages
1351 internationaux soient en mesure d'utiliser, si les nécessités de leur service l'exigent, les fréquences porteuses navire-navire:

NOC 2635 kHz (fréquence assignée 2636,4 kHz);
2638 kHz (fréquence assignée 2639,4 kHz).

Les conditions d'utilisation de ces fréquences sont spécifiée au numéro **4193**.

NOC **8216** **4370** *C)* Bandes comprises entre 4000 kHz et 23 000 kHz

NOC

C1) Mode de fonctionnement des stations

NOC **8217** **4371** § 80. (1) Les classes d'émission à utiliser pour la radiotéléphonie dans les
1351A bandes comprises entre 4000 kHz et 23 000 kHz sont les classes H3E (1), R3E et J3E.

NOC **8218** **4372** (2) Le mode de fonctionnement normal de chaque station côtière est indiqué
1351B dans la Nomenclature des stations côtières.

NOC **8219** **4373** (3) Les stations côtières radiotéléphoniques qui utilisent les classes d'émission
1351C H3E (1), R3E ou J3E dans les bandes comprises entre 4000 kHz et 23 000 kHz doivent avoir la puissance minimale nécessaire pour couvrir leur zone de service et ne doivent en aucun cas avoir une puissance en crête dépassant 10 kW par voie.

NOC **8220** **4374** (4) Les stations radiotéléphoniques de navire qui utilisent les classes d'émission
1351D H3E (1), R3E ou J3E dans les bandes comprises entre 4000 kHz et 23 000 kHz ne doivent en aucun cas avoir une puissance en crête dépassant 1,5 kW par voie.

NOC

C2) Appel et réponse

NOC **8221** **4375** § 81. (1) Les stations de navire peuvent utiliser pour l'appel en radiotéléphonie
1352 les fréquences porteuses suivantes:

4125 kHz (2) (3);
6215,5 kHz (4);
8257 kHz;
12 392 kHz;
16 522 kHz;
22 062 kHz.

SUP **8217.1**

MOD **8217.2** **4371.1**
1351A.2

MOD **8219.1** **4373.1**
1351C.1

MOD **8220.1** **4374.1**
1351D.1

(1) Pour l'utilisation de la classe d'émission H3E voir les numéros **2982** et **2986**.

MOD **8221.1** **4375.1**
1352.1

(2) Aux États-Unis et au Canada, l'utilisation en commun de la fréquence porteuse 4125 kHz par les stations côtières et les stations de navire pour la radiotéléphonie simplex à bande latérale unique est également autorisée sous réserve que la puissance en crête de ces stations ne dépasse par 1 kW (voir aussi le numéro **4376.2**).

MOD **8221.2** **4375.2**
1352.2

(3) Dans la zone des Régions 1 et 2 située au sud du parallèle 15° Nord, y compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, l'utilisation en commun de la fréquence porteuse 4125 kHz par les stations côtières et les stations de navire pour la radiotéléphonie simplex à bande latérale unique pour l'appel, la réponse et la sécurité est également autorisées, sous réserve que la puissance en crête de ces stations ne dépasse pas 1 kW. Dans ces zones, l'utilisation de la fréquence porteuse 4125 kHz comme fréquence de travail n'est pas autorisée (voir aussi les numéros **2982, 3030** et **4375.1**).

MOD **8221.3** **4375.3**
1352.3

(4) Dans la zone de la Région 3 située au sud du paralléle 25° Nord, l'utilisation en commun de la fréquence porteuse 6215,5 kHz par les stations côtières et les stations de navire pour la radiotéléphonie simplex à bande latérale unique por l'appel, la réponse et la sécurité est également autorisée, sous réserve que la puissance en crête de ces stations ne dépasse pas 1 kW. Dans cette zone, l'utilisation de la fréquence porteuse 6215,5 kHz comme fréquence de travail n'est pas autorisée (voir aussi le numéro **2986**).

NOC **8222** **4376** (2) Les stations côtières peuvent utiliser pour l'appel en radiotéléphonie les
1352A fréquences porteuses suivantes (1):

4419,4 kHz (2);
6521,9 kHz (2);
8780,9 kHz;
13 162,8 kHz;
17 294,9 kHz;
22 658 kHz.

NOC **8223** **4377** § 82. Les stations de navire et les staions côtières qui emploient l'appel sélectif
1352AA numérique mentionné au numéro **4681** peuvent utiliser les fréquences indequées respectivement aux numéros **4683** et **4684.**

NOC **8224** **4378** § 83. Les vacations des stations côtières ouvertes à la correspondance publique
1354 et la ou les fréquences sur lesquelles une veille est maintenue sont indiquées dans la Nomenclature des stations côtières.

NOC **8225** **4379** § 84. (1) Dans la zone des Régions 1 et 2 située au sud du parallèle Nord, y
1351G compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, avant d'émettre sur la fréquence porteuse 4125 kHz ou 6215,5 kHz, une station doit écouter sur cette fréquence pendant en laps de temps suffisant afin d'être certaine qu'aucun trafic de détresse n'est en cours (voir le numéro **4915**).

NOC **8226** **4380** (2) Les dispositions du numéro **4379** ne s'applequent pas aux stations en
1351H détresse.

NOC

C3) Trafic

NOC **8227** **4381** § 85. (1) Pour l'exploitation en radiotéléphonie duplex, les fréquences d'émission
1355 des stations côtières et des stations de navire qui correspondent avec elles sont appariées, ainsi qu'il est indiqué dans l'appendice **16** sauf, provisoirement, lorsque les conditions de travail interdisent l'utilisation de fréquences appariées pour répondre aux besoins d'exploitation.

MOD **8228** **4382** (2) La section B de l'appendice **16** indique les fréquences à utiliser pour
1356 l'exploration en radiotéléphonie simplex. Dans ce cas, la puissance en crête des émetteurs des stations côtières ne doit pas dépasser 1 kW.

MOD **8229** **4383** (3) Les fréquences indiquées dans l'appendice **16** pour l'émission des stations
1357 de navire peuvent être utilisées par les navires de toutes catégories selon des besoins du trafic.

MOD **8230** **4384** (4) Les carectéristiques techniques des émetteurs utilisés pour la radiotéléphonie
1358 dans les bandes comprises entre 4000 kHz et 23 000 kHz sont spécifiées à l'appendice **17**.

NOC **8231** **4385** *D*) Bandes comprises entre 156 MHz et 174 MHz

NOC

D1) Appel et réponse

MOD **8232** **4386** § 86. (1) La fréquence 156, 8 MHz esta la fréquence internationale de détresse,
1359 de sécurité et d'appel en radiotéléphonie pour les stations qui font usage de fréquences des bandes autorisés comprises entre 156 MHz et 174 MHz (voir le munéro **2994** pour les détails de son utilisation). La classe d'emission utiliser pour la radiotéléphonie sur la fréquence 156,8 MHz esta la classe G3E (voir l'appendice **19**).

NOC **8223** **4387** (2) La fréquence 156,8 MHz peut aussi être utilisée:
1359A

4388 *a*) Par les stations côtières et les stations de navire pour l'appel et la réponse, conformémente aux dispositions des articles 62 et 65;

4389 *b*) Par les stations côtières pour annoncer l'émission, sur une autre fréquence, de leurs listes d'appels et de renseignements maritimes importants (voir les numéros **4925** à **4929**).

NOC **8222.1** **4376.1** (1) Ces fréquence peuvent, de plus être utilisées par les stations côtières pour des émissions
1352A.1 de la classe H2B, lorsqu'on utilise le système d'appel sélectif défini à l'appendice **39**.

MOD **8222.2** **4376.2** (2) Dans les Régions 2 et 3, l'utilisation en commun des fréquences porteuses 4419,4 kHz et
1352A.2 6521,9 kHz par les stations côtières et les stations de navire pour la radiotéléphonie simplex à bande latérale unique est également autorisée sous réserve que la puissance en crête de ces stations ne dépasse pas 1 kW. Il convient que l'utilisation à cet effet de la fréquence porteuse 6521,9 kHz soit limitée aux heures de jour (voir aussi le numéro **4375.1**).

NOC 8234 4390 (3) La fréquence 156,8 MHz peut être utilisée par les sations de navire et les
1359B stations côtières pour l'appel sélectif.

NOC 8235 4391 (4) Les administrations peuvent, si elles le désirent, utiliser pour l'appel une des
1361 voies de correspondance publique désignées à l'appendice **18**. Il en est alors fait mention dans la Nomenclature des stations côtières.

MOD 8236 4392 (5) Les stations côtières et de navire du service de la correspondance publique
1362 peuvent utiliser, pour l'appel, une fréquence de travail dans les conditions prescrites aux articles 62 et 65.

NOC 8237 4393 (6) Toute émission dans la bande 156,725-156,875 MHz (1) pouvant causer
1363 des brouillages préjudiciables aux émissions autorisées des stations du service mobile maritime sur 156,8 MHz est interdite.

NOC 8238 4394 (7) Afin de faciliter la réception des appels de détresse, toutes les émissions sur
1363C la fréquence 156,8 MHz, doivent être réduites au minimum et ne pas dépasser une minute.

MOD 8239 4395 (8) Avant d'émettre sur la fréquence 156,8 MHz, une station doit écouter sur
1363A cette fréquence pedant un laps de temps suffisant afin d'être certaine qu'aucun trafic de détresse n'est en cours (voir le numéro **4915**).

NOC 8240 4396 (9) Les dispositions du numéro **4395** ne s'appliquent pas aux stations em détresse.
1363B

NOC

D2) Veille

NOC 8241 4397 § 87. (1) Il convient qu'en plus de la veille prescrite au numéro **3057**, les stations
1365 côtières ouvertes au service international de correspondance publique asurent, pendante leurs vacations, la veille sur leur fréquence de réception ou sur les fréquences qui sont indiquées dans la Nomenclature des stations côtières.

NOC 8242 4398 (2) La veille sur la ou les fréquences de travail ne doit pas être moins efficace
1366 que la veille assurée par un opérateur.

NOC 8243 4399 (3) Lorsqu'elles se trouvent dans la zone de service de stations côtières du
1367 service mobile maritime radiotéléphonique dans les bandes comprises entre 156 MHz et 174 MHz, et lorsque c'est possible en pratique, il convient que les stations de navire assurent la veille sur la fréquence 156,8 MHz. Il convient que celles qui ne sont pourvues que d'appareils radiotéléphoniques fonctionnant dans des bandes autorisées comprises entre 156 MHz et 174 MHz assurent, lorsqu'elles sont en mer, une veille sur la fréquence 156,8 MHz.

NOC 8244 4400 (4) Lorqu'elles sont en liaison avec une station portuaire, les stations de navire
1367A peuvent, à titre exceptionnel et sous réserve de l'accord de l'administration intéressée, continuer à maintenir la veille seulement sur la fréquence prévue por les opérations portuaires, à condition que la station portuaire maintienne la veille sur la fréquence 156,8 MHz.

NOC 8245 4401 (5) Lorsqu'elles sont en liaison avec une station côtière du service du mou-
1367B vement des navires, les stations de navire peuvent, sous réserve de l'accord des administrations intéressées, continuer à maintenir la veille seulement sur la fréquence appropriée du service du mouvement des navires, à condition que cette station côtière maintienne la veille sur la fréquence 156,8 MHz.

NOC 8246 4402 § 88. Les stations côtières du service des opérations portuaires situées dans une
1368 zone où la fréquence 156,8 MHz est temporairement utilisée pour les communications de détresse, d'urgence ou de sécurité, assurent pendant leurs vacations une veille supplémentaire des appels émis sur la fréquence 156,6 MHz ou sur toute autre fréquence du service des opérations portuaires figurant en caractères gras dans la Nomenclarure des stations côtières.

NOC 8247 4403 § 89. Les stations côtières du service du mouvement des navires situées dans
1368A une zone où la fréquence 156,8 MHz, est utilisée pour la détresse, l'urgence et la sécurité, assurent, pendent leurs vacations, une veille supplémentaire sur les fréquences du service du mouvement des navires figuram en caractères gras dans da Nomenclature des stations côtières.

NOC

D3) Trafic

NOC 8248 4404 § 90. (1) Lorsque c'est possible en pratique, les stations côtières ouvertes au
1369 service international de correspondance publique doivent pouvoir fonctionner en duplex ou en semi-duplex avec les stations de navires équipées à cet effet.

NOC 8237.1 4393.1 (1) A partie du 1er janvier 1983, cette bande deviendra 156,7625-156,8375 MHz (voir la Résolu-
1363.1 tion **308**).

NOC **8249** **4405**
1370

(2) Il convient que le mode de fonctionnement (à une fréquence ou à deux fréquences) spécifié pour chaque vie dans l'appendice **18** soit employé dans les services internationaux (voir la Résolution **308**).

NOC **8250** **4406**
1371

§ 91. Les messages échangés dans le service des opérations portuaires doivent être limités à ceux qui concernent la manutention, le mouvement et la sécurité des navires et, en cas d'urgence, la sauvegarde des personnes. Sont exclus de ce service les messages qui ont le caractère de correspondance publique.

NOC **8251** **4407**
1371A

§ 92. Les messages échangés dans le service du mouvement des navires doivent être limités à ceux concernant le mouvement des navires. Sont exclus de ce service les messages qui ont le caractère de correspondance publique.

NOC **8252** **4408**
1372

§ 93. (1) Les stations côtières qui utilisent la fréquence 156,8 MHz pour l'appel doivent pouvoir utiliser au moins une autre voie aurorisée pour le service mobile maritime international radiotéléphonique dans la bande 156-174 MHz.

NOC **8253** **4409**
1373

(2) Lorsque c'est possible en pratique, les administrations assignent aux stations côtières et aux stations de navire, pour les services internationaux qu'elles jugent nécessaires, des fréquences de la bande 156-174 MHz conformément au tableau des fréquences d'émission qui figure à l'appendice **18** (voir la Résolution **308**).

MOD **8254** **4410**
1373A

(3) L'ordre normal dans lequel il convient que les voies soient mises en service dans la bande 156-174 MHz est indiqué par les numéros inscrits dans les colonnes correspondantes de l'appendice **18**.

NOC **8255** **4411**
1373B

(4) Il convient que les administrations fassent en sorte, autant que possible, que les stations de navire disposant des voies qui correspondent aux numéros encerclés du tableau de l'appendice **18** puissent obtenir une utilisation raisonnablement suffisant des services disponibles.

NOC **8256** **4412**
1374

(5) En assignant des fréquences à leurs stations côtières, il convient que les administrations coopèrent dans le cas où des brouillages préjudiciables sont à craindre.

NOC **8257** **4413**
1375

(6) Les voies sont désignées par des numéros dans de tableau des fréquences d'emission qui figure à l'appendice **18** (voir la Résolution **308**).

NOC **8258** **4414**
1376

§ 94. (1) En assignant des fréquences aux stations des services autres que le service mobile maritime, les administrations doivent éviter de causer des brouillages au service maritime international dans les bandes comprises entre 156 MHz et 174 MHz.

MOD **8259** **4415**
1377

(2) L'utilisation des voies para le service mobile maritime à des fins autres que celles indiquées dans le tableau des fréquences d'emission qui figure à l'appendice **18** doit être telle qu'aucun brouillage préjudiciable ne soit causé aux services fonctionnant conformément à ce tableau et ne doit causer aucun préjudice au développement de ces services (voir la Résolution **308**).

NOC **8260** **4416**
1379

§ 95. La puissance de l'onde porteuse des émetteurs des stations de navire ne doit pas dépasser 25 watts pour les appareils mis en service après le 1er janvier 1970.

4417 à **4440**

(Non attribués).

ARTICLE 61

NOC

Ordre de priorité des communications dans le service mobile maritime et dans le service mobile par satellite

MOD **8361** **4441**
1496A

L'ordre de priorité des communcitions (1) dans de service mobile maritime et dans le service mobile maritime par satellite doit être l'ordre ci-après, sauf impossibilité pratique dans un système entièrement automatisé: cependant, même dans ce cas, la priorité doit être donnée aux communications de la première catégorie:

1) Appels de détresse, messages de détresse et trafic de détresse;
2) Communications précédées du signal d'urgence;
3) Communications précédées du signal de sécurité;
4) Communications relatives aux relèvements radiogoniométriques;
5) Communications relatives à navigation et à la sécurité des mouvements des aéronefs participant à des opérations de recherche et de sauvetage;
6) Communications relatives à la navigation, aux mouvements et aux besoins des navires et des aéronefs, et messages d'observation météorologique destinés à un service météorologique officiel;

ADD **8361.1** **4441.1**

(1) Le terme *communications* employé dans le présent article englobe les radiotélégrammes, les conservations radiotéléphoniques ainsi que les communications radiotélex.

7) ETATPRIORITENATIONS — Radiotélégrammes relatifs à l'application de la Carte des Nations Unies;
8) ETATPRIORITE — Radiotélégrammes d'État avec priorité et communications d'État pour lesquelles le droit de priorité a été expressément demandé;
9) Communications de service relatives au fonctionnement du service de télécommuncation et à des communications précédemment écoulées;
10) Communications d'État autres que celles indiquées à l'alinéa 8 ci-dessus, communications privées ordinaires, radiotélégrammes RTC (1) et radiotélégrammes de presse.

ARTICLE 62

NOC

Procédure relative à l'appel sélectif dans le service mobile maritime

SECTION I

NOC

Généralités

MOD **8387** 1235B **4665** § 1. (1) Dans la bande 1605-4000 kHz, l'appel sélectif peu être émis sus des fréquences de travais appropriées à la radiotéléphonie dans des sens côtière vers navire et navire vers côtière, et entre navires.

MOD **8388** 1239A **4666** (2) Des appels sélectifs peuvent être émis sur la fréquence 156,8 MHz et sur des fréquences de travail appropriées à la radiotéléphonie, dans les sens côtière vers navire et navire vers côtière, et entre navires.

SECTION II

Système séquential à une seule fréquence

NOC **8389** **4667** *A*) Généralités

NOC **8390** 999A **4668** § 2. Les caractéristiques du système international d'appel sélectif séquentiel à une seule fréquence doivent être conformes aux dispositions l'appendice **39**.

SUP **8391** 1013AA

NOC **8392** **4669** *B*) Méthode d'appel

NOC **8393** 999B **4670** § 3. (1) L'appel se compose:

4671
a) Du numéro d'appel sélectif où du numéro ou signal d'identification de la station appelée, suivi
b) Du numéro d'appel sélectif ou du numéro ou signal d'identification de la station appelante.

4672 Toutefois, en ondes métriques, lorsque l'appel émane d'une station côtière, le numéro de la voie à utiliser pour la réponse et pour le trafic peut être substitué au numéro ou signal d'identification de la station côtière.

Cet appel est transmis deux fois.

NOC **8394** 999C **4673** (2) Si une station appelée ne répond pas, il convient normalement d'attendre au moins cinq minutes avant de répéter l'appel: ensuite, il convient d'attendre encore quinze minutes avant de renouveler l'appel.

ADD **8361.2** **4441.2** (1) RCT (Red Cross Telegrams): télégrammes concernant les personnes protégées en temps de guerre par les Conventions de Génève du 12 août 1949.

(MOD) **8395** **4674** (3) L'utilisation d'un «appel à tous les navires» est restreinte aux cas de détresse et d'urgence dans les bandes des ondes hectométriques et décamétriques, ainsi qu'à l'annonce d'avis d'un grande importance pour la navigation émis dans ces bandes; en outre, il peut être aux fins de sécurité dans la bande des ondes métriques. L'«appel á tous les navires» ne peut être utilisé que pour compléter, le cas échéant, les procédures de détresse spécifiées aux numéros **3101, 3102, 3116** et **3117** et ne doit en aucun cas se susbtituer à ces procédures, notamment aux signaux d'alarme mentionnés dans les numéros **3268** et **3270**.
999CA

NOC **8396** **4675** *C)* Réponse aux appels

NOC **8397** **4676** § 4. La réponse aux appels doit se faire:
999D

4677 *a)* En radiotélégraphie, conformément aux dispositions des numéros **4767** et **4769**;

4678 *b)* En radiotéléphonie, conformément aux dispositions des números **4982** à **5002**.

NOC **8398** **4679** *D)* Fréquences à utiliser

MOD **8399** **4680** § 5. Il convient que les sélectifs soient émis sur une ou plusiers des fréquences porteuses ci-dessus:
999E

500 kHz;
2170,5 kHz (1);
4125 kHz;
4419,4 kHz;
6521,9 kHz;
8780,9 kHz;
13 162,8 kHz;
17 294,9 kHz;
22 658 kHz;
156,8 MHz (2).

SECTION III

NOC **Système d'appel sélectif numérique**

NOC **8400** **4681** § 6. Il est possible d'utiliser un système d'appel sélectif numérique qui soit en tous points conforme aux dispositions des Avis pertinents du CCIR tenant compte de tous les aspects techniques, d'exploitation et de compatibilité qui entrent en jeu.
999F

SUP **8401**
1013AB

MOD **8402** **4682** § 7. Les fréquences qui peuvent être assignées aux stations de navire et aux stations côtières pour l'appel sélectif numérique sont les suivantes:
(ex **8739**)
1238B

MOD **8403** **4683** *a) Stations de navire:*
(ex **8740**)
1238C

4187,6 kHz;
6281,4 kHz;
8375,2 kHz;
12 562,3 kHz;
12 562,8 kHz;
16 749,9 kHz;
16 750,4 kHz;

MOD **8399.1** **4680.1** (1) Cette fréquence a remplacé le fréquence porteuse 2182 kHz pour l'appel sélectif, sous réserve des dispositions du numéro **2976**.
999E.1

MOD **8399.2** **4680.2** (2) Normalement, il convient que l'appel sélectif sur cette fréquence se fasse seulement dans le sens côtière-navire ou entre navires et que les appels sélectifs de navire à station côtière soient chaque fois que possible émis sur d'autres fréquences appropriées figurant dans l'appendice **18**.
999E.2

22 248 kHz;
22 248,5 kHz;

MOD **8404** **4684** *b) Stations côtières:*
(ex **8741**)
1238D

4357 kHz;
6506 kHz;
8718,5 kHz;
13 100 kHz;
13 100,5 kHz;
17 232 kHz;
17 232,5 kHz;
22 595 kHz;
22 595,5 kHz.

ARTICLE 63

NOC

Procédure générale radiotélégraphique dans le service mobile maritime

SECTION I

NOC

Dispositions générales

MOD **8423** **4710** § 1. La procédure détaillée dans le présent article est obligatoire, sauf dans les cas de détresse, d'urgence ou de sécurité, auxquels sont aplicables les dispositions du chapitre IX.
1000

MOD **8424** **4711** § 2. L'emploi des signaux du code Morse figurant dans l'instruction pour l'exploitation du service télégraphique public international est obligatoire. Toutefois, pour les radiocommunications d'un caractère spécial, l'usage d'autres signaux n'est pas exclu.
1003

MOD **8425** **4712** § 3. Les abréviations réglementaires définies à l'appendice **14** doivent être utilisées.
1005

SECTION II

NOC

Opérations préliminaires

NOC **8426** **4713** § 4. (1) Avant d'émettre, une station prend les précautions voulues pour s'assurer que ses émissions ne brouilleront pas des transmissions en cours; si un tel brouillage est probable, la station attend un arrêt opportun de la transmission qu'elle pourrait brouiller. Cette obligation ne s'applique pas aux stations qui peuvent fonctionner sans surveillance par des moyens automatiques (voir le numéro **3863**) sur des fréquences destinées aux systèmes à bande étroite de télégraphie à impression directe.
1007

NOC **8427** **4714** (2) Dans le cas où même en opérant ainsi, l'émission de cette station vient à brouiller une transmission déjá en cours, on applique les règles suivantes:
1008

MOD **8428** **4715** *a)* La station de navire dont l'émission brouille la communication entre une station mobile et une station côtière doit cesser d'émettre à la première demande de la situation côtière;
1009

MOD **8429** **4716** *b)* La station de navire dont l'émission brouille les communications entre des station mobiles doit cesser d'émettre à la première demande de l'une quelconque de ces stations;
1010

MOD **8430** **4717** *c)* La station qui demande cette cessation doit indiquer la durée approximative de l'attente imposée à la station dont elle fait suspendre l'émission.
1011

SECTION III

NOC

Appels en radiotélégraphie

NOC **8431** **4718** *A) Généralités*

NOC **8432** **4719** § 5. Les dispositions de la présente section ne sont pas applicables au service mobile maritime par satellite.
1064A

MOD **8433** **4720** § 6. (1) En règle générale, il incombe à la station de navire d'établir la communications avec la station côtière. A cet effet, la station de navire ne peut appeler la station côtière qu'après arrivée dans sa zone de service, c'est-à-dire dans la zone où, en utilisant une fréquence appropriée, la station de navire peut être entendue par la station côtière.
1065

MOD **8434** **4721** (2) Toutefois, une station côtière qui a du trafic pour une station de navire peut appeler cette station si elle a des raisons de croire que celle-ci se trouve dans sa zone de service et assure l'écoute.
1066

MOD **8435** **4722** § 7. (1) De plus, chaque station côtière doit, pour autant que cela est possible en pratique, transmettre ses appels sous forme de «listes d'appels» formées des indicatifs d'appel, classés par ordre alphabétique, des stations de navire pour lesquelles elle a du trafic en instance. Ces appels ont lieu à des moments déterminés par accord entre les administrations intéressées, espacés de deux heures au moins et de quatre heures au plus, pendant les heures d'ouverture de la station côtière.
1067

NOC **8436** **4723** (2) Toutefois, dans les bandes comprises entre 4000 kHz et 27 500 kHz, les listes d'appels peuvent être transmises à des moments espacés d'une heure au moins.
1067A

NOC **8437** **4724** (3) Il convient que les stations côtières évitent de répéter continuellement ou fréquemment leur indicatif d'appel ou le signal CQ (voir les numéros **1799** a **1803**).
1068

MOD **8438** **4725** (4) Toutefois, dans les bandes comprises entre 4000 kHz et 27 500 kHz, une station côtière peut transmettre son indicatif d'appel à certains intervalles de temps en utilisant des émissions de type A1A, afin de permettre aux stations de navire de choisir pour l'appel la bande dont les fréquences présentent les caractéristiques de propagation les plus favorables pour établir une communication satisfaisante (voir le numéro **4261**).
1068A

NOC **8439** **4726** (5) Les stations côtières transmettent ces listes d'appels sur leurs fréquences normales de travail, dans les bandes appropriées. Cette transmission est précédée d'un appel général à toutes les stations (CQ).
1069

NOC **8440** **4727** (6) L'appel général à toutes les stations annonçant la liste d'appels peut être émis sur une fréquence d'appel, sous la forme suivante:
1070

CQ (trois fois au plus);
Le mot DE;
Trois fois, au plus, l'indicatif d'appel de la station appelante;
QSW suivi de l'indication de la ou des fréquences de travail sur la(les)-quelle(s) la liste d'appels va être transmise aussitôt après.

En aucun cas, ce préambule ne peut être répété.

NOC **8441** **4728** (7) Les dispositions du numéro **4727**:
1071

NOC **8442** **4729** *a*) Sont obligatoires lorsque c'est la fréquence 500 kHz qui est utilisée;
1071A

MOD **8443** **4730** *b*) Ne s'appliquent pas lorsqu'il s'agit de fréquences des bandes comprises entre 4000 kHz et 27 500 kHz.
1072

NOC **8444** **4731** (8) Les heures auxquelles les stations côtières transmettent leurs listes d'appels, ainsi que les fréquences et les classes d'émission qu'elles utilisent à cet effet, doivent être mentionnées dans la Nomenclature des stations côtières.
1073

MOD **8445** **4732** (9) Il convient que les stations de navire écoutent dans toute la mesure du possible les émissions des listes d'appels des stations côtières. Lorsqu'elles perçoivent leur indicatif d'appel dans une liste, elles doivent répondre aussitôt qu'elles le peuvent.
1074

MOD **8446** **4733** (10) Lorsque le trafic ne peut pas être écoulé immédiatement, la station côtière fait connaître à chaque station de navire intéressée l'heure probable à laquelle le travail pourra commencer ainsi que, si cela est nécessaire, la fréquence et la classe d'émission qui seront utilisées.
1075

MOD **8447** **4734** § 8. Lorsqu'une stations côtière reçoit pratiquement en même temps des appels de plusieurs stations de navire, elle décide de l'ordre dans lequel ces stations pourront lui transmettre leur trafic. Sa décision est fondée sur l'ordre de priorité (voir le numéro **4441**) des radiotélégrammes en instance dans les stations de navire, et sur le nécessité de permettre á chacune des stations appelantes d'écouler le plus grand nombre possible de communications.
1076

NOC **8448** **4735** § 9. (1) Lorsqu'une station appelée ne répond pas à l'appel émis trois fois à des intervalles de deux minutes, l'appels doit cesser et il ne doit pas être renouvelé avant quinze minutes.
1077

ADD **8448A** **4736** (2) Dans les cas d'une communication entre une station du service mobile maritime et une station d'aéronef, l'appel peut être renouvelé après cinq minutes, nonobstant les dispositions du número **4735.**
1078

NOC **8449** **4737** (3) Avant le renouveler l'appel, la station appelante doit s'assurer que la station
1079 appelée n'est pas en communication avec une autre station.

NOC **8450** **4738** (4) S'il n'y a pas de raison de craindre que des brouillages préjudiciables n'affectent
1080 des communications en cours, les dispositions des numéros **4146** et **4735** ne sont pas applicables. Dans ce cas, l'appel émis trois fois à des intervalles de deux minutes peut être renouvelé après un intervalle de durée inférieure à quinze minutes mais ou moins égale à trois minutes.

MOD **8451** **4739** § 10. Les stations de navire ne doivent pas émettre leur onde porteuse entre les
1081 appels.

MOD **8452** **4740** § 11. Lorsque le nom et l'adresse de l'administration ou de l'exploitation privée
1082 dont dépend une station de navire de sont pas mentionées dans la nomenclature appropriée on ne sont plus en concordance avec les indications de celle-ci, la station de navire a le devoir de donner d'office à la station côtière à laquelle elle transmet du trafic tous les renseignements nécessaires à cet égard.

MOD **8453** **4741** § 12. (1) La station côtière peut, au moyen de l'abréviation TR, demander à la
1083 station de navire de lui fournir les renseignements suivants:

NOC **8454** **4742** *a*) Position et, autant que possible, route et vitesse;
1084

NOC **8455** **4743** *b*) Prochain lieu d'escale.
1085

MOD **8456** **4744** (2) Il convient que les renseignements indiqués aux numéros **4741** à **4743**, précédés
1086 de l'abréviation TR, soient fournis par les stations de navire, chaque fois que cela semble approprié, sans demande préalable de la station côtière. Ces renseignements ne sont fournis qu'après autorisation du commandant ou de la personne responsable du navire ou de tout autre bâtiment portant la station.

NOC **8457** **4745** *B)* Appels à plusieurs stations

MOD **8458** **4746** § 13. Les dispositions de la présente section ne sont pas applicables au service
1087A mobile maritime par satellite.

NOC **8459** **4747** § 14. Deux types de signaux d'appel «à tous» sont reconnus:
1088

NOC **8460** **4748** *a*) Appel CQ suivi de la lettre K (voir les números **4750** et **4751**);
1089

NOC **8461** **4749** *b*) Appel CQ non suivi de la lettre K (voir le numéro **4752**).
1090

MOD **8462** **4750** § 15. Les stations qui désirent entrer en communication avec des stations du
1091 service mobile maritime, sans toutefois connaître le nom de celles de ces stations qui sont dans leur zone de service, peuvent employer le signal de recherche CQ pour remplacer dans l'appel l'indicatif de la station appelée. L'appel doit alors être suivi le la lettre K (appel général à toutes les stations du service mobile maritime avec demande de réponse).

MOD **8463** **4751** § 16. L'emploi de l'appel CQ suivi de la letre K est interdit dans le régions où
1092 le trafic est intense. Par exception, il peut être utilisé avec des signaux d'urgence.

NOC **8464** **4752** § 17. L'appel CQ non suivi de la lettre K (appel général à toutes les stations
1093 sans demande de réponse) est employé avant la transmission des renseignements de toute nature destinés à être lus ou utilisés par quiconque peut les capter.

NOC **8465** **4753** § 18. L'appel CP suivi de deux ou plusieurs indicatifs d'appel ou d'un mot
1094 conventionnel (appel à certaines stations réceptrices sans demande de réponse) n'est employé que pour la transmission des renseignements de toute nature destinés à être lus ou utilisés par les personnes autorisées.

SECTION IV

NOC **Méthode d'appel, réponse à l'appel et signaux préparatoires au trafic**

NOC **8466** **4754** *A)* Méthode d'appel — Télégraphie Morse
SUP **8467**
1013A

NOC **8468** **4755** § 19. (1) L'appel est constitué comme suit:
1013B

Deux fois, au plus, l'indicatif d'appel de la station appelée;
Le mot DE;
Deux fois, au plus, l'indicatif d'appel de la station appelante;

Les renseignements demandés au numéro **4761** et, éventuellement, aux numéros **4764** et **4765**;
La lettre K.

NOC **8469** 1013C **4756** (2) Pour l'appel normal, lorsque les conditions du número **4261** ont été satisfaites, l'appel spécifié au numéro **4755** peut être transmis une seconde fois, après un intervalle d'au moins une minute, après quoi il ne doit pas être renouvelé avant trois minutes.

NOC **8470** **4757** *B*) Fréquence à utiliser pour l'appel et les signaux préparatoires

NOC **8471** 1014 **4758** § 20. (1) Pour faire l'appel ainsi que pour transmettre les signaux préparatoires, la station appelante utilise une fréquence sur laquelle veille le station appelée.

MOD **8472** 1015 **4759** (2) Une station de navire appelant une station côtière dans l'une des bandes de fréquences situées entre 4000 kHz et 27 500 kHz doit faire usage d'une fréquence de la bande d'appel spécialement réservée à cet effet.

NOC **8473** **4760** *C*) Indication de la fréquence à utiliser pour le trafic

MOD **8474** 1016A **4761** § 21. (1) L'appel, tel qu'il est défini au numéro **4755,** doit contenir l'abréviation réglementaire indiquant la fréquence de travail et, si c'est utile, la classe d'émission que la situation appelant se propose d'utiliser pour transmettre son trafic.

MOD **8475** 1019A **4762** (2) Lorsque l'appel émis par une station côtière ne contient pas l'indication de la fréquence à utiliser pour la trafic, cela signifie que cette station se propose d'utiliser pour le trafic sa fréquence normale de travail indiquée dans la Nomenclature des stations côtières.

NOC **8476** **4763** *D*) Indication de priorité, du motif de l'appel et de la transmission des radiotélégrammes par séries

NOC **8477** 1020A **4764** § 22. (1) La station appelante transmet l'abréviation réglementaire après les signaux preparatoires susmentionnés, afin d'indiquer s'il agit d'une message prioritaire autre qu'un message de détresse, d'urgence ou de sécurité (voir le numéro **4441**) et d'indiquer le motif de l'appel.

NOC **8478** 1021 **4765** (2) De plus, lorsque la station appelante désire transmettre ses radiotélégrammes par séries, elle l'indique en ajoutant l'abréviation réglementaire pour demander le consentement de la station appelée.

NOC **8479** **4766** *E*) Forme de la réponse à l'appel

MOD **8480** 1022A **4767** § 23. La réponse à l'appel est constituée comme suit:
Deux fois, au plus, l'indicatif d'appel de la station appelante;
Le mot DE;
Une fois seulement, l'indicatif d'appel de la station appelée.

NOC **8481** **4768** *F*) Fréquence de réponse

NOC **8482** 1023 **4769** § 24. Sauf indication contraire dans le présent Règlement, pour transmettre la réponse aux appels et aux signaux préparatoires, la station appelée emploie la fréquence sur laquelle veille la station appelante, à moins que la station appelante n'ait désigné une autre fréquence pour la réponse.

NOC **8483** **4770** *G*) Accord sur la fréquence à utiliser pour le trafic

NOC **8484** 1027 **4771** § 25. (1) Si la station appelée est d'accord avec la station appelante, elle transmet:

NOC **8485** 1028 **4772** *a*) La réponse à l'appel;

NOC **8486** 1029 **4773** *b*) L'abréviation réglementaire indiquant qu'à partir de ce moment elle écoute sur la fréquence de travail annoncée par la station appelante;

NOC **8487** 1030 **4774** *c*) Éventuellement, les indications prévues, au numéro **4783;**

MOD **8488** 1031 **4775** *d*) Si c'est utile, l'abréviation réglementaire et le chiffre indiquant la force et ou l'intelligibilité des signaux reçus (voir l'appendice **14**);

NOC **8489** 1032 **4776** *e*) La lettre K, si la station appelée est prête à recevoir le trafic de la station appelante.

NOC **8490** **4777** (2) Si la station appelée n'est pas d'accord avec la station appelante sur la
1033 fréquence de travail à employer, elle transmet:

NOC **8491** **4778** *a*) La réponse à l'appel;
1034

(MOD) **8492** **4779** *b*) L'abréviation réglementaire indiquant la fréquence de travail à utiliser
1035 par la station appelante et, s'il y a lieu, la classe d'émission;

NOC **8493** **4780** *c*) Éventuellement, les indications prévues au numéro **4783.**
1036

NOC **8494** **4781** (3) Lorsque l'accord est réalisé sur la fréquence de travail que la station
1037 appelante doit employer pour son trafic, la station appelée transmet la lettre K à la suite des indications contenues dans sa réponse.

NOC **8495** **4782** *H*) Réponse à la demande de transmission par séries

NOC **8496** **4783** § 26. La station appelée, répondant à une station appelante qui a demandé à
1038 transmettre ses radiotélégrammes par séries (voir le numéro **4765**) indique, au moyen de l'abréviation réglementaire, son acceptation ou son refus. Dans le premier cas, elle spécifie, s'il y a lieu, le nombre des radiotélégrammes qu'elle est prête à recevoir en une série.

NOC **8497** **4784** *I*) Difficultés de réception

NOC **8498** **4785** § 27. (1) Si la station appelée n'est pas en mesure de recevoir le trafic
1039 immédiatement, elle répond à l'appel comme il est indiqué aux numéros **4771** à **4776**, mais elle remplace la lettre K par le signal . — . . . (attente) suivi d'un nombre indiquant en minutes la durée probable de l'attendre. Si cette durée probable dépasse dix minutes (cinq minutes dans le cas d'une station d'aéronef communiquant avec une station du servicwe mobile maritime) l'attente doit être motivée.

NOC **8499** **4786** (2) Lorsqu'une station reçoit un appel sans être certaine qu'il lui est destiné,
1040 ele ne doit pas répondre avant que cet appel ait été répété et compris. Lorsque, d'autre part, une station reçoit um appel qui est destiné, mais a des doutes sur l'indicatif d'appel de la station appelante, elle doit répondre immédiatement en utilisant l'abréviation réglementaire au lieu de l'indicatif d'appel de cette dernière station.

SECTION V

NOC **Ecoulement du trafic**

NOC **8500** **4787** *A*) Fréquence de trafic

MOD **8501** **4788** § 28. (1) En régle générale, une station du service mobile maritime transmet
1041 son trafic en employant l'une de ses fréquences de travail de la bande dans laquelle l'appel a eu lieu.

NOC **8502** **4789** (2) En plus de sa fréquence normale de travail, imprimée en caractères gras
1042 dans la Nomenclature des stations côtières, chaque station côtière peut employer une ou plusieurs fréquences supplémentaires de la même bande, conformément aux dispositions de l'article 60.

MOD **8503** **4790** (3) A l'exception du trafic de détresse (voir le chapitre IX), l'emploi des fré-
1043 quences réservées à l'appel est interdit pour le trafic.

NOC **8504** **4791** (4) Si la transmission d'un radiotélégramme a lieu sur une autre fréquence
1044 et ou une autre classe d'émission que celles utilisées pour l'appel, cette transmission est précédée:

De, deux foi au plus, l'indicatif d'appel de la station appelée;
Du mot DE;
De l'indicatif d'appel de la station appelant, une fois seulement.

NOC **8505** **4792** (5) Si la transmission a lieu sur les mêmes fréquence et classe d'émission
1045 que l'appel, la transmission du radiotélégramme est précédée, si c'est nécessaire:

De l'indicatif d'appel de la station appelée;
Du mot DE;
De l'indicatif d'appel de la station appelante.

NOC **8506** **4793**

B) Numérotage par séries quotidiennes

MOD **8507** **4794** 1046

§ 29. (1) En règle générale, les radiotélégrammes de toute nature transmis par les stations de navire sont numérotés par séries quotidiennes, en donnant le numéro 1 au premier radiotélégramme transmis chaque jour à chaque station différente.

NOC **8508** **4795** 1047

(2) Il convient qu'une série de numéros commencée en radiotélégraphie soit continuée em radiotéléphonie et inversement.

(MOD) **8509** **4796**

C) Radiotélégrammes longs

NOC **8510** **4797** 1048

§ 30. (1) Dans le cas où les deux stations sont pourvues de dispositifs leur permettant de passer de l'émission à la réception sans manœuvre de commutation, la station transmettrice peut poursuivre sa transmission jusqu'à la fin du message ou jusqu'à ce que la station réceptrice l'interrompe au moyen de l'abréviation réglementaire BK. Au préalable, les deux stations se mettent généralement d'accord sur une telle méthode de travail au moyen de l'abréviation réglementaire QSK.

(MOD) **8511** **4798** 1049

(2) Si cette méthode de travail ne peut pas être employée, les radiotélégrammes longs, tant ceux em langage clair que ceux en langage secret sont, en régle générale, transmis par tranches, chaque tranche contenant cinquante mots dans le cas du langage clair et vingt mots ou groupes dans le cas du langage secret.

NOC **8512** **4799** 1050

(3) A la fin de chaque tranche, le signal . . __ __ . . (?) signifiant «Avez-vous bien reçu le radiotélégramme jusqu'ici?» est transmis. Si la tranche a été correctement reçue, la station réceptrice répond en transmettant la lettre K, et la transmission du radiotélégramme est poursuivie.

NOC **8513** **4800**

D) Suspension du trafic

MOD **8514** **4801** 1051

§ 31. Lorsqu'une station de navire transmet sur une fréquence de travail d'une station côtière et brouille les émissions de ladite station côtière, elle doit suspendre son travail à la première demande de celle-ci.

Section VI

NOC

Fin du trafic et du travail

NOC **8515** **4802**

A) Signal de fin de transmission

NOC **8516** **4803** 1052

§ 32. (1) La transmission d'un radiotélégramme se termine par le signal . __ . __ . (fin de transmission), suivi de la lettre K.

NOC **8517** **4804** 1053

(2) Dans le cas d'une transmision par séries, la fin de chaque radiotélégramme est indiquée par le signal . __ . __ . (fin de transmission) et la fin de chaque série par la lettre K.

NOC **8518** **4805**

B) Accusé de réception

NOC **8519** **4806** 1054

§ 33. (1) L'accusé de réception d'un radiotélégramme ou d'une série de radiotélégrammes est donné sous la forme suivante:

L'indicatif d'appel de la station transmettrice;
Le mot DE;
L'indicatif d'appel de la station réceptrice;
La lettre R suivie du numéro du radiotélégramme; *ou*
La lettre R suivie du numéro du dernier radiotélégramme d'une série.

NOC **8520** **4807** 1055

(2) L'accusé de réception est transmis par la station réceptrice sur la fréquence de trafic (voir les numéros **4788** et **4789**).

NOC **8521** **4808**

C) Fin du travail

NOC **8522** **4809** 1056

§ 34. (1) La fin du travail entre deux stations est indiquée par chacune d'elles au moyen du signal . . . __ . __ (fin du travail).

NOC **8523** **4810** 1057

(2) Le signal . . . __ . __ (fin du travail) est aussi utilisé:

À la fin de toute transmission de radiotélégrammes d'information générale, d'avis généraux de sécurité et d'informations météorologiques;

À la fin de la transmission dans le service de radiocommunication à grande distance avec accusé de réceptrion différé ou sans accusé de réception.

SECTION VII

NOC

Direction du travail

NOC **8524** **4811**
1058
§ 35. Les dispositions de la présente section ne s'appliquent pas aux cas de détresse, d'urgence ou de sécurité (voir le numéro **4710**).

MOD **8525** **4812**
1059
§ 36. Dans les communications entre station côtière et station de navire, la station de navire se conforme aux instructions données par la station côtière pour tout ce qui a trait à l'ordre et à l'heure de transmission, au choix de la fréquence et de la classe d'émission, à la durée et à la suspension du travail.

MOD **8526** **4813**
1060
§ 37. Dans les communications entre stations de navire, la station appelée a la direction du travail selon les indications du numéro **4812**. Cependant, si une station côtière estime nécessaire d'intervenir, les stations de navire se conforment à ses instructions.

SECTION VIII

NOC

Essais

MOD **8527** **4814**
1061
§ 38. Lorsqu'il est nécessaire pour une station de navire d'émettre des signaux d'essai ou de réglage susceptibles de brouiller le travail de stations côtières voisines, le consentement de ces stations doit être obtenu avant d'effectuer de telles émissions.

MOD **8528** **4815**
1062
§ 39. Lorsqu'il est nécessaire pour une station du service mobile maritime de faire des signaux d'essai, soit pour le réglage d'un émetteur avant de transmettre un appel, soit pour le réglage d'un récepteur, ces signaux ne doivent pas durer plus de dix seconds. Ils doivent être constitués par une série de VVV suivie de l'indicatif d'appel de la station qui émet pour essais.

4816 à **4840**
(Non attribués.)

ARTICLE 64

NOC

Procédures générales applicables à la télégraphie à impression directe à bande étroite dans le service mobile maritime (1)

SECTION I

NOC

Généralités

MOD **8580** **4841**
1062AA
§ 1. Les stations utilisant la télégraphie à impression directe à bande étroite doivent satisfaire aux dispositions des articles **59** et **60**.

NOC **8581** **4842**
1062AB
§ 2. Il convient que les procédures spécifiées dans le présent article soient appliquées, sauf dans le cas de détresse, d'urgence ou de sécurité.

NOC **8582** **4843**
1062AC
§ 3. (1) Le trafic peut être échangé avec ou sans emploi de dispositifs de correction d'erreur.

NOC **8583** **4844**
1062AD
(2) Dans las communications entre deux stations, il convient d'utiliser le mode «correction d'erreurs avec circuit de retour» (ARQ), si deux stations fonctionnent selon ce mode.

NOC **8584** **4845**
1062AE
(3) Dans les transmissions d'une station côtière ou d'une station de navire à destination de plusieurs autres stations, il convient d'utiliser le mode «correction d'erreurs sans circuit de retour» lorsque les stations en cause fonctionnent selon ce mode.

NOC **8585** **4846**
1062AF
§ 4. Les services assurés par chaque station ouverte à la correspondance publique doivent être indiqués dans la Nomenclature des stations côtières et dans la Nomenclature des stations de navire, ainsi que des renseignements concernant la taxation.

NOC **A.N61** **A.64**
(1) On peut également se reporter aux Avis pertinents du CCIR.

MOD **8586** **4847**
1062AG

§ 5. Lorsque la transmission emprunte les voies de télécommunication ouvertes à la correspondance publique, à l'exclusion des voies de télécomunication du service mobile et du service mobile par satellite et ses liaisons de connexion, il convient de tenir compte des dispositions du Règlement télégraphique et des Avis pertinents du CCITT.

SECTION II

NOC

Procédures applicables à l'exploitation manuelle

NOC **8587** **4848**

A) Généralités

MOD **8588** **4849**
1015A

§ 6. Dans le cas de l'utilisation de systèmes de télégraphie à impression directe ou de systèmes similaires dans une bande de fréquence attribuée au service mobile maritime, l'appel peut être émis, selon accord préalable, sur une fréquence de travail dont ces systèmes peuvent disposer.

NOC **8589** **4850**

B) Sens navire-station côtière

NOC **8590** **4851**
1062AH

§ 7. (1) L'opérateur de la station de navire établit la communication avec la station côtière par télégraphie Morse de classe A1A, par téléphonie ou par un autre moyen, en appliquant les procédures normales d'appel. Il lui demande ensuite une communication à impression directe, échange avec elle des renseignements concernant les fréquences à utiliser et, le cas échéant, lui indique le numéro d'appel sélectif de la station de navire pour l'impression directe, attribué conformément aux dispositions de l'appendice **38.**

NOC **8591** **4852**
1062AI

(2) L'opérateur de la station côtière établit alors la communication à impression directe sur la fréquence décidée d'un commun accord, en utilisant l'indication appropriée du navire.

NOC **8592** **4853**
1062AJ

§ 8. (1) L'opérateur de la station de navire peut également avoir recours à l'équipement à impression directe pour appeler la station côtière sur une fréquence de réception prédéterminée de celle-ci: il utilise alors le signal d'identification de la station côtière attribué conformément aux dispositions de l'appendice **38.**

NOC **8593** **4854**
1062AK

(2) L'opérateur de la station côtière établit alors la communication à impression directe sur la fréquence d'émission correspondance de sa station.

NOC **8594** **4855**

C) *Sens station côtière-navire*

NOC **8595** **4856**
1062AL

§ 9. (1) L'opérateur de la station côtière appelle la station de navire par télégraphie Morse de classe A1A, par téléphonie ou par un autre moyen, en appliquant les procédures normales d'appel.

NOC **8596** **4857**
1062AM

(2) L'opérateur de la station de navire applique alors les procédures décrites aux numéros **4851** ou **4853.**

NOC **8597** **4858**

D) Communications entre navires

NOC **8598** **4859**
1062AN

§ 10. (1) L'opérateur de la station de navire appelante établit la communication avec la station de navire appelée par télégraphie Morse de classe A1A, par téléphonie ou par un autre moyen, en appliquant les procédures normales d'appel. Il lui demande ensuite une communication à impression directe, échange avec elle des renseignements concernant les fréquences à utiliser et le cas échéant, lui indique le numéro d'appel sélectif de sa station à utiliser pour l'impression directe, numéro assigné conformément aux dispositions de l'appendice **38.**

NOC **8599** **4860**
1062AO

(2) L'opérateur de la station de navire appelée établit alors la communication à impression directe sur la fréquence décidée d'un commun accord, en utilisant l'identification appropriée du navire appelant.

SECTION III

NOC

Procédures applicables à l'exploitation automatique

NOC **8600** **4861**

A) Sens navire-station côtière

NOC **8601** **4862**
1062AP

§ 11. (1) La station de navire appelle la station côtière sur une fréquence de réception prédéterminée de celle-ci, en recourant à l'équipement à impression directe et en utilisant le signal d'identification attribué à la station côtière conformément aux dispositions de l'appendice **38.**

NOC **8602** **4863** (2) L'équipement à impression directe de la station côtière détecte l'appel et
1062AQ la station côtière répond directement, soit automatiquement, soit par un procédé manuel, sur la fréquence d'émission correspondante.

NOC **8603** **4864** *B)* Sens station côtière-navire

NOC **8604** **4865** § 12. (1) La station côtière appelle la station de navire sur une fréquence
1062AR d'émission prédéterminée de station côtière, en recourant à l'équipement à impression directe et en utilisant le numéro d'appel sélectif de la station de navire pour l'impression directe, attribué conformément aux dispositions de l'appendice **38.**

NOC **8605** **4866** (2) L'équipement à impression directe de la station de navire, accordé pour
1062AS recevoir la fréquence d'émission prédéterminée de la station côtière, détecte l'appel: la station de navire répond alors selon l'une ou l'autre des méthodes suivantes:

NOC **8606** **4867** *a)* Elle répond soit immédiatement sur la fréquence de réception
1062AT correspondante de la station côtière, soit après un certain délai, selon la procédure décrite au numéro **4853**, *ou*

NOC **8607** **4868** *b)* Son émetteur se met en marche automatiquement sur la fréquence
1062AU de réception correspondante de la station côtière; l'équipement à impression directe du navire émet alors des signaux appropriés pour indiquer qu'il est prêt à recevoir le trafic par voie automatique.

SECTION IV

NOC **Forme des messages**

NOC **8608** **4869** § 13. Lorsque la station côtière dispose des installations appropriées, le trafic
1062AV peut être échangé avec le réseat télex:

NOC **8609** **4870** *a)* Soit selon le mode «conversation»; les stations intéressées sont alors
1062AW directement reliées, automatiquement ou manuellement;

NOC **8610** **4871** *b)* Soit selon le mode «enregistrement et retransmission»: les messages
1062AX sont alors mis en mémoire à la station côtière jusqu'à ce qu'un circuit puisse être établi automatiquement ou manuellement avec le poste appelé.

(MOD) **8611** **4872** § 14. Dans le sens station côtière-navire, il convient que la forme des messages
1062AY soit conforme à celle qui est normalement utilisée dans le réseau télex.

(MOD) **8612** **4873** § 15. Dans le sens navire-station côtière, il convient que la forme des messages
1062AZ soit conforme à celle qui est normalement utilisée dans le réseau télex, moyennant l'adjonction d'un préambule établi comme suit:

NOC **8613** **4874** *a)* Dans le mode «conversation», le préambule se compose des caractères
1062BA DIRTLXyz+ transmis à la suite les uns autres, précédés d'au moins un signe «retour de chariot» et d'un signe «changement de ligne», «y» représentant le code télex de destination conformément aux Avis pertinents du CCITT, «z» représentant le numéro télex de l'abonné à terre et «+» indiquant la fin de la séquence;

NOC **8614** **4875** *b)* Dans le mode «enregistrement et retransmission», le préambule se
1062BB compose des caractères TLXyz+ transmis à la suite les uns des autres, précédés d'au moins un signe «retour de chariot» et d'un signe «changement de ligne», «y» représentant le code télex de destination conformément aux Avis pertinents du CCITT, «z» représentant le numéro télex de l'abonné à terre et «+» indiquant la fin de la séquence.

SECTION V

NOC **Procédures applicables à l'exploitation avec «correction d'erreurs sans circuit de retour»**

NOC **8615** **4876** § 16. Aux termes d'arrangements préalables, les messages peuvent être
1062BC transmis à partir d'une station côtière ou d'une station de navire à destination d'une ou plusieurs stations de navire selon de mode «correction d'erreurs sans circuit de retour», dans les cas suivants:

NOC **8616** **4877** *a)* La station de navire qui doit recevoir le message n'est pas en mesure
1062BD d'utiliser son émetteur ou n'est pas autorisée à le faire;

NOC **8617** **4878** *b)* Le message est destiné à plusieurs navires;
1062BE

NOC 8618 4879 1062BF

c) Il est nécessaire d'effectuer la réception sans surveillance selon le mode «correction d'erreurs sans circuit de retour» et l'accusé de réception automatique n'est pas exigé.

NOC 8619 4880 1062BG

§ 17. Il convient que tous les messages transmis selon le mode «correction d'erreurs sans circuit de retour» soient précédés des signes «retour de chariot» et «changement de ligne», transmis au moins une fois.

NOC 8620 4881 1062BH

§ 18. Les stations de navire peuvent accuser réception des messages transmis selon le mode «correction d'erreurs sans circuit de retour», par télégraphie Morse de classe A1A, par téléphonie ou par tout autre moyen.

4882 à 4902

(Non attribués.)

N62

ARTICLE 65

NOC

Procédure générale radiotéléphonique dans le service mobile maritime

SECTION I

NOC

Dispositions générales

MOD 8671 4903 1209

§ 1. La procédure détaillée dans le présent article est applicable aux stations radiotéléphoniques, sauf dans les cas de détresse, d'urgence ou de sécurité, auxquels sont applicables les dispositions du chapitre IX.

NOC 8672 4904 1211

§ 2. (1) Le service des stations radiotéléphoniques de navire doit être assuré par un opérateur satisfaisant aux conditions fixées à l'article 55.

NOC 8673 4905 1212

(2) Pour les indicatifs d'appel ou autres moyens d'identification des stations radiotéléphoniques côtières ou de navire, voir l'article 25.

NOC 8674 4906 1213

§ 3. Il convient que le service radiotéléphonique ouvert à la correspondance publique à bord des navires soit, si possible, exploité en duplex.

(MOD) 8675 4907 1214

§ 4. (1) On peut utiliser des dispositifs émettant un signal qui indique qu'une communication est en cours sur une voie, à condition de ne pas causer de brouillage préjudiciable au service assuré par les stations côtières.

NOC 8676 4908 1214A

(2) L'utilisation de dispositifs émettant des signaux d'appel ou d'identification continus ou répétés n'est pas autorisée.

NOC 8677 4909 1214B

(3) Une station ne peut pas émettre des informations identiques simultanément sur plusieurs fréquences lorsqu'elle communique avec une seule autre stations.

NOC 8678 4910 1214C

(4) Les stations ne doivent pas émettre d'onde perteuse entre les appels.

MOD 8679 4911 1215

(5) Il convient que les stations radiotéléphoniques soient autant que possible, équipées de dispositifs leur permettant de passer instantanément de l'émission à la réception et vice versa. Ces dispositifs sont nécessaires pour toutes les stations qui assurent des communications entre les navires et les abonnés du réseau téléphonique terrestre.

MOD 8680 4912 1216

§ 5. Les stations équipées pour la radiotéléphonie peuvent transmettre et recevoir les radiotélégrammes en radiotéléphonie. Les stations côtières qui assurent un tel service et qui sont ouvertes à la correspondance publique doivent être signalées dans la Nomenclature des stations côtières.

NOC 8681 4913 1216A

(2) Pour faciliter les radiocommunications, les abréviations de service indiquées à l'appendice 14 peuvent être utilisées.

NOC 8682 4914 1216B

(3) S'il faut épeler certaines expressions, des mots difficiles, des abréviations de service, des chiffres, etc., on utilise les tables d'épellation phonétique de l'appendice **24**.

SECTION II

NOC

Opérations préliminaires

NOC 8683 4915 1217

§ 6. Avant d'émettre, une station prend les précautions voulues pour s'assurer que ses émissions ne brouilleront pas des transmissions en cours, si un tel brouillage est probable, la station attend un arrêt opportun de la transmision qu'elle pourrait brouiller.

NOC 8684 4916 1218

(2) Dans le cas où, même en opérant ainsi, l'émission de cette station vient à brouiller une transmission déjà en cours, on applique les règles suivantes:

MOD 8685 4917 1219

a) La station de navire dont l'émission brouille la communication entre une station mobile et une station côtière doit cesser d'émettre à la première demande de la station côtière;

MOD **8686** **4918**
1220

b) La station de navire don't d'émission brouille les communications entre des stations mobiles cesser d'émettre à la première demande de l'une qualconque de ces stations;

NOC **8687** **4919**
1221

c) La station qui demande cette cessation doit indiquer la durée approximative de l'attente imposée à la station dont elle fait suspendre l'émission.

SECTION III

NOC

Appels en radiotéléphonie

MOD **8688** **4920**
1297A

§ 7. (1) Les dispositions de la présente section relatives aux intervalles entre les appels ne sont pas applicables à une opérant dans les conditions de détresse, d'urgence ou de sécurité.

MOD **8689** **4921**
1297B

(2) Les dispositions de la présente section ne sont pas applicables au service mobile maritime par satellite.

MOD **8690** **4922**
1298

§ 8. (1) En règle générale, il incombe à la station de navire d'établir la communication avec la station sôtière. A cet effet, la station, la station de navire ne peut appeler la station côtière qu'après être arrivée dans sa zone de service, c'est.à-dire dans la zone où, en utilisant une fréquence appropriée, la station de navire peut être entendue par la station côtière.

MOD **8691** **4923**
1299

(2) Toutefois, une station côtière qui a du trafic pour une station de navire peut appeler cette station si elle a des raisons de croire que celle-ci se trouve dans sa zone de service et assure l'écoute.

MOD **8692** **4924**
1300

§ 9. (1) De plus, chaque station côtière doit, pour autant que cela est possible en pratique, transmettre ses appels sous forme de «listes d'appels» formées des indicatifs d'appel ou autres moyens d'identification, classés par ordre alphabétique, des stations de navire pour lesquelles elle a du trafic en instance. Ces appels ont lieu à des moments déterminés ayant fait l'objet d'un accord entre les administrations intéressées, espaces de deux heures au moins et de quatre heures au plus, pendant les heures d'ouverture de la station côtière.

NOC **8693** **4925**
1301

(2) Les stations côtières transmettent ces listes d'appels sur leurs fréquences normales de travail dans les bandes appropriées. Cette transmission est précédée d'un appel général à toutes les stations.

NOC **8694** **4926**
1302

(3) L'appel général à toutes les stations, annonçant la liste d'appels, peut être fait sur une fréquence d'appel sous la forme suivant:

Trois fois, au plus, «appel à tous les navires» ou CQ (épelé à l'aide des mots de code CHARLIE QUEBEC);
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);
Trois fois, au plus, «... Radio»;
«Ecoutez ma liste d'appels sur ... kHz».

En aucun cas, ce préambule ne peut être répété.

NOC **8695** **4927**
1302A

(4) Toutefois, dans les bandes comprises entre 156 MHz et 174 MHz, l'appel décrit au numéro **4926** peut lorsque le contact est facile à établir, être remplacé par l'appel décrit ci-après:

Une fois «appel à tous les navires» ou CQ (épelé à l'aide des mots de code CHARLIE QUEBEC);
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);
Deux fois, «... Radio»;
«Ecoutez ma liste d'appels sur la voie ... ».

En aucun cas, ce préambule ne peut être répété.

NOC **8696** **4928**
1303

(5) Les dispositions du numéro **4926** sont obligatoires lorsque les fréquences 2182 kHz et 156,8 MHz sont utilisées.

NOC **8697** **4929**
1304

(6) Les heures auxquelles les stations côtières transmettent leurs listes d'appels, ainsi que les fréquences et les classes d'émissions qu'elles utilisent à cet effet, doivent être mentionnées dans la Nomenclature des stations côtières.

MOD **8698** **4930**
1305

(7) Il convient que les stations de navire écoutent, dans toute la mesure du possible, les émissions des listes d'appels des stations côtières. Lorqu'elles perçoivent leur indicatif d'appel ou leur signal d'identification dans une liste, elles doivent répondre aussitôt qu'elles le peuvent.

MOD **8699** **4931**
1306

(8) Lorsque le trafic ne peut pas être écoulé immédiatement, la station côtière fait connaître à chaque station de navire intéressée l'heure probable à laquelle le travail pourra commencer ainsi que, si cela est nécessaire, la fréquence et la classe d'émission qui seront utilisées.

MOD **8700** **4932**
1307

§ 10. Lorsqu'une station côtière reçoit pratiquement en même temps des appels de plusieurs stations de navire, elle décide de l'ordre dans lequel ces stations pourront lui transmettre leur trafic. Sa décision est fondée sur l'ordre de priorité (voir le numéro **4441**) des radiotélégrammes ou des conversations radiotéléphoniques en instance dans les stations de navire, et sur la nécessité de permettre à chacune des stations appelantes d'écouler le plus grand nombre possible de communications.

MOD **8701** **4933**
1308

§ 11. (1) Lorsqu'une station appelée ne répond pas à l'appel émis trois fois à des intervalles de deux minutes, l'appel doit cesser.

MOD **8702** **4934**
1308A

(2) Toutefois lorqu'une station appelée ne répond pas, l'appel peut être répété à des intervalles de trois minutes.

MOD **8703** **4935**
1308B

(3) Dans les zones où il est pratiquement possible d'établir, en ondes métriques, des liaisons sûres avec les stations côtières, la station de navire appelante peut répéter l'appel dès qu'il est certain que la station côtière n'écoule plus de trafic.

NOC **8704** **4936**
1309

(4) Lorsqu'il s'agit d'une communication entre une station du service mobile maritime et une station d'aéronef, l'appel peut être repris cinq minutes plus tard.

NOC **8705** **4937**
1310

(5) Avant de renouveler l'appel, la station appelante doit s'assurer que la station appelée n'est pas en communication avec une autre station.

MOD **8706** **4938**
1311

(6) S'il n'y pas de raison de craindre que des brouillages préjudiciables affectent des communications en cours, les dispositions du numéro **4936** ne sont pas applicables. Dans ces cas l'appel, émis trois fois à des intervalles de deux minutes, peut être renouvelé après un intervalle au moins égal à trois minutes.

MOD **8707** **4939**
1311A

(7) Toutefois, avant de renouveler l'appel, la station appelante doit s'assurer qu'un nouvel appel ne risque pas de causer des brouillages à d'autres communications en cours et que la station appelée n'est pas en communication avec une autre station.

MOD **8708** **4940**
1312

(8) Les stations de navire ne doivent pas émettre leur onde porteuse entre les appels.

MOD **8709** **4941**
1313

§ 12. Lorsque le nom et l'adresse de l'administration ou de l'exploitation privée dont dépend une station de navire ne sont pas mentionnés dans la nomenclature appropriée ou ne sont plus en concordance avec les indications de celle-ci. La station de navire a le devoir de donner d'office à la station côtière à laquelle elle transmet du trafic tous les renseignements nécessaires à cet égard.

MOD **8710** **4942**
1314

§ 13. (1) La station côtière peut, au moyen de l'abréviation TR (épelée à l'aide des mots de code TANGO ROMEU), demander à la station de navire de lui fournir les renseignements suivants:

NOC **8711** **4943**
1315

a) Position et, autant que possible, route et vitesse;

NOC **8712** **4944**
1316

b) Prochain lieu d'escale.

MOD **8713** **4945**
1317

(2) Il convient que les renseignements visés aux numéros **4942** à **4944,** précédés de l'abréviation TR, soient fournis par les stations de navire, chaque fois que cela semble approprié, sans demande préalable de la station côtière. Ces renseignements ne sont fournis qu'après autorisation du commandant ou de la personne responsable du navire.

SECTION IV

NOC

Méthode d'appel, réponse à l'appel et signaux préparatoires au trafic

NOC **8714** **4946**

A) Méthode d'appel

NOC **8715** **4947**
1222

§ 14. (1) L'appel est constitué comme suit:

Trois fois, au plus, l'indicatif d'appel ou tout autre signal d'identification de la station appelée;

Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage;

Trois fois, au plus, l'indicatif d'appel ou tout autre signal d'identification de la station appelante.

NOC **8716** **4948** (2) Toutefois, dans les bandes comprises entre 1256 MHz et 174 MHz, l'appel décrit au numéro **4047** peut, lorsque le contact est facile à établir, être remplacé par l'appel décrit ci-après:
1222A

Une fois l'indicatif d'appel de la station appelée;
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);
Deux fois l'indicatif d'appel ou tout autre signal d'identification de la station appelante.

NOC **8717** **4949** (3) Lorsqu'une station de navire appelle sur une fréquence de travail une station côtière qui fonctionne sur plusieurs voies en ondes métriques, il convient qu'elle inclue dans son appel le numéro de la voie employée.
1222B

NOC **8718** **4950** (4) Après l'établissement du contact, l'indicatif d'appel ou tout autre signal d'identification ne peut être émis qu'une seule fois.
1223

NOC **8719** **4951** (5) Si la station côtière est munie d'un dispositif d'appel sélectif et si la station de navire est munie d'un dispositif de réception des appels sélectifs, la station côtière appelle le navire en émettant les signaux de code appropriés: la station de navire appelle la station côtière à la voix, selon la procédure indiquée au numéro **4947** (voir aussi l'article 62).
1224

(MOD) **8720** **4952** § 15. Les appels pour les communications internes à bord des navires qui se trouvent dans des eaux territoriales sont constitués comme suit:
1224A

NOC **8721** **4953** *a*) Appels émanant de la station principale:
1224B

Trois fois, au plus, le nom du navire suivi d'une seule lettre (ALFA, BRAVO, CHARLIE, etc.) indiquant la sous-station;
Le mot ICI;
Le nom du navire suivi du mot CONTROLE.

NOC **8722** **4954** *b*) Appels émanant de la sous-station:
1224C

Trois fois, au plus, le nom du navire suivi du mot CONTROLE;
Le mot ICI;
Le nom du navire suivi d'une seule lettre (ALFA, BRAVO, CHARLIE, etc.) indiquant la sous-station.

NOC **8723** **4955** *B*) Fréquence à utiliser pour l'appel et les signaux préparatoires

NOC **4956** **B1) Bandes comprises emtre 1605 kHz et 4000 kHz**

NOC **8724** **4957** § 16. (1) Lorsqu'une station radiotéléphonique de navire appelle une station côtière, il convient qu'eles utilise pour l'appel, par ordre de préference:
1225

NOC **8725** **4958** *a*) Une fréquence de travail sur laquelle la station côtière assure la veille;
1226

NOC **8726** **4959** *b*) La fréquence porteuse 2182 kHz;
1227

NOC **8727** **4960** *c*) Dans les Régions 1 et 3 et au Groenland, la fréquence porteuse 2191 kHz (fréquence assignée 2192,4 kHz), lorsque la fréquence porteuse 2182 kHz est utilisée pour la détresse.
1227A

NOC **8728** **4961** (2) Lorsqu'une station radiotéléphonique de navire appelle une autre station de navire, il convient qu'elle utilise pour l'appel:
1229

NOC **8729** **4962** *a*) La fréquence porteuse 2182 kHz;
1230

NOC **8730** **4963** *b*) Une fréquence navire-navire, où et lorsque la densité du trafic est élevée et lorsqu'il a été possible d'en convenir à l'avance.
1231

NOC **8731** **4964** (3) Sous réserve des dispositions du numéro **4967** et selon les règlements de leur pays, les stations côtières appellent les stations de navire de leur propre nationalité, soit sur une fréquence de travail, soit, lorsqu'il s'agit d'appels individuels à des navires déterminés, sur la fréquence porteuse 2182 kHz.
1233

NOC **8732** **4965** (4) Toutefois, dans le cas ou une station de navire maintient à la fois une veille sur la fréquence porteuse 2182 kHz et sur une fréquence de travail, il convient de l'appeler sur cette fréquence de travail.
1234

NOC **8733** 1235 **4966** (5) En règle générale, il convient que les stations côtières utilisent la fréquence porteuse 2182 kHz pour appler les stations radiotéléphoniques de navire de nationalité autre que la leur.

(MOD) **8734** 1235A **4967** (6) Les stations côtières peuvent appeler les stations de navire équipées pour recevoir des signaux d'appel sélectif conformément aux dispositions de l'article 62.

4968 **B2) Bandes comprises entre 4000 kHz et 23 000 kHz**

MOD **8735** 1236 **4969** § 17. (1) Lorsqu'une station de navire appelle une station côtière en radiotéléphonie, elle utilise soit l'une des fréquences d'appel mentionnées au numéro **4375**, soit la fréquence de travail associée à celle de la station côtière, conformément à la section A de l'appendice **16.**

MOD **8736** 1237 **4970** (2) Lorsque'une station côtière appelle en radiotélephonie une station de navire, elle utilise à cet effet l'une des fréquences d'appel mentionnées au numero **4376,** l'une de ses fréquences de travail indiquées dans la Nomenclature de stations côtières ou l'une des deux fréquences porteuses 4125 kHz et 6215,5 kHz conformément aux dispositions des numéros **4375.2** et **4375.3.**

NOC **8737** 1238 **4971** (3) Les operations préliminaires à l'établissement des communications radiotéléphoniques peuvent s'effectuer en radiotélégraphie suivant la procédure propre à la radiotélégraphie (voir les numéros **4758** et **4759**).

MOD **8738** 1238A **4972** (4) Les dispositions des numéros **4969** et **4970** ne s'appliquent pas aux communications entre stations de navire et stations côtières sur les fréquences pour l'exploitation simplex spécifiées dans la section B de l'appendice **16.**

SUP **8739** à **8741** (deviennent **8402** à **8404**)

NOC **4973** **B3) Bandes comprises entre 156 MHz et 174 MHz**

MOD **8742** 1239 **4974** § 18. (1) Dans les bandes comprises entre 156 MHz et 174 MHZ, il convient qu'en règle générale l'appel entre les stations de navire et l'appel dans le sens station côtière vers station de navire soient effectués sur la fréquence 156,8 MHz. Toutefois, l'appel dans les sens stations côtière vers stations de navire peut être effectué sur une voie de travail ou sur une voie à deux fréquences destinée à l'appel, qui a été mise en service conformément au numéro **4391.** Sauf pour les communications de détresse, d'urgence ou de sécurité, pour lesquelles il convient d'utiliser la fréquence 156,8 MHZ, l'appel dans le sens station de navire vers station côtière doit, autant que possible, être effectué sur une voie de travail ou sur une voie à deux fréquences, destinées à l'appel, qui a été mise en service conformément au numéro **4391.** Il convient que les navires désirant participer au service des opérations portuaires ou au service du mouvement des navires appellent sur une fréquence de travail destinée au service des opérations portuaires ou au service du mouvement des navires, indiquée en caractères gras dans la Nomenclature des stations côtières.

NOC **8743** 1240 **4975** (2) Si la fréquence 156,8 MHz est utilisée pour des communications de détresse, d'urgence ou de sécurité, une station de navire désirant participer au service des opérations portuaires peut établir le contact sur156,6 MHz ou à l'aide d'une autre fréquence du service des opérations portuaires imprimée en caractères gras dans la Nomenclature des stations côtières.

NOC **4976** **B4) Procédure à appliquer pour appeler une station assurant un service de pilotage**

NOC **8744** 1240A **4977** § 19. Lorsq'une station radioteléphonique de navire appelle uns station assurant un service de pilotage, il convient qu'ele utilise pour l'appel, par ordre de préférence:

(MOD) **8745** 1240B **4978** *a*) Une voie appropriée des bandes comprises entre 156 MHz et 174 MHz;

NOC **8746** 1240C **4979** *b*) Une fréquence de travail choisie dans les bandes comprises entre 1605 kHz et 4000 kHz;

NOC **8747** 1240D **4980** *c*) La fréquence porteuse 2182 kHz, mais alors seulement pour désigner la fréquence de travail à employer.

NOC **8748** **4981** *C*) Forme de la réponse à l'appel

NOC **8749** 1241 **4982** § 20. La réponse à l'appel est constituée comme suit:

Trois fois, au plus, l'indicatif d'appel ou tout autre signal d'identification de la station appelante;
Le mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);
Trois fois au plus, l'indicatif d'appel ou tour autre signal d'identification de la station appelée.

NOC **8750** **4983** *D*) Fréquence de réponse

NOC **4984** **D1) Bandes comprises entre 1605 MHz et 4000 KHz**

NOC **8751** 1242 **4985** § 21. (1) Lorsqu'un station de navire est appelée sur la fréquence porteuse 2182 kHz, il convient qu'elle réponde sur cette même fréquence porteuse, à moins qu'une autre fréquence n'ait été indiquée à cet effet par la station appelante.

NOC **8752** 1242A **4986** (2) Lorsqu'une station de navire est appelée au moyen de l'appel sélectif, elle doit répondre sur une fréquence sur laquelle la station côtière assure la veile.

NOC **8753** 1243 **4987** (3) Lorsqu'une station de navire est appelée sur une fréquence de travail par une station côtière de sa nationalité, elle doit répondre sur la fréquence de travail normalement associée à la fréquence utilisée par la station côtière pour l'appel.

NOC **8754** 1244 **4988** (4) En appelant une station côtière ou une station de navire, une station de navire doit indiquer la fréquence sur laquelle la réponse doit lui être trasmise, à moins que cette fréquence ne soit celle qui est normalement associée à la fréquence utilisée pour l'appel.

NOC **8755** 1245 **4989** (5) Une station de navire qui échange fréquemment du trafic avec une station côtière d'une nationalité autre que la sienne peut, lorsque les administrations intéressées sont d'accord à cet effet, utiliser la même procédure de réponse qui les navires de la nationalité de la station côtière.

NOC **8756** 1246 **4990** (6) En règle générale, une station côtière doit répondre:

NOC **8757** 1247 **4991** *a*) Sur la fréquence porteuse 2182 kHz, aux appels transmis sur cette même fréquence porteuse, à moins u'une autre fréquence n'ait été indiquée à cet effet par la station appelante;

NOC **8758** 1248 **4992** *b*) Sur une fréquence de travail, aux appels transmis sur une fréquence de travail;

NOC **8759** 1248A **4993** *c*) Dans les Régions 1 et 3, au Groenland, sur une fréquence de travail, aux appels faits sur la fréquence porteuse 2191 kHz (fréquence assignée 2192,4 kHz).

NOC **4994** **D2) Bandes comprises entre 4000 KHZ et 23 000 KHz**

MOD **8760** 1249 **4995** § 22. (1) Une station de navire appelée par une station côtière répond soit sur l'une des fréquences d'appel mentionnées au numéro **4375,** soit sur la fréquence de travail associée à celle de la station côtière, conformément à la section A de l'appendice **16.**

NOC **8761** 1250 **4996** (2) Une station côtière appelée par une station de navire répond en utilisant l'une des fréquences d'appel mentionnées au numéro **4376,** ou l'une de ses fréquences de travail indiquées dans la Nomenclature des stations côtières.

MOD **8762** 1250A **4997** (3) Dans la zone des Régions 1 et 2 située au sud du parallèle 15° Nord, y compris le Mexique, et dans la zone de la Région 3 située au sud du parallèle 25° Nord, lorsqu'une station est appelée sur le fréquence porteuse 4125 kHz, il convient qu'elle réponde sur cette même fréquence porteuse, à moins qu'une autre fréquence n'ait été indiquée à cet effet par la station appelante.

MOD **8763** 1251 **4998** (4) Dans la zone de la Région 3 situé au sud du parallèle 25° Nord, lorsq'une station est appelée sur la fréquence porteuse 6215,5 kHz, il convient qu'elle réponde sur cette même fréquence porteuse, à moins qu'une autre fréquence n'ait été indiquée à cet effet par la station appelante.

MOD **8764** 1251A **4999** (5) Les dispositions des numéros **4995** et **4996** ne s'appliquent pas aux communications entre stations de navire et stations côtières sur les fréquences pour l'exploitation simplex spécifiées dans la section B de l'appendice **16.**

NOC **5000** **D3) Bandes comprises entre 156 MHz et 174 MHz**

NOC **8765** 1252 **5001** § 23. (1) Lorsqu'une station est appelée sur la fréquence 156,8 MHz, il convient qu'elle réponde sur cette fréquence à moins qu'une autre fréquence n'ait été indiquée à cet effet par la station appelante.

NOC 8766 1253 5002 (2) Lorsq'une station côtière ouverte à la correspondance publique appelle une station de navire, soit à la voix, soit par apple sélectif, sur une voie à deux fréquences, la station de navire répond à la voix sur la fréquence associée à celle de la station côtière; inversement, une station côtière répond à une appel d'une station de navire sur la fréquence associée à celle de la station de navire.

NOC 8767 5003 *E*) Indication de la fréquence à utiliser pour le trafic

NOC 5004 **E1) Bandes comprises entre 1605 kHz et 4000 kHz**

NOC 8768 1254 5005 § 24. Si le contact est établi sur la fréquence porteuse 2182 kHz, la station côtière et la station de navire doivent passer sur des fréquences de travail afin d'échanger leur trafic.

NOC 5006 **E2) Bandes comprises entre 4000 kHz et 23 000 kHz**

NOC 8769 1255 5007 § 25. Après l'etablissement du contact entre une station de navire et une station côtière, ou une autre station de navire, sur la fréquence d'appel de la bande choisie, le trafic doit être échangé sur les fréquences de travail respectives de ces stations.

NOC 5008 **E3) Bandes comprises entre 156 MHz et 174 MHz**

NOC 8770 1256 5009 § 26. (1) Une fois que le contact a été établi entre une station côtière du service de correspondance publique et une station de navire sur la fréquence 156,8 MHz, ou le cas échéant, sur la voie d'appel à deux fréquences (voir le numéro **4392**), les deux stations passent sur l'une deleurs paires de fréquences normales de travail pour échanger leur trafic. Il convient que la station appelante indique la voie sur laquelle elle propose de passer, en identifiant cette voie, soit par la fréquence exprimée em MHz, soit, de préférence, par le numéro qui désigne la voie.

NOC 8771 1257 5010 (2) Une fois que le contact a été établi sur la fréquence 156,8 MHz entre une station côtière du service des opérations portuaires et une station de navire, il convient que la station de navire indique la nature du service qu'elle désire (renseignements sur la navigation, instructions au sujet du mouvement dans les bassins, etc.); la station côtière fait alors connaître la voie à employer pour l'échange du trafic en identifiant cette voie, soit par la fréquence exprimée em MHz, soit, de préférence, par le numéro qui désigne la voie.

NOC 8772 1257A 5011 (3) Une fois que le contact a été établi sur la fréquence 156,8 MHz entre une station côtière du service du mouvement des navires et une station de navire, la station côtière fait connaître la voie à employer pour l'échange du trafic en par le numéro qui désigne la voie.

NOC 8773 1258 5012 (4) Il convient qu'après avoir établi le contact avec une autre station de navire sur la fréquence 156,8 MHz, une station de navire fasse connaître la voie navire-navire qu'elle propose d'employer pour l'échange du trafic, en identifiant cette voie, soit par la fréquence exprimée en MHz, soit, de préférence, par le numéro qui désigne la voie.

NOC 8774 1258A 5013 (5) Cependant, il n'est pas nécessaire qu'un bref échange de trafic, qui ne doit pas durer plus d'une minute, concernant la securité de la navigation, ait lieu sur une fréquence de travail lorsqu'il importe que tous les navires qui se trouvent dans la zone de service reçoivent l'émission.

NOC 8775 1258B 5014 (6) Les stations qui preçoivent une émision concernant la sécurité de la navigation doivent écouter le message jusqu'à ce qu'elles aient acquis la certitude que le message ne les concerne pas. Elles ne doivent faire aucune émission susceptible de brouiller le message.

NOC 8776 5015 F) Accord sur la fréquence à utiliser pour la trafic

NOC 8777 1259 5016 § 27. (1) Si la station appelé est d'accord avec la station appelante, elle transmet:

NOC 8778 1260 5017 *a*) L'indication qu'à partir de ce moment elle écoute sur la fréquence ou la voie de travail annoncée par la station appelante;

NOC 8779 1261 5018 *b*) L'indication qu'elle est prête à recevoir le trafic de la station appelante.

NOC 8780 1262 5019 (2) Si la station appelée n'est pas d'accord avec la station appelante sur la fréquence ou la voie de travail à employer, elle transmet l'indication de la fréquence de travail ou de la voie qu'elle propose.

NOC 8781 5020 (3) Dans une liaison entre une station côtière et une station de navire, la station côtière décide finalement de la fréquence ou de la voie à utiliser.

NOC 8782 1264 5021 (4) Lorsque l'accord est réalisé sur la fréquence ou la voie de travail que devra employer la station appellante pour son trafic, la station appelée annonce qu'elle est prête à recevoir le trafic.

NOC 8783 5022 G) Indication du trafic

NOC 8784 1265 5023 § 28. Lorsque la station appelante désire écouler plusieurs communications radiotéléphoniques ou transmettre un ou plusieurs radiotélégrammes, il convient qu'elle l'indique après la prise de contact.

NOC 8785 5024 *H*) Difficultés de réception

NOC 8786 1266 5025 § 29. (1) Si la station appelée n'est pas en mesure de recevoir le trafic immédiatement, il convient qu'elle réponde à l'appel comme il est indiqué au numéro **4982**, puis qu'elle fasse suivre sa réponse de l'expression «attendez ... minutes» [ou AS épelé à l'aide des mots de code ALFA SIERRA ... (minutes) en cas de difficultés de langage], en précisant la durée probable de l'attente en minutes. Si cette durée probable dépasse dix minutes, l'attente doit être motivée. Au lieu de cette procédure, la station appelée peut faire connaître par tout moyen approprié qu'elle n'est pas prête à recevoir le trafic immédiatement.

NOC 8787 1267 5026 (2) Lorsqu'une station reçoit un appel sans être certaine que cet appel lui est destiné, elle ne doit pas répondre avant que cet appel ait été répété et compris.

NOC 8788 1268 5027 (3) Lorsqu'une station reçoit un appel qui lui est destiné, mais a des doutes sur l'identification de la station appelante, elle doit répondre immédiatement en demandant à celle-ci de répéter son indicatif d'appel ou toute autre signal d'identification qu'elle utilise.

SECTION V

NOC **Ecoulement du trafic**

NOC 8789 5028 *A*) Fréquence de trafic

MOD 8790 1269 5029 § 30. (1) Il convient que chaque station utilise pour l'écoulement de son trafic (communications radiotéléphoniques ou radiotélégrammes) une de ses fréquences de travail de la bande dans laquelle l'appel a eu lieu.

NOC 8791 1270 5030 (2) En plus de sa fréquence normale de travail, imprimée en caractères gras dans la Nomenclature des stations côtières, chaque station côtière peut employer une ou plusieurs fréquences supplémentaires de la même bande, conformément aux dispositions de l'article 60.

MOD 8792 1271 5031 (3) A l'exception du trafic de détresse (voir le chapitre IX), l'emploi des fréquences réservées à l'appel est interdit pour le trafic.

NOC 8793 1272 5032 (4) Lorsque le contact a été établi sur la fréquence à utiliser pour le trafic, la transmission d'un radiotélégramme ou d'une communication radiotéléphonique est précédée:

NOC 8794 1273 5033 De l'indicatif d'appel ou tout autre signal d'identification de la station appelée;

5034 Du mot ICI (ou DE épelé à l'aide des mots de code DELTA ECHO en cas de difficultés de langage);

5035 De l'indicatif d'appel ou de tout autre signal d'identification de la station appelante.

NOC 8795 1274 5036 (5) Il n'est pas nécessaire que l'indicatif d'appel ou tout autre signal d'identification soit émis plus d'une fois.

NOC 8796 5037 *B*) Établissement des communications radiotéléphoniques et transmission des radiotélégrammes

NOC 5038 **B1) Établissement des communications radiotéléphoniques**

MOD 8797 1275 5039 § 31. (1) Pour écouler une communication radiotéléphonique, il convient que la station côtière établisse aussi rapidement que possible la liaison avec le réseau téléphonique. Pendant ce temps, la station de navire doit rester à l'écoute sur la fréquence de travail indiquée par la station côtière.

MOD 8798 1276 5040 (2) Toutefois, si la liaison ne peut être établie rapidement, la station côtière doit en informer la station de navire. Dans ce cas, cette dernière peut:

NOC 8799 1277 5041 *a*) Soit rester à l'écoute sur la fréquence appropriée jusqu'á ce que la liaison puisse être établie;

NOC 8800 1278 5042 *b*) Soit reprendre contact avec la station côtière au moment convenu.

NOC 8801 1279 5043 (3) Lorsqu'une communication radiotéléphonique a été ecoulée, la procédure indiquée au numéro **5054** est applicable sauf si d'autres communications sont en instance à l'une des deux stations.

NOC 5044 **B2) Transmission des radiotélégrammes**

NOC 8802 1280 5045 § 32. (1) Il convient que la transmission d'un radiotélégramme s'effectue de la façon suivante:
