(*i*) Qu'il s'agisse de produits étrangers fournis gratuitement et qui servent uniquement à des distribuitions gratuites au public sur le lieu de la manifestation,

(*ii*) Que la valeur globale et la quantité des marchandises soient raisonnables, de l'avis des autorités douanières du pays d'importation, eu égard à la nature de la manifestation, au nombre de visiteurs et à l'importance de la participation de l'exposant à la manifestation.

2. Les dispositions du paragraphe 1 ci-dessus ne sont pas applicables aux boissons alcooliques, aux tabacs et aux combustibles.

ARTICLE 7

Sont exonérés des droits à l'importation et ne sont soumis à aucune prohibition ou restriction d'importation les dossiers, archives, formules et autres documents destinés à être utilisés comme tels au cours ou à l'occasion de réunions, conférences ou congrès internationaux.

CHAPITRE IV

Simplification des formalités

ARTICLE 8

Chaque Partie Contractante réduit au minimum les formalités douanières afférentes aux facilités prévues par la présente Convention et publie, dans les plus brefs délais, les règlements qu'elle édicte au sujet de ces formalités.

ARTICLE 9

1. Lorsqu'une Partie Contractante exige la constitution d'une garantie afin de s'assurer de l'exécution des conditions requises pour bénéficier des facilités prévues par la présente Convention, le montant de cette garantie ne peut excéder de plus de 10 pour cent celui des droits à l'importation exigibles.

2. Toutefois, cette Partie Contractante s'efforcera d'accepter, dans tous les cas où cela sera possible, la substitution d'une garantie globale fournie par les organisateurs de la manifestation ou par toute autre personne agréée par les autorités douanières, aux garanties individuelles qui pourraient être exigées en application des dispositions de l'alinéa précédent.

ARTICLE 10

1. A l'entrée comme à la sortie, la vérification et le dédouanement des marchandises qui vont être ou qui ont été présentées ou utilisées à une manifestation sont effectués, dans tous les cas où cela est possible et opportun, sur les lieux de cette manifestation.

2. Chaque Partie Contractante s'efforcera, dans tous les cas où elle l'estimera utile, compte tenu de l'importance de la manifestation, d'ouvrir pour une durée raisonnable, un bureau de douane sur les lieux de la manifestation organisée sur son territoire.

3. La réexportation de marchandises placées en admission temporaire peut s'effectuer en une ou en plusieurs fois et par tout bureau de douane ouvert à ces opérations, même s'il est différent du bureau d'importation, sauf si l'importateur s'engage, afin de bénéficier d'une procédure simplifiée, à réexporter les marchandises par le bureau d'importation.

CHAPITRE V

Dispositions diverses

ARTICLE 11

Les produits accessoirement obtenus au cours de la manifestation, à partir de marchandises importées temporairement, à l'occasion de la démonstration de machines ou d'appareils exposés, sont soumis aux dispositions de la présente Convention.

ARTICLE 12

Les dispositions de la présente Convention établissent des facilités minima et ne mettent pas obstacle à l'application de facilités plus grandes que certaines Parties Contractantes accordent ou accorderaient soit par des dispositions unilatérales, soit en vertu d'accords bilatéraux ou multilatéraux.

ARTICLE 13

Pour l'application de la présente Convention, les territoires des Parties Contractantes qui forment une union douanière ou économique peuvent être considérés comme un seul territoire.

ARTICLE 14

Les dispositions de la présente Convention ne mettent pas obstacle à l'application:

(*a*) Des dispositions nationales ou conventionnelles non douanières concernant l'organisation de manifestations;

(*b*) Des prohibitions et restrictions dérivant des lois et règlements nationaux et fondées sur des considérations de moralité ou d'ordre publics, de sécurité publique, d'hygiène ou de santé publiques ou sur des considérations d'ordre vétérinaire ou phytopathologique, ou se rapportant à la protection des brevets, marques de fabrique et droits d'auteur et de reproduction.

ARTICLE 15

Toute infraction aux dispositions de la présente Convention, toute substitution, fausse déclaration ou manœuvre ayant pour effet de faire bénéficier indûment une personne ou un objet des facilités prévues par la présente Convention, expose le contrevenant, dans le pays où l'infraction est commise, aux sanctions prévues par les lois et règlements de ce pays et, le cas échéant, au paiement des droits à l'importation exigibles.

CHAPITRE VI

Clauses finales

ARTICLE 16

1. Les Parties Contractantes se réunissent lorsqu'il est nécessaire pour examiner les conditions dans lesquelles la présente Convention est appliquée afin, notament, de rechercher les mesures propres à en assurer l'interprétation et l'application uniformes.

2. Ces réunions sont convoquées par le Secrétaire Général du Conseil, sur la demande d'une Partie Contractante, et, sauf décision contraire des Parties Contractantes, elles se tiennent au siège du Conseil.

3. Les Parties Contractantes établissent le règlement intérieur de leurs réunions. Les décisions des Parties Contractantes sont prises à la majorité des deux tiers de celles qui sont présentes et qui prennent par au vote.

4. Les Parties Contractantes ne peuvent valablement se prononcer sur une question que si plus de la moitié d'entre elles sont présentes.

ARTICLE 17

1. Tout différend entre Parties Contractantes en ce qui concerne l'interprétation ou l'application de la présente Convention est, autant que possible, réglé par voie de négociations directes entre lesdites parties.

2. Tout différend qui n'est pas réglé par voie de négociations directes est porté, par les parties en cause, devant les Parties Contractantes, réunies dans les conditions prévues à l'article 16 de la présente Convention, qui examinent le différend et font des recommandations en vue de son règlement.

3. Les parties au différend peuvent convenir d'avance d'accepter les recommandations des Parties Contractantes.

ARTICLE 18

1. Tout Etat membre du Conseil et tout Etat membre de l'Organisation des Nations Unies ou de ses institutions spécialisées peut devenir Partie Contractante à la présente Convention:

(*a*) En la signant, sans réserve de ratification;

(*b*) En déposant un instrument de ratification après l'avoir signée sous réserve de ratification; ou

(*c*) En y adhérant.

2. La présente Convention est ouverte jusqu'au 31 mars 1962, au siège du Conseil, à Bruxelles, à la signature des Etats visés au paragraphe 1 du présent article. Après cette date, elle sera ouverte à leur adhésion.

3. Dans le cas prévu au paragraphe 1 (*b*) du présent article, la Convention est soumise à la ratification des Etats signataires conformément à leurs procédures constitutionnelles respectives.

4. Tout Etat non membre des organisations visées au paragraphe 1 du présent article, auquel une invitation est adressée à cet effet par le Secrétaire Général du Conseil, sur la demande des Parties Contractantes, peut devenir Partie Contractante à la présente Convention en y adhérant après son entrée en vigueur.

5. Les instruments de ratification ou d'adhésion sont déposés auprès du Secrétaire Général du Conseil.

ARTICLE 19

1. La présente Convention entre en vigueur trois mois après que cinq des Etats mentionnés au paragraphe 1 de l'article 18 de la présente Convention l'ont signée sans réserve de ratification ou ont déposé leur instrument de ratification ou d'adhésion.

2. À l'égard de tout Etat qui ratifie la présente Convention ou y adhère, après que cinq Etats ont soit signé la Convention sans réserve de ratification, soit déposé leur instrument de ratification ou d'adhésion, la présente Convention entre en vigueur trois mois après le dépôt de l'instrument de ratification ou d'adhésion dudit Etat.

ARTICLE 20

1. La présente Convention est conclue pour une durée illimitée. Toutefois, toute Partie Contractante peut la dénoncer à tout moment après la date de son entrée en vigueur, telle qu'elle est fixée à l'article 19 de la présente Convention.

2. La dénonciation est notifiée par un instrument écrit déposé auprès du Secrétaire Général du Conseil.

3. La dénonciation prend effet six mois après la réception de l'instrument de dénonciation par le Secrétaire Général du Conseil.

ARTICLE 21

1. Les Parties Contractantes, réunies dans les conditions prévues à l'Article 16 ci-dessus, peuvent recommander des amendements à la présente Convention.

2. Le texte de tout amendement ainsi recommandé est communiqué par le Secrétaire Général du Conseil à toutes les Parties Contractantes, à tous les autres Etats signataires ou adhérents, au Secrétaire Général de l'Organisation des Nations Unies et à l'U. N. E. S. C. O.

3. Dans un délai de six mois à compter de la date de la communication de l'amendement recommandé, toute Partie Contractante peut faire connaître au Secrétaire Général du Conseil:

(*a*) Soit qu'elle a une objection à l'amendement recommandé,

(*b*) Soit que, bien qu'elle ait l'intention d'accepter l'amendement recommandé, les conditions nécessaires à cette acceptation ne se trouvent pas encore remplies dans son pays.

4. Tant qu'une Partie Contractante qui a adressé la communication prévue ci-dessus au paragraphe 3 (*b*) n'a pas notifié au Secrétaire Général du Conseil son acceptation, elle peut, pendant un délai de neuf mois à partir de l'expiration du délai de six mois prévu au paragraphe 3 du présent Article, présenter une objection à l'amendement recommandé.

5. Si une objection à l'amendement recommandé est formulée dans les conditions prévues aux paragraphes 3 et 4 du présent Article, l'amendement est considéré comme n'ayant pas été accepté et reste sans effet.

6. Si aucune objection à l'amendement recommandé n'a été formulée dans les conditions prévues aux paragraphes 3 et 4 du présent Article, l'amendement est réputé accepté à la date suivante:

(*a*) Lorsque aucune Partie Contractante n'a adressé de communication en application du paragraphe 3 (*b*) du présent Article, à l'expiration du délai de six mois visé à ce paragraphe 3;

(*b*) Lorsqu'une ou plusieurs Parties Contractantes ont adressé une communication en application du paragraphe 3 (*b*) du présent Article, à la plus rapprochée des deux dates suivantes:

(*i*) Date à laquelle toutes les Parties Contractantes ayant adressé une telle communication ont notifié au Secrétaire Général du Conseil leur acceptation de l'amendement recommandé, cette date étant toutefois reportée à l'expiration du délai de six mois visé au paragraphe 3 du présent Article si toutes les acceptations ont été notifiées antérieurement à cette expiration;

(*ii*) Date d'expiration du délai de neuf mois visé au paragraphe 4 du présent Article.

7. Tout amendement réputé accepté entre en vigueur six mois après la date à laquelle il a été réputé accepté.

8. Le Secrétaire Général du Conseil notifie le plus tôt possible à toutes les Parties Contractantes toute objection formulée conformément au paragraphe 3 (*a*) du présent Article ainsi que toute communication adressée conformément au paragraphe 3 (*b*). Il fait savoir ultérieurement à toutes les Parties Contractantes si la ou les Parties Contractantes qui ont adressé une telle communication élèvent une objection contre l'amendement recommandé ou l'acceptent.

9. Tout Etat qui ratifie la présente Convention ou y adhère est réputé avoir accepté les amendements entrés en vigueur à la date du dépôt de son instrument de ratification ou d'adhésion.

ARTICLE 22

1. Tout Etat peut, soit au moment de la signature sans réserve de ratification, de la ratification ou de l'adhésion, soit ultérieurement, notifier au Secrétaire Général du Conseil que la présente Convention s'étend à l'ensemble ou à certains des territoires dont les relations internationales sont placées sous sa responsabilité; la Convention est applicable auxdits territoires trois mois après la date de réception de cette notification par le Secrétaire Général du Conseil, mais pas avant la date d'entrée en vigueur de la présente Convention à l'égard de cet Etat.

2. Tout Etat ayant, en vertu du paragraphe 1 du présent Article, accepté la présente Convention pour un territoire dont les relations internationales sont placées sous sa responsabilité, peut notifier au Secrétaire Général du Conseil, conformément aux dispositions de l'Article 20 de la présente Convention, que ce territoire cessera d'appliquer la Convention.

ARTICLE 23

1. Tout Etat peut déclarer au moment où il signe ou ratifie la présente Convention ou y adhère, ou bien, après être devenu Partie Contractante à la Convention, notifier au Secrétaire Général du Conseil qu'il ne se considère pas lié par les dispositions de l'Article 6, paragraphe 1, alinéa (*a*), de la présente Convention.

Ces déclarations et notifications doivent indiquer explicitement les marchandises à l'égard desquelles la réserve est formulée. Les notifications adressées au Secrétaire Général prennent effet le quatre-vingt-dixième jour après qu'elles ont été reçues par le Secrétaire Général.

2. Si une Partie Contractante formule une réserve conformément au paragraphe 1 du présent Article, les autres Parties Contractantes ne sont pas liées par les dispositions de l'Article 6, paragraphe 1, alinéa (*a*), de la présente Convention à l'égard de cette Partie Contractante en ce qui concerne les marchandises spécifiées dans cette réserve.

3. Toute Partie Contractante qui a formulé une réserve conformément au paragraphe 1 du présente Article, peut à tout moment lever cette réserve par notification au Secrétaire Général du Conseil.

4. Aucune autre réserve à la présente Convention n'est admise.

ARTICLE 24

Le Secrétaire Général du Conseil notifie à toutes les Parties Contractantes ainsi qu'aux autres Etats signataires ou adhérents, au Secrétaire Général des Nations Unies et à l'U. N. E. S. C. O.

(*a*) Les signatures, ratifications et adhésions visées à l'Article 18;

(*b*) La date à laquelle la présente Convention entre en vigueur conformément à l'Article 19;

(*c*) Les dénonciations et annulations notifiées conformément à l'Article 20;

(*d*) Les amendements réputés acceptés conformément à l'Article 21 ainsi que la date de leur entrée en vigueur;

(*e*) Les déclarations et notifications reçues conformément à l'Article 22;

(*f*) Les déclarations et notifications reçues conformément à l'Article 23, paragraphes 1 et 3, ainsi que la date à laquelle les réserves entrent en vigueur ou celle à compter de laquelle elles sont levées.

ARTICLE 25

Conformément à l'Article 102 de la Charte des Nations Unies, la présente Convention sera enregistrée au Secrétariat des Nations Unies à la requête du Secrétaire Général du Conseil.

En foi de quoi les plénipotentiaires soussignés ont signé la présente Convention.

Fait à Bruxelles, le huit juin mil neuf cent soixante et un, en langues française et anglaise, les deux textes faisant également foi, en un seul exemplaire qui sera déposé auprès du Secrétaire Général du Conseil qui en transmettra à tous les Etats visés au paragraphe 1 de l'Article 18 de la présente Convention, des copies certifiées conformes.

Pour l'Autriche, sous réserve de ratification:

Josef Stangelberger.

Pour l'Italie, sous réserve de ratification:

Ugo Calderoni.

Pour la Suisse, sous réserve de ratification:

Charles Lenz.

Pour l'Espagne, sous réserve de ratification:

Comte de Casa Miranda.

Pour le Royaume-Uni de Grande-Bretagne et d'Irlande du Nord, sous réserve de ratification:

John Nichols.

Pour Cuba, sous réserve de ratification:

Gustavo Arcos Bergnes.

Pour la République Fédérale d'Allemagne, sous réserve de ratification:

Kurt Oppler.
Karl Zepf.

Pour le Niger, sans réserve:

Georges Condat.

Pour l'Australie, sous réserve de ratification:

James William Crawford Cumes.

Pour le Danemark, sous réserve de ratification:

Eggert Adam Knuth.

Pour la Tchecoslovaquie, sans réserve:
Vladimir Ludvik.

Pour la Suède, sous réserve de ratification:
Gunnar Ljungdahl.

Pour la France, sous réserve de ratification:
Raymond Bousquet.

Pour l'Iran, sous réserve de ratification:
Khosrow Hedayat.

Pour la Turquie, sous réserve de ratification:
Hasan Esat Isik.

Pour le Portugal, sans réserve:
Eduardo Vieira Leitão.

Convenção aduaneira relativa às facilidades concedidas para a importação de mercadorias destinadas a serem apresentadas ou utilizadas em exposições, feiras, congressos ou manifestações semelhantes.

PREÂMBULO

Os Estados signatários da presente Convenção,

Reunidos sob os auspícios do Conselho de Cooperação Aduaneira, com o concurso da Comissão Económica para a Europa das Nações Unidas (C. E. E.) e da Organização das Nações Unidas para a Educação, Ciência e Cultura (U. N. E. S. C. O.),

Considerando os votos expressos pelos representantes do comércio internacional e por outros meios interessados,

Desejosos de conceder facilidades às mercadorias destinadas a serem apresentadas em exposições, feiras, congressos ou manifestações semelhantes de carácter comercial, técnico, religioso, educativo, científico, cultural ou filantrópico,

Convencidos de que a adopção de regras gerais relativas ao regime aduaneiro dessas mercadorias trará vantagens substanciais ao comércio internacional e favorecerá o intercâmbio no plano internacional de ideias e conhecimentos,

Acordam no que se segue:

CAPITULO I

Definições

ARTIGO 1.º

Para os fins da presente Convenção:

a) O termo «manifestação» designa:

1. As exposições, feiras e manifestações semelhantes do comércio, indústria, agricultura e artesanato;
2. As exposições ou manifestações organizadas com um fim essencialmente filantrópico;
3. As exposições ou manifestações organizadas com um fim essencialmente científico, técnico, artesanal, artístico, educativo ou cultural, desportivo, religioso ou de culto, ou ainda com o objectivo de auxiliar os povos para uma melhor compreensão recíproca;
4. As reuniões de representantes de organizações ou de agrupamentos internacionais;
5. As cerimónias e manifestações de carácter oficial ou comemorativo;

com exclusão das exposições organizadas a título privado, em estabelecimentos ou recintos comerciais, com o objectivo de vender mercadorias estrangeiras;

b) O termo «direitos de importação» designa os direitos aduaneiros e todos os outros direitos e taxas cobrados na importação ou em consequência da importação e inclui todos os direitos de consumo e taxas internas aplicáveis aos produtos importados, mas não inclui, todavia, os direitos e encargos que são limitados ao custo aproximado dos serviços prestados e que não constituem protecção indirecta dos produtos nacionais ou tributação de carácter fiscal da importação;

c) O termo «importação temporária» designa a importação, com isenção de direitos, de uma mercadoria destinada a reexportação, não sendo de admitir nem proibições nem restrições de importação;

d) O termo «Conselho» designa a organização instituída pela Convenção de Bruxelas, firmada em 15 de Dezembro de 1950, que criou um Conselho de Cooperação Aduaneira;

e) O termo «pessoa» designa tanto uma pessoa física como moral, a não ser que o contexto disponha de outro modo.

CAPITULO II

Importação temporária

ARTIGO 2.º

1. Beneficiarão de importação temporária:

a) As mercadorias destinadas a exposições ou a demonstrações numa manifestação;

b) As mercadorias destinadas a serem utilizadas para apresentação de produtos estrangeiros numa manifestação, tais como:

i) Mercadorias necessárias para demonstração das máquinas ou aparelhos estrangeiros expostos;

ii) Material de construção ou de decoração, compreendendo o apetrechamento eléctrico, dos pavilhões provisórios de expositores estrangeiros;

iii) Material publicitário e de demonstração destinado manifestamente a utilizar-se a título de publicidade das mercadorias estrangeiras expostas, tal como gravações sonoras, filmes e dispositivos e ainda a aparelhagem necessária ao seu uso;

c) O material, compreendendo as instalações de interpretação, os aparelhos de gravação de som e os filmes de carácter educativo, científico ou cultural, destinado a utilizar-se em reuniões, conferências e congressos internacionais.

2. Conceder-se-ão as facilidades previstas no parágrafo 1 do presente artigo, desde que:

a) As mercadorias se possam identificar no acto da sua reexportação;

b) Consoante o seu destino, seja razoável o número ou a quantidade de artefactos idênticos importados;

c) As autoridades aduaneiras do país de importação temporária considerem que serão satisfeitas as condições estabelecidas pela presente Convenção.

ARTIGO 3.º

Enquanto beneficiarem das facilidades previstas na presente Convenção, e salvo se as leis e regulamentos

do país de importação temporária o permitirem, as mercadorias importadas temporàriamente não poderão ser:

a) Emprestadas, alugadas ou utilizadas mediante retribuição;

b) Transportadas para recinto diferente do da manifestação.

ARTIGO 4.º

1. A reexportação das mercadorias importadas temporàriamente deve realizar-se no prazo de seis meses, a contar da data da importação. No entanto, as autoridades aduaneiras do país de importação temporária podem exigir, consoante as circunstâncias e, designadamente, a duração e natureza da manifestação, que as mercadorias sejam reexportadas num prazo mais curto, que não deve ser inferior a um mês depois do fim da manifestação.

2. Não obstante as disposições do parágrafo 1 do presente artigo, as autoridades aduaneiras autorizarão os interessados a deixar no país de importação temporária as mercadorias destinadas a serem apresentadas ou utilizadas numa manifestação ulterior desde que se conformem com as disposições das leis e regulamentos desse país e que as mercadorias sejam reexportadas no prazo de um ano, a contar da data da importação.

3. Por razões válidas, as autoridades aduaneiras poderão, nos limites previstos pelas leis e regulamentos em vigor no país de importação temporária, conceder prazos mais longos do que os previstos nos parágrafos 1 e 2 do presente artigo ou prorrogar o prazo inicial.

4. Quando as mercadorias importadas temporàriamente não puderem ser reexportadas em virtude de uma confiscação de natureza diferente das que são efectuadas a requerimento de particulares, a obrigação de reexportação prevista no presente artigo fica suspensa enquanto durar a confiscação.

ARTIGO 5.º

1. Não obstante a obrigação de reexportação prevista na presente Convenção, não se exigirá a reexportação das mercadorias deterioráveis, gravemente avariadas ou de diminuto valor, desde que, mediante decisão das autoridades aduaneiras:

a) No estado em que se encontram, sobre elas se façam incidir os competentes direitos de importação; ou

b) Sejam abandonadas, sem qualquer despesa para o Tesouro público do país de importação temporária; ou

c) Sejam destruídas, mediante fiscalização oficial, sem que daí resultem despesas para o país de importação temporária.

2. As mercadorias importadas temporàriamente poderão não ser reexportadas, sendo de admitir que entrem no consumo interno sujeitas às condições e formalidades previstas nas leis e regulamentos do país de importação temporária em relação a idênticas mercadorias importadas directamente do estrangeiro.

CAPITULO III

Dispensa de pagamento dos direitos de importação

ARTIGO 6.º

1. Excluídas as mercadorias que forem objecto de reservas notificadas nas condições previstas no artigo 23.º da presente Convenção, os direitos de importação não serão cobrados, as proibições ou restrições de importação não serão aplicadas e, se a importação temporária tiver sido concedida, a reexportação não será exigida, nos seguintes casos:

a) Pequenas amostras representativas das mercadorias estrangeiras expostas numa manifestação, compreendendo amostras de produtos alimentares e de bebidas, importadas como tais ou obtidas na manifestação a partir de mercadorias que na importação se apresentavam acondicionadas de modo diferente, desde que:

i) Sejam produtos estrangeiros fornecidos gratuitamente e que sirvam apenas para distribuições gratuitas ao público da manifestação, para serem utilizados ou consumidos pelas pessoas a quem forem distribuídas;

ii) Esses produtos se possam identificar como amostras de carácter publicitário, de diminuto valor unitário;

iii) Não se prestem a comercialização e, como tal, se apresentem acondicionadas em quantidades nitidamente inferiores às contidas na mais pequena das embalagens para venda a retalho;

iv) As amostras de produtos alimentares ou de bebidas, que não forem distribuídas nas embalagens a que se refere a alínea *iii*) acima indicada, sejam consumidas na manifestação; e

v) O valor global e a quantidade das mercadorias sejam razoáveis, segundo parecer das autoridades aduaneiras do país de importação e tendo em vista a natureza da manifestação, o número de visitantes e a importância da participação do expositor na manifestação;

b) Mercadorias importadas ùnicamente com o objectivo da sua demonstração, ou para demonstração de máquinas e aparelhos estrangeiros apresentados na manifestação, consumidas ou destruídas no decurso dessas demonstrações, desde que o valor global e a quantidade das mercadorias sejam razoáveis, segundo parecer das autoridades aduaneiras do país de importação e tendo em vista a natureza da manifestação, o número de visitantes e a importância da participação do expositor na manifestação;

c) Produtos de diminuto valor, utilizados na construção, mobiliário e decoração dos pavilhões provisórios dos expositores estrangeiros da manifestação (tintas, vernizes, papéis para forrar casas, etc.), cujo uso determina a sua inutilização;

d) Impressos, catálogos, prospectos, preçários, cartazes publicitários, calendários (mesmo ilustrados) e fotografias não encaixilhadas, que se destinem manifestamente a constituir material publicitário das mercadorias estrangeiras expostas na manifestação, desde que:

i) Sejam produtos estrangeiros fornecidos gratuitamente e que sirvam apenas para distribuição gratuita ao público no recinto da manifestação;

ii) O valor global e a quantidade das mercadorias sejam razoáveis, segundo parecer das autoridades aduaneiras do país de importação e tendo em vista a natureza da manifestação, o número de visitantes e a importância da participação do expositor na manifestação.

2. As disposições do parágrafo 1 do presente artigo não serão aplicáveis a bebidas alcoólicas, tabaco e combustíveis.

ARTIGO 7.º

Serão isentos de direitos de importação, e não ficarão sujeitos a nenhuma proibição ou restrição de importação, os *dossiers*, arquivos, fórmulas e outros documentos destinados a serem utilizados como tais em reuniões, conferências ou congressos internacionais.

CAPITULO IV

Simplificação de formalidades

ARTIGO 8.º

Cada Parte Contratante reduzirá ao mínimo as formalidades aduaneiras relativas às facilidades previstas na presente Convenção e publicará, nos mais curtos espaços de tempo, os regulamentos referentes a essas formalidades.

ARTIGO 9.º

1. Quando uma parte Contratante exigir uma garantia para se assegurar da execução das condições requeridas para se obter o benefício das facilidades previstas na presente Convenção, o montante dessa garantia não poderá exceder em mais de 10 por cento o dos direitos de importação exigíveis.

2. Todavia, essa Parte Contratante, quando for possível, esforçar-se-á por aceitar uma garantia global prestada pelos organizadores da manifestação ou por qualquer outra pessoa aprovada pelas autoridades aduaneiras, em substituição das garantias individuais que seriam de exigir de acordo com as disposições da alínea anterior.

ARTIGO 10.º

1. Tanto na importação como na reexportação, a verificação e desalfandegação das mercadorias, que serão ou foram apresentadas ou utilizadas numa manifestação, efectuar-se-ão, sempre que seja possível e oportuno, no recinto dessa manifestação.

2. Cada Parte Contratante, quando o julgar útil e tendo em vista a importância da manifestação, esforçar-se-á por instalar uma estância aduaneira no recinto da manifestação organizada no seu território, durante um espaço de tempo razoável.

3. A reexportação das mercadorias importadas temporàriamente poderá efectuar-se, por uma ou várias vezes, através de uma das estâncias aduaneiras habilitadas a realizar estas operações, ainda mesmo que não seja a da importação, a não ser que o importador se comprometa a reexportar as mercadorias por esta última estância, a fim de beneficiar de um processo simplificado.

CAPITULO V

Disposições diversas

ARTIGO 11.º

Os produtos acessòriamente obtidos no decurso da manifestação, a partir de mercadorias importadas temporàriamente e como resultado da demonstração das máquinas ou aparelhos expostos, ficarão sujeitos às disposições da presente Convenção.

ARTIGO 12.º

As disposições da presente Convenção estabelecem facilidades mínimas, não se opondo à aplicação de facilidades maiores concedidas ou a conceder por algumas Partes Contratantes, quer por disposições unilaterais, quer em virtude de acordos bilaterais ou multilaterais.

ARTIGO 13.º

Para os fins da presente Convenção, os territórios das Partes Contratantes que formarem uma união aduaneira ou económica poderão considerar-se como um único território.

ARTIGO 14.º

As disposições da presente Convenção não obstarão à aplicação:

a) Das disposições nacionais ou convencionais não aduaneiras relativas à organização de manifestações;

b) Das proibições e restrições impostas por leis e regulamentos nacionais e fundadas em considerações de moralidade ou de ordem públicas, de segurança pública, de higiene ou de saúde públicas, em considerações de ordem veterinária ou fitopatológica ou relacionadas com a protecção de patentes, marcas de fábrica e direitos de autor e de reprodução.

ARTIGO 15.º

Qualquer infracção às disposições da presente Convenção, qualquer substituição, falsa declaração ou manobra tendentes a fazer beneficiar indevidamente uma pessoa ou um objecto das facilidades previstas na referida Convenção exporá o contraventor, no país em que a infracção for cometida, às sanções previstas nas leis e regulamentos desse país e, se for caso disso, ao pagamento dos direitos de importação exigíveis.

CAPITULO VI

Cláusulas finais

ARTIGO 16.º

1. As Partes Contratantes reunir-se-ão quando for necessário para examinar as condições em que a presente Convenção é aplicada, a fim, nomeadamente, de procurar as medidas adequadas para assegurar a sua interpretação e aplicação uniformes.

2. Essas reuniões serão convocadas pelo secretário-geral do Conselho, a pedido de uma das Partes Contratantes, e, salvo decisão em contrário das mesmas Partes, realizar-se-ão na sede do Conselho.

3. As Partes Contratantes estabelecerão o regulamento interno das suas reuniões. As suas decisões serão tomadas por maioria de dois terços das que estiverem presentes e que tomarem parte na votação.

4. As Partes Contratantes não poderão vàlidamente pronunciar-se sobre uma questão, a não ser que mais de metade delas esteja presente.

ARTIGO 17.º

1. Qualquer diferendo entre as Partes Contratantes no que disser respeito à interpretação ou à aplicação da presente Convenção será, na medida do possível, regulado por via de negociações directas entre as ditas Partes.

2. Qualquer diferendo que não for regulado por via de negociações directas será levado, pelas partes em causa, à presença das Partes Contratantes, reunidas nas condições previstas no artigo 16.º da presente Conven-

ção, que examinarão o diferendo e farão recomendações com vista à sua resolução.

3. As partes no diferendo poderão convir antecipadamente a aceitação das recomendações das Partes Contratantes.

ARTIGO 18.º

1. Qualquer Estado membro do Conselho e qualquer Estado membro da Organização das Nações Unidas ou das suas instituições especializadas poderá tornar-se Parte Contratante à presente Convenção:

a) Assinando-a sem reserva de ratificação;

b) Depositando um instrumento de ratificação depois de a ter assinado sob reserva de ratificação; ou

c) Aderindo a ela.

2. A presente Convenção estará aberta até 31 de Março de 1962, na sede do Conselho, em Bruxelas, à assinatura dos Estados visados no parágrafo 1 do presente artigo. Depois desta data, estará aberta à sua adesão.

3. No caso previsto no parágrafo 1, *b*), do presente artigo, a Convenção será submetida à ratificação dos Estados signatários em conformidade com os seus processos constitucionais respectivos.

4. Todo o Estado não membro das organizações visadas no parágrafo 1 do presente artigo, ao qual para esse efeito for dirigido um convite pelo secretário-geral do Conselho, a pedido das Partes Contratantes, poderá tornar-se Parte Contratante à presente Convenção, aderindo a ela depois da sua entrada em vigor.

5. Os instrumentos de ratificação ou de adesão serão depositados junto do secretário-geral do Conselho.

ARTIGO 19.º

1. A presente Convenção entrará em vigor três meses depois de cinco dos Estados mencionados no parágrafo 1 do artigo 18.º a terem assinado sem reserva de ratificação ou terem depositado o seu instrumento de ratificação ou de adesão.

2. Em relação a qualquer Estado que ratificar a presente Convenção ou que a ela aderir, depois de cinco Estados a terem assinado sem reserva de ratificação, ou terem depositado o seu instrumento de ratificação ou de adesão, a Convenção entrará em vigor três meses depois do depósito do instrumento de ratificação ou de adesão do referido Estado.

ARTIGO 20.º

1. A presente Convenção é concluída para uma duração ilimitada. Todavia, qualquer Parte Contratante poderá denunciá-la em qualquer momento depois da data da sua entrada em vigor, tal como se encontra fixada no seu artigo 19.º

2. A denúncia será notificada por um instrumento escrito depositado junto do secretário-geral do Conselho.

3. A denúncia efectivar-se-á seis meses depois da recepção do seu instrumento pelo secretário-geral do Conselho.

ARTIGO 21.º

1. As Partes Contratantes, reunidas nas condições previstas no artigo 16.º acima indicado, poderão recomendar emendas à presente Convenção.

2. O texto de qualquer emenda assim recomendada será comunicado pelo secretário-geral do Conselho a todas as Partes Contratantes, a todos os outros Estados signatários ou aderentes, ao secretário-geral da Organização das Nações Unidas e à U. N. E. S. C. O.

3. Num prazo de seis meses, a contar da data da comunicação da emenda recomendada, qualquer Parte Contratante poderá fazer reconhecer ao secretário-geral do Conselho:

a) Que tem uma objecção a fazer à emenda recomendada;

b) Ou que, se bem que tenha a intenção de aceitar a emenda recomendada, não se encontram ainda preenchidas no seu país as condições necessárias para essa aceitação.

4. Enquanto a Parte Contratante que tiver dirigido a comunicação prevista no parágrafo 3, *b*), acima indicado não tiver notificado o secretário-geral do Conselho da sua aceitação, poderá, durante um período de nove meses a partir da expiração do prazo de seis meses previsto no parágrafo 3 do presente artigo, apresentar objecções à emenda recomendada.

5. Se for formulada qualquer objecção à emenda recomendada, nas condições previstas nos parágrafos 3 e 4 do presente artigo, a emenda será considerada como não aceite e ficará sem efeito.

6. Se não for formulada nenhuma objecção à emenda recomendada nas condições previstas nos parágrafos 3 e 4 do presente artigo, a emenda será considerada como aceite na seguinte data:

a) Quando nenhuma Parte Contratante tiver dirigido a comunicação prevista no parágrafo 3, *b*), do presente artigo, na expiração do prazo de seis meses visado nesse parágrafo;

b) Quando uma ou várias Partes Contratantes tiverem dirigido a comunicação prevista no parágrafo 3, *b*), do presente artigo, na mais aproximada das duas datas seguintes:

i) Data na qual todas as Partes Contratantes que tiverem dirigido uma tal comunicação notificaram o secretário-geral do Conselho da sua aceitação da emenda recomendada, sendo todavia essa data reportada à expiração do prazo de seis meses visado no parágrafo 3 do presente artigo, se todas as aceitações tiverem sido notificadas anteriormente a essa expiração;

ii) Data da expiração do prazo de nove meses visado no parágrafo 4 do presente artigo.

7. Toda a emenda considerada como aceite entrará em vigor seis meses depois da data na qual como tal foi considerada.

8. O secretário-geral do Conselho notificará o mais cedo possível todas as Partes Contratantes de qualquer objecção formulada em conformidade com o parágrafo 3, *b*). Fará ulteriormente saber a todas as Partes Contratantes se a ou as Partes Contratantes que tiverem dirigido uma tal comunicação levantam objecções à emenda recomendada ou se a aceitam.

9. Todo o Estado que ratificar a presente Convenção ou que aderir a ela será considerado como tendo aceitado as emendas entradas em vigor à data do depósito do seu instrumento de ratificação ou de adesão.

ARTIGO 22.º

1. Qualquer Estado poderá, quer no momento da assinatura sem reserva de ratificação, da ratificação ou da adesão, quer ulteriormente, notificar o secretário-geral do Conselho de que a presente Convenção se estenderá ao conjunto ou a certos dos territórios cujas

relações internacionais estão colocadas sob a sua responsabilidade; a Convenção será aplicável aos ditos territórios três meses depois da data da recepção dessa notificação pelo secretário-geral do Conselho, mas nunca antes da entrada em vigor da presente Convenção em relação a esse Estado.

2. Qualquer Estado que tiver, em virtude do parágrafo 1 do presente artigo, aceitado a presente Convenção para um território cujas relações internacionais estejam colocadas sob a sua responsabilidade, poderá notificar o secretário-geral do Conselho, em conformidade com as disposições do artigo 20.º da Convenção, de que esse território deixará de aplicar a Convenção.

ARTIGO 23.º

1. Qualquer Estado poderá declarar, no momento em que assinar ou ratificar a presente Convenção ou em que aderir a ela, ou, depois de se ter tornado Parte Contratante à Convenção, notificar o secretário-geral do Conselho de que não se considera ligado pelas disposições do artigo 6.º, parágrafo 1, alínea *a*), da Convenção. Essas declarações e notificações deverão indicar explicitamente as mercadorias em relação às quais a reserva for formulada. As notificações dirigidas ao secretário-geral tomarão efeito no octogésimo dia após terem sido por ele recebidas.

2. Se uma Parte Contratante formular uma reserva em conformidade com o parágrafo 1 do presente artigo, as outras Partes Contratantes não ficarão ligadas pelas disposições do artigo 6.º, parágrafo 1, alínea *a*), da presente Convenção no que disser respeito às mercadorias especificadas nessa reserva.

3. Qualquer Parte Contratante que tiver formulado uma reserva em conformidade com o parágrafo 1 do presente artigo poderá, a qualquer momento, levantar essa reserva por notificação ao secretário-geral do Conselho.

4. Não será admitida qualquer outra reserva à presente Convenção.

ARTIGO 24.º

O secretário-geral do Conselho notificará todas as Partes Contratantes, bem como os outros Estados signatários ou aderentes, o secretário-geral das Nações Unidas e a U. N. E. S. C. O.:

a) Das assinaturas, ratificações e adesões visadas no artigo 18.º;

b) Da data na qual a presente Convenção entrará em vigor, em conformidade com o artigo 20.º;

c) Das denúncias e anulações notificadas em conformidade com o artigo 20.º;

d) Das emendas consideradas como aceites em conformidade com o artigo 21.º, assim como da data da sua entrada em vigor;

e) Das declarações e notificações recebidas em conformidade com o artigo 22.º;

f) Das declarações e notificações recebidas em conformidade com o artigo 23.º, parágrafos 1 e 3, assim como da data na qual as reservas entrarão em vigor ou daquela a contar da qual foram levantadas.

ARTIGO 25.º

Em conformidade com o artigo 102.º da Carta das Nações Unidas, a presente Convenção será registada no Secretariado das Nações Unidas a pedido do secretário-geral do Conselho.

Em fé do que os plenipotenciários abaixo indicados assinaram a presente Convenção.

Feito em Bruxelas, a 8 de Junho de 1961, em línguas francesa e inglesa, fazendo os dois textos igualmente fé, num só exemplar, que será depositado junto do secretário-geral do Conselho, que dele transmitirá a todos os Estados visados no parágrafo 1 do artigo 18.º da presente Convenção cópias certificadas conformes.

PRESIDÊNCIA DA REPÚBLICA

Decreto do Presidente da República n.º 188/99

de 22 de Outubro

O Presidente da República decreta, nos termos do artigo 292.º, n.º 1, da Constituição e dos artigos 3.º, n.ºs 2 e 3, 69.º e 70.º do Estatuto Orgânico de Macau, o seguinte:

É estentida ao território de Macau, nos mesmos termos em que a ela está vinculado o Estado Português, a Convenção sobre o Reconhecimento e Execução de Sentenças Arbitrais Estrangeiras, de 10 de Junho de 1958, ratificada pelo Decreto do Presidente da República n.º 52/94, de 8 de Julho, cujo texto foi publicado no *Diário da República*, l.ª série, de 8 de Julho de 1994.

Foram ouvidos os órgãos de governo próprios do território de Macau.

Assinado em 15 de Outubro de 1999.

Publique-se no *Boletim Oficial* de Macau, em conjunto com os referidos decreto de ratificação e texto da Convenção.

O Presidente da República, JORGE SAMPAIO.

PRESIDÊNCIA DA REPÚBLICA

Decreto do Presidente da República n.º 52/94

de 8 de Julho

O Presidente da República decreta, nos termos do artigo 138.º, alínea *b*), da Constituição, o seguinte:

É ratificada a Convenção sobre o Reconhecimento e a Execução de Sentenças Arbitrais Estrangeiras, celebrada em Nova Iorque, a 10 de Junho de 1958, e aprovada, para ratificação, pela Resolução da Assembleia da República n.º 37/94, em 10 de Março de 1994, com a formulação da seguinte reserva, nos termos do n.º 3 do artigo 1.º da Convenção: no âmbito do princípio da reciprocidade, Portugal só aplicará a Convenção no caso de as sentenças arbitrais terem sido proferidas no território de Estados a ela vinculados.

Assinado em 1 de Junho de 1994.

Publique-se.

O Presidente da República, MÁRIO SOARES.

Referendado em 7 de Junho de 1994.

O Primeiro-Ministro, *Aníbal António Cavaco Silva.*

共和國總統府

共和國總統令 第188/99號

十月二十二日

共和國總統根據《憲法》第二百九十二條第一款及《澳門組織章程》第三條第二款及第三款、第六十九條及第七十條之規定，命令如下：

將一九五八年六月十日之《關於承認和執行外國仲裁裁決的公約》延伸至澳門地區，按照葡萄牙政府受該公約約束之相同規定適用；該公約係經七月八日第52/94號共和國總統令批准，且文本已公布於一九九四年七月八日《共和國公報》第一組。

已聽取澳門地區本身管理機關之意見。

一九九九年十月十五日簽署。

將本總統令連同上述批准公約之命令及公約之文本公布於《澳門政府公報》。

共和國總統

沈拜奧

（一九九九年十月二十二日第247期《共和國公報》第一組-A）

共和國總統府

共和國總統令 第52/94號

七月八日

共和國總統根據《憲法》第一百三十八條b項之規定，命令如下：

批准一九五八年六月十日在紐約訂立，經一九九四年三月十日第37/94號共和國議會決議通過以待批准之《關於承認和執行外國仲裁裁決的公約》，並根據公約第一條第三款之規定作出以下保留：在互惠原則之範圍內，葡萄牙僅對在受公約約束之國家之領土內所作成之仲裁裁決適用本公約。

一九九四年六月一日簽署。

命令公布。

共和國總統

蘇亞雷斯

一九九四年六月七日副署。

總理

施華高

ASSEMBLEIA DA REPÚBLICA

Resolução da Assembleia da República n.º 37/94

Aprova, para ratificação, a Convenção sobre o Reconhecimento e a Execução de Sentenças Arbitrais Estrangeiras.

A Assembleia da República resolve, nos termos dos artigos 164.º, alínea *j*), e 169.º, n.º 5, da Constituição, o seguinte:

Artigo 1.º É aprovada, para ratificação, a Convenção sobre o Reconhecimento e a Execução de Sentenças Arbitrais Estrangeiras, celebrada em Nova Iorque, a 10 de Junho de 1958, cuja versão autêntica em língua francesa e respectiva tradução em língua portuguesa seguem em anexo à presente resolução.

Art. 2.º Nos termos do n.º 3 do artigo 1.º da Convenção, Portugal formula a seguinte reserva: no âmbito do princípio da reciprocidade, Portugal só aplicará a Convenção no caso de as sentenças arbitrais terem sido proferidas no território de Estados a ela vinculados.

Aprovada em 10 de Março de 1994.

O Presidente da Assembleia da República, *António Moreira Barbosa de Melo.*

(*D.R. n.º 156, I Série-A, de 8 de Julho de 1994*)

共和國議會

共和國議會決議　第 37/94 號

通過《關於承認和執行外國仲裁裁決的公約》以待批准

共和國議會根據《憲法》第一百六十四條 j 項及第一百六十九條第五款之規定，議決如下：

第一條 —— 通過一九五八年六月十日在紐約訂立之《關於承認和執行外國仲裁裁決的公約》，以待批准；該公約之法文原文及葡文譯本附於本決議。

第二條 —— 根據公約第一條第三款之規定，葡萄牙作出以下保留：在互惠原則之範圍內，葡萄牙僅對在受公約約束之國家之領土內所作成之仲裁裁決適用本公約。

一九九四年三月十日通過。

共和國議會議長

António Moreira Barbosa de Melo

（一九九四年七月八日第 156 期《共和國公報》第一組 -A）

CONVENTION POUR LA RECONNAISSANCE ET L'EXÉCUTION DES SENTENCES ARBITRALES ÉTRANGÈRES, FAITE À NEW-YORK, LE 10 JUIN 1958 (*).

Article premier

1 — La présente Convention s'applique à la reconnaissance et à l'exécution des sentences arbitrales rendues sur le territoire d'un État autre que celui où la reconnaissance et l'exécution des sentences sont demandées, et issues de différends entre personnes physiques ou morales. Elle s'applique également aux sentences arbitrales qui ne sont pas considérées comme sentences nationales dans l'État où leur reconnaissance et leur exécution sont demandées.

2 — On entend par «sentences arbitrales» non seulement les sentences rendues par des arbitres nommés pour des cas déterminés, mais également celles qui sont rendues par des organes d'arbitrage permanents auxquels les parties se sont soumises.

3 — Au moment de signer ou de ratifier la présente Convention, d'y adhérer ou de faire la notification d'extension prévue à l'article x, tout État pourra, sur la base de la réciprocité, déclarer qu'il appliquera la Convention à la reconnaissance et à l'exécution des seules sentences rendues sur le territoire d'un autre État contractant. Il pourra également déclarer qu'il appliquera la Convention uniquement aux différends issus de rapports de droit, contractuels ou non contractuels, qui sont considérés comme commerciaux par sa loi nationale.

Article II

1 — Chacun des États contractants reconnaît la convention écrite par laquelle les parties s'obligent à soumettre à un arbitrage tous les différends ou certains des différends qui se sont élevés ou pourraient s'élever entre elles au sujet d'un rapport de droit déterminé, contractuel ou non contractuel, portant sur une question susceptible d'être réglée par voie d'arbitrage.

2 — On entend par «convention écrite» une clause compromissoire insérée dans un contrat, ou un compromis, signés par les parties ou contenus dans un échange de lettres ou de télégrammes.

3 — Le tribunal d'un État contractant, saisi d'un litige sur une question au sujet de laquelle les parties ont conclu une convention au sens du présent article, renverra les parties à l'arbitrage, à la demande de l'une d'elles, à moins qu'il ne constate que ladite convention est caduque, inopérante ou non susceptible d'être appliquée.

Article III

Chacun des États contractants reconnaîtra l'autorité d'une sentence arbitrale et accordera l'exécution de cette sentence conformément aux règles de procédure suivies dans le territoire où la sentence est invoquée, aux conditions

(*) Conformément à son article XII, la Convention est entrée en vigueur le 7 juin 1959, le quatre-vingt-dixième jour suivant la date du dépôt du troisième instrument de ratification ou d'adhésion auprès du Secrétaire général de l'Organisation des Nations Unies. Les États ci-après ont déposé leurs instruments de ratification ou d'adhésion (*a*) aux dates indiquées ci-dessous:

Israël — 5 janvier 1959;
Marroc — 12 février 1959 (*a*);
République arabe unie — 9 mars 1959 (*a*).

établies dans les articles suivants. Il ne sera pas imposé, pour la reconnaissance ou l'exécution des sentences arbitrales auxquelles s'applique la présente Convention, de conditions sensiblement plus rigoureuses, ni de frais de justice sensiblement plus élevés, que ceux qui sont imposés pour la reconnaissance ou l'exécution des sentences arbitrales nationales.

Article IV

1 — Pour obtenir la reconnaissance et l'exécution visées à l'article précédent, la partie qui demande la reconnaissance et l'exécution doit fournir, en même temps que la demande:

a) L'original dûment authentifié de la sentence ou une copie de cet original réunissant les conditions requises pour son authenticité;
b) L'original de la convention visée à l'article II, ou une copie réunissant les conditions requises pour son authenticité.

2 — Si ladite sentence ou ladite convention n'est pas rédigée dans une langue officielle du pays où la sentence est invoquée, la partie qui demande la reconnaissance et l'exécution de la sentence aura à produire une traduction de ces pièces dans cette langue. La traduction devra être certifiée par un traducteur officiel ou un traducteur juré ou par un agent diplomatique ou consulaire.

Article V

1 — La reconnaissance et l'exécution de la sentence ne seront refusées, sur requête de la partie contre laquelle elle est invoquée, que si cette partie fournit à l'autorité compétente du pays où la reconnaissance et l'exécution sont demandées la preuve:

a) Que les parties à la convention visée à l'article II étaient, en vertu de la loi à elles applicable, frappées d'une incapacité, ou que ladite convention n'est pas valable en vertu de la loi à laquelle les parties l'ont subordonnée ou, à défaut d'une indication à cet égard, en vertu de la loi du pays où la sentence a été rendue; ou
b) Que la partie contre laquelle la sentence est invoquée n'a pas été dûment informée de la désignation de l'arbitre ou de la procédure d'arbitrage, ou qu'il lui a été impossible, pour une autre raison, de faire valoir ses moyens; ou
c) Que la sentence porte sur un différend non visé dans le compromis ou n'entrant pas dans les prévisions de la clause compromissoire, ou qu'elle contient des décisions qui dépassent les termes du compromis ou de la clause compromissoire; toutefois, si les dispositions de la sentence qui ont trait à des questions soumises à l'arbitrage peuvent être dissociées de celles qui ont trait à des questions non soumises à l'arbitrage, les premières pourront être reconnues et exécutées; ou
d) Que la constitution du tribunal arbitral ou la procédure d'arbitrage n'a pas été conforme à la convention des parties, ou, à défaut de convention, qu'elle n'a pas été conforme à la loi du pays où l'arbitrage a eu lieu; ou
e) Que la sentence n'est pas encore devenue obligatoire pour les parties ou a été annulée ou suspendue par une autorité compétente du pays dans lequel, ou d'après la loi duquel, la sentence a été rendue.

2 — La reconnaissance et l'exécution d'une sentence arbitrale pourront aussi être refusées si l'autorité compétente du pays où la reconnaissance et l'exécution sont requises constate:

a) Que, d'après la loi de ce pays, l'objet du différend n'est pas susceptible d'être réglé par voie d'arbitrage; ou
b) Que la reconnaissance ou l'exécution de la sentence serait contraire à l'ordre public de ce pays.

Article VI

Si l'annulation ou la suspension de la sentence est demandée à l'autorité compétente visée à l'article V, paragraphe 1, *e*), l'autorité devant qui la sentence est invoquée peut, si elle l'estime approprié, surseoir à statuer sur l'exécution de la sentence; elle peut aussi, à la requête de la partie qui demande l'exécution de la sentence, ordonner à l'autre partie de fournir des sûretés convenables.

Article VII

1 — Les dispositions de la présente Convention ne portent pas atteinte à la validité des accords multilatéraux ou bilatéraux conclus par les États contractants en matière de reconnaissance et d'exécution de sentences arbitrales et ne privent aucune partie intéressée du droit qu'elle pourrait avoir de se prévaloir d'une sentence arbitrale de la manière et dans la mesure admises par la législation ou les traités du pays où la sentence est invoquée.

2 — Le Protocole de Genève de 1923 relatif aux clauses d'arbitrage et la Convention de Genève de 1927 pour l'exécution des sentences arbitrales étrangères cesseront de produire leurs effets entre les États contractants du jour, et dans la mesure, où ceux-ci deviendront liés par la présente Convention.

Article VIII

1 — La présente Convention est ouverte jusqu'au 31 décembre 1958 à la signature de tout État membre des Nations Unies, ainsi que de tout autre État qui est, ou deviendra par la suite, membre d'une ou plusieurs institutions spécialisées des Nations Unies ou partie au Statut de la Cour internationale de Justice, ou qui aura été invité par l'Assemblée générale des Nations Unies.

2 — La présente Convention doit être ratifiée et les instruments de ratification déposés auprès du Secrétaire général de l'Organisation des Nations Unies.

Article IX

1 — Tous les États visés à l'article VIII peuvent adhérer à la présente Convention.

2 — L'adhésion se fera par le dépôt d'un instrument d'adhésion auprès du Secrétaire général de l'Organisation des Nations Unies.

Article X

1 — Tout État pourra, au moment de la signature, de la ratification ou de l'adhésion, déclarer que la présente Convention s'étendra à l'ensemble des territoires qu'il représente sur le plan international, ou à l'un ou plusieurs d'entre eux. Cette déclaration produira ses effets au moment de l'entrée en vigueur de la Convention pour ledit État.

2 — Par la suite, toute extension de cette nature se fera par notification adressée au Secrétaire général de l'Organisation des Nations Unies et produira ses effets à partir du quatre-vingt-dixième jour qui suivra la date à laquelle le Secrétaire général de l'Organisation des Nations Unies aura reçu la notification, ou à la date d'entrée en vigueur de la Convention pour ledit État si cette dernière date est postérieure.

3 — En ce qui concerne les territoires auxquels la présente Convention ne s'applique pas à la date de la signature, de la ratification ou de l'adhésion, chaque État intéressé examinera la possibilité de prendre les mesures voulues pour étendre la Convention à ces territoires sous réserve le cas échéant, lorsque des motifs constitutionnels l'exigeront, de l'assentiment des gouvernements de ces territoires.

Article XI

Les dispositions ci-après s'appliqueront aux États fédératifs ou non unitaires:

a) En ce qui concerne les articles de la présente Convention qui relèvent de la compétence législative du pouvoir fédéral, les obligations du gouvernement fédéral seront les mêmes que celles des États contractants qui ne sont pas des États fédératifs;

b) En ce qui concerne les articles de la présente Convention qui relèvent de la compétence législative de chacun des États, ou provinces constituants, qui ne sont pas, en vertu du système constitutionnel de la fédération, tenus de prendre des mesures législatives, le gouvernement fédéral portera le plus tôt possible, et avec son avis favorable, lesdits articles à la connaissance des autorités compétentes des États ou provinces constituants;

c) Un État fédératif Partie à la présente Convention communiquera, à la demande de tout autre État contractant qui lui aura été transmise par l'intermédiaire du Secrétaire général de l'Organisation des Nations Unies, un exposé de la législation et des pratiques en vigueur dans la fédération et ses unités constituantes, en ce qui concerne telle ou telle disposition de la Convention, indiquant la mesure dans laquelle effet a été donné, par une action législative ou autre, à ladite disposition.

Article XII

1 — La présente Convention entrera en vigueur le quatre-vingt-dixième jour qui suivra la date du dépôt du troisième instrument de ratification ou d'adhésion.

2 — Pour chacun des États qui ratifieront la Convention ou y adhéreront après le dépôt du troisième instrument de ratification ou d'adhésion, elle entrera en vigueur le quatre-vingt-dixième jour qui suivra la date du dépôt par cet État de son instrument de ratification ou d'adhésion.

Article XIII

1 — Tout État contractant pourra dénoncer la présente Convention par notification écrite adressée au Secrétaire général de l'Organisation des Nations Unies. La dénonciation prendra effet un an après la date où le Secrétaire général de l'Organisation des Nations Unies aura reçu la notification.

2 — Tout État qui aura fait une déclaration ou une notification conformément à l'article X pourra notifier ultérieurement au Secrétaire général de l'Organisation des Nations Unies que la Convention cessera de s'appliquer au territoire en question un an après la date à laquelle le Secrétaire général aura reçu cette notification.

3 — La présente Convention demeurera applicable aux sentences arbitrales au sujet desquelles une procédure de reconnaissance ou d'exécution aura été entamée avant l'entrée en vigueur de la dénonciation.

Article XIV

Un État contractant ne peut se réclamer des dispositions de la présente Convention contre d'autres États contractants que dans la mesure où il est lui-même tenu d'appliquer cette Convention.

Article XV

Le Secrétaire général de l'Organisation des Nations Unies notifiera à tous les États visés à l'article VIII:

a) Les signatures et ratifications visées à l'article VIII;
b) Les adhésions visées à l'article IX;
c) Les déclarations et notifications visées aux articles premier, X et XI;
d) La date où la présente Convention entrera en vigueur, en application de l'article XII;
e) Les dénonciations et notifications visées à l'article XIII.

Article XVI

1 — La présente Convention, dont les textes anglais, chinois, espagnol, français et russe font également foi, sera déposée dans les archives de l'Organisation des Nations Unies.

2 — Le Secrétaire général de l'Organisation des Nations Unies remettra une copie certifiée conforme de la présente Convention aux États visés à l'article VIII.

CONVENÇÃO SOBRE O RECONHECIMENTO E A EXECUÇÃO DE SENTENÇAS ARBITRAIS ESTRANGEIRAS, CELEBRADA EM NOVA IORQUE AOS 10 DE JUNHO DE 1958 (*).

Artigo I

1 — A presente Convenção aplica-se ao reconhecimento e à execução das sentenças arbitrais proferidas no território

(*) Nos termos do seu artigo XII, a Convenção entrou em vigor em 7 de Junho de 1959, no 90.º dia a seguir à data de depósito do terceiro instrumento de ratificação ou de adesão junto do Secretário-Geral da Organização das Nações Unidas. Os Estados a seguir indicados depositaram os respectivos instrumentos de ratificação ou de adesão (*a*) nas seguintes datas:

Israel — 5 de Janeiro de 1959;
Marrocos — 12 de Fevereiro de 1959 (*a*);
República Árabe Unida — 9 de Março de 1959 (*a*).

de um Estado que não aquele em que são pedidos o reconhecimento e a execução das sentenças e resultantes de litígios entre pessoas singulares ou colectivas. Aplica-se também às sentenças arbitrais que não forem consideradas sentenças nacionais no Estado em que são pedidos o seu reconhecimento e execução.

2 — Entende-se por «sentenças arbitrais» não apenas as sentenças proferidas por árbitros nomeados para determinados casos, mas também as que forem proferidas por órgãos de arbitragem permanentes aos quais as Partes se submeteram.

3 — No momento da assinatura ou da ratificação da presente Convenção, da adesão a esta ou da notificação de extensão prevista no artigo X, qualquer Estado poderá, com base na reciprocidade, declarar que aplicará a Convenção ao reconhecimento e à execução apenas das sentenças proferidas no território de um outro Estado Contratante. Poderá também declarar que aplicará apenas a Convenção aos litígios resultantes de relações de direito, contratuais ou não contratuais, que forem consideradas comerciais pela respectiva lei nacional.

Artigo II

1 — Cada Estado Contratante reconhece a convenção escrita pela qual as Partes se comprometem a submeter a uma arbitragem todos os litígios ou alguns deles que surjam ou possam surgir entre elas relativamente a uma determinada relação de direito, contratual ou não contratual, respeitante a uma questão susceptível de ser resolvida por via arbitral.

2 — Entende-se por «convenção escrita» uma cláusula compromissória inserida num contrato, ou num compromisso, assinado pelas Partes ou inserido numa troca de cartas ou telegramas.

3 — O tribunal de um Estado Contratante solicitado a resolver um litígio sobre uma questão relativamente à qual as Partes celebraram uma convenção ao abrigo do presente artigo remeterá as Partes para a arbitragem, a pedido de uma delas, salvo se constatar a caducidade da referida convenção, a sua inexequibilidade ou insusceptibilidade de aplicação.

Artigo III

Cada um dos Estados Contratantes reconhecerá a autoridade de uma sentença arbitral e concederá a execução da mesma nos termos das regras de processo adoptadas no território em que a sentença for invocada, nas condições estabelecidas nos artigos seguintes. Para o reconhecimento ou execução das sentenças arbitrais às quais se aplica a presente Convenção, não serão aplicadas quaisquer condições sensivelmente mais rigorosas, nem custas sensivelmente mais elevadas, do que aquelas que são aplicadas para o reconhecimento ou a execução das sentenças arbitrais nacionais.

Artigo IV

1 — Para obter o reconhecimento e a execução referidos no artigo anterior, a Parte que requerer o reconhecimento e a execução deverá juntar ao seu pedido:

a) O original devidamente autenticado da sentença, ou uma cópia do mesmo, verificadas as condições exigidas para a sua autenticidade;

b) O original da convenção referida no artigo II, ou uma cópia da mesma, verificadas as condições exigidas para a sua autenticidade.

2 — No caso de a referida sentença ou convenção não estar redigida numa língua oficial do país em que for invocada a sentença, a Parte que requerer o reconhecimento e a execução da mesma terá de apresentar uma tradução dos referidos documentos nesta língua. A tradução deverá estar autenticada por um tradutor oficial ou por um agente diplomático ou consular.

Artigo V

1 — O reconhecimento e a execução da sentença só serão recusados, a pedido da Parte contra a qual for invocada, se esta Parte fornecer à autoridade competente do país em que o reconhecimento e a execução forem pedidos a prova:

a) Da incapacidade das Partes outorgantes da convenção referida no artigo II, nos termos da lei que lhes é aplicável, ou da invalidade da referida convenção ao abrigo da lei a que as Partes a sujeitaram ou, no caso de omissão quanto à lei aplicável, ao abrigo da lei do país em que for proferida a sentença; ou

b) De que a Parte contra a qual a sentença é invocada não foi devidamente informada quer da designação do árbitro quer do processo de arbitragem, ou de que lhe foi impossível, por outro motivo, deduzir a sua contestação; ou

c) De que a sentença diz respeito a um litígio que não foi objecto nem da convenção escrita nem da cláusula compromissória, ou que contém decisões que extravasam os termos da convenção escrita ou da cláusula compromissória; no entanto, se o conteúdo da sentença referente a questões submetidas à arbitragem puder ser destacado do referente a questões não submetidas à arbitragem, o primeiro poderá ser reconhecido e executado; ou

d) De que a constituição do tribunal arbitral ou o processo de arbitragem não estava em conformidade com a convenção das Partes ou, na falta de tal convenção, de que não estava em conformidade com a lei do país onde teve lugar a arbitragem; ou

e) De que a sentença ainda não se tornou obrigatória para as Partes, foi anulada ou suspensa por uma autoridade competente do país em que, ou segundo a lei do qual, a sentença foi proferida.

2 — Poderão igualmente ser recusados o reconhecimento e a execução de uma sentença arbitral se a autoridade competente do país em que o reconhecimento e a execução foram pedidos constatar:

a) Que, de acordo com a lei desse país, o objecto de litígio não é susceptível de ser resolvido por via arbitral; ou

b) Que o reconhecimento ou a execução da sentença são contrários à ordem pública desse país.

Artigo VI

Se a anulação ou a suspensão da sentença for requerida à autoridade competente prevista no artigo V, n.º 1, alínea *e*), a autoridade perante a qual a sentença for invocada poderá, se o considerar adequado, diferir o momento da sua decisão relativa à execução da sentença; poderá igualmente, a requerimento da parte que solicitar a execução da sentença, exigir da outra Parte a prestação das garantias adequadas.

Artigo VII

1 — As disposições da presente Convenção não prejudicam a validade dos acordos multilaterais ou bilaterais celebrados pelos Estados Contratantes em matéria de reconhecimento e de execução de sentenças arbitrais, nem prejudicam o direito de invocar a sentença arbitral que qualquer das Partes interessadas possa ter nos termos da lei ou dos tratados do país em que for invocada.

2 — O Protocolo de Genebra de 1923 Relativo às Cláusulas de Arbitragem e a Convenção de Genebra de 1927 Relativa à Execução das Sentenças Arbitrais Estrangeiras deixarão de produzir efeitos entre os Estados Contratantes a partir do momento, e na medida, em que aqueles se encontrem obrigados pela presente Convenção.

Artigo VIII

1 — A presente Convenção pode ser assinada até 31 de Dezembro de 1958 por qualquer Estado membro das Nações Unidas, ou por qualquer outro Estado que seja, ou venha a ser posteriormente, membro de uma ou várias agências especializadas das Nações Unidas ou parte do Estatuto do Tribunal Internacional de Justiça, ou que seja convidado pela Assembleia Geral das Nações Unidas.

2 — A presente Convenção deve ser ratificada e os instrumentos de ratificação depositados junto do Secretário-Geral da Organização das Nações Unidas.

Artigo IX

1 — Todos os Estados referidos no artigo VIII podem aderir à presente Convenção.

2 — A adesão efectuar-se-á através do depósito de um instrumento de adesão junto do Secretário-Geral da Organização das Nações Unidas.

Artigo X

1 — Qualquer Estado poderá, no acto da assinatura, da ratificação ou da adesão, declarar que a presente Convenção será extensível ao conjunto, ou apenas a um ou vários, dos territórios que representa a nível internacional. Esta declaração produzirá os seus efeitos a partir do momento da entrada em vigor da presente Convenção naquele Estado.

2 — Posteriormente, qualquer extensão desta natureza far-se-á através de notificação dirigida ao Secretário-Geral da Organização das Nações Unidas e produzirá os seus efeitos a partir do 90.º dia seguinte à data do recebimento da notificação pelo Secretário-Geral da Organização das Nações Unidas, ou na data de entrada em vigor da Convenção naquele Estado, se esta for posterior.

3 — No que respeita aos territórios aos quais não se aplica a presente Convenção na data da assinatura, da ratificação ou da adesão, cada Estado interessado examinará a possibilidade de tomar as medidas que desejar para estender a Convenção a esses territórios, sob reserva, se for caso disso, do acordo dos governos desses territórios quando exigido por razões constitucionais.

Artigo XI

As disposições seguintes aplicar-se-ão aos Estados federativos ou não unitários:

a) No que respeita aos artigos da presente Convenção que relevem da competência legislativa do poder federal, as obrigações do governo federal serão as mesmas que as dos Estados Contratantes que não sejam Estados federativos;

b) No que respeita aos artigos da presente Convenção que relevem da competência legislativa de cada um dos Estados ou províncias constituintes, que não sejam, em virtude do sistema constitucional da federação, obrigados a tomar medidas legislativas, o governo federal levará, o mais cedo possível, e com parecer favorável, os referidos artigos ao conhecimento das autoridades competentes dos Estados ou províncias constituintes;

c) Um Estado federativo Parte na presente Convenção comunicará, a pedido de qualquer outro Estado contratante, transmitido por intermédio do Secretário-Geral da Organização das Nações Unidas, uma exposição da legislação e das práticas em vigor na federação e nas suas unidades constituintes, no que respeita a qualquer disposição da Convenção, indicando qual o efeito dado a essa disposição através de uma acção legislativa ou outra.

Artigo XII

1 — A presente Convenção entrará em vigor no 90.º dia seguinte à data do depósito do terceiro instrumento de ratificação ou de adesão.

2 — Para cada Estado que ratificar a Convenção ou a ela aderir após o depósito do terceiro instrumento de ratificação ou de adesão, a Convenção entrará em vigor a partir do 90.º dia seguinte à data do depósito por esse Estado do seu instrumento de ratificação ou de adesão.

Artigo XIII

1 — Qualquer Estado contratante poderá denunciar a presente Convenção através de notificação escrita dirigida ao Secretário-Geral da Organização das Nações Unidas. A denúncia produzirá efeitos um ano após a data do recebimento da notificação pelo Secretário-Geral da Organização das Nações Unidas.

2 — Qualquer Estado que tenha feito uma declaração ou uma notificação, nos termos do artigo X, poderá notificar posteriormente o Secretário-Geral da Organização das Nações Unidas de que a Convenção cessará a sua aplicação no território em questão um ano após a data do recebimento desta notificação pelo Secretário-Geral.

3 — A presente Convenção continuará a ser aplicável às sentenças arbitrais relativamente às quais tiver sido iniciado um processo de reconhecimento ou de execução antes da entrada em vigor da denúncia.

Artigo XIV

Um Estado Contratante só se poderá prevalecer das disposições da presente Convenção contra outros Estados Contratantes na medida em que ele próprio esteja obrigado a aplicá-la.

Artigo XV

O Secretário-Geral da Organização das Nações Unidas notificará a todos os Estados referidos no artigo VIII:

a) As assinaturas e ratificações referidas no artigo VIII;
b) As adesões referidas no artigo IX;
c) As declarações e notificações referidas nos artigos I, X e XI;
d) A data de entrada em vigor da presente Convenção, nos termos do artigo XII;
e) As denúncias e notificações referidas no artigo XIII.

Artigo XVI

1 — A presente Convenção, cujas versões em inglês, chinês, espanhol, francês e russo são igualmente autênticas, será depositada nos arquivos da Organização das Nações Unidas.

2 — O Secretário-Geral da Organização das Nações Unidas enviará uma cópia autenticada da presente Convenção aos Estados referidos no artigo VIII.

PROTOCOL RELATING TO AN AMENDMENT TO ARTICLE 56 OF THE CONVENTION ON INTERNATIONAL CIVIL AVIATION

Signed at Montreal on 6 October 1989

The Assembly of the International Civil Aviation Organization:

Having met in its Twenty-seventh Session at Montreal on 6 October 1989;

Having noted that it is the general desire of Contracting States to enlarge the membership of the Air Navigation Commission;

Having considered it proper to increase the membership of that body from fifteen to nineteen; and

Having considered it necessary to amend, for the purpose aforesaid, the Convention on International Civil Aviation, done at Chicago on the seventh day of December 1944:

1 — Approves, in accordance with the provisions of article 94, *a*), of the Convention aforesaid, the following proposed amendment to the said Convention:

«In article 56 of the Convention the expression 'fifteen members' shall be replaced by 'nineteen members'.»

2 — Specifies, pursuant to the provisions of the said article 94, *a*), of the said Convention, one hundred and eight as the number of Contracting States upon whose ratification the aforesaid amendment shall come into force.

3 — Resolves that the Secretary General of the International Civil Aviation Organization shall draw up a Protocol, in the English, French, Russian an Spanish languages, each of which shall be of equal authenticity, embodying the amendment above-mentioned and the matters hereinafter appearing:

a) The Protocol shall be signed by the President of the Assembly and its Secretary General;

b) The Protocol shall be open to ratification by any State which has ratified or adhered to the said Convention on International Civil Aviation;

c) The instruments of ratification shall be deposited with the International Civil Aviation Organization;

d) The Protocol shall come into force in respect of the States that have ratified it on the date on which the one hundred and eighth instrument of ratification is so deposited;

e) The Secretary General shall immediately notify all Contracting States of the date of deposit of each ratification of the Protocol;

f) The Secretary shall immediately notify all States parties to the said Convention of the date on which the Protocol comes into force;

g) With respect to any Contracting State ratifying the Protocol after the date aforesaid, the Protocol shall come into force upon deposit of its instrument of ratification with the International Civil Aviation Organization.

Consequently, pursuant to the aforesaid action of the Assembly, this Protocol has been draw up by the Secretary General of the Organization.

In witness whereof, the President and the Secretary General of the aforesaid Twenty-seventh Session of the Assembly of the International Civil Aviation Organization, being authorized thereto by the Assembly, sign this Protocol.

Done at Montreal on the 6 day of October of the year one thousand nine hundred and eighty-nine, in a single document in the English, French, Russian and Spanish languages, each text being equally authentic. This Protocol shall remain deposited in the archives of the International Civil Aviation Organization, and certified copies thereof shall be transmitted by the Secretary General of the Organization to all States parties to the Convention on International Civil Aviation, done at Chicago on the seventh day of December 1944.

A. Alegría, President of the Twenty-seventh Session of the Assembly — *S. S. Sidhu,* Secretary General.

PROTOCOLE PORTANT AMENDEMENT DE L'ARTICLE 56 DE LA CONVENTION RELATIVE À L'AVIATION CIVILE INTERNATIONALE

Signé à Montréal le 6 octobre 1989

L'Assemblée de l'Organisation de l'aviation civile internationale:

S'étant réunie à Montréal le 6 octobre 1989, en sa vingt-septième session;

Ayant pris acte du désir général des États contractants d'augmenter le nombre des membres de la Commission de navigation aérienne;

Ayant jugé qu'il convenait de porter de quinze à dix-neuf le nombre des membres de cet organe;

Ayant jugé nécessaire d'amender à cette fin la Convention relative à l'aviation civile internationale faite à Chicago le septième jour de décembre 1944:

1 — Approuve, conformément aux dispositions de l'alinéa *a*) de l'article 94 de la Convention précitée, le projet suivant d'amendement de ladite Convention:

«Remplacer l'expression 'quinze membres' par 'dix-neuf membres' dans l'article 56 de la Convention.»

2 — Fixe à cent huit le nombre d'États contractants dont la ratification est nécessaire à l'entrée en vigueur dudit amendement, conformément aux dispositions de l'alinéa *a*) de l'article 94 de ladite Convention.

3 — Décide que le Secrétaire général de l'Organisation de l'aviation civile internationale établira dans les langues française, anglaise, espagnole e russe, chacune faisant également foi, un Protocole concernant l'amendement précité et comprenant les dispositions ci-dessous:

a) Le Protocole sera signé par le Président et par le Secrétaire général de l'Assemblée;

b) Il sera soumis à la ratification de tout État contractant qui a ratifié la Convention relative à l'aviation civile internationale ou y a adhéré;

c) Les instruments de ratification seront déposés auprès de l'Organisation de l'aviation civile internationale;

d) Le Protocole entrera en vigueur le jour du dépôt du cent huitième instrument de ratification à l'égard des États qui l'auront ratifié;

e) Le Secrétaire général notifiera immédiatement à tous les États contractants la date du dépôt de chaque instrument de ratification du Protocole;

f) Le Secrétaire général notifiera immédiatement à tous les États parties à ladite Convention la date à laquelle ledit Protocole entrera en vigueur;

g) Le Protocole entrera en vigueur, à l'égard de tout État contractant qui l'aura ratifié après la date précitée, dès que cet État aura déposé son instrument de ratification auprés de l'Organisation de l'aviation civile internationale.

En conséquence, conformément à la décision ci-dessous de l'Assemblée, le présent Protocole a été établi par le Secrétaire général de l'Organisation.

En foi de quoi, le Président et le Secrétaire général de la vingt-septième session de l'Assemblée de l'Organisation de l'aviation civile internationale, dûment autorisés à cet effet par l'Assemblée, ont apposé leur signature au présent Protocole.

Fait à Montréal le 6 octobre 1989 de l'an mil neuf cent quatre-vingt-neuf, en un seul document dans les langues française, anglaise, espagnole e russe, chacun des textes faisant également foi. Le présent Protocole sera déposé dans les archives de l'Organisation de l'aviation civile internationale et des copies certifiées conformes seront transmises par le Sécretaire général de l'Organisation à tous les États parties à la Convention relative à l'aviation civile internationale faite à Chicago le 7 décembre 1944.

A. Alegría, Président de la 27ᵉ session de l'Assemblée — *S. S. Sidhu,* Secrétaire général.

PROTOCOLO RELATIVO A UMA EMENDA AO ARTIGO 56.º DA CONVENÇÃO SOBRE AVIAÇÃO CIVIL INTERNACIONAL

Assinado em Montreal a 6 de Outubro de 1989

A Assembleia da Organização da Aviação Civil Internacional:

Reunida em Montreal na sua 27.ª Sessão, no dia 6 de Outubro de 1989;

Tendo em conta o desejo geral dos Estados Contratantes de aumentar o número de membros da Comissão de Navegação Aérea;

Considerando conveniente elevar de 15 para 19 o número de membros deste órgão; e

Considerando que, para o efeito, é necessário emendar a Convenção sobre a Aviação Civil Internacional, assinada em Chicago a 7 de Dezembro de 1944:

1 — Aprova, de acordo com o disposto na alínea *a*) do artigo 94.º da referida Convenção, o seguinte projecto de emenda àquela Convenção:

«Substituir a expressão '15 membros' por '19 membros', no artigo 56.º da Convenção.»

2 — Fixa em 108 o número de Estados Contratantes cuja ratificação é necessária para a entrada em vigor da referida emenda, de acordo com o disposto na alínea *a*) do artigo 94.º daquela Convenção.

3 — Decide que o Secretário-Geral da Organização da Aviação Civil Internacional redigirá em inglês, francês, espanhol e russo, fazendo cada um dos idiomas igual fé, um Protocolo relativo à emenda acima mencionada e compreendendo as seguintes disposições:

a) O Protocolo será assinado pelo Presidente e pelo Secretário-Geral da Assembleia;

b) O Protocolo ficará aberto para ratificação de qualquer Estado que tenha a referida Convenção sobre Aviação Civil Internacional ou a ela tenha aderido;

c) Os instrumentos de ratificação serão depositados junto da Organização da Aviação Civil Internacional;

d) O Protocolo entrará em vigor, em relação aos Estados que o tiverem ratificado, no dia do depósito do 108.º instrumento de ratificação;

e) O Secretário-Geral notificará imediatamente todos os Estados Contratantes da data de depósito de cada instrumento de ratificação do Protocolo;

f) O Secretário-Geral notificará imediatamente todos os Estados Partes da referida Convenção da data da entrada em vigor do Protocolo;

g) O Protocolo entrará em vigor em relação a qualquer Estado Contratante que o tiver ratificado após aquela data a partir do momento em que tal Estado depositar o respectivo instrumento de ratificação junto da Organização da Aviação Civil Internacional.

Em consequência, de acordo com a referida decisão da Assembleia, o presente Protocolo foi redigido pelo Secretário-Geral da Organização.

Em fé do que o Presidente e o Secretário-Geral da 27.ª Sessão da Assembleia da Organização da Aviação Civil Internacional, para esse efeito autorizados pela Assembleia, assinam o presente Protocolo.

Feito em Montreal, a 6 de Outubro de 1989, num só exemplar redigido em inglês, francês, espanhol e russo, fazendo cada idioma igual fé. O presente Protocolo ficará depositado nos arquivos da Organização da Aviação Civil Internacional, e o Secretário-Geral da Organização enviará cópias autenticadas a todos os Estados Partes da Convenção sobre Aviação Civil Internacional, assinada em Chicago a 7 de Dezembro de 1944.

PROTOCOL RELATING TO AN AMENDMENT TO THE CONVENTION ON INTERNATIONAL CIVIL AVIATION

The Assembly of the International Civil Aviation Organization:

Having met in its Twenty-third Session at Montreal on 6 October 1980;

Having noted Resolutions A21-22 and A22-28 on lease, charter and interchange of aircraft in international operations;

Having noted the draft amendment to the Convention on International Civil Aviation prepared by the 23rd Session of the Legal Committee;

Having noted that it is the general desire of Contracting States to make a provision for the transfer of certain functions and duties from the State of registry to the State of the operator of the aircraft in the case of lease, charter or interchange or any similar arrangements with respect to such aircraft;

Having considered it necessary to amend, for the purpose aforesaid, the Convention on International Civil Aviation done at Chicago on the seventh day of December 1944:

1 — Approves, in accordance with the provisions of article 94, *a*), of the Convention aforesaid, the following proposed amendment to the said Convention:

Insert after article 83 the following new article 83 bis:

«Article 83 bis

Transfer of certain functions and duties

a) Notwithstanding the provisions of articles 12, 30, 31 and 32, *a*), when an aircraft registered in a contracting State is operated pursuant to an agreement for the lease, charter or interchange of the aircraft or any similar arrangement by an operator who has his principal place of business or, if he has no such place of business, his permanent residence in another contracting State, the State of registry may, by agreement with such other State, transfer to it all or part of its functions and duties as State of registry in respect of that aircraft under articles 12, 30, 31 and 32, *a*). The State of registry shall be relieved of responsibility in respect of the functions and duties transferred.

b) The transfer shall not have effect in respect of other contracting States before either the agreement between States in which it is embodied has been registered with the Council and made public pursuant to article 83 or the existence and scope of the agreement have been directly communicated to the authorities of the other contracting State or States concerned by a State party to the agreement.

c) The provisions of paragraphs *a*) and *b*) above shall also be applicable to cases covered by article 77.»

2 — Specifies, pursuant to the provisions of the said article 94, *a*), of the said Convention, ninety-eight as the number of Contracting States upon whose ratification the proposed amendment aforesaid shall come into force.

3 — Resolves that the Secretary General of the International Civil Aviation Organization draw up a Protocol, in the English, French, Russian and Spanish languages, each of which shall be of equal authenticity, embodying the proposed amendment above-mentioned and the matter hereinafter appearing:

a) The Protocol shall be signed by the President of the Assembly and its Secretary General;

b) The Protocol shall be open to ratification by any State which has ratified or adhered to the said Convention on International Civil Aviation;

c) The instruments of ratification shall be deposited with the International Civil Aviation Organization;

d) The Protocol shall come into force in respect of the States which have ratified it in the date on which the ninety-eighth instrument of ratification is so deposited;

e) The Secretary General shall immediately notify all Contracting States of the date of deposit of each ratification of the Protocol;

f) The Secretary General shall immediately notify all States parties to the said Convention of the date on which the Protocol comes into force;

g) With respect to any Contracting State ratifying the Protocol after the date aforesaid, the Protocol shall come into force upon deposit of its instrument of ratification with the International Civil Aviation Organization.

Consequently, pursuant to the aforesaid action of the Assembly, this Protocol has been drawn up by the Secretary General of the Organization.

In witness whereof, the President and the Secretary General of the aforesaid Twenty-third Session of the Assembly of the International Civil Aviation Organization, being authorized thereto by the Assembly, sign this Protocol.

Done at Montreal on the sixth day of October of the year one thousand nine hundred and eighty, in a single document in the English, French, Russian and Spanish languages, each of which shall be of equal authenticity. This Protocol shall remain deposited in the archives of the International Civil Aviation Organization, and certified copies thereof shall be transmitted by the Secretary General of the Organization to all States parties to the Convention on International Civil Aviation done at Chicago on the seventh day of December 1944.

R. S. Nyaga, President of the 23rd Session of the Assembly — *Yves Lambert,* Secretary General.

PROTOCOLE PORTANT AMENDEMENT DE LA CONVENTION RELATIVE A L'AVIATION CIVILE INTERNATIONALE

L'Assemblée de l'Organisation de l'aviation civile internationale:

S'étant réunie à Montréal, le 6 octobre 1980, en sa vingt-troisième session;

Ayant pris acte des Résolutions A21-22 et A22-28 sur la location, l'affrètement et la banalisation d'aéronefs en exploitation internationale;

Ayant pris acte du projet d'amendement à la Convention relative à l'Aviation civile internationale établi par la 23ème session du Comité juridique;

Ayant pris acte du désir général des États contractants de permettre le transfert de certaines fonctions et obligations de l'État d'immatriculation à l'État de l'exploitant d'un aéronef en cas de location, d'affrètement ou de banalisation ou de tout arrangement similaire relatif audit aéronef;

Ayant estimé qu'il était nécessaire d'amender à cette fin la Convention relative à l'aviation civile internationale, faite à Chicago de 7 décembre 1944:

1 — Approuve, conformément aux dispositions de l'article 94, alinéa *a*), de ladite Convention, l'amendement ci-après qu'il est proposé d'apporter à ladite Convention:

Insérer après l'article 83 le nouvel article 83 bis ci-après:

«Article 83 bis

Transfert de certaines fonctions et obligations

a) Nonobstant les dispositions des articles 12, 30, 31 et 32, *a*), lorsqu'un aéronef immatriculé dans un État contractant est exploité en vertu d'un accord de location, d'affrètement ou de banalisation de l'aéronef, ou de tout autre arrangement similaire, par un exploitant qui a le siège principal de son exploitation, ou à défaut, sa résidence permanente dans un autre État contractant, l'État d'immatriculation peut, par accord avec cet autre État, transférer à celui-ci tout ou partie des fonctions et obligations que les articles 12, 30, 31 et 32, *a*), lui confèrent, à l'égard de cet aéronef, en sa qualité d'État d'immatriculation. L'État d'immatriculation sera dégagé de sa responsabilité en ce qui concerne les fonctions et obligations transférées.

b) Le transfert ne portera pas effet à l'égard des autres États contractants avant que l'accord dont il fait l'objet ait été enregistré au Conseil et rendu public conformément à l'article 83 ou que l'existence et la portée de l'accord aient été notifiées directement aux autorités de l'État ou des autres États contractants intéressés par un État partie à l'accord.

c) Les dispositions des alinéas *a*) et *b*) ci-dessus sont également applicables dans les cas envisagés à l'article 77.»

2 — Fixe, conformément aux dispositions dudit article 94, alinéa *a*), de ladite Convention, à quatre-vingt-dix-huit le nombre d'États contractants dont la ratification est nécessaire à l'entrée en vigueur dudit amendement.

3 — Décide que le Secrétaire général de l'Organisation de l'aviation civile internationale devra établir en langues française, anglaise, espagnole et russe, chacune faisant également foi, un Protocole concernant l'amendement précité et comprenant les dispositions ci-dessous:

a) Le Protocole sera signé par le Président et le Secrétaire général de l'Assemblée;

b) Le Protocole sera ouvert à la ratification de tout État qui aura ratifié la Convention relative à l'aviation civile internationale ou y aura adhéré;

c) Les instruments de ratification seront déposés auprès de l'Organisation de l'aviation civile internationale;

d) Le Protocole entrera en vigueur à l'égard des États qui l'auront ratifié le jour du dépôt du quatre-vingt-dix-huitième instrument de ratification;

e) Le Secrétaire général notifiera immédiatement à tous les États contractants la date du dépôt de chaque instrument de ratification du Protocole;

f) Le Secrétaire général notifiera immédiatement à tous les États qui sont parties à ladite Convention la date à laquelle ledit Protocole entrera en vigueur;

g) Le Protocole entrera en vigueur, à l'égard de tout État contractant qui l'aura ratifié après la date précitée, dès que cet État aura déposé son instrument de ratification auprès de l'Organisation de l'aviation civile internationale.

En conséquence, conformément à la décision ci-dessus de l'Assemblée, le présent Protocole a été établi par le Secrétaire générale de l'Organisation.

En foi de quoi, le Président et le Secrétaire général de la vingt-troisième session de l'Assemblée de l'Organisation de l'aviation civile internationale, dûment autorisés à cet effet par l'Assemblée, ont apposé leur signature au présent Protocole.

Fait à Montréal le six octobre de l'an mil neuf cent quatre-vingt, en un seul document dans les langues française, anglaise, espagnole et russe, chacun des textes faisant également foi. Le présent Protocole sera déposé dans les archives de l'Organisation de l'aviation civile internationale et des copies certifiées conformes seront transmises par le Secrétaire général de l'Organisation à tous les États parties à la Convention relative à l'aviation civile internationale, faite à Chicago le 7 décembre 1944.

R. S. Nyaga, Président de la 23ème session de l'Assemblée — *Yves Lambert,* Secrétaire général.

PROTOCOLO RELATIVO A UMA EMENDA À CONVENÇÃO SOBRE AVIAÇÃO CIVIL INTERNACIONAL

A Assembleia da Organização da Aviação Civil Internacional:

Reunida na sua 23.ª Sessão, em Montréal, em 6 de Outubro de 1980;

Tendo em conta as Resoluções A21-22 e A22-28, sobre o aluguer, fretamento e intercâmbio de aeronaves em operações internacionais;

Tendo em conta o projecto de emenda à Convenção sobre Aviação Civil Internacional elaborado pela 23.ª Sessão do Comité Jurídico;

Tendo em conta o desejo geral dos Estados Contratantes de permitirem a transferência de certas funções e obrigações do Estado de matrícula para o Estado do operador da aeronave em caso de aluguer, fretamento ou intercâmbio, ou quaisquer arranjos similares relativos àquela aeronave;

Considerando necessário emendar, para os efeitos acima mencionados, a Convenção sobre Aviação Civil Internacional, assinada em Chicago a 7 de Dezembro de 1944:

1 — Aprova, em conformidade com as disposições da alínea *a*) do artigo 94.º da referida Convenção, o seguinte projecto de emenda àquela Convenção:

Inserir depois do artigo 83.º o seguinte novo artigo 83.º-bis:

«Artigo 83.º-bis

Transferência de certas funções e obrigações

a) Não obstante o disposto nos artigos 12.º, 30.º, 31.º e 32.º, alínea *a*), quando uma aeronave matriculada num Estado Contratante é explorada em conformidade com um contrato de aluguer, fretamento ou intercâmbio de aeronaves, ou qualquer arranjo similar, por um operador que tenha a sede das suas operações, ou, na falta desta, a sua residência permanente noutro Estado Contratante, o Estado de matrícula, mediante acordo com esse outro Estado, poderá transferir para o mesmo todas ou parte das funções e obrigações que os artigos 12.º, 30.º, 31.º e 32.º, alínea *a*), lhe conferem, relativamente àquela aeronave, na sua qualidade de Estado de matrícula. O Estado de matrícula será eximido da sua responsabilidade em relação às funções e obrigações transferidas.

b) A transferência não produzirá efeitos relativamente aos outros Estados Contratantes enquanto o acordo de que é objecto não tiver sido registado no Conselho e tornado público em conformidade com o artigo 83.º, ou enquanto um Estado Parte no referido acordo não tiver comunicado a existência e o alcance do acordo directamente aos outros Estados Contratantes interessados.

c) As disposições das alíneas *a*) e *b*) anteriores são igualmente aplicáveis nos casos previstos no artigo 77.º»

2 — Fixa, em conformidade com as disposições da alínea *a*) do artigo 94.º da referida Convenção, em 98 o número de Estados Contratantes cuja ratificação é necessária para que a emenda proposta entre em vigor.

3 — Decide que o Secretário-Geral da Organização da Aviação Civil Internacional redija em inglês, francês, espanhol e russo, fazendo cada um dos idiomas igual fé, um Protocolo relativo à emenda acima mencionada, e compreendendo as seguintes disposições:

a) O Protocolo será assinado pelo Presidente e pelo Secretário Geral da Assembleia;

b) O Protocolo ficará aberto para ratificação de qualquer Estado que tenha ratificado a Convenção sobre Aviação Civil Internacional ou a ela tenha aderido;

c) Os instrumentos de ratificação serão depositados junto da Organização da Aviação Civil Internacional;

d) O Protocolo entrará em vigor, em relação aos Estados que o tiverem ratificado, no dia do depósito do 98.º instrumento de ratificação;

e) O Secretário-Geral notificará imediatamente todos os Estados Contratantes da data de depósito de cada instrumento de ratificação do Protocolo;

f) O Secretário-Geral notificará imediatamente todos os Estados Partes da referida Convenção da data de entrada em vigor do Protocolo;

g) O Protocolo entrará em vigor, em relação a qualquer Estado Contratante que o ratificar depois da data acima mencionada, quando esse Estado depositar o seu instrumento de ratificação junto da Organização da Aviação Civil Internacional.

Em consequência, de acordo com a referida decisão da Assembleia, o presente Protocolo foi redigido pelo Secretário-Geral da Organização.

Em fé do que o Presidente e o Secretário-Geral da referida 23.ª Sessão da Assembleia da Organização da Aviação Civil Internacional, para o efeito autorizados pela Assembleia, assinam o presente Protocolo.

Feito em Montréal a 6 de Outubro de 1980, num só exemplar, redigido em inglês, francês, espanhol e russo, fazendo cada idioma igual fé. O presente Protocolo ficará depositado nos arquivos da Organização da Aviação Civil Internacional, e o Secretário-Geral desta Organização enviará cópias autenticadas a todos os Estados Partes da Convenção sobre Aviação Civil Internacional, assinada em Chicago em 7 de Dezembro de 1944.

(A versão da língua chinesa do presente texto será publicada logo que possível.)

PRESIDÊNCIA DA REPÚBLICA

Decreto do Presidente da República n.º 183/99

de 28 de Agosto

O Presidente da República decreta, nos termos do artigo 292.º, n.º 1, da Constituição e dos artigos 3.º, n.ºs 2 e 3, 69.º e 70.º do Estatuto Orgânico de Macau, o seguinte:

É estendida ao território de Macau, nos mesmos termos em que a ela está vinculado o Estado Português, a Convenção sobre as Substâncias Psicotrópicas, de 21 de Fevereiro de 1971,

共和國總統府

共和國總統令 第183/99號

八月二十八日

共和國總統根據《憲法》第二百九十二條第一款及《澳門組織章程》第三條第二款及第三款、第六十九條及第七十條之規定，命令如下：

將一九七一年二月二十一日之《精神藥物公約》延伸至澳門地區，按照葡萄牙政府受該公約約束之相同規定適用；

aprovada pelo Decreto n.º 10/79, de 30 de Janeiro, cujo texto foi publicado no *Diário da República*, 1.ª série, de 30 de Janeiro de 1979.

Foram ouvidos os órgãos de governo próprio do território de Macau.

Assinado em 20 de Agosto de 1999.

Publique-se no *Boletim Oficial* de Macau, em conjunto com os referidos decreto de aprovação e texto da Convenção.

O Presidente da República, JORGE SAMPAIO.

(D.R. n.º 201, I Série-A, de 28 de Agosto de 1999)

MINISTÉRIO DOS NEGÓCIOS ESTRANGEIROS

Direcção-Geral dos Negócios Políticos

Decreto n.º 10/79

de 30 de Janeiro

Usando da faculdade conferida pelo artigo 200.º, n.º 1, alínea *c*), da Constituição da República Portuguesa, o Governo decreta o seguinte:

Artigo único. É aprovada, para adesão, a Convenção sobre as Substâncias Psicotrópicas, de 1971, aberta para assinatura em Viena em 21 de Fevereiro de 1971, cujo texto, em francês, e respectiva tradução, em português, vão anexos ao presente decreto.

Visto e aprovado em Conselho de Ministros. — *Carlos Alberto da Mota Pinto — João Carlos Lopes Cardoso de Freitas Cruz.*

Promulgado em 2 de Janeiro de 1979.

Publique-se.

O Presidente da República, ANTÓNIO RAMALHO EANES.

(D.R. n.º 25, I Série, de 30 de Janeiro de 1979)

CONVENTION SUR LES SUBSTANCES PSYCHOTROPES

Préambule

Les Parties,

Soucieuses de la santé physique et morale de l'humanité,

Préoccupées par le problème de santé publique et le problème social qui résultant de l'abus de certaines substances psychotropes,

Déterminées à prévenir et à combattre l'abus de ces substances et le trafic illicite auquel il donne lieu,

Considérant qu'il est nécessaire de prendre des mesures rigoureuses pour limiter l'usage de ces substances à des fins légitimes,

Reconnaissant que l'utilisation des substances psychotropes à des fins médicales et scientifiques est indispensable et que la possibilité de se procurer des substances à ces fins ne devrait faire l'objet d'aucune restriction injustifiée,

Croyant que pour être efficaces les mesures prises contre l'abus de ces substances doivent être coordonnées et universelles,

Reconnaissant la compétence de l'Organisation des Nations Unies en matière de contrôle des substances psychotropes et désirant que les organes internationaux intéressés exercent leur activité dans le cadre de cette Organisation,

Convaincues qu'une convention internationale est nécessaire pour réaliser ces fins,

conviennent de ce qui suit:

ARTICLE PREMIER

expressions suivantes ont dans la présente Convention les significations indiquées ci-dessous:

a) L'expression «Conseil» désigne le Conseil économique et social des Nations Unies;

b) L'expression «Commission» désigne la Commission des stupéfiants du Conseil;

c) L'expression «Organe» désigne l'Organe internationale de contrôle des stupéfiants institué en vertu de la Convention unique sur les stupéfiants de 1961;

d) L'expression «Secrétaire général» désigne le Secrétaire général de l'Organisation des Nations Unies;

e) L'expression «substance psychotrope» désigne toute substance, qu'elle soit d'origine naturelle ou synthétique, ou tout produit naturel du tableau I, II, III ou IV;

f) L'expression «préparation» désigne:

i) Une solution ou un mélange, quel que soit son état physique, contenant une ou plusieurs substances psychotropes, ou

ii) Une ou plusieurs substances psychotropes divisées en unités de prise;

g) Les expressions «tableau I», «tableau II», tableau III» et «tableau IV» désignent les listes de substances psychotropes portant les numéros correspondants, annexées à la présente Convention, qui pourront être modiffées, conformément à l'article 2;

h) Les expressions «exportation» et «importation» désignent, chacune dans son acception particulière, le transfert matériel d'une substance psychotrope d'un État dans un autre État;

i) L'expression «fabrication» désigne toutes les opérations permettant d'obtenir des substances psychotropes, et comprend la purification et la transformation de substances psychotropes en d'autres substances psychotropes. Cette expression comprend aussi la fabrication de préparations autres que celles qui sont faites, sur ordonnance, dans une pharmacie;

j) L'expression «trafic illicite» désigne la fabrication ou le trafic de substances psychotropes, effectués contrairement aux dispositions de la présente Convention;

k) L'expression «région» désigne toute partie d'un État qui, en vertu de l'article 28, est traitée comme une entité distincte aux fins de la présente Convention;

l) L'expression «locaux» désigne les bâtiments, les parties de bâtiments ainsi que le terrain affecté auxdits bâtiments ou aux parties desdits bâtiments.

ARTICLE 2

Champ d'application du contrôle des substances

1 — Si une Partie ou l'Organisation mondiale de la santé est en possession de renseignements se rapportant à une substance non encore soumise au contrôle international qui, à son avis, peuvent rendre nécessaire son adjonction à l'un des tableaux de la présente Convention, elle adressera au Secrétaire général une notification, accompagnée de tous les renseignements pertinents à l'appui. Cette procédure sera de même appliquée lorsqu'une Partie ou l'Organisation mondiale de la santé sera en possession de renseignements qui justifient le transfert d'une substance d'un tableau à un autre, ou la suppression de son inscription à l'un des tableaux.

2 — Le Secrétaire général communiquera cette notification, ainsi que les renseignements qu'il jugera pertinents, aux Parties, à la Commission et, si la notification a été faite par une Partie, à l'Organisation mondiale de la santé.

3 — S'il résulte des reseignements accompagnant cette notification que ladite substance est susceptible d'être inscrite au tableau I ou au tableau II en vertu du paragraphe 4, les Parties examineront, à la lumière de tous les renseignements dont elles disposeront, la possibilité d'appliquer à titre provisoire à cette substance toutes les mesures de contrôle aplicables aux substances du tableau I ou du tableau II, selon le cas.

4 — Si l'Organisation mondiale de la santé constate:

a) Que ladite substance peut provoquer:

i) 1) Un état de dépendance, et

2) Une stimulation ou une dépression du système nerveux central donnant lieu à des hallucinations ou à des troubles de la fonction motrice ou du jugement ou du comportement ou de la perception ou de l'humeur, ou

ii) Des abus et des effets nocifs comparables à ceux d'une substance du tableau I, II, III ou IV, et

b) Qu'il existe des raisons suffisantes de croire que la substance donne ou risque de donner lieu à des abus tels qu'elle constitue un problème de santé publique et un problème social justifiant qu'elle soit placée sous contrôle international,

elle comuniquera à la Commission une évaluation de cette substance, où elle indiquera notamment la mesure dans laquelle la substance donne ou risque de donner lieu à des abus, le degré de gravité du problème de santé publique et du problème social et le degré d'utilité de la substance en thérapeutique, ainsi que des recommandations sur les mesures éventuelles de contrôle auxquelles il serait opportun de l'assujettir à la lumière de cette évaluation.

5 — Tenant compte de la communication de l'Organisation mondiale de la santé, dont les évaluations seront déterminantes en matière médicale et scientifique, et prenant en considération les facteurs d'ordre économique, social, juridique, administratif et tous autres facteurs qu'elle pourra juger pertinents, la Commission pourra ajouter ladite substance au tableau I, II III ou IV. Elle pourra demander des renseignements complémentaires à l'Organisation mondiale de la santé ou à d'autres sources appropriées.

6 — Si une notification faite en vertu du paragraphe 1 a trait à une substance déjà inscrite à l'un des tableaux, l'Organisation mondiale de la santé transmettra à la Commission ses nouvelles constatations ainsi que toute nouvelle évaluation de cette substance qu'elle pourra faire conformément aux dispositions du paragraphe 4 et toutes nouvelles recommandations portant sur des mesures de contrôle

qui pourront lui paraître appropriées à la lumière de ladite évaluation. La Commission, tenant compte de la communication reçue de l'Organisation mondiale de la santé conformément au paragraphe 5, ainsi que des facteurs énumérés dans ledit paragraphe, pourra décider de transférer cette substance d'un tableau à un autre, ou de supprimer son inscription aux tableaux.

7 — Toute décision de la Commission prise en vertu du présent article sera communiquée par le Secrétaire général à tous les États Membres de l'Organisation des Nations Unies, aux États non membres Parties à la présente Convention, à l'Organisation mondiale de la santé et à l'Organe. Cette décision prendra pleinement effet pour chaque Partie cent-quatre-vingts jours après la date de la communication, sauf pour une Partie qui, pendant cette période, et au sujet d'une décision ayant pour effet d'ajouter une substance à un tableau, aura informé par écrit le Secrétaire général qu'en raison de circonstances exceptionnelles elle n'est pas en mesure de soumettre cette substance à toutes les dispositions de la Convention applicables aux substances de ce tableau. Une telle notification exposera les motifs de cette décision exceptionnelle. Nonobstant cette notification, chaque Partie devra appliquer au minimum les mesures de contrôle énumérées ci-après.

a) La Partie qui a notifié au Secrétaire général une telle décision au sujet d'une substance jusque-là non soumise au contrôle et ajoutée au tableau I, tiendra compte, autant que possible, des mesures de contrôle spéciales énumérées à l'article 7 et, en ce qui concerne cette substance, devra:

i) Exiger des licences pour sa fabrication, son commerce et sa distribution, conformément aux dispositions prévues par l'article 8 pour les substances du tableau II;

ii) Exiger qu'elle ne soit fournie ou dispensée que sur ordennance médicale, conformément aux dispositions prévues par l'article 9 pour les substances du tableau II;

iii) Se conformer aux obligations relatives à l'exportation et à l'importation énoncées à l'article 12, sauf à l'égard d'une notification autre Partie ayant adressé au Secrétaire général une notification au sujet de la substance en question;

iv) Se conformer aux obligations énoncées pour les substances du tableau II à l'article 13, portant interdiction ou restrictions à l'exportation et à l'importation;

v) Fournir à l'Organe des rapports statistiques conformément aux dispositions de l'alinéa *a*) du paragraphe 4 de l'article 16; et

vi) Prendre des mesures conformes aux dispositions de l'article 22 en vue de réprimer tout acte contraire aux lois ou règlements adoptés en exécution des obligations ci-dessus.

b) La Partie qui a notifié au Secrétaire général une telle décision au sujet d'une substance jusque-là non soumise au contrôle et ajoutée au tableau II devra, en ce qui concerne cette substance:

i) Exiger des licences pour sa fabrication, son commerce et sa distribution, conformément aux dispositions de l'article 8;

ii) Exiger qu'elle ne soit fournie ou dispensée que sur ordonnance médicale, conformément aux dispositions de l'article 9;

iii) Se conformer aux obligations relatives à l'exportation et à l'importation énoncées à l'article 12, sauf à l'égard d'une autre Partie ayant adressé au Secrétaire général une notification au sujet de la substance en question;

iv) Se conformer aux obligations énoncées à l'article 13, portant interdiction ou restrictions à l'exportation et à l'importation;

v) Fournir à l'Organe des rapports statistiques conformément aux dispositions des alinéas *a*), *c*) et *d*) du paragraphe 4 de l'article 16; et

vi) Prendre des mesures conformes aux dispositions de l'article 22 en vue de réprimer tout acte contraire aux lois ou règlements adoptés en exécution des obligations ci-dessus.

c) La Partie qui a notifié au Secrétaire général une telle décision au sujet d'une substance jusque-là non soumise au contrôle et ajoutée au tableau III devra, en ce qui concerne cette substance:

i) Exiger des licences pour sa fabrication, son commerce et sa distribution, conformément aux dispositions de l'article 8;

ii) Exiger qu'elle ne soit fournie ou dispensée que sur ordennance médicale, conformément aux dispositions de l'article 9;

iii) Se conformer aux obligations relatives à l'exportation énoncées à l'article 12, sauf à l'égard d'une autre Partie ayant adressé au Secrétaire général une notification au sujet de la substance en question;

iv) Se conformer aux obligations énoncées à l'article 13, portant interdiction ou restrictions à l'exportation et à l'importation; et

v) Prendre des mesures conformes aux dispositions de l'article 22 en vue de réprimer tout acte contraire aux lois ou règlements adoptés en exécution des obligations ci-dessus.

d) La Partie qui a notifié au Secrétaire général une telle décision au sujet d'une substance jusque-là non soumise au contrôle et ajoutée au tableau IV devra, en ce qui concerne cette substance:

i) Exiger des licences pour sa fabrication, son commerce et sa distribution, conformément aux dispositions de l'article 8;

ii) Se conformer aux obligations énoncées à l'article 13, portant interdiction ou restrictions à l'exportation et à l'importation; et

iii) Prendre des mesures conformes aux dispositions de l'article 22 en vue de réprimer tout acte contraire aux lois ou règlements adoptés en exécution des obligations ci-dessus.

e) La Partie qui a notifié au Secrétaire général une telle décision au sujet d'une substance transférée à un tableau auquel s'appliquent des mesures de contrôle et des obligations plus strictes appliquera au minimum l'ensemble des dispositions de la présente Convention applicables au tableau d'où elle a été transférée.

8 — *a*) Les décisions de la Commission prises en vertu du présent article seront sujettes à revision par le Conseil si une Partie en formule la demande dans les cent-quatre-vingts jours suivant la réception de la notification de la décision. La demande de revision devra être adressée au Secrétaire général en même temps que tous les renseignements pertinents qui l'auront motivée.

b) Le Secrétaire général communiquera copie de la demande de revision et des renseignements perti-

nents à la Commission à l'Organisation mondiale de la santé et à toutes les Parties, en les invitant à lui communiquer leurs observations dans un délai de quatre-vingt-dix jours. Toutes les observations ainsi reçues seront soumises à l'examen du Conseil.

c) Le Conseil peut confirmer modifier ou annuler la décision de la Commission. Sa décision sera notifiée à tous les États Membres de l'Organisation des Nations Unies, aux États non membres Parties à la présente Convention, à la Commission, à l'Organisation mondiale de la santé et à l'Organe.

d) Au cours de la procédure de revision, la décision originale de la Commission restera en vigueur, sous réserve des dispositions du paragraphe 7.

9 — Les Parties feront tout ce qui est en leur pouvoir afin de soumettre à des mesures de surveillance autant que faire se pourra les substances qui ne sont pas visées par la présente Convention, mais qui peuvent être utilisées pour la fabrication illicite de substances psychotropes.

ARTICLE 3

Dispositions particulières relatives au contrôle des préparations

1 — Sous réserve de ce qui est stipulé aux paragraphes suivants du présent article, une préparation est soumise aux mêmes mesures de contrôle que la substance psychotrope qu'elle contient, et, si elle contient plus d'une telle substance, aux mesures applicables à celle de ces substances qui est le plus strictement contrôlée.

2 — Si une préparation qui contient une substance psychotrope autre qu'une substance du tableau I est composée de telle manière qu'elle ne présente qu'un risque d'abus négligeable ou nul, et que la substance ne peut pas être récupérée en quantité pouvant donner lieu à des abus, par des moyens facilement applicables, et qu'en conséquence cette préparation ne crée, ni un problème pour la santé publique, ni un problème social, ladite préparation pourra être exemptée de certaines des mesures de contrôle énoncées dans la présente Convention, conformément au paragraphe 3.

3 — Si une Partie constate qu'une préparation relève des dispositions du paragraphe précédent, elle peut décider de l'exempter, dans son pays ou dans l'une de ses régions, d'une ou de toutes les mesures de contrôle prévues dans la présente Convention; toutefois ladite préparation demeurera soumise aux obligations énoncées dans les articles suivants:

a) Article 8 (licences), en ce qu'il s'applique à la fabrication;

b) Article 11 (enregistrement), en ce qu'il s'applique aux préparations exemptées;

c) Article 13 (interdiction et restrictions à l'exportation et à l'importation);

d) Article 15 (inspection), en ce qu'il s'applique à la fabrication;

e) Article 16 (renseignements à fournir par les Parties), en ce qu'il s'applique aux préparations exemptées; et

f) Article 22 (dispositions pénales), dans la mesure nécessaire à la répression d'actes contraires aux lois ou règlements adoptés conformément aux obligations ci-dessus.

Ladite Partie notifiera au Secrétaire général toutes décisions de ce genre, ainsi que le nom et la composition de la préparation exemptée, et les mesures de contrôle dont celle-ci est exemptée. Le Secrétaire général transmettra la notification aux autres Parties, à l'Organisation mondiale de la santé et à l'Organe.

4 — Si une Partie ou l'Organisation mondiale de la santé a des informations sur une préparation exemptée en vertu du paragraphe 3, qui, à son avis, justifient la suppression complète ou partielle de l'exemption, elle les notifiera au Secrétaire général et lui fournira les informations à l'appui de cette notification. Le Secrétaire général transmettra cette notification, accompagnée de toute information qu'il jugera pertinente, aux Parties, à la Commission et, lorsque la notification sera faite par une Partie, à l'Organisation mondiale de la santé. L'Organisation mondiale de la santé communiquera à la Commission une évaluation de la préparation prenant en considération les facteurs énumérés au paragraphe 2, ainsi qu'une recommandation relative aux mesures de contrôle dont la préparation devrait éventuellement cesser d'être exemptée. La Commission, tenant compte de la communication de l'Organisation mondiale de la santé, dont l'évaluation sera déterminante en matière médicale et scientifique, et prenant en considération les facteurs d'ordre économique, social, juridique, administratif et autres, qu'elle pourra juger pertinents, pourra décider que la préparation cessera d'être exemptée d'une ou de toutes les mesures de contrôle. Le Secrétaire général communiquera toute décision de la Commission prise en vertu du présent paragraphe à tous les États Membres de l'Organisation des Nations Unies, aux États non membres Parties à la présente Convention, à l'Organisation mondiale de la santé et à l'Organe. Toutes les Parties prendront des dispositions en vue de supprimer l'exemption de la ou des mesures de contrôle en question dans un délai de cent-quatre-vingts jours à compter de la date de la communication du Secrétaire général.

ARTICLE 4

Autres dispositions particulières relatives au champ d'application du contrôle

En ce qui concerne les substances psychotropes autres que celles du tableau I, les Parties pourront autoriser:

a) Le transport par les voyageurs internationaux de petites quantités de préparations pour leur usage personnel; chaque Partie pourra cependant s'assurer que ces préparations ont été légalement obtenues;

b) L'emploi de ces substances dans l'industrie pour la fabrication de substances ou produits non psychotropes, sous réserve que leur soient appliquées les mesures de contrôle requises par la présente Convention jusqu'à ce que l'état des substances psychotropes soit tel qu'elles ne puissent pas, dans la pratique, donner lieu à des abus ou être récupérées; et

c) L'utilisation de ces substances, sous réserve que leur soient appliquées les mesures de contrôle requises par la présente Convention, pour la capture d'animaux par des personnes expressément autorisées par les autorités compétentes à utiliser lesdites substances à cet effet.

ARTICLE 5

Limitation de l'utilisation aux fins médicales et scientifiques

1 — Chaque Partie limitera l'utilisation des substances du tableau I ainsi qu'il est prévu à l'article 7.

2 — Chaque Partie devra, sous réserve des dispositions de l'article 4, limiter, par les mesures qu'elle jugera appropriées, la fabrication, l'exportation, l'importation, la distribution, les stocks, le commerce, l'emploi et la détention de substances des tableaux II, III et IV aux fins médicales et scientifiques.

3 — Il est souhaitable que les Parties n'autorisent pas la détention de substances des tableaux II, III et IV, sauf dans les conditions prévues par la loi.

ARTICLE 6

Administration spéciale

Il est souhaitable qu'à effet d'appliquer les dispositions de la présente Convention chaque Partie institue et entretienne une administration spéciale. Il peut y avoir avantage à ce que cette administration soit la même que l'administration spéciale qui a été instituée en vertu des dispositions des conventions soumettant les stupéfiants à un contrôle, ou qu'elle travaille en étroit collaboration avec cette administration spéciale.

ARTICLE 7

Dispositions spéciales visant les substances du tableau I

En ce qui concerne les substances du tableau I, les Parties devront:

a) Interdire toute utilisation de ces substances, sauf à des fins scientifiques ou à des fins médicales très limitées, par des personnes dûment autorisées qui travaillent dans des établissements médicaux ou scientifiques relevant directement de leurs gouvernements ou expressément autorisés par eux;

b) Exiger que la fabrication, le commerce, la distribution et la détention de ces substances soient subordonnés à la possession d'une licence spéciale ou d'une autorisation préalable;

c) Prévoir une surveillance étroit des activités et des actes mentionnés aux alinéas *a*) et *b*);

d) Ne permettre de délivrer à une personne dûment autorisée que la quantité de ces substances nécessaire aux fins pour lesquelles l'autorisation a été accordée;

e) Exiger que les personnes exerçant des fonctions médicales et scientifiques enregistrent l'acquisition de ces substances et les détails de leur utilisation, lesdits enregistrements devant être conservés pendant au moins deux ans après la dernière utilisation qui y aura été consignée; et

f) Interdire l'exportation et l'importation de ces substances sauf lorsque l'exportateur et l'importateur seront l'un et l'autre l'autorité ou l'administration compétente du pays ou de la région exportateurs et importateurs, respectivement, ou d'autres personnes ou entreprises que les autorités compétentes de leurs pays ou régions auront expressément autorisées à cet effet. Les exigences prévues au paragraphe 1 de l'article 12 en ce qui concerne les autorisations d'exportation et d'importation pour les substances du tableau II s'appliqueront également aux substances du tableau I.

ARTICLE 8

Licences

1 — Les Parties exigeront une licence ou autre mesure de contrôle similaire pour la fabrication, le commerce (y compris le commerce d'exportation et d'importation) et la distribution des substances des tableaux II, III et IV.

2 — Les Parties:

a) Exerceront une surveillance sur toutes les personnes et entreprises dûment autorisées se livrant à la fabrication, au comerce (y compris le commerce d'exportation et d'importation) ou à la distribution des substances visées au paragraphe 1;

b) Soumettront à un régime de licence ou autre mesure de contrôle similaire les établissements et les locaux dans lesquels cette fabrication, ce commerce ou cette distribution peuvent se faire; et

c) Feront en sorte que des mesures de sécurité soient prises pour ces établissements et ces locaux, de manière à prévenir les vols ou autres détournements de stocks.

3 — Les dispositions des paragraphes 1 et 2 du présent article concernant le régime de licence ou autres mesures de contrôle similaires ne s'appliqueront pas nécessairement aux personnes dûment autorisées à exercer des fonctions thérapeutiques ou scientifiques et agissant dans l'exercice de ces fonctions.

4 — Les Parties exigeront que toutes les personnes à qui des licences sont délivrées en application de la présent Convention ou qui possèdent des autorisations équivalentes conformément aux dispositions prévues au paragraphe 1 du présent article ou à l'alinéa *b*) de article 7 soient dûment qualifiées pour appliquer effectivement et fidèlement les dispositions des lois et réglements adoptés en exécution de la présent Convention.

ARTICLE 9

Ordonnances médicales

1 — Les Parties exigeront que les substances des tableaux II, III et IV ne soient fournies ou dispensées pour être utilisées par des particuliers que sur ordonnance médicale, sauf dans les cas où des particuliers peuvent légalment obtenir, utiliser, dispenser ou administrer ces substances dans l'exercice dûment autorisé de fonctions thérapeutiques ou scientifiques.

2 — Les Parties prendront les mesures nécessaires pour que les ordonnances prescrivant des substances des tableaux II, III et IV soient délivrées conformément à la pratique médicale et soumises, en ce qui concerne notamment le nombre des renouvellements possibles et la durée de leur validité, à une réglementation qui assure la protection de la santé et de l'intérêt publics.

3 — Nonobstant les dispositions du paragraphe 1, une Partie peut si, à son avis, la situation locale l'exige et dans les conditions qu'elle pourra prescrire, y compris en matière d'enregistrement, autoriser les pharmaciens sous licence ou tous autres distributeurs de détail sous licence désignés par les autorités chargées de la santé publique dans son pays ou une partie de celui-ci, à fournir, à leur discrétion et sans ordonnance, pour être utilisées par des particuliers dans des cas exceptionnels et à des fins médicales, de petites quantités de substances des tableaux III et IV, dans les limites que les Parties définiront.

ARTICLE 10

Mises en garde à porter sur le conditionnement et annonces publicitaires

1 — Chaque Partie exigera, compte tenu des réglementations ou recommandations pertinentes de l'Organisation mondiale de la santé, que soient indiqués sur les étiquettes, lorsqu'il sera possible de le faire et de toute façon sur la notice accompagnant le conditionnement pour la distribution au détail des substances psychotropes, le mode d'emploi ainsi que les précautions à prendre et les mises en garde qui sont nécessaires, à son avis, pour la sécurité de l'usager.

2 — Chaque Partie, tenant dûment compte des dispositions de sa constitution, interdira les annonces publicitaires ayant trait aux substances psychotropes et destinées au grand public.

ARTICLE 11

Enregistrement

1 — Les Parties exigeront que, pour les substances du tableau I, les fabricants et toutes autres personnes autorisées en vertu de l'article 7 à faire le commerce de ces substances et à les distribuer procèdent à l'enregistrement, dans les conditions déterminées par chaque Partie, de manière à faire apparaître, de façon précise, les quantités fabriquées ou détenues en stock ainsi que pour chaque acquisition et pour chaque cession, la quantité, la date et les noms du fournisseur et de l'acquéreur.

2 — Les Parties exigeront que, pour les substances des tableaux II et III, les fabricants, les distributeurs de gros, les exportateurs et les importateurs procèdent à l'enregistrement dans les conditions déterminées par chaque Partie, de manière à faire apparaître de façon précise, les quantités fabriquées ainsi que, pour chaque acquisition et pour chaque cession, la quantité, la date et les noms du fournisseur et de l'acquéreur.

3 — Les Parties exigeront que, pour les substances du tableau II, les distributeurs de détail, les établissements hospitaliers, les centres de traitement et les institutions scientifiques procèdent à l'enregistrement dans les conditions déterminées pour chaque Partie, de manière à faire apparaître, de façon précise, pour chaque acquisition et pour chaque cession, la quantité, la date et les noms du fournisseur et de l'acquéreur.

4 — Les Parties veilleront, par des méthodes appropriées et en tenant compte des pratiques professionnelles et commerciales qui leur sont propres, à ce que les informations relatives à l'acquisition et à la cession de substances du tableau III par des distributeurs de détail, des établissements hospitaliers, des centres de traitement et des institutions scientifiques puissent être facilement consultées.

5 — Les Parties exigeront que, pour les substances du tableau IV, les fabricants, les exportateurs et les importateurs procèdent à l'enregistrement, dans les conditions déterminées par chaque Partie, de manière à faire apparaître les quantités fabriquées, exportées et importées.

6 — Les Parties exigeront des fabricants de préparations exemptées conformément au paragraphe 3 de l'article 3 qu'ils enregistrent la quantité de chaque substance psychotrope utilisée dans la fabrication d'une préparation exemptée, la nature et la quantité totale de la préparation exemptée fabriquée à partir de cette substance, ainsi que les mentions relatives à la première cession de ladite préparation.

7 — Les Parties veilleront à ce que les enregistrements et les informations visées au présent article et qui sont nécessaires à l'établissement des rapports prévus à l'article 16, soient conservés pendant deux ans au moins.

ARTICLE 12

Dispositions relatives au commerce international

1 — *a*) Toute Partie autorisant l'exportation ou l'importation de substances du tableau I ou II doit exiger qu'une autorisation d'importation ou d'importation ou d'exportation distincte, rédigée sur un formulaire d'un modèle établi par la Commission, soit obtenue pour chaque exportation ou importation, qu'il s'agisse d'une ou de plusieurs substances.

b) Cette autorisation doit comporter la dénomination commune internationale de la substance ou, en l'absence d'une telle dénomination, la désignation de la substance dans le tableau, la quantité à exporter ou à importer, la forme pharmaceutique, le nom et l'adresse de l'exportateur et de l'importateur, et la période au cours de laquelle l'exportation ou l'importation doit avoir lieu. Si la substance est exportée ou importée sous forme de préparation, le nom de la préparation, s'il en existe un, sera aussi indiqué. L'autorisation d'exportation doit aussi indiquer le numéro et la date du certificat d'importation, et spécifier l'autorité qui l'a délivré.

c) Avant de délivrer une autorisation d'exportation les Parties exigeront une autorisation d'importation délivrée par les autorités compétentes du pays ou de la région importateurs et attestant que l'importation de la substance ou des substances dont il est question est approuvée, et cette autorisation sera produite par la personne ou l'établissement demandant l'autorisation d'exportation.

d) Une copie de l'autorisation d'exportation sera jointe à chaque envoi, et le gouvernement qui délivre l'autorisation d'exportation en adressera une copie au gouvernement du pays ou de la région importateurs.

e) Lorsque l'importation a été effectuée, le gouvernement du pays ou de la région importateurs renverra au governement du pays ou de la région exportateurs l'autorisation d'exportation avec une attestation certificant la quantité effectivement importée.

2 — *a*) Les Parties exigeront que, pour chaque exportation de substances du tableau III, les exportateurs établissent en trois exemplaires une déclaration, rédigée sur un formulaire d'un modèle établi par la Commission, contenant les renseignements suivants:

i) Le nom et l'adresse de l'exportateur et de l'importateur;

ii) La dénomination commune internationale ou, en l'absence d'une telle dénomination, la désignation de la substance dans le tableau;

iii) La quantité de la substance et la forme pharmaceutique sous laquelle la substance est exportée, et, si c'est sous la forme d'une préparation, le nom de cette préparation, s'il existe; et

iv) La date d'envoi.

b) Les exportateurs fourniront aux autorités compétentes de leur pays ou de leur région deux exemplaires de cette déclaration. Ils joindront le troisième exemplaire à leur envoi.

c) La Partie du territoire de laquelle une substance du tableau III a été exportée devra, aussitôt que possible mais au plus tard quatre-vingt-dix jours après la date d'envoi, transmettre aux autorités compétentes du pays ou de la région importateurs, sous pli recommandé avec accusé de réception, un exemplaire de la déclaration reçue de l'exportateur.

d) Les Parties pourront exiger que, dès réception colis, l'importateur adresse aux autorités compétentes de son pays ou de sa région l'exemplaire qui accompagne l'envoi dûment endossé, en indiquant les quantités reçues et la date de réception.

3 — Les substances des tableaux I et II seront en outre soumises aux dispositions ci-après:

a) Les Parties exerceront dans les ports francs et les zones franches la même surveillance et le même contrôle que dans les autres parties de leur territoire, étant entendu, toutefois, qu'elles pourront appliquer un régime plus sévère.

b) Les exportations sous forme d'envois adressés à une banque au compte d'une personne différente de celle dont le nom figure sur l'autorisation d'exportation ou à une boîte postale seront interdites.

c) Les exportations de substances du tableau I sous forme d'envois adressés à un entrepôt de douane seront interdites. Les exportations de substances du tableau II sous forme d'envois adressés à un entrepôt de douane seront interdites, sauf si le Gouvernement du pays importateur précise, sur le certificat d'importation produit par la personne ou l'établissement qui demande l'autorisation d'exportation, qu'il a approuvé l'importation de l'envoi afin que celui-ci soit déposé dans un entrepôt de douane. En pareil cas, l'autorisation d'exportation précisera que l'envoi est effectué à cette fin. Tout l'envoi est effectué à cette fin. Tout retrait de l'entrepôt de douane sera subordonné à la présentation d'un permis émanant des autorités dont relève l'entrepôt, et, dans le cas d'un envoi à destination de l'étranger, il sera assimilé à une exportation nouvelle au sens de la présente Convention.

d) Les envois entrant sur le territoire d'une Partie ou en sortant sans être accompagnés d'une autorisation d'exportation seront retenus par les autorités compétentes.

e) Une Partie n'autorisera pas le passage en transit sur son territoire, en direction d'un autre pays, d'un envoi quelconque de ces substances, que cet envoi soit ou non déchargé du véhicule qui le transporte, sauf si la copie de l'autorisation d'exportation pour cet envoi est présentée aux autorités compétentes de ladite Partie.

f) Les autorités compétentes d'un pays ou d'une région quelconque à travers lesquels le passage d'un envoi de ces substances est autorisé prendront toutes les mesures nécessaires pour empêcher le déroutement dudit envoi vers une destination autre que celle qui figure sur la copie de l'autorisation l'exportation jointe à l'envoi, à moins que le Gouvernement du pays ou de la région à travers lesquels ledit envoi s'effectue n'autorise ce déroutement. Le Gouvernement de ce pays ou de cette région de transit traitera toute demande de déroutement comme s'il s'agissait d'une exportation du pays ou de la région de transit vers le pays ou la région de la nouvelle destination. Si le déroutement est autorisé, les dispositions de l'alinéa *e*) du paragraphe 1 s'appliqueront également entre le pays ou la région de transit et le pays ou la région d'où l'envoi a primitivement été exporté.

g) Aucun envoi de ces substances en transit ou déposé dans un entrepôt de douane ne peut être soumis à un traitement quelconque qui modifierait la nature des substances. L'emballage ne peut être modifié sans l'agrément des autorités compétentes.

h) Les dispositions des alinéas *e*) à *g*) relatives au transit de ces substances sur le territoire d'une Partie ne sont pas applicables si l'envoi est transporté par la voie aérienne à condition que l'aéronef n'atterrisse pas dans le pays ou la région de transit. Si l'aéronef atterrit dans ce pays ou cette région, ces dispositions s'appliqueront dans la mesure où les circonstances l'exigent.

i) Les dispositions du présent paragraphe ne portent pas préjudice à celles de tout accord international qui limite le contrôle pouvant être exercé par toute Partie sur ces substances en transit.

ARTICLE 13

Interdiction et restrictions à l'exportation et à l'importation

1 — Une Partie peut notifier à toutes les autres Parties par l'intermédiaire du Secrétaire général qu'elle interdite l'importation dans son pays ou dans l'une de ses régions d'une ou plusieurs substances du tableau II, III ou IV, spécifiées dans sa notification. Dans cette notification, elle indiquera le nom donné à la substance dans le tableau II, III ou IV.

2 — Si une Partie a reçu une notification d'interdiction comme prévu au paragraphe 1, elle prendra les mesures nécessaires pour qu'aucune des substances spécifiées dans ladite notification ne soit exportée vers le pays ou l'une des régions de la Partie qui a fait la notification.

3 — Nonobstant les dispositions des paragraphes précédents, une Partie qui a fait une notification conformément au paragraphe 1 peut, en délivrant dans chaque cas un permis spécial d'importation, autoriser l'importation de quantités déterminées des substances en question ou de préparations qui en contiennent. L'autorité du pays importateur qui aura délivré le permis spécial d'importation l'adressera en deux exemplaires, qui porteront le nom et l'adresse de l'importateur et de l'exportateur, à l'autorité compétente du pays ou de la région exportateurs, qui pourra alors autoriser l'exportateur à faire l'expédition. Celle-ci sera accompagnée d'un exemplaire du permis spécial d'importation dûment visé par l'autorité compétente du pays ou de la région exportateurs.

ARTICLE 14

Dispositions spéciales concernant le transport des substances psychotropes dans les trousses de premiers secours des navires, aéronefs ou autres moyens de transport public effectuant des parcours internationaux.

1 — Le transport international par navires, aéronefs ou autres moyens de transport public inter-

national, tels que les trains et autocars internationaux, de quantités limitées de substances du tableau II, III ou IV susceptibles d'être nécessaires pendant le voyage pour l'administration des premiers secours et pour les cas d'urgence ne sera pas considéré comme une exportation, une importation ou un transit au sens de la présente Convention.

2 — Des précautions appropriées seront prises par le pays d'immatriculation pour empêcher l'usage indu des substances mentionnées au paragraphe 1 ou leur détournement à des fins illicites. La Comission recommandera ces précautions en consultation avec les organisations internationales compétentes.

3 — Les substances transportées par navires, aéronefs ou autres moyens de transport public international, tels que les trains et autocars internationaux, conformément aux dispositions du paragraphe 1, seront soumises aux lois, règlements, permis et licences du pays d'immatriculation, sans préjudice du droit des autorités locales compétentes de procéder à des vérifications, inspections et autres opérations de contrôle à bord de ces moyens de transport. L'administration de ces substances en cas d'urgence ne sera pas considérée comme contrevenant aux dispositions du paragraphe 1 de l'article 9.

ARTICLE 15

Inspection

Les Parties institueront un système d'inspection des fabricants, des exportateurs, des importateurs et des distributeurs de gros et de détail de substances psychotropes, ainsi que des institutions médicales et scientifiques qui utilisent ces substances. Elles prévoiront des inspections aussi fréquentes qu'elles le jugeront nécessaire des locaux, des stocks et des enregistrements.

ARTICLE 16

Renseignements à fournir par les Parties

1 — Les Parties fourniront au Secrétaire général les renseignements que la Commission peut demander en tant que nécessaires pour l'exercice de ses fonctions, et notamment un rapport annuel ayant trait au fonctionnement de la Convention sur leurs territoires et contenant des renseignements sur:

a) Les modifications importantes apportées à leurs lois et règlements relatifs aux substances psychotropes; et

b) Les faits particulièrement significatifs qui se seront produits sur leurs territoires en matière d'abus et de trafic illicite des substances psychotropes.

2 — Les Parties communiqueront d'autre part ao Secrétaire général les noms et adresses des autorités gouvernementales mentionnées à l'alinéa *f*) de l'article 7, à l'article 12 et au paragraphe 3 de l'article 13. Le Secrétaire général diffusera ces renseignements à toutes les Parties.

3 — Les Parties adresseront au Secrétaire général, dans les plus brefs délais, un rapport sur les cas de trafic illicite de substances psychotropes et de saisie de substances faisant l'objet de ce trafic illicite, lorsque ces cas leur paraîtront importants en raison:

a) Des tendances nouvelles mises en évidence;

b) Des quantités en cause;

c) De la lumière qu'elles jettent sur les sources d'approvisionnement; ou

d) Des méthodes employées par les trafiquants illicites.

Des copies du rapport seront communiquées conformément à l'alinéa *b*) de l'article 21.

4 — Les Parties fourniront à l'Organe des rapports statistiques annuels, en utilisant à cet effet les formulaires établis par l'Organe. Ces rapports porteront:

a) En ce qui concerne chacune des substances des tableaux I et II, sur les quantités fabriquées, exportées à destination de et importées en provenance de chaque pays ou région, ainsi que sur les stocks détenus par les fabricants;

b) En ce qui concerne chacune des substances des tableaux III et IV, sur les quantités fabriquées, ainsi que sur les quantités totales exportées et importées;

c) En ce qui concerne chacune des substances des tableaux II et III, sur les quantités utilisées pour la fabrication de préparations exemptées; et

d) En ce qui concerne chacune des substances inscrites à un tableau autre que le tableau I, sur les quantités employées à des fins industrielles, conformément aux dispositions de l'alinéa *b*) de l'article 4.

Les quantités fabriquées qui sont visées aux alinéas *a*) et *b*) du présent paragraphe ne comprennent pas les quantités de préparations fabriquées.

5 — Une Partie fournira à l'Organe, sur sa demande, des renseignements statistiques supplémentaires ayant trait à des périodes à venir sur les quantités de telle ou telle substance des tableaux III et IV exportées à destination de chaque pays ou région et importées en provenance de chaque pays ou région. Cette Partie pourra demander à l'Organe de donner un caractère confidentiel tant à sa demande de renseignements qu'aux renseignements fournis en vertu du présent paragraphe.

6 — Les Parties fourniront les renseignements mentionnés dans les paragraphes 1 et 4 de la manière et aux dates que la Commission ou l'Organe pourra fixer.

ARTICLE 17

Fonctions de la Commission

1 — La Commission peut examiner toutes les questions ayant trait aux buts de la présente Convention et à l'application de ses dispositions et faire des recommandations à cet effet.

2 — Les décisions de la Commission prévues à l'article 2 et à l'article 3 seront prises à la majorité des deux tiers des membres de la Commission.

ARTICLE 18

Rapports de l'Organe

1 — L'Organe établit sur ses travaux des rapports annuels dans lesquels figurent une analyse des renseignements statistiques dont il dispose et, dans les cas appropriés, un exposé des explications que les gouvernements ont pu fournir ou ont été requis de fournir, ainsi que toute observation et recommandation que l'Organe peut vouloir formuler. L'Organe peut également faire

tous rapports supplémentaires qu'il peut juger nécessaires. Les rapports sont présentés au Conseil par l'intermédiaire de la Commission, qui peut formuler les observations qu'elle juge opportunes.

2 — Les rapports de l'Organe sont communiqués aux Parties et publiés ultérieurement par le Secrétaire général. Les Parties autorisent la libre distribution de ces rapports.

ARTICLE 19

Mesures à prendre par l'Organe pour assurer l'exécution des dispositions de la Convention

1 — *a*) Si, après examen des renseignements adressés à l'Organe par les gouvernements ou des renseignements communiqués par des organes des Nations Unies, l'Organe a motif de croire que les buts de la présente Convention sont sérieusement compromis du fait qu'un pays ou une région n'exécute pas ses dispositions, l'Organe a le droit de demander des explications au Gouvernement du pays ou de la région intéressés. Sous réserve du droit qu'il possède d'appeler l'attention des Parties, du Conseil et de la Commission sur la question visée à l'alinéa *c*), l'Organe considérera comme confidentielle une demande de renseignements ou une explication fournie par un gouvernement conformément au présent alinéa.

b) Après avoir agi conformément à l'alinéa *a*), l'Organe peut, s'il juge nécessaire de le faire, demander au Gouvernement intéressé de prendre les mesures correctives qui, en raison des circonstances, peuvent paraître nécessaires pour assurer l'exécution des dispositions de la présente Convention.

c) Si l'Organe constate que le Gouvernement intéressé n'a pas donné des explications satisfaisantes lorsqu'il a été invité à le faire conformément à l'alinéa *a*), ou a négligé d'adopter toute mesure corrective qu'il a été invité à prendre conformément à l'alinéa *b*), il peut appeler l'attention des Parties, du Conseil et de la Commission sur la question.

2 — Lorsqu'il appelle l'attention des Parties, du Conseil et de la Commission sur une question conformément à l'alinéa *c*) du paragraphe 1, l'Organe peut, s'il juge une telle mesure nécessaire, recommander aux Parties d'arrêter l'exportation de substances psychotropes à destination du pays ou de la région intéressés ou l'importation de substances psychotropes en provenance de ce pays ou de cette région, ou à la fois l'exportation et l'importation, soit pour une période déterminée, soit jusqu'à ce que la situation dans ce pays ou cette région lui donne satisfaction. L'État intéressé a le droit de porter la question devant le Conseil.

3 — L'Organe a le droit de publier un rapport sur toute question visée par les dispositions du présent article, et de le communiquer au Conseil qui le transmettra à toutes les Parties. Si l'Organe publie dans ce rapport une décision prise en vertu du présent article ou des renseignements concernant cette décision, il doit également publier l'avis du Gouvernement intéressé si celui-ci le demande.

4 — Dans les cas où une décision de l'Organe publiée conformément au présent article n'a pas été prise à l'unanimité, l'opinion de la minorité doit être exposée.

5 — Tout État sera invité à se faire représenter aux séances de l'Organe au cours desquelles est examinée une question l'intéressant directement aux termes du présent article.

6 — Les décisions de l'Organe prises en vertu du présent article doivent être adoptées à la majorité des deux tiers du nombre total des membres de l'Organe.

7 — Les dispositions des paragraphes précédents s'appliqueront également si l'Organe a motif de croire que les buts de la présente Convention sont sérieusement compromis du fait d'une décision prise par une Partie en vertu des disposition du paragraphe 7 de l'article 2.

ARTICLE 20

Mesures contre l'abus des substances psychotropes

1 — Les Parties prendront toutes les mesures susceptibles de prévenir l'abus des substances psychotropes et assurer le prompt dépistage ainsi que le traitement, l'éducation, la post-cure, la réadaptation et la réintégration sociale des personnes intéressées; elles coordonneront leurs efforts à cette fin.

2 — Les Parties favoriseront, autant que possible, la formation d'un personnel pour assurer le traitement, la post-cure, la réadaptation et la réintégration sociale des personnes qui abusent de substances psychotropes.

3 — Les Parties aideront les personnes qui en ont besoin dans l'exercice de leur profession à acquérir la connaissance des problèmes posés par l'abus des substances psychotropes et par sa prévention, et elles développeront aussi cette connaissance parmi le grand public s'il y a lieu de craindre que l'abus de ces substances ne se répande très largement.

ARTICLE 21

Lutte contre le trafic illicite

Compte dûment tenu de leurs régimes constitutionnel, juridique et administratif, les Parties:

a) Assureront sur le plan national la coordination de l'action préventive et répressive contre le trafic illicite; à cette fin elles pourront utilement désigner un service approprié chargé de cette coordination;

b) S'assisteront mutuellement dans la lutte contre le trafic illicite des substances psychotropes, et en particulier transmettront immédiatement aux autres Parties directement intéressées, par la voie diplomatique ou par l'intermédiaire des autorités compétentes qu'elles auront désignées à cet effet, copie de tout rapport qu'elles auraient adressé au Secrétaire général en vertu de l'article 16 à la suite de la découverte d'une affaire de trafic illicite ou d'une saisie;

c) Coopéreront étroitement entre elles et avec les organisations internationales compétentes dont elles sont membres afin de mener une lutte coordonnée contre le trafic illicite.

d) Veilleront à ce que la coopération internationale des services appropriés se réalise par des voies rapides; et

e) S'assureront que, lorsque des pièces de procédure sont transmises entre des pays pour l'exercice d'une action judiciaire, la transmission soit effectuée par des voies rapides à l'adresse des instances dé-

signées par les Parties; cette disposition ne porte pas atteinte au droit des Parties de demander que les pièces de procédure leur soient envoyées par la voie diplomatique.

ARTICLE 22

Dispositions pénales

1 — *a*) Sous réserve de ses dispositions constitutionnelles, chaque Partie considérera comme une infraction punissable tout acte commis intentionnellement qui contrevient à une loi ou à un règlement adopté en exécution de ses obligations découlant de la présente Convention, et prendra les mesures nécessaires por que les infractions graves soient dûment sanctionnées, par exemple par une peine d'emprisonnement ou une autre peine privative de liberté.

b) Nonobstant les dispositions figurant à l'alinéa précédent, lorsque des personnes utilisant de façon abusive des substances psychotropes auront commis ces infractions, les Parties pourront, au lieu de les condamner ou de prononcer une sanction pénale à leur encontre, ou comme complément de la sanction pénale, soumettre ces personnes à des mesures de traitement, d'éducation, de post-cure, de réadaptation et de réintégration sociale, conformément aux dispositions du paragraphe 1 de l'article 20.

2 — Sous réserve des dispositions constitutionnelles, du système juridique et de la législation nationale de chaque Partie:

a) *i*) Si une suite d'actes qui sont liés entre eux et qui constituent des infractions en vertu du paragraphe 1 ci-dessus a été commise dans des pays différents, chacun de ces actes sera considéré comme une infraction distincte;

ii) La participation intentionnelle à l'une quelconque desdites infractions, l'association ou l'entente en vue de la commettre ou la tentative de la commettre, ainsi que les actes préparatoires et les opérations financières intentionnellement accomplis, relatifs aux infractions mentionnées dans le présent article, constitueront des infractions passibles des peines prévues au paragraphe 1;

iii) Les condamnations prononcées à l'étranger pour ces infractions seront prises en considération aux fins d'établissement de la récidive; et

iv) Les infractions graves précitées, qu'elles soient commises par des nationaux ou des étrangers, seront poursuivies par la Partie sur le territoire de laquelle l'infraction a été commise ou par la Partie sur le territoire de laquelle le délinquant se trouve si l'extradition n'est pas compatible avec la législation de la Partie à laquelle la demande est adressée et si le délinquant n'a pas déjà été poursuivi et jugé.

b) Il est souhaitable que les infractions mentionnées au paragraphe 1 et dans la partie *ii*) de l'alinéa *a*) du paragraphe 2 soient considérées comme des cas d'extradition aux termes de tout traité d'extradition conclu ou à conclure entre des Parties, et soient reconnues comme cas d'extradition entre elles par les Parties qui ne subordonnent pas l'extradition à l'existence d'un traité ou à la réciprocité, étant entendu, toutefois, que l'extradition sera accordée conformément à la législation de la Partie à qui la demande d'extradition est adressée et que ladite Partie aura le droit de refuser de procéder à l'arrestation du délinquant ou de refuser d'accorder son extradition si les autorités compétentes considèrent que l'infraction n'est pas suffisamment grave.

3 — Toute substance psychotrope, toute autre substance et tout matériel utilisés ou qu'il était envisagé d'utiliser pour commettre l'une quelconque des infractions visées aux paragraphes 1 et 2, pourront être saisis et confisqués.

4 — Aucune disposition du présent article ne portera atteinte aux dispositions de la législation nationale d'une Partie en matière de compétence.

5 — Aucune disposition du présent article ne portera atteinte au principe selon lequel les infractions auxquelles il se réfère seront définies, poursuivies et punies conformément à la législation nationale de chacune des Parties.

ARTICLE 23

Application de mesures de contrôle plus sévères que celles qu'exige le Convention

Les Parties pourront adopter des mesures de contrôle plus strictes ou plus sévères que celles qui sont prévues par la présente Convention si elles le jugent opportun ou nécessaire pour la protection de la santé et de l'intérêt publics.

ARTICLE 24

Dépenses des organes internationaux encourues pour l'administration des dispositions de la Convention

Les dépenses de la Commission et de l'Organe pour l'exécution de leurs fonctions respectives en vertu de la présente Convention seront assumées par l'Organisation des Nations Unies dans les conditions qui seront déterminées par l'Assemblée générale. Les Parties qui ne sont pas membres de l'Organisation des Nations Unies contribueront à ces dépenses, l'Assemblée générale fixant périodiquement, après avoir consulté les Gouvernements des ces Parties, le montant des contributions qu'elle jugera équitable.

ARTICLE 25

Procédure d'admission, de signature, de ratification et d'adhésion

1 — Les États Membres de l'Organisation des Nations Unies, les États non membres de l'Organisation des Nations Unies qui sont membres d'une institution spécialisée des Nations Unies ou de l'Agence internationale de l'énergie atomique, ou qui sont Parties au Statut de la Cour internationale de Justice, ainsi que tout autre État invité par le Conseil, peuvent devenir Parties à la présente Convention:

a) En la signant; ou

b) En la ratifiant après l'avoir signée sous réserve de ratification; ou

c) En y adhérant.

2 — La présente Convention sera ouverte à la signature jusqu'au 1er janvier 1972 inclus. Elle sera ensuite ouverte à l'adhésion.

3 — Les instruments de ratification ou d'adhésion seront déposés auprès du Secrétaire général.

ARTICLE 26

Entrée en vigueur

1 — La présente Convention entrera en vigueur quatre-vingt-dix jours après que quarante des États visés au paragraphe 1 de l'article 25 l'auront signée sans réserve de ratification ou auront déposé leurs instruments de ratification ou d'adhésion.

2 — Pour tout autre État qui signe sans réserve de ratification, ou qui dépose un instrument de ratification ou d'adhésion après la date de la dernière signature ou du dernier dépôt visés au paragraphe précédent, la présente Convention entrera en vigueur quatre-vingt-dix jours après la date de sa signature ou du dépôt de son instrument de ratification ou d'adhésion.

ARTICLE 27

Application territoriale

La présente Convention s'appliquera à tous les territoires non métropolitains qu'une Partie représente sur le plan international, sauf si le consentement préalable d'un tel territoire est nécessaire en vertu soit de la Constitution de la Partie ou du territoire intéressé, soit de la coutume. En ce cas, la Partie s'efforcera d'obtenir dans le plus bref délai le consentement du territoire qui est nécessaire et, lorsque ce consentement aura été obtenu, elle le notifiera au Secrétaire général. La présente Convention s'appliquera au territoire ou aux territoires désignés par ladite notification, dès la date de la réception de cette dernière par le Secrétaire général. Dans les cas où le consentement préalable du territoire non métropolitain n'est pas nécessaire, la Partie intéressée déclarera, au moment de la signature, de la ratification ou de l'adhésion, à quel territoire ou territoires non métropolitains s'applique la présente Convention.

ARTICLE 28

Régions aux fins de la présente Convention

1 — Toute Partie peut notifier au Secrétaire général qu'aux fins de la présente Convention, son territoire est divisé en deux ou plusieurs régions, ou que deux ou plusieurs de ses régions sont groupées en une seule.

2 — Deux ou plusieurs Parties peuvent notifier au Secrétaire général qu'à la suite de l'institution d'une union douanière entre elles, ces Parties constituent une région aux fins de la présente Convention.

3 — Toute notification faite en vertu du paragraphe 1 ou 2 prendra effet au 1er janvier de l'année qui suivra celle où ladite notification aura été faite.

ARTICLE 29

Dénonciation

1 — A l'expiration d'un délai de deux ans à compter de la date de l'entrée en vigueur de la présente Convention, toute Partie pourra, en son nom ou au nom d'un territoire qu'elle représente sur le plan international et qui a retiré le consentement donné en vertu de l'article 27, dénoncer la présente Convention en déposant un instrument à cet effet auprès du Secrétaire général.

2 — Si le Secrétaire général reçoit la dénonciation avant le 1er juillet ou à cette date, elle prendra effet le 1er janvier de l'année suivante; si la dénonciation est reçue après le 1er juillet, elle prendra effet comme si elle avait été reçue l'année suivante avant le 1er juillet ou à cette date.

3 — La présente Convention viendra à expiration si, par suite de dénonciations notifiées conformément aux dispositions des paragraphes 1 et 2, les conditions de son entrée en vigueur prévues au paragraphe 1 de l'article 26 cessent d'être remplies.

ARTICLE 30

Amendements

1 — Toute Partie pourra proposer un amendement à la présente Convention. Le texte dudit amendement et les raisons qui l'ont motivé seront communiqués au Secrétaire général qui les communiquera aux Parties et au Conseil. Le Conseil pourra décider soit:

a) De convoquer une conférence, conformément au paragraphe 4 de l'article 62 de la Charte des Nations Unies, en vue d'étudier l'amendement proposé; soit

b) De demander aux Parties si elles acceptent l'amendement proposé et aussi de les prier de présenter éventuellement au Conseil leurs observations sur cette proposition.

2 — Si un projet d'amendement distribué conformément à l'alinéa *b*) du paragraphe 1 n'a été rejeté par aucune Partie dans les dix-huit mois qui suivent sa communication, il entrera immédiatement en vigueur. Si toutefois il est rejeté par une Partie, le Conseil pourra décider, compte tenu des observations des Parties, s'il convient de convoquer une conférence chargée d'étudier ledit amendement.

ARTICLE 31

Différends

1 — S'il s'élève entre deux ou plusieurs Parties un différend concernant l'interprétation ou l'application de la présente Convention, lesdites Parties se consulteront en vue de régler ce différend par voie de négociation, d'enquête, de médiation, de conciliation, d'arbitrage, de recours à des organismes régionaux, par voie judiciaire ou par d'autres moyens pacifiques de leur choix.

2 — Tout différend de ce genre qui n'aura pas été réglé par les moyens prévus au paragraphe 1 sera soumis, à la demande de l'une des parties au différend, à la Cour Internationale de Justice.

ARTICLE 32

Réserves

1 — Aucune réserve n'est autorisée en dehors des réserves faites conformément aux paragraphes 2, 3 et 4 du présent article.

2 — Tout État peut, au moment de la signature, de la ratification ou de l'adhésion, faite des réserves sur les dispositions suivantes de la présente Convention:

a) Article 19, paragraphes 1 et 2;
b) Article 27; et
c) Article 31.

3 — Tout État qui désire devenir Partie à la Convention, mais qui veut être autorisé à faire des réserves autres que celles qui sont énumérées aux paragraphes 2 et 4, peut aviser le Secrétaire général de cette intention. À moins qu'à l'expiration de douze mois après la date de la communication de la réserve en question par le Secrétaire général, un tiers des États qui ont signé sans réserve de ratification ou ratifié la Convention ou y ont adhéré avant la fin de ladite période n'aient élevé des objections contre elle, elle sera considérée comme autorisée, étant entendu toutefois que les États qui auront élevé des objections contre cette réserve n'auront pas à assumer à l'égard de l'État qui l'a formulée l'obligation juridique découlant de la présente Convention, sur laquelle porte la réserve.

4 — Tout État sur le territoire duquel poussent à l'état sauvage des plantes contenant des substances psychotropes du tableau I utilisées traditionnellement par certains groupes restreints bien déterminés à l'occasion de cérémonies magiques ou religieuses, peut, au moment de la signature de la ratification ou de l'adhésion, faire des réserves concernant ces plantes sur les dispositions de l'article 7, sauf sur celles relatives au commerce international.

5 — L'État qui aura fait des réserves pourra à tout moment et par voie de notification écrite au Secrétaire général retirer tout ou partie de ses réserves.

ARTICLE 33

Notifications

Le Secrétaire général notifiera à tous les États mentionnés au paragraphe 1 de l'article 25:

a) Les signatures, ratifications ou adhésions conformément à l'article 25;

b) La date à laquelle la présente Convention entrera en vigueur conformément à l'article 26;

c) Les dénonciations conformément à l'article 29; et

d) Les déclarations et notifications conformément aux articles 27, 28, 30 et 32.

En foi de quoi, les soussignés, dûment autorisés, ont signé la présente Convention au nom de leurs Gouvernements respectifs.

Fait à Vienne, le 21 février 1971, en un seul exemplaire, en anglais, chinois, espagnol, français et russe, les cinq textes faisant également foi. La Convention sera déposée auprès du Secrétaire général de l'Organisation des Nations Unies qui en transmettra des copies certifiées conformes à tous les États Membres de l'Organisation des Nations Unies et aux autres États visés au paragraphe 1 de l'article 25.

CONVENÇÃO SOBRE AS SUBSTÂNCIAS PSICOTRÓPICAS

Preâmbulo

As Partes:

Atentas à saúde física e moral da humanidade,

Preocupadas com o problema da saúde pública e os problemas sociais resultantes do abuso de certas substâncias psicotrópicas,

Decididas a prevenir e combater o abuso destas substâncias e o tráfico ilícito a que dá lugar,

Considerando que são necessárias medidas rigorosas para limitar o uso destas substâncias a fins legítimos,

Reconhecendo que a utilização das substâncias psicotrópicas para fins médicos e científicos é indispensável e que a possibilidade de adquirir substâncias para estes fins não deveria ser objecto de nenhuma restrição injustificada,

Crendo que, para serem eficazes, as medidas tomadas contra o abuso destas substâncias devem ser coordenadas e universais,

Reconhecendo a competência da Organização das Nações Unidas em matéria de fiscalização das substâncias psicotrópicas e desejando que os órgãos internacionais interessados exerçam a sua actividade no quadro desta Organização,

Considerando que é necessária uma convenção internacional para realizar este objectivo,

acordam no seguinte:

ARTIGO 1

Glossário

Salvo indicação em contrário, e ressalvando a possibilidade de o contexto exigir uma interpretação diferente, as expressões seguintes têm na presente Convenção o significado indicado:

a) A expressão «Conselho» designa o Conselho Económico e Social das Nações Unidas;

b) A expressão «Comissão» designa a Comissão dos Estupefacientes do Conselho;

c) A expressão «Órgão» designa o Órgão Internacional de Fiscalização dos Estupefacientes instituído em virtude da Convenção Única sobre Estupefacientes de 1961;

d) A expressão «Secretário-Geral» designa o Secretário-Geral da Organização das Nações Unidas;

e) A expressão «substância psicotrópica» designa qualquer substância, de origem natural ou sintética, ou qualquer produto natural das listas I, II, III ou IV;

f) A expressão «preparação» designa:

i) Uma solução ou uma mistura, qualquer que seja o seu estado físico, que inclua uma ou várias substâncias psicotrópicas, ou

ii) Uma ou várias substâncias psicotrópicas em forma dosificada;

g) As expressões «lista I», «lista II», «lista III» e «lista IV» designam as listas de substâncias psicotrópicas que com essa numeração se anexam à presente Convenção, que poderão ser modificadas de acordo com o artigo 2;

h) As expressões «exportação» e «importação» designam, cada uma na sua acepção particular, a transferência material de uma substância psicotrópica de um Estado para outro Estado;

i) A expressão «fabrico» designa todas as operações que permitam obter substâncias psicotrópicas e inclui a purificação e a transformação de substâncias psicotrópicas noutras substâncias psicotrópicas. Esta expressão inclui também o fabrico de pre-

parações diferentes das que são feitas por receita numa farmácia;

j) A expressão «tráfico ilícito» designa o fabrico ou o tráfico de substâncias psicotrópicas efectuados contrariamente às disposições da presente Convenção;

k) A expressão «região» designa qualquer parte de um Estado que, em virtude do artigo 28, é considerada como uma entidade distinta para efeitos da presente Convenção;

l) A expressão «locais» designa os edifícios ou partes de edifício, assim como o terreno adjacente aos ditos edifícios ou às ditas partes de edifício.

ARTIGO 2

Domínio da aplicação da fiscalização das substâncias

1 — Se uma Parte ou a Organização Mundial de Saúde estiver na posse de informações ligadas a uma substância ainda não submetida à fiscalização internacional que, na sua opinião, possam tornar necessária a sua inscrição numa das listas da presente Convenção, deverá dirigir ao Secretário-Geral uma notificação acompanhada de todas as informações pertinentes em seu abono. Este processo será ainda aplicado quando uma Parte ou a Organização Mundial de Saúde estiver na posse de informação que justifique a transferência de uma substância de uma lista para outra, ou a supressão da sua inscrição numa das listas.

2 — O Secretário-Geral comunicará esta notificação, juntamente com as informações que julgar pertinentes, às Partes, à Comissão e, se a notificação for feita por uma Parte, à Organização Mundial de Saúde.

3 — Se das informações que acompanham esta notificação resultar que a dita substância é susceptível de ser inscrita na lista I ou na lista II em virtude do parágrafo 4, as Partes examinarão, à luz de todas as informações que tiverem, a possibilidade de aplicar, a título provisório, a esta substância todas as medidas de fiscalização aplicáveis às substâncias da lista I ou da lista II, conforme o caso.

4 — Se a Organização Mundial de Saúde constatar:

a) Que a dita substância pode provocar:

i) 1) Um estado de dependência, e

2) Um estímulo ou uma depressão do sistema nervoso central, dando lugar a alucinações ou a perturbações da função motora, do julgamento, do comportamento, de percepção ou da disposição, ou

ii) Abusos e efeitos nocivos comparáveis aos de uma substância da lista I, II, III ou IV, e

b) Que existem razões suficientes para crer que a substância dá ou pode dar lugar a abusos tais que constitua um problema de saúde pública e um problema social, justificando a sua fiscalização internacional,

deverá transmitir à Comissão um parecer sobre esta substância, onde indicará nomeadamente em que medida a substância dá ou pode dar lugar a abusos, a gravidade do problema de saúde pública e do problema social que constitui e o grau de utilidade da substância na terapêutica, assim como as recomendações sobre medidas eventuais de fiscalização a que seria oportuno sujeitá-la à luz desta avaliação.

5 — Tendo em conta a comunicação da Organização Mundial de Saúde, cujas opiniões serão determinantes em matéria médica e científica, e tendo ainda em consideração os factores de ordem económica, social, jurídica, administrativa e todos os outros que possa julgar pertinentes, a Comissão poderá acrescentar a dita substância à lista I, II, III ou IV. Poderá pedir informações complementares à Organização Mundial de Saúde ou a outras fontes apropriadas.

6 — Se uma notificação feita nos termos do parágrafo 1 disser respeito a uma substância já inscrita numa das listas, a Organização Mundial de Saúde transmitirá à Comissão as suas novas constatações, assim como qualquer novo parecer sobre esta substância que possa fazer de acordo com as disposições do parágrafo 4 e quaisquer novas recomendações sobre medidas de fiscalização que lhe pareçam apropriadas à luz do dito parecer. A Comissão, tendo em conta a comunicação recebida da Organização Mundial de Saúde, nos termos do parágrafo 5, assim como os factores enumerados no dito parágrafo, poderá decidir transferir esta substância de uma lista para outra ou suprimir a sua inscrição nas listas.

7 — Qualquer decisão da Comissão assumida nos termos do presente artigo será comunicada pelo Secretário-Geral a todos os Estados Membros da Organização das Nações Unidas, aos Estados não Membros Partes da presente Convenção, à Organização Mundial de Saúde e ao Órgão. Esta decisão terá pleno efeito para cada Parte cento e oitenta dias depois da data da comunicação, excepto para uma Parte que, durante este período, e relativamente a uma decisão de inscrição de uma substância numa lista, tenha informado por escrito o Secretário-Geral que devido a circunstâncias excepcionais não se encontra em condição de sujeitar esta substância a todas as disposições da Convenção aplicáveis às substâncias dessa lista. Uma tal notificação exporá os motivos desta decisão excepcional. Apesar desta notificação, cada Parte deverá aplicar no mínimo as medidas de fiscalização, que em seguida se enumeram:

a) A Parte que haja notificado o Secretário-Geral sobre uma tal decisão acerca de substância ainda não sujeita à fiscalização e acrescentada à lista I terá em conta, tanto quanto possível, as medidas de fiscalização especiais enumeradas no artigo 7 e, em relação a esta substância, deverá:

i) Exigir licenças para o seu fabrico, o seu comércio e a sua distribuição, de acordo com as disposições previstas pelo artigo 8 para as substâncias da lista II;

ii) Exigir que o seu fornecimento ou cedência se efectue apenas sob apresentação da receita médica, de acordo com as disposições previstas pelo artigo 9 para as substâncias da lista II;

iii) Sujeitar-se às obrigações relativas à exportação e à importação enunciada no artigo 12, excepto em relação a uma outra Parte que tenha dirigido ao Secretário-Geral uma notificação sobre a substância em questão;

iv) Sujeitar-se às obrigações enunciadas no artigo 13 para as substâncias da lista II, incluindo a proibição ou restrições à exportação e à importação;

v) Fornecer ao Órgão relatórios estatísticos de acordo com as disposições da alínea *a*) do parágrafo 4 do artigo 16; e

vi) Tomar medidas de acordo com as disposições do artigo 22, com vista a reprimir qualquer acto contrário às leis ou regulamentos adoptados em execução das obrigações acima mencionadas.

b) A Parte que haja notificado o Secretário-Geral sobre uma tal decisão acerca de substância ainda não sujeita à fiscalização e acrescentada à lista II deverá, em relação a esta substância:

i) Exigir licenças para o seu fabrico, o seu comércio e a sua distribuição, de acordo com as disposições do artigo 8;

ii) Exigir que o seu fornecimento ou cedência se efectue apenas sob apresentação de receita médica, de acordo com as disposições do artigo 9;

iii) Sujeitar-se às obrigações relativas à exportação e à importação enunciadas no artigo 12, excepto em relação a uma outra Parte que tenha dirigido ao Secretário-Geral uma notificação acerca da substância em questão;

iv) Sujeitar-se às obrigações enunciadas no artigo 13, incluindo proibição ou restrições à exportação e à importação;

v) Fornecer ao Órgão relatórios estatísticos, de acordo com as disposições das alíneas *a*), *c*) e *d*) do parágrafo 4 do artigo 16; e

vi) Tomar medidas de acordo com as disposições do artigo 22, com vista a reprimir qualquer acto contrário às leis ou regulamentos adoptados em execução das obrigações acima mencionadas;

c) A Parte que haja notificado o Secretário-Geral sobre uma tal decisão acerca de substância ainda não sujeita a fiscalização e acrescentada à lista III deverá, em relação a esta substância:

i) Exigir licenças para o seu fabrico, o seu comércio e a sua distribuição, de acordo com as disposições do artigo 8;

ii) Exigir que o seu fornecimento ou cedência se efectue apenas sob apresentação de receita médica, de acordo com as disposições do artigo 9;

iii) Sujeitar-se às obrigações relativas à exportação enunciadas no artigo 12, excepto em relação a uma outra Parte que tenha dirigido ao Secretário-Geral uma notificação acerca da substância em questão;

iv) Sujeitar-se às obrigações enunciadas no artigo 13, incluindo proibição ou restrições à exportação e à importação; e

v) Tomar medidas de acordo com as disposições do artigo 22, com vista a reprimir qualquer acto contrário às leis ou regulamentos adoptados em execução das obrigações acima mencionadas;

d) A Parte que haja notificado o Secretário-Geral sobre uma tal decisão acerca de substância ainda não sujeita a fiscalização e acrescentada à lista IV deverá, em relação a esta substância:

i) Exigir licenças para o seu fabrico, o seu comércio e a sua distribuição, de acordo com as disposições do artigo 8;

ii) Sujeitar-se às obrigações enunciadas no artigo 13, incluindo proibição ou restrições à exportação e à importação; e

iii) Tomar medidas de acordo com as disposições do artigo 22, com vista a reprimir qualquer acto contrário às leis ou regulamentos adoptados em execução das obrigações acima mencionadas;

e) A Parte que haja notificado o Secretário-Geral sobre uma tal decisão acerca de substância transferida para uma lista a que se aplicam medidas de fiscalização e obrigações mais estritas aplicará no mínimo o conjunto das disposições da presente Convenção aplicáveis à lista donde foi transferida.

8 — *a*) As decisões da Comissão tomadas nos termos do presente artigo serão sujeitas à revisão pelo Conselho se uma Parte formular um pedido neste sentido nos cento e oitenta dias seguintes à recepção da notificação da decisão. O pedido de revisão deverá ser dirigido ao Secretário-Geral juntamente com todas as informações pertinentes que a justifiquem.

b) O Secretário-Geral entregará cópias do pedido de revisão e das informações pertinentes à Comissão, à Organização Mundial de Saúde e a todas as Partes, convidando-as a comunicar-lhe as suas observações num prazo de noventa dias. Todas as observações assim recebidas serão submetidas ao exame do Conselho.

c) O Conselho pode confirmar, modificar ou anular a decisão da Comissão. A sua decisão será notificada a todos os Estados Membros da Organização das Nações Unidas, aos Estados não Membros Partes da presente Convenção, à Comissão, à Organização Mundial de Saúde e ao Órgão.

d) No decorrer do processo de revisão, a decisão original da Comissão manter-se-á em vigor, sob reserva do consignado no parágrafo 7.

9 — As Partes farão tudo o que estiver ao seu alcance para aplicar as possíveis medidas de vigilância às substâncias que, embora se não encontrem assinaladas na presente Convenção, possam ser utilizadas para o fabrico ilícito de substâncias psicotrópicas.

ARTIGO 3

Disposições particulares relativas à fiscalização das preparações

1 — Sem prejuízo do que é estipulado nos parágrafos seguintes do presente artigo, uma preparação é sujeita às mesmas medidas de fiscalização que a substância psicotrópica que contém e, se contém mais de uma dessas substâncias, às medidas aplicáveis à substância mais estritamente fiscalizada.

2 — Se uma preparação que contém uma substância psicotrópica não inscrita na lista I apresentar uma composição que comporte um risco de abuso negligenciável ou nulo e esta substância não puder ser recuperada em quantidades que permitam abusos, por meios facilmente aplicáveis, e se, portanto, esta substância não originar um problema para a saúde pública nem um problema social, a dita preparação poderá ser

isenta de algumas das medidas de fiscalização enunciadas na presente Convenção, de acordo com os termos do parágrafo 3.

3 — Se uma Parte constatar que uma preparação está de acordo com as disposições do parágrafo precedente, pode decidir isentá-la, no seu país ou numa das suas regiões, de uma ou de todas as medidas de fiscalização previstas na presente Convenção; no entanto, a dita preparação ficará sujeita às obrigações enunciadas nos artigos seguintes:

a) Artigo 8 (licenças) no que se refere ao seu fabrico;

b) Artigo 11 (registo) no que se aplica às preparações isentas;

c) Artigo 13 (proibição e restrições à exportação e à importação);

d) Artigo 15 (inspecção) no que se aplica ao fabrico;

e) Artigo 16 (informações a fornecer pelas Partes) no que se aplica às preparações isentas; e

f) Artigo 22 (disposições penais), na medida em que tal for necessário à repressão de actos contrários às leis ou regulamentos adoptados de acordo com as obrigações acima mencionadas.

A dita Parte notificará ao Secretário-Geral todas as decisões deste género, assim como o nome e a composição da preparação isenta, e as medidas de fiscalização de que está isenta. O Secretário-Geral transmitirá a notificação às outras Partes, à Organização Mundial de Saúde e ao Órgão.

4 — Se uma Parte ou a Organização Mundial de Saúde detiver informações sobre uma preparação isenta nos termos do parágrafo 3 que, na sua opinião, justifiquem a supressão completa ou parcial da isenção, deverá notificar o Secretário-Geral e fornecer-lhe as informações que abonem tal notificação. O Secretário-Geral transmitirá esta notificação, acompanhada de quaisquer informações que considere pertinentes, às Partes, à Comissão e, quando a notificação for feita por uma Parte, à Organização Mundial de Saúde. A Organização Mundial de Saúde comunicará à Comissão um parecer sobre a preparação, tendo em conta os factores enumerados no parágrafo 2, assim como uma recomendação sobre as medidas de fiscalização de que a preparação deveria eventualmente deixar de ser isenta. A Comissão, tendo em conta a comunicação da Organização Mundial de Saúde, cuja opinião será determinante em matéria médica e científica, e tomando em consideração os factores de ordem económica, social, jurídica, administrativa e outros, que possa considerar pertinentes, poderá decidir que a preparação deixe de estar isenta de uma ou de todas as medidas de fiscalização. O Secretário-Geral comunicará qualquer decisão da Comissão tomada nos termos do presente parágrafo a todos os Estados Membros da Organização das Nações Unidas, aos Estados não membros Partes da presente Convenção, à Organização Mundial de Saúde e ao Órgão. Todas as Partes tomarão as disposições necessárias com vista a suprimir a isenção da ou das medidas de fiscalização consideradas, num prazo de cento e oitenta dias a contar da data da comunicação do Secretário-Geral.

ARTIGO 4

Outras disposições particulares relativas ao domínio de aplicação da fiscalização

No que respeita às substâncias psicotrópicas não incluídas na lista I, as Partes poderão autorizar:

a) O transporte pelos viajantes internacionais de pequenas quantidades de preparações para seu uso pessoal; cada Parte poderá, no entanto, assegurar-se de que estas preparações foram legalmente adquiridas;

b) O emprego destas substâncias na indústria para o fabrico de substâncias ou produtos não psicotrópicos, na condição de lhes serem aplicadas as medidas de fiscalização requeridas pela presente Convenção até que o estado das substâncias psicotrópicas seja tal que não possam, na prática, dar lugar a abusos ou ser recuperadas; e

c) A utilização destas substâncias, desde que lhes sejam aplicadas as medidas de fiscalização requeridas pela presente Convenção, para a captura de animais por pessoas expressamente autorizadas pelas autoridades competentes para utilizar as ditas substâncias para esse efeito.

ARTIGO 5

Limitação da utilização para fins médicos e científicos

1 — Cada Parte limitará a utilização das substâncias da lista I da maneira prevista no artigo 7.

2 — Cada Parte deverá, sob ressalva do que vem disposto no artigo 4, limitar, pelas medidas que considere apropriadas, o fabrico, a exportação, a importação, a distribuição, as existências, o comércio, o emprego e a detenção de substâncias inscritas nas listas II, III e IV para fins médicos e científicos.

3 — É desejável que as Partes não autorizem a detenção de substâncias das listas II, III e IV, excepto nas condições previstas pela lei.

ARTIGO 6

Serviço especial

É desejável que, para efeitos de aplicação das disposições da presente Convenção, cada Parte institua e mantenha um serviço especial. Pode haver vantagem em que este serviço seja o mesmo que foi criado ao abrigo das convenções que sujeitam os estupefacientes a uma fiscalização, ou com este serviço trabalhe em estreita colaboração.

ARTIGO 7

Disposições especiais visando as substâncias da lista I

No que respeita às substâncias inscritas na lista I, as Partes deverão:

a) Proibir qualquer utilização destas substâncias, excepto para fins científicos ou médicos muito limitados, e por pessoas devidamente autorizadas que trabalham em estabelecimentos médicos ou científicos que dependam directamente dos Governos ou sejam expressamente autorizados por estes;

b) Exigir que o fabrico, o comércio, a distribuição e a detenção destas substâncias sejam subordinados à posse de uma licença especial ou de uma autorização prévia;

c) Prever uma vigilância estreita das actividades e dos actos mencionados nas alíneas *a*) e *b*);

d) Só permitir a cedência a uma pessoa devidamente autorizada da quantidade de substâncias necessária aos fins para os quais a autorização foi concedida;

e) Exigir que as pessoas que exerçam funções médicas e científicas registem a aquisição destas substâncias e os pormenores da sua utilização, devendo ser estes registos conservados durante, pelo menos, dois anos depois da última utilização aí consignada; e tâncias, excepto quando tanto o exportador como o importador sejam a autoridade ou a administração competente do país ou da região exportadores e importadores, respectivamente, ou outras pessoas ou empresas que as autoridades competentes do seu país ou região tenham expressamente autorizado para este efeito. As exigências previstas no parágrafo 1 do artigo 12 no que respeita à concessão de autorizações de exportação e de importação para as substâncias da lista II aplicar-se-ão igualmente às substâncias da lista I.

ARTIGO 8

Licenças

1 — As Partes comprometem-se a exigir uma licença ou outra medida de fiscalização semelhante para o fabrico, o comércio (incluindo o comércio de exportação e importação) e a distribuição das substâncias das listas II, III e IV.

2 — As Partes:

a) Comprometem-se a exigir uma vigilância sobre todas as pessoas e empresas devidamente autorizadas que tratem do fabrico, do comércio (incluindo o comércio de exportação e importação) ou da distribuição das substâncias visadas no parágrafo 1;

b) Comprometem-se a submeter a um regime de licenças ou outra medida de fiscalização semelhante os estabelecimentos e os locais onde este fabrico, este comércio ou esta distribuição se podem efectuar; e

c) Comprometem-se a actuar de maneira que sejam tomadas medidas de segurança em relação a estes estabelecimentos e locais, de modo a evitar os roubos e outros desvios das existências.

3 — As disposições dos parágrafos 1 e 2 do presente artigo que referem o regime de licenças ou outras medidas de fiscalização semelhante não se aplicarão necessariamente às pessoas devidamente autorizadas a exercer funções terapêuticas ou científicas e actuando no exercício das suas funções.

4 — As Partes comprometem-se a exigir que todas as pessoas a quem são concedidas licenças em aplicação da presente Convenção ou que possuam autorizações equivalentes de acordo com as disposições previstas no parágrafo 1 do presente artigo ou na alínea *b*) do artigo 7 sejam devidamente qualificadas para aplicar efectiva e fielmente as disposições das leis e regulamentos adoptados para a execução da presente Convenção.

ARTIGO 9

Receitas médicas

1 — As Partes comprometem-se a exigir que as substâncias inscritas nas listas II, III e IV só sejam fornecidas ou dispensadas para utilização por particulares contra apresentação de receita médica, excepto nos casos em que os particulares podem legalmente obter, utilizar, ceder ou administrar estas substâncias no exercício devidamente autorizado de funções terapêuticas ou científicas.

2 — As Partes comprometem-se a adoptar as medidas necessárias para que as receitas prescrevendo a ministração de substâncias inscritas nas listas II, III e IV sejam preenchidas de acordo com a prática médica e sujeitas, no que diz nomeadamente respeito ao número de repetições possíveis e à duração da sua validade, a uma regulamentação que assegure a protecção da saúde e do interesse público.

3 — Apesar das disposições do parágrafo 1, uma Parte pode, se em sua opinião a situação local o exigir e nas condições que determine, incluindo a obrigação de efectuar um registo, autorizar os farmacêuticos ou qualquer outro distribuidor a retalho sob licença, designados pelas autoridades encarregadas da saúde pública no seu país ou numa parte deste, a fornecer à sua discrição e sem receita, para serem utilizadas por particulares em casos excepcionais e para fins médicos, pequenas quantidades de substâncias inscritas nas listas III e IV, nos limites que as Partes se comprometem a definir.

ARTIGO 10

Advertências nas embalagens e propaganda

1 — Cada Parte compromete-se a exigir, tendo em conta as regulamentações ou recomendações pertinentes da Organização Mundial de Saúde, que seja indicado nas etiquetas, quando seja possível fazê-lo, e de qualquer modo nas instruções que acompanham a embalagem para a distribuição a retalho das substâncias psicotrópicas, o modo de emprego, assim como as precauções a tomar e as advertências que, em sua opinião, são necessárias para a segurança do utente.

2 — Cada Parte, tendo em conta as disposições da sua Constituição, proibirá os anúncios publicitários relativos às substâncias psicotrópicas e destinados ao grande público.

ARTIGO 11

Registo

1 — As Partes comprometem-se a exigir que, para as substâncias inscritas na lista I, os fabricantes e todas as outras pessoas autorizadas nos termos do artigo 7 a fazer o comércio e a distribuição dessas substâncias procedam ao registo nas condições determinadas por cada Parte, de modo a mostrar claramente as quantidades fabricadas ou existentes em armazém, assim como, no caso de qualquer aquisição ou cedência, a quantidade, a data e os nomes do fornecedor e do comprador.

2 — As Partes comprometem-se a exigir que, para as substâncias das listas II e III, os fabricantes, os armazenistas, os exportadores e os importadores procedam ao registo nas condições determinadas por cada Parte, de maneira a mostrar claramente as quantidades fabricadas, assim como, para cada aquisição ou cedência, a quantidade, a data e os nomes do fornecedor e do comprador.

3 — As Partes comprometem-se a exigir que, para as substâncias inscritas na lista II, os distribuidores a retalho, os estabelecimentos hospitalares, os centros

de tratamento e as instituições científicas procedam ao registo nas condições determinadas por cada Parte, de maneira a mostrar claramente, para cada aquisição ou cedência, a quantidade, a data e os nomes do fornecedor e do comprador.

4 — As Partes comprometem-se a assegurar por métodos apropriados, e tendo em conta as práticas profissionais e comerciais que lhes são próprias, a possibilidade de consultar facilmente as informações relativas à aquisição e à cedência de substâncias inscritas na lista III por distribuidores a retalho, estabelecimentos hospitalares, centros de tratamento e instituições científicas.

5 — As Partes comprometem-se a exigir que, para as substâncias inscritas na lista IV, os fabricantes, os exportadores e os importadores procedam a um registo efectuado nas condições determinadas por cada Parte, de modo a mostrar claramente as quantidades fabricadas, exportadas e importadas.

6 — As Partes comprometem-se a exigir dos fabricantes de preparações isentas de acordo com o parágrafo 3 do artigo 3 que registem a quantidade de cada substância psicotrópica utilizada no fabrico de uma preparação isenta, a natureza, a quantidade total e o destino inicial da preparação isenta fabricada a partir dessa substância.

7 — As Partes comprometem-se a exigir que os registos e as informações visados no presente artigo e necessários para o estabelecimento dos relatórios previstos no artigo 16 sejam conservados durante dois anos, pelo menos.

ARTIGO 12

Disposições relativas ao comércio internacional

1 — *a*) Qualquer Parte que autorize a exportação ou importação de substâncias inscritas na lista I ou II deve exigir que seja obtida para cada exportação ou importação uma autorização de importação ou exportação distinta, redigida segundo um modelo de formulário estabelecido pela Comissão, e isto quer se trate de uma ou de várias substâncias.

b) Esta autorização deve referir a denominação comum internacional da substância ou, na sua ausência, a designação da substância na lista, quantidade a exportar ou a importar, a sua forma farmacêutica, o nome e o endereço do exportador e do importador e o período em que se deve verificar a exportação ou importação. Se a substância é exportada ou importada sob a forma de preparação, o nome da preparação, se existe, será também indicado. A autorização de exportação deve também indicar o número e a data do certificado de importação e especificar a autoridade que a concedeu.

c) Antes de conceder uma autorização de exportação, as Partes comprometem-se a exigir uma autorização de importação concedida pelas autoridades competentes do país ou da região importadoras, atestando que a importação da substância ou das substâncias consideradas se encontra aprovada, devendo ser esta autorização apresentada pela pessoa ou pelo estabelecimento que pede a autorização de exportação.

d) Uma cópia da autorização de exportação deverá acompanhar cada remessa, devendo o Governo que concede a autorização de exportação enviar uma cópia desta ao Governo do país ou da região importadora.

e) Quando a importação se efectuou, o Governo do país ou da região importadora devolverá ao Governo do país ou da região exportadora a autorização de exportação, acompanhada de um atestado, pelo qual certifique a quantidade efectivamente importada.

2 — *a*) As Partes comprometem-se a exigir que, para cada exportação de substâncias inscritas na lista III, os exportadores preencham uma declaração em três exemplares, redigida segundo um modelo de formulário estabelecido pela Comissão, contendo as informações seguintes:

i) O nome e o endereço do exportador e do importador;

ii) A denominação comum internacional ou, na sua ausência, a designação da substância na lista;

iii) A quantidade da substância e a forma farmacêutica sob a qual a substância é exportada e, se for sob a forma de uma preparação, o nome desta preparação, se existe; e

iv) A data de expedição.

b) Os exportadores fornecerão às autoridades competentes do seu país ou da sua região dois exemplares desta declaração e juntarão o terceiro exemplar à encomenda.

c) A Parte de cujo território uma substância inscrita na lista III foi exportada deverá, tão cedo quanto possível, mas o mais tardar até noventa dias a contar da data de expedição, enviar às autoridades competentes do país ou da região importadora, por correio registado com aviso de recepção, um exemplar da declaração recebida do exportador.

d) As Partes reservam-se o direito de exigir que, aquando da recepção da encomenda, o importador dirija às autoridades do seu país ou da sua região o exemplar que acompanha a encomenda devidamente assinado, indicando as quantidades recebidas e a data da recepção.

3 — As substâncias inscritas nas listas I e II serão sujeitas às seguintes disposições adicionais:

a) As Partes comprometem-se a exercer nos portos francos ou nas zonas francas a mesma vigilância e fiscalização que efectuam nas outras partes do seu território, admitindo-se, no entanto, que possam aplicar um regime mais severo;

b) Serão proibidas as exportações dirigidas a uma caixa postal ou a um banco para a conta de uma pessoa diferente da designada na autorização de exportação;

c) As exportações de substâncias inscritas na lista I sob a forma de encomendas dirigidas a um entreposto alfandegário serão proibidas. As exportações de substâncias inscritas na lista II sob a forma de encomendas dirigidas a um entreposto alfandegário serão proibidas, excepto se o Governo do país importador indicar no certificado de importação apresentado pela pessoa ou entidade que pede a autorização de exportação que aprova a importação da encomenda para um entreposto alfandegário. Neste caso, a autorização de exportação indicará que a encomenda é efectuada para este fim. Qualquer levantamento do entreposto alfandegário será subordinado à apresentação de uma autorização passada pelas autoridades das quais depende o entreposto e, no caso de uma encomenda destinada ao estrangeiro, será considerada como uma nova exportação, nos termos da presente Convenção;

d) As encomendas que entram no território de uma

Parte ou dele saem sem estarem acompanhadas de uma autorização de exportação serão retidas pelas autoridades competentes;

e) Uma Parte não autorizará a passagem em trânsito pelo seu território, em direcção a um outro país, de nenhuma encomenda destas substâncias, quer esta encomenda seja ou não descarregada do veículo que a transporta, excepto no caso de a cópia da autorização de exportação para esta encomenda ser apresentada às autoridades competentes da dita Parte;

f) As autoridades competentes de um país ou de uma região qualquer, através dos quais é autorizada a passagem de uma encomenda destas substâncias, comprometem-se a adoptar todas as medidas necessárias para impedir o seu desvio para um destino diferente do que vem inscrito na cópia da autorização de exportação anexa à encomenda, a menos que o Governo do país ou da região através dos quais a dita encomenda se efectua autorize este desvio. O Governo deste país ou desta região de trânsito considerará qualquer pedido de desvio como se se tratasse de uma exportação do país ou da região de trânsito para o país ou a região do novo destino. Se o desvio é autorizado, as disposições da alínea *e*) do parágrafo 1 aplicar-se-ão igualmente entre o país ou a região de trânsito e o país ou a região donde a encomenda foi primitivamente exportada;

g) Nenhuma encomenda destas substâncias em trânsito ou depositadas num entreposto alfandegário pode ser sujeita a qualquer tratamento que modifique a natureza das substâncias. A embalagem não pode ser modificada sem autorização das autoridades competentes;

h) As disposições das alíneas *e*) a *g*) relativas ao trânsito destas substâncias no território de uma Parte não são aplicáveis no caso de a encomenda ser transportada por via aérea, desde que a aeronave não aterre no país ou na região de trânsito. Se a aeronave aterra neste país ou nesta região, aquelas disposições serão aplicadas na medida em que as circunstâncias o exigirem;

i) As disposições do presente parágrafo devem ser entendidas sem prejuízo do preceituado em qualquer acordo internacional que limite a fiscalização a exercer por qualquer Parte sobre estas substâncias em trânsito.

ARTIGO 13

Proibição e restrições à exportação e importação

1 — Uma Parte pode notificar todas as outras Partes, por intermédio do Secretário-Geral, de que proíbe a importação no seu país ou numa das suas regiões de uma ou várias substâncias inscritas nas listas II, III e IV, especificadas na sua notificação. Nesta notificação deverá indicar o nome dado à substância na lista II, III ou IV.

2 — Se uma Parte recebeu uma notificação de proibição nos termos do parágrafo 1, tomará todas as medidas necessárias para que nenhuma das substâncias especificadas na dita notificação seja exportada para o país ou para uma das regiões da Parte que produz a notificação.

3 — Apesar das disposições dos parágrafos precedentes, uma Parte que efectuou uma notificação nos termos do parágrafo 1 pode, concedendo em cada caso uma autorização especial de importação, autorizar a importação de determinadas quantidades das substâncias em questão ou de preparações que as incluem. A autoridade do país importador que tenha concedido a autorização especial de importação envia-la-á em dois exemplares, contendo o nome e o endereço do importador e do exportador, à autoridade competente do país ou da região exportadora, a qual poderá então autorizar o exportador a expedir a encomenda. Esta será acompanhada de um exemplar da autorização especial de importação devidamente visada pela autoridade competente do país ou da região exportadora.

ARTIGO 14

Disposições especiais sobre o transporte das substâncias psicotrópicas nos estojos de primeiros socorros dos navios, aeronaves ou outros meios de transporte público que efectuem percursos internacionais.

1 — O transporte internacional por navios, aeronaves ou outros meios de transporte público internacional, tais como comboios e autocarros internacionais, de quantidades limitadas de substâncias inscritas nas listas II, III ou IV, susceptíveis de serem necessárias durante a viagem, para administrar os primeiros socorros e para casos de urgência, não será considerada como uma exportação, uma importação ou um trânsito por um país, no sentido da presente Convenção.

2 — Precauções apropriadas serão tomadas pelo país de matrícula para impedir o uso indevido das substâncias mencionadas no parágrafo 1 ou o seu desvio para fins ilícitos. A Comissão recomendará estas precauções, consultando as organizações internacionais competentes.

3 — As substâncias transportadas por navios, aeronaves ou outros meios de transporte público internacional, tais como comboios ou autocarros internacionais, de acordo com as disposições do parágrafo 1, serão submetidas às leis, regulamentos, autorizações e licenças do país de matrícula, sem prejuízo do direito de as autoridades locais competentes procederem a verificações, inspecções e outras operações de fiscalização a bordo destes meios de transporte. A administração destas substâncias, em caso de urgência, não será considerada uma violação às disposições do parágrafo 1 do artigo 9.

ARTIGO 15

Inspecção

As Partes comprometem-se a instituir um sistema de inspecção dos fabricantes, dos exportadores, dos importadores, dos armazenistas e retalhistas das substâncias psicotrópicas, assim como das instituições médicas e científicas que utilizam estas substâncias. As Partes devem criar as condições para que as inspecções dos locais, existências e registos sejam tão frequentes quanto necessário.

ARTIGO 16

Informações a fornecer pelas Partes

1 — As Partes comprometem-se a fornecer ao Secretário-Geral as informações que a Comissão possa

pedir por considerar necessárias ao exercício das suas funções, e nomeadamente um relatório anual relativo ao funcionamento da Convenção nos seus territórios e contendo informações sobre:

a) As modificações importantes introduzidas nas suas leis e regulamentos relativos às substâncias psicotrópicos; e

b) Os factos particularmente significativos que se tenham produzido nos seus territórios em matéria de abuso e de tráfico ilícito das substâncias psicotrópicas.

2 — Por outro lado, as Partes comprometem-se a comunicar ao Secretário-Geral os nomes e os endereços das autoridades governamentais mencionadas na alínea *f*) do artigo 7, no artigo 12 e no parágrafo 3 do artigo 13. O Secretário-Geral difundirá estas informações a todas as Partes.

3 — As Partes comprometem-se a dirigir ao Secretário-Geral, no mais curto prazo, um relatório sobre os casos de tráfico ilícito de substâncias psicotrópicas e de apreensão de substâncias que sejam objecto deste tráfico, quando estes casos lhes parecerem importantes devido:

a) A novas tendências postas em evidência;

b) Às quantidades em causa;

c) Aos dados que fornecem sobre as fontes de abastecimento; ou

d) Aos métodos empregues pelos traficantes.

Deverão ser fornecidas cópias do relatório de acordo com a alínea *b*) do artigo 21.

4. As Partes comprometem-se a fornecer ao Órgão relatórios estatísticos anuais, utilizando para este efeito os formulários estabelecidos pelo Órgão. Estes relatórios terão:

a) No que diz respeito a cada uma das substâncias inscritas nas listas I e II, as quantidades fabricadas, exportadas e importadas para ou de cada país ou região, assim como as existências em poder dos fabricantes;

b) No que diz respeito a cada uma das substâncias inscritas nas listas III e IV, as quantidades fabricadas e as quantias totais exportadas e importadas;

c) No que diz respeito a cada uma das substâncias inscritas nas listas II e III, as quantidades utilizadas para o fabrico de preparação isentas; e

d) No que diz respeito a cada uma das substâncias inscritas numa lista que não seja a lista I, as quantidades empregues para fins industriais, de acordo com as disposições da alínea *b*) do artigo 4.

As quantidades fabricadas que são visadas pelas alíneas *a*) e *b*) do presente parágrafo não incluem as quantidades de preparação fabricadas.

5 — Qualquer Parte deverá fornecer ao Órgão, a seu pedido, informações estatísticas suplementares relativas a períodos posteriores, sobre as quantidades de qualquer substância inscrita nas listas III e IV exportadas com destino a cada país ou região e importadas de cada país ou região. Esta Parte poderá pedir ao Órgão para conferir carácter confidencial tanto ao seu pedido de informações como às informações fornecidas nos termos do presente parágrafo.

6 — As Partes comprometem-se a fornecer as informações mencionadas nos parágrafos 1 e 4, da maneira e nas datas que a Comissão ou o Órgão fixar.

ARTIGO 17

Funções da Comissão

1 — O Órgão efectua sobre os seus trabalhos relatórios anuais onde figura uma análise das informações estatísticas de que dispõe e, nos casos apropriados, um relato das explicações que os Governos tenham fornecido ou lhe hajam solicitado, assim como qualquer observação e recomendação que o Órgão possa querer formular. O Órgão pode igualmente proceder à elaboração de todos os relatórios suplementares que considere necessários. Os relatórios são apresentados ao Conselho por intermédio da Comissão, que pode formular as observações que julgar oportunas.

2 — Os relatórios do Órgão são comunicados às Partes e publicados ulteriormente pelo Secretário-Geral. As Partes autorizam a livre distribuição destes relatórios.

ARTIGO 19

Medidas a tomar pelo órgão para assegurar a execução das disposições da Convenção

1 — *a*) Se, após exame das informações dirigidas ao Órgão pelos Governos, ou das informações comunicadas pelos órgãos das Nações Unidas, o Órgão tem motivo para crer que os fins da presente Convenção são seriamente comprometidos pelo facto de um país ou uma região não executar as suas disposições, o Órgão tem direito de pedir explicações ao Governo do país ou da região interessada. Sob reserva do direito que possui de chamar a atenção das Partes, do Conselho e da Comissão sobre a questão visada na alínea *c*), o Órgão considerará confidencial um pedido de informação ou uma explicação fornecida por um Governo, nos termos da presente alínea;

b) Depois de ter actuado segundo o prescrito na alínea *a*), o Órgão pode, se julga necessário fazê-lo, solicitar ao Governo interessado a adopção de medidas correctivas que, face às circunstâncias, possam revelar-se necessárias à boa execução das disposições da presente Convenção;

c) Se o Órgão constatar que o Governo interessado não deu explicações satisfatórias quando foi convidado a fazê-lo, nos termos da alínea *a*), ou negligenciou a adopção de todas as medidas correctivas que foi convidado a assumir, de acordo com a alínea *b*), pode chamar a atenção das Partes, do Conselho e da Comissão para o assunto.

2 — Quando chama a atenção das Partes, do Conselho e da Comissão para uma questão, de acordo com a alínea *c*) do parágrafo 1, o Órgão pode, se entender necessária tal medida, recomendar às Partes que interrompam a exportação de substâncias psicotrópicas para este país ou região, ou a importação das substâncias psicotrópicas provenientes deste país ou região, ou ainda simultaneamente a exportação e a importação, quer por um período determinado, quer até ao momento em que a situação neste país ou nesta região seja considerada aceitável pelo Órgão.

O Estado interessado tem o direito de apresentar a questão perante o Conselho.

3 — O Órgão tem o direito de publicar um relatório sobre qualquer questão visada pelas disposições do presente artigo e de comunicá-lo ao Conselho, que

o transmitirá a todas as Partes. Se o Órgão publica neste relatório uma decisão adoptada nos termos do presente artigo ou informações relativas a esta decisão, deve igualmente publicar a opinião do Governo interessado, se este o pede.

4 — Nos casos em que uma decisão do Órgão publicada nos termos do presente artigo não haja sido adoptada por unanimidade, a opinião da minoria deve ser expressa.

5 — Qualquer Estado será convidado a fazer-se representar nas sessões do Órgão em que seja examinada uma questão que directamente o interesse, nos termos do presente artigo.

6 — As decisões do Órgão assumidas nos termos do presente artigo devem ser adoptadas por maioria de dois terços do número total dos membros do Órgão.

7 — As disposições dos parágrafos precedentes aplicar-se-ão igualmente no caso de o Órgão ter motivos para crer que os fins da presente Convenção são ser amente comprometidos devido a uma decisão tomada por uma Parte de acordo com as disposições do parágrafo 7 do artigo 2.

ARTIGO 20

Medidas contra o abuso das substâncias psicotrópicas

1 — As Partes comprometem-se a adoptar todas as medidas susceptíveis de prevenir o abuso das substâncias psicotrópicas e assegurar a rápida identificação, assim como o tratamento, a educação, a pós-cura, a readaptação e a reintegração social das pessoas envolvidas; elas comprometem-se a coordenar os seus esforços para a consecução desse fim.

2 — As Partes comprometem-se a favorecer tanto quanto possível a formação do pessoal para assegurar o tratamento, a pós-cura, a readaptação e a reintegração social das pessoas que abusam de substâncias psicotrópicas.

3 — As Partes comprometem-se a auxiliar as pessoas que necessitem de apoio no exercício da sua profissão, no sentido de adquirirem o conhecimento dos problemas resultantes do abuso das substâncias psicotrópicas e pela sua prevenção, e comprometem-se a desenvolver igualmente este conhecimento no seio do grande público, no caso de se considerar que o abuso destas substâncias alastre muito rapidamente.

ARTIGO 21

Luta contra o tráfico ilícito

Tendo devidamente em consideração os seus regimes constitucional, jurídico e administrativo, as Partes:

a) Comprometem-se a assegurar no plano nacional a coordenação da acção preventiva e repressiva contra o tráfico ilícito; para este fim poderão utilmente designar um serviço apropriado encarregue desta coordenação;

b) Comprometem-se a assistir-se mutuamente na luta contra o tráfico ilícito das substâncias psicotrópicas, e em particular a transmitir imediatamente às outras Partes directamente interessadas, pela via diplomática ou através das autoridades competentes que hajam designado para esse efeito, cópias de qualquer relatório que tenham dirigido ao Secretário-Geral, nos termos do artigo 16, em consequência da descoberta de um caso de tráfico ilícito ou de uma apreensão;

c) Cooperarão estreitamente entre elas e com as organizações internacionais competentes de que são membros para travarem uma luta coordenada contra o tráfico ilícito;

d) Comprometem-se a actuar de modo que a cooperação internacional dos serviços apropriados se realize pelas vias mais rápidas; e

e) Comprometem-se a assegurar-se de que, quando peças de processo forem transmitidas entre países para o exercício de uma acção judiciária, a transmissão seja efectuada pelas vias mais rápidas e dirigida às instâncias designadas pelas Partes; esta disposição não prejudica o direito de as Partes pedirem que as peças do processo lhes sejam enviadas por via diplomática.

ARTIGO 22

Disposições penais

1 — *a*) Ressalvando as suas disposições constitucionais, cada Parte considerará como uma infracção punível qualquer acto cometido intencionalmente em contravenção a uma lei ou regulamento adoptados para execução das suas obrigações decorrentes da presente Convenção, e tomará as medidas necessárias para que as infracções graves sejam devidamente sancionadas, por exemplo por uma pena de prisão ou uma outra pena privativa da liberdade;

b) Sem prejuízo das disposições que figuram na precedente alínea, quando as pessoas que tenham cometido estas infracções utilizem de maneira abusiva as substâncias psicotrópicas, as Partes poderão, em vez de as condenar ou de pronunciar uma sanção penal contra elas, ou como complemento da sanção penal, sujeitar estas pessoas a medidas de tratamento de educação de pós-cura, de readaptação e de reintegração social, conforme as disposições do parágrafo 1 do artigo 20.

2 — Ressalvando as disposições constitucionais, do sistema jurídico e da legislação nacional de cada Parte:

a) *i*) Se uma série de actos ligados entre si e que constituam infracções nos termos do anterior parágrafo 1 for cometida em países diferentes, cada um destes actos será considerado como uma infracção distinta;

ii) A participação intencional numa qualquer das ditas infracções, a associação ou o entendimento com vista a cometê-la ou a tentativa de cometê-la, assim como os actos preparatórios e as operações financeiras intencionalmente efectuadas, relativas às infracções mencionadas no presente artigo, constituirão infracções passíveis das penas previstas no parágrafo 1;

iii) As condenações pronunciadas no estrangeiro sobre estas infracções serão tomadas em consideração a fim de estabelecer a reincidência; e

iv) As infracções graves citadas acima, quer sejam cometidas por nacionais ou por estrangeiros, serão submetidas a procedimento judicial pela Parte em cujo território a infracção foi cometida ou pela Parte em cujo território o delinquente se encontra, no caso de a extradição não ser compatível com a legislação da Parte à qual o pedido foi dirigido e se o delinquente não foi já apresentado a juízo e julgado.

b) É desejável que as infracções mencionadas no parágrafo 1 e na parte *ii*) da alínea *a*) do parágrafo 2 sejam consideradas como casos de extradição nos termos de qualquer tratado de extradição concluído ou a concluir entre Partes e sejam reconhecidas como casos de extradição entre si pelas Partes que não sujeitam a extradição à existência de um tratado ou à reciprocidade, entendendo-se, todavia, que a extradição será concedida de acordo com a legislação da Parte a quem o pedido de extradição foi dirigido, tendo a dita Parte o direito de recusar a execução da detenção do delinquente ou recusar o seu acordo à extradição se as autoridades competentes considerarem que a infracção não é suficientemente grave.

3 — Qualquer substância psicotrópica ou outra substância e qualquer utensílio utilizado ou destinado a ser utilizado para cometer uma qualquer das infracções visadas nos parágrafos 1 e 2 poderão ser apreendidos e confiscados.

4 — Nenhuma disposição do presente artigo prejudicará as disposições da legislação nacional de uma Parte em matéria de competência.

5 — Nenhuma disposição do presente artigo prejudicará o princípio segundo o qual as infracções a que se refere serão definidas, apreciadas em juízo e condenadas de acordo com a legislação nacional de cada uma das Partes.

ARTIGO 23

Aplicação de medidas de fiscalização mais severas do que as exigidas pela Convenção

As Partes poderão adoptar medidas de fiscalização mais restritas ou mais severas do que as previstas pela presente Convenção se o considerarem oportuno ou necessário para a protecção da saúde e do interesse público.

ARTIGO 24

Despesas dos órgãos internacionais resultantes da aplicação das disposições da Convenção

As despesas da Comissão e do Órgão na execução das suas funções respectivas em virtude da presente Convenção serão assumidas pela Organização das Nações Unidas nas condições que serão determinadas pela Assembleia Geral. As Partes que não são membros da Organização das Nações Unidas contribuirão para estas despesas, devendo a Assembleia Geral fixar periodicamente, depois de consultar os Governos destas Partes, o montante das contribuições que considere equitativo.

ARTIGO 25

Processo de admissão, de assinatura, de ratificação e de adesão

1 — Os Estados membros da Organização das Nações Unidas, os Estados não membros da Organização das Nações Unidas que sejam membros de uma instituição especializada das Nações Unidas ou da Agência Internacional da Energia Atómica ou Partes no Estatuto do Tribunal Internacional de Justiça, assim como qualquer outro Estado convidado pelo Conselho, podem tornar-se Partes na presente Convenção:

a) Assinando-a; ou

b) Ratificando-a, depois de a ter assinado sob reserva de ratificação; ou

c) Aderindo a ela.

2 — A presente Convenção será aberta para assinatura até ao dia 1 de Janeiro de 1972, inclusive. Será a seguir aberta a adesão.

3 — Os instrumentos de ratificação ou de adesão serão depositados junto do Secretário-Geral.

ARTIGO 26

Entrada em vigor

1 — A presente Convenção entrará em vigor noventa dias depois de quarenta dos Estados visados no parágrafo 1 do artigo 25 a terem assinado sem reserva de ratificação ou terem depositado os seus instrumentos de ratificação ou de adesão.

2 — Para qualquer outro Estado que assine sem reserva de ratificação, ou que deposite um instrumento de ratificação ou de adesão depois da data da última assinatura ou do último depósito visados no parágrafo precedente, a presente Convenção entrará em vigor noventa dias depois da data da sua assinatura ou do depósito do seu instrumento de ratificação ou de adesão.

ARTIGO 27

Aplicação territorial

A presente Convenção aplicar-se-á a todos os territórios não metropolitanos que uma Parte represente no plano internacional, excepto no caso de ser necessário o consentimento prévio de um tal território em virtude da Constituição da Parte ou do território interessado, ou do costume. Neste caso, a Parte esforçar-se-á por obter, no mais curto prazo de tempo, o consentimento do território e, quando este consentimento tiver sido obtido, notificará o Secretário-Geral. A presente Convenção aplicar-se-á ao território ou aos territórios designados pela dita notificação na data de recepção desta última pelo Secretário-Geral. Nos casos em que o consentimento prévio do território não metropolitano não seja necessário, a Parte interessada deverá declarar, no momento da assinatura da ratificação ou da adesão, a que território ou territórios não metropolitanos se aplica a presente Convenção.

ARTIGO 28

Regiões no entender da presente Convenção

1 — Qualquer Parte pode notificar o Secretário-Geral de que, para os fins da presente Convenção, o seu território é dividido em duas ou várias regiões ou que duas ou várias das suas regiões são agrupadas numa só.

2 — Duas ou várias Partes podem notificar o Secretário-Geral de que, em consequência da instituição de uma união alfandegária entre si, estas Partes constituem uma região para efeitos da presente Convenção.

3 — Qualquer notificação efectuada nos termos do parágrafo 1 ou 2 tornar-se-á efectiva no dia 1 de Janeiro do ano seguinte àquele em que a dita notificação houver sido feita.

ARTIGO 29

Denúncia

1 — Decorrido o prazo de dois anos sobre a data de entrada em vigor da presente Convenção, qualquer Parte poderá, em nome próprio ou em nome de um território que represente no plano internacional e que retirou o consentimento dado, nos termos do artigo 27, denunciar a presente Convenção, depositando um instrumento para este efeito junto do Secretário-Geral.

2 — Se o Secretário-Geral receber a denúncia antes do dia 1 de Julho ou nesta data, ela tornar-se-á efectiva no dia 1 de Janeiro do ano seguinte; se a denúncia for recebida depois de 1 de Julho, tornar-se-á efectiva como se houvesse sido recebida no ano seguinte antes de 1 de Julho ou nesta data.

3 — A presente Convenção expirará se, em consequência de denúncias notificadas de acordo com as disposições dos parágrafos 1 e 2, as condições da sua entrada em vigor previstas no parágrafo 1 do artigo 26 deixarem de ser preenchidas.

ARTIGO 30

Emendas

1 — Qualquer Parte poderá propor uma emenda à presente Convenção. O texto da dita emenda e as razões que a motivaram serão comunicadas ao Secretário-Geral, que as comunicará às Partes e ao Conselho. O Conselho poderá decidir:

a) Convocar uma conferência de acordo com o parágrafo 4 do artigo 62 da Carta das Nações Unidas, com vista a estudar a emenda proposta; ou

b) Perguntar às Partes se aceitam a emenda proposta e pedir ainda que apresentem ao Conselho as suas observações eventuais sobre esta proposta.

2 — Se um projecto de emenda distribuído de acordo com a alínea *b*) do parágrafo 1 não for rejeitado por nenhuma Parte nos dezoito meses que se seguem à sua comunicação, entrará imediatamente em vigor. Se, no entanto, for rejeitado por uma Parte, o Conselho poderá decidir, tendo em conta as observações das Partes, sobre a conveniência em convocar uma conferência à qual seja cometido o estudo da sobredita emenda.

ARTIGO 31

Diferendos

1 — Se surgir entre duas ou várias Partes um diferendo no que se refere à interpretação ou à aplicação da presente Convenção, as ditas Partes realizarão consultas entre si para resolver este diferendo por via de negociações, de inquéritos, de mediação, de conciliação, de arbitragem, de recurso a organismos regionais, por via judiciária ou por outros meios pacíficos da sua escolha.

2 — Qualquer diferendo deste género que não tenha sido resolvido pelos meios previstos no parágrafo 1 será submetido, a pedido de uma das Partes do diferendo, ao Tribunal Internacional de Justiça.

ARTIGO 32

Reservas

1 — Nenhuma reserva é autorizada fora das reservas feitas de acordo com os parágrafos 2, 3 e 4 do presente artigo.

2 — Qualquer Estado pode, na altura da assinatura, da ratificação ou da adesão, fazer reservas sobre as disposições seguintes da presente Convenção:

a) Artigo 19, parágrafos 1 e 2;
b) Artigo 27; e
c) Artigo 31.

3 — Qualquer Estado que deseje tornar-se Parte da Convenção, mas que pretenda ser autorizado a efectuar reservas diferentes das que são enumeradas nos parágrafos 2 e 4, pode avisar o Secretário-Geral desta sua intenção. A menos que, ao expirarem doze meses sobre a data da comunicação da reserva em questão pelo Secretário-Geral, um terço dos Estados que assinaram sem reserva de ratificação, ratificaram a Convenção ou aderiram a ela antes do termo do dito período levantem objecções contra ela, será considerada como autorizada, entendendo-se todavia que os Estados que hajam levantado objecções contra esta reserva não terão que assumir, em relação ao Estado que a formulou, a obrigação jurídica decorrente da presente Convenção, sobre a qual incide a reserva.

4 — Qualquer Estado em cujo território cresçam no estado selvagem plantas contendo substâncias inscritas na lista I e utilizadas tradicionalmente por certos grupos restritos bem determinados na ocasião de cerimónias mágicas ou religiosas, pode, na altura da assinatura da ratificação ou da adesão, fazer reservas sobre estas plantas no que se refere às disposições do artigo 7, excepto nas relativas ao comércio internacional.

5 — O Estado que tenha feito reservas poderá a qualquer altura, e por via de notificação escrita ao Secretário-Geral, levantar todas ou parte das reservas.

ARTIGO 33

Notificação

O Secretário-Geral notificará a todos os Estados mencionados no parágrafo 1 do artigo 25:

a) As assinaturas, ratificações ou adesões de acordo com o artigo 25;
b) A data em que a presente Convenção entrará em vigor de acordo com o artigo 26;
c) As denúncias de acordo com o artigo 29; e
d) As declarações e notificações de acordo com os artigos 27, 28, 30 e 32.

Em fé do que, os abaixo assinados, devidamente autorizados, assinaram a presente Convenção em nome dos seus Governos respectivos.

Feito em Viena, a 21 de Fevereiro de 1971, em exemplar único, em inglês, chinês, espanhol, francês e russo, fazendo os cinco textos igualmente fé. A Convenção será depositada junto do Secretário-Geral da Organização das Nações Unidas, que transmitirá cópias certificadas conformes a todos os Estados Membros da Organização das Nações Unidas e aos outros Estados visados no parágrafo 1 do artigo 25.

Lista das substâncias *

Substâncias da lista I

DCI	Outras denominações comuns	Nomenclatura química
1.	DET	*N*,*N*-dietiltriptamina.
2.	DMHP	3-(1,2-dimetil-heptil)-1-hidroxil-7,8,9,10-tetra-hidro-6,6,9-trimetil--6*H*-dibenzo[*b*,*d*]pirano.
3.	DMT	*N*,*N*-dimetiltriptamina.
4. (+)-Lisergida	LSD, LSD-25	(2)-*N*,*N*-dietilisergamida (dietilamida do ácido *d* lisérgico).
5.	Mescalina	3,4,5-trimetoxifenetilamina.
6.	Para-hexilo	3-hexil-1-hidroxi-7,8,9,10-tetra-hidro-6,6,9-trimetil-6*H*-dibenzo[*b*,*d*]pirano.
7.	Psilocina, psilotsina	3-(2-dimetilamincetil)-4-hidroxiindol.
8. *Psilocibina*	—	**Fosfato di-hidrogenado de** 3-(2-dimetil-aminoetil)-indol-4-ilo.
9.	STP, DOM	2-amino-1-2,5-dimtoxi-4-metil) fenilpropano.
10.	Tetra-hidrocanabinóis, os seguintes isómeros: Δ6*a*(10*a*), Δ6*a*(7), Δ7, Δ8, Δ9, Δ10, Δ9(11), e as suas variantes tereoquímicas.	—

Os sais das substâncias indicadas nesta lista, sempre que a existência de tais sais seja possível.

Substâncias da lista II

DCI	Outras denominações comuns	Nomenclatura química
1. *Anfetamina*	—	(±)-2-amino-1-fenilpropano.
2. *Dexanfetamina*	—	(+)-2-amino-1-fe ilpropano.
3. *Metanfetamina*	—	(+)-2-metilamino-1-fenilpropano.
4. *Metilfenidato*	—	Éster netílico do ácido 2-fefil-2-(2-piperidil) acético.
5. *Fenciclidina*	—	1-(fenilciclo-hexil)-pipedina.
6. *Fenmetrazina*	—	3-metil-2-fenilmorfolina.

Os sais das substâncias indicadas nesta lista, sempre que a existência de tais sais seja possível.

Substâncias da lista III

DCI	Outras denominações comuns	Nomenclatura química
1. *Amobarbital*	—	Ácido 5-etil-5-(3-metilbutil) barbitúrico.
2. *Ciclobarbital*	—	Ácido 5-(1 ciclo-hexeno-l-il)-5-etilbarbitúrico.
3. *Glutetimina*	—	2-etil-2-fenilglutarimida.
4. *Pentobarbital*	—	Ácido 5-etil-5-(1-metilbutil) barbitúrico.
5. *Secobarbital*	—	Ácido 5-alil-5-(1-metilbutil) barbitúrico.

Os sais das substâncias indicadas nesta lista, sempre que a existência de tais sais seja possível.

Substâncias da lista IV

DCI	Outras denominações comuns	Nomenclatura química
1. *Anfepramona*	—	2-(dietilamino) propiofenona.
2. *Barbital*	—	Ácido 5,5-dietilbarbitúrico.
3.	Etclorvinol	Etil-2-cloroviniletinilcarbinol.
4. *Etinamato*	—	Carbamato de l-etinilciclo-hexilo.
5. *Meprobamato*	—	Dicarbamato de 2-metil-2-propil-1,3-propa odiol.
6. *Metaqualona*	—	2-metil-3-*o*-totil-4-(3*H*)-quinazolinona.
7. *Metilfenobarbital*	—	Ácido 5-etil-1-metil-5-fenilbarbitúrico.
8. *Metiprilona*	—	3,3-dietil-5-metil-2,4-piperidinodiona.
9. *Fenobarbital*	—	Ácido 5-etil-5-fenilbarbitúrico.
10. *Pipradrol*	—	1,1-difenil-1-(2-piperidil) metanol.
11.	SPA	(−)-1-dimetilamino-1,2-difeniletano.

Os sais das substâncias indicadas nesta lista, sempre que a existência de tais sais seja possível.

* Os nomes que aparecerem em itálico na coluna da esquerda são as denominações comuns internacionais (DCI). Com uma excepção [(+)-Lisergida], somente se indicam outros nomes comuns quando ainda não tenha sido proposta ne huma DCI.

PRESIDÊNCIA DA REPÚBLICA

Decreto do Presidente da República n.º 178/99

de 5 de Agosto

O Presidente da República decreta, nos termos do artigo 292.º, n.º 1, da Constituição e dos artigos 3.º, n.ºs 2 e 3, 69.º e 70.º do Estatuto Orgânico de Macau, o seguinte:

É estentida ao território de Macau, nos mesmos termos em que a ela está vinculado o Estado Português, a emenda à Convenção sobre o Regulamento Internacional para Evitar Abalroamentos no Mar, adoptada em 1989, aprovada pelo Decreto n.º 56/91, de 21 de Setembro, cujo texto foi publicado no *Diário da República*, 1.ª série, de 21 de Setembro de 1991.

Foram ouvidos os órgãos de governo próprios do território de Macau.

Assinado em 28 de Julho de 1999.

Publique-se no *Boletim Oficial* de Macau, em conjunto com o referido decreto de aprovação e texto da Convenção.

O Presidente da República, JORGE SAMPAIO.

(D.R. n.º 181, I Série-A, de 5 de Agosto de 1999)

MINISTÉRIO DOS NEGÓCIOS ESTRANGEIROS

Decreto n.º 56/91

de 21 de Setembro

Nos termos da alínea *c*) do n.º 1 do artigo 200.º da Constituição, o Governo decreta o seguinte:

Artigo único. São aprovadas, para ratificação, as emendas à regra 10 do Regulamento Internacional para Evitar Abalroamentos no Mar, cuja versão original em inglês e respectiva tradução portuguesa seguem em anexo ao presente decreto.

Visto e aprovado em Conselho de Ministros de 1 de Agosto de 1991. — *Joaquim Fernando Nogueira — Joaquim Fernando Nogueira — Vítor Ângelo Mendes da Costa Martins — Joaquim Martins Ferreira do Amaral — Carlos Alberto Diogo Soares Borrego.*

Ratificado em 6 de Setembro de 1991.

Publique-se.

O Presidente da República, MÁRIO SOARES.

Referendado em 10 de Setembro de 1991.

O Primeiro-Ministro, *Aníbal António Cavaco Silva.*

Amendment to the International Regulations for Preventing Collisions at Sea, 1972

Rule 10 – Traffic Separation Schemes

The existing text of paragraph (*d*) is replaced by the following:

(*d*) (*i*) A vessel shall note use an inshore traffic zone when she can safely use the appropriate traffic lane within the adjacent traffic separation scheme. However, vessels of less than 20 metres in length, sailing vessels and vessels engaged in fishing may use the inshore traffic zone.

(*ii*) Notwithstanding subparagraph (*d*) (*i*), a vessel may use an inshore traffic zone when *en route* to or from a port, offshore installation or structure, pilot station or any other place situated within the inshore traffic zone, or to avoid immediate danger.

Emenda ao Regulamento Internacional para Evitar Abalroamentos no Mar, 1972

Regra 10 – Esquemas de Separação de Tráfego

O texto existente do parágrafo (*d*) é substituído pelo seguinte:

(*d*) (*i*) Um navio não deverá navegar numa zona de tráfego costeiro quando o possa fazer com segurança no corredor de tráfego apropriado do respectivo esquema de separação de tráfego. Contudo, navios com comprimento inferior a 20 m, navios à vela e navios em faina de pesca podem navegar na zona de tráfego costeiro.

(*ii*) Não obstante o subparágrafo (*d*) (*i*), um navio pode navegar numa zona de tráfego costeiro quando seguindo para ou provindo de um porto, instalação ou estrutura *offshore*, estação de pilotos ou qualquer outro destino localizado dentro da zona de tráfego costeiro, ou ainda para evitar um perigo imediato.

Resolution A.464 (XII)

(Adopted on 19 November 1981)

Amendments to the International Regulations for Preventing Collisions at Sea, 1972

The Assembly,

Recalling article VI of the Convention on the International Regulations for Preventing Collisions at Sea, 1972, on amendments to the Regulations;

Recalling also Resolution A.431 (XI) entitled «Recommendation concerning vessels restricted in their ability to manœuvre when engaged in an operation for the maintenance of safety of navigation in a traffic separation scheme» including the decision to consider at its twelfth session the adoption of a corresponding amendment to rule 10 of the International Regulations for Preventing Collisions at Sea, 1972;

Having considered the above and other amendments to the International Regulations for Preventing Collisions at Sea, 1972, adopted by the Maritime Safety Committee at its forty-fourth session and communicated to all Contracting Parties in accordance with paragraph 2 of article VI of that Convention and also the recommendations of the Maritime Safety Committee concerning entry into force of these amendments,

1 — Adopts, in accordance with paragraph 3 of article VI of the Convention, the amendments set out in the annex to the present resolution;

2 — Decides, in accordance with paragraph 4 of article VI of the Convention, that each amendment shall enter into force on 1 June 1983 unless by 1 June 1982 more than one third of the Contracting Parties have notified their objection to the amendments;

3 — Requests the Secretary-General, in conformity with paragraph 3 of article VI, to communicate this resolution to all Contracting Parties to the Convention for acceptance, together with copies to all Members of the Organization;

4 — Invites Contracting Parties to submit any objections to the amendments not later than 1 June 1982 whereafter the amendments will be deemed to enter into force as determined in this resolution.

ANNEX

Amendments to the International Regulations for Preventing Collisions at Sea, 1972

1 — *Rule 1, c):*
Amend to read:

c) Nothing in these rules shall interfere with the operation of any special rules made by the Government of any State with respect to additional station or signal lights, shapes or whistle signals for ships of war and vessels proceeding under convoy, or with respect to additional station or signal lights or shapes for fishing vessels engaged in fishing as a fleet. These additional station or signal lights, shapes or whistle signals shall, so far as possible, be such that they cannot be mistaken for any light, shape or signal authorized elsewhere under these rules.

2 — *Rule 3, g):*
Replace the sentence immediately before sub-paragraphs *i)* to *vi)* by the following:

The term «vessels restricted in their ability to manœuvre» shall include but not be limited to.

3 — *Rule 3, g), v):*
Replace the word «minesweeping» by the word «mineclearance».

4 — *Rule 10, b), iii):*
Replace the words «when joining or leaving from the side» by the words «when joining or leaving from either side».

5 — *Rule 10, d):*
Add the following sentence to the present text:

However, vessels of less than 20 metres in length and sailing vessels may under all circumstances use inshore traffic zones.

6 — *Rule 10, e):*
Amend to read:

e) A vessel other than a crossing vessel or a vessel joining or leaving a lane shall not normally enter ...

7 — *Rule 10, k):*
Add the following new paragraph:

k) A vessel restricted in her ability to manœuvre when engaged in an operation for the maintenance of safety of navigation in a traffic separation scheme is exempted from complying with this rule to the extent necessary to carry out the operation.

8 — *Rule 10, l):*
Add the following new paragraph:

l) A vessel restricted in her ability to manœuvre when engaged in an operation for **the laying, servicing** or picking up of a submarine cable, within a traffic separation scheme, is exempted from complying with this rule to the extent necessary to carry out the operation.

9 — *Rule 13, a):*
Amend to read:

a) Notwithstanding anything contained in the rules of part B, sections I and II ...

10 — *Rule 22, d):*
Add a new paragraph:

d) In inconspicuous, partly submerged vessels or objects being towed: — a white all-round light, 3 miles.

11 — *Rule 23, c):*
Amend to read:

c):

i) A power-driven vessel of less than 12 metres in length may in lieu of the lights prescribed in paragraph *a)* of this rule exhibit an all-round white light and sidelights;

ii) A power-driven vessel of less than 7 metres in length whose maximum speed does not exceed 7 knots may in lieu of the lights prescribed in paragraph *a)* of this rule exhibit an all-round white light and shall, if practicable, also exhibit sidelights;

iii) The masthead light or all-round white light on a power driven vessel of less than 12 metres in length may be displaced from the fore and aft centreline fitting is not practicable, provided that the sidelights are combined in one lantern which shall be carried on the fore and aft centreline of the vessel or located as nearly as practicable in the same fore and aft line as the masthead light or the all-round white light.

12 — *Rule 24, a), i) and c), i):*
Insert «or *a), ii)*» after «in rule 23, *a), i)*» and delete «forward».

13 — *Rule 24, d):*
Replace the words «paragraphs *a)* and *c)*» in the first line by the words «paragraph *a)* or *c)*».

14 — *Rule 24, e):*
Amend the lead-in sentence to read:

A vessel or object being towed, other than those mentioned in paragraph *g)* of this rule, shall exhibit:

15 — *Rule 24, g):*
Insert the following new paragraph *g):*

g) An inconspicuous, partly submerged vessel or object, or combination of such vessels or objects being towed, shall exhibit:

i) If it is less than 25 metres in breadth, one all-round white light at or near the forward end and one at or near the after end except that dracones need not exhibit a light at or near the forward end;

ii) If it is 25 metres or more in breadth, two additional all-round white lights at or near the extremities of its breadth;

iii) If it exceeds 100 metres in length, additional all-round white lights between the lights prescribed in sub-paragraphs *i)* and *ii)* so that the distance between the lights shall not exceed 100 metres;

iv) A diamond shape at or near the aftermost extremity of the last vessel or object being towed and if the length of the tow exceeds 200 metres an additional diamond shape where it can best be seen and located as far forward as is practicable.

16 — *Rule 24, h):*
Reletter existing paragraph *g)*, which becomes paragraph *h)*, and amend it to read:

h) Where from any sufficient cause it is impracticable for a vessel or object being towed to exhibit the lights or shapes prescribed in paragraph *e)* or *g)* of this rule, all possible measures shall be taken to light the vessel or object towed or at least to indicate the presence of such vessel or object.

17 — *Rule 24, i):*
Add the following new paragraph:

i) Where from any sufficient cause it is impracticable for a vessel not normally engaged in towing operations to display the lights prescribed in paragraph *a)* or *c)* of this rule, such vessel shall not be required to exhibit those lights when engaged in towing another vessel in distress or otherwise

in need of assistance. All possible measures shall be taken to indicate the nature of the relationship between the towing vessel and the vessel being towed as authorized by rule 36, in particular by illuminating the towline.

18 — *Rule 25, b):*

Amend «12 metres» to read «20 metres».

19 — *Rule 27, b), preamble:*

Replace the word «minesweeping» by the word «mineclearance» in the first sentence.

20 — *Rule 27, b), iii):*

Replace the words «masthead lights» by the words «a masthead light or lights».

21 — *Rule 27, c):*

Amend to read:

c) A power-driven vessel engaged in a towing operation such as severely restricts the towing vessel and her tow in their ability to deviate from their course shall, in addition to the lights or shapes prescribed in rule 24, *a*), exhibit the lights or shapes prescribed in sub-paragraphs *b*), *i*) and *ii*) of this rule.

22 — *Rule 27, d):*

Replace the words «paragraph *b*)» by the words «sub-paragraphs *b*), *i*), *ii*) and *iii*)»;

Delete existing sub-paragraph *iii*);

Renumber existing sub-paragraph *iv*) which becomes *iii*) and amend it to read:

iii) When at anchor, the lights or shapes prescribed in this paragraph instead of the lights or shape prescribed in rule 30.

23 — *Rule 27, e):*

Amend to read:

e) Whenever the size of a vessel engaged in diving operations makes it impracticable to exhibit all lights and shapes prescribed in paragraph *d*) of this rule, the following shall be exhibited:

i) Three all-round lights in a vertical line where they can best be seen. The highest and lowest of these lights shall be red and the middle light shall be white;

ii) A rigid replica of the International Code flag «A» not less than 1 metre in height. Measures shall be taken to ensure its all-round visibility.

24 — *Rule 27, f):*

Amend to read:

f) A vessel engaged in mineclearance operations shall, in addition to the lights prescribed for a power-driven vessel in rule 23 or to the lights or shape prescribed for a vessel at anchor in rule 30 as appropriate, exhibit three all-round green lights or three balls. One of these lights or shapes shall be exhibited near the foremast head and one at each end of the fore yard. These lights or shapes indicate that it is dangerous for another vessel to approach within 1000 metres of the mineclearance vessel.

25 — *Rule 27, g):*

Amend to read:

g) Vessels of less than 12 metres in length, except those engaged in diving operations, shall not be required to exhibit the lights and shapes prescribed in this rule.

26 — *Rule 29, a), iii):*

Amend to read:

a):

iii) When at anchor, in addition to the lights prescribed in sub-paragraph *i*), the light, lights or shape prescribed in rule 30 for vessels at anchor.

27 — *Rule 30, a):*

Delete «or aground» and amend «shapes prescribed in paragraphs *a*), *b*) or *d*) of this rule» to read «shape prescribed in paragraphs *a*) and *b*) of this rule».

28 — *Rule 30, f):*

Add the following new paragraph:

f) A vessel of less than 12 metres in length, when aground, shall not be required to exhibit the lights or shapes prescribed in sub-paragraphs *d*), *i*) and *ii*) of this rule.

29 — *Rule 33, a):*

In the last line replace «required» by «prescribed».

30 — *Rule 34, b), iii):*

Add «to these Regulations» after the words «annex I».

31 — *Rule 35, d):*

Insert a new paragraph *d*) and reletter existing paragraphs *d*) to *i*) which become *e*) to *j*), as appropriate:

d) A vessel engaged in fishing, when at anchor, and a vessel restricted in her ability to manœuvre when carrying out her work at anchor, shall instead of the signals prescribed in paragraph *g*) of this rule sound the signal prescribed in paragraph *c*) of this rule.

32 — *Rule 36:*

Add the following at the end of the present text:

Any light to attract the attention of another vessel shall be such that it cannot be mistaken for any aid to navigation. For the purpose of this rule the use of high intensity intermittent or revolving lights, such as strobe lights, shall be avoided.

33 — *Rule 37:*
Replace the word «prescribed» by «described».
34 — *Rule 38:*
Insert «to these Regulations» after the words «annex I» in paragraphs *d*), *i*), *e*), *f*) and after the words «annex III» in paragraph *g*).
35 — *Rule 38, h):*
Add the following new paragraph:

h) The repositioning of all-round lights resulting from the prescription of section 9, *b*), of annex I to these Regulations, permanent exemption.

36 — *Annex* I, *section 1:*
Add the following sentence to the present text of the definition:

This height shall be measured from the position vertically beneath the location of the light.

37 — *Annex* I, *section 2, e*):
Amend to read as follows:

e) One of the two or three masthead lights prescribed for a power-driven vessel when engaged in towing or pushing another vessel shall be placed in the same position as either the forward masthead light or the after masthead light; provided that, if carried on the aftermast, the lowest after masthead light shall be at least 4.5 metres vertically higher than the forward masthead light.

38 — *Annex* I, *section 2, f):*
Amend to read:

f):

i) The masthead light or lights prescribed in rule 23, *a*), shall be so placed as to be above and clear of all other lights and obstructions except as described in sub-paragraph *ii*).

ii) When it is impracticable to carry the all-round lights prescribed by rule 27, *b*), *i*) or rule 28 below the masthead lights, they may be carried above the after masthead light(s) or vertically in between the forward masthead light(s) and after masthead light(s), provided that in the latter case the requirement of section 3, *c*), of this annex shall be complied with.

39 — *Annex* I, *section 2, i), i):*
Replace all words of this sub-paragraph after the word «required» in the penultimate line by the following «be placed at a height of not less than 4 metres above the hull».
40 — *Annex* I, *section 2, i), ii):*
Replace all words of this sub-paragraph after the word «required» in the penultimate line by the following «be placed at a height of not less than 2 metres above the hull».

41 — *Annex* I, *section 2, j):*
Delete «fishing» before «vessel».
42 — *Annex* I, *section 2, k):*
Insert «prescribed in rule 30, *a*), *i*)» between «light» and «when two are carried».
Replace all words after «shall» in the second sentence by «be placed at a height of not less than 6 metres above the hull».
43 — *Annex* I, *section 3, b):*
In the first line replace «On a vessel» by «On a power-driven vessel».
44 — *Annex* I, *section 3, c):*
Add the following new paragraph:

c) When the lights prescribed in rule 27, *b*), *i*), or rule 28 are placed vertically between the forward masthead light(s) and the after masthead light(s) these all-round lights shall be placed at a horizontal distance of not less than 2 metres from the fore and aft centreline of the vessel in the athwartship direction.

45 — *Annex* I, *section 5:*
Insert in the first line after «The sidelights» the words «of vessels of 20 metres or more in length» and add the following sentence after the first sentence:

On vessels of less than 20 metres in length the sidelights, if necessary to meet the requirements of section 9 of this annex, shall be fitted with inboard matt black screens.

46 — *Annex* I, *section 8:*
Add the following sentence to the note at the end of this section:

This shall not be achieved by a variable control of the luminous intensity.

47 — *Annex* I, *section 9, a), i):*
Replace «must» by «shall».
48 — *Annex* I, *section 9, a), ii). last line:*
Replace «limits» by «sectors».
49 — *Annex* I, *section 9, b):*
Insert «prescribed in rule 30» between «lights» and «which need not be ...».
50 — *Annex* I, *section 10, a) and b):*
Insert «as fitted» after «electric lights» in the introductory sentences of section 10, *a*) *and b*).

51 — *Annex* I, *section 13:*
Amend to read as follows:

The construction of lights and shapes and the installation of lights on board the vessel shall be to the satisfaction of the appropriate authority of the State whose flag the vessel is entitled to fly.

52 — *Annex* III, *section 1, d):*
Replace «4 dB below the sound pressure» by «4 dB below the prescribed sound pressure» and replace «10 dB below the sound pressure» by «10 dB below the prescribed sound pressure».

53 — *Annex* III, *section 2, a):*
Replace the words «1 metre» by the words «a distance of 1 metre from it».
54 — *Annex* III, *section 2, b):*
Amend the second sentence to read:

The diameter of the mouth of the bell shall be not less than 300 mm for vessels of 20 metres or more in length, and shall be not less than 200 mm for vessels of 12 metres or more but of less than 20 metres in length.

55 — *Annex* III, *section 3:*
Replace «the State where the vessel is registered» by «the State whose flag the vessel is entitled to fly»
56 — *Rule 35, b) (french text):*
Insert «à propulsion mécanique» between «navire» and «faisant route».

Resolução A.464 (XII)

(19 de Novembro de 1981)

ANEXO

Emendas ao Regulamento Internacional para Evitar Abalroamentos no Mar, 1972

1 — *Regra 1, parágrafo c):*
Alterar este parágrafo como segue:

c) Nenhuma disposição das presentes regras prejudicará a aplicação de normas especiais elaboradas pelo governo de um Estado relativas a faróis, balões, sinais luminosos ou sonoros adicionais a utilizar pelos navios de guerra e navios em comboio, ou faróis, balões ou sinais luminosos adicionais para navios em faina de pesca e constituindo um grupo de pesca. Estes faróis, balões, sinais luminosos ou sonoros adicionais devem, na medida do possível, ser tais que não possam confundir-se com qualquer outra luz, balão ou sinal autorizado em qualquer parte destas regras.

2 — *Regra 3, parágrafo g):*
Alterar a frase que precede imediatamente as alíneas *i*) a *vi*) de forma a ler:

A expressão «navio com capacidade de manobra reduzida» compreende, sem que esta lista seja restritiva:

3 — *Regra 3, parágrafo g), alínea v):*
Alterar as palavras «dragagem de minas» para «limpeza de minas».
4 — *Regra 10, parágrafo b), alínea iii):*
No texto inglês alterar o texto «when joining or leaving from the side» de forma a ler «when joining or leaving from either side».
5 — *Regra 10, parágrafo d):*
Acrescentar ao texto actual a seguinte frase:

Contudo, os navios de comprimento inferior a 20 m e os navios à vela podem, em todas as circunstâncias, utilizar as zonas de tráfego costeiro.

6 — *Regra 10, parágrafo e):*
Alterar este parágrafo como segue:

e) Um navio que não esteja a cruzar um esquema de separação de tráfego ou que não esteja a entrar ou sair de um corredor de tráfego normalmente não deve penetrar na zona de separação ou cruzar a linha de separação, excepto:

7 — *Regra 10, parágrafo k):*
Inserir um novo parágrafo como segue:

k) Um navio com capacidade de manobra reduzida, quando efectua uma operação destinada a manter a segurança da navegação num esquema de separação de tráfego, está isento de cumprir com a presente regra na medida do necessário para a execução dessa operação.

8 — *Regra 10, parágrafo l):*
Inserir um novo parágrafo como segue:

l) Um navio com capacidade de manobra reduzida, quando efectua uma operação destinada a lançar, reparar ou levantar um cabo submarino dentro de um esquema de separação de tráfego, está isento de cumprir com a presente regra na medida do necessário para a execução dessa operação.

9 — *Regra 13, parágrafo a):*
Alterar este parágrafo como segue:

a) Não obstante o disposto nas regras das secções I e II da parte B ...

10 — *Regra 22, parágrafo d):*
Inserir um novo parágrafo como segue:

d) Para os navios ou objectos rebocados que estão parcialmente submersos e de difícil avistamento:

Farol visível em todo o horizonte, de luz branca: 3 milhas.

11 — *Regra 23, parágrafo c):*
Alterar este parágrafo como segue:

c):

i) Um navio de propulsão mecânica de comprimento inferior a 12 m pode, em vez dos faróis prescritos no parágrafo *a*) desta regra, mostrar um farol de luz branca visível em todo o horizonte e faróis de borda;

ii) Um navio de propulsão mecânica de comprimento inferior a 7 m e cuja velocidade máxima não ultrapasse 7 nós pode, em vez dos faróis prescritos no parágrafo *a*) desta regra, mostrar um farol de luz branca visível em todo o horizonte e deve, se possível, mostrar faróis de borda;

iii) O farol de mastro ou o farol de luz branca visível em todo o horizonte num navio de propulsão mecânica de comprimento inferior a 12 m pode não se encontrar no eixo longitudinal do navio se não for possível a sua instalação sobre esse eixo, desde que os faróis de borda estejam combinados num farol colocado sobre o eixo longitudinal do navio ou tão perto quanto

possível da linha longitudinal sobre a qual se encontra o farol de mastro ou o farol de luz branca visível em todo o horizonte.

12 — *Regra 24, parágrafo a), alínea i), e parágrafo c), alínea i):*

Inserir as palavras «ou na regra 23, *a*), *ii*)» depois das palavras «prescrito na regra 23, *a*), *i*)» e suprimir a palavra «a vante».

13 — *Regra 24, parágrafo d):*

Alterar as palavras «parágrafos *a*) e *c*) desta» para «parágrafos *a*) ou *c*) desta».

14 — *Regra 24, parágrafo e):*

Alterar a primeira frase como segue:

e) Um navio ou objecto rebocado, com excepção dos mencionados no parágrafo *g*) desta regra, deve mostrar:

15 — *Regra 24, parágrafo g):*

Inserir o novo parágrafo *g*) como segue:

g) Um navio ou objecto rebocado que está parcialmente submerso e de difícil avistamento, ou um conjunto destes navios ou objectos rebocados, deve mostrar:

i) Quando a sua largura é inferior a 25 m, um farol de luz branca visível em todo o horizonte, colocado na extremidade de vante ou sua proximidade, e um outro na extremidade de ré ou sua proximidade, excepto para os «dracones», que não necessitam de mostrar um farol na extremidade de vante ou sua proximidade;

ii) Quando a sua largura é igual ou superior a 25 m, dois faróis suplementares de luz branca visível em todo o horizonte nas extremidades da sua largura ou suas proximidades;

iii) Quando o seu comprimento for superior a 100 m, faróis suplementares de luz branca visível em todo o horizonte entre os faróis prescritos nas alíneas *i*) e *ii*), de modo que a distância entre faróis não seja superior a 100 m;

iv) Um balão bicónico na extremidade ou o mais próximo da extremidade de ré do último navio ou objecto rebocado e, se o comprimento de reboque for superior a 200 m, um balão adicional bicónico no local o mais visível e o mais a vante possível.

16 — *Regra 24, parágrafo h):*

Designar o actual parágrafo *g*) por parágrafo *h*) e alterá-lo como segue:

h) Se, por uma razão justificada, um navio ou objecto rebocado está impossibilitado de mostrar os faróis ou balões prescritos nos parágrafos *e*) ou *g*) desta regra, deverão ser tomadas todas as medidas possíveis para iluminar o navio ou o objecto rebocado, ou pelo menos para indicar a sua presença.

17 — *Regra 24, parágrafo i):*

Inserir um novo parágrafo como segue:

i) Se, por uma razão adequada, um navio que normalmente não efectua operações de reboque está impossibilitado de mostrar os faróis prescritos nos parágrafos *a*) ou *c*) desta regra, está dispensado de as mostrar quando procede ao reboque de um outro navio em perigo ou necessitando de assistência por outras razões. Todas as medidas possíveis devem ser tomadas para indicar, de forma autorizada pela regra 36, a ligação entre o navio rebocador e o navio rebocado, particularmente iluminando o cabo de reboque.

18 — *Regra 25, parágrafo b):*

Alterar «12 m» para «20 m».

19 — *Regra 27, parágrafo b), preâmbulo:*

Alterar as palavras «dragagem de minas» para «limpeza de minas».

20 — *Regra 27, parágrafo b), alínea iii):*

Inserir as palavras «farol ou» antes das palavras «faróis de mastro».

21 — *Regra 27, parágrafo c):*

Alterar este parágrafo como segue:

c) Um navio de propulsão mecânica ocupado numa operação de reboque que restrinja seriamente ao navio rebocador e seu reboque a capacidade de alterar o rumo, além dos faróis ou balões prescritos na regra 24, *a*), deve mostrar os faróis ou balões prescritos nas alíneas *i*) e *ii*) do parágrafo *b*) desta regra.

22 — *Regra 27, parágrafo d):*

Alterar as palavras «no parágrafo *b*) desta regra» para «nas alíneas *i*), *ii*) e *iii*) do parágrafo *b*) desta regra».

Eliminar a actual alínea *iii*).

Renumerar a actual alínea *iv*) para *iii*) e alterá-la como segue:

iii) Quando está fundeado, deve mostrar, em vez dos faróis ou balões prescritos pela regra 30, os faróis ou balões prescritos neste parágrafo.

23 — *Regra 27, parágrafo e):*

Alterar este parágafo como segue:

e) Um navio participando em operações de mergulhadores que, por motivo das suas dimensões, não possa mostrar os balões prescritos no parágrafo *d*) desta regra deve mostrar:

i) Três faróis visíveis em todo o horizonte, dispostos na mesma linha vertical, onde melhor possam ser vistos. O superior e o inferior devem ser de luz vermelha e o do meio de luz branca:

ii) Uma réplica rígida, de altura não inferior a 1 m, da bandeira «A» do Código Internacional de Sinais.

Deve tomar medidas para que esta réplica seja visível em todo o horizonte.

24 — *Regra 27, parágrafo f*):

Alterar este parágrafo como segue:

f) Um navio executando operações de limpeza de minas, além dos faróis prescritos na regra 23 para os navios de propulsão mecânica ou os faróis e balões prescritos na regra 30 para os navios fundeados, consoante o caso, deve mostrar três faróis de luz verde, visíveis em todo o horizonte, ou três balões esféricos. Deve mostrar um destes faróis ou bálões próximo da parte superior do mastro de vante e os outros dois faróis ou balões um em cada lais de verga do mesmo mastro. Estes faróis ou balões indicam que é perigoso para outro navio aproximar-se a menos de 1000 m do navio que efectua a limpeza de minas.

25 — *Regra 27, parágrafo g*):

Alterar este parágrafo como segue:

g) Os navios de comprimento inferior a 12 m, excepto os navios ocupados em operações de mergulhadores, não são obrigados a mostrar os faróis e balões prescritos nesta regra.

26 — *Regra 29, parágrafo a), alínea iii*):

Alterar esta alínea como segue:

iii) Quando fundeado, em adição aos faróis prescritos na alínea *i*), o farol, faróis ou balões prescritos na regra 30 para navios fundeados.

27 — *Regra 30, parágrafo e*):

Eliminar as palavras «ou encalhado» e alterar as palavras «os faróis ou balões prescritos nos parágrafos *a*), *b*) ou *d*) desta regra.» para «os faróis ou balão prescritos nos parágrafos *a*) e *b*) desta regra.».

28 — *Regra 30, parágrafo f*):

Inserir nesta regra um novo parágrafo como segue:

f) Um navio de comprimento inferior a 12 m quando está encalhado não é obrigado a mostrar os faróis ou balões prescritos nas alíneas *i*) e *ii*) do parágrafo *d*) desta regra.

29 — *Regra 33, parágrafo a*):

Na última linha do texto inglês, alterar a palavra «required» para «prescribed».

30 — *Regra 34, parágrafo b), alínea iii*):

Inserir as palavras «deste Regulamento» depois das palavras «do anexo I».

31 — *Regra 35, parágrafo d*):

Inserir um novo parágrafo *d*) como segue:

d) Um navio em faina de pesca, quando está fundeado, e um navio com capacidade de manobra reduzida executando o seu trabalho, quando está fundeado, devem emitir, em lugar dos sinais prescritos no parágrafo *g*) desta regra, o sinal prescrito no parágrafo *c*) desta regra.

Renumerar os actuais parágrafos *d*), *e*), *f*), *g*), *h*) e *i*) para *e*), *f*), *g*), *h*), *i*) e *j*).

32 — *Regra 36:*

Adicionar ao texto actual o seguinte:

Qualquer luz destinada a chamar a atenção de outro navio não deve poder ser confundida com uma ajuda à navegação. Para os fins desta regra deve ser evitado o emprego de luzes intermitentes ou giratórias de alta intensidade como, por exemplo, as lanternas giroscópicas.

33 — *Regra 37:*

Alterar a palavra «prescritos» para «descritos».

34 — *Regra 38:*

Inserir as palavras «deste Regulamento» depois das palavras «do anexo I» no parágrafo *d*), alínea *i*), e parágrafos *e*) e *f*); no parágrafo *g*) inserir as palavras «deste Regulamento» depois das palavras «do anexo III».

35 — *Regra 38, parágrafo h*):

Inserir um novo parágrafo como segue:

h) Alteração da localização dos faróis visíveis em todo o horizonte, resultante das prescrições da secção 9, *b*), do anexo I deste Regulamento (Isenção permanente).

36 — *Anexo I, secção 1:*

Adicionar ao texto actual da definição a frase seguinte:

Esta altura deve ser medida na vertical a partir da posição do farol.

37 — *Anexo I, secção 2, parágrafo e*):

Alterar o texto como segue:

e) Um dos dois, ou três, faróis de mastro prescritos para um navio de propulsão mecânica que reboca ou empurra outro deve estar colocado no mesmo local do farol de mastro de vante ou de ré; quando colocados no mastro de ré o farol inferior de mastro de ré deve ficar, pelo menos, 4,5 m mais alto que o farol do mastro de vante.

38 — *Anexo* I, *secção 2, parágrafo f)*:
Alterar este parágrafo como segue:

f):

i) O farol ou faróis de mastro prescritos na regra 23, *a)*, devem estar colocados acima e desimpedidos em relação a todos os outros faróis e obstruções, com a excepção descrita na alínea *ii)*;

ii) Quando é impraticável colocar abaixo dos faróis de mastro os faróis de luz visível em todo o horizonte prescritos na regra 27. *b)*, *i)*, ou regra 28, devem ser colocados acima do farol ou faróis de mastro de ré ou, sobre um plano vertical, entre o farol ou faróis de mastro de vante e o farol ou faróis de mastro de ré, na condição de que, neste último caso, seja dado cumprimento às prescrições do parágrafo *c)* da secção 3 deste anexo.

39 — *Anexo* I, *secção 2, parágrafo i), alínea i)*:
Alterar as palavras «não deve ficar a uma altura inferior a 4 m acima da borda» para «deve ficar a uma altura não inferior a 4 m acima da borda».

40 — *Anexo* I, *secção 2, parágrafo i), alínea ii)*:
Alterar as palavras «não deve ficar a uma altura inferior a 2 m acima da borda» para «deve ficar a uma altura não inferior a 2 m acima da borda».

41 — *Anexo* I, *secção 2, parágrafo j)*:
Eliminar as palavras «de pesca» depois de «para um navio».

42 — *Anexo* I, *secção 2, parágrafo k)*:
Inserir as palavras «prescrito na regra 30, *a)*, *i)*» depois de «farol de fundeado mais a vante».

Na segunda frase alterar «não deve ficar a menos de 6 m acima da borda» para «deve ficar a uma altura não inferior a 6 m acima da borda».

43 — *Anexo* I, *secção 3, parágrafo b)*:
Na primeira linha alterar as palavras «A bordo de um navio» para «A bordo de um navio de propulsão mecânica».

44 — *Anexo* I, *secção 3, parágrafo c)*:
Inserir um novo parágrafo como segue:

c) Quando os faróis prescritos na regra 27, *b)*, *i)*, ou regra 28, são colocados verticalmente entre o farol ou faróis de mastro de vante e o farol ou faróis de mastro de ré, estes faróis de luz visível em todo o horizonte devem ser colocados a uma distância horizontal não inferior a 2 m do eixo longitudinal do navio, no sentido transversal.

45 — *Anexo* I, *secção 5:*
Na primeira linha inserir depois das palavras «Os faróis de borda» as palavras «dos navios de comprimento igual ou superior a 20 m».

No fim da primeira frase inserir a frase seguinte:

Nos navios de comprimento inferior a 20 m, os faróis de borda, se necessário para satisfazer as prescrições da secção 9 deste anexo, devem estar munidos, pelo lado de dentro do navio, de esbarros pintados de preto.

46 — *Anexo* I, *secção 8:*
Adicionar à seguinte frase a nota que figura no fim da secção:

Esta limitação da intensidade luminosa não deve ser obtida por intermédio de um comando variável.

47 — *Anexo* I, *secção 9, parágrafo a), alínea i)*:
No texto inglês alterar a palavra «must» para «shall».

48 — *Anexo* I, *secção 9, parágrafo a), alínea ii)*:
Na última linha do texto inglês alterar a palavra «limits» para «sectors».

49 — *Anexo* I, *secção 9, parágrafo b)*:
Inserir as palavras «prescritos na regra 30» depois das palavras «Com excepção dos faróis de navio fundeado».

50 — *Anexo* I, *secção 10, parágrafos a) e b)*:
Na primeira frase dos parágrafos *a)* e *b)* da secção 10 inserir as palavras «uma vez instalados» depois das palavras «faróis eléctricos».

51 — *Anexo* I, *secção 13:*
Alterar o texto como segue:

A construção de faróis e de balões e a instalação de faróis a bordo devem ser consideradas satisfatórias pela autoridade competente do Estado da bandeira arvorada pelo navio.

52 — *Anexo* III, *secção 1, parágrafo d)*:
Alterar a expressão «4 dB, ao nível de pressão acústica» para «4 dB, ao nível de pressão acústica prescrito».

Alterar a expressão «10 dB, ao nível da pressão acústica» para «10 dB, ao nível da pressão acústica prescrito».

53 — *Anexo* III, *secção 2, parágrafo a)*:
Alterar as palavras «de 1 m» para «de 1 m da fonte emissora».

54 — *Anexo* III, *secção 2, parágrafo b)*:
Alterar a segunda frase do texto como segue:

O diâmetro da boca do sino não deve ser inferior a 300 mm em navios de comprimento igual ou superior a 20 m e a 200 mm em navios de comprimento igual ou superior a 12 m mas inferior a 20 m.

55 — *Anexo* III, *secção 3:*
Alterar as palavras «do Estado onde o navio estiver registado» para «do Estado da bandeira arvorada pelo navio».

56 — *Regra 35, parágrafo b)*:
No texto francês inserir as palavras «à propulsion mécanique» entre as palavras «un navire» e «faisant route».

(A versão da língua chinesa do presente texto será publicada logo que possível.)

PRESIDÊNCIA DA REPÚBLICA

Decreto do Presidente da República n.º 176/99
de 5 de Agosto

O Presidente da República decreta, nos termos do artigo 292.º, n.º 1, da Constituição e dos artigos 3.º, n.ºs 2 e 3, 69.º e 70.º do Estatuto Orgânico de Macau, o seguinte:

É estentida ao território de Macau, nos mesmos termos em que a ele está vinculado o Estado Português, o Protocolo Relativo a Uma Emenda à Alínea *a*) do Artigo 50.º da Convenção sobre Aviação Civil Internacional, adoptado em 26 de Outubro de 1990, aprovado pelo Decreto n.º 47/97, de 3 de Setembro, cujo texto foi publicado no *Diário da República*, 1.ª série, de 3 de Setembro de 1997.

Foram ouvidos os órgãos de governo próprios do território de Macau.

Assinado em 28 de Julho de 1999.

Publique-se no *Boletim Oficial* de Macau, em conjunto com o referido decreto de aprovação e texto da Convenção.

O Presidente da República, JORGE SAMPAIO.

(D.R. n.º 181, I Série-A, de 5 de Agosto de 1999)

MINISTÉRIO DOS NEGÓCIOS ESTRANGEIROS

Decreto n.º 47/97
de 3 de Setembro

Nos termos da alínea *c*) do n.º 1 do artigo 200.º da Constituição, o Governo decreta o seguinte:

Artigo único

É aprovado, para ratificação, o Protocolo Relativo a Uma Emenda à Alínea *a*) do Artigo 50.º da Convenção sobre Aviação Civil Internacional, aprovada pelo Decreto-Lei n.º 36 158, de 17 de Fevereiro de 1947, adoptado em 26 de Outubro de 1990, em Montréal, cujo texto original em inglês e francês e respectiva tradução em português seguem em anexo ao presente diploma.

Visto e aprovado em Conselho de Ministros de 17 de Julho de 1997. — *António Manuel de Oliveira Guterres — Francisco Manuel Seixas da Costa — José Manuel da Costa Monteiro Consiglieri Pedroso.*

Ratificado em 11 de Agosto de 1997.

Publique-se.

O Presidente da República, JORGE SAMPAIO.

Referendado em 14 de Agosto de 1997.

O Primeiro-Ministro, *António Manuel de Oliveira Guterres.*

(D.R. n.º 203, I Série-A, de 3 de Setembro de 1997)

共和國總統府

共和國總統令 第176/99號
八月五日

共和國總統根據《憲法》第二百九十二條第一款及《澳門組織章程》第三條第二款及第三款、第六十九條及第七十條之規定，命令如下：

將一九九零年十月二十六日通過之《關於國際民用航空公約第五十條第一款修正案的議定書》延伸至澳門地區，按照葡萄牙政府受該議定書約束之相同規定適用；該議定書係經九月三日第 47/97 號命令通過，且文本已公布於一九九七年九月三日《共和國公報》第一組。

已聽取澳門地區本身管理機關之意見。

一九九九年七月二十八日簽署。

將本總統令連同上述通過議定書之命令及公約之文本公布於《澳門政府公報》。

共和國總統 沈拜奧

（一九九九年八月五日第 181 期《共和國公報》第一組-A）

外交部

政府命令 第47/97號
九月三日

政府根據《憲法》第二百條第一款 c 項之規定，命令制定法規如下：

獨一條

通過一九九零年十月二十六日在蒙特利爾通過之《關於國際民用航空公約第五十條第一款修正案的議定書》，以待批准；該議定書之英文本及法文本，以及葡文譯本附於本命令。

一九九七年七月十七日於部長會議批閱及通過——*António Manuel de Oliveira Guterres* —— *Francisco Manuel Seixas da Costa* —— *José Manuel da Costa Monteiro Consiglieri Pedroso*

一九九七年八月十一日批准。

命令公布。

共和國總統

JORGE SAMPAIO

一九九七年八月十四日副署。

總理

António Manuel de Oliveira Guterres

（一九九七年九月三日第 203 期《共和國公報》第一組-A）

PROTOCOL RELATING TO AN AMENDMENT TO ARTICLE 50, *a*), OF THE CONVENTION ON INTERNATIONAL CIVIL AVIATION SIGNED AT MONTREAL ON 26 OCTOBER 1990

The Assembly of the International Civil Aviation Organization:

Having met in its twenty-eighth Session (Extraordinary) at Montreal on 25 October 1990;

Having noted that it is the desire of a large number of Contracting States to enlarge the membership of the Council in order to ensure better balance by means of an increased representation of Contracting States;

Having considered it appropriate to increase the membership of that body from thirty-three to thirty-six;

Having considered it necessary to amend, for the purpose aforesaid, the Convention on International Civil Aviation done at Chicago on the seventh day of December 1944:

1 — Approves, in accordance with the provisions of article 94, *a*), of the Convention aforesaid, the following proposed amendment to the said Convention:

«In article 50, *a*), of the Convention the second sentence shall be amended by replacing 'thirty-three' by 'thirty-six'»;

2 — Specifies, pursuant to the provisions of the said article 94, *a*), of the said Convention, one hundred and eight as the number of Contracting States upon whose ratification the proposed amendment aforesaid shall come into force;

3 — Resolves that the Secretary General of the International Civil Aviation Organization draw up a Protocol, in the English, French, Russian and Spanish languages, each of which shall be of equal authenticity, embodying the amendment above-mentioned and the matter hereinafter appearing:

a) The Protocol shall be signed by the President of the Assembly and its Secretary General;

b) The Protocol shall be open to ratification by any State which has ratified or adhered to the said Convention on International Civil Aviation;

c) The instruments of ratification shall be deposited with the International Civil Aviation Organization;

d) The Protocol shall come into force in respect of the States which have ratified it on the date on which the one hundred and eighth instrument of ratification is so deposited;

e) The Secretary General shall immediately notify all Contracting States of the date of deposit of each ratification of the Protocol;

f) The Secretary General shall immediately notify all States parties to the said Convention of the date on which the Protocol comes into force;

g) With respect to any Contracting State ratifying the Protocol after the date aforesaid, the Protocol shall come into force upon deposit of its instrument of ratification with the International Civil Aviation Organization.

Consequently, pursuant to the aforesaid action of the Assembly, this Protocol has been drawn up by the Secretary General of the Organization.

In witness whereof, the President and the Secretary General of the aforesaid twenty-eighth Session (Extraordinary) of the Assembly of the International Civil Aviation Organization, being authorized thereto by the Assembly, sign this Protocol.

Done at Montreal on the twenty-sixth day of October of the year one thousand nine hundred and ninety, in a single document in the English, French, Russian and Spanish languages, each text being equally authentic. This Protocol shall remain deposited in the archives of the International Civil Aviation Organization, and certified copies thereof shall be transmitted by the Secretary General of the Organization to all States parties to the Convention on International Civil Aviation done at Chicago on the seventh day of December 1944.

Assad Kotaite, President of the Twenty-eighth Session (Extraordinary) of the Assembly.

S. S. Sidhu, Secretary General.

PROTOCOLE PORTANT AMENDEMENT DE L'ARTICLE 50, *a*), DE LA CONVENTION RELATIVE À L'AVIATION CIVILE INTERNATIONALE SIGNÉ À MONTRÉAL LE 26 OCTOBRE 1990

L'Assemblée de l'Organisation de l'aviation civile internationale:

S'étant réunie à Montréal le 25 octobre 1990, en sa vingt-huitième session (extraordinaire):

Ayant pris acte du désir d'un grand nombre d'États contractants d'augmenter le nombre des membres du Conseil afin d'assurer un meilleur équilibre au moyen d'une représentation plus large des États contractants;

Ayant jugé qu'il convenait de porter de trente-trois à trente-six le nombre des membres de cet organe;

Ayant jugé nécessaire d'amender à cette fin la Convention relative à l'aviation civile internationale faite à Chicago le septième jour de décembre 1944:

1 — Approuve, en vertu des dispositons de l'alinéa *a*) de l'article 94 de la Convention précitée, le projet suivant d'amendement de ladite Convention:

«Amender la deuxième phrase de l'alinéa *a*) de l'article 50 de la Convention en remplaçant les mots 'trente-trois' par 'trente-six'»;

2 — Fixe à cent huit le nombre d'Etats contractants dont la ratification est nécessaire à l'entrée en vigueur de l'amendement proposé, conformément aux dispositions de l'alinéa *a*) de l'article 94 de ladite Convention;

3 — Décide que le Secrétaire général de l'Organisation de l'avition civile internationale établira dans les langues française, anglaise, espagnole et russe, chacune faisant également foi, un protocole concernant l'amendement précité et comprenant les dispositions ci-dessous:

a) Le Protocole sera signé par le Président et par le Secrétaire général de l'Assemblée;

b) Il sera soumis à la ratification de tout État qui a ratifié la Convention relative à l'aviation civile internationale ou y a adhéré;

c) Les instruments de ratification seront déposés auprès de l'Organisation de l'aviation civile internationale;

d) Le Protocole entrera en vigueur le jour du dépôt du cent huitième instrument de ratification à l'égard des États qui l'auront ratifié;

e) Le Secrétaire général notifiera immédiatement à tous les États contractants la date du dépôt de chaque instrument de ratification du Procole;

f) Le Secrétaire général notifiera immédiatement à tous les États parties à ladite Convention la date à laquelle ledit Procotole entrera en vigueur;

g) Le Protocole entrera en vigueur, à l'égard de tout État contractant qui l'aura ratifié après la date précitée, dès que cet État aura déposé son instrument de ratification auprès de l'Organisation de l'aviation civile internationale.

En conséquence, conformément à la décision ci-dessus de l'Assemblée, le présent Protocole a été établi par le Secrétaire général de l'Organisation.

En foi de quoi, le Président et le Secrétaire général de la vingt-huitième session (extraordinaire) de l'Assemblée de l'Organisation de l'aviation civile internationale, dûment autorisés à cet effet par l'Assemblée, ont apposé leur signature au présent Protocole.

Fait à Montréal le vingt-sixième jour d'octobre de l'an mil neuf cent quatre-vingt-dix, en un seul document dans les langues française, anglaise, espagnole et russe, chacun des textes faisant également foi. Le présent Protocole sera déposé dans les archives de l'Organisation de l'aviation civile internationale et des copies certifiées conformes seront transmises par le Secrétaire général de l'Organisation à tous les États parties à la Convention relative à l'aviation civile internationale, faite à Chicago le septième jour de décembre 1944.

Assad Kotaite, Président de la vingt-huitième session (extraordinaire) de l'Assemblée.

S. S. Sidhu, Secrétaire général.

PROTOCOLO RELATIVO A UMA EMENDA AO ARTIGO 50.º, *A*), DA CONVENÇÃO SOBRE AVIAÇÃO CIVIL INTERNATIONAL, ASSINADO EM MONTRÉAL A 26 DE OUTUBRO DE 1990

A Assembleia da Organização da Aviação Civil Internacional:

Reunida na sua 28.ª Sessão (extraordinária), em Montréal, no dia 25 de Outubro de 1990;

Tendo em conta a vontade de um elevado número de Estados Contratantes de aumentar o número de membros do Conselho de forma a assegurar um maior equilíbrio, pelo aumento da representação de Estados Contratantes;

Considerando conveniente elevar de 33 para 36 o número de membros deste órgão;

Considerando que, para o efeito, é necessário modificar a Convenção sobre Aviação Civil Internacional, assinada em Chicago a 7 de Dezembro de 1944:

1 — Aprova, em conformidade com o disposto na alínea *a*) do artigo 94.º da referida Convenção, o seguinte projecto de emenda àquela Convenção:

«Modificar a segunda frase da alínea *a*) do artigo 50.º da Convenção, substituindo 'trinta e três' por 'trinta e seis'»;

2 — Fixa em 108 o número de Estados Contratantes cuja ratificação é necessária para a entrada em vigor da referida emenda, de acordo com o disposto na alínea *a*) do artigo 94.º daquela Convenção;

3 — Decide que o Secretário-Geral da Organização da Aviação Civil Internacional redija em inglês, francês, espanhol e russo, fazendo cada um dos idiomas igual fé, um protocolo relativo à emenda acima mencionada e compreendendo as seguintes disposições:

a) O Protocolo será assinado pelo Presidente e pelo Secretário-Geral da Assembleia;

b) O Protocolo ficará aberto para ratificação de qualquer Estado que tenha ratificado a referida Convenção sobre Aviação Civil Internacional ou a ela tenha aderido;

c) Os instrumentos de ratificação serão depositados junto da Organização da Aviação Civil Internacional;

d) O Protocolo entrará em vigor, em relação aos Estados que o tiverem ratificado, no dia do depósito do 108.º instrumento de ratificação;

e) O Secretário-Geral notificará imediatamente todos os Estados Contratantes da data de depósito de cada instrumento de ratificação do Protocolo;

f) O Secretário-Geral notificará imediatamente todos os Estados partes da referida Convenção da data de entrada em vigor do Protocolo;

g) O Protocolo entrará em vigor, em relação a qualquer Estado Contratante que o tiver ratificado após aquela data, a partir do momento em que tal Estado depositar o respectivo instrumento de ratificação junto da Organização da Aviação Civil Internacional.

Em consequência, de acordo com a referida decisão da Assembleia, o presente Protocolo foi redigido pelo Secretário-Geral da Organização.

Em fé do que o Presidente e o Secretário-Geral da 28.ª Sessão (extraordinária) da Assembleia da Organização da Aviação Civil Internacional, para o efeito autorizados pela Assembleia, assinam o presente Protocolo.

Feito em Montréal, a 26 de Outubro do ano de 1990, num só exemplar redigido em inglês, francês, espanhol e russo, fazendo cada idioma igual fé. O presente Protocolo ficará depositado nos arquivos da Organização da Aviação Civil Internacional e o Secretário-Geral da Organização enviará cópias autenticadas a todos os Estados Partes da Convenção sobre Aviação Civil Internacional, assinada em Chicago a 7 de Dezembro de 1944.

(A versão da língua chinesa do presente texto será publicada logo que possível.)

PRESIDÊNCIA DA REPÚBLICA

Decreto do Presidente da República n.º 206/99

de 9 de Novembro

O Presidente da República decreta, nos termos do artigo 292.º, n.º 1, da Constituição e dos artigos 3.º, n.ºs 2 e 3, 69.º e 70.º do Estatuto Orgânico de Macau, o seguinte:

É estendido ao território de Macau, nos mesmos termos em que a ele está vinculado o Estado Português, o Regulmaneto das Radiocomunicações da União Internacional das Telecomunicações, de 6 de Dezembro de 1979, aprovado pelo Decreto n.º 39-A/92, de 1 de Outubro, cujo texto foi publicado no *Diário da República*, 1.ª série, de 1 de Outubro de 1992.

Foram ouvidos os órgãos de governo próprios do território de Macau.

Assinado em 29 de Outubro de 1999.

Publique-se no *Boletim Oficial de Macau*, em conjunto com os referidos decreto de aprovação e texto do Regulamento.

O Presidente da República, JORGE SAMPAIO.

(D.R. n.º 261, I Série-A, de 9 de Novembro de 1999)

MINISTÉRIO DOS NEGÓCIOS ESTRANGEIROS

Decreto n.º 39-A

de 1 de Outubro de 1992

Considerando que o Regulamento das Radiocomunicações (RR) é um dos regulamentos administrativos previstos no artigo 83.º, n.º 643, da Convenção Internacional das Telecomunicações, dela fazendo parte integrante, sendo, simultaneamente, uma publicação do Secretariado-Geral da União Internacional das Telecomunicações (UIT), de que Portugal é membro activo de pleno direito, e contém os princípios orientadores fundamentais, técnicos e administrativos a que deve obedecer toda e qualquer utilização de uma radiocomunicação;

Considerando que a Conferência Administrativa Mundial das Radiocomunicações, realizada em Genebra de 24 de Setembro a 17 de Dezembro de 1979 (CAMR79), procedeu a uma profunda revisão do Regulamento das Radiocomunicações de 1959 e que a correspondente versão, incluída nos actos finais da CAMR79, encontra-se já internacionalmente em vigor desde 1 de Janeiro de 1981;

Considerando que esta versão do RR79 carece também de aprovação pelo Governo de cada Estado membro da UIT a fim de vigorar na sua ordem jurídica interna, ser imposta aos operadores nacionais de radiocomunicações e poder ser invocado na defesa dos seus interesses em matéria de radiocomunicações aquando das relações com as administrações dos outros Estados membros da UIT:

Assim:

Nos termos da alínea *c*) do n.º 1 do artigo 200.º da Constituição, o Governo decreta o seguinte:

共和國總統府

共和國總統令 第206/99號

十一月九日

共和國總統根據《憲法》第二百九十二條第一款及《澳門組織章程》第三條第二款及第三款、第六十九條及第七十條之規定，命令如下：

將一九七九年十二月六日《國際電訊聯盟無線電規則》延伸至澳門地區，按照葡萄牙政府受該公約約束之相同規定適用；該規則係經十月一日第 39-A/92 號命令通過，且文本已公布於一九九二年十月一日《共和國公報》第一組。

已聽取澳門地區本身管理機關之意見。

一九九九年十月二十九日簽署。

將本總統令連同上述通過規則之命令及規章之文本公布於《澳門政府公報》。

共和國總統

沈拜奧

（一九九九年十一月九日第261期《共和國公報》第一組-A）

外交部

命令 第39-A號

一九九二年十月一日

鑑於《無線電規則（RR）》爲《國際電訊公約》第八十三條第 643 號所規定之行政規則之一，並成爲該公約之組成部分；同時，該規則亦係國際電訊聯盟（UIT）秘書處之出版物，且載有對無線電通訊之一切或任何使用應遵守之基礎、技術及行政指導原則；葡萄牙爲該聯盟之全權現任會員；

鑑於一九七九年九月二十四日至十二月十七日在日內瓦舉行之世界無線電通訊行政會議（CAMR 79）對一九五九年《無線電規則》進行了深入檢討，而有關之載入一九七九年世界無線電通訊行政會議之最後決議內之文本已自一九八一年一月一日起在國際上生效；

鑑於《無線電通訊規則》之一九七九年文本須獲《國際電訊聯盟》每一成員國政府通過，以便該文本在本國法律秩序生效，並強制適用於本國無線電經營人，且在與《國際電訊聯盟》其他成員國之行政部門聯繫時，得要求維護本國在無線電事宜方面之利益；

基於此；

政府根據《憲法》第二百條第一款 c 項之規定，命令制定法規如下：

Artigo 1.º É aprovado o Regulamento das Radiocomunicações, assinado em Genebra em 16 de Dezembro de 1979, cuja versão original em francês e respectiva tradução em português seguem em anexo ao presente decreto.

Art. 2.º São revogados:

a) O Decreto n.º 45 205, de 21 de Agosto de 1963;
b) O Decreto n.º 46 425, de 3 de Julho de 1965;
c) O Decreto n.º 48 404, de 28 de Maio de 1968;
d) O Decreto n.º 434/71, de 15 de Outubro.

Art. 3.º O presente diploma em vigor no dia imediato ao da sua publicação.

Visto e aprovado em Conselho de Ministros de 6 de Dezembro de 1990. — *Aníbal António Cavaco Silva — João de Deus Rogado Salvador Pinheiro — Joaquim Martins Ferreira do Amaral.*

Assinado em 18 de Dezembro de 1990.

Publique-se.

O Presidente da República, *Mário Soares.*

Referenciado em 21 de Dezembro de 1990.

O Primeiro-Ministro, *Aníbal António Cavaco Silva.*

(D.R. n.º 227, I Série-A, de 1 de Outubro de 1992)

第一條 —— 通過一九七九年十二月十六日在日內瓦簽署之《無線電規則》；該規則之法文原文及葡文譯本附於本命令。

第二條 —— 廢止：

a) 一九六三年八月二十一日第 45205 號命令；

b) 一九六五年七月三日第 46425 號命令；

c) 一九六八年五月二十八日第 48404 號命令；

d) 十月十五日第 434/71 號命令。

第三條 —— 本法規於公布翌日開始生效。

一九九零年十二月六日於部長會議批閱及通過 —— *Aníbal António Cavaco Silva —— João de Deus Rogado Salvador Pinheiro —— Joaquim Martins Ferreira do Amaral*

一九九零年十二月十八日簽署。

命令公布。

共和國總統

Mário Soares

一九九零年十二月二十一日副署。

總理

Aníbal António Cavaco Silva

（一九九二年十月一日第 227 期《共和國公報》第一組 -A）

REGULAMENTO DAS RADIOCOMUNICAÇÕES DE 1979

Actos Finais da Conferência Administrativa Mundial das Radiocomunicações

(Genebra, 1979)

Na sua Resolução n.º 28, a Conferência de Plenipotenciários da União Internacional das Telecomunicações (Málaga, Terremolinos, 1973), considerando que diversas conferências administrativas mundiais das radiocomunicações reunidas desde 1959 trouxeram ao Regulamento das Radiocomunicações e ao Regulamento Adicional da Radiocomunicações emendas respeitantes a pontos especiais, mas não puderam harmonizar as suas decisões devido ao carácter limitado da agenda de cada uma delas, decidiu que seria convocada em 1979 uma conferência administrativa mundial das radiocomunicações com o objectivo de rever, conforme fosse necessário, esses Regulamentos e encarregou o Conselho de Administração de tomar as medidas preparatórias necessárias para a convocação dessa conferência.

Na sua 30.ª sessão (1975), o Conselho de Administração constituiu, pela sua Resolução n.º 768, um grupo de especialistas de administrações encarregado de estudar a reestruturação eventual do Regulamento das Radiocomunicações e do Regulamento Adicional das Radiocomunicações.

A reestruturação do Regulamento das Radiocomunicações proposta pelo grupo de especialistas foi aprovada em princípio pela Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Génebra, 1977), na sua Resolução SAT-10, a qual solicita instantemente aos países membros que utilizem o Regulamento das Radiocomunicações sob a forma reestruturada e o Regulamento Adicional das Radiocomunicações sob a forma actual para apresentar propostas à presente Conferência.

Na sua 32.ª sessão (1977), o Conselho de Administração decidiu, pela sua Resolução n.º 801, que a Conferência Administrativa Mundial das Radiocomunicações de 1979 seria convocada para Genebra em 24 de Setembro de 1979, com uma duração de 10 semanas, e adoptou a agenda dessa Conferência.

Em consequência, a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) foi convocada e, em conformidade com a sua agenda e na base da «reestruturação do Regulamento das Radiocomunicações» acima mencionada, bem como das propostas apresentadas pelas administrações, examinou, reestruturou e reviu parcialmente, quanto ao conteúdo, as disposições do Regulamento das Radiocomunicações. Na sequência desses trabalhos, adoptou o Regulamento das Radiocomunicações (Genebra, 1979), cujo texto figura no anexo aos presentes Actos Finais.

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) autoriza o secretário-geral da União Internacional das Telecomunicações a proceder à numeração final apropriada dos capítulos, artigos, secções, subsecções, parágrafos e subparágrafos e à numeração marginal, à numeração final dos apêndices e à inserção das notas necessárias no que respeita ao Regulamento das Radiocomunicações (Genebra, 1979), de que enviará uma cópia certificada conforme aos Membros da União.

Os Membros da União devem informar o secretário-geral da sua aprovação do Regulamento das Radiocomunicações (Genebra, 1979), tal como foi adoptado pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), e o secretário-geral comunicará essas aprovações aos Membros, à medida que as for recebendo.

Os delegados dos Membros da União Internacional das Telecomunicações representados na Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), tendo assinado os presentes Actos Finais, declaram que, se uma administração formular reservas quanto à aplicação de uma ou de várias disposições do Regulamento das Radiocomunicações (Genebra, 1979), nenhuma outra administração é obrigada a observar essa ou essas disposições nas suas relações com a administração que formulou tais reservas.

Em firmeza do que os delegados dos Membros da União Internacional das Telecomunicações representados na Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) assinaram, em nome dos países respectivos, os presentes Actos Finais, cujo exemplar único ficará depositado nos arquivos da União Internacional das Telecomunicações e do qual será enviada uma cópia certificada conforme a cada um dos Membros da União.

Feito em Genebra aos 16 de Dezembro de 1979.

Seguem-se as assinaturas dos delegados dos seguintes países:

Regulamento das Radiocomunicações

(Genebra, 1979)

Preâmbulo

1 A aplicação das disposições do presente Regulamento pelos organismos permanentes da União Internacional das Telecomunicações não implica da parte da União qualquer tomada de posição quanto à soberania ou ao estatuto jurídico de qualquer país, território ou zona geográfica.

PARTE A

CAPÍTULO 1

Terminologia

ARTIGO 1

Termos e definições

Introdução

2 Para os fins do presente Regulamento, os termos seguintes têm o sentido dado pelas definições que os acompanham. Contudo, esses termos e definições não são necessariamente aplicáveis noutros casos. As definições idênticas às que figuram na Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973) são assinaladas pela indicação (Conv.).

Nota. — Se no texto de uma definição indicada abaixo figurar um termo em itálico, isso significa que esse termo é ele próprio definido no presente artigo.

SECÇÃO I

Termos gerais

3 1.1 — *Administração:* qualquer serviço ou departamento responsável pelas medidas a tomar para executar as obrigações da Convenção Internacional das Telecomunicações dos Regulamentos (Conv.).

4 1.2 — *Telecomunicação:* qualquer transmissão, *emissão* ou recepção de indicações, sinais, escritos, imagens, sons ou informações de qualquer natureza, por fios, radioelectricidade, óptica ou outros sistemas electromagnéticos (Conv.).

5 1.3 — *Rádio:* prefixo que se aplica ao emprego das *ondas radioeléctricas* (Conv.).

6 1.4 — *Ondas radioeléctricas* ou *ondas hertzianas:* ondas electromagnéticas cuja frequência é, por convenção, inferior a 3000 GHz e que se propagam no espaço sem guia artificial.

7 1.5 — *Radiocomunicação: telecomunicação* efectuada por meio de *ondas radioeléctricas* (Conv.).

8 1.6 — *Radiocomunicação de Terra:* qualquer *radiocomunicação* que não as *radiocomunicações espaciais* ou *radioastronomia.*

9 1.7 — *Radiocomunicação espacial:* qualquer *radiocomunicação* assegurada por meio de uma ou várias *estações espaciais* ou por meio de um ou vários *satélites reflectores* ou de outros objectos espaciais.

10 1.8 — *Radiodeterminação:* determinação da posição, da velocidade ou de outras características de um objecto ou obtenção de dados relativos a esses parâmetros, com o auxílio das propriedades de propagação das *ondas radioeléctricas.*

11 1.9 — *Radionavegação:* aplicação da *radiodeterminação* à navegação, incluindo a localização de objectos perturbadores.

12 1.10 — *Radiolocalização:* aplicação da *radiodeterminação* a outros fins que não a *radionavegação.*

13 1.11 — *Radiogoniometria:* radiodeterminação que utiliza a recepção das *ondas radioeléctricas* a fim de determinar a direcção de uma *estação* ou de um objecto.

14 1.12 — *Radioastronomia:* astronomia baseada na recepção das *ondas radioeléctricas* de origem cósmica.

15 1.13 — *Tempo universal coordenado (UTC):* escala de tempo fundada no segundo (SI), definida e recomendada pela CCIR e mantida pela Comissão Internacional da Hora (BIH) (1).

Para a maior parte das aplicações práticas associadas ao Regulamento das Radiocomunicações, o tempo UTC é equivalente ao tempo solar médio no meridiano de origem (0° de longitude), expresso anteriormente em TMG.

16 1.14 — *Utilizações industriais, científicas e médicas* (da energia radioeléctrica) *(ISM):* utilização de aparelhos ou de instalações concebidos para produzir e utilizar, num espaço reduzido de energia radioeléctrica para fins industriais, científicos, médicos, domésticos ou análogos, com exclusão de qualquer uso de *telecomunicações.*

15.1 (1) A definição completa figura no Parecer n.º 460-2 da CCIR.

SECÇÃO II

Termos específicos ligados à gestão das frequências

17 2.1 — *Atribuição* (de uma faixa de frequências): registo no Quadro de Atribuição das Faixas de Frequência de uma faixa de frequências determinada, tendo em vista a sua utilização por um ou vários *serviços de radiocomunicações* de Terra ou espacial, ou pelo *serviço de radioastronomia,* em condições especificadas. Este termo aplica-se igualmente à faixa de frequências considerada.

18 2.2 — *Adjudicação* (de uma frequência ou de um canal radioeléctrico): registo de um dado canal num plano adoptado por uma conferência competente, tendo em vista a sua utilização por uma ou várias administrações para um *serviço de radiocomunicação* de Terra ou espacial, num ou vários países ou zonas geográficas determinadas e segundo condições especificadas.

19 2.3 — *Consignação* (de uma frequência ou de um canal radioeléctrico): autorização dada por uma administração para a utilização por uma *estação* radioeléctrica de uma frequência ou de um canal radioeléctrico determinado segundo condições especificadas.

SECÇÃO III

Serviços radioeléctricos

20 3.1 — *Serviço de radiocomunicação:* serviço definido na presente secção que implique a transmissão, a *emissão* ou a recepção de *ondas radioeléctricas* com fins específicos de *telecomunicação.*

No presente Regulamento, salvo indicação em contrário, qualquer serviço de radiocomunicação refere-se às *radiocomunicações de Terra.*

21 3.2 — *Serviço fixo: serviço de radiocomunicação* entre pontos fixos determinados.

22 3.3 — *Serviço fixo por satélite: serviço de radiocomunicação* entre *estações terrenas* situadas em pontos fixos determinados utilizando um ou vários *satélites;* em certos casos, este serviço compreende ligações entre satélites, as quais podem igualmente ser asseguradas pelo serviço intersatélites; o serviço fixo por satélite pode, além disso, compreender *ligações de conexão* para outros serviços de *radiocomunicação espacial.*

23 3.4 — *Serviço fixo aeronáutico: serviço de radiocomunicação* entre pontos fixos determinados, previsto essencialmente para a segurança da navegação aérea e para assegurar a regularidade, a eficácia e a economia da exploração dos transportes aéreos.

24 3.5 — *Serviço intersatélites: serviço de radiocomunicação* assegurando as ligações entre *satélites* artificiais da Terra.

25 3.6 — *Serviço de exploração espacial: serviço de radiocomunicação* destinado exclusivamente à exploração de *engenhos espaciais,* particularmente à *perseguição espacial,* à *telemedida espacial* e ao *telecomando espacial.* Estas funções serão normalmente asseguradas pelo serviço no qual funciona a *estação espacial.*

26 3.7 — *Serviço móvel: serviço de radiocomunicação* entre *estações terrestres* ou entre *estações móveis* (Conv.).

27 3.8 — *Serviço móvel por satélite; serviço de radiocomunicação:*

Entre *estações terrenas móveis* e uma ou várias *estações espaciais,* ou entre *estações espaciais* utilizadas por este serviço; ou

Entre *estações terrenas móveis,* através de uma ou de *várias estações espaciais.*

Este serviço pode, além disso, compreender as *ligações de conexão* necessárias à sua exploração.

28 3.9 — *Serviço móvel terrestre: serviço móvel* entre *estações de base* e *estações móveis terrestres* ou entre *estações móveis terrestres.*

29 3.10 — *Serviço móvel terrestre por satélite: serviço móvel por satélite* no qual as *estações terrenas móveis* estão situadas na Terra.

30 3.11 — *Serviço móvel marítimo: serviço móvel* entre *estações costeiras* e *estações de navio,* ou entre *estações de navio,* ou entre *estações de comunicações* de bordo associadas. As *estações de engenho de salvamento* e as *estações de radiobaliza de localização de sinistros* podem igualmente participar neste serviço.

31 3.12 — *Serviço móvel marítimo por satélite: serviço móvel por satélite* no qual as *estações terrenas móveis* estão situadas a bordo de navios. As *estações de engenho de salvamento* e as *estações de radiobaliza de localização de sinistros* podem igualmente participar neste serviço.

32 3.13 — *Serviço de operações portuárias: serviço móvel marítimo* num porto ou na vizinhança de um porto entre *estações costeiras* e *estações de navio,* ou entre *estações de navio,* que tem por objectivo a transmissão de mensagens que tratem exclusivamente da manobra, do movimento e da segurança dos navios e, em caso de urgência, de salvaguarda das pessoas. Excluem-se deste serviço as mensagens que têm carácter de *correspondência pública.*

33 3.14 — *Serviço de movimento de navios: serviço de segurança* compreendido no *serviço móvel marítimo*, que não o *serviço de operações portuárias*, entre *estações costeiras* e *estações de navio*, ou entre *estações de navio*, que tem por objectivo a transmissão de mensagens que tratem exclusivamente do movimento dos navios.

Excluem-se deste serviço as mensagens que têm carácter de *correspondência pública*.

34 3.15 — *Serviço móvel aeronáutico: serviço móvel* entre *estações aeronáuticas* e *estções de aeronave* ou entre *estações de aeronave*, no qual podem também participar *estações de engenho de salvamento*. As *estações de radiobaliza de localização de sinistros* podem também participar neste serviço em frequência de perigo e de urgência estabelecidas.

35 3.16 — *Serviço móvel aeronáutico: serviço móvel por satélite* no qual as *estações terrenas móveis* estão situadas a bordo de aeronaves. As *estações de engenho de salvamento* e as *estações de radiobaliza de localização de sinistros* podem igualmente participar neste serviço.

36 3.17 — *Serviço de radiodifusão: serviço de radiocomunicação* cujas *emissões* se destinam a ser recebidas directamente pelo público em geral. Este serviço pode compreender *emissões* sonoras, *emissões de televisão* ou entre géneros de emissões (Conv.).

37 3.18 — *Serviço de radiodifusão por satélite: serviço de radiocomunicação* no qual os sinais emitidos ou retransmitidos por *estações espaciais* se destinam a ser recebidos directamente pelo público em geral.

No serviço de radiodifusão por satélite, a expressão «recebidos directamente» aplica-se simultaneamente à *recepção individual* e *à recepção comunitária*.

38 3.19 — *Serviço de radiodeterminação: serviço de radiocomunicação* para efeitos de *radiodeterminação*.

39 3.20 — *Serviço de radiodeterminação por satélite: serviço de radiocomunicação* para efeitos de *radiodeterminação* e envolvendo a utilização de uma ou várias *estações espaciais*.

40 3.21 — *Serviço de radionavegação: serviço de radiodeterminação* para efeitos de *radionavegação*.

41 3.22 — *Serviço de radionavegação por satélite: serviço de radiodeterminação por satélite* para efeitos de *radionavegação*.

Este serviço pode também compreender as ligações de conexão necessárias à sua exploração.

42 3.23 — *Serviço de radionavegação marítima: serviço de radionavegação* para as necessidades dos navios e a segurança da sua exploração.

43 3.24 — *Serviço de radionavegação marítima por satélite: serviço de radionavegação por satélite* no qual as *estações terrenas* estão situadas a bordo de navios.

44 3.25 — *Serviço de radionavegação aeronáutica: serviço de radionavegação* para as necessidades das aeronaves e a segurança da sua exploração.

45 3.26 — *Serviço de radionavegação aeronáutica por satélite: serviço de radionavegação por satélite* no qual as *estações terrenas* estão situadas a bordo de navios.

46 3.27 — *Serviço de radiolocalização: serviço de radiodeterminação* para efeitos de *radiolocalização*.

47 3.28 — *Serviço de auxiliares da meteorologia: serviço de radiocomunicação* destinado às observações e às sondagens utilizadas para a meteorologia, incluindo a hidrologia.

48 3.29 — *Serviço de exploração da Terra por satélite: serviço de radiocomunicação* entre *estações terrenas* e uma ou várias *estações espaciais*, que pode compreender ligações entre *estações espaciais*, e no qual:

São obtidas informações relativas às características da Terra e dos seus fenómenos naturais a partir de *detectores activos* ou de *detectores passivos* situados em *satélites* da Terra;

São recolhidas informações análogas a partir de plataformas aerotransportadas ou situadas sobre a Terra.

Estas informações podem ser distribuídas a *estações terrenas* pertencentes ao mesmo sistema.

As plataformas podem igualmente ser interrogadas.

Este serviço pode também compreender as *ligações de conexão* necessárias à sua exploração.

49 3.30 — *Serviço de meteorologia por satélite: serviço de exploração da Terra por satélite* para efeitos de meteorologia.

50 3.31 — *Serviço de frequências padrão e de sinais horários: serviço de radiocomunicação* que se assegura, para fins científicos, técnicos e outros, a emissão de frequências especificadas, de sinais horários ou de ambos ao mesmo tempo, de precisão elevada e dada, e destinada à recepção geral.

51 3.32 — *Serviço de frequência padrão e de sinais horários por satélite: serviço de radiocomunicação* utilizando *estações espaciais* situadas em *satélites* da Terra para os mesmos fins que o *serviço de frequências padrão e de sinais horários*.

Este serviço pode também incluir as *ligações de conexão* necessárias à sua exploração.

52 3.33 — *Serviço de pesquisa espacial: serviço de radiocomunicação* no qual se utilizam *engenhos espaciais* ou outros objectos espaciais para a pesquisa científica ou técnica.

53 3.34 — *Serviço de amador: serviço de radiocomunicação* destinado à instrução individual, à intercomunicação e aos estudos técnicos, efectuado por amadores, isto é, por pessoas devidamente autorizadas que se interessam pela técnica de radioelectricidade a título unicamente pessoal e sem interesse pecuniário.

54 3.35 — *Serviço de amador por satélite: serviço de radiocomunicação* utilizando *estações espaciais* situadas em *satélites* da Terra para os mesmos fins que o *serviço de amador*.

55 3.36 — *Serviço de radioastronomia:* serviço que envolve a utilização da *radioastronomia.*

56 3.37 — *Serviço de segurança:* qualquer serviço radioeléctrico explorado por forma permanente ou temporária para garantir a segurança da vida humana e a salvaguarda de bens (Conv.).

57 3.38 — *Serviço especial: serviço de radiocomunicação* não definido especificadamente na presente secção, efectuado exclusivamente para satisfazer necessidades determinadas de interesse geral e não aberto à *correspondência pública.*

SECÇÃO IV

Estações e sistemas radioeléctricos

58 4.1 — *Estação:* um ou vários emissores ou receptores ou um conjunto de emissores e receptores, incluindo os aparelhos acessórios, necessários para assegurar um *serviço de radiocomunicação* ou para o *serviço de radioastronomia,* num dado local.

Cada estação é classificada segundo o serviço em que participa de modo permanente ou temporário.

59 4.2 — *Estação de Terra: estação* que assegura uma *radiocomunicação de Terra.* No presente Regulamento, salvo indicação em contrário, todas as *estações* são *estações* de Terra.

60 4.3 — *Estação terrena: estação* situada quer na superfície da Terra quer na parte principal da atmosfera terrestre e destinada a comunicar:

Com uma ou várias *estações espaciais;* ou

Com uma ou várias *estações* da mesma natureza, com o auxílio de um ou de vários *satélites reflectores* ou de outros objectos espaciais.

61 4.4 — *Estação espacial: estação* situada sobre um objecto que se encontra, é destinado a ir, ou foi, além da parte principal da atmosfera terrestre.

62 4.5 — *Estação de engenho de salvamento: estação móvel* do *serviço móvel marítimo* ou do *serviço móvel aeronáutico* destinada unicamente às necessidades dos náufragos e colocada numa embarcação, jangada ou qualquer outro equipamento de salvamento.

63 4.6 — *Estação fixa: estação* do *serviço fixo.*

64 4.7 — *Estação fixa aeronáutica: estação* do *serviço fixo aeronáutico.*

65 4.8 — *Estação móvel: estação* do *serviço móvel* destinada a ser utilizada quando em movimento ou durante paragens em pontos não determinados.

66 4.9 — *Estação terrena móvel: estação terrena* do *serviço móvel por satélite* destinada a ser utilizada quando em movimento ou durante paragens em pontos não determinados.

67 4.10 — *Estação terrestre: estação* do *serviço móvel* não destinada a ser utilizada quando em movimento.

68 4.11 — *Estação base: estação terrestre* do *serviço móvel terrestre.*

69 4.12 — *Estação móvel terrestre: estação móvel* do *serviço móvel terrestre* susceptível de se deslocar em superfície, no interior dos limites geográficos de um país ou de um continente.

70 4.13 — *Estação costeira: estação terrestre* do *serviço móvel marítimo.*

71 4.14 — *Estação terrena costeira: estação terrena* do *serviço fixo por satélite,* ou, em certos casos, do *serviço móvel marítimo por satélite* situada num ponto determinado do solo e destinada a assegurar a *ligação de conexão* do *serviço móvel marítimo por satélite.*

72 4.15 — *Estação de navio: estação móvel* do *serviço móvel marítimo* colocada a bordo de um navio que não está permanentemente ancorado, distinta de uma *estação de engenho de salvamento.*

73 4.14 — *Estação terrena de navio: estação terrena móvel* do *serviço móvel marítimo por satélite,* instalada a bordo de um navio.

74 4.15 — *Estação de comunicação de bordo: estação móvel* de fraca potência do *serviço móvel marítimo* destinada às comunicações internas a bordo de um navio, ou às comunicações entre um navio e as suas embarcações e jangadas de salvamento no decurso de exercícios ou de operações de salvamento, ou às comunicações no seio de um grupo de navios rebocados ou impelidos, assim como às comunicações que dizem respeito às instruções relativas à manobra dos cabos e à amarração.

75 4.18 — *Estação portuária: estação costeira* do *serviço de operações portuárias.*

76 4.19 — *Estação aeronáutica: estação terrestre* do *serviço móvel aeronáutico.* Em certos casos, uma *estação aeronáutica* pode, por exemplo, estar colocada a bordo de um navio ou de uma plataforma no mar.

77 4.20 — *Estação terrena aeronáutica: estação terrena* do *serviço fixo por satélite,* ou em certos casos, do *serviço móvel aeronáutico por satélite,* situada num ponto determinado do solo e destinada a assegurar a *ligação de conexão* do *serviço móvel aeronáutico por satélite.*

78 4.21 — *Estação de aeronave: estação móvel* do *serviço móvel aeronáutico* instalada a bordo de uma aeronave, distinta de uma *estação de engenho de salvamento.*

79 4.22 — *Estação terrena de aeronave: estação terrena móvel* do *serviço móvel aeronáutico por satélite* instalada a bordo de uma aeronave.

80 4.23 — *Estação de radiodifusão: estação* do *serviço de radiodifusão.*

81 4.24 — *Estação de radiodeterminação: estação* do *serviço de radiodeterminação.*

82 4.25 — *Estação móvel de radionavegação: estação* do *serviço de radionavegação* destinada a ser utilizada quando em movimento ou durante paragens em pontos não determinados.

83 4.26 — *Estação terrestre de radionavegação: estação* do *serviço de radionavegação* não destinada a ser utilizada quando em movimento.

84 4.27 — *Estação móvel de radiolocalização: estação* do *serviço de radiolocalização* destinada a ser utilizada quando em movimento ou durante paragens em pontos não determinados.

85 4.28 — *Estação terrestre de radiolocalização: estação* do *serviço de radiolocalização* não destinada a ser utilizada quando em movimento.

86 4.29 — *Estação de radiogoniometria: estação de radiodeterminação* que utiliza a *radiogoniometria.*

87 4.30 — *Estação de radiofarol: estação* do *serviço de radionavegação* cujas emissões são destinadas a permitir a uma *estação móvel* determinar a sua posição ou a sua direcção em relação à *estação de radiofarol.*

88 4.31 — *Estação de radiobaliza de localização de sinistros: estação* do *serviço móvel* cujas *emissões* são destinadas a facilitar as operações de busca e salvamento.

89 4.32 — *Estação de frequências padrão e de sinais horários: estação* do *serviço de frequências padrão e de sinais horários.*

90 4.33 — *Estação de amador: estação* do *serviço de amador.*

91 4.34 — *Estação de radioastronomia: estação* do *serviço de radioastronomia.*

92 4.35 — *Estação experimental: estação* que utiliza as *ondas radioeléctricas* para experiências que interessam aos progressos da ciência ou da técnica.

Esta definição não inclui as *estações de amador.*

93 4.36 — *Emissor de socorro de navio:* emissor de navio para utilizar exclusivamente numa frequência de perigo, para fins de perigo, de urgência ou de segurança.

94 4.37 — *Radar:* sistema de *radiodeterminação* fundado na comparação entre sinais de referência e sinais radioeléctricos reflectidos ou retransmitidos a partir da posição a determinar.

95 4.38 — *Radar primário:* sistema de *radiodeterminação* fundado na comparação entre sinais de referência e sinais radioeléctricos reflectidos a partir da posição a determinar.

96 4.39 — *Radar secundário:* sistema de *radiodeterminação* fundado na comparação entre sinais de referência e sinais radioeléctricos retransmitidos a partir da posição a determinar.

97 4.40 — *Baliza-radar* «racon»: emissor-receptor associado a um ponto de referência fixo de navegação que, quando excitado por um *radar,* reenvia automaticamente um sinal distintivo, o qual poderá aparecer no *écran* do *radar* e fornecer indicações sobre a distância, azimute e identificação.

98 4.41 — *Sistema de aterragem por instrumentos* (ILS): sistema de *radionavegação* que fornece às aeronaves um guiamento horizontal e vertical imediatamente antes e durante a aterragem e que, em certos pontos fixos, dá indicação da distância ao ponto de aterragem de referência.

99 4.42 — *Radioalinhamento de pista:* sistema de guiamento horizontal incorporado no *sistema de aterragem por instrumentos, que* indica o afastamento horizontal da aeronave em relação à sua trajectória óptima de descida segundo o eixo da pista de aterragem.

100 4.43 — *Radioalinhamento de descida:* sistema de guiamento vertical incorporado no *sistema de aterragem por instrumentos, que* indica o afastamento vertical da aeronave em relação à sua trajectória óptima de descida.

101 4.44 — *Radiobaliza:* emissor do *serviço de radionavegação aeronáutica* que radia um feixe no sentido vertical para fornecer a uma aeronave uma indicação de posição.

102 4.45 — *Radioaltímetro:* aparelho de *radionavegação* instalado a bordo de uma aeronave ou de um *engenho espacial,* que permite determinar a altura dessa aeronave ou desse *engenho espacial* em relação à superfície da Terra ou a uma outra superfície.

103 4.46 — *Radiossonda:* emissor radioeléctrico automático do *serviço de meteorologia,* habitualmente transportado por uma aeronave, um balão livre, um pára-quedas ou um papagaio, e que transmite dados meteorológicos.

104 4.47 — *Sistema espacial:* qualquer conjunto de *estações terrenas,* de *estações espaciais* ou de *estações terrenas* e de *estações espaciais* cooperando para assegurar *radiocomunicações espaciais* para fins determinados.

105 4.48 — *Sistemas de satélites: sistema espacial* que utiliza um ou vários *satélites* artificiais da Terra.

106 4.49 — *Rede de satélite: sistema de satélites* ou parte de um *sistema de satélites,* composto por um só *satélite* e *estações terrenas* associadas.

107 4.50 — *Ligação por satélite:* ligação radioeléctrica entre uma *estação terrena* emissora e uma *estação terrena* receptora através de um *satélite.*

Uma ligação por satélite compreende uma ligação ascendente e uma ligação descendente.

108 4.51 — *Ligação multissatélite:* ligação radioeléctrica entre uma *estação terrena* emissora e uma *estação terrena* receptora através de, pelo menos, dois *satélites,* sem qualquer *estação terrena* intermédia.

Uma ligação multissatélite compreende uma ligação ascendente, uma ou várias ligações entre *satélites* e uma ligação descendente.

109 4.52 — *Ligação de conexão:* ligação radioeléctrica que vai de uma *estação terrena,* situada num ponto fixo determinado, a uma *estação espacial,* ou vice-versa, a fim de transmitir informações para uma *radiocomunicação espacial* de um serviço diferente do *serviço fixo por satélite.*

Secção V

Termos relativos à exploração

110 5.1 — *Correspondência pública:* qualquer *telecomunicação* que os serviços e *estações,* pelo facto de estarem à disposição do público, devem aceitar para transmissão (Conv.).

111 5.2 — *Telegrafia* (*): forma de *telecomunicação* que intervém em qualquer operação que assegure a transmissão e a reprodução à distância do conteúdo de qualquer documento, tal como um escrito, um impresso ou uma imagem fixa, ou a reprodução à distância de qualquer género de informação sob essa forma. Para os fins do Regulamento das Radiocomunicações, o termo «telegrafia» significa, salvo indicação em contrário, uma forma de *telecomunicação* que assegura a transmissão de escritos pela utilização de um código de sinais.

112 5.3 — *Telegrama* (*): escrito destinado a ser transmitido por *telegrafia* a fim de ser entregue ao destinatário. Salvo indicação em contrário, este termo inclui também o *radiotelegrama.*

Nesta definição, o termo «telegrafia» tem o sentido geral definido na Convenção.

113 5.4 — *Radiotelegrama: telegrama* originário quer de uma *estação móvel* quer de uma *estação terrena móvel,* ou que a qualquer delas se destine, transmitido, em todo ou parte do seu percurso, pelas vias de *radiocomunicação* do *serviço móvel* ou do *serviço móvel por satélite.*

114 5.5 — *Comunicação radiotelex:* comunicação por *telex* originária quer de uma *estação móvel* quer de uma *estação terrena móvel,* ou que a qualquer delas se destine, transmitida, em todo ou parte do seu percurso, pelas vias de *radiocomunicação* do *serviço móvel* ou do *serviço móvel por satélite.*

115 5.6 — *Telegrafia por variação de frequência: telagrafia* por modulação de frequência, na qual o sinal telegráfico varia a frequência da onda de suporte entre valores predeterminados.

116 5.7 — *Fac-símile:* forma de *telagrafia* que assegura a transmissão de imagens fixas, com ou sem meias-tintas, para a sua reprodução sob forma permanente.

Nesta definição, o termo «telegrafia» tem o sentido geral definido na Convenção.

117 5.8 — *Telefonia* (*): forma de *telecomunicação* estabelecida para a transmissão da palavra ou, em certos casos, de outros sons.

118 5.9 — *Conversação radiotelefónica:* conversação telefónica originária de uma *estação móvel* ou de uma *estação terrena móvel* ou a qualquer delas destinada, transmitida, em todo ou parte do seu percurso, pelas vias de *radiocomunicação* do *serviço móvel* ou do *serviço móvel por satélite.*

119 5.10 — *Exploração simplex:* modo de exploração pela qual a transmissão é possível alternadamente nos dois sentidos da via de *telecomunicação,* por exemplo, por meio de um sistema de comando manual (1).

120 5.11 — *Exploração dúplex:* modo de exploração pelo qual a transmissão é possível simultaneamente nos dois sentidos da via de *telecomunicação* (2).

121 5.12 — *Exploração semidúplex:* modo de *exploração simplex* num extremo da via de *telecomunicação* e de *exploração dúplex* no outro (2).

122 5.13 — *Televisão:* forma de *telecomunicação* que assegura a transmissão de imagens não permanentes de objectos fixos ou móveis.

123 5.14 — *Recepção individual* (serviço de radiodifusão por satélite): recepção das *emissões* de uma *estação espacial* do *serviço de radiodifusão por satélite* por meio de instalações domésticas simples e, nomeadamente, de instalações com antenas de pequenas dimensões.

124 5.15 — *Recepção comunitária* (no serviço de radiodifusão por satélite): recepção das *emissões* de uma *estação espacial* do *serviço de radiodifusão por satélite* por meio de instalações receptoras, podendo, em certos casos, ser complexas e ter antenas de maiores dimensões do que as utilizadas para a *recepção individual* e destinadas a ser utilizadas:

Por um grupo de público, em geral, num mesmo local; ou
Por meio de um sistema de distribuição servindo uma zona limitada.

125 5.16 — *Telemedida:* utilização das *telecomunicações* para indicar ou registar automaticamente medidas a uma certa distância do instrumento de medida.

126 5.17 — *Radiomedida: telemedida* efectuada por meio de *ondas radioeléctricas.*

127 5.18 — *Telemedida espacial: telemedida* utilizada para a transmissão, a partir de uma *estação espacial,* dos resultados das medidas efectuadas num *engenho espacial,* incluindo as que se referem ao funcionamento do *engenho espacial.*

128 5.19 — *Telecomando:* utilização das *telecomunicações* para a transmissão de sinais destinados a pôr em funcionamento, a modificar ou a parar à distância o funcionamento de um aparelho.

129 5.20 — *Telecomando espacial:* utilização das *rediocomunicações* para a transmissão de sinais radioeléctricos a uma *estação espacial* para pôr em funcionamento, modificar ou para o funcionamento de aparelhos situados no objecto espacial associado, incluindo a *estação espacial.*

130 5.21 — *Perseguição espacial:* determinação da órbita, da velocidade ou da posição instantânea de um objecto situado no espaço, pela utilização da *radiodeterminação,* com exclusão dos radares primários, a fim de seguir os deslocamentos deste objecto.

(*) V. a Resolução n.º 68.

119.1 (1) Em geral, o modo de *exploração simplex* pode ser realizado com uma ou duas frequências.

120.1 e 121 (2) Em geral, os modos de *exploração dúplex* e *exploração semidúplex* de uma via de *radiocomunicação* necessitam da utilização de duas frequências. O modo de *exploração simplex* pode utilizar uma ou duas frequências.

Secção VI

Características das emissões e dos materiais

131 6.1 — *Radiação* (radioeléctrica): fluxo de energia produzido sob a forma de *ondas radioeléctricas* a partir de uma fonte qualquer, ou nessa mesma energia.

132 6.2 — *Emissão: radiação* produzida, ou produção de *radiação*, a partir de uma *estação* radioeléctrica de emissão.

Por exemplo, a energia radiada pelo oscilador local de um receptor radioeléctrico não constitui uma comissão, mas uma *radiação*.

133 6.3 — *Classe de emissão* conjunto de características de uma *emissão*, tais como o tipo de modulação da portadora principal, a natureza do sinal de modulação, o género de informação a transmitir e, eventualmente, outras características. Cada classe é designada por um conjunto de símbolos normalizados.

134 6.4 — *Emissão de faixa lateral única: emissão* em modulação de amplitude contendo apenas uma das duas faixas laterais.

135 6.5 — *Emissão de faixa lateral única com portadora completa: emissão de faixa lateral única* sem redução da portadora.

136 6.6 — *Emissão de faixa lateral única com portadora reduzida: emissão de faixa lateral única* em que a portadora é reduzida a um nível que ainda permite reconstituí-la para ser usada na desmodulação.

137 6.7 — *Emissão de faixa lateral única com portadora suprimida: emissão de faixa lateral única* em que a portadora é virtualmente suprimida e não se destina a ser usada na desmodulação.

138 6.8 — *Emissão fora de faixa (*): emissão* numa frequência ou em frequências situadas fora da *largura de faixa necessária*, mas na sua vizinhança imediata, devida ao processo da modulação, com exclusão das *radiações não essenciais*.

139 6.9 — *Radiação não essencial (*): radiação* numa frequência ou em frequências fora da *largura de faixa necessária* e cujo nível pode ser reduzido sem afectar a correspondente transmissão da informação. Estas radiações compreendem as radiações harmónicas, as radiações parasitas e os produtos de intermodulação e de conversão de frequência, com exclusão das *emissões fora de faixa*.

140 6.10 — *Radiações não desejadas (*):* conjunto de *radiações não essenciais* e de *radiações* provenientes de *emissões fora de faixa*.

141 6.11 — *Faixa de frequências consignada:* faixa de frequências no interior da qual é autorizada a *emissão* de uma dada *estação*. A largura desta faixa é igual à *largura de faixa necessária* acrescida do dobro do valor absoluto da *tolerância de frequência*. No caso de *estações espaciais*, a faixa de frequência consignada inclui o dobro do desvio máximo devido ao efeito Doppler, que pode ocorrer em relação a qualquer ponto da superfície da Terra.

142 6.12 — *Frequência consignada:* centro da *faixa de frequências consignada* a uma *estação*.

143 6.13 — *Frequência característica:* frequência que se pode facilmente identificar e medir numa *emissão* dada.

Uma frequência portadora, por exemplo, pode ser designada como frequência característica.

144 6.14 — *Frequência de referência:* frequência que tem uma posição fixa e bem determinada em relação à frequência *consignada*. O afastamento dessa frequência em relação à *frequência consignada* é, em grandeza e sinal, o mesmo que o da *frequência característica* em relação ao centro da faixa de frequência ocupada pela *emissão*.

145 6.15 — *Tolerância de frequência:* afastamento máximo admissível entre a *frequência consignada* e a frequência situada no centro da faixa ocupada por uma *emissão*, ou entre a *frequência de referência* e a *frequência característica* de uma *emissão*.

A tolerância de frequência exprime-se em milionésimos ou em hertz.

146 6.16 — *Largura de faixa necessária:* para uma dada *classe de emissão*, o valor mínimo da largura de faixa ocupada suficiente para assegurar a transmissão da informação à velocidade e com a qualidade requeridas em condições dadas.

147 6.17 — *Largura de faixa ocupada:* largura da faixa de frequência tal que, abaixo da sua frequência limite inferior e acima da sua frequência limite superior, sejam radiadas *potências médias* iguais, cada uma, a uma percentagem especificada $\beta/2$ da *potência média* total de uma dada *emissão*.

Na falta de especificações da CCIR para a classe de emissão considerada, o valor $\beta/2$ deve ser igual a 0,5 %.

(*) Os termos associados às definições dadas nos n.os **138**, **139** e **140** devem ser expressos nas línguas de trabalho do seguinte modo:

Números	Em francês	Em inglês	Em espanhol	Em português
138 (6.8)	Emission hors bande.	Out-of-band emission.	Emisión fuera de banda.	Emissão fora de faixa.
139 (6.9)	Rayonnement non essentiel.	Spurious emission.	Emisión no esencial.	Radiação não essencial.
140 (6.10)	Rayonnements non désirés.	Unwanted emissions.	Emisiones no deseadas.	Radiações não desejadas.

148 6.18 — *Onda de polarização dextrogira* (sentido dos ponteiros do relógio): onda polarizada elíptica ou circularmente, cujo vector campo eléctrico gira, em função do tempo, no sentido dextrorso, isto é, no sentido dos ponteiros do relógio. O movimento do vector campo eléctrico será verificado, num plano fixo qualquer normal à direcção da propagação, por um observador que olhe no sentido em que a onda se propaga.

149 6.19 — *Onda de polarização levogira* (sentido contrário ao dos ponteiros do relógio): onda polarizada elíptica ou circularmente, cujo vector campo eléctrico gira, em função do tempo, no sentido contrário ao dos ponteiros do relógio. O movimento do vector campo eléctrico será verificado, num plano fixo qualquer normal à direcção da propagação, por um observador que olhe no sentido em que a onda se propaga.

150 6.20 — *Potência:* sempre que se indica a potência de um emissor radioeléctrico, etc., ela deve ser expressa por uma das formas seguintes, segundo a *classe de emissão*, utilizando os símbolos arbitrários indicados:

Potência de ponta (*PX* ou *pX*);
Potência média (*PY* ou *pY*);
Potência da portadora (*PZ* ou *pZ*).

Para as diferentes *classes de emissão*, as relações entre a *potência de ponta* a *potência média* e a *potência da portadora*, nas condições de funcionamento normal e na ausência de modulação, são indicadas em pareceres da CCIR, os quais podem ser utilizados como guia.

Nas fórmulas, o símbolo *p* indica a potência em watts e o símbolo *P* a potência em decibéis relativa a um nível de referência.

151 6.21 — *Potência de ponta* (de um emissor radioeléctrico): média da potência fornecida à linha de alimentação da antena por um emissor em funcionamento normal, durante um ciclo de radiofrequência correspondente à amplitude máxima da envolvente de modulação.

152 6.22 — *Potência média*(de um emissor radioeléctrico): média da potência fornecida à linha de alimentação da antena por um emissor em funcionamento normal, avaliada durante um intervalo de tempo relativamente longo em relação ao período da componente de mais baixa frequência da modulação.

153 6.23 — *Potência da portadora* (de um emissor radioeléctrico): média da potência fornecida à linha de alimentação da antena por um emissor durante um ciclo de radiofrequência, na ausência de modulação.

154 6.24 — *Ganho de uma antena*: relação, geralmente expressa em decibéis, entre a potência necessária à entrada de uma antena de referência sem perdas e a potência fornecida à entrada da antena dada, para que as duas antenas produzam, numa dada direcção, a mesma intensidade de campo ou a mesma densidade de fluxo de potência, à mesma distância. Na ausência de indicação em contrário, trata-se do ganho da antena na direcção do máximo de *radiação*. O ganho pode eventualmente ser considerado para uma polarização especificada.

Conforme a antena de referência escolhida, distingue-se:

a) *O ganho isotrópico* ou *absoluto* (G_i), quando a antena de referência é uma antena isotrópica, isolada no espaço;
b) O *ganho em relação a um dipolo de meia onda* (G_d), quando a antena de referência é um dipolo de meia onda, isolada no espaço, cujo plano equatorial contém a direcção dada;
c) O *ganho em relação a uma antena vertical* (G_v), quando a antena de referência é um condutor rectilíneo muito mais curto que o quarto do comprimento de onda, normal à superfície de um plano perfeitamente condutor que contém a direcção dada.

155 6.25 — *Potência isotrópica radiada equivalente* (p. i. r. e.): produto da potência fornecida à antena pelo seu ganho em relação a uma antena isotrópica, numa dada direcção (*ganho isotrópico* ou *absoluto*).

156 6.26 — *Potência aparente radiada* (p. a. r.) (numa dada direcção): produto da potência fornecida à antena pelo seu *ganho em relação a um dipolo de meia onda* numa dada direcção.

157 6.27 — *Potência aparente radiada em relação a uma antena vertical curta* (p. a. r. v.) (numa dada direcção): produto da potência fornecida à antena pelo seu *ganho em relação a uma antena vertical curta* numa dada direcção.

158 6.28 — *Difusão troposférica*: modo de propagação no qual as *ondas radioeléctricas* são difundidas por virtude de irregularidades ou descontinuidades nas propriedades físicas da troposfera.

159 6.29 — *Difusão ionosférica*: modo de propagação no qual as *ondas radioeléctricas* são difundidas por virtude de irregularidades ou descontinuidades na ionização da ionosfera.

Secção VII

Partilha de frequências

160 7.1 — *Interferência*: efeito provocado sobre a recepção, num sistema de *radiocomunicação*, por uma energia não desejada devida a qualquer *emissão*, *radiação* ou indução (ou a uma combinação dessas *emissões*,

radiações ou induções), e que se manifesta pela degradação da qualidade de transmissão, pela deformação ou pela perda da informação que poderia obter-se na ausência dessa energia não desejada.

161 7.2 — *Interferência admissível* (1): *interferência* observada ou prevista, que satisfaz os níveis de *interferência* e os critérios quantitativos de partilha fixados no presente Regulamento ou em pareceres da CCIR, ou ainda em acordos especiais cuja possibilidade é prevista no presente Regulamento.

162 7.3 — *Interferência aceite* (1): *interferência* superior à definida como admissível, que foi objecto de um acordo entre duas ou mais administrações sem causar prejuízo às outras administrações.

163 7.4 — *Interferência prejudicial* (2): *interferência* que compromete o funcionamento de um *serviço de radionavegação* ou de outros *serviços de segurança* ou que degrada seriamente, interrompe repetidamente ou impede o funcionamento de um *serviço de radiocomunicação* utilizado de acordo com o presente Regulamento.

164 7.5 — *Relação de protecção* (R. F.): valor mínimo, geralmente expresso em decibéis, da relação sinal útil/sinal indesejável à entrada de um receptor, determinado em condições especificadas, que permite obter uma dada qualidade de recepção do sinal útil à saída do receptor.

165 7.6 — *Zona de coordenação:* zona associada a uma *estação terrena* no exterior da qual uma *estação de Terra*, que partilha a mesma faixa de frequências, não pode provocar ou sofrer qualquer *interferência* superior à *interferência admissível*.

166 7.7 — *Contorno de coordenação:* linha que delimita a *zona de coordenação*.

167 7.8 — *Distância de coordenação:* num azimute dado, distância medida a partir da posição de uma *estação terrena*, para além da qual uma *estação de Terra*, que partilha a mesma faixa de frequências, não pode provocar ou sofrer qualquer *interferência* superior à *interferência admissível*.

168 7.9 — *Temperatura de ruído equivalente de uma ligação por satélite:* temperatura de ruído referida à saída da antena de recepção da *estação terrena* que corresponde à potência de ruído radioeléctrico que produz o ruído total observado na saída da ligação por *satélite*, não levando em conta o ruído devido às *interferências* causadas por *ligações por satélite* utilizando outros *satélites* e por sistemas de Terra.

Secção VIII

Termos técnicos relativos ao espaço

169 8.1 — *Espaço longínquo:* região do espaço situada a distâncias da Terra superiores ou aproximadamente iguais à distância entre a Terra e a Lua.

170 8.2 — *Engenho espacial:* engenho construído pelo homem e destinado a ir além da parte principal da atmosfera terrestre.

171 8.3 — *Satélite:* corpo que gira em volta de um outro corpo de massa preponderante e cujo movimento é principalmente determinado, de forma permanente, pela força de atracção deste último.

172 8.4 — *Satélite activo: satélite* que transporta uma *estação* destinada a emitir ou retransmitir sinais de *radiocomunicação*.

173 8.5 — *Satélite reflector: satélite* destinado a transmitir por reflexão sinais de *radiocomunicação*.

174 8.6 — *Detector activo:* instrumento de medida utilizado no *serviço de exploração da Terra por satélite* ou no *serviço de pesquisa espacial*, que permite obter informações por *emissão* e recepção de *ondas radioeléctricas*.

175 8.7 — *Detector passivo:* instrumento de medida utilizado no *serviço de exploração da Terra por satélite* ou no *serviço de pesquisa espacial*, que permite obter informações por recepção de *ondas radioeléctricas* de origem natural.

176 8.8 — *Órbita:* trajectória descrita, em relação a um dado sistema de referência, pelo centro de gravidade de um *satélite* ou de outro objecto espacial submetido de forma preponderante às forças naturais, essencialmente às forças de gravitação.

177 8.9 — *Inclinação de uma órbita* (de satélite da Terra): ângulo formado pelo plano que contém uma *órbita* e o plano do Equador terrestre.

178 8.10 — *Período* (de um satélite): intervalo de tempo compreendido entre duas passagens consecutivas de um *satélite* num ponto característico da sua *órbita*.

179 8.11 — *Altitude do apogeu ou do perigeu:* altitude do apogeu ou do perigeu acima de uma superfície de referência especificada servindo para representar a superfície da Terra.

180 8.12 — *Satélite geossíncrono: satélite* da Terra cujo período de revolução é igual ao período de rotação da Terra em torno do seu eixo.

181 8.13 — *Satélite geostacionário: satélite geossíncrono* cuja *órbita* circular e directa está situada no plano do Equador terrestre e que, por consequência, está fixo em relação à Terra. Por extensão, *satélite* que se mantém aproximadamente fixo em relação à Terra.

161.2 (1) Os termos «interferência admissível» e «interferência aceite» são utilizados na coordenação das consignações de frequência entre administrações.

(2) V. a Resolução n.º 68

182 8.14 — *Órbita de satélites geostacionários: órbita* em que deve ser colocado um *satélite* para que seja um *satélite geostacionário.*

183 a 207 *(Não atribuídos.)*

ARTIGO 2

Nomenclatura das faixas de frequências e dos comprimentos de onda em radiocomunicações

208 § 1. O espectro das frequências radioeléctricas subdivide-se em nove faixas de frequências, designadas por números inteiros consecutivos, de acordo com o quadro seguinte. Sendo a unidade de frequência o hertz (Hz), as frequências exprimem-se:

Em quilohertz (kHz), até 3000 kHz, inclusive;
Em megahertz (MHz), acima de 3 MHz e até 3000 MHz, inclusive;
Em gigahertz (GHz), acima de 3 GHz e até 3000 GHz, inclusive.

Para as faixas de frequências superiores a 3000 GHz, quer dizer, para as ondas centimilimétricas,n as ondas micrométricas e as ondas decimicrométricas, convém utilizar o terahertz (THz).

Todavia, nos casos em que a aplicação destas regras ocasionar sérias dificuldades, como, por exemplo, na notificação e registo das frequências, nas questões relativas às listas de frequências e nas questões conexas, podem aceitar-se afastamentos razoáveis.

Número da taxa	Símbolos (em inglês)	Faixas de frequências (limite inferior excluído, limite superior incluído)	Subdivisão métrica correspondente	Abreviações métricas para as faixas
4	VLF	3 a 30 kHz	Ondas miriamétricas	F. Mam.
5	LF	30 a 300 kHz	Ondas quilométricas	F. km.
6	MF	300 a 3000 kHz	Ondas hectométricas	F. hm.
7	HF	3 a 30 MHz	Ondas decamétricas	F. dam.
8	VHF	30 a 300 MHz	Ondas métricas	F. m.
9	UHF	300 a 3000 MHz	Ondas decimétricas	F. dm.
10	SHF	3 a 30 GHz	Ondas centimétricas	F. cm.
11	EHF	30 a 300 GHz	Ondas milimétricas	F. mm.
12	—	300 a 3000 GHz	Ondas decimilimétricas	—

Nota 1 — A «faixa N» (N = número da faixa) vai de $0{,}3 \times 10^N$ Hz a 3×10^N Hz.
Nota 2 — Prefixos: k = quilo (10^3); M = mega (10^6); G = giga (10^9); T = tera (10^{12}).

209 § 2. Nas relações entre as administrações e a UIT não deveriam ser utilizados nomes, símbolos ou abreviaturas para designar as faixas de frequência diferentes dos que figuram no n.º **208**.

210 a 234 *(Não atribuídos.)*

ARTIGO 3

Nomenclatura das datas e das horas empregadas em radiocomunicações

235 § 1. Qualquer data utilizada em relação com as radiocomunicações deve estar conforme com o calendário gregoriano.

236 § 2. Se, numa data, o mês não for indicado com todas as letras ou abreviadamente, deve ser indicado sob forma numérica segundo uma sequência determinada de algarismos, representando, dois a dois, o dia, o mês e o ano.

237 § 3. Cada vez que uma data for utilizada em relação com o tempo universal coordenado (UTC) essa data deve ser a do meridiano de origem no momento apropriado, correspondendo o meridiano de origem a uma longitude geográfica de 0°.

238 § 4. Salvo indicação em contrário, sempre que uma dada hora é utilizada em actividades internacionais de radiocomunicação, deve ser aplicado o tempo universal coordenado (UTC), e a hora deve ser apresentada sob a forma de um grupo de quatro algarismos (0000-2359). A abreviatura UTC deve ser utilizada em todas as línguas.

239 a 263 *(Não atribuídos.)*

ARTIGO 4

Designação das emissões

264 § 1. (1) As emissões são designadas segundo a sua largura de faixa necessária e a sua classe.

265 (2) Encontrar-se-ão na parte B do apêndice 6 exemplos de emissões designadas de acordo com o disposto no presente artigo. Poderão ser dados outros exemplos nos pareceres mais recentes da CCIR. Esses exemplos poderão também ser publicados no prefácio da Lista Internacional das Frequências.

Secção I

Largura de faixa necessária

266 § 2. (1) A largura de faixa necessária, tal como se encontra definida no n.º **146** e determinada na parte B do apêndice 6, deve ser expressa por três algarismos e uma letra. A letra ocupa a posição da vírgula e representa a unidade da largura de faixa. O primeiro carácter não deve ser nem o algarismo 0 nem uma das letras K, M ou G.

267 (2) A largura de faixa necessária ([1]):

Entre 0,001 e 999 Hz é expressa em Hz (letra H);
Entre 1,00 e 999 é expressa em kHz (letra K);
Entre 1,00 e 999 MHz é expressa em MHz (letra M);
Entre 1,00 e 999 GHz é expressa em GHz (letra G).

Secção II

Classes

268 § 3. A classe de emissão é o conjunto das características mencionadas no n.º **269**.

269 § 4. As emissões são classificadas e simbolizadas segundo as suas características fundamentais, tais como figuram no n.º **270**, e segundo todas as características adicionais facultativas descritas de acordo com a parte A do apêndice 6.

270 § 5. As características fundamentais são as seguintes (v. os n.ºs **271**, **272** e **273**):

(1) Primeiro símbolo — tipo de modulação da portadora principal;
(2) Segundo símbolo — natureza do sinal (ou dos sinais) que modula a portadora principal;
(3) Terceiro símbolo — tipo de informação a transmitir.

Quando a modulação é apenas empregada durante curtos intervalos de tempo e de forma ocasional (como, em muitos casos, para os sinais de identificação ou de chamada) pode não ser levada em conta, desde que a largura de faixa necessária indicada não seja com isso aumentada.

271 § 6. (1) Primeiro símbolo — tipo de modulação da portadora principal:

(1.1) Emissão de uma onda não modulada ..... N
(1.2) Emissão cuja onda portadora principal é modulada em amplitude (incluídos os casos em que há subportadoras moduladas em modulação angular):
(1.2.1) Faixa lateral dupla ..... A
(1.2.2) Faixa lateral única, onda portadora completa ..... H
(1.2.3) Faixa lateral única, onda portadora reduzida ou de nível variável ..... R
(1.2.4) Faixa lateral única, onda portadora suprimida ..... J
(1.2.5) Faixas laterais independentes ..... B
(1.2.6) Faixa lateral residual C
(1.3) Emissão de uma onda portadora principal é modulada em modulação angular:
(1.3.1) Modulação de frequência ..... F
(1.3.2) Modulação de fase ..... G
(1.4) Emissão de uma onda portadora principal é modulada em amplitude e em modulação angular, quer simultaneamente quer numa ordem previamente estabelecida ..... D
(1.5) Emissão de impulso ([2]):
(1.5.1) Sequências de impulsos não modulados ..... P

267.1 ([1]) Exemplos:

0,002 Hz = H002;	6 Hz = 6K00;	1,25 MHz = 1M25;
0,1 Hz = H100;	12,5 kHz = 12k5;	2 MHz = 2M00;
25,3 Hz = 25H3;	180,4 kHz = 180K;	10 MHz = 10M0;
400 kHz = 2K40;	180,5 kHz = 181K;	202 MHz = 202M;
	180,7 kHz = 181K;	5,65 GHz = 5G65.

271.1 ([2]) As emissões cuja portadora principal é modulada directamente por um sinal que foi codificada sob forma quantificada (por exemplo, modulação por impulsos e codificação) devem ser designadas de acordo com os pontos (1.2) ou (1.3).

(1.5.2) Sequências de impulsos:

(1.5.2.1) Modulados em amplitude ..... K
(1.5.1.2) Modulados em largura/duração L
(1.5.2.3) Modulados em posição/fase ..... M
(1.5.2.4) Nos quais a onda portadora é modulada em modulação angular durante o período do impulso ..... Q
(1.5.2.5) Consistindo numa combinação do precedente ou produzida por outros meios V

(1.6) Casos não cobertos acima, nos quais a emissão consiste na portadora principal modulada, quer simultaneamente quer numa ordem previamente estabelecida, segundo uma combinação de vários dos seguintes modos: em amplitude, em modulação angular ou por impulsos ..... W
(1.7) Outros casos X

272 (2) Segundo símbolo — natureza do sinal (ou dos sinais) que modula a portadora principal:

(2.1) Não existe sinal modulante 0
(2.2) Uma única via contendo informação quantificada ou numérica, sem emprego de uma subportadora modulante (1) 1
(2.3) Uma única via contendo informação quantificada ou numérica, com o emprego de uma subportadora modulante (1) 2
(2.4) Uma única via contendo informação analógica 3
(2.5) Duas vias ou mais contendo informação quantificada ou numérica 7
(2.6) Duas vias ou mais contendo informação analógica 8
(2.7) Sistema compósito com uma ou várias vias contendo informação quantificada ou numérica e uma ou várias vias contendo informação analógica 9
(2.8) Outros casos X

273 (3) Terceiro símbolo — tipo de informação a transmitir (2):

(3.1) Nenhuma informação ..... N
(3.2) Telegrafia — para recepção auditiva ..... A
(3.3) Telegrafia — para recepção automática ..... B
(3.4) Fac-símile C
(3.5) Transmissão de dados, telemedida, telecomando ..... D
(3.6) Telefonia (incluindo a radiodifusão sonora) ..... E
(3.7) Televisão (vídeo) ..... F
(3.8) Combinação dos casos acima ..... W
(3.9) Outros casos X

274 a 298 *(Não atribuídos.)*

CAPÍTULO II

ARTIGO 5

Características técnicas das estações

299 § 1. (1) A escolha e o funcionamento dos aparelhos destinados a ser utilizados nas estações, bem como todas as emissões destas, devem satisfazer o estipulado no presente Regulamento.

300 (2) Do mesmo modo, na medida compatível com as considerações práticas, a escolha dos aparelhos de emissão, de recepção e de medida deve basear-se nos mais recentes progressos da técnica, tais como são indicados especialmente nos pareceres da CCIR.

301 § 2. Na concepção dos equipamentos de emissão e de recepção destinados a ser utilizados numa dada parte do espectro das frequências procurar-se-á tomar em conta as características técnicas dos equipamentos de emissão e de recepção susceptíveis de serem utilizados nas regiões vizinhas dessa parte do espectro e noutra regiões do espectro, desde que tenham sido tomadas todas as medidas técnica e economicamente justificáveis para reduzir o nível das radiações não desejadas destes últimos equipamentos de emissão e para reduzir a sensibilidade às interferências destes últimos equipamentos de recepção.

272.1 (1) Isto exclui o multiplex por divisão no tempo.

273.1 (2) Neste contexto, o termo «informação» tem um sentido restrito, quer dizer, não se trata de uma informação de natureza permanente e invariável, como no caso de emissões de frequências padrão, de radares da onda contínua ou de impulsos, etc.

302 § 3. Na medida do possível, convém que os equipamentos a ser utilizados numa estação apliquem métodos de processamento dos sinais que permitam utilizar o espectro das frequências com o máximo de eficácia, de acordo, com os pareceres pertinentes da CCIR. Estes métodos compreendem, designadamente, certas técnicas de expansão da largura de faixa e, particularmente nos sistemas que funcionam em modulação de amplitude, a utilização da técnica da faixa lateral única.

303 § 4. (1) As estações de emissão devem satisfazer as tolerâncias de frequência fixadas no apêndice 7.

304 (2) As estações de emissão devem satisfazer as especificações do apêndice 8 no que se refere aos níveis de potência máximos tolerados de radiações não essenciais.

305 (3) As estações de emissão devem satisfazer as especificações fixadas no presente Regulamento para certos serviços e classes de emissão, por exemplo os apêndices 17 e 27 Aer2 (*), no que refere aos níveis de potência máximos tolerados para as emissões fora de faixa. Na ausência de tais especificações, as estações de emissão devem, tanto quanto possível, satisfazer as condições relativas à limitação das emissões fora de faixa especificadas nos mais recentes pareceres da CCIR.

306 (4) Além disso, devem ser feitos todos os esforços para manter as tolerâncias de frequência e o nível das radiações não desejadas nos valores mais baixos permitidos pelo estado da técnica e pela natureza do serviço a assegurar.

307 § 5. (1) As larguras de faixa das emissões devem igualmente permitir assegurar a utilização mais eficaz possível do espectro, o que significa em geral que as larguras de faixas devem ser mantidas nos valores mais baixos permitidos pelo estado da técnica e pela natureza do serviço a assegurar. O apêndice 6 constitui um guia para a determinação da largura de faixa necessária.

308 (2) Quando se utilizam técnicas de expansão de largura de faixa, deve ser empregada a densidade espectral de potência mínima compatível com a utilização eficaz do espectro.

309 § 6. (1) Sempre que pareça necessário para uma boa utilização do espectro, os receptores utilizados por qualquer serviço devem, tanto quanto possível, ter as mesmas tolerâncias de frequência que os emissores desse serviço, tendo em conta o efeito de Doppler nos casos em que este deva ser tomado em conta.

310 (2) As estações de recepção deveriam utilizar equipamento com características técnicas apropriadas à classe de emissão respectiva; em particular, a selectividade deveria ser apropriada tendo em conta o n.º **307** relativo às larguras de faixa das emissões.

311 (3) As características de funcionamento dos receptores deveriam ser tais que estes não fossem interferidos por emissores situados a distância razoável e funcionamento de acordo com as disposições do presente Regulamento.

312 § 7. A fim de assegurar o acatamento do presente Regulamento, as administrações procederão de modo que as emissões das estações colocadas sob a sua jurisdição sejam objecto de medições frequentes; para esse fim empregarão, se necessário, os meios definidos no artigo 20. A técnica a aplicar e os intervalos de medição a respeitar devem, dentro das possibilidades práticas, estar de acordo com os mais recentes pareceres da CCIR.

313 § 8. É proibido a qualquer estação funcionar em ondas amortecidas.

314 a 338 *(Não atribuídos.)*

CAPÍTULO III

Frequências

ARTIGO 6

Regras gerais de consignação e emprego das frequências

339 § 1. Os Membros esforçar-se-ão por limitar o número de frequências e a extensão do espectro utilizado ao mínimo indispensável para assegurar de forma satisfatória o funcionamento dos serviços necessários. Para esse fim, esforçar-se-ão por aplicar, no prazo mais curto possível, os últimos aperfeiçoamentos da técnica (1).

340 § 2. Os Membros comprometem-se a seguir as prescrições do quadro de atribuição das faixas de frequências, bem como as outras prescrições do presente Regulamento, para consignar frequências às estações que podem causar interferências aos serviços assegurados pelas estações dos outros países.

341 § 3. Qualquer nova consignação ou qualquer modificação da frequência ou de outra característica fundamental de uma consignação existente (v. o apêndice 1 ou o apêndice 3) deve ser efectuada de modo a evitar que cause interferências prejudiciais aos serviços assegurados por estações que utilizam frequências de acordo com o quadro de atribuição das faixas de frequências do presente capítulo e com as outras disposições do presente Regulamento, cujas características estão inscritas no ficheiro de referência internacional das frequências.

(*) Nota do Secretariado-Geral: v. o n.º 5189 e a Resolução n.º 400.

339.1 (1) N.º 130 da Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973).

342 § 4. As administrações dos Membros não devem consignar a uma estação qualquer frequência em derrogação ao quadro de atribuição das faixas de frequências do presente capítulo ou às outras disposições do presente Regulamento, salvo com a condição expressa de que daí não resulte interferência prejudicial para um serviço assegurado por estações que trabalhem de acordo com as disposições da Convenção e do presente Regulamento.

343 § 5. A frequência consignada a uma estação de um serviço dado deve ficar suficientemente afastada dos limites da faixa atribuída a esse serviço de tal modo que, tendo em conta a faixa de frequências consignada à estação, se não causem interferências prejudiciais aos serviços a que estação atribuídas as faixas adjacentes.

344 § 6. Para a resolução de interferências prejudiciais, o serviço de radioastronomia é tratado como um serviço de radiocomunicação. Contudo, em relação às emissões dos serviços que funcionam nas outras faixas, ele beneficia de grau de protecção igual àquele de que beneficiam esses serviços, uns em relação aos outros.

345 § 7. Para a resolução de casos de interferências prejudiciais causadas por outros serviços funcionando noutras faixas o serviço de pesquisa espacial (passiva) e o serviço de exploração da Terra por satélite (passiva) beneficiam de grau de protecção igual àquele de que beneficiam esse diferentes serviços, uns em relação aos outros.

346 § 8. Quando em regiões ou sub-regiões diferentes uma faixa de frequências é atribuída a serviços diferentes da mesma categoria (v. as secções I e II do artigo 8), o funcionamento desses serviços baseia-se na igualdade de direitos. Por consequência, as estações de cada serviço, numa das regiões ou das sub-regiões, devem funcionar de tal modo que não causem interferência prejudicial aos serviços das outras regiões ou sub-regiões.

347 § 9. Nenhuma disposição do presente Regulamento poderá impedir o emprego, por uma estação em perigo, de todos os meios de radiocomunicação de que disponha para chamar a atenção, assinalar o seu estado e a sua posição e obter socorro.

348 § 10. Nenhuma disposição do presente Regulamento poderá impedir o emprego, por uma estação, nas circunstâncias excepcionais indicadas no n.º **347**, de todos os meios de radiocomunicação de que disponha para prestar assistência a uma estação em perigo.

349 a 373 *(Não atribuídos.)*

ARTIGO 7

Acordos especiais

374 § 1. Vários Membros podem, em virtude das disposições do artigo 31 da Convenção relativas a arranjos especiais, concluir acordos especiais respeitantes à sub-repartição das faixas de frequência entre os serviços interessados desses países.

375 § 2. Vários Membros podem, em virtude das disposições do artigo 31 da Convenção relativas a arranjos especiais e baseados nos resultados de uma conferência a que tenham sido convidados todos os Membros interessados, concluir acordos especiais par a consignação de frequência àquelas das suas estações que participam num ou vários serviços determinados, nas faixas de frequências atribuídas a esses serviços segundo o artigo 8, quer abaixo de 5060 kHz, mas não entre estes limites.

376 § 3. Os Membros podem, em virtude das disposições do artigo 31 da Convenção relativas a arranjos especiais, concluir, numa base mundial e como resultado de uma conferência para a qual tenham sido convidados todos os Membros, acordos especiais para a consignação de frequências àquelas das suas estações que participam num serviço determinado, com a condição de que essas consignações sejam feitas dentro dos limites das faixas de frequências atribuídas exclusivamente a esse serviço de acordo com o artigo 8.

377 § 4. A faculdade prevista nos n.os **374** a **376** de concluir acordos especiais não implica derrogação às disposições do presente Regulamento.

378 § 5. O secretário-geral deverá ser previamente informado da reunião de qualquer conferência convocada com o fim de concluir acordos especiais; será igualmente informado dos termos desses acordos; avisará os Membros da existência de tais acordos.

379 § 6. Em conformidade com as disposições do artigo 10, a Comissão Internacional do Registo de Frequências pode ser convidada a delegar representantes para participarem, a título consultivo, na preparação de acordos especiais e nos trabalhos das conferências. Reconhece-se que uma tal participação é desejável na maioria dos casos.

380 § 7. Se, para além das disposições que, nos termos do n.º **375**, têm a faculdade de adoptar, vários Membros coordenarem, em qualquer das faixas de frequências abrangidas pelo artigo 8, a utilização de frequências específicas antes de notificarem as correspondentes consignações de frequência, eles informarão desse facto a Comissão, nos casos apropriados.

381 a 390 *(Não atribuídos.)*

ARTIGO 8

Atribuições das faixas de frequência

Introdução

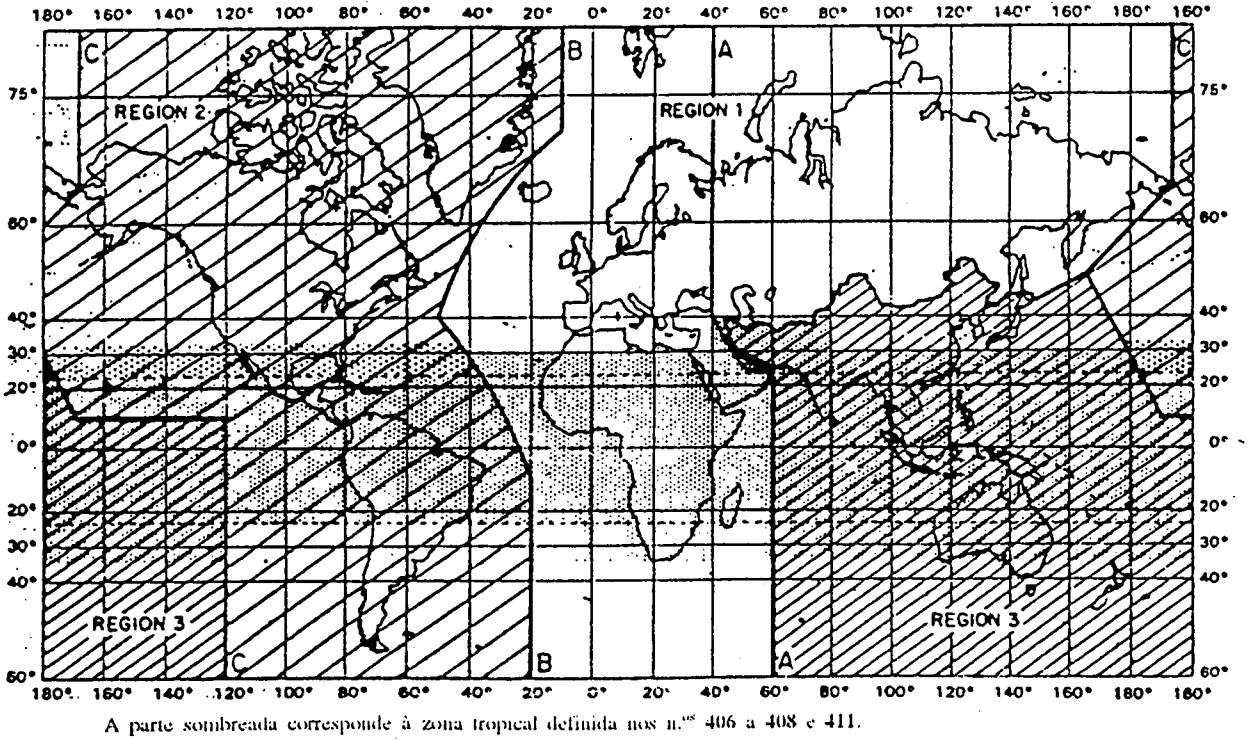
391 1. Em todos os documentos de União, nos casos em que sejam empregados nos termos «atribuição», «adjudicação» e «consignação», será dado o sentido definitivo nos n.os 17 a 19, com a correspondência indicada a seguir nas três línguas de trabalho:

Repartição das faixas de frequência entre	Em francês	Em inglês	Em espanhol	Termo adoptado na tradução portuguesa
Serviços	Attribution (Attribuer)	Allocation (To allocate)	Atribución (Atribuir)	Atribuição (Atribuir)
Zonas ou países	Allotissement (Allotir)	Allotment (To allot)	Adjudicación (Adjudicar)	Adjudicação (Adjudicar)
Estações	Assignation (Assigner)	Assignment (To assign)	Asignación (Asignar)	Consignação (Consignar)

Secção I

Regiões e zonas

392 § 2. Sob o ponto de vista da atribuição das faixas de frequências, o Mundo foi dividido em três Regiões (1), como se mostra no planisfério seguinte e nos n.os 393 a 399:



A parte sombreada corresponde à zona tropical definida nos n.os 406 a 408 e 411.

393 *Região 1:*

A Região 1 compreende a zona limitada a este pela linha A (v. a seguir a definição das linhas A, B e C) e a oeste pela linha B, com excepção dos territórios do Irão situados entre estes limites. Compreende também a parte dos territórios da Turquia e da União das Repúblicas Socialistas Soviéticas situada fora desses limites, bem como o território da República Popular da Mongólia e a zona ao norte da URSS, entre as linhas A e C.

392.1 (1) Convém notar que quando as palavras «região» e «regional» se empregam sem R maiúsculo no presente Regulamento, elas se não referem às três regiões aqui definidas para fins de atribuição das faixas de frequências.

394 *Região 2:*

A Região 2 compreende a zona limitada a este pela linha B e a oeste pela linha C.

395 *Região 3:*

A Região 3 compreende a zona limitada a este pela linha C e a oeste pela linha A, com excepção dos territórios da República Popular da Mongólia, da Turquia, da URSS e da zona ao norte da URSS. Compreende também a parte do território do Irão situadas fora daqueles limites.

396 As linhas A, B e C são definidas como segue:

397 *Linha A:*

A linha A parte do Pólo Norte, segue o meridiano 40° E. de Greenwich até ao paralelo 40° N., depois o arco de círculo máximo ao ponto de intersecção do meridiano 60° E. com o trópico de Câncer e daí o meridiano 60° E., até ao Pólo Sul.

398 *Linha B:*

A linha B parte do Pólo Norte, segue o meridiano 10° O. de Greenwich até à sua intersecção com o paralelo 72° N., daí o arco de círculo máximo até ao ponto de intersecção do meridiano 50° O. com o paralelo 40° N., de novo o arco de círculo máximo até ao ponto de intersecção do meridiano 20° O. com o paralelo 10° S. e, finalmente, o merediano 20° O., até ao Pólo Sul.

399 *Linha C:*

A linha C parte do Pólo Norte, segue o arco de meridiano até ao ponto de intersecção do paralelo 65° 30' N. com o limite internacional no estreito de Bering, daí o arco de círculo máximo até ao ponto de intersecção do meridiano 165° E. de Greenwich com o paralelo 50° N., em seguida o arco de círculo máximo até ao ponto de intersecção do meridiano 170° O. com o paralelo 10° N., daí segue o paralelo 10° N. até à sua intersecção com o meridiano 120° O. e, finalmente, o meridiano 120° O., até ao Pólo Sul.

400 § 3. Para a aplicação do presente Regulamento, a expressão «zona africana de radiodifusão» designa:

401 *a*) Os países, partes de país, territórios africanos situados entre os paralelos 40° S. e 30° N.;

402 *b*) As ilhas do oceano Índico a oeste do meridiano 60° E. de Greenwich, situadas entre o paralelo 40° S. e o arco de círculo máximo que une os pontos de coordenadas 45° E., 11° 30' N. e 60° E., 15° N.;

403 *c*) As ilhas do oceano Atlântico a este da linha B no n.º **398** do presente Regulamento, situadas entre os paralelos 40° S. e 30° N.

404 § 4. A «zona europeia de radiodifusão» é limitada: a oeste, pelos limites oeste da Região 1; a este, pelo meridiano 40° E. de Greenwich, e a sul, pelo paralelo 30° N., de maneira a englobar a parte ocidental da URSS, a parte setentrional da Arábia Saudita e a parte dos países banhados pelo Mediterrâneo compreendida nos ditos limites. Além disso, o Iraque e a Jordânia ficam englobados na zona europeia de radiodifusão.

405 § 5. A «zona marítima» é limitada: a norte, por uma linha que segue o paralelo 72° N., desde a sua intersecção com o meridiano 55° E. de Greenwich até à sua intersecção com o meridiano 5° O., daí, o meridiano 5° O. até à sua intersecção com o paralelo 67° N. e, finalmente, segue este paralelo 67° N. até à sua intersecção com o meridiano 30° O.; a oeste, por uma linha que segue o meridiano 30° O. até à sua intersecção com o paralelo 30° N.; ao sul, por uma linha que segue o paralelo 30° N. até à sua intersecção com o meridiano 43° E.; a este, por uma linha que segue o meridiano 43° E. até à sua intersecção com o paralelo 60° N. e daí esse paralelo 60° N. até à sua intersecção com o meridiano 55° E. e, finalmente, segue este meridiano 55° E. até à sua intersecção com o paralelo 72° N.

406 § 6. A «zona tropical» (v. o mapa do n.º **392**) é definida como segue:

407 *a*) Na Região 2, toda a zona compreendida entre os trópicos de Câncer e de Capricórnio;

408 *b*) No conjunto das Regiões 1 e 3, a zona compreendida entre os paralelos 30° N. e 35° S. e, além disso:

409 1) A zona compreendida entre os meridianos 40° E. e 80° E. de Greenwich e os paralelos 30° N. e 40° N.;

410 2) A parte da Líbia situada ao norte do paralelo 30° N.

411 (2) Na Região 2, a zona tropical pode ser alargada até ao paralelo 33° N. por acordos especiais concluídos entre os países interessados dessa Região (v. o artigo 7).

412 § 7. Uma Sub-Região é uma zona constituída por vários países de uma mesma Região.

SECÇÃO II

Categorias de serviços e de atribuições

413 *Serviços primários, permitidos e secundários:*

414 § 8. (1) Quando numa casa do quadro que figura na secção IV do presente artigo se indica uma faixa de frequências como atribuída a vários serviços, quer no mundo inteiro quer numa Região, enumeram-se esses serviços pela seguinte ordem:

415 *a*) Serviços cujo nome está impresso em «maiúsculas» (exemplo: FIXO); estes serviços denominam-se serviços «primários»;

416 *b*) Serviços cujo nome está impresso em «maiúsculas entre barras» (exemplo:/ RADIOLOCALIZAÇÃO/); estes serviços denominam-se serviços «permitidos» (v. o n.º **419**);

417 *c*) Serviços cujo nome está impresso em «caracteres normais» (exemplo: Móvel); estes serviços denominam-se serviços «secundários» (v. os n.os **420** a **423**.

418 (2) As observações complementares devem ser indicadas em caracteres normais (exemplo: MÓVEL, excepto móvel aeronáutico).

419 (3) Um serviço permitido e um serviço primário têm os mesmos direitos, excepto quando se trate da elaboração de planos de frequências, caso em que o serviço primário é o primeiro a escolher frequências em relação ao serviço permitido.

420 (4) As estações de um serviço secundário:

421 *a*) Não devem causar interferência prejudicial às estações de um serviço primário ou de um serviço permitido a que já tenham sido consignadas frequências anteriormente ou para as quais a consignação de frequências seja susceptível de se efectuar ulteriormente;

422 *b*) Não podem pretender protecção contra interferências prejudiciais causadas pelas estações de um serviço primário ou de um serviço permitido a que já tenham sido consignadas frequências anteriormente ou para as quais a consignação de frequências seja susceptível de se efectuar ulteriormente;

423 *c*) Têm, porém, direito à protecção contra interferências prejudiciais causadas pelas estações desse ou de outros serviços secundários para as quais a consignação de frequências seja susceptível de se efectuar ulteriormente.

424 (5) Quando numa nota ao quadro se indica uma faixa como atribuída a um serviço «a título secundário» numa zona menos extensa que uma Região ou num país determinado, trata-se de um serviço secundário (v. os n.os **420** a **423**).

425 (6) Quando numa nota ao quadro se indica uma faixa como atribuída a um serviço «a título primário» ou «a título permitido» numa zona menos extensa que uma Região ou num país determinado, trata-se de um serviço primário ou de um serviço permitido apenas nessa zona ou nesse país (v. o n.º **419**).

426 *Atribuições adicionais:*

427 § 9. (1) Quando numa nota ao quadro se indica uma faixa como «atribuída adicionalmente» a um serviço numa zona menos extensa que uma Região ou num país determinado, trata-se de uma atribuição «adicional», isto é, de uma atribuição que se adiciona nessa zona ou nesse país ao serviço ou serviços indicados no quadro (v. o n.º **428**).

428 (2) Se a nota não contiver qualquer restrição imposta ao serviço ou aos serviços em questão, além da obrigação de não funcionar senão numa zona ou num país determinados, as estações desse serviço ou desses serviços funcionam na base de igualdade de direitos com as estações do outro ou dos outros serviços primários indicados no quadro.

429 (3) Se se impuserem restrições a uma atribuição adicional, além da obrigação de não funcionar senão numa zona ou num país determinados, a nota do quadro indica o facto.

430 *Atribuições de substituição:*

431 § 10. (1) Quando numa nota ao quadro se indica uma faixa como «atribuída» a um serviço numa zona menos extensa que uma Região ou num país determinado, trata-se de uma atribuição «de substituição», isto é, de uma atribuição que substitui, nessa zona ou nesse país, a atribuição que está indicada no quadro (v. n.º **432**).

432 (2) Se a nota não contiver qualquer restrição imposta às estações do ou dos serviços nela mencionados, além da obrigação de não funcionarem senão numa zona ou num país determinados, as estações desse ou desses serviços funcionam na base de igualdade de direitos com as estações dos outros serviços primários indicados no quadro e aos quais a faixa de frequências está atribuída noutras zonas ou noutros países.

433 (3) Se se impuserem restrições às estações de um serviço que constitui uma atribuição de substituição, além da obrigação de não funcionarem senão numa zona ou num país determinados, a nota ao quadro indicará o facto.

434 *Disposições diversas:*

435 § 11. (1) Quando no presente Regulamento se indica que um serviço pode funcionar numa faixa de frequências com a condição de não causar interferência prejudicial, isso significa igualmente que esse serviço não pode pretender protecção contra interferências prejudiciais causadas pelos outros serviços a que a faixa é atribuída de acordo com o capítulo III do presente Regulamento.

436 (2) Excepto se uma nota dispuser de outro modo, o termo «serviço fixo», quando utilizado na secção IV do presente artigo, não inclui os sistemas que utilizam a propagação por difusão ionosférica.

SECÇÃO III

Disposição do quadro de atribuição das faixas de frequência

437 § 12. (1) O cabeçalho do quadro que figura na secção IV do presente artigo contém três colunas, que correspondem, cada uma, a uma das Regiões (v. o n.º **392**). Consoante uma atribuição ocupa a totalidade da largura do quadro ou apenas uma ou duas das três colunas, assim se trata, respectivamente, de uma atribuição mundial ou de uma atribuição regional.

438 (2) A faixa de frequências objecto de cada atribuição é indicada no ângulo superior esquerdo do rectângulo em causa.

439 (3) Em cada uma das categorias especificadas nos n.ºs **415** a **417**, os serviços são agrupados por ordem alfabética dos seus nomes em língua francesa. Essa ordem não implica qualquer prioridade relativa dentro de cada categoria.

440 (4) Quando se acrescenta uma restrição entre parênteses depois de uma atribuição no quadro, essa atribuição é limitada ao género de exploração designado dentro dos parênteses.

441 (5) Os números que figuram eventualmente na parte inferior de um rectângulo do quadro, por baixo dos nomes do ou dos serviços a que a faixa é atribuída, são referências a notas ao quadro colocadas ao fundo da página e relativas ao conjunto das atribuições em causa.

442 (6) Os nomes que figuram eventualmente à direita do nome de um serviço são referências a notas colocadas ao fundo da página e que apenas se referem a esse serviço.

443 (7) Em certos casos, os nomes de países que figuram nas notas ao quadro foram simplificados a fim de abreviar o texto.

SECÇÃO IV

Quadro de atribuição das faixas de frequências

(V. o n.º 208)

kHz

9–19,95

Atribuição aos serviços		
Região 1	Região 2	Região 3
Abaixo de **9**		
	(Não está atribuída)	
	444 445	
9-14		
	RADIONAVEGAÇÃO	
14-19,95		
	FIXO	
	MÓVEL MARÍTIMO 448	
	446 447	

444 As administrações que autorizam a utilização de frequências inferiores a 9 kHz devem assegurar-se de que daí não resulte interferência prejudicial aos serviços a que são atribuídas as faixas superiores a 9 kHz (v. o n.º **1816**).

445 Solicita-se instantemente às administrações, que efectuem pesquisas científicas em frequências inferiores a 9 kHz, que informem as outras administrações susceptíveis de afectar tais pesquisas, a fim de que essas pesquisas beneficiem de toda a protecção que na prática se possa conseguir contra interferências prejudiciais.

446 *Atribuição adicional:* na Bulgária, Hungria, Polónia, República Democrática Alemã, Checoslováquia e URSS a faixa 14-17 kHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação.

447 As estações dos serviços a que são atribuídas as faixas 14–19,95 kHz e, além disso, na Região 1, as faixas 72–84 kHz e 86–90 kHz podem emitir frequências padrão e sinais horários. Essas estações são protegidas contra interferências prejudiciais. Na Bulgária, Hungria, Mongólia, Polónia, Checoslováquia e URSS as frequências 25 kHz e 50 kHz serão utilizadas para esse fim nas mesmas condições.

kHz

19,95–90

Atribuição aos serviços

19,95-20,05	FREQUÊNCIAS PADRÃO E SINAIS HORÁRIOS (20 kHz)	
20,05-70	FIXO MÓVEL MARÍTIMO 448 447 449	
70-72 RADIONAVEGAÇÃO 451	**70-90** FIXO MÓVEL MARÍTIMO 448 RADIONAVEGAÇÃO MARÍTIMA 451 *Radiolocalização*	**70-72** RADIONAVEGAÇÃO 451 *Fixo* *Móvel marítimo* 448 450
72-84 FIXO MÓVEL MARÍTIMO 448 RADIONAVEGAÇÃO 451 447		**72-84** FIXO MÓVEL MARÍTIMO 448 RADIONAVEGAÇÃO 451
84-86 RADIONAVEGAÇÃO 451		**84-86** RADIONAVEGAÇÃO 451 *Fixo* *Móvel marítimo* 448 450
86-90 FIXO MÓVEL MARÍTIMO 448 RADIONAVEGAÇÃO 447	452	**86-90** FIXO MÓVEL MARÍTIMO 448 RADIONAVEGAÇÃO 451

448 A utilização das faixas 14–19,95 kHz, 70–90 kHz (72-84 kHz e 86–90 kHz na Região 1) e 90–110 kHz pelo serviço móvel marítimo é limitada às estações costeiras radiotelegráficas (A1A e F1B somente). Excepcionalmente, a utilização de emissões da classe J2B ou J7B é autorizada, na condição de que a largura de faixa necessária não ultrapasse a que corresponde normalmente às emissões das classes A1A ou F1B as faixas consideradas.

449 *Atribuição adicional:* na Bulgária, Hungria, Polónia, República Democrática Alemã, Checoslováquia e URSS a faixa 67–70 kHz é atribuída adicionalmente ao serviço de radionavegação a título permitido.

450 *Categoria de serviço diferente:* no Bangladesh, no Irão e no Paquistão a atribuição das faixas 70–72 kHz e 84-86 kHz aos serviços fixo e móvel marítimo é feita a título primário (v. o n.º 425).

451 A utilização das faixas 70–90 kHz (70–86 kHz na Região 1) e 110–130 kHz (112–130 kHz na Região 1) pelo serviço de radionavegação é limitada aos sistemas de ondas persistentes.

452 Na Região 2, as estações do serviço de radionavegação marítima não podem ser estabelecidas e funcionar nas faixas 70–90 kHz e 110–130 kHz, salvo mediante acordo obtido em conformidade com o procedimento previsto no artigo 14, com as administrações a cujos serviços essas faixas estão atribuídas e sejam susceptíveis de ser afectados. Contudo, as estações dos serviços fixo, móvel marítimo e de radiolocalização não deverão causar interferência prejudicial às estações do serviço de radionavegação marítima quando elas forem estabelecidas em seguimento a tais acordos.

kHz

Atribuição aos serviços		
Região 1	Região 2	Região 3
90-110	RADIONAVEGAÇÃO 453 *Fixo* *Móvel marítimo* 448 454	

453 Solicita-se instantemente às administrações que exploram estações do serviço de radionavegação na faixa 90-110 kHz que coordenem as características técnicas e de exploração de forma a evitar interferências prejudiciais aos serviços garantidos por essas estações.

454 As emissões das classes A1A ou F1B, A2C, A3C, F1C ou F3C são as únicas autorizadas para as estações do serviço fixo nas faixas atribuídas a este serviço entre 90 kHz e 160 kHz (148,5 kHz na Região) e para as estações do serviço móvel marítimo nas faixas atribuídas a este serviço entre 110 kHz e 160 kHz (148,5 kHz na Região 1). Excepcionalmente, as emissões da classe J2B ou J7B são igualmente autorizadas na faixa 110-160 kHz (148,5 kHz na Região 1) para as estações do serviço móvel marítimo.

457 *Atribuição adicional:* na Bulgária, Hungria, Mongólia, Polónia, República Democrática Alemã, Roménia, Checoslováquia e URSS a faixa 130-148,5 kHz é atribuída adicionalmente, a título secundário, ao serviço de radionavegação. No interior desses países e entre eles esse serviço funciona em base de igualdade de direitos.

458 Na Região 1 a mudança dos limites de faixa de 150 kHz e 285 kHz para 148,5 kHz e 283,5 kHz verificar-se-á em 1 de Fevereiro de 1986 para o limite inferior e em 1 de Fevereiro de 1990 para o limite superior (v. a Resolução n.º 500).

459 Nas zonas polares da Região 2 (a norte de 60° N. e a sul de 60° S.) sujeita às perturbações devidas às auroras boreais, o serviço fixo aeronáutico é o serviço primário na faixa 160-190 kHz.

460 *Atribuição de distribuição:* em Angola, Botswana, Burundi, Congo, Malawi, Ruanda, República da África do Sul e Zaire a faixa 160-200 kHz é atribuída a título primário, ao serviço fixo.

461 *Atribuição adicional:* na Somália a faixa 200-255 kHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica.

462 *Atribuição de sushstituição:* em Angola, Botswana, Burundi, Camarões, República Centro-Africana, Congo, Etiópia, Quénia, Lesotho, Mdagáscar, Malawi, Moçambique, Namíbia, Nigéria, Omã, Ruanda, República da África do Sul, Suazilândia, Tanzânia, Chade, Zaire, Zâmbia e Zimbabwe a faixa 200-283,5 kHz é atribuída, a título primário, ao serviço de radionavegação aeronáutica.

463 *Categoria de serviço diferente:* no Sudão e no Iémene (RDP do) a atribuição da faixa 255-283,5 kHz ao serviço de radionavegação aeronáutica é feita a título primário (v. o n.º 425).

464 *Atribuição de substituição:* na Tunísia a faixa 255-283,5 kHz é atribuída, a título primário, ao serviço de radiodifusão.

465 As estações norueguesas do serviço fixo situadas nas zonas setentrionais (ao norte de 60° N.) sujeitas às perturbações devidas às auroras boreais são autorizadas a continuar a funcionar utilizando quatro frequências nas faixas 283,5-490 kHz e 510-526,5 kHz.

466 Nas faixas 283-325 kHz (283,5-325 kHz na Região 1), no serviço de radionavegação marítima, as estações de radiofarol podem também transmitir informações suplementares úteis à navegação utilizando técnicas de faixa estreita, desde que não afectem de modo significativo a função principal do radiofarol.

467 *Categoria de serviço diferente:* na URSS e nas zonas búlgara, romena e turca do mar Negro a atribuição da faixa 315-325 kHz ao serviço de radionavegação marítima é feita, a título primário (v. o n.º 425, nas seguintes condições:

a) Nas zonas do mar Negro e do mar Branco, o serviço de radionavegação marítima é o serviço primário e o serviço de radionavegação aeronáutica é o serviço permitido;

b) Na zona do mar Báltico, a consignação de frequências desta faixa a novas estações de radionavegação marítima ou aeronáutica deverá ser precedida de consulta entre as administrações interessadas.

469 *Atribuição adicional:* no Afeganistão, Austrália, China, territórios franceses do ultramar da Região 3, Índia, Japão e Papuásia-Nova Guiné a faixa 415-495 kHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação aeronáutica.

470 A utilização das faixas 415-495 kHz e 505-526,5 kHz (505-510 kHz na Região 2) pelo serviço móvel marítimo é limitada à radiotelegrafia.

471 As faixas 490-495 kHz e 505-510 kHz estão sujeitas às disposições do n.º 3018 até que sejam postas em vigor as disposições da Recomendação n.º 200.

472 A frequência 500 kHz é a frequência internacional de chamada e de perigo em radiotelegrafia. As condições de utilização desta frequência estão fixadas no artigo 38.

473 Na Região 1, na faixa 505-526,5 kHz, as administrações que exploram estações do serviço de radionavegação aeronáutica devem tomar as medidas técnicas necessárias para evitar interferências prejudiciais ao serviço móvel marítimo.

474 Na República Federal da Alemanha, Bélgica, Espanha, França, Islândia, Itália, Noruega, Países Baixos, Reino Unido, Suécia e Jugoslávia a frequência 518 kHz é utilizada, a título experimental, para emissão pelas estações costeiras, com destino aos navios, de boletins meteorológicos e de avisos à navegação por telegrafia com impressão directa de faixa estreita.

475 Na faixa 515,5-526,5 kHz, a Áustria pode continuar a explorar unicamente as estações de radiodifusão mencionadas no Protocolo adicional III aos Actos Finais da Conferência Administrativa de Radiodifusão em Ondas Quilométricas e Hectométricas (Regiões 1 e 3) (Genebra, 1975). Esta exploração continua autorizada até à entrada em vigor de uma revisão do Plano de Genebra de 1975 e desde que daí não resulte interferência prejudicial para o serviço marítimo e para o serviço de radionavegação aeronáutica.

476 *Atribuição adicional:* no Reino Unido a faixa 519,5-526,5 kHz é atribuída adicionalmente, à título secundário, ao serviço de radiodifusão, para a transmissão de informações de utilidade pública.

477 Na Região 2, na faixa 525-535 kHz, a potência da portadora das estações de radiodifusão não deve ir além de 1 kW durante o dia e de 250 W durante a noite.

478 *Atribuição adicional:* em Angola, Botswana, Lesotho, Malawi, Moçambique, Namíbia, República da África do Sul, Suazilândia, Zâmbia e Zimbabwe a faixa 526,5-535 kHz é atribuída adicionalmente, a título secundário, ao serviço móvel.

479 *Atribuição adicional:* na China a faixa 526,5-535 kHz é atribuída adicionalmente, a título secundário, ao serviço de radionavegação aeronáutica.

480 Na Região 2 a utilização da faixa 1605-1705 kHz pelas estações do serviço de radiodifusão está dependente da elaboração de um plano que deverá ser estabelecido por uma conferência administrativa regional das radiocomunicações (v. a Recomendação n.º 504).

481 Na Região 2, até às datas fixadas pela conferência administrativa regional das radiocomunicações mencionada no n.º **480**, a faixa 1605-1705 kHz é atribuída, a título primário, aos serviços fixo, móvel e de radionavegação aeronáutica e, a título secundário, ao serviço de radiolocalização (v. a Recomendação n.º 504).

482 *Atribuição adicional:* na Austrália, Indonésia, Nova Zelândia, Singapura, Filipinas, Sri Lanka e Tailândia a faixa 1606,5-1705 kHz é atribuída adicionalmente, a título secundário, ao serviço de radiodifusão.

483 *Categoria de serviço diferente:* na Bulgária, Hungria, Mongólia, Nigéria, Polónia, República Democrática Alemã, Chade, Checoslováquia e URSS nas faixas 1606,5-1625 kHz, 1635-1800 kHz e 2107-2160 kHz, a atribuição aos serviços fixo e móvel terrestre é feita a título primário (v. o n.º **425**).

484 Há países da Região 1 que utilizam sistemas de radiodeterminação nas faixas 1606,5-1625 kHz, 1635-1800 kHz, 1850-2160 kHz, 2194-2300 kHz, 2502-2850 kHz e 3500-3800 kHz. O estabelecimento e a exploração de tais sistemas estão sujeitos a um acordo obtido em conformidade com o procedimento previsto no artigo 14. A potência média radiada dessas estações não deverá ultrapassar 50 W.

485 *Atribuição adicional:* em Angola, Bulgária, Hungria, Mongólia, Nigéria, Polónia, República Democrática Alemã, Chade, Checoslováquia e URSS as faixas 1625-1635 kHz, 1800-1810 kHz e 2160-2170 kHz são atribuídas adicionalmente aos serviços fixo e móvel terrestre, a título primário, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

486 Na Região 1, nas faixas 1625-1635 kHz, 1800-1810 kHz e 2160-2170 kHz (excepto nos países mencionados no n.º **485** e nos países mencionados no n.º **499** no que respeita à faixa 2160-2170 kHz), as anotações existentes dos serviços fixo e móvel, com excepção do móvel aeronáutico [bem como as estações do serviço móvel aeronáutico (OR) na faixa 260-2170 kHz], podem continuar a trabalhar a título primário até que tenham sido encontradas e postas ao serviço consignações de substituição satisfatórias, em conformidade com as disposições da Resolução n.º 38.

487 Na Região 1 o estabelecimento e a exploração de estações do serviço de radiolocalização nas faixas 1625-1635 kHz, 1800-1810 kHz e 2160-2170 kHz devem ser objecto de um acordo obtido em conformidade com o procedimento previsto no artigo 14 (v. também o n.º 486). A potência média radiada dessas estações de radiolocalização não deve ultrapassar 50 W. São proibidos os sistemas de impulso.

488 Na República Federal da Alemanha, Dinamarca, Finlândia, Hungria, Irlanda, Israel, Jordânia, Malta, Noruega, Polónia, República Democrática Alemã, Reino Unido, Suécia, Checoslováquia e URSS as administrações podem atribuir até 200 kHz ao seu serviço amador nas faixas 1715-1800 kHz e 1850-2000 kHz. Todavia, ao proceder a essas atribuições nestas faixas, deverão, após consulta prévia às administrações dos países vizinhos, tomar as medidas eventualmente necessárias para impedir que o seu serviço de amador cause interferências prejudiciais aos serviços fixo e móvel de outros países. A potência média de qualquer estação de amador não deve ultrapassar 10 W.

489 Na Região 2 as estações do sistema Loran que funcionam na faixa 1800-2000 kHz deixarão de ser exploradas o mais tardar até 31 de Dezembro de 1982. Na região 3, a frequência de trabalho do sistema Loran é 1850 kHz ou 1950 kHz; as faixas ocupadas são respectivamente 1825-1875 kHz e 1925-1975 kHz. Os outros serviços a que é atribuída a faixa 1800-2000 kHz podem utilizar qualquer frequência desta faixa, desde que não causem interferências prejudiciais ao sistema Loran que funcione nas frequências 1850 kHz ou 1950 kHz.

490 *Atribuição de substituição:* na República Federal da Alemanha, Angola, Áustria, Bélgica, Bulgária, Camarões, Congo, Dinamarca, Egipto, Espanha, Etiópia, França, Grécia, Itália, Líbano, Luxemburgo, Malawi, Países Baixos, Portugal, Síria, República Democrática Alemã, Somália, Tanzânia, Tunísia, Turquia e URSS a faixa 1810-1830 kHz é atribuída a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

491 *Atribuição adicional:* na Arábia Saudita, Iraque, Líbia, Polónia, Roménia, Chade, Checoslováquia, Togo e Jugoslávia a faixa 1810-1830 kHz é atribuída adicionalmente, a título primário aos serviços, fixo e móvel, excepto móvel aeronáutico.

492 Na Região 1 a faixa 1810-1850 kHz é utilizada pelo serviço de amador na condição de terem sido encontradas e posta em serviço, de acordo com o disposto na Resolução n.º 38, consignações de substituição satisfatórias para as frequências de todas as estações existentes dos serviços fixo e móvel, excepto móvel aeronáutico, que funcionam nesta faixa (salvo as estações dos países mencionados nos n.os **490, 491** e **493**). Após o termo de uma transferência satisfatória, nos países situados em todo ou em parte a norte do paralelo 40° N. a autorização de utilizar a faixa 1810-1830 kHz não será dada ao serviço de amador senão após consulta aos países mencionados nos n.os **490** e **491**, a fim de definir as medidas a tomar para evitar interferências prejudiciais entre as estações de amador e as estações dos outros serviços que funcionam em conformidade com as notas **490** e **491**.

493 *Atribuição de substituição:* no Burundi e Lesotho a faixa 1810-1850 kHz é atribuída, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

494 *Atribuição de substituição:* na Argentina, Bolívia, Chile, México, Paraguai, Peru, Uruguai e Venezuela, a faixa 1850-2000 kHz é atribuída, a título primário, aos serviços fixo, móvel, excepto aeronáutico, de radiolocalização e de radionavegação.

495 Na Região 1, ao fazerem consignações às estações dos serviços fixo e móvel nas faixas 1850-2045 kHz, 2502-2625 kHz e 2650-2850 kHz, as administrações devem ter em conta as necessidades particulares do serviço móvel marítimo.

2160-2170 RADIOLOCALIZAÇÃO 487 485 486 499	**2107-2170** FIXO MÓVEL	

496 Na Região 1 a utilização da faixa 2025-2045 kHz pelo serviço de auxiliares da meteorologia é limitada às estações de bóias oceanográficas.

497 Na Região 2, excepto na Gronelândia, as estações costeiras e as estações de navio que utilizam a radiotelefonia na faixa 2065-2107 kHz deverão ser limitadas às emissões de classe R3E ou J3E e a sua potência de ponta não deverá ultrapassar 1 kW. Convém que essas estações utilizem, de preferência, as frequências portadoras seguintes: 2065 kHz, 2079 kHz, 2082,5 kHz, 2086 kHz, 2093 kHz, 2096,5 kHz, 2100 kHz e 2103,5 kHz. Na Argentina, no Brasil e no Uruguai utilizam-se também com esse fim as frequências portadoras 2068,5 kHz e 2075,5 kHz, sendo as frequências compreendidas na faixa 2072-2075,5 kHz utilizadas em conformidade com o n.º 4245.

498 Nas Regiões 2 e 3, com a condição de não causarem interferência prejudicial ao serviço móvel marítimo, as frequências compreendidas entre 2065 kHz e 2107 kHz podem ser utilizadas pelas estações do serviço fixo comunicando unicamente no interior das fronteiras nacionais A potência média dessas estações não deve ultrapassar 50 W. Quando da notificação dessas frequências, convirá chamar a atenção da Comissão Internacional do Registo de Frequências para estas disposições.

499 *Atribuição adicional:* na Arábia Saudita, Botswana, Etiópia, Iraque, Lesotho, Líbia, Malawi, Somália, Suazilândia e Zâmbia a faixa 2160-2170 kHz é também atribuída, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico (R). As estações desses serviços não devem utilizar uma potência média que ultrapasse 50 W.

505 As frequências portadoras (frequências de referência) 3023 kHz e 5680 kHz podem também ser utilizadas pelas estações do serviço móvel marítimo que participem em operações de busca e de salvamento coordenadas, nas condições especificadas nos n.os **2980** e **2984**, respectivamente.

506 Solicita-se instantemente às administrações que autorizem a utilização da faixa 3155-3195 kHz para proporcionar uma via mundial comum destinadas aos aparelhos de correcção auditiva sem fio de fraca potência. Elas poderão consignar para esses mesmos aparelhos vias suplementares nas faixas compreendidas entre 3155 kHz e 3400 kHz, para prover às necessidades locais.

Convém notar que as frequências da faixa compreendida entre 3000 kHz e 4000 kHz convêm aos aparelhos de correcção auditiva destinados a funcionar a curtas distâncias dentro do campo de indução.

507 *Atribuição de substituição:* na Bélgica, Camarões, Chipre, Costa do Marfim, Dinamarca, Egipto, Espanha, França, Grécia, Islândia, Itália, Libéria, Malta, Noruega, Países Baixos, Reino Unido, Singapura, Sri Lanka, Suécia, Togo, Turquia e Jugoslávia a faixa 3155-3200 kHz é atribuída, a título primário, ao serviço móvel marítimo e, a título permitido, aos serviços fixo e móvel terrestre.

508 *Atribuição adicional:* na Austrália, Brasil, Canadá, Estados Unidos da América, Japão, México, Nova Zelândia, Peru e Uruguai a faixa 3230-3400 kHz é atribuída adicionalmente, a título secundário, ao serviço de radiolocalização.

509 *Atribuição adicional:* nas Honduras, México, Peru e Venezuela a faixa 3500-3750 kHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel.

510 A Resolução n.º 640 rege a utilização, em caso de catástrofe natural, das faixas atribuídas ao serviço de amador nas frequências 3,5 MHz, 7 MHz, 10,1 MHz, 14 MHz, 18,086 MHz, 21 MHz, 24,89 MHz e 144 MHz.

511 *Atribuição adicional:* no Brasil, a faixa 3700-4000 kHz é atribuída adicionalmente, a título primário, ao serviço de radiolocalização.

512 *Atribuição de substituição:* na Argentina, Bolívia, Chile, Equador, Paraguai, Peru e Uruguai a faixa 3750-4000 kHz é atribuída, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

513 *Atribuição de substituição:* no Botswana, Lesotho, Malawi, Moçambique, Namíbia, República da África do Sul, Suazilândia, Zâmbia e Zimbabwe a faixa 3900-3950 kHz é atribuída, a título primário, ao serviço de radiodifusão. A utilização desta faixa pelo serviço de radiodifusão depende de um acordo feito com os países vizinhos cujos serviços funcionem em conformidade com o quadro, aplicando o procedimento previsto no artigo 14.

514 *Atribuição adicional:* no Canadá a faixa 3950-4000 kHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão. A potência das estações de radiodifusão exploradas nesta faixa não deve ultrapassar o valor necessário para assegurar um serviço adicional no interior das fronteiras deste país e não deve causar interferências prejudiciais aos outros serviços explorados em conformidade com o quadro.

515 *Atribuição adicional:* na Gronelândia a faixa 3950-4000 kHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão. A potência das estações de radiodifusão exploradas nesta faixa não deve ultrapassar o valor necessário para assegurar um serviço nacional e nunca deve ser superior a 5 kW.

516 Na Região 3 as estações dos serviços aos quais é atribuída a faixa 3995-4005 kHz podem emitir frequências padrão e sinais horários.

517 A utilização da faixa 4000-4063 kHz pelo serviço móvel marítimo é limitada às estações de navio funcionando em radiotelefonia (v. o n.º **4373**).

518 No Afeganistão, Argentina, Austrália, Botswana, China, Índia, Suazilândia, Chade e URSS, nas faixas 4063-4123 kHz, 4130-4133 kHz e 4408-4438 kHz, as estações de serviço fixo de potência limitada e situações a mais de 600 km das costas são autorizadas a funcionar desde que não causem interferência prejudicial ao serviço móvel marítimo.

519 Com a condição de que não seja causada qualquer interferência prejudicial ao serviço móvel marítimo, as frequências das faixas 4063-4123 kHz e 4130-4438 kHz podem ser utilizadas excepcionalmente por estações do serviço fixo, de potência média que não ultrapasse 50 W, para comunicarem apenas no interior das fronteiras nacionais.

520 Para a utilização da frequência portadora 4125 kHz nas zonas das Regiões 1 e 2 situadas ao sul do paralelo 15° N. incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N. (v. o n.º **2982**).

524 A faixa 6765-6795 kHz (frequência central 6780 kHz) é utilizável em aplicações industriais, científicas e médicas (ISM). A utilização desta faixa de frequências em aplicações ISM depende de uma autorização especial concedida pela administração responsável, de acordo com as outras administrações cujos serviços de radiocomunicação possam ser afectados. Para a aplicação desta disposição, as administrações reportar-se-ão aos mais recentes pareceres da CCIR sobre o assunto.

525 *Categoria de serviço diferente:* na Mongólia e na URSS a atribuição da faixa 6765-7000 kHz ao serviço móvel terrestre é feita a título primário (v. o n.º **425**).

526 *Atribuição adicional:* em Angola, Iraque, Quénia, Ruanda, Somália e Togo a faixa 7000-7050 kHz é atribuída adicionalmente, a título primário, ao serviço fixo.

527 *Atribuição de substituição:* no Egipto, Etiópia, Guiné, Líbia, Madagáscar, Malawi e Tanzânia a faixa 7000-7050 kHz é atribuída, a título primário, ao serviço fixo.

528 A utilização da faixa 7100-7300 kHz pelo serviço de amador na Região 2 não impor limitações ao serviço de radiodifusão, cujo emprego é previsto na Região 1 e na Região 3.

529 Na Região 3 as estações dos serviços a que é atribuída a faixa 7995-8005 kHz podem emitir frequências padrão e sinais horários.

530 Com a condição de que não seja causada interferência prejudicial ao serviço de radiodifusão, as frequências das faixas 9775-9900 kHz, 11 650-11 700 kHz e 11 975-12 050 kHz podem ser utilizadas por estações de serviço fixo, que comuniquem apenas no interior das fronteiras nacionais, não devendo a potência total radiada de cada estação ultrapassar 24 dBW.

531 As faixas 9775-9900 kHz, 11 650-11 700 kHz, 11 975-12 050 kHz, 13 600-13 800 kHz, 15 450-15 600 kHz, 17 550-17 700 kHz e 21 750-21 850 kHz são atribuídas, a título primário, ao serviço fixo, com a condição de ser observado o procedimento descrito na Resolução n.º 8. A utilização destas faixas pelo serviço de radiodifusão reger-se-á por disposições a adoptar pela conferência administrativa mundial das radiocomunicações para a planificação das faixas de ondas decamétricas atribuídas ao serviço de radiodifusão (v. a Resolução n.º 508). Nestas faixas, a data em que poderão começar as emissões do serviço de radiodifusão num canal planificado não deverá ser anterior à data em que seja concluída satisfatoriamente, em conformidade com os procedimentos descritos na Resolução n.º 8, a transferência de todas as consignações de frequência às estações do serviço fixo que funcionam em conformidade com o quadro e com as outras disposições do Regulamento das Radiocomunicações, que estão inscritas no ficheiro de referência e que são susceptíveis de ser afectadas pelas emissões de radiodifusão nesse canal.

533 Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços a que a faixa 13 360-13 410 kHz é atribuída, tomem todas as medidas, dentro das possibilidades práticas, para proteger o serviço de radioastronomia contra interferências prejudiciais. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferência particularmente importantes para o serviço de radiotronomia (v. os n.^{os} **343** e **344** e o artigo 36).

534 A faixa 13 553-13 567 kHz (frequência central 13 560 kHz) é utilizável em aplicações, científicas e medidas (ISM). Os serviços de radiocomunicação que funcionam nesta faixa devem aceitar as interferências prejudiciais que possam produzir-se em virtude daquelas aplicações. Os aparelhos ISM que funcionam nesta faixa estão sujeitos às disposições do n.º **1815**.

535 *Atribuição adicional:* no Afeganistão, China, Costa do Marfim, Irão e URSS a faixa 14 250-14 350 kHz é atribuída adicionalmente, a título primário, ao serviço fixo. A potência radiada das estações do serviço fixo não deve ultrapassar 24 dBW.

A data em que poderá começar a utilização de uma frequência pelo serviço móvel marítimo em conformidade com as disposições acima mencionadas não deverá ser anterior à data em que seja concluída satisfatoriamente, em conformidade com o procedimento descrito na Resolução n.º 8, a transferência de todas as consignações às estações dos serviços fixo e móvel terrestre que funcionam em conformidade com o quadro e com as outras disposições do Regulamento das Radiocomunicações que estão inscritas no ficheiro de referência e que são susceptíveis de ser afectadas pela utilização dessa frequência pelo serviço móvel marítimo.

545 A faixa 25 550-25 600 kHz é atribuída, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico, com a condição de que seja observado o procedimento descrito na Resolução n.º 8. A utilização desta faixa pelo serviço de radioastronomia só poderá ser autorizada depois da transferência satisfatória de todas as consignações às estações dos serviços fixo e móvel, excepto móvel aeronáutico, que funcionam nesta faixa e estão inscritas no ficheiro de referência, em conformidade com o procedimento descrito na Resolução n.º 8. A faixa 25 600-25 670 kHz é atribuída, a título primário, ao serviço de radiodifusão, com a condição de que sejam observadas as disposições que venham a ser adoptadas pela conferência administrativa mundial das radiocomunicações para a planificação das faixas de ondas decamétricas atribuídas ao serviço de radiodifusão (v. Resolução n.º 508). Após a aplicação de todas as disposições mencionadas serão evitadas todas as emissões susceptíveis de causar interferências prejudiciais ao serviço de radioastronomia na faixa 25 550-25 670 kHz. Será também autorizada a utilização de detectores passivos por outros serviços.

546 A faixa 26 957-27 283 kHz (frequência central 27 120 kHz) é utilizável em aplicações industriais, científicas e médicas (ISM).

Os serviços de radiocomunicações que trabalham nesta faixa devem aceitar as interferências prejudiciais que possam produzir-se em virtude daquelas aplicações. Os aparelhos ISM que trabalham nesta faixa estão sujeitos às disposições do n.º 1815.

548 A faixa 40,66-40,70 MHz (frequência central 40,68 MHz) é utilizável em aplicações industriais, científicas e médicas (ISM). Os serviços de radiocomunicação que trabalham nesta faixa devem aceitar as interferências prejudiciais que possam produzir-se em virtude daquelas aplicações. Os aparelhos ISM que trabalham nesta faixa estão sujeitos às disposições do n.º **1815**.

549 *Atribuição adicional:* no Botswana, Burundi, Lesotho, Malawi, Namíbia, Ruanda, República da África do Sul, Suazilândia, Zaire, Zâmbia e Zimbabwe a faixa 41-44 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica.

550 *Atribuição adicional:* no Irão e no Japão a faixa 41-44 MHz é atribuída adicionalmente, a título secundário, ao serviço de radiolocalização.

551 *Atribuição adicional:* em França e no Mónaco a faixa 41-47 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão até 1 de Janeiro de 1986 e, no Reino Unido, até 1 de Janeiro de 1987.

552 *Atribuição adicional:* na Austrália e na Nova Zelândia a faixa 44-47 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão.

553 *Atribuição adicional:* na Hungria, Quénia, Mongólia, Checolováquia e URSS as faixas 47-48,5 MHz e 56,5-58 MHz são atribuídas adicionalmente, a título secundário, ao serviço fixo e ao serviço móvel terrestre.

554 *Atribuição adicional:* na Albânia, República Federal da Alemanha, Áustria, Bélgica, Bulgária, Dinamarca, Finlândia, França, Gabão, Grécia, Israel, Itália, Líbano, Listenstaina, Luxemburgo, Mali, Malta, Marrocos, Nigéria, Noruega, Países Baixos, Polónia, República Democrática Alemã, Reino Unido, Senegal, Suécia, Suíça, Tunísia, Turquia e Jugoslávia a faixa 47-68 MHz e, na Roménia, a faixa 47-58 MHz são atribuídas adicionalmente, a título permitido, ao serviço móvel terrestre.

Contudo, as estações do serviço móvel terrestre dos países mencionados para cada faixa indicada na presente nota não devem causar interferência prejudicial às estações de radiodifusão, existentes ou em projecto, de países que não sejam os mencionados para essa mesma faixa, nem pedir para serem protegidos em relação a estas.

555 *Atribuição adicional:* em Angola, Camarões, Congo, Madagáscar, Moçambique, Somália, Sudão, Tanzânia, Chade e Iémene (RDP do) a faixa 47-68 MHz é atribuída adicionalmente, a título permitido, aos serviços fixo e móvel, excepto móvel aeronáutico.

556 *Atribuição de substituição:* na Nova Zelândia a faixa 50-51 MHz é atribuída, a título primário, aos serviços fixo, móvel e de radiodifusão; a faixa 53-54 MHz é atribuída, a título primário, aos serviços fixo e móvel.

557 *Atribuição de substituição:* no Afeganistão, Bangladesh, Brunei, Índia, Indonésia, Irão, Malásia, Paquistão, Singapura e Tailândia a faixa 50-54 MHz é atribuída, a título primário, aos serviços fixo, móvel e de radiodifusão.

558 *Atribuição adicional:* na Austrália, China e República Popular Democrática da Coreia a faixa 50-54 MHz é atribuída adicionalmente a título primário, ao serviço de radiodifusão.

559 *Atribuição de substituição:* no Botswana, Burundi, Lesotho, Malawi, Namíbia, Ruanda, República da África do Sul, Suazilândia, Zaire, Zâmbia e Zimbabwe a faixa 50-54 MHz é atribuída, a título primário, ao serviço de amador.

560 *Atribuição adicional:* na Nova Zelândia a faixa 51-53 MHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel.

561 *Atribuição adicional:* no Botswana, Burundi, Lesotho, Malawi, Mali, Namíbia, Ruanda, República da África do Sul, Suazilândia, Zaire, Zâmbia e Zimbabwe e faixa 54-68 MHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

562 *Categoria de serviço diferente:* nos departamentos franceses do ultramar da Região 2, Guiana, Jamaica e México a atribuição da faixa 54-68 MHz aos serviços fixo e móvel é feita a título primário (v. o n.º 425).

563 *Categoria de serviço diferente:* em Cuba, nos departamentos franceses do ultramar da Região 2, Guiana, Jamaica e México a atribuição da faixa 68-72 MHz aos serviços fixo e móvel é feita a título primário (v. o n.º 425).

564 *Atribuição de substituição:* na Bulgária, Hungria, Polónia, Roménia e Checoslováquia a faixa 68-73 MHz é atribuída, a título primário, ao serviço de radiodifusão e utilizada em conformidade com as disposições dos Actos Finais da Conferência Regional Especial (Genebra, 1960).

565 *Atribuição de substituição:* na Mongólia e URSS as faixas 68-73 MHz e 76-87,5 MHz são atribuídas, a título primário, ao serviço de radiodifusão. Os serviços a que estas faixas são atribuídas nos outros países e o serviço de radiodifusão na Mongólia e na URSS devem ser objecto de acordos com os países vizinhos interessados

566 *Atribuição adicional:* na Austrália, China, República da Coreia, Filipinas, República Democrática da Coreia e Samoa Ocidental a faixa 68-74 MHz é atribuída adicionalmente a título primário, ao serviço de radiodifusão.

567 *Atribuição adicional:* na Bulgária, Hungria, Mongólia, Polónia, Checoslováquia e URSS a faixa 73-74 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão. A utilização desta faixa pelo serviço de radiodifusão na Bulgária, Hungria, Mongólia, Polónia, Checoslováquia e URSS deverá ser objecto de acordos obtidos em conformidade com o procedimento previsto no artigo 14.

568 Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços a que é atribuída a faixa 73-74,6 MHz, tomem todas as medidas dentro das possibilidades práticas para proteger o serviço de radioastronomia contra interferência prejudiciais. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferência particularmente importantes para o serviço de radioastronomia (v. os n.ºs **343** e **344** e o artigo 36).

569 Na Região 2 os serviços fixo, móvel e de radiodifusão precedentemente autorizados na faixa 73-74,6 MHz poderão continuar a funcionar até 31 de Dezembro de 1985, desde que não causem interferências prejudiciais ao serviço de radioastronomia.

570 *Atribuição adicional:* na Colômbia, Costa Rica, Cuba, El Salvador, Guatemala, Guiana, Honduras e Nicarágua a faixa 73-74,6 MHz é atribuída adicionalmente, a título secundário, aos serviços fixo e móvel.

571 *Atribuição adicional:* na Bulgária, China, Hungria, Mongólia, Polónia, Checoslováquia e URSS as faixas 74,6-74,8 MHz e 75,2-75,4 MHz são atribuídas adicionalmente, a título primário, ao serviço de radionavegação aeronáutica, unicamente para os emissores no solo.

572 A frequência 75 MHz é consignada às radiobalizas. As administrações devem evitar consignar frequências vizinhas dos limites da faixa de guarda a estações de outros serviços que, devido à sua potência ou à sua posição geográfica, possam causar interferências prejudiciais às radiobalizas ou impor-lhes outros condicionamentos.

Até 31 de Dezembro de 1989 as administrações das Regiões 2 e 3 deverão evitar consignar frequências a estações de outros serviços nas faixas 74,6-74,8 MHz e 75,2-75,4 MHz.

No futuro deverão ser feitos todos os esforços para melhorar ainda mais as características dos receptores de bordo e para limitar a potência das estações que emitem em frequências próximas dos limites 74,8 MHz e 75,2 MHz.

574 *Atribuição adicional:* China, República da Coreia, Japão, Filipinas e República Popular Democrática da Coreia a faixa 76-87 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão.

575 *Atribuição adicional:* na Bulgária, Hungria, Polónia, Roménia e Checoslováquia a faixa 76-87,5 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão e utilizada em conformidade com as decisões contidas nos Actos Finais da Conferência Regional Especial (Genebra, 1960).

576 *Categoria de serviço diferente:* nos Estados Unidos, departamentos franceses do ultramar situados na Região 2, Guiana, Jamaica, México e Paraguai a atribuição da faixa 76-88 MHz aos serviços fixo e móvel é feita a título primário (v. o n.º 425).

577 Na Região 3 (excepto na República da Coreia, Índia, Japão, Malásia, Filipinas, Singapura e Tailândia) a faixa 79, 75-80,25 MHz é também atribuída, a título primário, ao serviço de radioastronomia. Solicita-se instantemente às administrações que, ao consignarem frequência às estações dos outros serviços a que esta faixa é atribuída, tomem todas as medidas dentro das possibilidades práticas para protegerem o serviço de radioastronomia contra interferências prejudiciais. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferência particularmente importantes para o serviço de radioastronomia (v. os n.ºs 343 e 344 e o artigo 36).

578 *Atribuição de substituição:* na Albânia a faixa 81-87,5 MHz é atribuída, a título primário, ao serviço de radiodifusão e utilizada em conformidade com as decisões contidas nos Actos Finais da Conferência Regional Especial (Genebra, 1960).

579 *Atribuição adicional:* no Afeganistão e Austrália a faixa 85-87 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão. A introdução do serviço de radiodifusão nestes países deve ser objecto de acordos especiais entre as administrações interessadas.

580 *Atribuição de substituição:* na Nova Zelândia a faixa 87-88 MHz é atribuída, a título primário, ao serviço móvel terrestre.

581 *Atribuição adicional:* na República Federal da Alemanha, Espanha, França, Irlanda, Itália, Listenstaina, Mónico, Reino Unido, Suíça e Iémene (RDP do) a faixa 87,5-88 MHz é atribuída adicionalmente, a título permitido, ao serviço móvel terrestre, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

582 *Atribuição adicional:* no Reino Unido a faixa 97,6-102,1 MHz é atribuída adicionalmente, a título permitido, ao serviço móvel terrestre até 31 de Dezembro de 1989. A utilização desta faixa pelo serviço móvel terrestre é limitada às estações em serviço em 1 de Janeiro de 1980. A cessação do serviço das estações móveis terrestres será organizada em consulta com as administrações interessadas.

583 Na Região 1 os sistemas existentes nos serviços fixo e móvel, excepto móvel aeronáutico (R), podem continuar a utilizar a faixa 100-104 MHz a título primário até à primeira das seguintes datas: a data da entrada em vigor do novo acordo regional de radiodifusão mencionado na Resolução n.º 510 ou 1 de Janeiro de 1985.

584 Na Região 1 as estações de radiodifusão funcionando na faixa 100-108 MHz deverão ser instaladas e exploradas em conformidade com um acordo e com o plano associado relativo à faixa 87,5-108 MHz, que devem ser elaborados por uma conferência regional da radiodifusão (v. a Resolução n.º 510). Antes da data da entrada em vigor desse acordo poderão ser postas em serviço estações de radiodifusão

por acordo entre as administrações interessadas, entendendo-se que a exploração dessas estações não poderá, em caso algum, constituir direito adquirido no momento em que o plano seja estabelecido.

585 *Atribuição adicional:* na China, República da Coreia, Filipinas e Singapura a faixa 100-108 MHz é atribuída adicionalmente, a título permitido, aos serviços fixo e móvel.

586 *Atribuição de substituição:* na Nova Zelândia a faixa 100-108 MHz é atribuída ao serviço móvel terrestre a título primário e ao serviço de radiodifusão a título secundário.

587 *Atribuição adicional:* na Áustria, Bulgária, Hungria, Israel, Quénia, Mongólia, Polónia, Síria, República Democrática Alemã, Reino Unido, Somália, Checoslováquia e URSS a faixa 104-108 MHz é atribuída adicionalmente, a título permitido, ao serviço móvel, excepto móvel aeronáutico (R), até 31 de Dezembro de 1995 e, a título secundário, depois dessa data.

588 *Atribuição adicional:* na Finlândia e Jugoslávia a faixa 104-108 MHz é atribuída adicionalmente, a título permitido, ao serviço fixo até 31 de Dezembro de 1995. A potência efectiva radiada de qualquer estação não deve ultrapassar 25 W.

589 *Atribuição adicional:* em França, Roménia, Suécia, Turquia e Jugoslávia a faixa 104-108 MHz é atribuída adicionalmente, a título permitido, ao serviço móvel, excepto móvel aeronáutico (R), até 31 de Dezembro de 1995.

590 *Atribuição adicional:* na Itália, a faixa 104-108 MHz é atribuída adicionalmente, a título primário, ao serviço móvel terrestre até à primeira das seguintes datas: a data da entrada em vigor do novo acordo regional de radiodifusão mencionado na Resolução n.º 510 ou 1 de Janeiro de 1985.

MHz

108-138

Atribuição aos serviços		
Região 1	Região 2	Região 3

591 A faixa 117,975-137 MHz é também atribuída, a título secundário, ao serviço móvel aeronáutico por satélite (R), com a condição de que não cause interferência prejudicial ao serviço móvel aeronáutico (R) e sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

592 As faixas 121,45-121,55 MHz e 242,95-243,05 MHz são também atribuídas ao serviço móvel por satélite para a recepção, a bordo dos satélites, de emissões provenientes de radiobalizas de localização de sinistros trabalhando em 121,5 MHz e 243 MHz.

593 Na faixa 117,975-136 MHz a frequência 121,5 MHz é a frequência aeronáutica de urgência e, se necessário, a frequência 123,1 MHz é a frequência aeronáutica auxiliar de 121,5 MHz.

As estações móveis do serviço móvel marítimo podem comunicar nestas frequências, para fins de segurança, com as estações do serviço móvel aeronáutico.

594 *Atribuição adicional:* em Angola, Bulgária, Hungria, Irão, Iraque, Japão, Mongólia, Moçambique, Papuásia-Nova Guiné, Polónia, República Democrática Alemã, Roménia, Checoslováquia e URSS a faixa 132-136 MHz é atribuída adicionalmente, a título permitido, ao serviço móvel aeronáutico (OR).

595 Até 1 de Janeiro de 1990 a faixa 136-137 MHz é também atribuída, a título primário, ao serviço de exploração espacial (espaço para Terra), ao serviço de meteorologia por satélite (espaço para Terra) e ao serviço de pesquisa espacial (espaço para Terra). A introdução de estações do serviço móvel aeronáutico (R) só pode efectuar-se depois dessa data e deverá processar-se em conformidade com os planos aprovados internacionalmente para esse serviço. Depois de 1 de Janeiro de 1990 a faixa 136-137 MHz será também atribuída, a título secundário, aos serviços de radiocomunicação espaciais mencionados acima (v. a Recomendação n.º 404).

596 *Categoria de serviço diferente:* no Afeganistão, Arábia Saudita, Bahrein, Brunei, China, Emirados Árabes Unidos, Índia, Indonésia, Irão, Iraque, Koweit, Malásia, Omã, Paquistão, Qatar, Singapura, Tailândia, Iémene (RA) e Iémene (RDP do) a atribuição da faixa 137-138 MHz aos serviços fixo e móvel, excepto móvel aeronáutico (R), é feita a título primário (v. o n.º **425**).

597 *Categoria de serviço diferente:* em Israel, Jordânia e Síria a atribuição da faixa 137-138 MHz aos serviços fixo e móvel, excepto móvel aeronáutico, é feita a título primário (v. o n.º **425**).

598 *Categoria de serviço diferente:* na Áustria, Bulgária, Egipto, Finlândia, Grécia, Hungria, Líbano, Mongólia, Polónia, República Democrática Alemã, Roménia, Checoslováquia, URSS e Jugoslávia a atribuição da faixa 137-138 MHz ao serviço móvel aeronáutico (OR) é feita a título primário (v. o n.º **425**).

599 *Atribuição adicional:* na Austrália a faixa 137-144 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão, até que este serviço possa ser incluído no quadro das atribuições regionais para a radiodifusão.

605 *Atribuição adicional:* em Singapura a faixa 144-145 MHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel. Esta utilização limita-se aos sistemas postos ao serviço antes de 1 de Janeiro de 1980, os quais deverão cessar o seu funcionamento o mais tardar até 31 de Dezembro de 1995.

606 *Atribuição adicional:* na China a faixa 144-146 MHz é atribuída adicionalmente, a título secundário, ao serviço móvel aeronáutico (OR).

607 *Atribuição de substituição:* no Afeganistão, Bangladesh, Cuba, Guiana e Índia a faixa 146-148 MHz é também atribuída, a título primário, aos serviços fixo e móvel.

608 Sob reserva de acordo em conformidade com o procedimento previsto no artigo 14, a faixa 148-149,9 MHz pode ser utilizada para o serviço de exploração espacial (Terra para espaço).

A largura de faixa de uma emissão não deverá exceder ± 25 kHz.

609 As emissões do serviço de radionavegação por satélite nas faixas 149-150,05 MHz e 399,9-400,05 MHz podem também ser utilizadas pelas estações terrenas de recepção do serviço de pesquisa espacial.

610 Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços a que a faixa 150,05-153 MHz é atribuída, tomem todas as medidas, dentro das possibilidades práticas, para proteger o serviço de radioastronomia contra interferências prejudiciais. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferência particularmente importantes para o serviço de radioastronomia (v. os n.os **343** e **344** e o artigo 36).

611 *Atribuição adicional:* na Austrália e na Índia a faixa 150,05-153 MHz é atribuída adicionalmente, a título primário, ao serviço de radioastronomia.

612 *Atribuição adicional:* na Suécia e na Suíça a faixa 150,05-153 MHz é atribuída adicionalmente, a título secundário, ao serviço móvel aeronáutico (OR).

613 A frequência 156,8 MHz é a frequência internacional utilizada para o perigo, a segurança e a chamada pelo serviço móvel marítimo radiotelefónico em ondas métricas. As condições de utilização desta frequência estão fixadas no artigo 38.

No que respeita às faixas 156-156,7625 MHz, 156,8375-157,45 MHz, 160,6-160,975 MHz e 161,475-162,05 MHz, as administrações devem dar prioridade ao serviço móvel marítimo efectuado unicamente nas frequências destas faixas consignadas por essas administrações às estações do serviço marítimo (v. o artigo 60).

Convém evitar que os outros serviços a que está atribuída esta faixa utilizem frequências de uma qualquer das faixas acima mencionadas em qualquer região em que essa utilização poderia causar interferências às radiocomunicações do serviço móvel marítimo em ondas métricas.

Contudo, a frequência 156,8 MHz e as faixas de frequências em que é dada prioridade ao serviço móvel marítimo podem ser utilizadas para as radiocomunicações nas vias de água interiores, sob reserva de acordos entre as administrações interessadas e aquelas cujos serviços a que a faixa está atribuída possam ser afectados, tendo em conta a utilização corrente das frequências e os acordos existentes.

614 *Atribuição de substituição:* em França e no Mónaco a faixa 162-174 MHz é atribuída, a título primário, ao serviço de radiodifusão até 1 de Janeiro de 1985.

615 *Atribuição de substituição:* em Marrocos a faixa 162-174 MHz é atribuída, a título primário, ao serviço de radiodifusão. Esta utilização será objecto de acordo com as administrações cujos serviços que funcionam ou estão previstos em conformidade com o quadro possam ser afectados.

As estações existentes em 1 de Janeiro de 1981, com as suas características técnicas nessa data, não são afectadas por esse acordo.

616 *Atribuição adicional:* na China a faixa 163-167 MHz é atribuída adicionalmente a título primário, ao serviço de exploração espacial (espaço para Terra), sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

617 *Atribuição adicional:* no Afeganistão, na China e no Paquistão a faixa 167-174 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão. A introdução do serviço de radiodifusão nesta faixa deverá ser objecto de acordos com os países vizinhos da Região 3 cujos serviços possam ser afectados.

618 *Atribuição adicional:* no Japão a faixa 170-174 MHz é atribuída adicionalmente, a título primário, ao serviço de radiodifusão.

619 *Atribuição adicional:* na China a faixa 174-184 MHz é atribuída adicionalmente, aos serviços de pesquisa espacial (espaço para Terra) e de exploração espacial (espaço para Terra), sob reserva de acordo obtido em conformidade com o procedimento descrito no artigo 14. Esses serviços não deverão causar interferência prejudicial a estações de radiodifusão existentes ou em projecto, nem pedir para serem protegidos em relação a estas.

620 *Categoria de serviço diferente:* no México, na faixa 174-216 MGz, a atribuição aos serviços fixo e móvel é feita a título primário (v. o n.º **425**).

621 *Atribuição adicional:* na Áustria, República Federal da Alemanha, Bélgica, Dinamarca, Finlândia, França, Itália, Listenstaina, Mónaco, Noruega, Países Baixos, Reino Unido, Suécia, Suíça e Iémene (RDP do) a faixa 174-223 MHz é atribuída adicionalmente, a título permitido, ao serviço móvel terrestre. Contudo, as estações do serviço móvel terrestre não deverão causar interferência prejudicial às estações de radiodifusão existentes, ou em projecto, de países que não sejam os mencionados na presente nota, nem pedir para serem protegidas em relação a estas.

622 *Categoria de serviço diferente:* na Áustria, República Federal da Alemanha, Bélgica, Dinamarca, Espanha, Finlândia, França, Israel, Itália, Listenstaina, Luxemburgo, Noruega, Países Baixos, Portugal, Reino Unido, Suécia, Suíça e Iémene (RDP do) a faixa 223-230 MHz é atribuída, a título permitido, ao serviço móvel terrestre (v. o n.º **425**). Contudo, as estações do serviço móvel terrestre não deverão causar interferência prejudicial às estações de radiodifusão existentes, ou em projecto, de países que não sejam os mencionados na presente nota, em pedir para serem protegidas em relação a estas.

623 *Atribuição adicional:* no Congo, Etiópia, Gâmbia, Guiné, Quénia, Líbia, Malawi, Mali, Uganda, Senegal, Serra Leoa, Somália, Tanzânia e Zimbabwe a faixa 174-223 MHz é atribuída adicionalmente, a título secundário, aos serviços fixo e móvel.

624 *Atribuição adicional:* no Bangladesh, na Índia, no Paquistão e nas Filipinas a faixa 200-216 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica.

625 *Atribuição adicional:* na Austrália e na Papuásia-Nova Guiné as faixas 204-208 MHz e 222-223 MHz são atribuídas adicionalmente, a título primário, ao serviço de radionavegação aeronáutica.

626 *Atribuição adicional:* na China, na Índia e na Tailândia a faixa 216-223 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação e, a título secundário, ao serviço de radiolocalização.

627 Na Região 2 a faixa 216-225 MHz é atribuída, a título primário, ao serviço de radiolocalizado até 1 de Janeiro de 1990, A partir dessa data não será autorizada nenhuma estação deste serviço. As estações antes de 1 de Janeiro de 1990 poderão continuar a trabalhar a título secundário.

628 Atribuição adicional: na Somália a faixa 216-225 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica, com a condição de que não cause interferência prejudicial às estações de radiodifusão existentes ou previstas nos outros países.

629 *Atribuição adicional:* em Omã, no Reino Unido e na Turquia a faixa 216-235 MHz é atribuída adicionalmente, a título secundário, ao serviço de radiolocalização.

630 *Atribuição adicional:* no Japão a faixa 222-223 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica e, a título secundário, ao serviço de radiolocalização.

631 *Categoria de serviço diferente:* em Espanha e em Portugal a faixa 223-230 MHz é atribuída, a título permitido, ao serviço fixo (v. o n.º **425**). As estações deste serviço não devem causar interferência prejudicial às estações de radiodifusão existentes ou em projecto nos outros países e que trabalhem em conformidade com o quadro nem pedir para serem protegidas em relação a estas.

632 *Atribuição adicional:* na Arábia Saudita, Bahrein, Emiratos Árabes Unidos, Israel, Jordânia, Omã, Qatar e Síria a faixa 223-235 MHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação aeronáutica.

633 *Atribuição adicional:* em Espanha e em Portugal a faixa 223-235 MHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação aeronáutica até 1 de Janeiro de 1990, com a condição de que não cause interferência prejudicial às estações de radiodifusão existentes ou em projecto noutros países.

634 *Atribuição adicional:* na Suécia a faixa 223-235 MHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação aeronáutica até 1 de Janeiro de 1990, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14 e com a condição de não causar interferência prejudicial às estações de radiodifusão existentes ou em projecto noutros países.

635 *Atribuição de substituição:* no Botswana, Lesotho, Namíbia, República da África do Sul, Suazilândia e Zâmbia as faixas 223-238 MHz e 246-254 MHz são atribuídas, a título primário, ao serviço de radiodifusão, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

636 *Atribuição de substituição:* na Nova Zelândia, na Samoa Ocidental e nas ilhas Niue e Cook a faixa 225-230 MHz é atribuída, a título primário, aos serviços fixo, móvel e de radionavegação aeronáutica.

637 *Atribuição adicional:* na China a faixa 225-235 MHz é atribuída adicionalmente, a título secundário, ao serviço de radioastronomia.

638 *Atribuição adicional:* na Nigéria a faixa 230-235 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica, sob reserva de acordo obtido em conformidades com o procedimento previsto no artigo 14.

639 *Atribuição adicional:* na Jugoslávia a faixa 230-235 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica até 1 de Janeiro de 1995. A utilização desta faixa pelo serviço de radionavegação aeronáutica na Jugoslávia é limitadas às estações em serviço em 1 de Janeiro de 1980.

640 *Atribuição adicional:* na Nova Zelândia a faixa 235-239,5 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica.

641 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, as faixas 235-322 MHz e 335,4-399,9 MHz podem ser utilizadas pelo serviço móvel por satélite, com a condição de que as estações deste serviço não causem interferência prejudicial às estações dos outros serviços existentes, ou em projecto, funcionando em conformidade com o quadro.

642 A frequência 243 MHz é a frequência a utilizar nesta faixa pelos engenhos de salvamento e pelos dispositivos utilizados para fins de salvamento.

643 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 267-272 MHz pode ser utilizada, a título primário, pelas administrações para a telemedida espacial no seu próprio país.

644 Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços a que a faixa 322-328,6 MHz é atribuída, tomem todas as medidas, dentro das possibilidades práticas, para proteger o serviço de radioastrononia contra interferências prejudiciais. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferência particularmente importantes para o serviço de radioastrononia (v. os n.^{os} **343** e **344** e o artigo 36).

645 Limitado aos sistemas de aterragem por instrumentos (alinhamento de descida).

651 *Categoria de serviço diferente:* na Austrália, nos Estados Unidos, na Índia, no Japão e no Reino Unido, nas faixas 420-430 MHz e 440-450 MHz, a atribuição ao serviço de radiolocalização é feita a título primário (v. o n.º 425).

652 *Atribuição adicional:* na Austrália, Estados Unidos, Jamaica e Filipinas as faixas 420-430 MHz e 440-450 MHz são atribuídas adicionalmente, a título secundário, ao serviço de amador.

653 *Atribuição adicional:* na China, Índia, República Democrática Alemã, Reino Unido e URSS a faixa 420-460 MHz é atribuída adicionalmente, a título secundário, ao serviço de radionavegação aeronáutica (radioaltímetros).

654 *Categoria de serviço diferente:* na França, na faixa 430-434 MHz, a atribuição ao serviço de amador é feita a título secundário (v. o n.º 424).

655 *Categoria de serviço diferente:* na Dinamarca, na Líbia, na Noruega e na Suécia, nas faixas 430-432 MHz e 438-440 MHz, a atribuição ao serviço de radiolocalização é feita a título secundário (v. o n.º 424).

656 *Atribuição de substituição:* na Dinamarca, na Noruega e na Suécia as faixas 430-432 MHz e 438-432 MHz são atribuídas, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

657 *Atribuição adicional:* na Finlândia, na Líbia e na Jugoslávia as faixas 430-432 MHz e 438-440 MHz são atribuídas adicionalmente, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

658 *Atribuição adicional:* no Afeganistão, Argélia, Arábia Saudita, Bahrein, Bangladesh, Brunei, Burundi, Egipto, Emiratos Árabes Unidos, Equador, Etiópia, Grécia, Guiné, Índia, Indonésia, Irão, Iraque, Israel, Itália, Jordânia, Quénia, Koweit, Líbano, Listenstaina, Líbia, Malásia, Malta, Nigéria, Omã, Paquistão, Filipinas, Qatar, Síria, Singapura, Somália, Suíça, Tanzânia, Tailândia e Togo a faixa 430-440 MHz é também atribuída, a título primário, ao serviço fixo, e as faixas 430-435 MHz e 438-440 MHz são também atribuídas, a título primário, ao serviço móvel, excepto móvel aeronáutico.

659 *Atribuição adicional:* em Angola, Bulgária, Camarões, Congo, Gabão, Hungria, Mali, Mongólia, Níger, Polónia, República Democrática Alemã, Roménia, Ruanda, Chade, Checoslováquia e URSS a faixa 430-440 MHz é atribuída adicionalmente, a título primário, ao serviço fixo.

660 *Categoria de serviço diferente:* na Argentina, Colômbia, Costa Rica, Cuba, Guiana, Honduras, Panamá e Venezuela, na faixa 430-440 MHz, a atribuição ao serviço amador é feita a título primário (v. o n.º 425).

661 Na Região 1, excepto nos países mencionados no n.º 662, a faixa 433,05-434,79 MHz (frequência central 433,92 MHz) é utilizável em aplicações industriais, científicas e médicas (ISM). A utilização desta faixa de frequências em aplicações ISM depende um autorização especial concedida pela administração responsável, de acordo com as outras administrações cujos serviços de radiocomunicação possam ser afectados. Para a aplicação desta disposição, as administrações reportar-se-ão aos mais recentes pareceres da CCIR sobre o assunto.

662 Na República Federal da Alemanha, na Áustria, no Listenstaina, em Portugal, na Suíça e na Jugoslávia a faixa 433,05-434,79 MHz (frequência central 433,92 MHz) é utilizável em aplicações industriais, científicas e médicas (ISM). Os serviços de radiocomunicação destes

países, que trabalham nesta faixa, devem aceitar as interferências prejudiciais que possam produzir-se em virtude daquelas aplicações. Os aparelhos ISM que trabalham nesta faixa estarão sujeitos às disposições do n.º 1815.

663 *Atribuição adicional:* no Brasil, em França e nos departamentos do ultramar situados na Região 2 e na Índia, a faixa 433,75-434,25 MHz é atribuída adicionalmente, a título primário, ao serviço de exploração espacial (Terra para espaço) até 1 de Janeiro de 1990, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14. Depois de 1 de Janeiro de 1990 e nos mesmos países a faixa 433,75-434,25 MHz será atribuída ao mesmo serviço a título secundário.

664 O serviço de amador por satélite pode trabalhar nas faixas 435-438 MHz, 1260-1270 MHz, 2440-2450 MHz, 3400-3410 MHz (somente nas Regiões 2 e 3) e 5650-5670 MHz, com a condição de não resultar daí interferência prejudicial aos outros serviços que trabalham em conformidade com o quadro (v. o n.º 435). As administrações que autorizarem essa utilização deverão proceder de modo que seja imediatamente eliminada qualquer interferência prejudicial causada pelas emissões de uma estação do serviço de amador por satélite, em conformidade com as disposições do n.º 2741. A utilização das faixas 1260-1270 MHz e 5650-5670 MHz pelo serviço de amadora por satélite é limitada ao sentido Terra para espaço.

665 *Atribuição adicional:* na Áustria, a faixa 438-440 MHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

666 *Atribuição adicional:* no Canadá, na Nova Zelândia e na Papuásia-Nova Guiné, a faixa 440-450 MHz é atribuída adicionalmente, a título secundário, ao serviço de amador.

667 *Categoria de serviço diferente:* no Canadá, na faixa 440-450 MHz, a atribuição ao serviço de radiolocalização é feita a título primário (v. o n.º 425).

668 Sob reserva de acordo obtido em conformidade com o procedimento no artigo 14, a faixa 449,75-450,25 MHz pode ser utilizada no serviço de exploração espacial (Terra para espaço) e no serviço de pesquisa espacial (Terra para espaço).

669 No serviço móvel marítimo as frequências 457,525 MHz, 457,550 MHz, 457,575 MHz, 467,525 MHz, 467,550 MHz e 467,575 Mhz podem ser utilizadas pelas estações de comunicações de bordo. Essa utilização pode ser sujeita á regulamentação nacional da administração responsável quando estas frequências são utilizadas nas águas territoriais do seu país. As características dos aparelhos utilizados deverão estar em conformidade com as especificações do apêndice 20.

670 Nas águas territoriais do Canadá, dos Estados Unidos e das Filipinas as frequências a utilizar de preferência pelas estações de comunicações de bordo são 457,525 MHz, 457,550 MHz 457,575 MHz e 457,600 Mhz. Estas frequências são emparelhadas com as frequências 467,750 MHz, 467,775 MHz, 467,800 MHz e 467,825 Mhz, respectivamente. As características dos aparelhos utilizados devem estar em conformidade com as especificações do apêndice 20.

671 As faixas 460-470 MHz e 1690-1710 Mhz podem também ser utilizadas nas aplicações do serviço de exploração da Terra por satélite distintas das do serviço de meteorologia por satélite, nas transmissões espaço para Terra, com a condição de que não causem interferência prejudicial às estações que funcionem em conformidade com o quadro.

672 *Categoria de serviço diferente:* no Afeganistão, Bulgária, China, Cuba, Hungria, Japão, Mongólia, Polónia, Checoslováquia e URSS, na faixa 460-470 MHz, a atribuição ao serviço de meteorologia por satélite (espaço para Terra) é feita a título primário (v. o n.º 425) e sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

673 *Atribuição adicional:* na China a faixa 470-485 MHz é atribuída adicioalmente, a título primário, ao serviço de pesquisa espacial (espaço para Terra) e ao serviço de exploração espacial (espaço para Terra) e ao serviço de exploração espacial (espaço para Terra), sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14 e com a condição de que não cause interferência prejudicial às estações de radiodifusão existentes ou previstas.

674 *Categoria de serviço diferente:* no México e na Venezuela, na faixa 470-512 MHz, a atribuição aos serviços fixo e móvel é feita a título primário (v. o n.º **425**), sob reserva de acordo obtido em conformidade como o procedimento previsto no artigo 14.

675 *Categoria de serviço diferente:* no Chile, na Colômbia, no Equador, nos Estados Unidos, na Guiana e na Jamaica, nas faixas 470-512 MHz e 614-806 MHz, a atribuição aos serviços fixo e móvel é feita a título primário (v. o n.º **425**), sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

676 *Atribuição adicional:* no Burundi, Camarões, Congo, Etiópia, Israel, Quénia, Líbia, Senegal, Sudão, Síria e Iémene (RDP do) a faixa 470-582 MHz é atribuída adicionalmente, a título secundário, ao serviço fixo.

677 *Atribuição de substituição:* no Paquistão as faixas 470-582 MHz e 610-890 MHz são atribuídas, a título primário, ao serviço de radiodifusão.

678 *Atribuição adicional:* na Costa Rica, El Salvador, Equador, Estados Unidos, Guatemala, Guiana, Honduras, Jamaica e Venezuela a faixa 512-608 MHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

679 *Atribuição adicional:* na Índia a faixa 549,75-550,25 MHz é atribuída adicionalmente, a título secundário, ao serviço de exploração espacial (espaço para Terra).

680 *Atribuição adicional:* no Reino Unido as seguintes faixas são atribuídas adicionalmente, a título primário, ao serviço de radionavegação aeronáutica: 582-590 MHz até 31 de Dezembro de 1987 e 598-606 MHz até 31 de Dezembro de 1994. Todas as novas consignações ás estações do serviço de radionavegação aeronáutica nestas faixas são efectuadas sob reserva de acordo entre as administrações da República Federal da Alemanha, Bélgica, Dinamarca, Espanha, França, Irlanda, Luxemburgo, Marrocos, Noruega e Países Baixos.

681 *Atribuição adicional:* na Bélgica a faixa 582-606 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação até 31 de Dezembro de 1984.

682 *Atribuição adicional:* na França e na Itália a faixa 582-606 MHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação até 31 de Janeiro de 1990.

683 *Atribuição adicional:* em Omã a faixa 582-606 MHz é atribuída adicionalmente, a título secundário, ao serviço de radionavegação.

684 *Atribuição adicional:* em Israel, na Líbia, na Síria e no Sudão a faixa 582-790 MHz é atribuída adicionalmente, a título secundário, aos serviços fixo e móvel, excepto móvel aeronáutico.

685 *Atribuição adicional:* na Dinamarca e no Koweit a faixa 590-598 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica até 31 de Janeiro de 1995.

686 *Atribuição adicional:* no Reino Unido a faixa 590-598 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação aeronáutica. Todas as novas consignações às estações do serviço de radionavegação aeronáutica, incluindo as consignações transferidas das faixas adjacentes, deverá ser objecto de coordenação com as administrações da República Federal da Alemanha, Bélgica, Dinamarca, Espanha, França, Irlanda, Luxemburgo, Marrocos, Noruega e Países Baixos.

687 *Atribuição adicional:* na zona africana de radiodifusão (v. os n.ºs **400** a **403** a faixa 606-614 MHz é atribuída adicionalmente, a título permitido, ao serviço de radioastronomia.

688 *Atribuição adicional:* na China a faixa 606-614 MHz é atribuída adicionalmente, a título primário, ao serviço de radioastronomia.

689 Na Região 1, com excepção da zona africana de radiodifusão (v. os n.ºs **400** a **403**), e na Região 3 a faixa 608-614 MHz é também atribuída, a título secundário, ao serviço de radioastronomia. Solicita-se instantemente às administrações que, ao fazerem consignações às estações dos outros serviços a que esta faixa está atribuída, tomem medidas, dentro das possibilidades práticas, para proteger o serviço de radioastrononia contra interferências prejudiciais. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem construir fontes de interferência particularmente importantes para o serviço de radioastronomia (v. os n.ºs **343** e **344** e o artigo 36).

690 *Atribuição adicional:* na Índia a faixa 608-614 Mhz é atribuída adicionalmente, a título primário, ao serviço radioastronomia.

691 *Atribuição adicional:* na Nova Zelândia a faixa 610-620 MHz é atribuída adicionalmente, a título secundário, ao serviço de amador.

692 *Categoria de serviço diferente:* na costa Rica, em El Salvador e nas Honduras, na faixa 614-806 MHz, a atribuição ao serviço fixo é feita, a título primário (v. o n.º **425**), sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

693 Certas frequências compreendidas na faixa 620-790 Mhz podem ser consignadas a estações de televisão de modulação de frequência do serviço de radiodifusão por satélite, sob reserva de acordo entre as administrações interessadas e aquelas cujos serviços, funcionando em conformidades com o presente quadro, sejam susceptíveis de ser afectados (v. as Resoluções n.ºs 33 e 507). Tais estações não deverão produzir uma densidade de fluxo de potência superior a — 129 dB (W/m^2) para os ângulos de chegada inferiores a 20° (v. a Recomendação n.º 705) no interior dos territórios dos outros países sem o consentimento das administrações destes.

694 *Atribuição adicional:* na Bulgária, Hungria, Mongólia, Polónia, República Democrática Alemã, Roménia, Checoslováquia e URSS a faixa 645-862 MHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação aeronáutica.

695 *Atribuição de substituição:* em Espanha e em França a faixa 790-830 MHz é atribuída ao serviço de radiodifusão a título primário.

696 *Atribuição de substituição:* na Grécia, na Itália, em Marrocos e na Tunísia a faixa 790-838 MHz é atribuída ao serviço de radiodifusão a título primário.

697 *Atribuição adicional:* na República Federal da Alemanha, Dinamarca, Finlândia, Israel, Listenstaina, Noruega, Países Baixos, Suécia, Suíça e Jugoslávia a faixa 790-830 MHz e, nestes mesmos países, bem como em Espanha e em França, a faixa 830-862 MHz são atribuídas adicionalmente, a título primário, ao serviço móvel, excepto móvel aeronáutico. Contudo, as estações do serviço móvel dos países mencionados para cada faixa indicada na presente nota não deverão causar interferência prejudicial às estações dos serviços que trabalham em conformidades com o quadro e pertencem a países que não sejam os mencionados para essa mesma faixa nem pedir para serem protegidas em relação a estas.

698 *Atribuição adicional:* na Áustria a faixa 790-862 MHz é atribuída adicionalmente, a título secundário, ao serviço móvel, excepto móvel aeronáutico.

699 *Atribuição adicional:* na Noruega e na Suécia as faixas 806-890 MHz e 942-960 MHz são atribuídas adicionalmente, a título primário, ao serviço móvel por satélite, excepto móvel aeronáutico por satélite. Este serviço deverá trabalhar no interior das fronteiras nacionais, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14. Este serviço não deverá causar interferência prejudicial aos serviços que trabalham em conformidade com o quadro.

700 *Atribuição adicional:* na Região 2 a faixa 806-890 MHz é atribuída adicionalmente, a título primário, ao serviço móvel por satélite, excepto móvel aeronáutico por satélite. Este serviço deverá funcionar no interior das fronteiras nacionais, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

701 *Atribuição adicional:* na Região 3 as faixas 806-890 MHz e 942-960 MHz são atribuídas adicionalmente, a título primário, ao serviço móvel por satélite, excepto móvel aeronáutico por satélite. Este serviço deverá funcionar no interior das fronteiras nacionais, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14. Este serviço não deverá causar interferência prejudicial aos serviços que trabalham em conformidade com o quadro.

702 *Atribuição de substituição:* na Itália a faixa 838-854 MHz é atribuída, a título primário, ao serviço de radiodifusão, a partir de 1 de Janeiro de 1995.

703 Na Região 1, na faixa 862-960 MHz, as estações do serviço de radiodifusão devem funcionar unicamente na zona africana de radiodifusão (v. os n.os 400 a 403), excluindo desta a Argélia, o Egipto, a Líbia e Marrocos. Esse funcionamento deverá estar em conformidade com os Actos Finais da Conferência Africana de Radiodifusão em Ondas Métricas e Decimétricas (Genebra, 1963).

704 *Atribuição adicional:* na Bulgária, Hungria, Mongólia, Polónia, República Democrática Alemã, Roménia, Checoslováquia e URSS a faixa 862-960 MHz é atribuída adicionalmente, a título permitido, ao serviço de radionavegação aeronáutica, até 1 de Janeiro de 1998. Até essa data o serviço de radionavegação aeronáutica pode utilizar a faixa sob reserva de acordo obtido em conformidade com as disposições do artigo 14. Depois dessa data o serviço de radionavegação aeronáutica pode continuar a funcionar a título secundário.

705 *Categoria de serviço diferente:* nos Estados Unidos a atribuição da faixa 890-942 MHz ao serviço de radiolocalização é feita, a título primário (v. o n.º 425), sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

706 *Categoria de serviço diferente:* na Austrália a atribuição da faixa 890-942 MHz ao serviço de radiolocalização é feita a título primário (v. o n.º 425).

707 Na Região 2 a faixa 902-928 MHz (frequência central 915 MHz) é utilizável em aplicações industriais, científicas e médicas (ISM). Os serviços de radiocomunicação que funcionam nesta faixa devem aceitar as interferências prejudiciais que possam produzir-se em virtude daquelas aplicações. Os aparelhos ISM que trabalham nesta faixa estão sujeitos às disposições do n.º 1815.

708 *Categoria de serviço diferente:* nos Estados Unidos a atribuição das faixas 942-947 MHz e 952-960 MHz ao serviço móvel é feita, a título primário (v. o n.º 425), sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

744 A faixa 1718,8-1722,2 MHz é também atribuída, a título secundário, ao serviço de radioastronomia para as observações sobre as riscas do espectro. Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços a que a faixa é atribuída, tomem todas as medidas, dentro das possibilidades práticas, para proteger o serviço de radioastronomia contra as interferências prejudiciais.

As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferência particularmente importantes para o serviço de radioastronomia (v. os n.ºs **343** a **344** e o artigo 36).

745 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, e no que respeita, em particular, aos sistemas de difusão troposférica, a faixa 1750-1850 MHz pode também ser utilizada pelo serviço de exploração espacial (Terra para espaço) e pelo serviço de pesquisa espacial (Terra para espaço) na Região 2, no Afeganistão, na Austrália, na Índia, na Indonésia, no Japão e na Tailândia.

746 *Atribuição adicional:* na Bulgária, Cuba, Hungria, Mali, Mongólia, Polónia, República Democrática Alemã, Roménia, Checoslováquia e URSS a faixa 1770-1790 MHz é atribuída adicionalmente, a título primário, ao serviço de meteorologia por satélite, sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14.

747 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 2025-2110 MHz pode também ser utilizada para emissões Terra para espaço e espaço para espaço nos serviços de pesquisa espacial, de exploração espacial e de exploração da Terra por satélite. Os serviços que utilizem emissões espaço para espaço devem trabalhar em conformidade com as disposições dos n.ºs **2557** a **2560** e não deverão causar interferência aos outros serviços espaciais.

748 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 2110-2120 MHz pode também ser utilizada para as emissões Terra para espaço do serviço de pesquisa espacial (espaço longínquo).

749 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 2110-2120 MHz pode também ser utilizada no Japão pelos serviços de pesquisa espacial (Terra para espaço) e de exploração espacial (Terra para espaço) até 31 de Dezembro de 1990.

750 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 2200-2290 MHz pode também ser utilizada para as emissões espaço para Terra e espaço para espaço nos serviços de pesquisa espacial, de exploração espacial e de exploração da Terra por satélite. Estes serviços deverão trabalhar em conformidade com as disposições dos n.ºs **2557** a **2560**, não devendo as emissões espaço para espaço causar interferência prejudicial aos outros serviços espaciais.

754 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 2500-2535 MHz pode também ser utilizada na Região 3 pelo serviço móvel por satélite (espaço para Terra), excepto móvel aeronáutico por satélite, para a exploração limitada ao interior das fronteiras nacionais.

755 *Atribuição adicional:* no Canadá a faixa 2500-2550 MHz é atribuída adicionalmente, a título primário, ao serviço de radiolocalização.

756 *Atribuição adicional:* no Reino Unido a faixa 2500-2600 MHz é atribuída adicionalmente, a título secundário, ao serviço de radiolocalização.

757 A utilização da faixa 2500-2690 MHz pelo serviço de radiodifusão por satélite é limitada aos sistemas nacionais e regionais para a recepção comunitária. Esta utilização deverá ser objecto de um acordo obtido em conformidade com o procedimento previsto no artigo 14. A densidade do fluxo de potência à superfície da Terra não deverá ultrapassar os valores especificados nos n.os 2561 a 2564).

758 *Atribuição de substituição:* na República Federal da Alemanha e na Grécia a faixa 2500-2690 MHz é atribuída ao serviço fixo a título primário.

759 *Atribuição de substituição:* na Bulgária e na URSS a faixa 2500-2690 MHz é atribuída, a título primário, ao serviço fixo e ao serviço móvel, excepto móvel aeronáutico.

760 Solicita-se instantemente às administrações que, na concepção de sistemas de radiodifusão por satélite nas faixas situadas entre 2500 MHz e 2690 MHz, tomem todas as medidas necessárias para proteger o serviço de radioastronomia na faixa 2690-2700 MHz.

761 A utilização da faixa 2500-2690 MHz na Região 2 e das faixas 2500-2535 MHz e 2655-2690 MHz na Região 3 pelo serviço fixo por satélite é limitada aos sistemas nacionais e regionais. Esta utilização deverá ser objecto de um acordo obtido em conformidade com o procedimento previsto no artigo 14, tendo particularmente em conta o serviço de radiodifusão por satélite na Região 1. No sentido espaço para Terra, a densidade de fluxo de potência à superfície da Terra não deve ultrapassar os valores especificados nos n.os 2561 a 2564).

762 As administrações devem fazer todos os esforços, dentro das possibilidades práticas, para evitar o desenvolvimento de novos sistemas de difusão troposférica na faixa 2500-2690 MHz.

763 Sob reserva de acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 2500-2690 MHz pode ser utilizada pelos sistemas de difusão troposférica na Região 1.

764 Na planificação de novos feixes hertzianos que utilizem a difusão troposférica na faixa 2500-2690 MHz serão tomadas todas as medidas possíveis para evitar que as antenas sejam dirigidas na direcção da órbita dos satélites geostacionários.

781 *Atribuição adicional:* na República Federal da Alemanha, em Israel, na Nigéria e no Reino Unido a faixa 3400-3475 MHz é atribuída adicionalmente, a título secundário, ao serviço de amador.

782 *Categoria de serviço diferente:* na Áustria, na faixa 3400-3500 MHz, a atribuição ao serviço de radiolocalização é feita a título primário (v. o n.º **425**), sob reserva do acordo das administrações da Hungria, Itália, República Democrática Alemã, Checoslováquia e Jugoslávia. Esta utilização é limitada às estações no solo. Todavia, pede-se instantemente à administração austríaca que cesse essa exploração o mais tardar em 1985. Depois de 1985 ela deverá tomar todas as medidas, dentro das possibilidades práticas, para proteger o serviço fixo por satélite e não poderá ser imposta qualquer exigência de coordenação ao serviço fixo por satélite.

783 *Categoria de serviço diferente:* na Indonésia, no Japão, no Paquistão e na Tailândia a faixa 3400-3500 MHz é atribuída, a título primário, ao serviço móvel, excepto serviço móvel aeronáutico (v. o n.º **425**).

784 Nas Regiões 2 e 3, na faixa 3400-3600 MHz, a atribuição ao serviço de radiolocalização é feita a título primário. No entanto, solicita-se instantemente a todas as administrações que exploram sistemas de radiolocalização nesta faixa que cessem essa exploração antes de 1985. Daí em diante, as administrações deverão tomar todas as medidas, dentro das possibilidades práticas, para proteger o serviço fixo por satélite e proceder de modo que não sejam impostas necessidades de coordenação ao serviço fixo por satélite.

785 Na Dinamarca, na Noruega e no Reino Unido, os serviços fixo, de radiolocalização e fixo por satélite são explorados em base de igualdade de direitos na faixa 3400-3600 MHz. No entanto, solicita-se instantemente às administrações dos países que exploram sistemas de radiolocalização nesta faixa que cessem essa exploração o mais tardar em 1985. Depois de 1985 as administrações deverão tomar todas as medidas, dentro das possibilidades práticas, para proteger o serviço fixo por satélite e não deverá ser imposta qualquer exigência de coordenação ao serviço fixo por satélite.

786 No Japão, na faixa 3620-3700 MHz, está excluído o serviço de radiolocalização.

787 *Atribuição adicional:* na Nova Zelândia a faixa 3700-3770 MHz é atribuída adicionalmente, a título secundário, ao serviço de radiolocalização.

788 *Atribuição adicional:* na República Federal da Alemanha, na Dinamarca, na Noruega e na Suécia a faixa 4200-42100 MHz é atribuída adicionalmente, a título secundário, ao serviço fixo.

789 A utilização da faixa 4200-4400 MHz pelo serviço de radionavegação aeronáutica é reservada exclusivamente aos radioaltímetros instalados a bordo de aeronaves, bem como aos equipamentos de resposta associados que se encontram instalados no solo. Contudo, a detecção passiva dos serviços de exploração da Terra por satélite e de pesquisa espacial pode ser autorizada nesta faixa, a título secundário (não lhe sendo assegurada qualquer protecção pelos radioaltímetros).

790 *Atribuição adicional:* na China, no Irão, na Líbia, nas Filipinas e no Sri Lanka a faixa 4200-4400 MHz é atribuída adicionalmente, a título secundário, ao serviço fixo.

791 O serviço de frequências padrão e de sinais horários por satélite pode ser autorizado a utilizar a frequência 4202 MHz para emissões no sentido espaço Terra e a frequência 6427 MHz para emissões no sentido Terra para espaço. Essas emissões devem estar contidas nos limites que se situam a ± 2 MHz destas frequências e devem ser objecto de um acordo obtido em conformidade com o procedimento previsto no artigo 14.

4990-5000	FIXO MÓVEL, excepto móvel aeronáutico RADIOASTRONOMIA *Pesquisa espacial* (passiva) 795	

795 Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços a que está atribuída a faixa 4990-5000 MHz, tomem todas as medidas, dentro das possibilidades práticas, para proteger o serviço de radioastronomia contra

interferências prejudiciais. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferência particularmente importantes para o serviço de radioastrononia (v. os n.^{os} **343** e **344**, bem como o artigo 36).

MHz

5000-5470

796 A faixa 5000-5250 MHz é utilizável na exploração do sistema internacional normalizado (sistema de aterragem por hiperfrequências) para a aproximação e a aterragem de precisão. As necessidades deste sistema têm prioridade sobre as outras utilizações.

797 As faixas 5000-5250 MHz e 15,4-15,7 GHz são também atribuídas ao serviço fixo por satélite e ao serviço intersatélites para a ligação entre uma ou várias estações terrenas situadas em pontos fixos determinados da terra e estações espaciais, quando estes serviços são utilizados conjuntamente com o serviço de radionavegação aeronáutica e ou o serviço móvel aeronáutico (R). Esta utilização faz-se sob reserva de um acordo obtido em conformidade com o procedimento previsto no artigo 14.

798 *Atribuição adicional:* na Áustria, Bulgária, Hungria, Líbia, Mongólia, Polónia, República Democrática Alemã, Roménia, Checoslováquia e URSS a faixa 5250-5350 MHz é atribuída adicionalmente, a título primário, ao serviço de radionavegação.

799 A utilização da faixa 5350-5470 MHz pelo serviço de radionavegação aeronáutica é limitada ao uso dos radares aerotransportados e das radiobalizas de bordo associadas.

836 Na Região 2, na faixa 11,7-12,1 GHz, repetidores instalados a bordo de estações do serviço fixo por satélite podem também ser utilizados para transmissões do serviço de radiodifusão por satélite, desde que a P. I. R. E. desses repetidores não ultrapasse 53 dBW por canal de televisão e desde que não provoquem mais interferências nem exijam mais protecção do que o que resultaria de consignações de frequência coordenadas do serviço fixo por satélite. No que respeita aos serviços de radiocomunicação espacial, esta faixa deverá ser utilizada principalmente no serviço fixo por satélite. O limite superior desta faixa será modificado em conformidade com as decisões da Conferência Administrativa Regional das Radiocomunicações de 1983 para a Região 2 (v. o n.º 841).

837 *Categoria de serviço diferente:* no Canadá, no México e nos Estados Unidos a atribuição ao serviço fixo na faixa 11,7-12,2 GHz é feita a título secundário (v. o n.º 424).

838 Na faixa 11,7-12,5 GHz, nas Regiões 1 e 3, os serviços fixo, fixo por satélite, móvel, excepto móvel aeronáutico, e de radiodifusão, segundo as suas atribuições respectivas, não devem provocar interferência prejudicial às estações de radiodifusão por satélite que funcionam de acordo com as disposições do apêndice 30.

839 A utilização da faixa 11,7-12,7 GHz, na Região 2, pelos serviços de radiodifusão por satélite e fixo por satélite é limitada aos sistemas nacionais e sub-regionais e deve ser objecto de acordo prévio entre as administrações interessadas e aquelas cujos serviços, funcionando ou estando previstos para funcionar de acordo com o presente quadro, sejam susceptíveis de ser afectados (v. os artigos 11, 13 e 14 e a Resolução n.º 33).

840 Para a utilização da faixa 11,7-12,75 GHz nas Regiões 1, 2 e 3 v. as Resoluções n.ºs 31, 34, 504, 700 e 701.

841 A Conferência Administrativa Regional das Radiocomunicações de 1983 para a Região 2 dividirá a faixa 12,1-12,3 GHz em duas subfaixas e atribuirá a subfaixa inferior ao serviço fixo por satélite e a subfaixa superior aos serviços de radiodifusão por satélite, de radiodifusão, móvel, excepto móvel aeronáutico, e fixo, sendo a atribuição a todos esses serviços feita a título primário.

842 *Atribuição adicional:* no Brasil e no Peru a faixa 12,1-12,3 GHz e nos Estados Unidos a faixa 12,2-12,3 GHz são atribuídas adicionalmente, a título primário, ao serviço fixo.

843 Na Região 2, na faixa 12,1-12,7 GHz, os serviços de radiocomunicação espacial existentes, ou em projecto, antes da Conferência Administrativa Regional das Radiocomunicações de 1983 para a Região 2 não deverão impor restrições à elaboração do plano de radiodifusão por satélite na Região 2 e deverão funcionar nas condições a determinar pela referida Conferência.

844 Na Região 2, na faixa 12,1-12,7 GHz os serviços de radiocomunicações de Terra existentes ou futuros não deverão causar interferência prejudicial aos serviços de radiocomunicações espacial funcionando de acordo com o plano de radiodifusão por satélite que será estabelecido pela Conferência Administrativa Regional das Radiocomunicações de 1983 para a Região 2 e não deverão impor restrições à elaboração desse plano. O limite inferior desta faixa será modificado em conformidade com as decisões da referida Conferência (v. o n.º 841).

845 Na Região 3 a faixa 12,2-12,5 GHz é também atribuída ao serviço fixo por satélite (espaço para Terra), limitado a sistemas nacionais e sub-regionais. Os limites de densidade de fluxo de potência especificados no n.º 2574 aplicam-se a esta faixa de frequências. A introdução deste serviço deverá ser feita em conformidade com os procedimentos especificados no artigo 7 do apêndice 30, sob o ponto de vista das suas relações com o serviço de radiodifusão por satélite na Região 1, sendo a faixa de frequências aplicável alargada para 12,2-12,5 GHz.

846 Na Região 2, na faixa 12,3-12,7 GHz, as consignações às estações do serviço de radiodifusão por satélite de que se disporá de acordo com o plano a estabelecer pela Conferência Administrativa Regional das Radiocomunicações de 1983 para a Região 2 poderão também ser utilizadas para transmissões do serviço fixo por satélite (espaço para Terra), desde que essas transmissões não causem mais interferência ou não necessitem de mais protecção contra as interferências que as transmissões do serviço de radiodifusão por satélite funcionando em conformidade como plano correspondente. No que respeita aos serviços de radiocomunicação espacial, esta faixa deverá ser utilizada principalmente pelo serviço de radiodifusão por satélite. O limite inferior desta faixa será modificado em conformidade com as decisões da referida Conferência (v. o n.º 841).

847 Na Região 3, na faixa 12,5-12,75 GHz, o serviço de radiodifusão por satélite é limitado à recepção comunitária com uma densidade de fluxo de potência que não ultrapasse — 111 dB (W/m^2), segundo a definição dada no anexo 8 do apêndice 30.

848 *Atribuição adicional:* na Argélia, Angola, Arábia Saudita, Bahrein, Camarões, República Centro-Africana, Congo, Costa do Marfim, Egipto, Emirados Árabes Unidos, Etiópia, Gabão, Gana, Guiné, Iraque, Israel, Jordânia, Quénia, Koweit, Líbano, Líbia, Madagáscar, Mali, Marrocos, Mongólia, Níger, Nigéria, Qatar, Síria, Senegal, Somália, Sudão, Chade, Togo, Iémene (RDP do) e Zaire a faixa 12,5-12,75 GHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico.

849 *Atribuição adicional:* na República Federal da Alemanha, Bélgica, Dinamarca, Espanha, Finlândia, França, Grécia, Listenstaina, Luxemburgo, Mónaco, Noruega, Uganda, Países Baixos, Portugal, Roménia, Suécia, Suíça, Tanzânia, Tunísia e Jugoslávia a faixa 12,5-12,75 GHz é atribuída adicionalmente, a título secundário, aos serviços fixo e móvel, excepto móvel aeronáutico.

850 *Atribuição adicional:* na Áustria, Bulgária, Hungria, Polónia, República Democrática Alemã, Checoslováquia e URSS a faixa 12,5-12,75 GHz é atribuída adicionalmente, a título primário, aos serviços fixo e móvel, excepto móvel aeronáutico. Contudo, as estações destes serviços não deverão causar interferência prejudicial às estações terrenas do serviço fixo por satélite de países da Região 1 que não sejam os mencionados na presente nota. Não é exigida qualquer coordenação destas estações terrenas com as estações dos serviços fixo e móvel dos países mencionados na presente nota. Os limites de densidade de fluxo de potência na superfície da Terra prescritos no n.º 2574 para o serviço fixo por satélite deverão aplicar-se no território dos países mencionados na presente nota.

890 *Categoria de serviço diferente:* na Austrália, Espanha e Estados Unidos da América, na faixa 31,8-32,3 GHz, a atribuição ao serviço de pesquisa espacial (espaço longínquo) no sentido espaço para Terra é feita a título primário (v. o n.º **425**). Esta utilização não deverá impor limites de densidade de fluxo de potência aos sistemas do serviço intersatélites na faixa 32-32,3 GHz.

891 *Categoria de serviço diferente:* na Bulgária, Cuba, Mongólia, Polónia, República Democrática Alemã, Checoslováquia e URSS, na faixa 31,8-32,3 GHz, a atribuição ao serviço de pesquisa espacial é feita a título primário (v. o n.º **425**).

892 Sob reserva de um acordo obtido em conformidade com o procedimento previsto no artigo 14, a faixa 31,8-33,8 GHz pode também ser utilizada no Japão para emissões no sentido espaço para Terra do serviço fixo por satélite até 31 de Dezembro de 1990.

893 Ao conceberem sistemas do serviço intersatélites e do serviço de radionavegação funcionando na faixa 32-33 GHz, as administrações deverão tomar toda as medidas necessárias para evitar interferências prejudiciais entre esses dois serviços, tendo em conta o aspectro da segurança do serviço de radionavegação (v. a Recomendação n.º 707).

926 Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços a que a faixa 265-275 GHz é atribuída, tomem todas as medidas dentro das possibilidade práticas para proteger o serviço de radioastronomia contra interferências prejudiciais, especialmente nas faixas 265,64-266,16 GHz, 267,34-267,86 GHz e 271,74-272,26 GHz, que são utilizadas para as observações das riscas do espectro. As emissões provenientes de estações a bordo de engenhos espaciais ou de aeronaves podem constituir fontes de interferências particularmente importantes para o serviço de radioastronomia (v. os n.^{os} **343** e **344**, bem como o artigo 36).

927 A faixa 275-400 GHz pode ser utilizada pelas administrações para fins de experiência e de desenvolvimento de diversos serviços activos ou passivos. Nesta faixa foi reconhecida a necessidade de efectuar medidas sobre as riscas do espectro nos seguintes serviços passivos:

Serviço de radioastronomia: 278-280 GHz e 343-348 GHz;
Serviço de exploração da Terra por satélite (passiva) e de pesquisa espacial (passiva): 275-277 GHz, 300-302 GHz, 324-326 GHz, 345-347 GHz, 363-365 GHz e 379-381 GHz.

Nesta parte do espectro, ainda pouco explorada, os futuros trabalhos de pesquisa poderiam permitir a descoberta de novas riscas do espectro e de faixas do *continuum* que interessam aos serviços passivos. Solicita-se instantemente ás administrações que tomem todas as medidas dentro das possibilidades práticas para proteger estes serviços passivos contra interferências prejudiciais até à próxima conferência administrativa mundial das radiocomunicações competente.

928 a 952 *(Não atribuídos.)*

ARTIGO 9

Disposições especiais relativas à consignação e ao emprego das frequências

953 § 1. Os Membros reconhecem que o serviço de radionavegação e os outros serviços de segurança, pelo papel que desempenham em matéria de segurança, necessitam de disposições especiais que os coloquem ao abrigo de interferências prejudiciais. É, portanto, necessário ter este factor em conta na consignação e na utilização das frequências.

954 § 2. (1) Os Membros reconhecem que, entre as frequências susceptíveis de se propagar a grande distância, as das faixas compreendidas entre 5 MHz e 30 MHz são especialmente úteis para as comunicações a grande distância; concordam em se esforçar por reservar estas faixas para tais comunicações. Quando sejam utilizadas frequências destas faixas para comunicações a pequena ou média distância, as emissões devem ser efectuadas com o mínimo necessário de potência.

955 (2) A fim de reduzir as necessidades em frequências nas faixas compreendidas entre 5 MHz e 30 MHz e de, consequentemente, evitar as interferências prejudiciais entre as comunicações a grande distância, recomenda-se às administrações a utilização, sempre que isso seja possível na prática, de qualquer outro meio de comunicação.

956 § 3. (1) Se uma administração se encontrar colocada em circunstâncias que tornem indispensável para ela a aplicação dos métodos de trabalho enumerados em baixo, pode recorrer a eles, com condição expressa de que as características das estações se mantenham conformes às que estão inscritas no ficheiro de referência internacional das frequências:

957 *a)* Uma estação do serviço fixo ou uma estação terrena do serviço fixo por satélite pode fazer, nas suas frequências normais e nas condições prescritas nos n.os **420** a **423**, emissões destinadas a estações móveis;

958 *b)* Uma estação terrestre pode, nas condições prescritas nos n.os **420** a **423**, comunicar com estações fixas do serviço fixo ou estações terrenas do serviço fixo por satélite, ou com outras estações terrestres da mesma categoria.

959 (2) Todavia, nos casos em que está em jogo a segurança da vida humana ou a de um navio ou de uma aeronave, uma estação terrestre pode comunicar com estações fixas ou estações terrestres de uma outra categoria.

960 § 4. Qualquer administração pode consignar uma frequência escolhida numa faixa atribuída ao serviço fixo ou ao serviço fixo por satélite, a uma estação autorizada a emitir unilateralmente de um ponto fixo determinado para um ou vários pontos fixos determinados, desde que tais emissões não sejam destinadas a ser recebidas directamente pelo público em geral.

961 § 5. Qualquer estação móvel cuja emissão satisfaça a tolerância de frequência exigida para a estação costeira com a qual comunica pode emitir na mesma frequência que a estação costeira, desde que esta estação lhe peça uma tal emissão e que as outras estações não sofram qualquer interferência prejudicial daí resultante.

962 § 6. Em certos casos previstos nos artigos 38 e 59, as estações de aeronave são autorizadas a utilizar as frequências das faixas atribuídas ao serviço móvel marítimo para entrar em comunicação com as estações deste serviço (v. o n.º **4148**).

963 § 7. As estações terrenas de aeronave são autorizadas a utilizar as frequências das faixas atribuídas ao serviço móvel marítimo por satélite para entrar em comunicação, através de estações desse serviço, com as redes telegráficas e telefónicas públicas.

964 § 8. É proibida qualquer emissão susceptível de produzir interferências prejudiciais às comunicações de perigo, alarme, urgência ou segurança nas frequências internacionais de perigo e de urgência designadas para este fim pelo presente Regulamento. Convém que as frequências suplementares de perigo, disponíveis numa base geográfica mais restrita que a base mundial, beneficiem de protecção apropriada.

965 a 989 *(Não atribuídos.)*

CAPÍTULO IV

Coordenação, notificação e registo das frequências. Comissão internacional do Registo de Frequências

ARTIGO 10

Comissão Internacional do Registo de Frequências

SECÇÃO I

Funções da Comissão

990 § 1. A Constituição e as atribuições essenciais da Comissão Internacional do Registo de Frequências estão definidas na Convenção.

991 § 2. São funções da Comissão:

992 *a*) Tratar as fichas de notificação das consignações de frequência recebidas das administrações, incluindo também informações sobre qualquer posição orbital de satélite geostacionário associada a essas consignações, a fim de as inscrever no ficheiro de referências internacional das frequências;

993 *b*) Tratar as informações recebidas das administrações em aplicação dos procedimentos de publicação antecipada, de coordenação e outros procedimentos especificados no Regulamento das Radiocomunicações e nos actos finais das conferências administrativas das radiocomunicações; dar assistências neste domínio às administrações que a peçam;

994 *c*) Tratar e coordenar os horários periódicos de radiodifusão em ondas decamétricas, a fim de satisfazer as necessidades de todas as administrações neste domínio;

995 *d*) Elaborar, para fins de publicação pelo secretário-geral, sob forma apropriada e a intervalos convenientes, as listas de frequências que traduzam os dados contidos no ficheiro de referência internacional das frequências, bem como outros documentos relativos à consignação e utilização das frequências;

996 *e*) Rever as inscrições contidas no ficheiro de referência internacional das frequências, a fim de modificar ou eliminar, consoante o caso, as inscrições que não traduzam a utilização real do espectro das frequências, de acordo com as administrações que notificaram as consignações correspondentes:

997 *f*) Estudar, a longo prazo, a utilização do espectro das frequências radioeléctricas, a fim de formular recomendações tendentes a torná-la mais eficaz;

998 *g*) Inquirir, a pedido de uma ou de várias das administrações interessadas, os casos de interferências prejudiciais e formular as recomendações necessárias;

999 *h*) Dar às administrações assistência no domínio da utilização do espectro das frequências radioeléctricas, particularmente às administrações que tenham necessidade de assistência especial, e formular com destino às administrações, quando para tal houver lugar, recomendações tendentes à reestruturação das suas consignações de frequência, a fim de obter uma melhor utilização do espectro das frequências radioeléctricas;

1000 *i*) Reunir os resultados das observações feitas durante a fiscalização das emissões que as administrações ou os organismos de fiscalização lhe possam fornecer e tomar todas as disposições úteis, por intermédio do secretário-geral, para a sua publicidade sob forma apropriada;

1001 *j*) Elaborar normas técnicas [1] em conformidade com os n.os **1454** e **1582** do presente Regulamento, e regras [1] de procedimento destinadas ao uso interno da Comissão no exercício das suas funções;

1002 *k*) Formular e enviar à CCIR todas as questões técnicas de ordem geral encontradas pela Comissão durante o exame das consignações de frequência;

1003 *l*) Prestar a sua ajuda técnica à preparação e à organização das conferências de radiocomunicações, consultando, consoante o caso, os outros organismos permanentes da União e tomando em conta qualquer directiva do Conselho de Administração em conformidade com a Convenção:

1004 *m*) Participar, a título consultivo, a convite das organizações ou dos países interessados, nas conferências e reuniões em que se discutem questões relativas à consignação e à utilização das frequências;

1005 *n*) Contribuir para a formação de quadros das administrações que lho peçam, especialmente daqueles países que mais carência têm de quadros, no domínio da gestão e da utilização do espectro das frequências;

1006 *o*) Desempenhar as outras funções especificadas no Regulamento das Radiocomunicações e nos actos finais das conferências administrativas das radiocomunicações.

1007 § 3. O secretariado especializado da Comissão trabalha sob a direcção imediata da Comissão para lhe permitir desempenhar-se das atribuições e funções que lhe são confiadas.

Secção II

Métodos de trabalho da Comissão

1008 § 4. A comissão reúne-se tão frequentemente quanto necessário para desempenhar rapidamente as suas funções e, normalmente, pelo menos uma vez por semana.

1009 § 5. (1) Em conformidade com a Convenção, os membros da Comissão elegem entre si um presidente e um vice-presidente, os quais desempenham as suas funções pelo período de um ano. Em seguida, o vice-presidente sucede cada ano ao presidente e é eleito um novo vice-presidente.

1001.1 [1] As normas técnicas e as regras de procedimento da IFRB são comunicadas a todos os Membros da União e podem ser objecto de comentários da parte de qualquer administração. Caso subsista um desacordo que não possa ser resolvido, o procedimento a seguir vem indicado na Resolução n.º 35.

1010 (2) No caso de ausência inevitável do presidente e do vice-presidente, os membros da Comissão elegem para o caso um presidente temporário escolhido entre eles.

1011 § 6. (1) Cada membro da Comissão, incluindo o presidente, dispõe de um voto. É interdito o voto por procuração ou por correspondência.

1012 (2) As actas indicarão se uma decisão foi tomada por unanimidade ou por maioria.

1013 (3) O quórum necessário para que a Comissão possa deliberar validamente é igual a metade do número dos seus membros. Todavia, se numa reunião, na qual o número de membros presentes não ultrapassa o quórum, se não puder obter unanimidade sobre o assunto, a decisão é adiada para reunião ulterior em que estejam presentes, pelo menos, dois terços dos membros. Se o cálculo da metade ou dos dois terços dos membros conduzir a um número fraccionário, arrendondar-se-á para o número inteiro imediatamente superior.

1014 (4) A Comissão deve esforçar-se por tomar as suas decisões por acordo unânime. Se o não conseguir deve tomar a decisão por voto na base da maioria de dois terços dos membros presentes e votando a favor ou contra.

1015 § 7. A Comissão pode adoptar, para a sua orientação própria e para o desempenho eficaz das suas atribuições, as disposições internas que considere necessárias, em conformidade com a Convenção e com o Regulamento das Radiocomunicações.

1016 § 8. Os documentos da Comissão, que compreendem os arquivos completos de todos os seus actos oficiais e as actas de todas as suas reuniões, são mantidos em dia pela Comissão nas línguas de trabalho da União, tais como definidas na Convenção; para esse fim, bem como para as reuniões da Comissão, o secretário-geral fornece o pessoal linguístico e todos os outros meios materiais necessários. É mantido à disposição do público, nos escritórios da Comissão, um exemplar de todos os documentos da Comissão, para fins de consulta.

1017 a 1040 *(Não atribuídos.)*

ARTIGO 11

Coordenação das consignações de frequência às estações de um serviço de radiocomunicação espacial, com excepção das estações de serviço de radiodifusão por satélite, e às estações de Terra apropriadas (1)

SECÇÃO I

Procedimentos para a publicação antecipada de informações relativas às redes de satélite em projecto (2)

1041 *Publicação de informações:*

1042 § 1. (1) Qualquer administração (ou qualquer administração agindo em nome de um grupo de administrações expressamente nomeadas) que se proponha estabelecer um sistema de satélites enviará à Comissão Internacional do Registo de Frequências, antes de iniciar, se for caso disso, o procedimento de coordenação descrito n.º **1060**, o mais cedo 5 anos, e, de preferência, o mais tarde 2 anos antes da data de entrada em serviço de cada rede de satélite do sistema em projecto, as informações indicadas no apêndice 4.

1043 (2) Qualquer modificação das informações comunicadas conforme as disposições do n.º **1042** relativas a um sistema de satélites em projecto será igualmente comunicada à Comissão a partir do momento em que esteja disponível.

1044 (3) A Comissão publicará as informações a que ser referem os n.os **1042** e **1043** numa secção especial da sua circular semanal, e quando a circular semanal contiver informações desta natureza, avisará as administrações por telegrama-circular. Esse telegrama-circular indicará as faixas de frequências a utilizar e, no caso de um satélite geostacionário, a posição orbital da estação espacial.

1045 (4) Se as informações comunicadas forem consideradas incompletas, a Comissão publicá-las-á em conformidade com as disposições do n.º **1044** e solicitará imediatamente à administração responsável todos os esclarecimentos necessários e todas as informações que não foram fornecidas. Em tais, casos o período de 4 meses especificados no n.º **1047** será contado a partir da data da publicação, nos termos do n.º **1044**, das informações completas.

1046 *Observações sobre as informações publicadas:*

1047 § 2. Se, após ter estudado as informações publicadas nos termos no n.º **1044**, qualquer administração for de parecer que poderão ser causadas interferências prejudiciais aos seus serviços de radiocomunicação espacial, existentes ou em projecto, comunicará as suas observações à administração responsável no prazo de 4 meses a partir da data da circular semanal em que foi publicada a totalidade das informações enumeradas no apêndice 4. Enviará igualmente á Comissão uma cópia dessas observações. Se a administração responsável não receber de uma outra administração qualquer observação desta natureza durante o período acima mencionado, poderá admitir que esta última não tem objecção de maior a formular contra a ou as redes de satélite em projecto do sistema relativamente às quais foram publicadas informações.

A.11.1 (1) Para a coordenação das consignações de frequência às estações do serviço de radiodifusão por satélite e aos outros serviços nas faixas de frequências 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região 1) (v. também o artigo 15).

A.11.2 (2) Estes procedimentos podem ser aplicáveis às estações de bordo de engenhos lançadores de satélites.

1048 *Resolução das dificuldades:*

1049 § 3. (1) Uma administração que receba observações formuladas nos termos do n.º **1047** tentará resolver as dificuldades de qualquer natureza que possam apresentar-se e fornecerá todas as informações suplementares de que disponha.

1050 (2) Caso se apresentem dificuldades quando uma qualquer das redes de satélite em projecto de um sistema se destina a utilizar a órbita de satélites geostacionários:

1051 *a*) A administração responsável pelo sistema em projecto procurará, em primeiro lugar, todos os meios possíveis para fazer face às suas necessidades, tendo em conta as características das redes de satélite geostacionário que fazem parte de outros sistemas e sem considerar a possibilidade de serem feitos reajustamentos em sistemas dependentes de outras administrações. Se não dispuser de tais meios, a administração interessada poderá então dirigir-se às outras administrações em causa a fim de resolver essas dificuldades;

1052 *b*) Uma administração que receba um pedido nos termos do n.º **1051** procurará, de acordo com a administração requerente, todos os meios possíveis para fazer face às necessidades desta última, alterando, por exemplo, a localização de uma ou de várias das suas próprias estações espaciais geostacionárias em causa ou modificando as emissões, a utilização das frequências (incluindo mudanças de faixa de frequências) ou outras características técnicas ou de exploração;

1053 *c*) Se, após aplicação do procedimento descrito nos n.ºs **1051** e **1052**, existirem ainda dificuldades por resolver, as administrações em causa tentam, de comum acordo e por todos os meios possíveis, resolver essas dificuldades através de reajustamentos aceitáveis para as duas partes, modificando, por exemplo, a localização de estações espaciais geostacionárias ou outras características dos sistemas em causa, a fim de permitir o funcionamento normal tanto do sistema em projecto como dos sistemas existentes.

1054 (3) As administrações podem pedir o auxílio da Comissão nas suas tentativas para resolver as dificuldades acima mencionadas.

1055 *Resultados da publicação antecipada:*

1056 § 4. Qualquer administração em nome da qual tenham sido publicadas informações sobre as redes de satélite em projecto, de acordo com as disposições dos n.ºs **1042** a **1044**, comunicará à Comissão, ao expirar o período de 4 meses especificado no n.º **1047**, se recebeu ou não as observações referidas no n.º **1047** e informá-la-á sobre os progressos obtidos no que respeita à regularização de eventuais dificuldades. A intervalos que não ultrapassem 6 meses antes do início da coordenação ou antes do envio à Comissão das fichas de notificação, deverão ser enviadas à Comissão informações suplementares sobre os progressos alcançados no que respeita à resolução dessas dificuldades. A Comissão publicará essas informações numa secção especial da sua circular semanal e, quando a circular semanal contiver informações dessa natureza, avisará disso as administrações por telegrama-circular.

1057 *Início dos procedimentos de coordenação ou de notificação:*

1058 § 1. De acordo com as disposições dos n.ºs **1049** a **1054**, uma administração responsável por um sistema de satélite adiará, se necessário, o início do procedimento de coordenação ou, se este não for aplicável, o envio das suas fichas de notificação à Comissão para uma data de 6 meses posterior à data da circular semanal que contém as informações indicadas no apêndice 4 relativas à rede de satélite pertinente. Contudo, em relação às administrações com as quais foram resolvidas as dificuldades ou que responderam favoravelmente, o procedimento de coordenação pode, se for caso disso, ser iniciado antes de expirar o prazo de 6 meses acima referido.

Secção II

Coordenação das consignações de frequência a uma estação espacial a bordo de um satélite geostacionário ou a uma estação terrena que comunique com tal estação espacial, em relação às estações que pertencem a outras redes de satélite geostacionário

1059 *Condições que regem a coordenação:*

1060 § 6. (1) Antes de notificar à Comissão ou de pôr em serviço uma consignação de frequência a uma estação espacial instalada a bordo de um satélite geostacionário ou a uma estação terrena destinada a comunicar com uma tal estação espacial, qualquer administração (ou, no caso de uma estação espacial, qualquer administração agindo em nome de um grupo de administrações expressamente nomeadas) coordenará, salvo nos casos fixados nos n.ºs **1066** a **1071**, a utilização dessa consignação de frequência com qualquer outra administração da qual possa ser afectada uma consignação de frequência relativa a uma estação espacial instalada a bordo de um satélite geostacionário ou a uma estação terrena que comunique com uma tal estação espacial.

1061 (2) As consignações de frequência a que se aplicam as disposições do n.º **1060** são:

1062 *a*) As situadas na mesma faixa de frequências da consignação em projecto e em conformidade com as disposições do n.º **1503**; e

1063 *b*) Quer as inscritas no ficheiro de referência ou quer tenham sido objecto da coordenação prevista na presente secção;

1064 *c*) Ou as que se devem tomar em consideração para a coordenação a partir da data da recepção pela Comissão, em conformidade com as disposições do n.º **1074**, das informações pertinentes, tais como são especificadas no apêndice 3;

1065 *d*) Ou as notificadas à Comissão sem qualquer coordenação, nos casos em que se aplicam as disposições dos n.os **1066** a **1071**.

1066 (3) Não é necessária qualquer coordenação nos termos no n.º **1060**:

1067 *a*) Quando, devido à utilização de uma nova consignação de frequência, a temperatura de ruído do receptor de qualquer estação espacial ou terrena dependente de uma outra administração ou a temperatura equivalente de ruído de qualquer ligação por satélite, também dependente de outra administração, consoante o caso, sofrer um aumento que, calculado pelo método descrito no apêndice 29, não ultrapasse o valor de limiar definido nesse método;

1068 *b*) Quando a interferência resultante da modificação de uma consignação de frequência, já coordenada anteriormente, não exceder o valor convencionado no decorrer na coordenação;

1069 *c*) Quando uma administração se propõe notificar ou pôr em serviço uma nova estação terrena no interior de uma zona de serviço de uma rede de satélite existente, desde que a nova estação terrena não cause interferência de nível superior ao que seria causado por uma estação terrena pertencente à mesma rede de satélite e cujas características tivessem sido publicadas conforme as disposições do n.º **1078**, ao mesmo tempo que as informações sobre a estação espacial;

1070 *d*) Quando, para uma nova consignação de frequência a uma estação de recepção, a administração notificante declare que aceita a interferência resultante das consignações de frequência citadas nos n.os **1061** a **1065**;

1071 *e*) Entre estações terrenas que utilizem consignações de frequência no mesmo sentido (quer Terra para espaço, quer espaço para Terra).

1072 *Dados relativos à coordenação:*

1073 § 7. (1) A fim de efectuar a coordenação, a administração que procura a coordenação envia a qualquer outra administração visada no n.º **1060** todas as informações indicadas no apêndice 3 e necessárias à coordenação. O pedido de coordenação relativo a uma estação espacial ou a uma estação terrena associada pode compreender todas ou algumas das consignações de frequência que ela prevê vir a utilizar nessa estação espacial, mas em seguida cada consignação é tratada separadamente.

1074 (2) Quando uma administração inicia o procedimento de coordenação, envia à Comissão uma cópia do pedido de coordenação, acompanhada de todas as informações indicadas no apêndice 3 necessárias à coordenação, bem como do nome da ou das administrações junto das quais ela procura a coordenação. Uma administração que seja de parecer que se devem aplicar à sua consignação em projecto as disposições dos n.os **1066** a **1071** pode enviar à Comissão as informações pertinentes indicadas no apêndice 3, quer nos termos da presente disposição quer em conformidade com as disposições dos n.os **1488** a **1491**. Neste último caso, a Comissão avisará disso imediatamente todas as administrações por telegrama-circular.

1075 § 8. Ao receber as informações a que se refere o n.º **1074**, a Comissão:

1076 *a*) Examina imediatamente essas informações sob o ponto de vista da sua conformidade com as disposições do n.º **1503** e envia o mais rapidamente possível um telegrama a todas as administrações, indicando a identidade da rede de satélite, as conclusões a que chegou relativamente ao n.º **1503** e a data da recepção das informações. Esta data é tomada em conta como a data a partir da qual a consignação é tida em consideração para a coordenação;

1077 *b*) Examina as informações recebidas a fim de identificar as administrações cujos serviços possam ser afectados nos termos das disposições do n.º **1060** e informa por telegrama as administrações interessadas;

1078 *c*) Publica numa secção especial da sua circular semanal as informações recebidas em aplicação do n.º **1074** e o resultado efectuado em conformidade com os n.os **1076** e **1077**, bem como uma referência à circular semanal em que foram publicadas, nos termos da secção I do presente artigo, as informações relativas à rede de satélite. Quando a circular semanal contiver informações desta natureza, a Comissão avisa disso todas as administrações por telegrama-circular.

1079 *Pedidos de participação no procedimento de coordenação:*

1080 § 9. Qualquer administração que considere que deveria ser incluída no procedimento de coordenação a que se refere o n.º **1060** tem o direito de pedir para participar no procedimento de coordenação. Este pedido é enviado à administração que iniciou o procedimento de coordenação, com uma cópia para a Comissão, o mais rapidamente possível.

1081 *Avisos de recepção dos dados relativos à coordenação:*

1082 § 10. Qualquer administração junto da qual se procura a coordenação, nos termos do n.º **1060,** acusará imediatamente a recepção, por telegrama, dos dados relativos à coordenação. Se a administração que procura a coordenação não recebe aviso de recepção num prazo de 30 dias a contar da data da circular semanal em que foram publicadas, conforme as disposições do n.º **1078,** as informações pertinentes, enviará um telegrama a pedir o aviso de recepção, devendo a administração à qual o telegrama for dirigido responder num novo prazo de 15 dias.

1083 *Exame dos dados relativos à coordenação e acordo entre as administrações:*

1084 § 11. (1) Ao receber as informações relativas à coordenação, a administração junto da qual se procura a coordenação estuda rapidamente a questão, do ponto de vista das interferências (1) que seriam causadas ao serviço assegurado por aquelas suas estações para as quais se procura a coordenação nos termos do n.º **1060** ou causadas por estas estações. Ao fazer isto, tomará em consideração a data prevista da entrada ao serviço da consignação para a qual é procurada a coordenação. Em seguida, num prazo de 4 meses a contar da data da circular semanal pertinente, comunicará o seu acordo à administração que procura a coordenação. Se a administração junto da qual se procura a coordenação não comunicar o seu acordo, enviará, no mesmo prazo, à administração que procura a coordenação informações técnicas indicando as razões que motivam o seu desacordo, incluindo as características pertinentes contidas no apêndice 3 que não foram anteriormente notificadas à Comissão, e se for caso disso, apresentará as sugestões que possa fazer para se obter uma solução satisfatória do problema. É enviada também uma cópia dessas observações à Comissão.

1085 (2) A administração que procura a coordenação ou qualquer administração junto da qual se procura a coordenação pode pedir as informações suplementares que considere ter necessidade para avaliar a interferência causada aos serviços interessados.

1086 *Resultados da coordenação:*

1087 § 12. Qualquer administração que tenha iniciado um procedimento de coordenação em conformidade com as disposições dos n.os **1060** a **1074** comunicará à Comissão, no final do prazo de 4 meses a partir da data da circular semanal pertinente mencionada no n.º **1078,** os nomes das administrações com as quais tenha sido obtido um acordo, bem como as modificações das características das suas consignações de frequência. Comunicará igualmente à Comissão os progressos obtidos com as outras administrações, no que respeita à regularização da coordenação ou as dificuldades eventuais. Tal comunicação é feita à Comissão todos os 6 meses após o prazo acima mencionado. A Comissão publicará essas informações numa secção especial da sua circular semanal e, quando esta contiver tais informações sobre as modificações às características publicadas, avisará disso as administrações por telegrama-circular.

1088 *Assistência pedida à IFRB para efectuar a coordenação:*

1089 § 13. (1) A administração que procura efectuar a coordenação pode pedir à Comissão que tente efectuar essa coordenação nos seguintes casos:

1090 *a*) Uma administração junto da qual se procura a coordenação nos termos do n.º **1060** não envia aviso de recepção, nos termos do n.º **1082,** num prazo de 45 dias a contar da data da circular semanal em que foram publicadas as informações relativas ao pedido de coordenação;

1091 *b*) Uma administração envia um aviso de recepção nos termos do n.º **1082,** mas não comunica a sua decisão num prazo de 4 meses a contar da data da circular semanal pertinente;

1092 *c*) A administração que procura a coordenação e a administração junto da qual se procura a coordenação estão em desacordo no que respeita à interferência aceitável;

1093 *d*) Ou, ainda, a coordenação não é possível por qualquer outra razão.

1094 (2) Ao apresentar o seu pedido à Comissão, a administração interessada comunicar-lhe-á as informações necessárias que lhe permitam tentar efectuar a coordenação.

1095 *Medidas a tomar pela IFRB:*

1096 § 14. (1) Quando a Comissão receber um pedido nos termos do n.º **1090,** enviará sem demora um telegrama à administração interessada, pedindo-lhe que acuse a recepção imediatamente.

1097 (2) Quando a Comissão receber um aviso de recepção em consequência da medida que tomou nos termos do n.º **1096,** ou quando receber um pedido nos termos do n.º **1091,** enviará imediatamente um telegrama à administração interessada, pedindo-lhe que tome rapidamente uma decisão sobre o assunto.

1084.1 (1) Os métodos de cálculo e os critérios a utilizar para avaliar a interferência deveriam basear-se nos pareceres da CCIR aceites pelas administrações interessadas em aplicação da Resolução n.º 703 ou de outro modo.

No caso de desacordo sobre um parecer da CCIR ou na ausência de tais pareceres, os métodos e os critérios constituirão objecto de acordos entre as administrações interessadas.

Tais acordos deverão ser obtidos sem causar prejuízo às outras administrações.

1098 (3) Quando a Comissão receber um pedido nos termos do n.º **1093**, tentará efectuar a coordenação, em conformidade com as disposições do n.º **1060**. A Comissão tomará igualmente as medidas previstas nos n.os **1075** a **1078**. Quando a Comissão não receber aviso de recepção do seu pedido de coordenação no prazo especificado no n.º **1082**, agirá em conformidade com disposições do n.º **1096**.

1099 (4) Quando para tal houver lugar, a Comissão avaliará, em conformidade com o procedimento especificado nos n.os **1089** a **1094**, o nível de interferência. Em qualquer caso, comunicará às administrações interessadas os resultados obtidos.

1100 (5) A Comissão poderá pedir informações suplementares de que julgue ter necessidade para avaliar a interferência causada aos serviços interessados.

1101 (6) Quando uma administração não responder num prazo de 30 dias, a contar da data de envio do telegrama da Comissão nos termos do n.º **1096** pedindo-lhe que acuse a recepção, ou quando essa administração não comunicar a sua decisão sobre o assunto num prazo de 30 dias, a contar da data de envio do telegrama da Comissão nos termos do n.º **1097**, considera-se que a administração junto da qual se procurou a coordenação se obriga:

1102 *a*) A não formular queixa relativa às interferências prejudiciais que possam ser causadas ao serviço assegurado pelas suas estações de radiocomunicação espacial pela utilização da consignação de frequência para a qual se procurou a coordenação;

1103 *b*) A tomar as medidas necessárias para que as suas estações de radiocomunicação espacial não causem interferências à utilização da consignação de frequência para a qual se procurou a coordenação.

1104 *Notificação das consignações de frequência em caso de desacordo persistente:*

1105 § 15. Em caso de desacordo persistente entre a administração que procura a coordenação e a administração junto da qual se procurou a coordenação, a administração que procura a coordenação adiará por 6 meses, excepto nos casos em que tenha sido pedida a assistência da Comissão, o envio à Comissão da sua ficha de notificação relativa à consignação em projecto, sendo esse adiamento de 6 meses a contar da data de publicação do pedido de coordenação nos termos do n.º **1078**, em consideração as disposições do n.º **1496**.

SECÇÃO III

Coordenação das consignações de frequência a uma estação terrena em relação às estações de Terra

1106 *Condições que regem a coordenação:*

1107 § 16. (1) Antes de notificar à Comissão ou de pôr em serviço uma consignação de uma frequência de emissão ou de recepção a uma estação terrena numa faixa determinada, atribuída com igualdade de direitos a serviços de radiocomunicação espacial e a serviços de radiocomunicação de Terra na faixa de frequências situadas acima de 1 Ghz, qualquer administração coordena, excepto nos casos indicados nos n.os **1108** a **1111**, a utilização dessa consignação com a administração de qualquer país cujo território esteja situado total ou parcialmente no interior da zona de coordenação (1) da estação terrena em projecto. O pedido de coordenação relativo a uma estação terrena pode compreender todas ou algumas das consignações de frequência à estação espacial associada, mas, em seguida, cada consignação é tratada separadamente.

1108 (2) Não é necessária qualquer coordenação nos termos do n.º **1107** quando uma administração se propõe:

1109 *a*) Pôr em serviço uma estação terrena cuja zona de coordenação esteja inteiramente fora do território de qualquer outro país;

1110 *b*) Modificar as características de uma consignação existente de modo que tal não fique aumentado o nível de interferências causadas a ou por estações de radiocomunicação de Terra de outras administrações;

1111 *c*) Pôr em funcionamento uma estação terrena móvel. Todavia, se a zona de coordenação ligada ao funcionamento da tal estação terrena móvel numa das faixas de frequências referidas no n.º **1107** cobrir total ou parcialmente o território de um outro país, o funcionamento dessa estação será objecto de um acordo de coordenação entre as administrações interessadas. Esse acordo incide sobre as características da ou das estações terrenas móveis ou sobre as características de uma estação terrena móvel tipo e é feito para uma dada zona de serviço. Salvo disposições em contrário previstas no Acordo, este aplica-se a qualquer estação terrena móvel que se desloque na zona de serviço considerada, com a condição de que o nível de interferências causadas por ela não seja o mais elevado que no caso da estação terrena tipo cujas características técnicas figuram na ficha de notificação ou cuja notificação foi feita ou está em curso nos termos do n.º **1494**.

1107.1 (1) O apêndice 28, que é utilizado para calcular a zona de coordenação, contém os critérios relativos unicamente à coordenação entre as estações terrenas e as estações do serviço fixo ou do serviço móvel. Os critérios relativos aos outros serviços de radiocomunicação de Terra deveriam basear-se nos pareceres pertinentes da CCIR aceites pelas administrações interessadas em aplicação da Resolução n.º 703 ou de outras disposições.

No caso de desacordo sobre um parecer da CCIR ou, na ausência de tais pareceres, os métodos e critérios a utilizar serão objecto de acordos entre as administrações interessadas. Tais acordos deverão ser obtidos sem que seja causado prejuízo às outras administrações.

1112 *Dados relativos à coordenação:*

1113 § 17. A administração que procura a coordenação envia para isso, a cada uma das administrações interessadas, nos termos das disposições do n.º **1107**, uma cópia de um mapa feito em escala conveniente e que indique, para a emissão e para a recepção, a localização da estação terrena e das suas zonas associadas de coordenação, ou a zona de coordenação correspondente à zona de serviço em que se prevê que venha a ser explorada a estação terrena móvel, bem como os parâmetros que serviram de base ao cálculo dessas zonas, e todas as informações pertinentes relativas à consignação de frequência em projecto, tal como são indicadas no apêndice 3, e uma indicação da data aproximada em que se prevê que a estação começará a funcionar. Enviará também à Comissão, para informação desta, uma cópia de tais informações, juntamente com a data de expedição do pedido de coordenação.

1114 *Aviso de recepção dos dados relativos à coordenação:*

1115 § 18. Qualquer administração junto da qual se procura a coordenação, nos termos do n.º **1107**, acusará imediatamente a excepção, por telegrama, dos dados relativos à coordenação. Se a administração que procura a coordenação não receber aviso de recepção num prazo de 30 dias a contar da data do envio dos dados relativos à coordenação, enviará um telegrama a pedir esse aviso de recepção, devendo a administração à qual esse telegrama é dirigido responder num novo prazo de 15 dias.

1116 *Exame dos dados relativos à coordenação e acordo entre as administrações:*

1117 § 19. (1) Ao receber os dados relativos à coordenação, a administração junto da qual se procura a coordenação estudará rapidamente a questão, tendo em conta a data prevista de entrada em serviço da consignação para a qual a coordenação é rara, em vez do ponto de vista:

1118 *a*) Das interferências (1) que seriam causadas ao serviço assegurado pelas suas estações de radiocomunicação de Terra que funcionam de acordo com as disposições da Convenção e do presente Regulamento, ou destinadas a funcionar assim antes da data prevista de entrada em serviço de consignação à estação terrena, ou ainda nos três anos seguintes; seguindo aquela dessas datas que for a mais tardia; e

1119 *b*) Das interferências (1) que seriam causadas, na recepção, à estação terrena pelo serviço assegurado pelas suas estações de radiocomunicação de Terra que funcionam de acordo com as disposições da Convenção e do presente Regulamento, ou destinadas a funcionar assim antes da data prevista de entrada em serviço da consignação à estação terrena, ou ainda nos 3 anos seguintes, segundo aquela dessas datas que for a mais tardia.

1120 (2) Os períodos a que se referem os n.os **1118** e **1119** podem ser prolongados por acordo entre as administrações interessadas a fim de tomar em conta redes de Terra planificadas.

1121 (3) Em seguida num prazo de 4 meses a contar da data de envio dos dados relativos à coordenação, a administração junto da qual se procura a coordenação comunicará à administração que procura a coordenação:

1122 *a*) Ou o seu acordo sobre a coordenação, com cópia à Comissão, indicando, se tanto for o caso, a parte da faixa de frequências atribuída que compreende as consignações de frequência coordenadas;

1123 *b*) Ou um pedido tendente a incluir na coordenação as suas estações de radiocomunicação de Terra visadas os n.os **1118** e **1119**;

1124 *c*) Ou o seu desacordo.

1125 (4) No caso dos n.os **1123** e **1124**, a administração junto da qual se procura a coordenação enviará à administração que procura a coordenação um mapa em escala conveniente indicando a localização das suas estações de radiocomunicação de Terra que estão ou estarão no interior da zona de coordenação da estação terrena de emissão ou de recepção, consoante o caso, bem como todas as outras características fundamentais pertinentes, e apresentar-lhe-á as sugestões que possa fazer, se tanto for o caso, a fim de se obter uma solução satisfatória do problema.

1126 (5) Quando a administração junto da qual se procura a coordenação enviar à administração que procura a coordenação as informações mencionadas no n.º **1124**, enviará também uma cópia dessas informações á Comissão. Esta considerará como notificações nos termos da secção I do artigo 12 somente aquelas informações que digam respeito a consignações a estações de radiocomunicação de Terra existentes ou que serão postas em serviço nos 3 meses seguintes.

1118.1 (1) Os métodos de cálculo e os critérios a utilizar para avaliar a interferência deveriam basear-se nos pareceres pertinentes da
1191.1 CCIR aceites pelas administrações interessadas em aplicação da Resolução n.º 703 ou de outras disposições. No caso de desacordo sobre um parecer da CCIR ou na ausência de tais pareceres, os métodos e os critérios serão objecto de acordos entre as administrações interessadas. Tais acordos deverão ser obtidos sem causar prejuízo às outras administrações.

1127 (6) Quando for obtido um acordo sobre a coordenação em aplicação dos n.os **1121** a **1125**, a administração responsável pelas estações de Terra poderá enviar à Comissão as informações relativas às suas estações de Terra abrangidas pelo acordo e que deseje notificar nos termos da secção I do artigo 12. A Comissão considerará como notificações nos termos da citada secção somente as informações que digam respeito a consignações a estações de radiocomunicação de Terra existentes ou que serão postas em serviço nos 3 anos seguintes.

1128 (7) A administração que procura a coordenação, ou qualquer administração junto da qual se procura a coordenação, poderá pedir as informações suplementares de que julgue ter necessidade para avaliar a interferência causada aos serviços respectivos.

1129 *Assistência pedida à IFRB a fim de efectuar a coordenação:*

1130 § 20. (1) A administração que procura a coordenação pode pedir à Comissão que tente efectuar essa coordenação nas seguintes circunstâncias:

1131 *a*) Uma administração junto da qual se procura a coordenação nos termos do n.º **1107** não envia o aviso de recepção, nos termos do n.º **1115**, num prazo de 45 dias a contar da data de envio dos dados relativos à coordenação;

1132 *b*) Uma administração enviou um aviso de recepção nos termos do n.º **1115**, mas não comunicou a sua decisão num prazo de 4 meses a contar da data de envio dos dados relativos à coordenação nos termos do n.º **1113**;

1133 *c*) A administração que procura a coordenação e a administração junto da qual a coordenação é procurada estão em desacordo no que respeita à interferência aceitável;

1134 *d*) Ou, ainda, a coordenação não é possível por qualquer outra razão.

1135 (2) Ao apresentar o seu pedido à Comissão, a administração interessada enviar-lhe-á as informações necessárias para lhe permitir tentar a coordenação.

1136 *Medidas a tomar pela IFRB:*

1137 § 21. (1) Quando a Comissão receber um pedido nos termos do n.º **1131**, enviará sem demora um telegrama à administração interessada, pedindo-lhe que acuse a recepção imediatamente.

1138 (2) Quando a Comissão receber um aviso de recepção em consequência da medida que tomou nos termos do n.º **1137** ou quando receber um pedido nos termos do n.º **1132**, enviará imediatamente um telegrama à administração interessada, pedindo-lhe que tome rapidamente uma decisão sobre o assunto.

1139 (3) Quando a Comissão receber um pedido nos termos do n.º **1134**, tentará efectuar a coordenação, em conformidade com as disposições do n.º **1107**. Quando a Comissão não receber aviso de recepção do seu pedido de coordenação no prazo especificado no n.º **1115**, agirá em conformidade com as disposições do n.º **1137**.

1140 (4) Quando para tal houver lugar, a Comissão avaliará, em conformidade com o procedimento especificado nos n.os **1130** a **1135**, o nível de interferência. Em qualquer caso, comunicará às administrações interessadas os resultados obtidos.

1141 (5) A Comissão poderá pedir as informações suplementares que considere necessárias para avaliar a interferência causada aos serviços interessados.

1142 (6) Quando uma administração não responder num prazo de 30 dias, a contar da data de envio do telegrama que a Comissão lhe enviou nos termos do n.º **1137**, pedindo-lhe que acuse a recepção, ou quando essa administração não comunicar a sua decisão sobre o assunto num prazo de 30 dias, a contar da data de envio do telegrama da Comissão nos termos do n.º **1138**, considera-se que a administração junto da qual se procurou a coordenação se obriga:

1143 *a*) A não formular queixa relativa às interferências prejudiciais que possam ser causadas ao serviço assegurado pelas suas estações de radiocomunicação de Terra pela utilização de consignação de frequência para a qual se procurou a coordenação;

1144 *b*) A tomar as medidas necessárias para que as suas estações de radiocomunicação de Terra não causem interferências prejudiciais à utilização da consignação de frequência para a qual se procurou a coordenação.

1145 *Notificação das consignações de frequência em caso de desacordo persistente:*

1146 § 22. Em caso de desacordo persistente entre a administração que procura a coordenação e a administração junto da qual se procurou a coordenação, a administração que procura a coordenação adiará por 6 meses, excepto nos casos em que tenha sido pedida a assistência da Comissão, o envio à Comissão da sua ficha de notificação relativa à consignação em projecto, sendo esse adiamento de 6 meses a contar da data do pedido de coordenação, tendo em consideração as disposições do n.º **1496**.

Secção IV

Coordenação das consignações de frequência a uma estação de Terra emissora em relação a uma estação terrena

1147 *Condições que regem a coordenação:*

1148 § 23. (1) Antes de notificar à Comissão ou de pôr em serviço uma consignação de frequência a uma estação de Terra situada no interior da zona de coordenação (1) de uma estação terrena, numa faixa de frequências acima de 1 GHz, atribuída com igualdade de direitos aos serviços de radiocomunicação de Terra e aos serviços de radiocomunicação espacial (espaço para Terra), com excepção do serviço de radiodifusão por satélite, qualquer administração coordenará, excepto nos casos abrangidos pelos n.os **1155 a 1158,** a consignação em projecto com a administração responsável pela estação terrena no que respeita às consignações de frequência que:

1149 *a*) Estejam conforme as disposições do n.º **1503;**

1150 *b*) Ou estejam coordenadas nos termos do n.º **1107;**

1151 *c*) Ou sejam de tomar em consideração para a coordenação a contar da data de comunicação das informações a que se refere o n.º **1107;**

1152 *d*) Ou estejam inscritas no ficheiro de referência com uma conclusão favorável relativamente ao n.º **1505;**

1153 *e*) Ou estejam inscritas no ficheiro de referência com uma conclusão desfavorável relativamente ao n.º **1505** e uma conclusão relativamente ao n.º **1509;**

1154 *f*) Ou estejam inscritas no ficheiro de referência com uma conclusão desfavorável relativamente aos n.os **1505** e **1509** e que a administração notificadora tenha declarado que aceitou a interferência resultante das estações de Terra existentes, localizadas no interior da zona de coordenação terrena à data da sua inscrição.

1155 (2) Não é necessária qualquer coordenação nos termos dos n.os **1148** a **1154** quando uma administração se propõe:

1156 *a*) Pôr em serviço uma estação de Terra situada fora da zona de coordenação de uma estação terrena;

1157 *b*) Modificar as características de uma consignação existente de tal modo que daí não resulte aumento das interferências causadas a estações terrenas de outras administrações;

1158 *c*) Pôr em serviço uma estação Terra no interior da zona de coordenação de uma estação terrena, desde que a consignação projectada para a estação de Terra se encontre no exterior de qualquer parte de uma faixa de frequências que tenha sido objecto de uma coordenação em aplicação das disposições do n.º **1122** para a recepção por esta estação terrena.

1159 *Dados relativos à coordenação:*

1160 § 24. Para efectuar essa coordenação, a administração que a procura enviará a cada uma das administrações abrangidas pelos n.os **1148** a **1154,** pelo meio mais rápido possível, um mapa em escala conveniente, no qual indique a localização da estação de Terra, e comunicar-lhe-á todos os outros pormenores pertinentes respeitantes à consignação de frequência em projecto, bem como uma indicação da data aproximada prevista para a entrada em serviço da estação. O pedido de coordenação pode compreender todas ou algumas consignações de frequência cuja utilização pelas estações de uma rede de Terra, situadas total ou parcialmente no interior da zona de coordenação de uma estação terrena, está prevista para os três anos seguintes. Este período pode ser prolongado por acordo entre as administrações interessadas. Em seguida, cada consignação é tratada separadamente.

1161 *Aviso de recepção dos dados relativos à coordenação:*

1162 § 25. Qualquer administração junto da qual se procura a coordenação, nos termos dos n.os **1148** a **1154,** acusará imediatamente a recepção, por telegrama, dos dados relativos à coordenação. Se a administração que procura a coordenação não receber aviso de recepção num prazo de 30 dias a contar da data de envio dos dados relativos à coordenação, poderá enviar um telegrama a pedir esse aviso, devendo a administração à qual o telegrama foi dirigido responder num novo prazo de 15 dias.

1148.1 (1) O apêndice 28, que é utilizado para calcular a zona de coordenação, contém os critérios relativos unicamente à coordenação entre as estações terrenas e as estações do serviço fixo ou do serviço móvel. Os critérios relativos aos outros serviços de radiocomunicação de Terra deveriam basear-se nos pareceres da CCIR aceites pelas administrações interessadas em aplicação da Resolução n.º 703 ou de outras disposições.

No caso de desacordo sobre um parecer da CCIR, ou na ausência de tais pareceres, os métodos e critérios a utilizar serão objecto de acordos entre as administrações interessadas. Tais acordos deverão ser obtidos sem que seja causado prejuízo às outras administrações.

1163 *Exame dos dados relativos à coordenação e acordo entre as administrações:*

1164 § 26. (1) Ao receber as informações relativas à coordenação, a administração junto da qual se procura a coordenação estudará rapidamente a questão, do ponto de vista das interferências (1) que seriam causadas ao serviço assegurado pelas suas estações terrenas abrangidas pelos n.os **1148** a **1154** que funcionam ou se destinam a funcionar nos três anos seguintes.

1165 (2) Nesse estudo, a administração pode tomar em consideração qualquer consignação de frequência que lhe seja comunicada com uma antecipação de mais de três anos relativamente à sua utilização.

1166 (3) Num prazo total de quatro meses (2) a contar da data de envio dos dados à coordenação, a administração junto da qual se procura a coordenação ou comunicará o seu acordo sobre a consignação em projecto à administração que procura a coordenação ou então, no caso de impossibilidade, indicar-lhe-á os motivos do seu desacordo e, se for caso disso, apresentar-lhe-á as sugestões que possa fazer a fim de se obter uma solução satisfatória do problema.

1167 § 27. A administração que procura a coordenação ou qualquer administração junto da qual seja procurada a coordenação poderá pedir as informações suplementares que considere necessárias para avaliar o nível de interferência causada aos serviços interessados.

1168 *Assistência pedida à IFRB a fim de efectuar a coordenação:*

1169 § 28. (1) A administração que procura a coordenação pode pedir à Comissão que tente efectuar essa coordenação nas circunstâncias seguintes:

1170 *a*) Uma administração junto da qual se procura a coordenação nos termos dos n.os **1148** a **1154** não envia aviso de recepção, nos termos do n.º **1162**, num prazo de 30 dias a contar da data de envio, dos dados relativos à coordenação;

1171 *b*) Uma administração enviou um aviso de recepção de acordo com as disposições do n.º **1162**, mas não comunica a sua decisão num prazo de quatro meses a contar da data do envio dos dados relativos à coordenação;

1172 *c*) A administração que procura a coordenação e uma administração junto da qual se procura a coordenação estão em desacordo no que respeita à interferência aceitável;

1173 *d*) Ou, ainda, a coordenação não é possível por qualquer outra razão.

1174 (2) Ao apresentar o seu pedido à Comissão, a administração interessada comunicar-lhe-á as informações necessárias para lhe permitir tentar efectuar a coordenação.

1175 *Medidas a tomar pela IFRB:*

1176 § 29. (1) Quando a Comissão receber um pedido nos termos do n.º **1170**, enviará logo um telegrama à administração interessada pedindo-lhe que acuse a recepção imediatamente.

1177 (2) Quando a Comissão receber um aviso de recepção em consequência da medida que tomou nos termos do n.º **1176** ou quando a Comissão receber um pedido nos termos do n.º **1171**, enviará imediatamente um telegrama à administração interessada pedindo-lhe que tome rapidamente uma decisão sobre a questão.

1178 (3) Quando a Comissão receber um pedido nos termos do n.º **1173**, tentará efectuar a coordenação em conformidade com as disposições dos n.os **1148** a **1154**. Quando a Comissão não receber aviso de recepção do seu pedido de coordenação no prazo especificado no n.º **1162**, agirá de acordo com as disposições do n.º **1176**.

1179 (4) Se para tal houver lugar, a Comissão avaliará, em conformidade com o procedimento especificado nos n.os **1169** a **1174**, o nível de interferência. Em qualquer caso comunicará às administrações interessadas os resultados obtidos.

1180 (5) A Comissão poderá pedir as informações suplementares que considere necessárias para avaliar a interferência causada aos serviços interessados.

1181 (6) Quando uma administração não responder num prazo de 30 dias, a contar da data de envio do telegrama que a Comissão lhe enviou nos termos do n.º **1176**, pedindo-lhe que acuse a recepção, ou quando essa administração não comunicar a sua decisão sobre o assunto num prazo de 2 meses, a contar da data de envio do telegrama da Comissão nos termos do n.º **1177**, considera-se que a administração junto da qual se procurou a coordenação se obriga a não formular queixa relativa às interferências prejudiciais que possam ser causadas pela estação de Terra em vias de coordenação ao serviço assegurado pela sua estação terrena.

1164.1 (1) Os métodos de cálculo e os critérios para avaliar a interferência deveriam basear-se nos pareceres da CCIR aceites pelas administrações interessadas em aplicação da Resolução n.º 703 ou de outras disposições. No caso de desacordo sobre um parecer da CCIR ou na ausência de tais pareceres, os métodos e os critérios constituirão objecto de acordos entre as administrações interessadas. Tais acordos deverão ser obtidos sem causar prejuízo às outras administrações.

1166.2 (2) Este período pode ser prolongado com o acordo da administração que pediu a coordenação.

1182 *Notificação das consignações de frequência em caso de desacordo persistente:*

1183 § 30. Em caso de desacordo persistente entre a administração que procura a coordenação e a administração junto da qual se procurou a coordenação, a administração que procura a coordenação adiará por seis meses, excepto nos casos em que tenha sido pedida a assistência da Comissão, o envio à Comissão da sua ficha de notificação relativa à consignação em projecto, sendo esse adiamento de seis meses a contar da data do pedido de coordenação, tendo em consideração as disposições dos n.os **1230** e **1496.**

SECÇÃO V

Assistência especial dispensada pela IFRB

1184 § 31.(1) Se para isso lhe for feito pedido por qualquer administração e, em particular, pela administração de um país que tem necessidade de assistência especial, a Comissão, utilizando os meios de que disponha e que convenham às circunstâncias, prestará a seguinte assistência:

1185 *a*) Cálculo dos aumentos de temperatura de ruído, de acordo com o n.º **1066**;

1186 *b*) Preparação de mapas representando as zonas de coordenação, de acordo com o n.º **1113**;

1187 *c*) Qualquer outra assistência de carácter técnico para que sejam levados a bom termo os procedimentos descritos no presente artigo.

1188 (2) Ao apresentar o seu pedido à Comissão nos termos dos n.os **1184** a **1187**, a administração fornecer-lhe-á as informações necessárias.

1189 a 1213 *(Não atribuídos.)*

ARTIGO 12

Notificação e inscrição no ficheiro de referência internacional das frequências das consignações de frequência (1) às estações de radiocomunicações de Terra (2) (3)

SECÇÃO I

Notificação das consignações de frequência

1214 § 1. (1) Qualquer consignação de frequência (4) a uma estação fixa terrestre de radiodifusão (5), terrestre de radionavegação, terrestre de radiolocalização, de frequência padrão e de sinais horários, ou a uma estação em terra do serviço dos auxiliares de meteorologia, deverá ser notificada à Comissão Internacional do Registo de Frequências:

1215 *a*) Se a utilização da frequência em causa é susceptível de produzir interferências prejudiciais a qualquer serviço de uma outra administração (6);

1216 *b*) Ou se a frequência deve ser utilizada para radiocomunicações internacionais;

1217 *c*) Ou, ainda, se se desejar obter um reconhecimento internacional da utilização dessa frequência (7).

1218 (2) Deverá efectuar-se uma notificação análoga (8) quando uma administração desejar pedir a assistência da Comissão para a escolha de uma consignação de frequência a uma estação do serviço fixo em qualquer das faixas atribuídas em exclusivo ou em partilha a este serviço entre 3000 kHz e 27 500 kHz, ou quando esta administração desejar utilizar, paara o mesmo tipo de estação, uma consignação de frequência

---

A.12.1 (1) A expressão «consignação de frequência», sempre que figure no presente artigo, deve entender-se como referindo-se quer a uma nova consignação de frequência quer a uma modificação de uma consignação já inscrita no ficheiro de referência internacional das frequências (denominado a seguir ficheiro de referência).

A.12.2 (2) No que respeita à notificação e à inscrição no ficheiro de referência das consignações de frequência às estações de radioastrononia e às estações de radiocomunicação espacial. (v. o artigo 13).

A.12.3 (3) No que respeita à notificação e à inscrição das consignações de frequência às estações de Terra nas faixas de frequências 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região 1), na medida em que estejam implicadas as suas relações com o serviço de radiodifusão por satélite nestas faixas (v. o artigo 15).

1214.1 (4) Nos casos em que numerosas estações dependentes de uma mesma administração utilizem a mesma frequência [v. o apêndice 1 (secção F, II, coluna 5a, §§ 3 e 4)].

1214.2 (5) No que respeita às consignações às estações de radiodifusão nas faixas atribuídas em exclusivo ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz (v. o artigo 17).

1215.1 (6) Chama-se especialmente a atenção das administrações para a aplicação das disposições dos n.os **1215** e **1217** nos casos em que façam uma consignação de frequência a uma estação de Terra situada no interior da zona de coordenação de uma estação terrena (v. os n.os **1148 a 1154**, numa faixa que os serviços de radiocomunicação de Terra partilhem, com igualdade de direitos, com os serviços de radiocomunicação espacial na gama de frequências superiores a 1 GHz.

1217.1 (7) Chama-se especialmente a atenção das administrações para a aplicação dos n.os **1215** e **1217** nos casos em que façam uma consignação de frequência a uma estação de Terra situada no interior da zona de coordenação de uma estação terrena (v. os n.os **1148** a **1154**, numa faixa que os serviços de radiocomunicação de Terra partilhem, com igualdade de direitos, com os serviços de radiocomunicação espacial na gama de frequências superiores a 1 GHz.

1218.1 (8) V. a Resolução n.º 103.

predeterminada. Neste último caso, indicará as razões que motivam o seu pedido, bem como as modificações eventuais que poderia introduzir nas características da sua consignação, e a Comissão terá esta informação em conta na procura de uma solução satisfatória. Para isso deverá ser elaborada uma ficha individual de notificação pela forma prescrita na secção D do apêndice 1. Recomenda-se que a administração notificadora comunique à Comissão as outras informações indicadas nesse apêndice, bem como qualquer outra informação que julgue útil. O procedimento a seguir é o descrito nos n.os **1275** a **1304**.

1219 (3) Deverá efectuar-se uma notificação análoga no caso de qualquer frequência destinada a ser utilizada na recepção das emissões móveis por uma estação terrestre determinada, sempre que se verifique, pelo menos, uma das circunstâncias especificadas nos n.os **1214** a **1217**.

1220 (4) Não devem ser notificadas as frequências indicadas no prefácio da Lista Internacional das Frequências e prescritas no presente Regulamento como devendo ser utilizadas em comum pelas estações de um serviço determinado (por exemplo, as frequências internacionais de perigo 500 kHz e 2182 kHz, as frequências das estações radiotelegráficas de navio que funcionam em ondas decamétricas nas suas faixas exclusivas, etc.).

1221 § 2. (1) Qualquer consignação de frequência notificada em execução dos n.os **1214** a **1217** ou **1219** deve ser objecto de uma ficha individual de notificação elaborada pela forma prescrita no apêndice 1, no qual as secções A e B especificam as características fundamentais a fornecer, segundo o caso. Recomenda-se que a administração notificadora comunique igualmente à Comissão as outras informações indicadas nesse apêndice, bem como qualquer outra informação que possa julgar útil.

1222 (2) As fichas de notificação apresentadas nos termos dos n.os **1214** a **1217** ou **1218** e relativas às consignações de frequência a estações do serviço fixo nas faixas atribuídas a este serviço entre 3000 kHz e 27 500 kHz devem indicar, empregando os símbolos seguintes, a classe de funcionamento da consignação:

Símbolo A — consignação destinada a ser utilizada em exploração regular que não seja assegurada por um outro meio satisfatório de telecomunicação; ou

Símbolo B — consignação destinada a ser utilizada como consignação de reserva de um outro meio de telecomunicações; ou

Símbolo C — consignação de reservas para utilização ocasional, que não exige protecção internacionalmente reconhecida contra interferências prejudiciais.

1223 (3) Quando estações de um mesmo serviço, como, por exemplo, do serviço móvel terrestre, utilizarem uma faixa de frequências acima de 28 000 kHz numa ou várias zonas determinadas, convirá elaborar para cada frequência consignada a estações nesta faixa uma ficha de notificação pela forma prescrita no apêndice 1, no qual a secção C fixa as características fundamentais a fornecer; porém, as características notificadas deverão referir-se a uma única estação tipo. Esta disposição não se aplica:

1224 *a*) Às estações de radiodifusão;

1225 *b*) Às outras estações de Terra às quais se apliquem as disposições da subsecção II-E do presente artigo;

1226 *c*) Às estações dos serviços fixo ou móvel que funcionam nas faixas de frequências indicadas no quadro II do apêndice 28 com uma potência isotrópica radiada equivalente superior ao valor pertinente nesse quadro;

1227 *d*) Às estações de Terra nas faixas de frequências indicadas nos n.os **2509**, **2510** e **2111**.

1228 § 3. (1) Cada ficha de notificação apresentada nos termos dos n.os **1214** a **1217**, **1219** ou **1223** a **1227** deverá, tanto quanto possível, ser recebida pela Comissão antes da data de entrada em serviço da consignação de frequência em causa. Ela deve ser recebida, no máximo, 3 meses antes dessa data, mas, em qualquer caso, o mais tardar 30 dias depois de tal data.

1229 (2) Uma ficha de notificação apresentada nos termos do n.º **1218** deverá ser recebida pela Comissão no máximo um ano da data de entrada em serviço da frequência que é objecto do pedido.

1230 (3) Qualquer ficha de notificação relativa a uma consignação de frequência a estações de Terra a que se apliquem as disposições da subsecção II-E do presente artigo deverá ser recebida pela Comissão, no máximo, três anos antes e o mais tardar três meses antes da entrada em serviço da consignação de frequência em causa.

1231 (4) Com excepção dos casos abrangidos pelos n.os **1218** e **1229**, qualquer consignação de frequência cuja notificação seja recebida pela Comissão mais de 30 dias depois da data notificada de entrada em serviço ou, no caso de uma estação de Terra a que se refere a subsecção II-E do presente artigo, qualquer consignação de frequência cuja notificação seja recebida pela Comissão menos de 3 meses antes da data notificada de entrada em serviço, levará, quando houver lugar à sua inscrição no ficheiro de referência, uma observação que indique que a ficha de notificação não está conforme as disposições dos n.os **1228** ou **1230**. Todavia, essa observação não será registada no ficheiro quando se trate de uma consignação a uma estação de Terra que não foi notificada nos termos dos n.os **1214** a **1217**, mas que deverá ser notificada depois da sua entrada em serviço como resultado de uma coordenação ou de uma notificação relativa a uma consignação a uma estação terrena.

1232 § 4. Qualquer que seja o meio de comunicação, incluindo o telégrafo, pelo qual for transmitida à Comissão uma ficha de notificação, ela será considerada completa quando contenha, pelo menos, as características fundamentais apropriadas, tais como especificadas no apêndice 1.

1233 § 5. Quando for concluído um acordo regional ou de serviço, a Comissão deverá ser informada dos pormenores desse acordo.

SECÇÃO II

Procedimento para o exame das fichas de notificação e inscrição das consignações de frequência no ficheiro de referência

1234 § 6. Quando a Comissão receber uma ficha de notificação apresentada nos termos dos n.os **1214** a **1217**, **1219** ou **1223** a **1227**, que não contenha, pelo menos, as características fundamentais especificadas no apêndice 1, devolvê-la-á por correio aéreo à administração de origem, acompanhada dos motivos dessa devolução, excepto se as informações que não tinham sido fornecidas forem recebidas imediatamente em resposta a uma pergunta da Comissão. A Comissão informará a administração por telegrama quando uma ficha de notificação for devolvida nos termos da presente disposição.

1235 § 7. Quando a Comissão receber uma ficha de notificação completa, incluirá as informações que ela contém, com a data da sua recepção, numa circular semanal que será publicada num prazo de 40 dias a contar da data da recepção da ficha e que será enviada por correio aéreo a todas as administrações. Se a Comissão não puder respeitar este prazo, informará disso, logo que possível, as administrações interessadas, indicando os motivos.

1236 § 8. A circular conterá as informações completas relativas a todas as fichas de notificação dessa categoria recebidas desde a publicação da circular procedente e desempenhará o papel de aviso de recepção pela Comissão, à administração notificadora, de uma ficha de notificação completa.

1237 § 9. Para os fins dos n.os **1235** e **1236**, as fichas de notificação apresentadas nos termos do n.º **1218** sob a forma de um pedido de assistência à Comissão deverão ser agrupadas e especialmente identificadas.

1238 § 10. As fichas de notificação completas serão examinadas pela Comissão pela ordem em que as receba. Todavia, as fichas de notificação apresentadas nos termos do n.º **1218** serão tratadas logo após a sua recepção. A Comissão não poderá adiar a conclusão, a menos que faltem informações suficientes para tomar uma decisão a esse respeito. Além disso, a Comissão não resolverá sobre uma ficha de notificação que tenha relações técnicas com uma ficha recebida anteriormente.

SUBSECÇÃO II-A

Procedimento a seguir nos casos não tratados nas subsecções II-B a II-E do presente artigo

1239 § 11. (1) Com excepção das fichas de notificação a que se refere o n.º **1218**, as quais são objecto do procedimento previsto nos n.os **1275** a **1304**, a Comissão examinará cada ficha de notificação sob o ponto de vista da:

1240 *a*) Sua conformidade com as cláusulas da Convenção e do quadro de atribuição das faixas de frequências e com outras cláusulas do Regulamento das Radiocomunicações, com excepção das relativas à probabilidade de interferências prejudiciais, as quais são objecto das disposições dos n.os **1241** e **1242**;

1241 *b*) Probabilidade de uma interferência prejudicial em detrimento do serviço assegurado por uma estação para a qual já foi inscrita no ficheiro de referência uma consignação de frequência:

1) Que tenha uma data na coluna 2a (v. o n.º **1416**);
2) Ou que esteja de acordo com as disposições do n.º **1240** e tenha uma data na coluna 2b (v. o n.º **1417**), mas não tenha de facto produzido interferência prejudicial a uma qualquer consignação de frequência que tenha uma data na coluna 2a ou a uma qualquer consignação de frequência conforme com o n.º **1240** e que tenha uma data anterior na coluna 2b;

1242 *c*) Probabilidade de uma interferência prejudicial em detrimento do serviço assegurado por uma estação para a qual foi já inscrita no ficheiro de referência uma consignação de frequência:

1) Que esteja de acordo com as disposições do n.º **1240** e foi inscrita no Ficheiro de referência com uma data na coluna 2d, em seguimento a uma conclusão favorável relativamente ao n.º **1242**;
2) Ou que esteja de acordo com as disposições do n.º **1240** e foi inscrita no ficheiro de referência com uma data na coluna 2d depois de uma conclusão desfavorável relativamente ao n.º **1242**, mas que, de facto, não criou interferência prejudicial a uma qualquer consignação de frequência inscrita anteriormente no ficheiro de referência conforme com o n.º **1240**.

1243 (2) Ao proceder ao exame previsto nos n.os **1241** ou **1242**, a Comissão aplicará para a classe de funcionamento A critérios de protecção mais rigorosos do que para a classe de funcionamento B (1). A Comissão não tomará em conta a probabilidade de interferência às consignações de frequência da classe de funcionamento C.

1243.1 (1) Os diversos critérios de protecção que deverão ser aplicados pela Comissão para as classes de funcionamento A e B vêm publicados nas normas técnicas da Comissão (v. o n.º **1001**).

1244 (3) Quando se tratar de uma ficha de notificação respeitante a uma frequência superior a 28 000 kHz, a Comissão não procederá ao exame especificado no n.º **1242** senão a pedido de uma administração directamente interessada ou cujos serviços sejam afectados, quando não foi possível uma coordenação entre as administrações em causa.

1245 (4) Sempre que para tal haja lugar, a Comissão examinará também a ficha sob o ponto de vista da sua conformidade com um acordo regional ou de serviço. O procedimento a seguir em relação às consignações de frequências feitas em aplicação de um tal acordo deverá ser conforme as disposições dos n.os **1240** e **1241** ou **1242**, excepto que a Comissão não examinará a questão das probabilidades de interferências prejudiciais entre as partes contratantes do acordo. Do mesmo modo, a Comissão não examinará a questão das probabilidades de interferências prejudiciais causadas às consignações de qualquer administração com a qual a administração notificadora coordenou a utilização da frequência em causa.

1246 § 12. Segundo as conclusões a que chegar a Comissão em consequência do exame previsto nos n.os **1240** e **1241** ou **1242** e o resultado da acção empreendida pela Comissão nos termos dos n.os **1275** a **1278** e **1279**, o procedimento continuará pela forma seguinte:

1247 § 13. (1) *Conclusão favorável relativamente ao n.º* **1240** *nos casos em que as disposições dos n.os* **1241** *ou* **1242** *não são aplicáveis (v. o n.º* **1248**).

1248 (2) A consignação é inscrita no Ficheiro de referência. A data a inscrever na parte apropriada da coluna 2, segundo as disposições pertinentes da secção III do presente artigo, será a data de recepção da ficha de notificação pela Comissão.

1249 § 14. (1) *Conclusão favorável relativamente aos n.os* **1240** *e* **1241** *ou* **1242**.

1250 (2) A consignação é inscrita no ficheiro de referência. A data a inscrever na parte apropriada da coluna 2, segundo as disposições pertinentes da secção III do presente artigo, será a data de recepção da ficha de notificação pela Comissão.

1251 (3) Todavia, se resultar do exame que a certas horas, em certas estações ou em certas fases do ciclo da actividade solar a probabilidade de interferências prejudiciais é ligeiramente mais elevada do que a considerada conveniente, será inserida uma observação no ficheiro de referência, a fim de indicar que existe uma pequena probabilidade de interferências prejudiciais e que, por consequência, deverão ser tomadas precauções na utilização dessa consignação para evitar interferências prejudiciais às consignações já inscritas no ficheiro de referência.

1252 § 15. (1) *Conclusão favorável relativamente ao n.º* **1240** *mas desfavorável relativamente aos n.os* **1241** *ou* **1242**.

1253 (2) A ficha será devolvida imediatamente pelo correio aéreo à administração de origem, com uma exposição das razões que motivam a conclusão da Comissão e com as sugestões que ela possa fazer para se chegar a uma solução do problema satisfatória para as administrações que ela identificou.

1254 (3) Se a administração notificadora apresentar pela segunda vez a ficha com modificações que, depois de novo exame, motivam da parte da Comissão uma conclusão favorável relativamente aos n.os **1241** ou **1242**, a consignação será inscrita no ficheiro de referência. A data a inscrever na parte apropriada da coluna 2, segundo as disposições pertinentes da secção III do presente artigo, será a data de recepção da primeira ficha de notificação pela Comissão. A data de recepção da segunda ficha pela Comissão será indicada na coluna «Observações».

1255 (4) A administração notificadora pode apresentar pela segunda vez a ficha, quer não modificada, quer com modificações cujo efeito seja de diminuir a probabilidade de interferências prejudiciais. Quando não exista qualquer modificação ou quando as modificações não permitam aplicar as disposições do n.º **1254** e, por isso, a conclusão da Comissão se mantiver sem alteração, se a administração notificadora insistir num novo exame da ficha, indicando que pôs a sua consignação em serviço, a Comissão:

1256 *a*) Publicará na circular semanal as informações contidas na ficha de notificação, recebidas nos termos do n.º 1255, e indicará ao mesmo tempo quais são as administrações que correm o risco de ser afectadas;

1257 *b*) Enviará, simultaneamente, um telegrama a cada uma das administrações visadas no n.º **1256**, com uma referência à ficha de notificação em causa, pedindo-lhes:

1258 1) Que a informem se a consignação inscrita é ainda utilizada e, na afirmativa, se é utilizada com as características fundamentais notificadas;

1259 2) Que lhe participem qualquer interferência prejudicial que surja num prazo de dois meses a contar da data de publicação da circular semanal mencionada no n.º **1256**;

1260 *c*) Tomará as medidas apropriadas em conformidade com os n.os **1964** a **1966**, se a consignação na origem da conclusão desfavorável foi a presentada em aplicação do n.º **1218**;

1261 *d*) Inscreverá a consignação no ficheiro de referência se, ao expirar o prazo referido no n.º **1259**, não tiver recebido participação de qualquer interferência prejudicial. A data a inscrever na parte apropriada da coluna 2, segundo as disposições pertinentes da secção III do presente artigo, será a data de recepção pela Comissão da ficha de notificação inicial;

1262 *e*) Caso receba participações referentes a qualquer interferência prejudicial que tenha surgido durante o período de dois meses mencionado no n.º **1259**, à Comissão devolverá imediatamente a ficha de notificação à administração notificadora, informando esta da interferência que lhe foi participada e com as sugestões que possa fazer a fim de eliminar a interferência.

1263 (5) Se a Comissão receber informações respeitantes a qualquer interferência prejudicial que tenha surgido depois da inscrição de uma consignação nos termos do n.º **1261**, examinará de novo a questão e, se for caso disso, inscreverá, em frente de tal consignação, uma observação especial a indicar que não a tomará em conta quando do exame de fichas de notificação recebidas ulteriormente.

1264 (6) Se, em seguimento das informações recebidas nos termos dos n.ºs **1257** a **1259**, a Comissão estiver habilitada a formular uma conclusão favorável relativamente aos n.ºs **1241** ou **1242** em relação a uma consignação inscrita no ficheiro de referência nos termos dos n.ºs **1255** e **1261**, serão efectuadas as modificações convenientes na inscrição no ficheiro de referência . Se a conclusão continuar desfavorável, a Comissão inserirá no ficheiro de referência, em frente das consignações em causa, observações que descrevam a situação tal como se lhe afigura.

1265 (7) No caso em que a administração notificadora apresente pela segunda vez a sua ficha com modificações cujo efeito seja de aumentar a probabilidade de interferências prejudiciais e em que as conclusões da Comissão se mantenham, essa segunda ficha é tratada segundo as disposições do n.º **1253**:

1266 § 16. (1) *Conclusão desfavorável relativamente ao n.º* **1240** *nos casos em que as disposições dos n.ºs* **1241** *ou* **1242** *não são aplicáveis (v. o n.º* **1244**).

1267 (2) Quando a ficha comportar uma referência segundo a qual a estação funcionará de acordo com as disposições do n.º **342** do presente regulamento, a consignação será inscrita no ficheiro de referência com a condição de serem observadas as disposições dos n.ºs **1419** ou **1420**. A data a inscrever na parte apropriada da coluna 2, segundo as disposições pertinentes da secção III do presente artigo, é a data de recepção da ficha de notificação pela Comissão.

1268 (3) Quando a ficha não comportar qualquer referência segundo a qual a estação funcionará de acordo com as disposições do n.º **342** do presente Regulamento, essa ficha é devolvida imediatamente pelo correio aéreo à administração notificadora, com uma exposição das razões que motivaram a conclusão da Comissão e com as sugestões que ela possa fazer a fim de se obter uma solução satisfatória do problema.

1269 § 17. (1) *Conclusão desfavorável relativamente ao n.º* **1240** *nos casos em que as disposições dos n.ºs* **1241** *ou* **1242** *sejam aplicáveis.*

1270 (2) Quando a ficha comportar uma referência segundo a qual funcionará de acordo com as disposições do n.º **342** do presente Regulamento, será examinada imediatamente sob o ponto de vista dos n.ºs **1241** ou **1242** e, consoante o caso, ser-lhe-ão aplicadas as disposições dos n.ºs **1271** ou **1272**.

1271 (3) Se a conclusão for favorável relativamente aos n.ºs **1241** ou **1242**, a consignação será inscrita no ficheiro de referência com a condição de serem observadas as disposições do n.º **1419**. A data a inscrever na parte apropriada da coluna 2, segundo as disposições pertinentes da secção III do presente artigo, é a data da recepção pela Comissão da ficha de notificação.

1272 (4) Se a conclusão for desfavorável relativamente aos n.ºs **1242** ou **1242**, a ficha será devolvida imediatamente pelo correio aéreo à administração notificadora. Se esta administração insistir por novo exame da ficha, a consignação de frequência será inscrita apenas para informação, com uma observação apropriada referindo-se ao n.º **1419**.

1273 (5) Quando a ficha não contiver qualquer referência segundo a qual a estação funcionará de acordo com as disposições do n.º **342** do presente Regulamento, essa ficha será devolvida imediatamente pelo correio aéreo à administração notificadora, com uma exposição das razões que motivaram a conclusão da Comissão e com as sugestões que ela possa fazer a fim de se obter uma solução satisfatória do problema.

1274 § 18. *Procedimento a seguir para o tratamento das fichas de notificação apresentadas nos termos do n.º* **1218**.

1275 (1) No caso de uma ficha de notificação apresentada nos termos do n.º **1218** relativamente à escolha de uma consignação de frequência destinada a ser utilizada em exploração regular (classe de funcionamento A), a Comissão escolherá, o mais rapidamente possível, uma frequência que:

1276 *a*) Seja capaz de proporcionar o serviço pretendido;

1277 *b*) Consoante o caso, esteja conforme com os n.ºs **1240** e **1241** ou **1242**, a fim de garantir uma conclusão favorável;

1278 *c*) Esteja isenta de interferência prejudicial causada por qualquer consignação inscrita no ficheiro de referência e conforme com o n.º **1240**.

1279 (2) No caso de uma ficha de notificação apresentada nos termos do n.º **1218** referente à notificação de uma consignação de frequência predeterminada, a administração notificadora poderá pedir á Comissão que efectue, além do exame previsto nos n.ºs **1240** e **1241** ou **1242**, o cálculo da probabilidade de interferência prejudicial que poderá ser causada a essa consignação por consignações inscritas no ficheiro de referência.

A Comissão comunicará à administração notificadora os resultados desse exame e, se necessário, apresentará sugestões que visem evitar qualquer eventual interferência prejudicial à consignação.

1280 (3) Se a aplicação das disposições dos n.ºs **1275** a **1278** e **1279** der origem a dificuldades, deverá ser seguido o procedimento que abaixo se descreve:

1281 *a*) A Comissão procurará em primeiro lugar acesso a uma das partes menos sobrecarregadas de uma faixa apropriada, sem considerar a possibilidade de modificar uma consignação já inscrita;

1282 *b*) Se tanto for necessário, a Comissão consultará a administração que tenha apresentado uma ficha de notificação de acordo com o n.º **1218**, para ver se será possível modificar as características dessa consignação;

1283 *c*) No caso de não resultarem as medidas tomadas nos termos dos anteriores n.os **1281** e **1282** e se a administração que faz o pedido considerar que a frequência escolhida é aceitável, a Comissão determinará se a consignação objecto do pedido poderá ser inserida por anulação ou desclassificação de uma consignação já inscrita. As consultas a efectuar em tal caso são as que vêm descritas na secção VII do presente artigo;

1284 *d*) No caso de não resultarem as medidas tomadas nos termos das disposições do n.º **1283**, a Comissão procurará outros meios de inserir a consignação pedida, de forma a modificar apenas, no mínimo indispensável, as características de qualquer consignação já inscrita;

1285 *e*) Para os fins das medidas previstas no n.º **1284**, a Comissão concentrará as suas consultas sobre as consignações inscritas mais antigas e para as quais a Comissão pense existirem meios de telecomunicação satisfatórios a título de substituição;

1286 *f*) Depois de ter definido as modificações mínimas das características que, em tal caso, seria necessário efectuar a uma consignação já inscrita para inserir uma nova consignação pedida nos termos do n.º **1218**, a Comissão invocará as disposições pertinentes da Convenção para procurar a assistências da administração apropriada a fim de que esta aceite, na devida altura, que seja modificada a consignação já inscrita em seu nome;

1287 *g*) No caso de não resultarem as medidas tomadas nos termos das disposições do n.º **1286**, a Comissão chamará a atenção da administração apropriada para o facto de que, em tais circunstâncias, esta tem obrigação de reduzir a largura da faixa de frequências consignada, se isso for possível sob o ponto de vista da exploração, ou então de deslocar a frequência consignada de um valor que não exceda a largura de faixa da consignação de frequência inscrita, desde que não cause interferência prejudicial às consignações de frequência adjacentes;

1288 *h*) A administração apropriada deverá:

1289 1) Estar de acordo em efectuar as modificações necessárias da sua consignação existente inscrita, indicando a data em que tais modificações serão efectivas; ou

1290 2) Indicar as razões por que não podem ser efectuadas tais modificações;

1291 *i*) Se um tal caso não for resolvido num prazo de três meses a contar da data do pedido de consignação apresentado nos termos do n.º **1218**, a Comissão publicará, para informação de todos os Membros da União, um relatório sobre a questão;

1292 *j*) No decorrer do procedimento, a Comissão consultará, na altura apropriada, a administração que pediu uma consignação de acordo com as disposições do n.º **1218** para saber se a frequência escolhida é aceitável;

1293 *k*) Se, em aplicação do presente parágrafo, uma administração aceitar uma modificação das características fundamentais da sua consignação de frequência, essa modificação será inscrita no ficheiro de referência sem tocar na data ou nas datas iniciais.

1294 (4) Solicita-se instantemente às administrações que prestem à Comissão toda a assistência possível por intermédio das suas estações de fiscalização das emissões para que ela possa desempenhar bem as atribuições previstas na presente subsecção.

1295 § 19. (1) *Resultado das medidas tomadas pela Comissão em aplicação das disposições dos n.os* **1275** a **1278** *e relativas a um pedido de assistência apresentado nos termos do n.º* **1218**.

1296 (2) Depois de ter escolhido uma frequência em aplicação dos n.os **1275** a **1278**, a Comissão submeterá imediatamente, por telegrama, a frequência escolhida à aprovação da administração notificadora e inserirá uma inscrição provisória no ficheiro de referência de acordo com o n.º **1311**. A data de recepção do pedido dirigido à Comissão, em conformidade com o n.º **1218**, será inscrita na parte apropriada da coluna 2.

1297 (3) Logo que receba o telegrama mencionado no n.º **1296**, a administração notificadora estudará rapidamente a questão e, caso não aceite a frequência escolhida, informará disso a Comissão, indicando os motivos da recusa.

1298 (4) Nas condições mencionadas no n.º **1297**, a Comissão anulará a inscrição e informará a administração interessada de que foi feita a anulação.Em tal caso, se a administração notificadora lho pedir, a Comissão tentará novamente escolher uma frequência aceitável; todavia, esse pedido será considerado uma nova notificação nos termos do n.º **1218**.

1299 (5) Quando uma administração notificadora aceitar uma frequência escolhida pela Comissão, informará esta logo que possível.

1300 (6) Se, num prazo de dois meses a contar da data de envio do telegrama indicado no n.º **1296** a pedir a concordância com a frequência escolhida, a Comissão não receber qualquer resposta, anulará a inscrição provisória e informará as outras administrações de que foi feita essa anulação.

1301 § 20. (1) *Resultado das medidas tomadas pela Comissão em aplicação das disposições do n.º* **1280** *relativamente a um pedido de assistência apresentado nos termos do n.º* **1218**.

1302 (2) Depois de ter escolhido uma frequência em aplicação do n.º **1280** e se foram aceites as modificações necessárias da consignação inscrita anteriormente, em conformidade com as disposições do n.º **1289**, a Comissão tratará a consignação escolhida de acordo com as disposições do n.º **1295**.

1303 (3) Depois de ter escolhido uma frequência em aplicação do n.º **1280**, se não puderam ser efectuadas as modificações necessárias da consignação inscrita anteriormente em virtude de medidas tomadas de acordo com as disposições do n.º **1290** e se a frequência escolhida for mesmo assim considerada aceitável pela administração que pediu uma consignação, a Comissão procederá a uma inscrição no ficheiro de referência em nome da administração que fez o pedido. A data de recepção do pedido enviado à Comissão nos termos do n.º 1218 será inscrita na parte apropriada da coluna 2.

1304 (4) As interferências prejudiciais que possam resultar da utilização simultânea das duas consignações serão objecto de consultas entre as administrações interessadas.

1305 § 21. (1) *Modificações das características fundamentais das consignações já inscritas no ficheiro de referência.*

1306 (2) Qualquer notificação de modificação das características fundamentais de uma consignação já inscrita no Ficheiro de referência, tal como definidas no apêndice 1 (com excepção, todavia, das que figuram nas colunas 2c, 3, 4a e 11 do ficheiro de referência), será examinada pela Comissão segundo as disposições dos n.os **1240** e **1241**, **1242** ou **1244**, segundo o caso, e ser-lhe-ão aplicadas as disposições dos n.os **1247 a 1273**, inclusive. Quando a modificação for inscrita no ficheiro de referência, alterar-se-á a consignação original em conformidade com a notificação.

1307 (3) Todavia, no caso de uma modificação das características fundamentais de uma consignação que esteja de acordo com as disposições do n.º **1240** (com excepção de uma alteração da frequência consignada que exceda metade da faixa de frequências primitivamente consignada, tal como definida no n.º **141**) e em que a Comissão formule uma conclusão favorável relativamente aos n.os **1241** ou **1242** ou conclua que essa modificação não aumentará a probabilidade de interferências prejudiciais em detrimento de consignações de frequência já inscritas no ficheiro de referência, a consignação de frequência modificada conservará a data primitivamente inscrita na parte apropriada da coluna 2. Além disso, inscreve-se na coluna «Observações» a data de recepção pela Comissão da ficha de notificação respeitante à modificação.

1308 (4) A data prevista de entrada em serviço de uma consignação de frequência pode ser prorrogada por três meses, a pedido da administração notificadora. No caso de uma administração declarar que circunstâncias excepcionais motivam novo prolongamento desse prazo, esse novo prolongamento poderá ser concedido, mas não deverá em nenhum caso exceder seis meses a contar da data inicial prevista para a entrada em serviço.

1309 § 22. *Na aplicação das disposições das subsecções II-A a II-C*, qualquer ficha de notificação apresentada de novo à Comissão e recebida por ela mais de seis meses após a data em que devolveu a ficha à administração notificadora será considerada como uma nova ficha de notificação.

1310 § 23. (1) *Inscrição das consignações de frequência notificadas antes da sua entrada em serviço.*

1311 (2) Se uma consignação de frequência notificada antes da sua entrada em serviço for objecto de conclusões favoráveis formuladas pela Comissão relativamente aos n.os **1240** e **1241** ou **1242**, será inscrita provisoriamente no ficheiro de referência com um símbolo especial na coluna «Observações», para indicar o carácter provisório dessa inscrição.

1312 (3) Num prazo de 30 dias (v. o n.º **1228**) a contar da data prevista para a entrada em serviço inicialmente notificada ou modificada nos termos do n.º **1308**, a administração notificadora confirmará que a consignação de frequência foi posta em serviço. A Comissão suprimirá o símbolo especial na coluna «Observações» logo que seja avisada de que a consignação foi posta em serviço.

1313 (4) Se a Comissão não receber a confirmação no prazo previsto no n.º **1312**, a inscrição em causa será anulada. A Comissão consultará a administração interessada antes de tomar esta medida.

1314 (5) As disposições dos n.os **1311** a **1113** não se aplicam às consignações de frequência que estejam de acordo com os planos de adjudicação que figuram nos apêndices 25 Mar2, 26, 27 (*) e 27 Aer 2 (*) ao presente Regulamento; a Comissão inscreverá essas consignações de frequência no ficheiro de referência aquando da recepção da ficha de notificação.

Subsecção II-B

Procedimento a seguir pelas estações costeiras radiotelefónicas que funcionam nas faixas atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 23 000 kHz

1315 § 24. (1) *Exame das fichas de notificação respeitantes às consignações de frequência às estações costeiras radiotelefónicas nas faixas atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 23 000 kHz para as estações costeiras radiotelefónicas (v. o n.º* **1239***).*

1316 (2) A Comissão examinará cada ficha de notificação a que refere o n.º **1315**;

1317 *a*) Relativamente às disposições do n.º **1240** e, em particular, às do n.º **4373**;

1318 *b*) A fim de determinar se a consignação notificada está de acordo com uma adjudicação do plano de adjudicação que figura no apêndice 25 Mar2 ao presente Regulamento.

(*) Nota do Secretariado-Geral: v. o n.º *5189* e a Resolução n.º 400.

1319 (3) Qualquer consignação de frequência que seja objecto de uma conclusão favorável relativamente às disposições dos n.os **1317** e **1318** é inscrita no ficheiro de referência (v. igualmente o n.º **1314**. A data a inscrever na coluna 2a é a determinada pelas disposições pertinentes da secção III do presente artigo.

1320 (4) Qualquer consignação de frequência que seja objecto de uma conclusão desfavorável relativamente às disposições do n.º **1317** é examinada segundo as disposições dos n.os **1267** e **1268**. A data a inscrever na coluna 2b é determinada pelas disposições pertinentes da secção III do presente artigo.

1321 (5) No caso de uma ficha de notificação que seja objecto de uma conclusão favorável relativamente às disposições do n.º **1317**, mas desfavorável relativamente às do n.º **1318**, a Comissão examina essa ficha sob o ponto de vista da probabilidade de interferência prejudicial em detrimento do serviço assegurado por uma estação costeira radiotelefónica cuja consignação de frequência:

1322 *a*) Esteja de acordo com uma das adjudicações do plano e esteja já inscrita no ficheiro de referência ou seja susceptível de aí ser inscrita no futuro;

1323 *b*) Ou, então, foi inscrita no ficheiro de referência numa frequência especificada no apêndice 16, em seguimento a uma conclusão favorável relativamente aos n.os **1321** a **1324**;

1324 *c*) Ou, ainda, foi inscrita no ficheiro de referência numa frequência especificada no apêndice 16, depois de uma conclusão desfavorável relativamente aos n.os **1321** a **1324**, mas não criou, de facto, interferência prejudicial a uma qualquer consignação de frequência a uma estação costeira radiotelefónica anteriormente inscrita no ficheiro de referência.

1325 (6) Em conformidade com as conclusões da Comissão relativamente aos n.os **1321** a **1324**, o procedimento continuará segundo as disposições dos n.os **1249** a **1265**, inclusive, ou **1305** a **1307**, inclusive, consoante o caso, subentendendo-se que no texto destas disposições deverão ler-se os n.os **1321** a **1324** em lugar do n.º **1241**.

1326 § 25. (1) *Exame das fichas de notificação relativas às frequências de recepção utilizadas pelas estações costeiras radiotelefónicas nas faixas atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 23 000 kHz para as estações radiotelefónicas de navio (v. os n.os* **1219** *e* **1239**).

1327 (2) A Comissão examinará cada ficha de notificação a que se refere o n.º **1326**:

1328 *a*) Relativamente às disposições do n.º **1240** e em, especial, às do n.º **4374**;

1329 *b*) A fim determinar se a consignação notificada corresponde a uma frequência associada, segundo o apêndice 16, a uma frequência adjudicada à administração notificadora no plano de adjudicação que figura no apêndice 25 Mar2 ao presente Regulamento.

1330 (3) Qualquer consignação de frequência de uma recepção a uma estação costeira radiotelefónica que seja objecto de uma conclusão favorável relativamente aos n.os **1328** e **1329** será inscrita no ficheiro de referência. A data a inscrever na coluna 2a será a determinada pelas disposições pertinentes da secção III do presente artigo.

1331 (4) Qualquer consignação de frequência de recepção a uma estação costeira radiotelefónica que seja objecto de uma conclusão desfavorável relativamente ao n.º **1328** será examinada segundo as disposições pertinentes dos n.os **1267** e **1268**. A data a inscrever na coluna 2b será determinada pelas disposições pertinentes da secção III do presente artigo.

1332 (5) Qualquer consignação de frequência de recepção a uma estação costeira radiotelefónica que seja objecto de uma conclusão favorável relativamente ao n.º **1328** mas desfavorável relativamente ao n.º **1329** será inscrita no ficheiro de referência. A data a inscrever na coluna 2b será a determinada pelas disposições pertinentes da secção III do presente artigo.

SUBSECÇÃO II-C

Procedimento a seguir pelas estações aeronáuticas que funcionam nas faixas atribuídas em exclusivo aos serviços móveis aeronáuticos entre 2850 kHz e 22 000 kHz

1333 § 26. (1) *Exame das fichas de notificação respeitantes às consignações de frequência às estações aeronáuticas do serviço móvel aeronáutico (R) nas faixas atribuídas em exclusivo a este serviço entre 2850 kHz e 22 000 kHz (v. o n.º* **1239**).

1334 (2) A Comissão examinará cada ficha de notificação a que se refere o n.º **1333** a fim de determinar:

1335 *a*) Se a ficha de notificação está de acordo com as disposições do n.º **1240**;

1336 *b*) Se a frequência notificada corresponde a uma das frequências especificadas na coluna 1 do plano de adjudicação das frequência para o serviço móvel aeronáutico (R) que figura no apêndice 27 Aer2 (*) (parte II, secção II, artigo 2) ou se a consignação resulta de uma modificação permitida da classe de emissão, satisfazendo a largura de faixa necessária para a nova emissão à disposição das vias, tal como é dada no apêndice 27 Aer2 (*);

1337 *c*) Se são devidamente observadas as limitações de utilização especificadas na coluna 3 do plano:

(*) Nota do Secretariado-Geral: v. o n.º **5189** e a Resolução n.º 400.

1338 *d*) Se a ficha de notificação está de acordo com os princípios técnicos do plano, tal como são expostos no apêndice 27 Aer2 (*);

1339 *e*) Se a zona de utilização está contida no interior das zonas indicadas na coluna 2 do plano.

1340 (3) Uma ficha de notificação não em conformidade com as disposições do n.º **1335** será examinada segundo as disposições dos n.os **1267** e **1268**. A data a inscrever na coluna 2b será a determinada pelas disposições pertinentes da secção III do presente artigo.

1341 (4) No caso de uma ficha de notificação em conformidade com as disposições dos n.os **1335** a **1338**, mas não com as do n.º **1339**, a Comissão examinará se fica assegurada às adjudicações do plano a protecção especificada no apêndice 27 Aer2 (*) (parte I, secção II-A, § 5). Para isso, Comissão admite que a frequência será utilizada de acordo com as condições de partilha entre as zonas, tal como são especificadas no apêndice 27 Aer2 (*) (parte I, secção II-B, § 4).

1342 (5) Todas as consignações de frequência a que se refere o n.º **1333** serão inscritas no ficheiro de referência de acordo com as conclusões da Comissão. A data a inscrever na coluna 2a ou na coluna 2b será determinada pelas disposições pertinentes na secção III do presente artigo.

1343 § 27. (1) *Exame das fichas de notificação relativas às consignações de frequência a estações aeronáuticas do serviço móvel aeronáutico (OR) nas faixas atribuídas em exclusivo a este serviço entre 3025 kHz e 18 030 kHz (v. o n.º* **1239***).*

1344 (2) A Comissão examinará cada ficha de notificação a que se refere o n.º **1343** a fim de determinar:

1345 *a*) Se a consignação está em conformidade com uma das adjudicações primárias do plano de adjudicação das frequências do serviço móvel aeronáutico (OR) que figura no apêndice 26, bem como as condições especificadas nesse apêndice (partes III e IV);

1346 *b*) Se a consignação está em conformidade com uma das adjudicações secundárias do plano de adjudicação das frequências do serviço móvel aeronáutico (OR) que figura no apêndice 26 ou satisfaz as condições requeridas para as adjudicações secundárias, bem como as condições especificadas nesse mesmo apêndice [parte III, secção II, § 4, subparágrafo *d*), e parte IV]. Ao aplicar estas disposições, a Comissão admite que a frequência é utilizada durante o dia;

1347 *c*) Se a consignação resulta de uma modificação permitida da classe de emissão, se a largura de faixa ocupada pela nova emissão satisfaz a definição das vias, tal como figura no apêndice 26 (parte III, secção II, §§ 1 e 2), e se a consignação satisfaz todas as condições requeridas para uma adjudicação primária ou uma adjudicação secundária do plano, excepto que a frequência não corresponde sob o ponto de vista numérico, a uma das frequências especificadas no plano.

1348 (3) Os critérios técnicos a utilizar pela Comissão para o exame das fichas de notificação são os que figuram no apêndice 26 (parte III).

1349 (4) Todas as consignações de frequência a que se refere o n.º **1343** são inscritas no ficheiro de referência, de acordo com as conclusões da Comissão. A data a inscrever na coluna 2a ou na coluna 2b é a determinada pelas disposições pertinentes da secção III do presente artigo.

SUBSECÇÃO II-D

Procedimento a seguir pelas estações de radiodifusão que funcionam nas faixas atribuídas em exclusivo ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz

1350 § 1. As consignações de frequência às estações de radiodifusão nas faixas atribuídas em exclusivo ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz são tratadas em conformidade com as disposições do artigo 17 e não são incluídas senão na lista anual mencionada no n.º **1769**, que é considerada como um suplemento à Lista Internacional de Frequências.

SUBSECÇÃO II-E

Procedimento a seguir nos casos em que estações de Terra funcionam na mesma faixa de frequências de uma estação terrena e se situam na zona de coordenação desta estação, quer se trate de uma estação terrena existente, quer de uma estação terrena para a qual foi efectuada ou iniciada a coordenação

1351 § 29. A Comissão examinará cada ficha de notificação:

1352 *a*) Sob o ponto de vista da sua conformidade com as cláusulas da Convenção, o quando de atribuição das faixas de frequências e as outras cláusulas do Regulamento das Radiocomunicações, com excepção das relativas ao procedimento de coordenação e à probabilidade de interferências prejudiciais, as quais são objecto das disposições dos n.os **1353** e **1354**;

1353 *b*) Sob o ponto de vista da sua conformidade com as disposições dos n.os **1148** a **1154** relativas à coordenação da utilização da consignação de frequência com as outras administrações interessadas;

1354 *c*) Se tal for o caso, sob o ponto de vista da probabilidade de interferência prejudicial em detrimento do serviço assegurado por uma estação terrena de recepção para a qual tenha já sido inscrita

(*) Nota do Secretariado-Geral: v. o n.º **5189** e a Resolução n.º 400.

no ficheiro de referência uma consignação de frequência, de acordo com as disposições do n.º **1503**, se a consignação de frequência correspondente à estação espacial de emissão não tiver, de facto, causado interferência prejudicial a uma qualquer consignação anteriormente inscrita no ficheiro de referência e de acordo com os n.os **1240** ou **1352**, consoante o caso.

1355 § 30. Consoante as conclusões a que a Comissão chegar em consequência do exame previsto nos n.os **1352**, **1353** e **1354**, o procedimento continuará pela forma seguinte:

1356 § 31. (1) *Conclusão desfavorável relativamente ao n.º* **1352**.

1357 (2) Quanto a ficha comportar uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342** e a conclusão for favorável relativamente aos n.os **1353** ou **1354**, consoante o caso, a consignação é inscrita no ficheiro de referência, desde que sejam observadas as disposições do n.º **1420**. A data de recepção pela Comissão da ficha de notificação será inscrita na coluna 2d.

1358 (3) Se a conclusão for desfavorável relativamente aos n.os **1353** ou **1354**, consoante o caso, a ficha será devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivaram a conclusão da Comissão. Se a administração notificadora insistir num novo exame da ficha de notificação, a consignação será inscrita no ficheiro de referência, desde que sejam aplicáveis as disposições do n.º **1420**. A data de recepção pela Comissão da ficha de notificação original será inscrita na coluna 2d.

1359 (4) Quando a ficha não comportar qualquer referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342**, será devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivaram a conclusão da Comissão e com as sugestões que esta possa fazer para se obter uma solução satisfatória do problema.

1360 (5) Se a administração notificadora apresentar de novo a ficha com uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342**, a ficha de notificação será tratada como uma nova ficha de notificação.

1361 § 32. (1) *Conclusão favorável ao n.º* **1352**.

1362 (2) Quando a Comissão concluir que o procedimento de coordenação referido no n.º **1353** foi aplicado com êxito no que respeita a todas as administrações cujas estações terrenas possam ser afectadas, a consignação será inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação será inscrita na coluna 2d.

1363 (3) Quando a Comissão concluir que não foi aplicado o procedimento de coordenação referido no n.º **1353** e:

1364 *a*) Se a administração notificadora lhe pedir que efectue a coordenação requerida, a Comissão tomará as medidas necessárias para esse fim. Se forem coroadas de êxito as tentativas da Comissão para obter um acordo, ela informará disso as administrações interessadas e tratará a ficha de notificação em conformidade com as disposições do n.º **1362**;

1365 *b*) Se falharem as tentativas da Comissão para obter um acordo em aplicação dos n.os **1364** ou **1169** a **1174** ou se, quando notificar a consignação, a administração declarar que não obteve êxito e não lhe pedir que efectue a coordenação requerida, a Comissão examinará a ficha de notificação relativamente ao n.º **1354** e, simultaneamente, informará disso as administrações interessadas;

1366 *c*) Se a administração não lhe pedir que efectue a coordenação requerida, a ficha de notificação será devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivaram essa devolução e com as sugestões que a Comissão possa fazer para obter uma solução satisfatória do problema.

1367 (4) Quando a administração notificadora apresentar de novo a sua ficha de notificação, e se a Comissão concluir que o procedimento de coordenação referido no n.º **1353** foi aplicado com êxito no que respeita a todas as administrações cujas estações terrenas podem ser desfavoravelmente influenciadas, a consignação será inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação original será inscrita na coluna 2d. A data de recepção, pela Comissão, da ficha de notificação apresentada de novo será indicada na coluna «Observações».

1368 (5) Quando a administração notificadora apresentar de novo a ficha de notificação pedindo à Comissão que efectue a coordenação requerida, a ficha de notificação será tratada em conformidade com as disposições dos n.os **1363**, **1364** ou **1365**. Contudo, se a consignação vier, posteriormente, a ser inscrita no ficheiro de referência, a data de recepção pela Comissão da ficha de notificação apresentada de novo será indicada na coluna «Observações».

1369 § 33. (1) *Conclusão favorável relativamente aos n.os* **1352** e **1354**.

1370 (2) A consignação será inscrita no ficheiro de referência e a data de recepção, pela Comissão, da ficha de notificação será inscrita na coluna 2d.

1371 § 34. (1) *Conclusão favorável relativamente ao n.º* **1352**, *mas desfavorável relativamente ao n.º* **1354**.

1372 (2) A ficha será devolvida imediatamente pelo correio aéreo à administração de origem, com a indicação das razões que motivaram a conclusão da Comissão e com as sugestões que esta possa fazer para que se obtenha uma solução satisfatória do problema.

1373 (3) No caso de a administração notificadora apresentar de novo a ficha com modificações que, após novo exame, motivem da parte da Comissão uma conclusão favorável relativamente ao n.º **1354**, a consignação será inscrita no ficheiro de referência. A data de recepção, pela Comissão, da ficha de notificação original será

inscrita na coluna 2d, e a data de recepção, pela Comissão, da ficha de notificação apresentada de novo será indicada na coluna «Observações».

1374 (4) Se a administração notificadora apresentar de novo a ficha, quer não modificada, quer com modificações susceptíveis de diminuir a probabilidade de interferências prejudiciais, mas não em proporções suficientes que permitam a aplicação das disposições do n.º **1373**, se essa administração insistir por um novo exame a ficha e se as conclusões da Comissão se mantiverem, a consignação será inscrita no ficheiro de referência, mas essa inscrição só poderá ser feita se a administração notificadora avisar a Comissão de que a consignação esteve em serviço durante, pelo menos, quatro meses a contar da data em que as duas estações entraram em serviço sem que daí tenha resultado qualquer queixa de interferência prejudicial. A data de recepção pela Comissão da ficha de notificação original será inscrita na coluna 2d, e a data em que a Comissão recebeu aviso de que não se verificou qualquer queixa de interferência prejudicial será indicada na coluna «Observações».

1375 (5) Quando a administração notificadora não possa avisar a Comissão relativamente à interferência mencionada no n.º **1374** porque a consignação susceptível de ser interferida não foi ainda posta em serviço, poderá pedir à Comissão que inscreva provisoriamente a sua consignação no ficheiro de referência. A Comissão inscreverá então essa consignação com um símbolo especial na coluna «Observações» a indicar o carácter provisório dessa inscrição.

1376 § 35. (1) *Modificações das características fundamentais das consignações já inscritas no ficheiro de referência.*

1377 (2) Qualquer notificação de modificação das características fundamentais de uma consignação notificada nos termos do n.º **1221** e já inscrita no ficheiro de referência, tal como vêm definidas no apêndice 1, secção A ou B (com excepção, todavia, das que figuram nas colunas 2c, 3 e 4a do ficheiro de referência), ou qualquer notificação em conformidade com o n.º **1221** relativamente a uma consignação já inscrita nos termos dos n.ºs **1223** e **1227** (apêndice 1, secção C) será examinada pela Comissão de acordo com as disposições dos n.ºs **1352** e **1353** e, se for caso disso, **1354** e serão aplicadas as disposições dos n.ºs **1356** a **1374**. Quando a modificação deva ser inscrita no ficheiro de referência, a consignação original será modificada de acordo com a notificação.

1378 (3) Todavia, no caso de uma modificação das características fundamentais de uma consignação que esteja de acordo com as disposições do n.º **1352**, e se a Comissão formular uma conclusão favorável relativamente ao n.º **1353** e ao n.º **1354**, quando as disposições deste forem aplicáveis, ou concluir que essa modificação não aumenta a probabilidade de interferências prejudiciais em detrimento de consignações de frequência já inscritas no ficheiro de referência, a consignação de frequência modificada conservará a data primitivamente inscrita na coluna 2d. Além disso, será inscrita na coluna «Observações» a data de recepção, pela Comissão, da ficha de notificação relativa à modificação.

1379 (4) A data prevista para a entrada em serviço de uma consignação de frequência poderá ser prorrogada por três meses, a pedido da administração notificadora. Caso a administração venha a declarar que circunstâncias excepcionais motivam novo prolongamento desse prazo, poderá ser concedido esse novo prolongamento o qual, em caso algum, deverá ir além de seis meses a contar da data inicial prevista para a entrada em serviço.

1380 § 36. Na aplicação das disposições da presente subsecção, qualquer ficha de notificação apresentada de novo à Comissão e recebida por esta mais de dois anos após a data em que ela devolveu a ficha à administração notificadora será considerada como uma nova ficha de notificação.

1381 § 37. (1) *Inscrição de consignações de frequência notificadas antes da sua entrada em serviço.*

1382 (2) Se uma consignação de frequência notificada antes da sua entrada em serviço for objecto de conclusões favoráveis formuladas pela Comissão relativamente aos n.ºs **1352** e **1353**, e se for caso disso, **1354**, será inscrita provisoriamente no ficheiro de referência, com um símbolo especial na coluna «Observações» a indicar o carácter provisório dessa inscrição.

1383 (3) Num prazo de 30 dias a contar da data prevista para a entrada em serviço, inicialmente notificada (v. o n.º **1230**) ou modificada nos termos do n.º **1379**, a administração notificadora confirmará que a consignação de frequência foi posta em serviço. Quando a Comissão foi avisada de que a consignação foi posta em serviço, suprirá o símbolo especial na coluna «Observações».

1384 (4) Se a Comissão não receber a confirmação no prazo previsto no n.º **1383**, a inscrição em causa será anulada. A Comissão consultará a administração interessada antes de tomar esta medida.

1385 (5) Quando, ao expirar o período definido no n.º **1374**, a Comissão for avisada da não existência de qualquer queixa de interferência prejudicial, suprirá o símbolo inscrito em aplicação do n.º **1375**.

Secção III

Inscrição de datas e das conclusões no ficheiro de referência

1386 § 38. Sempre que a Comissão inscreva uma consignação de frequência no ficheiro de referência, indicará a sua conclusão por um símbolo colocado na coluna apropriada. Além disso, inscreverá na coluna «Observações» os motivos e qualquer conclusão desfavorável.

1387 § 39. O procedimento a plicar para a inscrição de datas na parte apropriada da coluna 2 do ficheiro de referência, consoante as faixas de frequências e os serviços interessados, é descrito a seguir nos n.ºs **1388** a **1413** no que respeita às consignações de frequência referidas nas subsecções II-A a II-C.

1388 § 40. (1) Faixas de frequências:

9-2850 kHz;
3155-3400 kHz;
3500-3900 kHz na Região 1;
3500-4000 kHz na Região 2;
3500-3950 kHz na Região 3;
4219,4-4349,4 kHz;
6325,4-6493,4 kHz;
8435,4-8704,4 kHz;
12 652,3-13 070,8 kHz;
16 859,4-17 196,9 kHz;
22 310,5-22 561 kHz.

1389 (2) Para qualquer consignação a que sejam aplicáveis as disposições dos n.os **1250**, **1251** ou **1254**, a data pertinente é inscrita na coluna 2a do ficheiro de referência. Contudo, no caso das consignações da classe de funcionamento B a estações de serviço fixo, a data pertinente é inscrita na coluna 2b.

1390 (3) Para qualquer consignação a que sejam aplicáveis as disposições dos n.os **1255**, **1265**, **1267**, **1271** ou **1272**, a data pertinente é inscrita na coluna 2b do ficheiro de referência.

1391 § 41. (1) *Faixas de frequências atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 23 000 kHz para as estações costeiras radiotelefónicas.*

1392 (2) Se a conclusão for favorável relativamente aos n.os **1317** e **1318**, inscreve-se a data de 7 de Junho de 1974 na coluna 2a.

1393 (3) Em todos os outros casos referidos no n.º **1315**, a data pertinente é inscrita na coluna 2b (v. os n.os **1250**, **1254**, **1255**, **1261**, **1265**, **1306** e **1307**).

1394 (4) Quando se trate de consignações a estações distintas de estações costeiras radiotelefónicas, a data pertinente é inscrita na coluna 2b (v. os n.os **1271** e **1272**).

1395 § 42. (1) *Faixas de frequências atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 23 000 kHz para as estações radiotelefónicas de navio.*

1396 (2) Se a conclusão for favorável relativamente aos n.os **1328** e **1329**, inscreve-se a data de 7 de Junho de 1974 na coluna 2a.

1397 (3) Em todos os outros casos referidos no n.º **1326**, inscreve-se na coluna 2b a data de recepção da ficha de notificação pela Comissão.

1398 (4) Quando se trate de consignações distintas das consignações de frequência de recepção a estações costeiras radiotelefónicas, a data pertinente é inscrita na coluna 2b (v. os n.os **1271** e **1272**).

1399 § 43. (1) *Faixas de frequência atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 25 110 kHz para as estações radiotelegráficas de navio (v. o n.º* **1220**).

1400 (2) Quando se trate de consignações a estações distintas das estações radiotelegráficas de navio, a data pertinente é inscrita na coluna 2b (v. os n.os **1271** e **1272**).

1401 § 44. (1) *Faixas de frequência atribuídas e exclusivo ao serviço móvel aeronáutico (R) entre 2850 kHz e 22 000 kHz.*

1402 (2) Se a conclusão for favorável relativamente aos n.os **1336** a **1339**, inscreve-se a data de 5 de Março de 1978 na coluna 2a.

1403 (3) Se a conclusão for favorável relativamente ao n.º **1431**, inscreve-se a data de 5 de Março de 1978 na coluna 2b.

1404 (4) Em todos os outros casos de que trata o n.º **1333**, a Comissão inscreve na coluna 2b a data de 6 de Março de 1978.

1405 (5) Quando se trate de consignações a estações distintas das estações aeronáuticas do serviço móvel aeronáutico (R), a data pertinente é inscrita na coluna 2b (v. os n.os **1271** e **1272**).

1406 § 45. (1) *Faixas de frequências atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 3025 kHz e 18 030 kHz.*

1407 (2) Se a conclusão for favorável relativamente ao n.º **1345**, inscreve-se na coluna 2a a data de 3 de Dezembro de 1951.

1408 (3) Se a conclusão for favorável relativamente ao n.º **1346**, inscreve-se na coluna 2b a data de 3 de Dezembro de 1951.

1409 (4) Se a Comissão concluir que são aplicáveis as disposições do n.º **1347**, inscreve-se a data de 3 de Dezembro de 1951 na coluna 2a, se se tratar de uma adjudicação primária, ou na coluna 2b, se se tratar de uma adjudicação secundária.

1410 (5) Nos outros casos de que trata o n.º **1343**, a data de recepção da ficha pela Comissão é inscrita na coluna 2b.

1411 (6) Quando se trate de consignações a estações distintas das estações aeronáuticas do serviço móvel aeronáutico (OR), a data pertinente é inscrita na coluna 2b (v. os n.os **1271** e **1272**.

1412 § 46. (1) *Faixas de frequências compreendidas entre 3950 kHz (4000 kHz na Região 2) e 28 000 kHz distintas das faixas atribuídas em exclusivo ao serviço móvel aeronáutico, ao serviço móvel marítimo, ao serviço de radiodifusão ou ao serviço de amador e faixas de frequências superiores a 28 000 kHz.*

1413 (2) Para qualquer consignação de frequência a inscrever no ficheiro de referência de acordo com as disposições da secção II do presente artigo, a data pertinente inscreve-se na coluna 2d.

1414 § 47. *Data a inscrever na coluna 2c.*

1415 A data a inscrever na coluna 2c é a data de entrada em serviço notificada pela administração interessada (v. os n.os **1228** a **1231**).

Secção IV

Categoria das consignações de frequência

1416 § 48. (1) Qualquer consignação de frequência que tenha uma data na coluna 2a do ficheiro de referência tem direito à protecção internacional contra interferências prejudiciais, o mesmo acontecendo com as consignações de classe de funcionamento A a estações do serviço fixo nas faixas apropriadas compreendidas entre 3000 kHz e 27 000 kHz inscritas com uma data na coluna 2d em consequência de uma conclusão favorável relativamente aos n.os **1240** e **1242**, especialmente as resultantes da aplicação do n.º **1218**.

1417 (2) Qualquer consignação de frequência que tenha uma data na coluna 2b é inscrita no ficheiro de referência, a fim de dar às administrações a possibilidade de terem em conta o facto de que a consignação de frequência em causa está em serviço. Essa inscrição não dá a essa consignação de frequência qualquer direito a protecção internacional, excepto no caso previsto na alínea 2) do n.º **1241**.

1418 (3) Para as consignações de frequência que tenham datas em duas partes da coluna 2, a data inscrita na coluna 2c é dada apenas a título de informação.

1419 (4) Se a utilização de uma consignação de frequência não em conformidade com as disposições dos n.os **1240** ou **1352** causar, efectivamente, interferência prejudicial à recepção de uma qualquer estação que funcione em conformidade com essas disposições, a estação que utiliza a consignação de frequência não em conformidade com elas deve eliminar imediatamente a interferência prejudicial quando desta for avisada

1420 (5) Se a utilização de uma consignação de frequência não em conformidade com as disposições dos n.os **1240** ou **1352** causar, efectivamente, interferência prejudicial à recepção de uma qualquer estação que funcione em conformidade com as disposições do n.º **1503**, a estação que utilize a consignação de frequência não em conformidade com as disposições dos n.os **1240** ou **1352** deve eliminar imediatamente a interferência prejudicial quando desta for avisada.

Secção V

Reexame das conclusões

1421 § 40. (1) Uma conclusão pode ser reexaminada pela Comissão:

a) A pedido da administração notificadora;

b) A pedido de qualquer outra administração interessada no assunto, mas unicamente com base numa interferência prejudicial verificada;

c) Por iniciativa da própria Comissão, quando esta considere que se justifica tal medida.

1422 (2) Baseando-se em todas as informações de que disponha, a Comissão reexamina o assunto, tendo em conta as disposições dos n.os **1240** ou **1352** e dos n.os **1241**, **1242**, **1353** ou **1354**, consoante o caso, e formula uma conclusão apropriada, após o que informará dessa conclusão a administração notificadora, quer antes de publicar a conclusão, quer, se for esse o caso, antes de a incluir no ficheiro de referência.

1423 § 50. Se a administração notificadora pedir o reexame de uma conclusão desfavorável, a título de assistência especial, a fim de fazer face a uma necessidade urgente e essencial num caso em que se verificou uma interferência prejudicial, a Comissão consulta imediatamente as administrações interessadas e apresenta-lhes sugestões tendentes a facilitar a utilização da sua consignação à administração que pediu assistência especial; as modificações resultantes dessa consulta são efectuadas no ficheiro de referência.

1424 § 51. (1) Depois da utilização real, durante um período razoável, de uma consignação de frequência inscrita no ficheiro de referência a insistência da administração notificadora, em seguimento de uma conclusão desfavorável relativamente aos n.os **1241**, **1242** ou **1354**, consoante o caso, essa administração pode pedir à Comissão que reexamine a conclusão. A Comissão reexamina então o assunto depois de consultar as administrações interessadas.

1425 (2) Se a conclusão da Comissão for então favorável, introduz no ficheiro de referência as modificações necessárias para que a inscrição passe a figurar aí como se a conclusão inicial tivesse sido favorável.

1426 (3) Se a conclusão relativa à probabilidade de interferência prejudicial se mantiver desfavorável, a inscrição inicial não é modificada.

1427 § 52. (1) No caso da supressão ou da modificação de qualquer consignação de frequência inscrita no ficheiro de referência que tenha sido causa de uma conclusão desfavorável e tenha levado á inscrição, em conformidade com o n.º **1255**, de uma consignação notificada posteriormente, a Comissão reexamina esta e, se for caso disso, revê a sua conclusão sob o ponto de vista dos n.os **1241** ou **1242**.

1428 (2) A fim de obter um critério que permita a revisão de uma inscrição no ficheiro de referência feita em aplicação das disposições do n.º **1255**, a Comissão ao reexaminar a ficha de notificação em causa, determina a data em que deverá reexaminar essa consignação de frequência. Se até essa data não tiver sido recebida pela administração responsável qualquer queixa de interferência prejudicial, a Comissão modifica automaticamente a inscrição no ficheiro de referência, de forma que esta figure aí de futuro como se a conclusão original tivesse sido favorável relativamente aos n.ºs **1241** ou **1242**.

SECÇÃO VI

Actualização do ficheiro de referência

1429 § 53. *Modificações, anulação e revisão das inscrições no ficheiro de referência.*

1430 § 54. Se a utilização de uma consignação de frequência inscrita no ficheiro de referência vier a ser abandonada definitivamente, a administração notificadora deve informar do facto a Comissão num prazo de três meses, o que terá como consequência a anulação da inscrição no ficheiro de referência.

1431 § 55. Sempre que a Comissão tenha razões para supor, segundo as informações de que disponha, que uma consignação inscrita no ficheiro de referência não entrou em serviço regular de acordo com as características fundamentais notificadas ou não é utilizada de acordo com essas características, a Comissão consulta a administração notificadora e, sob reserva do seu acordo, anula a inscrição ou introduz-lhe as modificações convenientes.

1432 § 56. Se, em seguimento a um inquérito feito pela Comissão nos termos dos n.ºs **1264** ou **1431**, a administração notificadora não forneceu à Comissão num prazo de três meses as informações necessárias ou pertinentes, a Comissão não considerará de futuro a consignação em causa quando tomar resoluções sobre as fichas de notificação que receber ulteriormente, até que tenha sido informada de que a consignação é utilizada segundo as características notificadas ou até que tenha recebido as informações pedidas. A Comissão inscreve na coluna «Observações» do ficheiro de referência observações que indiquem a situação, e em especial o período durante o qual a consignação não foi tomada em conta pela Comissão.

1433 § 57. (1) *Exames periódicos do ficheiro de referência.*

1434 (2) A Comissão elaborará um programa a longo prazo de exames periódicos de cada secção do ficheiro de referência a fim de o melhorar e de manter a precisão dele.

1435 (3) Para os exames mencionados no n.º **1434**, a Comissão enviará a cada administração, para revisão e devolução, um extracto nacional do ficheiro de referência relativo à secção em estudo. A Comissão chamará ao mesmo tempo a atenção das administrações para qualquer consignação a uma estação do serviço fixo que funcione nas faixas de frequência compreendidas entre 3000 kHz e 27 500 kHz para a qual se pense estarem disponíveis outros meios de telecomunicação.

1436 (4) Para melhorar e manter a precisão do ficheiro de referência, as administrações colaborarão nos exames periódicos, notificando a supressão de qualquer consignação não utilizada e, se necessário, a modificação das outras inscrições.

1437 (5) No seu relatório anual às administrações, a Comissão incluirá uma secção relativa aos trabalhos efectuados em aplicação das disposições do presente § 57, aos resultados obtidos e ao programa do ano seguinte.

SECÇÃO VII

Estudos e recomendações

1438 § 58. (1) Se lhe for feito pedido por qualquer administração, particularmente se se tratar da administração de um país com necessidade de assistência especial, a Comissão, utilizando para o efeito os meios de que disponha e que convenham às circunstâncias, procede a um estudo de qualquer problema de utilização de frequências que entre nas seguintes categorias:

1439 *a*) Pesquisa de uma frequência de substituição que permita evitar uma interferência prejudicial provável, nos casos indicados no n.º **1252**;

1440 *b*) Necessidade eventual de incluir consignações de frequência suplementares numa fracção determinada do espectro das frequências radioeléctricas;

1441 *c*) Caso em que, devido a interferências prejudiciais, várias frequências da mesma ordem de grandeza são utilizadas sucessivamente para manter uma ligação em funcionamento, se bem que esta não requeira senão uma só frequência da ordem de grandeza em causa;

1442 *d*) Presunção de contravenção ao presente Regulamento ou de não observância deste Regulamento, ou caso de interferência prejudicial.

1443 (2) A Comissão elabora em seguida um relatório, que comunica às administrações interessadas e no qual consigna as suas conclusões e recomendações para a solução do problema.

1444 (3) Quando receber as recomendações da Comissão para a solução do problema, uma administração acusa imediatamente a recepção por telegrama e comunica depois as medidas que conta tomar. No caso de as sugestões ou as recomendações da Comissão não poderem ser aceites pelas administrações interessadas, a Comissão tenta de novo encontrar uma solução aceitável para o problema.

1445 § 59. Se, principalmente em seguimento a um pedido da administração de um país que tenha necessidade de assistência especial, a Comissão verificar que uma modificação das características fundamentais, incluindo uma modificação de frequência numa faixa de frequências dada, de uma ou de várias consignações que satisfaçam as disposições do n.º **1240**, permitirá:

1446 *a*) Quer alojar uma nova consignação;

1447 *b*) Quer facilitar a solução de um problema de interferência prejudicial;

1448 *c*) Quer, de qualquer outro modo, concorrer para melhorar a utilização de determinada fracção do espectro de frequências radioeléctricas;

1449 e, se tal modificação for aceite pela ou pelas administrações interessadas, esta modificação das características fundamentais é inscrita no ficheiro de referência sem modificação da data ou das datas primitivas.

1450 § 60. No caso em que, em seguimento a um estudo, a Comissão apresente a uma ou várias administrações propostas ou recomendações tendentes à solução de um problema e se, no prazo de 30 dias, não tiver recebido resposta de uma ou várias dessas administrações, considera que as suas propostas ou recomendações não são aceitáveis pela ou pelas administrações que não responderam. Se a própria administração requerente não responder nesse prazo, a Comissão não dá continuação ao estudo.

Secção VIII

Disposições diversas

1451 § 61. As disposições das secções v, vi (com excepção do n.º **1430**) e vii do presente artigo não se aplicam às consignações de frequência conformes com os planos de adjudicação que figuram nos apêndices 25 Mar2, 26, 27 (*) e 27 Aer (*) do presente Regulamento.

1452 § 62. (1) Se para isso lhe for feito pedido por qualquer administração e, principalmente, pela administração de um país que tenha necessidade de assistência especial, a Comissão, utilizando para o efeito os meios de que disponha e que convenham às circunstâncias, fornece a assistência seguinte:

a) Verificação do mapa que indica a zona de coordenação referida no n.º **1113**;

b) Cálculo dos níveis de interferência de que tratam os n.ºs **1164** a **1166**;

c) Qualquer outra assistência de carácter técnico para que os procedimentos descritos no presente artigo possam ser levados a bom termo.

1453 (2) Ao apresentar o seu pedido à Comissão nos termos do n.º **1452**, a administração fornece-lhe as informações necessárias.

1454 § 63. As normas técnicas da Comissão baseiam-se nas disposições pertinentes do presente Regulamento e dos seus apêndices, nas decisões, se existirem, das conferências administrativas da União, nos pareceres da CCIR, no estado de avanço da técnica radioeléctrica e nos aperfeiçoamentos de novas técnicas de transmissão, tendo em conta as condições de propagação excepcionais que possam dominar em certas regiões (por exemplo, um efeito de condutas particularmente acentuado).

1455 § 64. (1) A Comissão leva ao conhecimento das administrações as suas conclusões e as respectivas justificações, bem como todas as modificações efectuadas no ficheiro de referência, por meio de circular semanal. Essas informações serão publicadas no prazo de 45 dias a contar da data de publicação da ficha completa na circular semanal de que trata o n.º **1235**. Quando a Comissão não puder cumprir o prazo acima mencionado, informará disso, logo que possível, as administrações interessadas, indicando as razões.

1456 (2) A circular semanal da IFRB é publicada nas línguas de trabalho da União, tal como são definidas na Convenção. Ao aplicar os diversos procedimentos especificados no presente Regulamento das Radiocomunicações, a Comissão utilizará, na medida do possível, esta circular semanal como meio de comunicação com as administrações.

1457 § 65. A Comissão informará as administrações, a intervalos convenientes, dos casos de assistência especial que tenha estudado nos termos dos n.ºs **1423** e **1438** a **1450**, inclusive, do presente Regulamento.

1458 § 66. Se um membro recorrer às disposições do artigo 50 da Convenção, a Comissão, se lhe for feito pedido, porá os seus documentos à disposição das partes interessadas para a aplicação de qualquer procedimento prescrito na Convenção para a solução de desacordos internacionais.

1459 a 1487 *(Não atribuídos.)*

(*) Nota do Secretariado-Geral: v. o n.º **5189** e a Resolução n.º 400.

ARTIGO 13

Notificação e inscrição no ficheiro de referência internacional das frequências das consignações de frequência (1) às estações de radioastronomia e às estações de radiocomunicação espacial, com excepção das do serviço de radiodifusão por satélite (2)

SECÇÃO I

Notificação das consignações de frequência

1488 § 1. (1) Qualquer consignação de frequência destinada a ser utilizada na emissão ou na recepção por uma estação terrena espacial deve ser notificada à Comissão:

1489 *a*) Se a utilização da frequência em causa for susceptível de produzir interferências prejudiciais a uma outra administração;

1490 *b*) Ou se a frequência se destinar a ser utilizada em radiocomunicações internacionais;

1491 *c*) Ou ainda se se desejar obter um reconhecimento internacional oficial da utilização dessa frequência.

1492 (2) Qualquer frequência ou faixa de frequência destinada a ser utilizada na recepção por uma estação de radioastronomia determinada pode ser notificada se se desejar que essa informação seja inscrita no ficheiro de referência.

1493 (3) Quando a Comissão receber de uma administração uma ficha de notificação relativa à modificação ou à anulação de uma consignação a uma estação espacial já inscrita no ficheiro de referência em nome de um grupo de administrações, considerará, salvo aviso em contrário, que a ficha de notificação é apresentada em nome de todas as administrações que estavam associadas à notificação original.

1494 (4) Uma notificação feita nos termos dos n.os **1488** a **1491** e relativa a uma consignação de frequência a estações terrenas móveis de um sistema de satélites inclui as características técnicas quer de cada estação terrena móvel, quer de uma estação terrena móvel tipo, bem como a indicação da zona de serviço em que essas estações se destinam a funcionar.

1495 § 2. Qualquer consignação de frequência notificada em execução dos n.os **1488** a **1492** ou **1494** deve ser objecto de uma ficha de notificação elaborada pela forma indicada no apêndice 3, do qual as diversas secções especificam as características fundamentais a fornecer consoante o caso. Recomenda-se que a administração notificadora comunique à Comissão as outras informações indicadas na secção A do referido apêndice, bem como qualquer outra informação que possa considerar útil.

1496 § 3. (1) Quando se tratar de uma consignação de frequência a uma estação terrena ou espacial, a ficha de notificação deve ser recebida pela Comissão no máximo três anos antes da data de entrada em serviço da consignação de frequência em causa. Não deve, em nenhum caso, ser recebida menos de três meses (3) antes dessa data, excepto quando se tratar de uma consignação de frequência a uma estação de serviço de pesquisa espacial numa faixa atribuída em exclusivo a este serviço ou numa faixa partilhada em que ele é o único serviço primário. No caso de uma tal consignação a uma estação do serviço de pesquisa espacial, a ficha de notificação deve, tanto quanto possível, ser recebida pela Comissão antes da data de entrada em serviço da consignação de frequência em causa, mas em nenhum caso deve ser recebida mais de 30 dias depois da data em que a consignação de frequência for efectivamente posta em serviço.

1497 (2) Qualquer consignação de frequência a uma estação terrena espacial cuja notificação seja recebida pela Comissão depois de expirados os prazos prescritos, indicados no n.º **1496**, leva, ao ser inscrita no ficheiro de referência, uma observação a indicar que a ficha de notificação não está em conformidade com as disposições do n.º **1496**.

SECÇÃO II

Procedimento para o exame das fichas de notificação e inscrição das consignações de frequência no ficheiro de referência

1498 § 4. Quando a Comissão receber uma ficha de notificação que não contenha, pelo menos, as características fundamentais especificadas no apêndice 3, devolve-a, pelo correio aéreo, à administração de origem, acompanhada dos motivos dessa devolução, excepto se as informações que não tinham sido recebidas forem recebidas imediatamente em resposta a um pedido da Comissão. A Comissão informa, por telegrama, a administração quando uma ficha de notificação for devolvida nos termos da presente disposição.

A.31.1 (1) A expressão «consignação de frequência» onde quer que figure no presente artigo, deve ser entendida como referindo-se quer a uma nova consignação de frequência, quer a uma modificação de uma consignação já inscrita no ficheiro de referência internacional das frequências (denominado daqui em diante ficheiro de frequência).

A .13.2 (2) Para a notificação e a inscrição de consignações de frequência às estações do serviço de radiodifusão por satélite e aos outros serviços nas faixas 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região 1), v. igualmente o artigo 15.

1496.1 (3) A administração notificadora iniciará, consoante o caso, o ou os procedimentos de coordenação com a antecedência necessária para que esta data limite seja respeitada.

1499 § 5. Quando a Comissão receber uma ficha de notificação completa, menciona as informações que ela contiver, incluindo os diagramas, e a data da sua recepção na circular semanal de que trata o n.º **1235**, que é publicada no prazo de 40 dias após a recepção da ficha de notificação. Quando a Comissão não puder cumprir este prazo, informará disso, logo que possível, as administrações interessadas, indicando as razões.

1500 § 6. A circular conterá todas as informações que figurarem nas fichas de notificação completas recebidas pela Comissão desde a publicação da circular precedente e será considerada, por cada administração notificadora, como aviso de recepção, pela Comissão, de uma ficha de notificação completa.

1501 § 7. A Comissão examina as fichas de notificação completas pela ordem em que as receber, tendo em conta o prazo mencionado no n.º **1583**. Não pode adiar a conclusão, a menos que lhe faltem informações suficientes para tomar uma decisão a esse respeito. Além disso, a Comissão não resolve sobre uma ficha de notificação que tenha relações técnicas com uma ficha recebida anteriormente e ainda em exame, antes de tomar uma decisão no que respeita a esta última.

1502 § 8. A Comissão examina cada ficha de notificação:

1503 *a*) Sob o ponto de vista da sua conformidade com as cláusulas da Convenção, o quadro da atribuição das faixas de frequência e as outras cláusulas do Regulamento das Radiocomunicações, com excepção das relativas aos procedimentos de coordenação e à probabilidade de interferências prejudiciais que são objecto das alíneas seguintes;

1504 *b*) Sob o ponto de vista da sua conformidade com as disposições relativas à coordenação da utilização da consignação de frequência com as outras administrações interessadas, relativamente às estações de radiocomunicação espacial, nos casos em que sejam aplicáveis as disposições dos n.os **1060** ou **1066** a **1071**;

1505 *c*) Sob o ponto de vista da sua conformidade com as disposições relativas à coordenação da utilização da consignação de frequência com as outras administrações interessadas, relativamente às estações de radiocomunicação de Terra, nos casos em que sejam aplicáveis as disposições do n.º **1107**;

1506 *d*) Sob o ponto de vista da probabilidade de qualquer interferência prejudicial, quando a coordenação nos termos do n.º **1060** não foi aplicada com êxito. Neste exame ([1]) serão tidas em conta as consignações de frequência para a emissão ou a recepção já inscritas no ficheiro de referência:

1507 1) Quer em aplicação das disposições dos n.os **1526**, **1531**, **1534** ou **1543**;

1508 2) Quer em aplicação das disposições do n.º **1544**, se essa consignação de frequência não causou, de facto, interferência prejudicial a qualquer consignação anteriormente inscrita no ficheiro de referência e que esteja em conformidade com o n.º **1503**.

1509 *e*) Sob o ponto de vista da probabilidade de qualquer interferência prejudicial, quando a coordenação nos termos do n.º **1107** não foi aplicada com êxito. Neste exame serão tidas em conta as consignações de frequência para a emissão ou a recepção já inscritas no ficheiro de referência:

1510 1) Quer em aplicação das disposições do n.º **1248**;

1511 2) Quer em aplicação das disposições dos n.os **1362**, **1367**, **1370** ou **1373**;

1512 3) Quer em aplicação das disposições do n.º **1374**, se dessa consignação de frequência não causou, de facto, interferência prejudicial a qualquer consignação anteriormente inscrita no ficheiro de referência e que esteja em conformidade com o n.º **1503**.

1513 § 9. Quando, após o exame de uma ficha de notificação relativamente aos n.os **1506** a **1508**, a Comissão formular uma conclusão desfavorável com base na probabilidade de interferências prejudiciais em detrimento de uma consignação de frequência inscrita no ficheiro de referência e relativa a uma estação espacial que a Comissão tenha razões para supor que não está regularmente em serviço, por exemplo, como consequência das disposições do n.º **1569**, a Comissão consulta sem demora a administração responsável por essa consignação. Se, após essa consulta, ela concluir, com base nas informações disponíveis, que essa consignação inscrita no ficheiro de referência não é utilizada há dois anos, não volta a tê-la em conta quer para o exame em curso quer para o exame de qualquer outra ficha de notificação que venha a ser realizado posteriormente nos termos dos n.os **1506** a **1508**, antes da data em que a consignação de frequência seja novamente posta em serviço. Antes de entrar de novo em serviço, a consignação de frequência será, consoante o caso, objecto de uma nova coordenação em conformidade com as disposições do n.º **1060** ou de um novo exame pela Comissão relativamente aos n.os **1506** a **1508**. A data da nova entrada em serviço será então inscrita no ficheiro de referência.

1514 § 10. Segundo as conclusões a que chegar a Comissão em consequência do exame previsto nos n.os **1503**, **1504**, **1505**, **1506** a **1508** e **1509** a **1512**, consoante o caso, o procedimento continuará pela forma seguinte:

1515 § 11. (1) *Conclusão favorável relativamente ao n.º* **1503** *nos casos em que não sejam aplicáveis as disposições dos n.os* **1504** *e* **1505** *(estação espacial a bordo de um satélite não geostacionário).*

1506.1 ([1]) O exame de uma tal ficha de notificação relativamente a qualquer outra consignação de frequência publicada nos termos do n.º **1078**, mas ainda não notificada, será adiado até que as duas consignações tenham sido notificadas. A Comissão examiná-los-á em seguida pela ordem da sua publicação nos termos do n.º **1078**.

1516 (2) A consignação é inscrita no ficheiro de referência. A data de recepção pela comissão da ficha de notificação inscreve-se na coluna 2d.

1517 § 12. (1) *Conclusão desfavorável relativamente ao n.º* **1503** *nos casos em que não sejam aplicáveis as disposições dos n.os* **1504** *e* **1505** *(estação espacial a bordo de um satélite não geostacionário).*

1518 (2) Quando a ficha de notificação comportar uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342**, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação inscreve-se na coluna 2d.

1519 (3) Quando a ficha não comportar qualquer referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342**, essa ficha é devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivaram a conclusão da Comissão, bem como com as sugestões que esta possa fazer para se obter uma solução satisfatória do problema.

1520 § 13. (1) *Conclusão desfavorável relativamente ao n.º* **1503** *nos casos em que sejam aplicáveis as disposições dos n.os* **1504** *e* **1505**.

1521 (2) Quando a ficha comportar uma referência segundo a qual a estação funcionará em conformidade com as disposições no n.º **342**, e se a conclusão for favorável relativamente aos n.os **1504**, **1505**, **1506** a **1508** e **1509** a **1512**, consoante o caso, a consignação inscrever-se-á no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d.

1522 (3) Quando a ficha comportar uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342**, e se a conclusão for desfavorável relativamente aos n.os **1504**, **1505**, **1506** a **1508** ou **1509** a **1512**, consoante o caso, essa ficha é devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivaram a conclusão da Comissão. Se a administração notificadora insistir num novo exame da ficha de notificação, a consignação será inscrita no ficheiro de referência, subentendendo-se que serão aplicadas as disposições do n.º **1560**. A data de recepção pela Comissão da ficha de notificação original inscrever-se-á na coluna 2d.

1523 (4) Quando a ficha não comportar qualquer referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342**, essa ficha é devolvida imediatamente pelo correio aéreo à administração notificadora, com a indicação das razões que motivaram a conclusão da Comissão, e com as sugestões que esta possa fazer para se obter uma solução satisfatória do problema.

1524 (5) Se a administração notificadora apresentar de novo a ficha não modificada, esta é tratada de acordo com as disposições do n.º **1523**. Se a administração notificadora apresentar de novo a ficha acompanhada de uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342**, a ficha de notificação é tratada de acordo com as disposições dos n.os **1521** ou **1522**, consoante o caso. Se a ficha for apresentada de novo com modificações tais que, após novo exame, a conclusão da Comissão seja favorável relativamente ao n.º **1503**, a ficha é tratada como uma nova ficha de notificação.

1525 § 14. (1) *Conclusão favorável relativamente ao n.º* **1503** *nos casos em que sejam aplicáveis as disposições dos n.os* **1504** *ou* **1505**.

1526 (2) Quando a Comissão concluir que os procedimentos de coordenação de que tratam os n.os **1504** ou **1505** foram aplicados com êxito relativamente a todas as administrações cujas estações de radiocomunicação espaciais ou de Terra pudessem ser afectadas, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação inscreve-se na coluna 2d.

1527 (3) Quando a Comissão concluir que não foi aplicado nem um nem outro dos procedimentos de coordenação de que tratam os n.os **1504** e **1505**, e:

1528 *a*) Se a administração notificadora pedir à Comissão que efectue a coordenação, a Comissão tomará as medidas necessárias para o efeito. Se as tentativas da Comissão para se obter um acordo forem coroadas de êxito, informará disso as administrações interessadas e a ficha de notificação será tratada de acordo com as disposições do n.º **1526**;

1529 *b*) Se as tentativas da Comissão para se obter um acordo em aplicação das disposições dos n.os **1528** ou **1089** a **1094** ou **1130** a **1135** não forem coroadas de êxito ou se, ao notificar a consignação, a administração declarar que não obteve êxito e não pedir à Comissão que efectue a coordenação pretendida, a Comissão examina a ficha de notificação sob o ponto de vista das disposições dos n.os **1506** a **1508** e **1509** a **1512**, consoante o caso. Ao mesmo tempo, a Comissão informa disso as administrações interessadas;

1530 *c*) Se a administração notificadora não lhe pedir que efectue a coordenação pretendida, a ficha de notificação é-lhe devolvida imediatamente pelo correio aéreo, com a indicação das razões que motivaram a devolução e com as sugestões que a Comissão possa fazer para se obter uma solução satisfatória do problema.

1531 (4) Quando a administração notificadora apresentar de novo a ficha de notificação, e se a Comissão concluir que os procedimentos de coordenação de que tratam os n.os **1504** e **1505** foram aplicados com êxito relativamente a todas as administrações cujas estações de radiocomunicação espacial ou de Terra podem ser afectadas, a consignação é inscrita no ficheiro de referência. A data da recepção pela Comissão da Ficha de notificação original é inscrita na coluna 2d, e a data de recepção pela Comissão da ficha de notificação apresentada de novo é indicada na coluna «Observações».

1532 (5) Quando a administração notificadora apresentar de novo a ficha de notificação pedindo à Comissão que efectue a coordenação pretendida nos termos dos n.os **1060** e **1107**, a ficha de notificação é tratada em conformidade com as disposições dos n.os **1527, 1528** e **1529**. Se houver motivo, posteriormente, para inscrever a consignação no ficheiro de referência, a data de recepção pela Comissão da ficha de notificação apresentada de novo indicar-se-á na coluna «Observações».

1533 § 15. (1) *Conclusão favorável relativamente aos n.os* **1503, 1506** *a* **1508** *e* **1509** *a* **1512**, *consoante o caso.*

1534 (2) A consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação será indicada na coluna 2d.

1535 (3) Todavia, se no exame se verificar que a interferência e a percentagem de tempo durante o qual esta é susceptível de se produzir têm valores ligeiramente mais elevados do que os que são utilizados para avaliar a probabilidade de interferências prejudiciais (condições especiais de propagação, humidade anormal da atmosfera, etc.), insere-se no ficheiro de referência uma observação a indicar que pode existir um pequeno risco de interferências prejudiciais e que, consequentemente, devem tomar-se precauções suplementares na utilização da consignação para evitar interferências prejudiciais às consignações já inscritas no ficheiro de referências.

1536 (4) Além do exame da consignação de frequência a uma estação terrena sob o ponto de vista das disposições dos n.os **1509** e **1512**, a Comissão, em caso de desacordo persistente, examina essa consignação de frequência sob o ponto de vista da probabilidade de interferência prejudicial, causada às estações de Terra ou produzida pelas estações de Terra cujas consignações tenham sido comunicadas à Comissão em aplicação das disposições do n.º **1126** e que serão postas em serviço nos três anos seguintes.

1537 (5) Após o exame nos termos do n.º **1536**, a Comissão, consoante o caso:

1538 *a*) Informa as administrações interessadas de qualquer conclusão desfavorável;

1539 *b*) No ficheiro de referência, em frente da consignação à estação terrena insere uma observação a indicar tal conclusão desfavorável;

1540 *c*) Inscreve as consignações às estações de Terra no ficheiro de referência, com uma observação a indicar qualquer conclusão desfavorável. A data de recepção das informações comunicadas nos termos do n.º **1136** é inscrita na coluna 2d.

1541 § 16. (1) *Conclusão favorável relativamente ao n.º* **1503** *mas desfavorável relativamente aos n.os* **1506** *a* **1508** *ou* **1509** *a* **1512**, *consoante o caso.*

1542 (2) A ficha de notificação é devolvida imediatamente, pelo correio aéreo, à administração de origem, com a indicação das razões que motivaram a conclusão da Comissão e com as sugestões que esta possa fazer para se obter uma solução satisfatória do problema.

1543 (3) Se a administração notificadora apresentar de novo a ficha com modificações que, após novo exame, motivem da parte da Comissão uma conclusão favorável relativamente aos n.os **1506** a **1508** ou **1509** a **1512**, consoante o caso, a consignação inscreve-se no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação original será inscrita na coluna 2d, e a data de recepção da ficha de notificação apresentada de novo indicar-se-á na coluna «Observações».

1544 (4) No caso em que a administração notificadora apresente de novo a ficha de notificação, quer não modificada, quer com modificações susceptíveis de diminuir a probabilidade de interferências prejudiciais, mas não em proporções suficientes que permitam a aplicação das disposições do n.º **1543**, se essa administração insistir num novo exame da ficha de notificação e se as conclusões da Comissão se mantiverem, a consignação é inscrita no ficheiro de referência, mas essa inscrição só pode fazer-se se a Comissão for informada de que a nova consignação esteve em serviço ao mesmo tempo que a consignação de frequência à estação que está na origem da conclusão desfavorável durante, pelo menos, quatro meses sem que daí tenha resultado qualquer queixa de interferência prejudicial, com a condição de que a mais antiga das consignações de frequência tenha sido posta em serviço durante o prazo adicional mencionado no n.º **1550**. A data de recepção pela Comissão da ficha de notificação original é inscrita na coluna 2d, e a data em que a Comissão recebeu aviso de que não se verificou qualquer queixa de interferência prejudicial indica-se na coluna «Observações».

1545 § 17. (1) *Fichas de notificação relativa às estações de radioastronomia.*

1546 (2) Uma ficha de notificação relativa a uma estação de radioastronomia será examinada pela Comissão somente sob o ponto de vista das disposições do n.º **1503**. Seja qual for a conclusão, a consignação é inscrita no ficheiro de referência com uma data na coluna 2c. A data de recepção pela Comissão da ficha de notificação é indicada na coluna «Observações».

1547 § 18. (1) *Modificação das características fundamentais de consignações já inscritas no ficheiro de referência.*

1548 (2) Qualquer notificação de modificação das características fundamentais de uma consignação já inscrita no ficheiro de referência, tal como definidas no apêndice 3 (com excepção, todavia, do nome da estação ou do nome da localidade onde está situada ou da data de entrada em serviço), é examinada pela Comissão segundo as disposições dos n.os **1503** e, se for o caso disso, **1504, 1505, 1506** a **1508** e **1509** a **1512** e aplicam-se as disposições dos n.os **1515** a **1546**, inclusive. Para inscrever a modificação no ficheiro de referência, a consignação inscrita é modificada de acordo com a notificação.

1549 (3) Contudo, no caso de uma modificação das características de uma consignação que esteja de acordo com as disposições do n.º **1503**, e se a Comissão formular uma conclusão favorável relativamente aos

n.os **1504, 1505, 1506** a **1508** e **1509** a **1512**, consoante o caso, ou concluir que tal modificação não aumentará a probabilidade de interferências prejudiciais em detrimento de consignações de frequência já inscritas no ficheiro de referência, a consignação de frequência modificada conserva a data primitivamente inscrita na coluna 2d. Além disso, a data de recepção pela Comissão da ficha de notificação relativa à modificação é indicada na coluna «Observações».

1550 (4) A data prevista para a entrada em serviço de uma consignação de frequência poderá ser prorrogada por 4 meses a pedido da administração notificadora. Caso a administração venha a declarar que circunstâncias excepcionais motivam novo prolongamento desse prazo, pode conceder-se esse novo prolongamento, que, em caso algum, deverá ir além de 18 meses a contar da data inicial prevista para a entrada em serviço.

1551 § 19. Na aplicação das disposições da presente secção, qualquer ficha de notificação apresentada de novo à Comissão e recebida por ela mais de 2 anos a data em que ela devolveu a ficha à administração notificadora será considerada como um nova ficha de notificação.

1552 § 20, (1) *Inscrição de consignações de frequência notificadas antes da sua entrada em serviço.*

1553 (2) Se uma consignação de frequência notificada antes da sua entrada em serviço for objecto de conclusões favoráveis formuladas pela Comissão relativamente aos n.os **1503** e, se for caso disso, **1504, 1505, 1506** a **1508** e **1509** a **1512**, é inscrita provisoriamente no ficheiro de referência, com um símbolo especial na coluna «Observações», a indicar o carácter provisório dessa inscrição.

1554 (3) No prazo de 30 dias após a data prevista para a entrada em serviço inicialmente notificada ou modificada nos termos do n.º **1550**, a administração notificadora confirmará que a consignação de frequência foi posta em serviço. Quando a comissão for avisada de que a consignação foi posta em serviço, suprime o símbolo especial na coluna «Observações».

1555 (4) Se a Comissão não receber a confirmação no prazo previsto no n.º **1554**, a inscrição em causa é anulada, mas a Comissão consultará a administração interessada antes de tomar tal medida.

1556 (5) No caso previsto nos n.os **1522** e **1544**, e enquanto uma ficha de notificação que tenha sido objecto de uma conclusão desfavorável não puder ser apresentada de novo à Comissão acompanhada de uma declaração relativa ao funcionamento sem interferência, a administração notificadora poderá pedir à Comissão que inscreva provisoriamente a consignação de frequência em causa no ficheiro de referência. Inscreve-se então na coluna «Observações» um símbolo especial a indicar o carácter provisório dessa inscrição. A Comissão anulará esse símbolo quando a administração notificadora a avisar, ao expirar o período especificado no n.º **1544**, da ausência de queixa de interferência prejudicial.

SECÇÃO III

Inscrição das conclusões no ficheiro de referência

1557 § 21. Sempre que a Comissão inscreva uma consignação de frequência no ficheiro de referência, indica a sua conclusão por meio de um símbolo colocado na coluna apropriada. Além disso, insere na coluna «Observações» uma observação que indique os motivos de qualquer conclusão desfavorável.

SECÇÃO IV

Categorias de consignações de frequência

1558 § 22. (1) A data a inscrever na coluna 2c é a da entrada de serviço notificada pela administração interessada. Será dada apenas a título de informação.

1559 (2) Se a utilização de uma consignação de frequência a uma estação de radiocomunicações espaciais que foi inscrita no ficheiro de referência em conformidade com as disposições do n.º **1544** causar efectivamente interferência prejudicial à recepção de uma estação de radiocomunicações espaciais para a qual tenha sido anteriormente inscrita no ficheiro de referência uma consignação de frequência, em seguimento de um conclusão favorável relativamente aos n.os **1503, 1504, 1505, 1506** a **1508** e **1509** a **1512**, consoante o caso, a estação que utilizar a consignação de frequência inscrita em conformidade com as disposições do n.º **1544** deverá fazer cessar imediatamente a interferência prejudicial logo que desta seja avisada.

1560 (3) Se a utilização de uma consignação de frequência que não esteja de acordo com as disposições do n.º **1503** causar efectivamente interferência prejudicial à recepção de qualquer estação que funcione em conformidade com as disposições dos n.os **1240, 1352** ou **1503**, consoante o caso, a estação que utilizar a consignação de frequência que não esteja de acordo com as disposições do n.º **1503** deverá fazer cessar imediatamente a interferência prejudicial logo que desta seja avisada.

SECÇÃO V

Reexame das conclusões

1561 § 23. (1) Uma conclusão pode ser reexaminada pela Comissão:

1562 *a*) A pedido da administração notificadora;

1563 *b*) A pedido de qualquer administração interessada no assunto, mas unicamente devido a interferência prejudicial verificada;

1564 *c*) Por iniciativa da própria Comissão, quando considere essa medida justificada.

1565 (2) Com base em todas as informações que disponha, a Comissão reexamina o assunto tendo em contas as disposições do n.º **1503** e, se for caso disso, as disposições dos n.os **1504, 1505, 1506 a 1508 e 1509 a 1512** e formula uma conclusão apropriada, após o que informará dessa conclusão a administração notificadora, quer antes de publicar a conclusão, quer antes de a incluir no ficheiro de referência.

1566 § 24. (1) Depois da utilização real, durante um período razoável, de uma consignação de frequência inscrita no ficheiro de referência por insistência da administração notificadora, em seguimento de uma conclusão desfavorável relativamente aos n.os **1506 a 1508 ou 1509 a 1512**, essa administração pode pedir à Comissão que reexamine a conclusão. A Comissão reexaminará então o assunto após consulta às administrações interessadas.

1567 (2) Se a conclusão da Comissão for então favorável, ela introduz no ficheiro de referência as modificações necessárias para que a inscrição aí passe a figurar como se a conclusão inicial tivesse sido favorável.

1568 (3) Se a conclusão relativa à probabilidade de interferência prejudicial se mantiver desfavorável, a inscrição inicial não será modificada.

Secção VI

Modificação, anulação e revisão das inscrições do Ficheiro de referência

1569 § 25. A Comissão pedirá à administração notificadora que confirme, a intervalos que não ultrapassem dois anos, que a sua consignação tem sido e continua a ser regularmente utilizada com características idênticas às inscritas no ficheiro de referência.

1570 § 26. (1) Quando a utilização de uma consignação de frequência a uma estação espacial inscrita no ficheiro de referência for suspensa por um período de 18 meses, a administração notificadora informará a Comissão, no decorrer desse período de 18 meses, da data em que essa utilização foi suspensa e da data em que será reiniciada a utilização regular dessa consignação.

1571 (2) Sempre que tenha razões para supor, em consequência ou não de medidas tomadas nos termos do n.º **1570**, que uma consignação de frequência a uma estação espacial inscrita no ficheiro de referência não tem sido utilizada regularmente durante mais de 18 meses, a Comissão consultará a administração notificadora sobre a data em que será reiniciada a utilização regular dessa consignação.

1572 (3) Se, no prazo de seis meses, a Comissão não receber resposta ao seu pedido de informações feito nos termos do n.º **1571**, ou se a resposta recebida não confirmar que será reiniciada no prazo de seis meses a utilização regular dessa consignação a uma estação espacial, insere-se no ficheiro de referência um símbolo em frente da inscrição. De futuro, a consignação será tratada, em conformidade com as disposições do n.º **1513**, como uma consignação em relação à qual se concluiu que não tem sido efectivamente utilizada desde há dois anos.

1573 § 27. Se a utilização de uma consignação de frequência inscrita no ficheiro de referência vier a ser abandonada definitivamente, a administração notificadora deve informar do facto a Comissão no prazo de três meses, após o que será anulada a inscrição no ficheiro de referência.

1574 § 28. Sempre que a Comissão tenha razões para supor, segundo as informações de que disponha, que uma consignação inscrita no ficheiro de referência não entrou em serviço regular de acordo com as características fundamentais notificadas ou não é utilizada de acordo com as suas características fundamentais, a Comissão consultará a administração notificadora e, sob reserva do seu acordo, anulará a inscrição ou introduzir-lhe-á as modificações convincentes ou manterá as suas características fundamentais.

1575 § 29. Se, após um inquérito feito pela Comissão nos termos do n.º **1574**, a administração notificadora não fornecer à Comissão, no prazo de três meses a contar da data desse inquérito, as informações necessárias ou pertinentes, a Comissão inserirá na coluna «Observações» do ficheiro de referência observações que indiquem a situação.

Secção VII

Estudos e recomendações

1576 § 30. (1) Se lhe for pedido por qualquer administração, a Comissão, utilizando para o efeito os meios de que disponha e que convenham às circunstâncias, procede a um estudo de casos de presunção de contravenção ao presente Regulamento ou de não observância deste Regulamento ou dos casos de interferência prejudicial.

1577 (2) A Comissão elabora seguidamente um relatório, que apresentará às administrações interessadas e no qual consignará as suas conclusões e as suas recomendações para a solução do problema.

1578 (3) Quando receber as recomendações da Comissão para a solução do problema, uma administração acusa imediatamente a recepção por telegrama e comunica depois as medidas que conta tomar. No caso de essas propostas ou recomendações não poderem ser aceites pelas administrações interessadas, a Comissão continuará a esforçar-se por encontrar uma solução aceitável.

1579 § 31. No caso em que, no seguimento a um estudo, a Comissão apresente a uma ou várias administrações propostas ou recomendações tendentes à solução de uma questão, e se, no prazo de quatro meses, ela não

tiver recebido resposta de uma ou várias dessa administrações, considerará que as suas propostas ou recomendações não são aceitáveis pela ou pelas administrações que não responderem. Se a própria administração requerente não responder nesse prazo, a Comissão não dará continuação ao estudo.

SECÇÃO VIII

Disposições divesas

1580 § 32. (1) Se para isso lhe for feito pedido por qualquer administração e, principalmente, pela administração de um país que tenha necessidade de assistência especial, a Comissão, utilizando para o efeito os meios de que disponha e que convenham às circunstâncias, prestará toda a assistência de carácter técnico na aplicação das disposições deste artigo.

1581 (2) Ao apresentar o seu pedido à Comissão, nos termos do n.º **1580**, a administração fornecer-lhe-á as informações necessárias.

1582 § 33. As normas técnicas da Comissão baseiam-se nas disposições pertinentes do presente Regulamento e dos seus apêndices, nas decisões, se existirem, das conferências administrativas da União, nos pareceres da CCIR, no estado de avanço da técnica radioeléctrica e nos aperfeiçoamentos de novas técnicas de transmissão, tendo em conta as condições de propagação excepcionais que possam dominar em certas regiões (por exemplo, um efeito de condutas particularmente acentuado).

1583 § 34. A Comissão leva ao conhecimento das administrações as conclusões e as respectivas justificações, vem como todas as modificações efectuadas no ficheiro de referência, por meio da circular semanal. Essas informações são publicadas no prazo de 45 dias a contar da data de publicação da ficha completa na circular semanal de que trata o n.º **1235**. Quanto a Comissão não puder cumprir o prazo acima mencionado, informará disso, logo que possível, as administrações, indicando as razões.

1584 § 35. Se um membro recorrer às disposições do artigo 50 da Convenção, a Comissão, se lhe for feito pedido, porá os seus documentos à disposição das partes interessadas para a aplicação de qualquer procedimento prescrito na Convenção para a solução de desacordos internacionais.

1585 a 1609 *(Não atribuídos.)*

ARTIGO 14

Procedimento suplementar a aplicar nos casos em que uma nota ao quadro de atribuição das faixas de frequência exija um acordo com uma administração

1610 § 1. (1) Antes de notificar à Comissão uma consignação de frequência que esteja de acordo com uma nota ao quadro de atribuição das faixas de frequência na qual uma referência ao presente artigo, a administração interessada deve obter o acordo de qualquer outra administração cujos serviços possam ser afectados. No caso de uma nota relativa a um serviço de radiocomunicação espacial, este procedimento pode ser iniciado antes da aplicação das disposições do artigo 11 ou ao mesmo tempo.

1611 (2) A administração que procura um tal acordo deve comunicar à Comissão, suficientemente antes da data prevista para a entrada em serviço da consignação:

1612 *a*) Para os serviços de radiocomunicação de Terra, as características fundamentais da consignação em projecto, tal como são indicadas na secção pertinente do apêndice 1;

1613 *b*) Para os serviços de radiocomunicação espacial, as características da consignação em projecto, tal como são indicadas no apêndice 4, ou no apêndice 3, quando estas estiverem disponíveis ([1]).

1614 (3) Ao mesmo tempo que comunicar à Comissão as características acima mencionadas, a administração que procura um acordo pode indicar-lhe as administrações que, em sua opinião, possuam serviços susceptíveis de ser afectados.

1615 § 2. (1) A Comissão publicará, numa secção especial da sua circular semanal ([2]), as informações comunicadas em aplicação dos n.os **1611** a **1614**. Por outro lado, quando uma circular semanal contiver informações dessa natureza, a Comissão informará do facto as administrações por telegrama-circular.

1616 (2) A Comissão procurará identificar as administrações com serviços susceptíveis de ser afectados e indicará o nome das que puder identificar na secção especial da sua circular semanal, bem como no telegrama-circular referido no n.º **1615**.

1613.1 ([1]) As informações indicadas nos apêndices 3 ou 4 e comunicadas à Comissão em aplicação do artigo 11 podem também ser utilizadas para os fins do presente procedimento.

1615.1 ([2]) No caso de um serviço de radiocomunicação espacial, a administração que apresentar as informações indicadas noa apêndices 3 ou 4 em conformidade com as disposições do artigo 11 pode pedir à Comissão que utilize igualmente essas informações na aplicação do presente procedimento. Em tal caso, a Comissão indicará na secção especial apropriada da sua circular semanal que é também procurado um acordo do presente artigo.

1617 § 3. (1) Ao receber essas informações, qualquer administração que pense que a consignação em projecto é susceptível de afectar serviços seus que funcionam de acordo com o quadro de atribuição das faixas de frequências ou se destinam a funcionar assim informará de tal facto, no prazo de quatro meses a contar da data de publicação da circular semanal, a administração que procura o acordo, bem como a Comissão.

1618 (2) Considera-se que uma administração que não tenha formulado qualquer comentário ao prazo especificado no n.º **1617** não é afectada pela consignação em projecto.

1619 (3) Uma administração que, em aplicação do n.º **1617**, responda a um pedido de acordo comunicará, se possível ao mesmo tempo, pelo menos as características fundamentais das suas estações cujos serviços são susceptíveis de ser afectados, bem como as sugestões que possa formular para se obter uma solução satisfatória do problema, e enviará simultaneamente à Comissão cópia de todas essa informações.

1620 § 4. A administração que procura um acordo em aplicação dos n.os **1611** a **1613** e a administração que responde em aplicação do n.º 1617 deve procurar resolver em comum (1) o problema antes da data de entrada em serviço da consignação em projecto.

1621 § 5. Qualquer dessas administrações pode pedir à outra informações suplementares que possam conduzir à solução do problema. Será enviada à Comissão cópia de pedido e de qualquer informação que seja dada em resposta.

1622 § 6. Qualquer das administrações pode pedir a ajuda da Comissão para resolver o problema.

1623 § 7. Uma vez resolvido o problema, a administração que procurou o acordo informará do facto a Comissão.

1624 § 8. Uma administração que tenha procurado um acordo em aplicação dos n.os **1611** a **1613** e que não tenha recebido resposta de qualquer administração em aplicação do n.º **1617** informa do facto a Comissão. Considera-se então que essa administração aplicou com êxito o procedimento do presente artigo.

1625 § 9. Considera-se que obteve o acordo exigido pela nota pertinente do quadro de atribuição das faixas de frequências qualquer administração que tenha procurado um acordo em aplicação dos n.os **1611** a **1613**, que tenha recebido uma ou várias respostas em aplicação do n.º **1617** e que, em conformidade com o n.º **1623**, tenha informado a Comissão de que o problema ficou resolvido.

1626 § 10. Uma vez avisada, nos termos do n.º **1624** ou do n.º **1625**, da aplicação completa do presente procedimento, a Comissão publica essa informação na secção especial apropriada da sua circular semanal.

1627 § 11. Uma administração que procura um acordo ou junto do qual é procurado um acordo, ou qualquer outra administração cujos serviços possam ser afectados, pode pedir o auxílio da Comissão na aplicação das diferentes fases do presente procedimento, especialmente para:

1628 *a*) Identificar as administrações cujos serviços possam ser afectados;

1629 *b*) Avaliar os níveis de interferência;

1630 *c*) Definir, com o acordo das administrações implicadas, os critérios técnicos a utilizar (1).

1631 a 1655 *(Não atribuídos.)*

ARTIGO 15

Coordenação, notificação e inscrição de frequências às estações do serviço de radiodifusão por satélite nas faixas de frequências 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região 1) e aos outros serviços a que estas faixas estão atribuídas, na medida em que esteja implicada a relação deste com o serviço de radiodifusão por satélite nestas faixas.

1656 As disposições e o plano associado aplicáveis ao serviço de radiodifusão por satélite nas faixas de frequências 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região 1), tais como adoptadas pela Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) e que figuram no apêndice 30, aplicam-se à consignação de frequências às estações do serviço de radiodifusão por satélite nestas faixas e às estações dos outros serviços a que estas faixas estão atribuídas e à utilização destas frequências pelas referidas estações, na medida em que esteja implicada a sua relação como serviço de radiodifusão por satélite nestas faixas.

1657 a 1681 *(Não atribuídos.)*

1620.1 1630.1 (1) Na ausência de pareceres pertinentes da CCIR ou de normas técnicas da IFRB, os critérios técnicos a aplicar em tal caso devem ter sido objecto de um acordo entre as administrações interessadas.

ARTIGO 16

Procedimento para actualização do plano de adjudicação (1) de frequências às estações costeiras radioeléctricas que funcionam nas faixas exclusivas do serviço móvel marítimo entre 4000 kHz e 23 000 kHz

(Apêndice 25 Mar2)

1682 § 1. (1) Antes de notificar à Comissão Internacional do Registo de Frequências ou de pôr em serviço uma consignação de frequência a uma estação costeira radiotelefónica para a qual não figure qualquer adjudicação correspondente no plano de adjudicação de frequências contido no apêndice 25 Mar2, qualquer administração que:

1683 *a*) Se proponha pôr em serviço uma estação costeira radioeléctrica e não tenha qualquer adjudicação no plano; ou

1684 *b*) Se proponha alargar o serviço radiotelefónico assegurado pela sua ou pelas suas estações costeiras e tenha necessidade de uma adjudicação adicional;

envia à Comissão as informações indicadas no apêndice 5 no máximo dois anos antes, no caso mencionado no n.º **1683**, ou no máximo seis meses antes, no caso mencionado no n.º **1684**, mas, em qualquer caso, não mais tarde que três meses antes da data prevista de entrada em funcionamento do seu serviço radiotelefónico em projecto.

1685 (2) A comissão publicará, numa secção especial da sua circular semanal, as informações de que tratam os n.ºs **1682** a **1684**, juntamente com os casos de incompatibilidade aparente que a Comissão possa detectar entre a adjudicação em projecto que é objecto da publicação e qualquer outra adjudicação existente ou em projecto. A Comissão fornecerá igualmente as informações de carácter técnico e as sugestões que possa apresentar com vista a evitar essas incompatibilidades.

1686 (3) Se lhe for pedido por qualquer administração, e especialmente por uma administração de um país que necessite de assistência especial, e se as circunstâncias o justificarem, a Comissão, utilizando todos os meios de que disponha e que convenham às circunstâncias, prestará a assistência seguinte:

1687 *a*) Determinação de uma ou de várias vias que melhor convenham ao serviço projectado pela administração antes de esta enviar as informações para publicação;

1688 *b*) Aplicação do procedimento previsto no n.º **1690**;

1689 *c*) Qualquer outra assistência de carácter técnico para que possam ser levados a bom termo os procedimentos descritos no presente artigo.

1690 § 2. (1) Ao mesmo tempo que envia à Comissão as informações indicadas no apêndice 5 para serem publicadas, a administração interessada procurará, relativamente à adjudicação em causa, obter o acordo das administrações a que a via está adjudicada e enviará à Comissão uma cópia de toda a correspondência efectuada nesse sentido.

1691 (2) Uma administração tem o direito de participar no procedimento encetado nos termos no n.º **1690** se, após estudar as informações publicadas pela Comissão, concluir que os seus serviços já existentes ou em projecto, destinados a entrar em serviço dentro dos prazos indicados nos n.ºs **1682** a **1684**, poderão ser desfavoravelmente influenciados.

1692 § 3. (1) Qualquer administração que receba um pedido nos termos do n.º **1690** acusará imediatamente a recepção, por telegrama. Se a administração que fez o pedido não receber aviso de recepção no prazo de 30 dias a contar da data da circular semanal em que foram publicadas as informações pertinentes de acordo com as disposições do n.º **1685**, enviará um telegrama a pedir o referido aviso de recepção, devendo a administração à qual o telegrama é dirigido responder dentro de um novo prazo de 15 dias.

1693 (2) Ao receber o pedido feito nos termos do n.º **1690**, a administração interessada, tendo em conta a data prevista de entrada em serviço da ou das consignações correspondentes à adjudicação para a qual foi pedido o acordo, estudará rapidamente a questão, sob o ponto de vista da interferência prejudicial que seria causada ao serviço assegurado pela sua ou pelas suas estação(ões) costeira(s):

1694 *a*) Que utiliza(m) uma consignação de frequência correspondente a uma adjudicação que figura no plano; ou

1695 *b*) Que será(ão) posta(s) em serviço no prazo prescrito no n.º **1720**, em conformidade com uma adjudicação que figura no plano; ou

1696 *c*) Que será(ão) posta(s) em serviço no prazo prescrito no n.º **1720**, em conformidade com uma adjudicação que foi comunicado à Comissão nos termos dos n.ºs **1682** a **1684** para ser publicado nos termos do n.º **1685**.

1697 (3) Qualquer administração que receba um pedido nos termos do n.º **1690** e que considere que o projecto de utilização de uma via não causará interferência prejudicial ao serviço assegurado pelas suas estações

---

A.16.1 (1) V. o n.º **18**.

costeiras a que se referem os n.os **1693** a **1696**, comunicará o seu acordo à administração que lhe fez o pedido tão rapidamente quanto possível e nunca mais tarde que dois meses após a data da circular semanal pertinente.

1698 (4) Qualquer administração que receba um pedido nos termos do n.º **1690** e que considere que o projecto de utilização de uma via poderia causar interferência prejudicial ao serviço assegurado pelas suas estações costeiras a que se referem os n.os **1693** a **1696**, comunicará à administração que lhe fez o pedido os motivos do seu desacordo tão rapidamente quanto possível e nunca mais tarde que dois meses após a data da circular semanal pertinentes. Fornecer-lhe-á igualmente qualquer informação ou sugestão que possa contribuir para uma solução satisfatória do problema. A administração que pretende obter o acordo procurará, na medida do possível, adaptar as suas necessidades tomando em consideração as observações que lhe foram feitas.

1699 (5) No caso em que uma administração que procura obter um acordo não tenha qualquer adjudicação na faixa considerada, a administração a que seja feito o pedido de acordo procurará, em conjunto com a administração requerente, todos os meios de satisfazer as necessidades desta.

1700 § 4.(1) A administração que procura obter um acordo pode pedir à Comissão que diligencie obter esse acordo nas seguintes circunstâncias:

1701 *a*) Uma administração à qual foi feito um pedido de acordo nos termos do n.º **1690** não acusa a recepção desse pedido no prazo de 45 dias a contar da data da circular semanal em que foram publicadas as informações pertinentes;

1702 *b*) Uma administração acusou a recepção nos termos do n.º **1692** mas não comunica a sua decisão no prazo de dois meses contar da data da circular semanal em que foram publicadas as informações pertinentes;

1703 *c*) A administração que procura obter um acordo e a administração junto da qual se pretende obter o acordo estão em desacordo no que respeita às possibilidades de partilha;

1704 *d*) Não é possível chegar a acordo por qualquer outro motivo.

1705 (2) A administração que procura obter um acordo, ou qualquer administração à qual foi feito um pedido de acordo, ou a Comissão, podem pedir as informações suplementares de que necessitem para o estudo dos problemas relativos a esse acordo.

1706 (3) Quando a Comissão receber um pedido nos termos do n.º **1701**, enviará sem demora um telegrama à administração interessada pedindo-lhe que acuse a recepção imediatamente.

1707 (4) Quando a Comissão receber um aviso de recepção em seguimento da medida por ela tomada nos termos do n.º **1706** ou quando a Comissão receber um pedido nos termos do n.º **1702**, enviará sem demora um telegrama à administração interessada pedindo-lhe que tome rapidamente uma decisão sobre o assunto.

1708 (5) Quando a Comissão receber um pedido nos termos do n.º **1704**, tentará obter o acordo mencionado no n.º **1690**. Quando a Comissão não receber de uma administração aviso de recepção do pedido feito em aplicação das disposições do n.º **1690** dentro do prazo especificado no n.º **1692**, actuará, no que respeita a essa administração, de acordo com as disposições do n.º **1706**.

1709 (6) Quando uma administração não responder dentro do prazo de 15 dias a contar da data em que a Comissão lhe enviou o telegrama nos termos do n.º **1706** pedindo-lhe que acusasse a recepção, ou quando não comunicar a sua decisão sobre o assunto no prazo de 30 dias a contar da data em que a Comissão lhe enviou o telegrama nos termos do n.º **1707**, considera-se que, uma vez, a adjudicação em projecto inserida no plano, essa administração se obriga a:

1710 *a*) Não formular queixa relativa às interferências prejudiciais que possam ser causadas ao serviço assegurado pelas suas estações costeiras radiotelefónicas pela utilização de consignações de frequências que estejam de acordo com a adjudicação para a qual foi pedido o acordo;

1711 *b*) Proceder de modo a evitar que as suas estações costeiras radiotelefónicas já existentes ou em projecto causem interferências prejudiciais à utilização de consignações de frequências que estejam de acordo com a adjudicação para a qual foi pedido o acordo.

1712 (7) A Comissão inscreve no ficheiro de referência, na coluna «Observações», em frente da adjudicação em causa e das respectivas consignações, uma observação a indicar que essas consignações não beneficiam das disposições do n.º **1416** do presente Regulamento, no que respeita às consignações da administração que procura obter o acordo.

1713 (8) A Comissão examina a adjudicação em projecto, sob o ponto de vista de probabilidade de interferência prejudicial que essa adjudicação possa sofrer por parte de uma adjudicação que figura no plano em nome da administração que não respondeu ao pedido da Comissão ou que comunicou o seu desacordo sem indicar os motivos deste. Se a sua conclusão foi favorável e se a aplicação do presente procedimento às outras administrações em causa o permitir, insere a adjudicação em projecto no plano.

1714 (9) No caso de uma conclusão desfavorável, a Comissão informa a administração interessada do resultado do seu exame. Se esta insistir e se a aplicação do presente procedimento às outras administrações em causa o permitir, insere a adjudicação em projecto no plano.

1715 (10) Quando a Comissão receber um pedido nos termos do n.º **1703**, avaliará as possibilidades de partilha e comunicará às administrações interessadas os resultados obtidos.

1716 (11) Em caso de desacordo persistente, a Comissão examina a adjudicação em projecto sob o ponto de vista das interferências prejudiciais que possam ser causadas ao serviço assegurado pelas estações da administração que manifestou o seu desacordo. Caso a conclusão seja favorável e se a aplicação do presente procedimento às outras administrações interessadas o permitir, a Comissão insere a adjudicação em projecto no plano.

1717 (12) Se, em consequência do exame a que se refere o n.º **1716**, a Comissão chegar a uma conclusão desfavorável, examina a adjudicação em projecto sob o ponto de vista das interferências prejudiciais que possam ser causadas aos serviços assegurados nas diferentes vias da faixa em questão. Se a Comissão formular uma conclusão desfavorável em todos os casos, escolhe a via menos afectada e, se a administração que procura obter o acordo lho pedir, insere a adjudicação em projecto nessa via do plano.

1718 § 5. A administração que procura obter acordo para uma adjudicação informa a Comissão do resultado das consultas feitas às administrações interessadas. Quando a Comissão concluir que o procedimento descrito no presente artigo foi aplicado em relação a todas as administrações interessadas, publica a sua conclusão numa secção especial da sua circular semanal e, se for caso disso, actualiza o plano.

1719 § 6. Apesar das disposições anteriores e se as circunstâncias o justificarem, qualquer administração poderá, em caso excepcionais, notificar à Comissão uma consignação de frequência não abrangida por uma adjudicação, com vista à sia inscrição provisória no ficheiro de referência. Deverá, todavia, iniciar simultaneamente o procedimento descrito no presente artigo.

1720 § 7. Quando, no prazo de 12 meses a contar da data da inclusão de uma adjudicação no plano, a Comissão não receber a notificação de uma primeira consignação de frequência relativa a essa adjudicação ou quando a primeira consignação notificada não for posta em serviço dentro dos prazos prescritos no presente Regulamento, antes de proceder à supressão da adjudicação no plano a Comissão consultará a administração interessada sobre a oportunidade de tal supressão e publicará essa informação no âmbito da actualização do plano. Todavia, quando, em consequência de pedido feito pela administração interessada, a Comissão concluir que circunstâncias excepcionais justificam um prazo suplementar, este não deve, em caso algum, ser superior a 6 meses, excepto tratando-se de uma administração que não tem nenhuma estação costeira em serviço, caso em que esse prazo poderá ser alargado até 18 meses.

1721 § 8. Qualquer administração em cujo nome figure uma adjudicação no plano e que tenha necessidade de a substituir por outra adjudicação na mesma faixa de frequências, com vista a melhorar o seu serviço, aplica o procedimento descrito no presente artigo. No caso de essa administração chegar a um resultado positivo através da aplicação deste procedimento, a Comissão substitui, a seu pedido, a adjudicação existente no plano pela adjudicação em projecto.

1722 § 9. A Comissão manterá actualizado um plano de referência resultante da aplicação do presente procedimento, e elaborará, de forma apropriada, para publicação pelo secretário-geral, a totalidade ou parte de uma versão revista do plano, sempre que as circunstâncias o justifiquem e, pelo menos, uma vez por ano.

1723 a 1747 *(Não atribuídos.)*

ARTIGO 17

Procedimento relativo às faixas atribuídas em exclusivo ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz

SECÇÃO I

Apresentação dos horários periódicos de radiodifusão em ondas decamétricas

1748 § 1. Em intervalos regulares, as administrações apresentam à Comissão Internacional do Registo de Frequências os projectos de horários periódicos das suas estações de radiodifusão nas faixas atribuídas em exclusivo ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz. Os horários assim notificados são relativos a cada um dos períodos seguintes, determinados segundo as condições de propagação, e são postos em vigor no primeiro domingo de cada um dos períodos em causa, às 01.00 UTC:

Horário de Março — Março e Abril;
Horário de Maio — Maio, Junho, Julho e Agosto;
Horário de Setembro — Setembro e Outubro;
Horário de Novembro — Novembro, Dezembro, Janeiro e Fevereiro.

1749 § 2. Os primeiros horários entraram em vigor em 4 de Setembro de 1960, para serem aplicados durante o período Setembro-Outubro de 1960. As datas limite antes das quais convém que os horários sejam recebidos pela Comissão são determinadas por esta, de tal modo que a antecipação com que os horários devem ser por ela recebidos seja progressivamente reduzida até ao mínimo que a Comissão tenha considerado conveniente. As consignações que figurem num horário determinado e cujas características sejam susceptíveis de não sofrer modificação podem ser apresentadas à Comissão com uma antecipação máxima de uma ano e devem ser confirmadas, o mais tardar, até à data limite de recepção pela Comissão dos horários relativos aos períodos

em causa. A Comissão tomará as medidas necessárias para, em tempo oportuno, chamar a atenção das administrações para as diversas fases do presente procedimento.

1750 § 3. Várias administrações podem apresentar à Comissão horários coordenados nos quais indiquem a utilização projectadas das frequências em que acordaram.

1751 § 4. As frequências indicadas nos horárias devem ser frequências que serão efectivamente utilizadas durante o período considerado e convém que o seu número seja o mínimo necessário para assegurar uma recepção satisfatória do programa em causa em cada uma das zonas a que é destinado. Convém que cada administração, ao elaborar os seus horários de período em período, utilize, em toda a media do possível, numa dada faixa, as frequências que utilizou nos seus horários precedentes.

1752 § 5. Os horários são apresentados à Comissão pela forma prescrita no apêndice 2, onde estão especificados as características a fornecer para cada consignação.

1753 § 6. As frequências indicadas nos horários devem satisfazer as disposições do n.º **1240** do presente Regulamento e convém que as frequências escolhidas correspondam, tanto quanto possível, a inscrições que figuram no ficheiro de referência internacional das frequências. As administrações em cujo nome não exista qualquer inscrição conveniente no ficheiro de referência poderão sugerir qualquer frequência que julguem conveniente ou, se o desejarem, limitar-se a indicar a faixa de frequência.

SECÇÃO II

Exame preliminar e elaboração do Horário provisório de radiodifusão em ondas decamétricas

1754 § 7. (1) Ao receber os horários periódicos, incluindo, se for caso disso, a confirmação de que continuarão a ser utilizadas certas consignações contidas no horário do período precedente, a Comissão incorpora os dados relativos à utilização projectada das frequências por todas as administrações num horário combinado e procede ao exame técnico preliminar necessário para a elaboração do'Horário provisório de radiodifusão em ondas decamétricas (daqui em diante denominado «Horário provisório») para o período considerado. Este Horário provisório compreenderá:

1755 *a*) Todas as consignações de frequência, nos casos em que a administração não propuser qualquer variante;

1756 *b*) As escolhas efectuadas pela Comissão, nos casos em que a administração tenha proposto uma ou mais variantes;

1757 *c*) As frequências que a Comissão proponha para todos os serviços para os quais não foi incluída, no horário apresentado, qualquer frequência específica: ao formular estas sugestões, a Comissão tomará devidamente em conta as disposições do n.º **1759**, a compatibilidade do Horário provisório e as modificações que poderia haver interesse em introduzir na utilização projectada das frequências, a fim de satisfazer mais equitativamente os pedidos das administrações;

1758 *d*) Os casos de incompatibilidade aparente que a Comissão possa detectar, durante o período de tempo de que dispõe, entre as consignações de frequência.

1759 (2) A pedido das administrações especialmente das administrações dos países que tenham necessidade de assistência especial e no nome das quais não figure qualquer inscrição conveniente no Ficheiro de referência, a Comissão dará uma atenção especial aos pedidos dessas administrações na elaboração do horário provisório.

1760 (3) A comissão começará os trabalho especificados nos n.os **1754** a **1758** suficientemente cedo para que o Horário provisório relativo a um dado período possa ser enviado às administrações o mais tardar dois meses antes do início desse período.

SECÇÃO III

Exame técnico e revisão do Horário provisório

1761 § 8. (1) A Comissão prosseguirá no exame técnico do Horário provisório, a fim de não só detectar e corrigir, sempre que possa outros caos de incompatibilidade entre consignações de frequência reveladoras pelo exame técnico, como ainda melhorar, sob o ponto de vista técnico, o Horário provisório, introduzindo-lhe modificações, para as quais deverá, por consultas, obter o assentimento das administrações interessadas.

1762 (2) Ao apresentar recomendações às administrações, a Comissão terá em conta os resultados da fiscalização das emissões e qualquer outro dado de que disponha. Todavia, quando se lhe afigurar que uma utilização de frequência não está de acordo com as consignações que figuram no horário apresentado por uma administração a Comissão dirigir-se-á a essa administração a fim de obter confirmação.

1763 (3) Convém que as administrações, após examinarem o Horário provisório e as recomendações eventuais da Comissão, notifiquem a esta, tão depressa quanto possível, e de preferência antes do início do período em causa, todas as modificações do Horário provisório que tenham a intenção dé efectuar.

1764 (4) As modificações às consignações das estações de radiodifusão que forem efectuadas depois do início do período considerado deverão ser notificadas à Comissão logo que previstas.

1765 (5) A Comissão aplicará às modificações que lhe sejam notificadas nos termos dos n.os **1763** e **1764** o procedimento especificado nos n.os **1759, 1761** e **1762**. Todas as modificações do Horário provisório que

resultem da aplicação do procedimento especificado na presente secção serão publicadas nas circulares semanais da IFRB, a fim de que as administrações possam actualizar os seus exemplares do Horário provisório.

SECÇÃO IV

Publicação do Horário de radiodifusão em ondas decamétricas

1766 § 9. Após o fim de cada período, a Comissão publica o Horário de radiodifusão em ondas decamétricas, o qual reflectirá o Horário provisório tal como foi modificado em virtude de todas as alterações notificadas à Comissão depois da sua publicação. Nesse Horário de radiodifusão em ondas decamétricas são assinaladas por meio de símbolos:

1767 *a*) As consignações em relação às quais as administrações tenham informado a Comissão não as julgarem satisfatórias na prática;

1768 *a*) As consignações não incluídas no Horário provisório e que a Comissão tenha tido em conta no exame que procedeu nos termos da secção III do presente artigo.

SECÇÃO V

Lista anual das frequências de radiodifusão em ondas decamétricas

1769 § 10. Será publicada uma lista das frequências de radiodifusão em ondas decamétricas no fim do primeiro ano em que tenha estado em vigor o procedimento especificado no presente artigo. Esta lista incluirá todas as consignações de frequência que figuram durante o ano decorrido nos Horários de radiodifusão em ondas decamétricas. Esta lista será publicada como suplemento à Lista Internacional das Frequências e com o mesmo aspecto geral. Incluirá também símbolos que indiquem as consignações de que a Comissão teve conhecimento de que se não revelaram satisfatórias na prática e outros símbolos que indiquem os períodos durante os quais foi utilizada cada consignação. Em seguida e anualmente será publicada uma lista recapitulativa.

SECÇÃO VI

Disposições diversas

1770 § 11. Convém que as normas técnicas utilizadas pela Comissão na aplicação das disposições do presente artigo se baseiem não só nos factores indicados no n.º **1454** mas ainda na experiência passada em matéria de elaboração de planos de radiodifusão e na experiência adquirida pela Comissão na aplicação das disposições do presente artigo.

1771 § 12. Com vista à evolução ulterior para planos tecnicamente compatíveis para as faixas de frequência em causa, a Comissão toma todas as medidas necessárias para proceder a estudos técnicos a longo termo. Usará, para esse efeito, todas as informações sobre a utilização das frequências postas à sua disposição, durante a a aplicação do procedimento descrito no presente artigo. A Comissão manterá as administrações informadas, em intervalos regulares, dos progressos e dos resultados desses estudos.

1772 § 13. Ao aplicar as disposições do artigo 22 do presente Regulamento, as administrações devem dar provas do máximo de boa vontade e de auxílio mútuo na solução dos problemas de interferências prejudiciais nas faixas em causa e devem tomar devidamente em consideração todos os factores pertinentes, tanto técnicos como de exploração.

1773 a 1797 *(Não atribuídos.)*

CAPÍTULO V

Medidas contras as interferências — Ensaios

ARTIGO 18

Interferências

1798 § 1. As administrações devem cooperar na pesquisa e na eliminação das interferências prejudiciais utilizando, se tal for o caso, os meios descritos no artigo 20 e seguindo o procedimento descrito no artigo 22.

SECÇÃO I

Interferências gerais

1799 § 2. São interditas a todas as estações:

1800 *a*) As transmissões inúteis;

1801 *b*) A transmissão de sinais e de correspondência supérfulos;
1802 *c*) A transmissão de sinais falsos ou que enganem;
1803 *d*) A transmissão de sinais cuja identidade não seja dada (excepto nos casos previstos no artigo 25).

1804 § 3. Todas as estações devem limitar a potência radiada no mínimo necessário para assegurar um serviço satisfatório.

1805 § 4. A fim de evitar as interferências:

1806 *a*) As localizações das estações de emissão e, quando a natureza do serviço o permitir, as das estações de recepção deverão ser escolhidas com cuidado especial;
1807 *b*) A radiação em direcções inúteis, bem como a recepção de radiações provenientes de direcções inúteis, deverão ser, sempre que a natureza do serviço o permita, reduzidas o mais possível, tirando o melhor partido das propriedades das antenas direccionais;
1808 *c*) A escolha e a utilização dos emissores e dos receptores deverão satisfazer as disposições do artigo 5;
1809 *d*) Devem ser preenchidas as condições especificadas no n.º **2612.**

1810 § 5. Deve ter-se cuidado muito especial em evitar as interferências nas frequências do perigo e de segurança, bem como nas frequências que têm relação com o perigo e a segurança, indicadas no artigo 38.

1811 § 6. Convém que a classe de emissão a utilizar por uma estação seja tal que produza o mínimo de interferência e assegure a utilização eficaz do espectro. Em geral, isso implica que, ao escolher, para o efeito, a classe de emissão, devem ser feitos todos os esforços para reduzir o mais possível a largura de faixa ocupada, tendo em conta as considerações técnicas e de exploração ao serviço a assegurar.

1812 § 7. Convém que as emissões fora de faixa das estações de emissão não causem interferência prejudicial aos serviços que funcionam em faixas adjacentes em conformidade com as disposições do presente Regulamento e que utilizam receptores de acordo com os n.os **301, 309, 310, 311** e com os pareceres pertinentes da CCIR.

1813 § 8. Se, embora satisfazendo às disposições do artigo 5, uma estação causar interferências prejudiciais em virtude das suas radiações não essenciais, devem ser tomadas medidas especiais para eliminar essas interferências.

Secção II

Interferências causadas por aparelhos e instalações eléctricas de qualquer espécie, com excepção dos aparelhos destinados às utilizações industriais, científicas e médicas

1814 § 9. As administrações devem tomar as medidas práticas necessárias para que o funcionamento dos aparelhos e das instalações eléctricas de qualquer espécie, incluindo as redes de distribuição de energia ou de telecomunicações, mas com excepção dos aparelhos destinados às utilizações industriais, científicas e médicas, não possa causar interferência prejudicial a qualquer serviço de radiocomunicação e em especial aos serviços de radionavegação e outros serviços de segurança, explorado em conformidade com este Regulamento (1).

Secção III

Interferências causadas pelos aparelhos destinados às utilizações industriais, científicas e médicas

1815 § 10. As administrações devem tomar todas as medidas práticas necessárias para que as radiações provenientes de aparelhos destinados às utilizações industriais, científicas e médicas sejam reduzidas ao mínimo e para que, fora das faixas utilizáveis por esses aparelhos, o nível de radiações não possa causar interferência prejudicial a qualquer serviço de radiocomunicação, e em especial aos serviços de radionavegação e outros serviços de segurança, explorado em conformidade com o presente Regulamento (1).

Secção IV

Casos especiais de interferência

1816 § 11. As administrações que autorizarem a utilização de frequências inferiores a 9 kHz deverão assegurar-se de que daí não resulte interferência prejudicial aos serviços a que estão atribuídas as faixas de frequência superiores a 9 kHz.

1817 a 1841 *(Não atribuídos.)*

1814.1 (1) A este respeito, as administrações deverão basear-se nos mais recentes pareceres pertinentes da CCIR.
1815.1

ARTIGO 19

Ensaios

1842 § 1. (1) Antes de autorizar ensaios e experiências numa estação, cada administração prescreverá, a fim de evitar interferências prejudiciais, que sejam tomadas todas as precauções possíveis, tais como: escolha da frequência e do horário, redução e, em todos os casos em que seja possível, supressão da radiação. Qualquer interferência prejudicial que resulte de ensaios e de experiências deverá ser eliminada nos menores prazos.

1843 (2) No que respeita à identificação das emissões feitas durante ensaios, os ajustes ou as experiências (v. o artigo 25).

1844 (3) No serviço de radionavegação aeronáutica não é desejável, por razões de segurança, transmitir a identificação normal quando se efectuarem emissões destinadas a verificações ou ajustes do material já em serviço. Convém, no entanto, que as emissões sem identificação sejam limitadas ao mínimo.

1845 (4) Os sinais de ensaio e de ajuste deverão ser escolhidos de modo tal que não se possa produzir qualquer confusão com um sinal, uma abreviatura, etc., de significado especial definido no presente Regulamento ou no Código Internacional de Sinais.

1846 (5) No que respeita aos ensaios nas estações do serviço móvel, v. os n.^{os} **3766, 3767** e **5058** a **5060.**

1847 a 1871 *(Não atribuídos.)*

ARTIGO 20

Fiscalização internacional das emissões

1872 § 1. Para facilitar, dentro das possibilidades práticas, a aplicação das disposições do presente Regulamento, especialmente para ajudar a garantir uma utilização eficaz e económica do espectro das frequências radioeléctricas e contribuir para a eliminação rápida das interferências prejudiciais, as administrações concordam em continuar a alargar os meios de fiscalização das emissões e em cooperar, em toda a medida do possível, no aperfeiçoamento progressivo de um sistema de fiscalização internacional das emissões.

1873 § 2. O sistema de fiscalização internacional das emissões compreende apenas as estações de fiscalização das emissões que foram designadas como tais pelas administrações nas informações enviadas ao secretário-geral em conformidade com o n.º **1879.** Essas estações podem ser exploradas por uma administração ou, em virtude de uma autorização concedida pela administração responsável, por uma empresa pública ou privada ou por um serviço de fiscalização estabelecido em comum por vários países ou por uma organização internacional.

1874 § 3. As administrações efectuam, na medida em que o considerem possível, as fiscalizações de carácter geral ou especial que lhes possam ser pedidas pela Comissão Internacional do Registo de Frequências ou por outras administrações. Convém que, ao pedirem observações de fiscalização, a Comissão e as administrações tenham em conta as instalações de fiscalização, mencionadas na nomenclatura das estações de fiscalização internacional das emissões (lista VIII, v. o artigo 26) e indiquem claramente, por um lado, para que fim se pedem as observações e, por outro lado, quais os parâmetros (incluindo os programas apropriados) da fiscalização desejada. Os resultados das fiscalizações desta natureza transmitidos a outras administrações poderão também ser comunicados à Comissão, se tal comunicação parecer indicada.

1875 § 4. Cada administração, cada serviço de fiscalização estabelecido em comum por vários países e cada organização internacional que participe no sistema de fiscalização internacional das emissões designa um organismo centralizador, ao qual devem ser endereçados todos os pedidos de fiscalização e por intermédio do qual os resultados da fiscalização serão transmitidos à Comissão e aos organismos centralizadores das outras administrações.

1876 § 5. As administrações concordam em que os pedidos de fiscalização oriundos de organizações internacionais que não participam no sistema de fiscalização das emissões devem ser coordenados pela Comissão e transmitidos por ela às administrações, se para tal houver lugar.

1877 § 6. As disposições do presente artigo não afectam os acordos de fiscalização particulares, concluídos para fins determinados por administrações, organizações internacionais ou empresas públicas ou privadas.

1878 § 7. As normas técnicas que a CCIR recomenda para observação pelas estações de fiscalização são reconhecidas pela Comissão como normas práticas óptimas para as estações de fiscalização internacional das emissões. Todavia, para satisfazer a necessidade de certos dados, as estações que observarem normas técnicas menos elevadas poderão, se a sua administração o desejar, participar no sistema de fiscalização internacional das emissões.

1879 § 8. Após ter determinado se as normas técnicas seguidas pelas estações de fiscalização são suficientes, as administrações notificam ao secretário-geral as informações úteis relativas aos organismos centralizadores e as estações que desejam incluir a lista VIII, identificando claramente as estações susceptíveis de participar no sistema de fiscalização internacional das emissões (v. o artigo 26 e o apêndice 9).

1880 § 9. (1) Os resultados de medidas transmitidos à Comissão ou a outras administrações deverão conter a estimativa de precisão obtida no momento da medida.

1881 (2) Quando a Comissão considerar duvidosos ou insuficientes para as suas necessidades os resultados fornecidos por uma estação de fiscalização, avisa do facto a administração ou organização internacional interessada, fornecendo os pormenores úteis.

1882 § 10. Quando forem necessárias medidas urgentes, as comunicações entre a Comissão e os organismos centralizadores, bem como entre os próprios organismos centralizadores, devem ser encaminhadas pelos mais rápidos meios de transmissão.

1883 § 11. As administrações farão todo o possível para que as observações de fiscalização (v. o apêndice 21) sejam comunicadas à Comissão nos menores prazos.

1884 § 12. Os organismos centralizadores podem pedir o auxílio de outros organismos centralizadores para aplicar as disposições do presente artigo e as do artigo 22.

1885 § 13. A Comissão fará um apanhado dos resultados que lhe forem transmitidos pelas estações de fiscalização que participam no sistema de fiscalização internacional das emissões e elaborará periodicamente, para fins de publicação pelo secretário-geral, resumos dos resultados de fiscalização úteis por ela recebidos, aos quais adicionará uma lista das estações que forneceram esses resultados.

1886 § 14. Quando uma administração, ao fornecer observações feitas por uma das suas estações de fiscalização que participa no sistema de fiscalização internacional das emissões, comunicar à Comissão que uma emissão identificada sem ambiguidade não está em conformidade com as disposições do presente Regulamento, a Comissão chama a atenção da administração responsável para essas observações.

1887 a 1914 *(Não atribuídos.)*

ARTIGO 21

Relatórios sobre infracções

1915 § 1. As infracções à Convenção ou ao Regulamento das Radiocomunicações são comunicadas às suas respectivas administrações pelos organismos de fiscalização, estações ou inspectores que as verifiquem. Para esse fim usar-se-ão formulários de acordo como o modelo reproduzido no apêndice 22.

1916 § 2. As representações relativas a qualquer infracção importante cometida por uma estação são feitas pelas administrações que as verifiquem à administração do país de que depende essa estação.

1917 § 3. Se uma administração tiver conhecimento de uma infracção à Convenção ou ao Regulamento das Radiocomunicações cometida por uma estação sob sua dependência, verificará os factos, determinará responsabilidades e adoptará as medidas necessárias.

1918 a 1942 *(Não atribuídos.)*

ARTIGO 22

Procedimento contra as interferências prejudiciais

1943 § 1. Para resolver os problemas de interferências prejudiciais é essencial que os Membros dêem provas do máximo de boa vontade e de auxílio mútuo na aplicação das disposições do artigo 35 da Convenção e dado presente artigo.

1944 § 2. Para resolver esses problemas tomar-se-ão devidamente em conta todos os factores em causa, incluindo os factores técnicos e de exploração apropriados, por exemplo: ajuste das frequências, características das antenas de emissão e de recepção, partilha no tempo, mudanças de via nas transmissões multivias.

1945 § 3. Quando for assinalada uma interferência prejudicial por uma estação de recepção, esta comunica à estação cuja emissão é interferida todas as informações que possam contribuir para identificar a origem e as características da interferência.

1946 § 4. Quando tal for possível na prática, e sob reserva de acordo entra as administrações interessadas, os problemas de interferências prejudiciais podem ser tratados directamente pelas suas estações de fiscalização especialmente designadas ou ao nível dos seus serviços de exploração.

1947 § 5. No presente artigo, o termo «administração» pode incluir o organismo centralizador designado pela administração em conformidade com o n.º **1875.**

1948 § 6. Se um caso de interferência prejudicial justificar tal diligência, a administração de que depende a estação de recepção que verificou a interferência informa do facto a administração de que depende a estação cuja emissão é interferida, comunicando-lhe o máximo de informações possível.

1949 § 7. Se forem necessárias observações e medidas complementares para determinar a origem e as características da interferência prejudicial, a administração de que depende a estação cuja emissão é interferida pode pedir, para tal efeito, a colaboração de outras administrações, em especial daquela de que depende a estação de recepção que verificou a interferência, ou de outras organizações.

1950 § 8. Depois de ter determinado a origem e as características da interferência prejudicial, a administração de que depende a estação cuja emissão é interferida comunica à administração de que depende a estação

interferente todas as informações úteis para que esta administração possa tomar as medidas necessárias a fim de eliminar a interferência.

1951 § 9. Quando for causada uma interferência prejudicial a um serviço de segurança, a administração de que depende a estação de recepção que notou a interferência pode intervir directamente junto da administração de que depende a estação interferente. Pode também fazê-lo noutros casos, sob reserva de aprovação prévia da administração de que depende a estação cuja emissão é interferida.

1952 § 10. Uma administração que seja avisada de uma das suas estações causa interferências prejudiciais a um serviço de segurança deve estudar rapidamente o assunto e, se for caso disso, tomar as medidas necessárias que se imponham.

1953 § 11. Quando é causada uma interferência prejudicial ao serviço assegurado por uma estação terrena, a estação de que depende a estação de recepção que verificou a interferência pode igualmente intervir directamente junto da administração de que depende a estação interferente.

1954 § 12. Uma administração de que depende uma estação que se presume tenha causado interferência prejudicial deve, logo que possível, após ter sido informada do facto, acusar a recepção dessa informação por telegrama, sem que, por fazê-lo, esteja a reconhecer a sua responsabilidade.

1955 § 13. Se as emissões de estações espaciais causarem interferências prejudiciais, as administrações que dependem essas estações interferentes devem, a pedido da administração de que depende a estação interferida, fornecer os dados necessários das efemérides que permitam determinar a posição dessas estações espaciais, quando essa posição não for conhecida de outra maneira.

1956 § 14. Para tratar de casos de interferência prejudicial que exijam decisões de urgência, as administrações comunicam entre si pelas vias mais rápidas. Sob reserva de autorização prévia das administrações responsáveis, as estações do sistema de fiscalização internacional das emissões especialmente designadas podem comunicar directamente entre si.

1957 § 15. Reconhecendo que as emissões das frequências de perigo e de segurança (v. artigo 38) têm necessidade de protecção internacional absoluta e que, por consequência, é imperativa a eliminação das interferências prejudiciais que afectem essas emissões, as administrações concordam em tratar com prioridade qualquer interferência prejudicial dessa natureza que chegue ao seu conhecimento.

1958 § 16. As informações pormenorizadas relativas à interferência prejudicial são, sempre que possível, fornecidas sob a forma indicada no apêndice 23.

1959 § 17. Se a interferência prejudicial persistir apesar da adopção do procedimento acima previsto, a administração de que depende a estação cuja emissão é interferida pode enviar àquela de que depende a estação de emissão interferente um relatório sobre a irregularidade ou a infracção, de acordo com as disposições do artigo 21.

1960 § 18. Quando existir uma organização internacional especializada para um serviço determinado, os relatórios relativos às irregularidades ou infracções que respeitem a interferências prejudiciais causadas ou sofridas pelas estações desse serviço poderão ser dirigidos a essa organização ao mesmo tempo que à administração interessada.

1961 § 19. (1) Em caso de necessidade, especialmente se as intervenções precedentes não produzirem resultado satisfatório, a administração interessada comunicará, a título de informação, os pormenores do assunto à Comissão Internacional do Registo de Frequências.

1962 (2) Nesse caso, a administração interessada poderá também pedir a intervenção da Comissão, em conformidade com as disposições das secções VII e VIII do artigo 12 e das secções VII e VIII do artigo 13, mas deverá então dar a conhecer à Comissão todos os factos, incluindo todos os pormenores técnicos, as informações de exploração e ainda cópias da correspondência.

1963 § 20. (1) Quando uma administração tiver dificuldade em determinar a origem de uma interferência prejudicial e desejar a assistência urgente da Comissão, no caso de ter sido esta que escolheu a consignação afectada em resposta a um pedido apresentado nos termos do n.º **1218**, comunicar-lhe-á sem demora o caso.

1964 (2) Ao receber essa informação, a Comissão solicitará imediatamente a cooperação das administrações interessadas ou das estações especialmente designadas do sistema internacional de fiscalização das emissões que possam ajudar a determinar a origem da interferência prejudicial.

1965 (3) A Comissão reunirá todos os relatórios recebidos em resposta aos pedidos feitos nos termos do n.º **1964** e, utilizando qualquer outra informação de que disponha, tentará determinar rapidamente a origem da interferência prejudicial.

1966 (4) A Comissão em seguida, por telegrama, á administração que lhe assinalou o caso de interferência prejudicial as suas conclusões e recomendações. Também comunicará, por telegrama, à administração presumivelmente responsável pela origem da interferência prejudicial essas conclusões e recomendações, pedindo-lhes ao mesmo tempo que tome rapidamente medidas apropriadas.

1967 a 1991 *(Não atribuídos.)*

CAPÍTULO VI

Disposições administrativas relativas às estações

ARTIGO 23

Sigilo

1992 Quando da aplicação das disposições apropriadas da Convenção, as administrações obrigam-se a tomar as medidas necessárias para proibir e, reprimir:

1993 *a*) A intercepção, sem autorização, de radiocomunicações que não se destinem ao uso geral do público;

1994 *b*) A divulgação do conteúdo ou simplesmente da existência, a publicação ou qualquer outro uso, sem autorização, das informações de qualquer natureza obtidas pela intercepção das radiocomunicações mencionadas no n.º **1993**.

1995 a 2019 *(Não atribuídos.)*

ARTIGO 24

Licenças

2020 § 1. (1) Nenhuma estação de emissão pode ser estabelecida ou explorada por um particular, ou por uma empresa qualquer, sem licença concedida, sob a forma apropriada e em conformidade com as disposições do presente Regulamento, pelo governo do país de que depende a referida estação (v., contudo, os n.ºs **2021**, **2027** e **2030**.

2021 (2) Todavia, o governo de um país pode concluir com o ou os governos de um ou de vários países limítrofes um acordo especial referente a uma ou mais estações do seu serviço de radiodifusão ou dos seus serviços móveis terrestres, funcionando em frequências superiores a 41 MHz, situadas no território de um país limítrofes e destinadas a melhorar a sua cobertura nacional. Esse acordo, que deve ser compatível com as disposições do presente Regulamento, assim como com as dos acordos regionais de que sejam signatários os países interessados, pode prever excepções às disposições do n.º **2020** e deverá ser comunicado ao secretário-geral, a fim de ser dado conhecimento às administrações, a título informativo.

2022 (3) As estações móveis matriculadas num território ou grupo de territórios que não tenham inteira responsabilidade das suas relações internacionais podem considerar-se, no que respeita à concessão de licenças, como dependentes da autoridade desse território ou grupo de territórios.

2023 § 2. O titular de uma licença fica obrigado a guardar sigilo das telecomunicações, como previsto nas disposições pertinentes da Convenção. Além disso, se a estação comportar um receptor, a licença deverá estipular expressamente ou por referências que é proibido captar as correspondências de radiocomunicações que não sejam as que ela está autorizada a receber e que, no caso de tais correspondências se receberem involuntariamente, não se devem reproduzir, comunicar a terceiros, utilizar para qualquer fim ou mesmo revelar a sua existência.

2024 § 3. (1) A fim de facilitar a verificação das licenças concedidas a estações móveis, acrescentar-se-á, quando necessário, ao texto redigido na língua nacional uma tradução numa das línguas de trabalho da União.

2025 § 4. (1) O governo que concede licença a uma estação móvel mencionará nela, de modo preciso, o estado sinalético da estação, incluindo o nome, o indicativo de chamada e, se for caso disso, a categoria em que fica classificada sob o ponto de vista da correspondência pública, assim como as características gerais da instalação.

2026 (2) Para estações móveis terrestres, incluindo as estações que comportam apenas um ou vários receptores, será incluída na licença uma disposição mencionando expressamente ou por referência que é proibida a exploração dessas estações em territórios de países diferentes do que concedeu a licença, salvo acordo especial entre os governos dos países interessados.

2027 § 5. (1) No caso de nova matrícula de um navio ou de uma aeronave em circunstâncias em que a concessão de licença pelo país em que vier a ser matriculado possa provocar atrasos, a administração do país de onde a estação móvel deseja partir para a sua travessia ou voo poderá, a pedido da companhia exploradora, conceder um certificado que indique que a estação satisfaz as estipulações do presente Regulamento. Esse certificado, elaborado pela forma fixada pela administração que o concede, deverá incluir o estado sinalético mencionado no n.º **2025** e só será válido para a travessia ou voo com destino ao país em que o navio ou aeronave será matriculado; de qualquer modo, a sua validade expirará passado um período de três meses.

2028 (2) A administração que conceder o certificado deverá informar a administração a quem compete conceder a licença das medidas que tomou.

2029 (3) O titular do certificado deverá satisfazer as disposições do presente Regulamento aplicáveis ao titular de um licença.

2030 § 6. Em caso de aluguer, de fretamento ou de troca de aeronaves, a administração de que depende o explorador de aeronaves que receba um aparelho em operações desta natureza pode, de acordo, com a administração do país em que a aeronave está registada, conceder uma licença nos moldes da definida no n.º 2025 e que substituirá temporariamente a licença inicial.

2031 a 2054 *(Não atribuídos.)*

ARTIGO 25

Identificação das estações

SECÇÃO I

Disposições gerais

2055 § 1. Todas as emissões devem poder ser identificadas por sinais de identificação ou por outros meios (1).

2056 § 2. (1) É proibido a todas as estações emitir utilizando um sinal de identificação falso ou enganoso.

2057 (2) Quando for possível na prática e nos serviços apropriados, os sinais de identificação deverão ser emitidos automaticamente, em conformidade com os pareceres pertinentes da CCIR.

2058 (3) Com excepção dos casos previstos nos n.os 2066 a 2068, todas as emissões dos serviços abaixo indicados deveriam conter sinais de identificação:

2059 *a*) Serviço de amador;

2060 *b*) Serviço de radiodifusão;

2061 *c*) Serviço fixo nas faixas inferiores a 28 000 kHz;

2062 *d*) Serviço móvel;

2063 *e*) Serviço de frequências padrão e de sinais horários.

2064 (4) Todas as emissões operacionais de radiobalizas devem conter sinais de identificação. Todavia, para as radiobalizas e para certos outros serviços de radionavegação, que emitem normalmente sinais de identificação, admite-se que, durante os períodos de funcionamento defeituoso ou não operacional, a supressão deliberada dos sinais de identificação seja um meio convencionado para advertir os utentes de que as emissões não podem ser utilizadas com todas a segurança para a navegação.

2065 (5) Os sinais de identificação emitidos devem estar de acordo com as disposições do presente artigo.

2066 (6) Contudo, a obrigação imposta a certas emissões de conterem sinais de identificação não se aplica:

2067 *a*) Nem às estações de engenho de salvamento, quando emitem automaticamente o sinal de perigo;

2068 *b*) Nem às radiobalizas de localização de sinistros.

2069 § 3. No caso das emissões que contém sinais de identificação, identifica-se uma estação por um indicativo de chamada, por uma identidade do serviço móvel marítimo em conformidade com o apêndice 43 (2) ou por qualquer outro processo de identificação reconhecido, que pode ser uma ou várias das indicações seguintes: nome da estação, localização da estação, nome do explorador, marcas oficiais de matrícula, número de identificação do voo, número ou sinal de chamada selectiva, número ou sinal de identificação para a chamada selectiva, sinal característico, características da emissão ou qualquer outra característica distintiva susceptível de identificação internacional fácil.

2070 § 4. No caso das emissões que contêm sinais de identificação, para poder ser facilmente identificada, cada estação deverá transmitir o seu sinal de identificação tão frequentemente quanto possível na prática, durante as suas emissões, incluindo as emissões de ensaio, de ajuste ou experimentais. Contudo, durante essas emissões, os sinais de identificação deverão ser transmitidos, pelo menos, uma vez por hora, de preferência durante o período que vai de cinco minutos antes até cinco minutos depois de cada hora exacta (UTC), a menos que daí resulte uma interrupção inaceitável do tráfego, caso em que a identificação será dada no início e no fim das emissões.

2071 § 5. Sempre que possível, os sinais de identificação devem ter uma das formas seguintes:

2072 *a*) Sinais vocais, utilizando a simples modulação de amplitude ou de frequência;

2073 *b*) Sinais do código Morse internacional transmitido em velocidade manual;

2074 *c*) Sinais emitidos segundo um código telegráfico compatível com o equipamento de impressão convencional;

2075 *d*) Qualquer outra forma recomendada pela CCIR.

2055.1 (1) No estado actual da técnica reconhece-se, contudo, que a transmissão de sinais de identificação nem sempre é possível em certos sistemas radioeléctricos (radiodeterminação, feixes hertzianos e sistemas espaciais, por exemplo).

2069.1 (2) Relativamente à aplicação do apêndice 43, v. a Resolução n.º 313.

2076 § 6. Na medida do possível, o sinal de identificação deveria ser transmitido em conformidade com os pareceres pertinentes da CCIR.

2077 § 7. As administrações devem providenciar para que, sempre que possível, os métodos de identificação por sobreposição sejam empregados em conformidade com os pareceres pertinentes da CCIR.

2078 § 8. Quando várias estações trabalham simultaneamente numa mesma ligação, ou como estações repetidoras ou em paralelo em diferentes frequências, cada uma delas deverá, na medida do praticável, emitir o seu próprio sinal de identificação ou então os de todas as estações interessadas.

2079 § 9. As administrações devem providenciar para que, salvo nos casos indicados nos n.os **2066** a **2068**, todas as emissões que não contenham sinais de identificação possam ser identificadas por outros meios, quando sejam susceptíveis de causar interferências prejudiciais aos serviços de uma outra administração explorados segundo as disposições do presente Regulamento.

2080 § 10. Tendo em conta as disposições do presente Regulamento relativas à notificação de consignações de frequência para inscrição no ficheiro de referência, as administrações devem adoptar as suas próprias medidas para seguir as disposições do n.º **2079**.

2081 § 11. Cada Membro reserva-se o direito de estabelecer os seus próprios processos de identificação para as estações que utilizar para as necessidades da sua defesa nacional. Contudo, deverão empregar-se para esse efeito, na medida do possível, indicativos de chamada reconhecíveis como tais e que contenham os caracteres distintivos da nacionalidade.

Secção II

Atribuição das séries internacionais e consignação dos indicativos de chamada

2082 § 12. (1) Todas as estações abertas à correspondência pública internacional, todas as estações de amador e todas as outras estações susceptíveis de causarem interferências prejudiciais para além das fronteiras dos países de que dependem devem possuir indicativos de chamada da série internacional atribuída ao seu país no quadro de atribuição das séries internacionais de indicativos de chamada que figura no apêndice 42.

2083 (2) A todas as estações de navio e a todas as estações terrenas de navio a que se aplicam as disposições do capítulo IX e a todas as estações costeiras ou estações terrenas costeiras capazes de comunicar com essas estações de navio são consignadas identidades do serviço móvel marítimo de acordo com o apêndice 43 (1).

2084 (3) Não é obrigatório consignar indicativos de chamada da série internacional às estações identificadas por identidades do serviço móvel marítimo ou que possam ser facilmente identificadas por outros processos (v. o n.º **2069**) e cujos sinais de identificação ou características de emissão sejam publicados em documentos internacionais.

2085 § 13. No caso de as disponibilidades do apêndice 42 se esgotarem, podem atribuir-se novas séries de indicativos de chamada, segundo os princípios enunciados na Resolução n.º 13, relativa à formação dos indicativos de chamada e à atribuição de novas séries internacionais.

2086 § 14. No intervalo entre duas conferências administrativas das radiocomunicações, o secretário-geral fica autorizado a tratar, a título provisório e sob reserva de confirmação pela próxima conferência, das questões relativas às alterações na atribuição das séries de indicativos de chamada (v. também o n.º **2085**.)

2087 § 15. Para o sistema de identificação utilizado no serviço móvel marítimo, o secretário-geral fica encarregado de atribuir as séries de algarismos de identificação de nacionalidade aos países que não figurarem no quadro dos algarismos de identificação de nacionalidade [v. o apêndice 43 (1)].

2088 § 16. O secretário-geral fica encarregado de fornecer, a pedido das administrações, séries de números ou de sinais de chamada selectiva (v. os n.os **2143** a **2146**).

2089 § 17. (1) Cada país escolhe os indicativos de chamada e, se o sistema de chamada selectiva utilizado estiver de acordo com as disposições do apêndice 39, escolhe também os números de chamada selectiva das suas estações de navio e os números de identificação das suas estações costeiras nas séries internacionais que lhe são atribuídas ou fornecidas e, em conformidade com o artigo 26, notifica essas informações ao secretário-geral, agrupando-as com as informações a figurar nas listas I, II, IV, V, VI e VIII-A. Esta última disposição não abrange os indicativos de chamada consignados às estações de amador e às estações experimentais.

2090 (2) Cada país consigna às suas estações identidades do serviço móvel marítimo escolhidas nas séries de algarismos de identificação de nacionalidade que lhe são atribuídas e notifica essas informações ao secretário-geral para que figurem nas listas pertinentes, como o previsto no artigo 26.

2091 (3) O secretário-geral cuida de evitar que um mesmo indicativo de chamada selectiva ou um mesmo número de identificação seja consignado mais de uma vez e que sejam consignados indicativos de chamada que possam confundir-se com os sinais de perigo ou com outros sinais da mesma natureza.

2092 § 18. (1) Quando uma estação fixa utilizar, no serviço internacional, mais de uma frequência, cada frequência pode ser identificada por uma indicativo de chamada distinto, utilizado unicamente para essa frequência.

2083.1 (1) Relativamente à aplicação do apêndice 43, v. a Resolução n.º 313.
2087.1

2093 (2) Quando uma estação de radiodifusão utilizar, no serviço internacional mais de uma frequência, cada frequência pode ser identificada quer por um indicativo de chamada distinto utilizado unicamente para essa frequência, quer por outros processos apropriados, tais como o anúncio da localização geográfica e da frequência utilizada.

2094 (3) Quando uma estação terrestre utilizar mais de uma frequência pode, a título facultativo, ser identificada por um indicativo de chamada distinto.

2095 (4) Convém que as estações costeiras utilizem, quando foi praticável, um indicativo de chamada comum para cada série de frequência (1).

SECÇÃO III

Formação dos indicativos de chamada

2096 § 19. (1) Para formar os indicativos de chamada podem utilizar-se as 26 letras do alfabeto, assim os algarismos, nos casos previstos a seguir. São excluídas as letras acentuadas.

2097 (2) Todavia, não se devem utilizar como indicativos de chamada as combinações indicadas a seguir:

2098 *a*) As que possam confundir-se com sinais de perigo ou com outros sinais da mesma natureza;

2099 *b*) As reservadas às abreviaturas a empregar nos serviços de radiocomunicação (v. os apêndices 13 e 14);

2100 *c*) Para as estações de amador, as que comecem por um algarismo e cujo segundo caracter seja uma das letras O ou I.

2101 § 20. Os indicativos de chamada das séries internacionais são formados como se indica nos n.os **2101** a **2122.** Os dois primeiros caracteres podem ser duas letras ou uma letra seguida de um algarismo ou um algarismo seguido de uma letra. Os dois primeiros caracteres ou, em certos casos, o primeiro caracter de um indicativo de chamada constituem a identificação de nacionalidade (2).

2102 *Estações terrestres e estações fixas:*

2103 § 21. (1):

Dois caracteres e duas letras; *ou*
Dois caracteres e uma letra seguidos de três algarismos, no máximo (não sendo 0 ou 1).

2104 (2) Todavia, recomenda-se que, na medida do possível, os indicativos de chamada das estações fixas sejam compostos por dois caracteres e uma letra seguidos de dois algarismos (não sendo 0 nem 1 o algarismo que segue imediatamente as letras).

2105 *Estações de navio:*

2106 § 22. (1):

Dois caracteres e uma letra; *ou*
Dois caracteres, duas letras e um algarismo (não sendo 0 ou 1).

2107 (2) Todavia, as estações de navio que utilizem somente a radiotelefonia poderão também utilizar um indicativo de chamada composto por:

Dois caracteres (com a condição de o segundo ser uma letra) seguidos de quatro algarismos (não sendo 0 nem 1 o que segue imediatamente as letras); *ou*
Dois caracteres e uma letra seguidos de quatro algarismos (não sendo 0 nem 1 o algarismo que segue imediatamente as letras).

2108 *Estações de aeronave:*

2109 § 23. Dois caracteres e três letras.

2110 *Estações de engenhos de salvamente de navio:*

2111 § 24. Indicativo de chamada do navio de base seguido de dois algarismos (não sendo 0 nem 1 o algarismo que segue imediatamente as letras).

2112 *Estações de radiobaliza de localização de sinistros:*

2113 § 25. A letra B em código de Morse ou o indicativo de chamada do navio a que pertence a radiobaliza, ou estas duas informações.

2095.1 (1) Por «série de frequências» entende-se um grupo de frequências em cada uma delas pertence a uma das diferentes faixas compreendidas entre 4000 kHz e 27 500 kHz e atribuídas em exclusivo ao serviço móvel marítimo.

2101.1 (2) Para as séries de indicativos de chamada que comecem por B, F, G,I, K, M, N, R e W só é necessários os três primeiros caracteres para a identificação de nacionalidade.

2114 *Estações de engenho de salvamento de aeronave:*

2115 § 26. Indicativo de chamada completo da aeronave de base (v. o n.º **2109**) seguido de um algarismo diferente de 0 ou 1.

2116 *Estações móveis terrestres:*

2117 § 27:

Dois caracteres (com a condição de o segundo ser uma letra) seguidos de quatro algarismos (não sendo 0 nem 1 o algarismo que segue imediatamente as letras); *ou*
Dois caracteres e uma ou duas letras seguidas de quatro algarismos (não sendo 0 nem 1 o algarismo que segue imediatamente as letras).

2118 *Estações de amador e estações experimentais:*

2119 § 28. (1):

Um caracteres (v. o n.º **2101.1**) e um só algarismo (diferente de 0 ou 1), seguidos de um grupo de três letras, no máximo, ou
Dois caracteres e um algarismos (diferente de 0 ou 1), seguidos de um grupo de três letras, no máximo.

2120 (2) Todavia, não se aplica às estações de amador a proibição de utilizar os algarismos 0 e 1.

2121 *Estações do serviço espacial:*

2122 § 29. Quando se empregam indicativos de chamada em estações de serviços espacial, recomenda-se que sejam compostos por dois caracteres seguidos de dois ou três algarismos (não sendo 0 nem 1 o que se segue imediatamente as letras).

Secção IV

Identificação das estações que utilizam a radiotelefonia

2123 § 30. As estações que utilizam a radiotelefonia são identificadas pelo modo indicado nos n.ºs **2124** a **2133.**

2124 § 31. (1) *Estações costeiras:*

Quer por um indicativo de chamada (v. o n.º **2103**);
Quer pelo nome geográfico do local, tal como figura na nomenclatura das estações costeiras, seguido, de preferência, da palavra RADIO ou de qualquer outra indicação apropriada.

2125 (2) *Estações de navio:*

Quer por um indicativo de chamada (v. os n.ºs **2106** e **2107**);
Quer pelo nome oficial do navio, precedido, se necessário, do nome de proprietário e sob condição de não resultar daí qualquer confusão possível com sinais de perigo, de urgência e de segurança;
Quer pelo seu número ou sinal de chamada selectiva.

2126 (3) *Estações de engenho de salvamento de navio:*

Quer por um indicativo de chamada (v. o n.º **2111**);
Quer por um sinal de identificação constituído pelo nome do navio de base seguido de dois algarismos.

2127 (4) *Estações de radiobaliza de localização de sinistros,* no caso de emissões vocais (v. o n.º **3265**):

O nome ou o indicativo de chamada do navio ao qual pertence a radiobaliza, ou ambas as informações.

2128 § 32. (1) *Estações aeronáuticas:*

Pelo nome do aeroporto ou o nome geográfico do local, seguido, se necessário, de uma palavra apropriada indicando a função da estação.

2129 (2) *Estações de aeronave:*

Quer por um indicativo de chamada (v. o n.º **2109**), que pode ser precedido de uma palavra que designe o proprietário ou o tipo de aeronave;

Quer por uma combinação de caracteres correspondente à marca de matrícula oficialmente atribuída à aeronave;
Quer por uma palavra que designe a empresa de transporte aéreo, seguida do número de identificação do voo.

2130 (3) Nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico as estações de aeronave que utilizam a radiotelefonia poderão, após acordo especial entre os governos, empregar outros métodos de identificação, sob reserva de serem internacionalmente conhecidos.

2131 (4) *Estações de engenho de salvamento de aeronave:*

Por um indicativo de chamada (v. o n.º **2115**).

2132 § 33. (1) *Estações de base:*

Quer por um indicativo de chamada (v. o n.º **2103**);
Quer pelo nome geográfico do local seguido, se apropriado, de qualquer outra indicação necessária.

2133 (2) *Estações móveis terrestres:*

Quer por um indicativo de chamada (v. o n.º **2117**);
Quer pela indicação da identidade do veículo ou qualquer outra indicação apropriada.

SECÇÃO V

Números de chamada selectiva no serviço móvel marítimo

2134 § 34. Quando as estações do serviço móvel marítimo utilizarem dispositivos de chamada selectiva de acordo com os apêndices 38 e 39, os números de chamada são-lhes consignados pelas administrações de que dependem, em conformidade com as disposições seguintes:

2135 *Formação dos números de chamada selectiva de estação de navio e dos números de identificação de estação costeira:*

2136 § 35. (1) Os dez algarismos 0 a 9 devem ser utilizados para formar os números de chamada selectiva.

2137 (2) Todavia, não devem ser utilizadas, para formar os números de identificação de estações costeiras, as combinações que comecem pelos algarismo 00 (zero,zero).

2138 (3) Os números de chamada selectiva das estações de navio e os números de identificação das estações costeiras, formados a partir das séries internacionais, devem estar de acordo com as disposições dos n.ºs **2139, 2140** e **2141.**

2139 (4) *Números de identificação de estação costeira:*

Quatro algarismos (v. o n.º **2137**).

2140 (5) *Números de chamada selectiva de estação de navio:*

Cinco algarismos.

2141 (6) *Grupos predeterminados de estação de navio:*

Cinco algarismos:

Quer o mesmo algarismo repetido cinco vezes;
Quer dois algarismos diferentes repetidos alternadamente.

2142 *Consignação dos números de chamada selectiva de estação de navio e dos números de identipificação de estação costeira:*

2143 § 36. (1) Nos casos em que sejam necessários números de chamada selectiva de estação de navio e números de identificação de estação costeira, para utilização no serviço móvel marítimo, e o sistema de chamada selectiva esteja de acordo com as disposições do apêndice 39, esses números de chamada selectiva e esses números de identificação são fornecidos, a pedido, pelo secretário-geral.

Quando uma administração notificar a introdução da chamada selectiva para fins de utilização no serviço móvel marítimo:

2144 *a*) Os números de chamada selectiva de estação de navio ser-lhe-ão fornecidos, segundo as necessidades, por grupos de 100;

2145 *b*) Os números de identificação de estação costeira ser-lhe-ão fornecidos, por grupos de 10, para satisfazer as necessidades efectivas;

2146 *c*) Os números de chamada selectiva para a chamada de grupos predeterminados de estações de navio (v. o n.º **2141**) ser-lhe-ão fornecidos nas mesmas condições dos números para estações individuais.

2147 (2) Cada administração escolherá os números de chamada selectiva a consignar às suas estações de navio nos grupos de séries que lhe são fornecidos.

2148 (3) Cada administração escolherá os números de identificação a consignar às suas estações costeiras nos grupos de séries que lhe são fornecidos.

Secção VI

Identidades do serviço móvel marítimo no serviço móvel marítimo e no serviço móvel marítimo por satélite

2149 § 37. Quando uma estação do serviço móvel marítimo ou do serviço móvel marítimo por satélite deva utilizar uma identidade de serviço móvel marítimo, a administração responsável consignará a essa estação uma identidade de acordo com as disposições do apêndice 43 e com a Resolução n.º 313, tendo em conta os pareceres pertinentes da CCIR e da CCITT.

Secção VII

Disposições especiais

2150 § 38. No serviço móvel aeronáutico, depois de estabelecida a comunicação por meio de indicativo de chamada completo, a estação de aeronave pode utilizar, se não existir risco de confusão, um indicativo ou um sinal de identificação abreviado, constituído:

2151 *a*) Em radiotelegrafia, pelo primeiro caracter e as duas últimas letras do indicativo de chamada completo (v. o n.º **2109**).

2152 *b*) Em radiotelefonia:

Quer pelo primeiro caracter do indicativo de chamada completo;
Quer pela abreviatura do nome de proprietário da aeronave (companhia ou particular);
Quer pelo tipo da aeronave;

seguido pelas últimas duas letras do indicativo completo (v. o n.º **2109**) ou pelos últimos dois caracteres da marca de matrícula.

2153 (2) As disposições dos n.os **2150, 2151** e **2152** podem ser completadas ou modificadas por acordos entre administrações interessadas.

2154 § 39. Os sinais distintos atribuídos aos navios para sinalização visual ou auditiva devem, em geral, coincidir com os indicativos de chamada das estações de navio.

2155 a 2179 *(Não atribuídos.)*

CAPÍTULO VII

ARTIGO 26

Documentos de serviço

Secção I

Títulos, conteúdo e publicação dos documentos de serviço

2180 § 1. O secretário-geral publica os documentos que seguem. Para fazer às circunstâncias e responder aos pedidos especiais das administrações, a informação publicada está também disponível sob as seguintes formas: extractos impressos por ordenador, suportes que podem ser lidos por máquinas, filmes, microfichas ou por outros meios apropriados.

2181 § 2. Lista I. *Lista internacional das frequências:*

2182 (1) Esta lista baseia-se nas informações elaboradas pela IFRB e contém:

2183 *a*) Os estabelecimentos sinaléticos das consignações de frequência inscritas no Ficheiro de referência internacional das frequências;

2184 *b*) As frequências (por exemplo 500 kHz ou 2182 kHz) prescritas pelo presente Regulamento para utilização comum em certos serviços;

2185 *c*) As adjudicações que figuram nos planos de adjudicação que são objecto do apêndice 25 Mar2 (v. o n.º **4212**), bem como dos apêndices 26, 27 (*) e 27 Aer 2 (*).

(*) Nota do Secretariado-Geral (v. o n.º **5189** e a Resolução n.º 400).

2186 (2) Será incluída nas inscrições correspondentes uma menção do emprego das frequências e das adjudicações mencionadas nos n.os **2184** e **2185.**

2187 (3) As consignações de frequência que figuram na Lista internacional das frequências serão inscritas por ordem numérica crescente das frequências consignadas.

2188 (4) Acima de 28 MHz, a Lista internacional das frequências é formada por quatro partes distintas:

2189 *a*) Consignações de frequência nas faixas compreendidas entre 28 MHz e 50 MHz, excluindo as estações de radiodifusão;

2190 *b*) Consignações de frequência da Região 1 nas faixas acima de 50 MHz e consignações de frequência ([1]) às estações de radiodifusão da Região 1 nas faixas compreendidas entre 28 MHz e 50 MHz.

2191 *c*) Consignações de frequência da Região 2 nas faixas acima de 50 MHz.

2192 *d*) Consignações de frequência da Região 3 nas faixas acima de 50 MHz e consignações de frequência às estações de radiodifusão da Região 3 nas faixas compreendidas entre 28 MHz e 50 MHz.

2193 (5) A Lista internacional das frequências é reeditada a intervalos que o secretário-geral determinar, mas que não devem ultrapassar dois anos, e é mantida actualizada por meio de suplementos recapitulativos trimestrais publicados com o mesmo aspecto geral da própria Lista. Deve indicar-se de modo apropriado qualquer nova inscrição ou qualquer modificação de uma inscrição introduzida no Ficheiro após a publicação do último suplemento recapitulativo e que apareça num novo suplemento recapitulativo ou numa nova edição da Lista.

2194 (6) Os suplementos recapitulativos dividem-se em duas secções:

2195 *a*) A secção A contém as novas inscrições e as modificações das inscrições que figuram já na Lista internacional das frequências;

2196 *b*) A secção B contém as inscrições da Lista internacional das frequências que foram completamente anuladas.

2197 § 3. Lista II. *Nomenclatura das estações fixas que assegurem ligações internacionais:*

2198 (1) Esta lista contém os estados sinaléticos das estações fixas que asseguram ligações internacionais e cujas frequências figuram na lista I.

2199 (2) Lista II é reeditada a intervalos que o secretário-geral determinar e é mantida actualizada por meio de suplementos recapitulativos trimestrais.

2200 § 4. Lista III. *(Disponível.)*

2201 § 5. Lista IV. *Nomenclatura das estações costeiras:*

2202 (1) Juntam-se a esta lista um quadro e um mapa que indiquem, segundo as zonas os horários de serviços a bordo dos navios cujas estações estão classificadas nas 2.ª e 3.ª categorias (v. apêndice 12) e um quadro com as taxas telegráficas interiores e limítrofes, etc. Esta Lista contém um anexo dando informações sobre sistemas móveis marítimos por satélites que possam ser comunicadas ao secretário-geral pelas administrações participantes.

2203 (2) A lista IV é reeditada de dois em dois anos e é mantida actualizada por meio de suplementos recapitulativos semestrais.

2204 § 6. Lista V. *Nomenclatura das estações de navio:*

2205 (1) Esta lista contém os estados sinaléticos:

2206 *a*) Das estações de navios equipados com instalações radiotelegráficas;

2207 *b*) Das estações de navios equipados com instalações radiotelegráficas e radiotelefónicas;

2208 *c*) Das estações de navios equipados unicamente com instalações radiotelefónicas, quando essas estações comuniquem com estações do serviço móvel marítimo que não sejam da sua própria nacionalidade ou quando esses navios efectuam viagens internacionais;

2209 *d*) Das estações de navios equipados com estações terrenas móveis.

2210 (2) Esta lista é completada por um quadro e um mapa que indiquem, segundo as zonas, os horários de serviço a bordo dos navios cujas estações estão classificadas nas 2.ª e 3.ª categorias (v. o apêndice 12) e por um anexo dando informações sobre os sistemas móveis marítimos por satélites que possam ser comunicadas ao secretário-geral pelas administrações participantes.

2211 (3) A lista V é reeditada anualmente e é mantida actualizada por meio um suplemento trimestral publicado além do suplemento recapitulativo semestral.

2190 ([1]) Relativamente às estações de televisão da Região 1, figurarão na lista I, inscrições distintas para as frequências das ondas portadoras do som e da imagem, respectivamente.

2212 § 7. Lista VI. *Nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais:*

2213 (1) Esta Lista compreende os estados sinaléticos das estações radiogoniométricas e de radiofarol do serviço de radionavegação marítima, incluindo as estações de radiofarol do serviço de radionavegação aeronáutica susceptíveis de utilização da radionavegação marítima, assim como os estados sinaléticos dos sistemas de radiodeterminação por satélite disponíveis para a utilização marítima, dos navios-estações oceânicos, das estações que emitem sinais para calibração de goniómetros, bem como das estações que emitem frequências padrão e sinais horários, boletins meteorológicos regulares, avisos aos navegadores, pareceres médicos, boletins epidemiológicos e ursigramas. Nesta lista é consagrada uma secção especial a cada classe de estações.

2214 (2) A lista VI é reeditada a intervalos que o secretário-geral determinar e será mantida actualizada por meio de suplementos recapitulativos semestrais.

2215 § 8. Lista VII. *Lista alfabética dos indicativos de chamada das séries internacionais consignados às estações que figuram nas listas I, II, IV, V, VI e VIII-A:*

2216 (1) Lista VII-A. *Lista alfabética dos indicativos de chamada e ou quadro numérico das identidades das estações utilizadas no serviço móvel marítimo e no serviço móvel marítimo por satélite (estações costeiras, estações terrenas costeiras, estações de navio, estações terrenas de navio, estações de radiodeterminação e estações que efectuam serviços especiais), dos números ou sinais de chamada selectiva de estação de navio e de estação terrena de navio, das identidades do serviço móvel marítimo para as estações de navio e para as estações terrenas de navio, dos números, dos números ou sinais de identificação de estação costeira e de estação terrena costeira e das identidades do serviço móvel marítimo para as estações costeiras e para as estações terrenas costeiras:*

2217 *a*) Esta lista é precedida do Quadro de atribuição das séries internacionais de indicativos de chamada e do Quadro das séries de algarismos de identificação de nacionalidade que figurem nos apêndices 42 e 43, respectivamente, assim como de um quadro dos sinais que caracterizam as emissões dos radiofaróis utilizados no serviço móvel marítimo:

2218 *b*) A lista VII-A é reeditada de dois em dois anos e é mantida actualizada por meio de suplementos recapitulativos trimestrais.

2119 (2) Lista VII-B. *Lista alfabética dos indicativos de chamada das estações que não são estações de amador, estações experimentais e estações do serviço móvel marítimo:*

2220 *a*) Esta lista é precedida do quadro de atribuição das séries internacionais de indicativos de chamada que figuram no apêndice 42 e de um quadro que indica a forma dos indicativos de chamada consignados por cada administração às suas estações de amador e às suas estações experimentais;

2221 *b*) A lista VII-B é reeditada a intervalos que o secretário-geral determinar e será mantida actualizada por meio de suplementos recapitulativos trimestrais.

2222 § 9. Lista VIII. *Nomenclatura das estações de fiscalização internacional das emissões:*

2223 (1) Esta lista contém em forma de quadro o estado sinalético das estações de fiscalização que participam no sistema de fiscalização internacional das emissões.

2224 (2) A lista VIII é publicada a intervalos que o secretário-geral determinar e é mantida actualizada por meio de suplementos recapitulativos publicados a intervalos determinados pelo secretário-geral.

2225 § 10. Lista VIII-A. *Nomenclatura das estações dos serviços de radiocomunicação espacial e do serviço de radioastronomia:*

2226 (1) Esta lista compreende os estados sinaléticos das estações terrenas, das estações espaciais e das estações de radioastronomia. A Comissão elabora e mantém actualizado o conteúdo desta lista e agrupa as suas rubricas de modo que as administrações possam identificar mais facilmente todas as estações que fazem parte de uma dada rede de satélite. Além disso, a Comissão efectua as melhorias necessárias à apresentação da lista, sem modificar seja de que maneira for os dados fundamentais especificados no presente Regulamento. Contudo, não deverão ser incluídas nesta lista as estações terrenas móveis do serviço móvel marítimo por satélite, mas deverá figurar nela uma nota geral referente à nomenclatura das estações de navio.

2227 (2) A lista VIII-A é reeditada a intervalos que o secretário-geral determinar e é mantida actualizada por meio de suplementos recapitulativos semestrais.

2228 § 11. *Mapa das estações costeiras abertas à correspondência pública ou que participam no serviço das operações portuárias:*

Este mapa é reeditado com o formato e a intervalos que o secretário-geral determinar.

2229 § 12. *Gráfico a cores, indicando a repartição das faixas de frequência* tal como especificada no artigo 8.

2230 § 13. *Manual para uso dos serviços móvel e marítimo por satélite:*

2231 (1) Este Manual deve incluir os extractos pertinentes:

2232 *a*) Da Convenção Internacional das Telecomunicações em vigor;

2233 *b*) Do Regulamento das Radiocomunicações em vigor;

2234 *c*) Do Regulamento Telegráfico em vigor, da versão actualizada das Instruções para a Exploração do Serviço Telegráfico Público Internacional e das resoluções e pareceres da CCITT;

2235 *d*) Do Regulamento Telefónico em vigor, da versão actualizada das Instruções Relativas ao Serviço Telefónico Internacional e das resoluções e pareceres da CCITT.

2236 (2) O Manual deveria ser revisto, se necessário, especialmente após as conferências administrativas e as assembleias plenárias da CCITT ou da CCIR. São publicadas novas edições a intervalos que o secretário-geral deve determinar.

SECÇÃO II

Preparação e modificação dos documentos de serviço

2237 § 14. (1) O secretário-geral publicará as modificações a introduzir nos documentos indicados na secção I do presente artigo.

Dado o interesse que apresentam especialmente para a segurança, as informações relativas à exploração que figuram nas listas IV, V e VI, as administrações adoptarão as disposições necessárias para notificar imediatamente ao secretário-geral quaisquer modificações introduzidas nessas informações. Pelo menos uma vez por mês, as administrações darão a conhecer ao secretário-geral, pela forma indicada para as próprias listas no apêndice 9, modificações e supressões a introduzir nas listas IV, V e VI, utilizando os símbolos apropriados que figuram no apêndice 10. Por outro lado, para introduzir nas listas I, II e VII-A as adições, modificações e supressões necessárias, o secretário-geral utilizará as informações que lhe forneça a IFRB e que provenham de informações recebidas em aplicação das disposições dos artigos 11, 12, 13 e 17. Introduzirá também na lista VII as emendas necessárias utilizando as informações que receba relativamente às listas I, II, IV, V, VI e VIII-A. As informações incluídas nas listas IV e VI serão coordenadas com as que figuram na lista I. O secretário-geral comunicará todas as divergências às administrações interessadas.

2238 (2) Para as modificações permanentes do funcionamento das estações de radiodeterminação (lista VI), (v. o n.º **2833**).

2239 § 15. (1) Os modelos segundo os quais se devem elaborar as listas II, IV, V, VI, VIII e VIII-A são indicados no apêndice 9. Os prefácios destes documentos e da lista I darão todas as indicações necessárias sobre a forma de os utilizar. Cada inscrição deverá ser acompanhada do símbolo apropriado indicado no apêndice 10 para designar a categoria da estação de que se trata. O secretário-geral poderá escolher símbolos suplementares quando for necessário e deverá notificá-los às administrações.

2240 (2) Nos documentos de serviço, os nomes das estações costeiras, aeronáuticas, radiogoniométricas e de radiofarol são seguidos pelas palavras:

2241 *a*) RADIO para as estações costeiras;
2242 *b*) AERADIO para as estações aeronáuticas;
2243 *c*) GONIO para as estações radiogoniométricas marítimas;
2244 *d*) PHARE para as estações de radiofarol marítimas;
2245 *e*) AEROPHARE para as estações de radiofarol aeronáuticas.

2246 § 16. No que respeita aos documentos de serviço, entende-se por «país» o território em cujos limites se encontra a estação. Um território que não tenha completa responsabilidade das suas relações internacionais é igualmente considerado como país para este caso especial.

2247 a 2500 *(Não atribuídos.)*

PARTE B

CAPÍTULO VIII

Disposições relativas a grupos de serviços, assim como a estações e a serviços particulares (*)

ARTIGO 27

Serviços de radiocomunicação de Terra que partilham faixas de frequência com os serviços de radiocomunicação espacial acima de 1 GHz

SECÇÃO I

Escolha das localizações e das frequências

2501 § 1. As localizações e as frequências das estações de Terra que funcionam nas faixas de frequências partilhadas, com igualdade de direitos, entre os serviços de radiocomunicação de Terra e os serviços de

(*) Para as disposições que regem os serviços móveis e os serviços especiais que interessem a segurança, ver:

Serviços especiais que interessam a segurança — capítulo IX;
Serviço móvel aeronáutico — capítulo X;
Serviço móvel marítimo — capítulo XI;
Serviço móvel marítimo por satélite — capítulo XI;
Serviço móvel terrestre — capítulo XII.

radiocomunicações espacial devem ser escolhidas em conformidade com os pareceres pertinentes da CCIR relativos à separação geográfica entre estações de Terra e estações terrenas.

2502 § 2. (1) Tanto quanto seja possível na prática, as localizações das estações de emissão (1) do serviço fixo ou do serviço móvel cujas potências isotrópicas radiadas equivalentes (p. i. r. e.) tenham valores máximos superiores a + 35 dBW nas faixas de frequências compreendidas entre 1 GHz e 10 GHz devem escolher-se de tal modo que a direcção da radiação máxima de qualquer antena se desvie, pelo menos, 2° da órbita dos satélites geostacionários, tendo em conta os efeitos da refracção atmosférica (2).

2503 (2) Tanto quanto seja possível na prática, as localizações das estações de emissão (3) do serviço fixo ou do serviço móvel cujas potências isotrópicas radiadas equivalentes (p. i. r. e.) tenham valores máximos superiores a + 45 dBW nas faixas de frequências compreendidas entre 10 GHz e 15 GHz devem escolher-se de tal modo que a direcção da radiação máxima de qualquer antena se desvie, pelo menos, 1,5° da órbita do satélites geostacionários, tendo em conta os efeitos da refracção atmosférica (4).

2504 (3) Nas faixas de frequências superiores a 15 GHz não há restrições (5) quanto à direcção da radiação máxima das estações do serviço fixo ou do serviço móvel.

Secção II

Limites de potência

2505 § 3. (1) O nível máximo da potência radiada equivalente (p. i. r. e.) de uma estação do serviço fixo ou do serviço móvel não deve ultrapassar + 55 dBW.

2506 (2) Caso não seja praticamente possível adoptar as disposições do n.º **2502**, o nível máximo da potência isotrópica radiada equivalente (p. i. r. e.) de uma estação do serviço fixo ou do serviço móvel não deve ultrapassar:

+ 47 dBW em qualquer direcção que esteja afastada menos de 0,5° da órbita dos satélites geostacionários; ou

+ 47 dBW a + 55 dBW, segundo uma variação linear em decibéis (8 dB por grau), em qualquer direcção compreendida entre 0,5° e 1,5° em relação à órbita dos satélites geostacionários, tendo em conta os efeitos da refacção atmosférica (6).

2507 (3) Nas faixas de frequências compreendidas entre 1 GHz e 10 GHz, o nível da potência fornecida à antena por um emissor do serviço fixo ou do serviço móvel não deve ultrapassar + 13 dBW.

2508 (4) Nas faixas de frequências superiores a 10 GHz, o nível da potência fornecida à antena por um emissor do serviço fixo ou do serviço móvel não deve ultrapassar + 10 dBW.

2509 (5) Os limites especificados nos n.os **2502, 2505, 2506** e **2507** aplicam-se nas faixas de frequências que a seguir se indicam e que estão atribuídas ao serviço fixo por satélite, ao serviço de meteorologia por satélite e ao serviço móvel por satélite, para a recepção pelas estações espaciais, quando estas faixas forem partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel:

1626,5-1645,5 MHz (para os países indicados no n.º **730**);
1646,5-1660 MHz (para os países indicados no n.º **730**);
2655-2690 MHz (7) (para as Regiões 2 e 3);
5725-5755 MHz (7) (para os países da Região 1 indicados nos n.os **803** e **805**);
5755-5850 MHz (7) (para os países da Região 1 indicados nos n.os **803, 805** e **807**);
5850-7075 MHz;
7900-8400 MHz.

2502.1 (1) Para sua própria protecção, convém que as estações de recepção do serviço fixo ou do serviço móvel que funcionem nas faixas de frequências partilhadas com os serviços de radiocomunicação espacial (no sentido espaço para Terra) evitem orientar as respectivas antenas na direcção da órbita dos satélites geostacionários, se a sua sensibilidade for suficiente elevada para que daí possam resultar interferências importantes causadas pelas emissões das estações espaciais.

2502.2 (2) Figuram informações sobre o assunto na versão mais recente do Relatório n.º 393 da CCIR.

2503.1 (3) Para sua própria protecção, convém que as estações de recepção do serviço fixo ou do serviço móvel que funcionem nas faixas de frequências partilhadas com os serviços de radiocomunicação espacial (no sentido espaço para Terra) evitem orientar as respectivas antenas na direcção da órbita dos satélites geostacionários, se a sua sensibilidade for suficientemente elevada para que daí possam resultar interferências importantes causadas pelas emissões das estações espaciais.

2503.2 (4) Figuram informações sobre o assunto na versão mais recente do Relatório n.º 393 da CCIR.

2504.1 (5) As disposições do n.º **2504** continuam aplicáveis até que a CCIR emita um parecer elativo à necessidade de serem aplicadas restrições nas faixas de frequências especificadas no n.º **2571**. Todos os sistemas postos em serviço a partir de 1 de Janeiro de 1982 deveriam desde então respeitar, dentro das possibilidades práticas, as restrições especificadas.

2506.1 (6) V. o n.º **2503.2**.

2509.1 (7) Quando uma faixa de frequência é atribuída a serviços diferentes da mesma categoria em Regiões diferentes, a igualdade de direitos no que diz respeito à exploração de serviços encontra-se estipulada no n.º **346**. Convirá, portanto, que, relativamente às interferências entre Regiões, as administrações respeitem, dentro das possibilidades práticas, todos os limites que possam ser especificados nos pareceres da CCIR.

2510 (6) Os limites especificados nos n.os **2503**, **2505** e **2508** aplicam-se nas faixas de frequências que a seguir se indicam e que estão atribuídas, para a recepção pelas estações espaciais, ao serviço fixo por satélite quando estas faixas forem partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel:

10,7-11,7 GHz (1) (2) (para a Região 1);
12,5-12,75 GHz (1) (para os países indicados nos n.os **848** e **850**);
12,7-12,75 GHz (1) (para a Região 2);
12,75-13,25 GHz;
14,0-14,25 GHz (para os países indicados no n.º **857**);
14,25-14,3 GHz (para os países indicados nos n.os **857**, **860** e **861**);
14,3-14,4 GHz (1) (para as regiões 1 e 3);
14,4-14,5 GHz;
14,5-14,8 GHz (2).

2511 (7) Os limites especificados nos n.os **2505** e **2508** aplicam-se nas faixas de frequências que a seguir se indicam e que estão atribuídas, para a recepção pelas estações espaciais, ao serviço fixo por satélite quando estas faixas forem partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel:

17,7-18,1 GHz (3);
27,0-27,5 GHz (4) (para as Regiões 2 e 3);
27,5-29,5 GHz.

2512 a **2538** *(Não atribuídos.)*

ARTIGO 28

Serviços de radiocomunicação espacial que partilham faixas de frequências com os serviços de radiocomunicação de Terra acima de 1 GHz

SECÇÃO I

Escolha das localizações e das frequências

2539 § 1. As localizações e as frequências das estações terrenas que funcionam nas faixas de frequências partilhadas, com igualdade de direitos, entre os serviços de radiocomunicação de Terra e os serviços de radiocomunicação espacial devem ser escolhidas em conformidade com os pareceres pertinentes da CCIR relativos à separação geográfica entre estações terrenas e estações de Terra.

SECÇÃO II

Limites de potência

2540 § 2. (1) Estações terrenas.

2541 (2) O nível da potência isotrópica radiada equivalente (p. i. r. e.) emitida em qualquer direcção para o horizonte por uma estação terrena que funcione nas faixas de frequências compreendidas entre 1 GHz e 15 GHz não deve exceder os limites seguintes, excepto nos casos a que se apliquem as disposições dos n.os **2544** ou **2546**:

$+ 40$ dBW em qualquer faixa com largura de 4 kHz, para $\theta \leq 0°$;
$+ 40 + 3\,\theta$ dBW em qualquer faixa com largura de 4 kHz para $0° < \theta \leq 5°$,

sendo θ o ângulo de elevação do horizonte, em graus, visto do centro de radiação da antena da estação terrena. Este ângulo é expresso por um valor positivo acima do plano horizontal e por um valor negativo abaixo desse plano.

2542 (3) O nível de potência isotrópica radiada equivalente (p. i. r. e.) emitida em qualquer direcção para o horizonte por uma estação terrena que funcione nas faixas de frequências superiores a 15 GHz não deve exceder os limites seguintes, excepto nos casos em que se apliquem as disposições dos n.os **2545** ou **2546**:

$+ 64$ dBW em qualquer faixa com largura de 1 MHz para $\theta \leq 0°$;
$+ 64 + 3\,\theta$ dBW em qualquer faixa com largura de 1 MHz para $0° < \theta \leq 5°$,

sendo θ definido como no n.º **2541**.

2510.1 (1) Quando a faixa de frequências é atribuída a serviços diferentes da mesma categoria em Regiões diferentes, a igualdade de direitos no que diz respeito à exploração de serviços encontra-se estipulada no n.º **346**. Convirá, portanto, que, relativamente às interferências entre Regiões, as administrações respeitem, dentro das possibilidades práticas, todos os limites que possam ser especificados nos pareceres da CCIR.

2510.2 (2) A aplicação dos limites nesta faixa é provisória (v. a Resolução n.º 101).

2511.1 (3) A aplicação dos limites nesta faixa é provisória (v. a Resolução n.º 101).

2511.2 (4) V. o n.º **2509.1**

2543 (4) Para ângulos de elevação do horizonte superiores a 5° não há quaisquer restrições quanto ao valor de potência isotrópica radiada equivalente (p. i. r. e.) emitida por uma estação terrena em direcção ao horizonte.

2544 (5) Em derrogação dos limites especificados no n.º **2541**, a potência isotrópica radiada equivalente (p. i. r. e.) emitada para o horizonte por uma estação terrena do serviço de pesquisa espacial (espaço longínquo) não deve exceder + 55 dBW em qualquer faixa com largura de 4 kHz.

2545 (6) Em derrogação dos limites especificados no n.º **2542**, a potência isotrópica radiada equivalente (p. i. r. e.) emitida para o horizonte por uma estação terrena do serviço de pesquisa espacial (espaço longínquo) não deve exceder + 79 dBW em qualquer faixa com largura de 1 MHz.

2546 (7) Os limites especificados nos n.os **2541**, **2542**, **2544** e **2455**, segundo o caso, podem ser aumentados de um valor máximo de 10 dB. Contudo, se a zona de coordenação resultante se estender sobre o território de outro país, esse aumento deve ser submetido a acordo da administração desse país.

2547 (8) Os limites especificados no n.º **2541** aplicam-se às faixas de frequência que a seguir se indicam e que são atribuídas, para a emissão pelas estações terrenas, ao serviço fixo por satélite e ao serviço de exploração da Terra por satélite e em especial ao serviço de meteorologia por satélite, ao serviço móvel por satélite e ao serviço de pesquisa espacial, quando estas faixas são partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel:

5670-5725 MHz (para os países indicados no n.º **804** em relação aos países indicados nos n.os **803** e **805**;
5725-5755 MHz (1) (para a Região 1 em relação aos países indicados nos n.os **803** e **805**);
5755-5850 MHz (1) (para a Região 1 em relação aos países indicados nos n.os **803**, **805** e **807**);
5850-7075 MHz;
7900-8400 MHz;
10,7-11,7 GHz (1) (Região 1);
12,5-12,75 GHz (1) (para a Região 1 em relação aos países indicados no n.º **848**;
12,7-12,75 GHz (1) (Região 2);
12,75-13,25 GHz;
14,0-14,25 GHz (em relação aos países indicados no n.º **857**);
14,25-14,3 GHz (em relação aos países indicados nos n.os **857**, **860** e **861**);
14,3-14,4 GHz (1) (Regiões 1 e 3);
14,4-14,8 GHz.

2548 (9) Os limites especificados no n.º **2542** aplicam-se às faixas de frequências que a seguir se indicam e que são atribuídas, para a emissão pelas estações terrenas, ao serviço fixo por satélite, ao serviço de exploração da Terra por satélite, ao serviço móvel por satélite e ao serviço de pesquisa espacial, quando estas faixas são partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel:

17,7-18,1 GHz;
27,0-27,5 GHz (1) (Regiões 2 e 3);
27,5-29,5 GHz;
31,0-31,3 GHz (todos os países indicados no n.º **885**);
34,2-35,23 GHz (todos os países indicados no n.º **895** e **896** em relação aos países indicados no n.º **894**).

Secção III

Ângulo mínimo de elevação

2549 § 3. (1) Estações terrenas.

2550 (2) As antenas das estações terrenas não devem ser utilizadas, na emissão, com ângulos de elevação inferiores a 3°, medidos a partir do plano horizontal na direcção da radiação máxima, salvo acordo das administrações interessadas ou daquelas cujos serviços possam ser afectados. No caso da recepção por uma estação terrena, o valor dado acima deve ser utilizado para fins de coordenação se o ângulo de elevação de funcionamento for inferior a esse valor.

2551 (3) Em derrogação das disposições do n.º **2550**, as antenas das estações terrenas do serviço de pesquisa espacial (na vizinhança da Terra) não devem ser utilizadas, na emissão, com ângulos de elevação inferiores a 5° e as antenas das estações terrenas do serviço de pesquisa espacial (espaço longínquo) não devem ser utilizadas, na emissão, com ângulos de elevação inferiores a 10°, sendo estes dois ângulos medidos a partir do plano horizontal na direcção da radiação máxima. No caso da recepção por uma estação terrena, os valores dados acima devem ser utilizados para fins de coordenação se ângulo de elevação de funcionamento for inferior a esses valores.

2547.1 (1) Quando uma faixa de frequências é atribuída a serviços diferentes da mesma categoria em Regiões diferentes, a igualdade de direitos, no que diz respeito à exploração de serviços, encontra-se estipulada no n.º **346**. Convirá, portanto, que, relativamente às interferências entre Regiões, as administrações respeitem, dentro das possibilidades práticas, todos os limites que possam ser especificados nos pareceres da CCIR.

SECÇÃO IV

Limites da densidade de fluxo de potência produzida pelas estações espaciais

2552 § 4. (1) Limites da densidade de fluxo de potência entre 1670 MHz e 1700 MHz.

2553 *a)* A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial, incluindo as provenientes de um satélite reflector, em qualquer condição e para qualquer método de modulação, não deve exceder — 133 dB(W/m²) em qualquer faixa com largura de 1,5 MHz. Este limite aplica-se à densidade de fluxo de potência que se obteria supondo uma propagação em espaço livre.

2554 *b)* O limite especificado no n.º 2553 aplica-se à faixa de frequências indicada no n.º 2555, que é atribuída, para a emissão pelas estações espaciais, ao serviço da exploração da Terra, por satélite, e em especial ao serviço da meteorologia por satélite, quando esta faixa é partilhada, com igualdade de direitos, com o serviço dos auxiliares da meteorologia:

2555 1670-1700 MHz.

2556 (2) Limites de densidade de fluxo de potência entre 1525 MHz e 2500 MHz.

2557 *a)* A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial, incluindo as provenientes de um satélite reflector, em qualquer condição e para qualquer método de modulação, não deve exceder os seguintes limites:

— 154 dB(W/m²) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 0° e 5° acima do plano horizontal;
— 154 + 0,5 (δ — 5) dB(W/m²) em qualquer faixa com largura de 4 hKz, para os ângulos de chegada δ (em graus) compreendidos entre 5° e 25° acima do plano horizontal;
— 144 dB(W/m²) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 25° e 90° acima do plano horizontal.

Estes limites aplicam-se à densidade de fluxo de potência que se obteria supondo uma propagação em espaço livre.

2558 *b)* Os limites especificados no n.º **2557** aplicam-se às faixas de frequências indicadas no n.º **2559**, que são atribuídas, para a emissão pelas estações espaciais, aos serviços de radiocomunicação espacial seguintes:

Serviço de meteorologia por satélite (espaço para Terra);
Serviço de pesquisa espacial (espaço para Terra);
Serviço de exploração espacial (espaço para Terra)

quando as referidas faixas são partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel:

2559 1525-1530 MHz (1) (Regiões 1 e 3);
1530-1535 MHz (1) (Regiões 1 e 3, até 1 de Janeiro de 1990);
1670-1690 MHz;
1690-1700 MHz (sobre o território dos países indicados nos n.os **740** e **741**);
1700-1710 MHz;
2290-2300 MHz.

2560 *c)* Os valores da densidade de fluxo de potência especificados no n.º **2557** foram calculados tendo como objectivo a protecção do serviço fixo que funciona em visibilidade directa. Quando o serviço fixo que utiliza as técnicas de difusão troposférica funcionar nas faixas indicadas no n.º **2559** e a separação de frequência for insuficiente, é necessário prever uma separação angular suficiente entre a direcção da estação espacial e a da radiação máxima da antena da estação receptora do serviço fixo que utiliza as técnicas de difusão troposférica para que a potência de interferência à entrada do receptor da estação do serviço fixo não exceda — 168 dBW em qualquer faixa com largura de 4 kHz.

2561 (3) Limites da densidade de fluxo de potência entre 2500 MHz e 2690 MHz.

2562 *a)* A densidade do fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial do serviço de radiodifusão por satélite ou do serviço fixo por satélite, em quaisquer condições e para todos os métodos de modulação, não deve exceder os limites seguintes:

— 152 dB (W/m²) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 0° e 5° acima do plano horizontal;
— 152 + 0,75 (δ — 5) dB (W/m²) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada δ (em graus) compreendidos entre 5° e 28° acima do plano horizontal;

2559.1 (1) Quando uma faixa de frequências é atribuída a serviços diferentes da mesma categoria em Regiões diferentes, a igualdade de direitos, no que diz respeito à exploração de serviços, encontra-se estipulada no n.º **346**. Convirá, portanto, que, relativamente às interferências entre Regiões, as administrações respeitem, dentro das possibilidades práticas, todos os limites que possam ser especificados nos pareceres da CCIR.

— 137 dB (W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 25° e 90° acima do plano horizontal.

Estes limites aplicam-se à densidade de fluxo de potência que se obteria supondo uma propagação em espaço livre.

2563 *b*) Os limites especificados ao n.º **2562** aplicam-se à faixa de frequências:

2500–2690 MHz,

que é partilhada entre, por um lado, o serviço de radiodifusão por satélite ou o serviço fixo por satélite e, por outro, o serviço fixo ou o serviço móvel.

2564 *c*) Os valores da densidade de fluxo de potência especificados no n.º **2562** foram calculados tendo como objectivo a protecção do serviço fixo que funciona em visibilidade directa. Quando o serviço fixo que utiliza as técnicas de difusão troposférica funcionar na faixa indicada no n.º **2563** e a separação de frequência for insuficiente, é necessário prever uma separação angular suficiente entre a direcção da estação espacial e a da radiação máxima da antena da estação receptora do serviço fixo que utiliza as técnicas de difusão troposférica para que a potência de interferência à entrada do receptor da estação de serviço fixo não exceda — 168 dBW em qualquer faixa com largura de 4 Khz.

2565 (4) Limites da densidade de fluxo de potência produzida entre 3400 MHz e 7750 MHz.

2566 *a*) A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial, incluindo as provenientes de um satélite reflector, em todas as condições e para todos os métodos de modulação, não deve exceder os limites seguintes:

— 152 dB(W/m2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 0° e 5° acima do plano horizontal;
— 152 + 0,5 (δ-5) dB(W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada δ (em graus) compreendidos entre 5° e 25° acima do plano horizontal;
— 142 dB(W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 25° e 90° acima do plano horizontal.

Estes limites aplicam-se à densidade de fluxo de potência que se obteria supondo uma propagação em espaço livre.

2567 *b*) Os limites especificados no n.º **2566** aplicam-se às faixas de frequências indicadas no n.º **2568**, que são atribuídas, para a emissão pelas estações espaciais, aos serviços de radiocomunicação espacial seguintes:

Serviço fixo por satélite (espaço para Terra);
Serviço de meteorologia por satélite (espaço para Terra);
Serviço móvel por satélite;
Serviço de pesquisa espacial,

quando as referidas faixas são partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel.

2568 3400–4200 MHz.
4500–4800 MHz.
5670–5725 MHz (sobre o território dos países indicados nos n.ºs **803** e **805**).
7250–7750 MHz.

2569 (5) Limites de densidade de fluxo de potência entre 8025 MHz e 11,7 GHz.

2570 *a*) A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial, incluindo as provenientes de um satélite reflector, em quaisquer condições e para todos os métodos de modulação, não deve exceder os valores seguintes:

— 150 dB(W/m^2) em qualquer faixa com largura de 4 KHz, para os ângulos de chegada compreendidos entre 0° e 5° acima do plano horizontal;
— 150 + 0,5 (δ-5) dB(W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada δ (em graus) compreendidos entre 5° e 25° acima do plano horizontal;
— 140 dB(W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 25° e 90° acima do plano horizontal.

Estes limites aplicam-se à densidade de fluxo de potência que se obteria supondo uma propagação em espaço livre.

2571 *b*) Os limites especificados no n.º **2570** aplicam-se às faixas de frequências indicadas no n.º **2572**, que são atribuídas, para a emissão pelas estações espaciais, aos serviços de radiocomunicação espacial seguintes:

Serviço de exploração da terra por satélite (espaço para Terra);
Serviço de pesquisa espacial (espaço para Terra);
Serviço fixo por satélite (espaço para Terra),

quando as referidas faixas são partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel.

2572 8025–8500 MHz.
10,7–11,7 GHz.

2573 (6) Limites da densidade de fluxo de potência entre 12,2 GHz e 12,75 GHz.

2574 *a*) A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial, incluindo as provenientes de um satélite reflector, em quaisquer condições e para todos os métodos de modulação, não deve exceder os limites seguintes:

— 148 dB(W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 0° e 5° acima do plano horizontal;
— 148 + 0,5 (δ-5) dB(W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada δ (em graus) compreendidos entre 5° e 25° acima do plano horizontal;
— 138 dB(W/m^2) em qualquer faixa com largura de 4 kHz, para os ângulos de chegada compreendidos entre 25° e 90° acima do plano horizontal.

Estes limites aplicam-se à densidade de fluxo de potência que se obteria supondo uma propagação em espaço livre.

2575 *b*) Os limites especificados no n.º **2574** aplicam-se às faixas de frequências indicadas no n.º **2576**, que são atribuídas, para a emissão pelas estações espaciais, ao serviço fixo por satélite, quando as referidas faixas são partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel.

2576 12,2–12,5 GHz ([1]) (Região 3).
12,5–12,75 GHz ([2]) (Região 3 e na Região 1 sobre o território dos países indicados nos n.os **848** e **850**).

2577 (7) Limites da densidade de fluxo de potência entre 17,7 GHz e 19,7 GHz.

2578 *a*) A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial, incluindo as provenientes de um satélite reflector, em quaisquer condições e para todos os métodos de modulação, não deve exceder os limite seguintes:

— 115 dB(W/m^2) em qualquer faixa com largura de 1 MHz, para os ângulos de chegada compreendidos entre 0° e 5° acima do plano horizontal;
— 115 + 0,5 (δ-5) dB(W/m^2) em qualquer faixa com largura de 1 MHz, para os ângulos de chegada δ (em graus) compreendidos entre 5° e 25° acima do plano horizontal;
— 105 dB(W/m^2) em qualquer faixa com largura de 1 MHz, para os ângulos de chegada compreendidos entre 25° e 90° acima do plano horizontal.

Estes limites aplicam-se à densidade de fluxo de potência que se obteria supondo uma propagação em espaço livre.

2579 *b*) Os limites especificados no n.º **2578** aplicam-se à faixa de frequências indicadas no n.º **2580**, que é atribuída, para a emissão pelas estações espaciais, aos serviços de radiocomunicação espacial seguintes:

Serviço fixo por satélite (espaço para Terra);
Serviço de exploração da Terra por satélite, incluindo o serviço meteorológico por satélite (espaço para Terra),

quando a referida faixa for partilhada, com igualdade de direitos, com o serviço fixo ou o serviço móvel.

2580 17,7–19,7 GHz ([3]).

2581 (8) Limites da densidade de fluxo de potência entre 31,0 GHz e 40,5 GHz.

2582 *a*) A densidade de fluxo de potência produzida à superfície da Terra pelas emissões de uma estação espacial, incluindo as provenientes de um satélite reflector, em quaisquer condições e para todos os métodos de modulação, não deve exceder os limites especificados no n.º **2578** ([4]).

2583 *b*) Os limites especificados no n.º **2582** aplicam-se às faixas de frequências indicadas no n.º **2584**, que são atribuídas, para a emissão pelas estações espaciais, ao serviço fixo por satélite, ao serviço móvel por satélite e ao serviço de pesquisa espacial, quando as referidas faixas são partilhadas, com igualdade de direitos, com o serviço fixo ou o serviço móvel.

2576.1 ([1]) Quando uma faixa de frequência é atribuída a serviços diferentes da mesma categoria em Regiões diferentes, a igualdade de direitos, no que diz respeito à exploração de serviços, encontra-se estipulada no n.º **346**. Convirá, portanto que, relativamente às interferências entre Regiões, as administrações respeitem, dentro das possibilidades práticas, todos os limites que possam ser especificados nos pareceres da CCIR.

2576.2 ([2]) V. o n.º **2576.1** e as Resoluções n.os 31, 34 e 700.

2580.1 ([3]) Quando uma faixa de frequência é atribuída a serviços diferentes da mesma categoria em Regiões diferentes, a igualdade de direitos, no que diz respeito à exploração de serviços, encontra-se estipulada no n.º **346**. Convirá, portanto, que, relativamente às interferências entre Regiões, as administrações respeitem, dentro das possibilidade práticas, todos os limites que possam ser especificados nos pareceres da CCIR.

2582.1 ([4]) As disposições do n.º **2582** aplicar-se-ão até que a CCIR adopte um parecer a indicar os limites de densidade de fluxo de potência que deverão aplicar-se às faixas de frequências indicadas no n.º **2584**, devendo então todos os sistemas respeitar os limites de densidade de fluxo de potência recomendados pela CCIR e aprovados por uma competente conferência administrativa mundial de radiocomunicações.

2584 31,0–31,3 GHz.

34,2–35,2 GHz (para as transmissões espaço para Terra segundo os n.os **895** e **896** sobre o território dos países indicados no n.° **894**.

37,5–40,5 GHz.

2585 (9) Os limites especificados nos n.os **2553**, **2557**, **2562**, **2566**, **2570**, **2574**, **2578**, **2582** e **2582.1** podem ser excedidos sobre o território de qualquer outro país cuja administração tenha dado para isso o seu acordo.

2586 a 2611 (*Não atribuídos.*)

ARTIGO 29

Disposições especiais relativas aos serviços de radiocomunicação espacial

SECÇÃO I

Cessação das emissões

2612 § 1. As estações espaciais devem estar dotadas de dispositivos que permitam fazer cessar imediatamente, por telecomando, as suas emissões radioeléctricas sempre que essa cessação seja imposta pelas disposições do presente Regulamento.

SECÇAO II

Medidas contra as interferências causadas aos sistemas de satélites geostacionários

2613 § 2. As estações espaciais não geostacionárias devem cessar as suas emissões ou reduzi-las a nível desprezável e as estações terrenas que comunicam com elas devem deixar de emitir sempre que não haja uma separação angular suficiente entre satélites não geostacionários e satélites geostacionários e sejam causadas interferências inaceitáveis (1) a sistemas espaciais de satélites geostacionários do serviço fixo por satélite que funcione em conformidade com as disposições do presente Regulamento.

2614 § 3. Na faixa de frequências 29,95–30 GHz, as estações espaciais do serviço de exploração da Terra por satélite instaladas a bordo de satélites geostacionários e que funcionam com estações espaciais do mesmo serviço instaladas abordo de satélites não geostacionários devem observar a seguinte restrição:

Sempre que as emissões provenientes de satélites geostacionários sejam dirigidas para a órbita de satélites geostacionários e causem interferências inaceitáveis (1) a um sistema espacial de satélites geostacionários do serviço fixo por satélite, essas emissões devem ser reduzidas a um nível igual ou inferior ao nível de interferência aceite (1).

SECÇAO III

Manutenção em posição das estações espaciais (2)

2615 § 4. (1) As estações espaciais instaladas a bordo de satélites geostacionários que utilizarem qualquer faixa de frequência atribuída ao serviço fixo por satélite ou ao serviço de radiodifusão por satélite (3):

2616 *a*) Devem poder ser mantidas em posição a menos de ± 0,1° de longitude da sua posição nominal;

2617 *b*) Devem ser mantidas em posição a menos de ± 0,1° de longitude da sua posição nominal;

2618 *c*) Contudo, as estações experimentais instaladas a bordo de satélites geostacionários não são obrigadas a observar as disposições dos n.os **2616** e **2617**, mas devem ser mantidas em posição a menos de ± 0,5° de longitude da sua posição nominal;

2619 *d*) As estações espaciais não são, contudo, obrigadas a observar as disposições do n.° **2617** ou do n.° **2618**, consoante o caso, desde que a rede de satélite a que pertencem não cause interferência inaceitável (4) a qualquer rede de satélite cuja estação espacial respeite os limites fixados nos n.os **2617** e **2618**.

2613.1 2614.1 S.III.1 (1) O nível de interferências aceite é fixado por acordo entre as administrações interessadas, com base nos pareceres pertinentes da CCIR.

(2) No caso de estações espaciais instaladas a bordo de satélites geossíncronos cuja órbita tenha uma inclinação superior a 5°, as tolerâncias de posição referem-se ao ponto nodal.

2615.1 (3) As estações espaciais do serviço de radiodifusão por satélite geostacionários que funcionam na faixa 11,7–12,7 GHz não são obrigadas a observar estas disposições, mas deverão ser mantidas em posição de acordo com o apêndice 30.

2619.1 (4) O nível de interferência aceite é fixado por acordo entre as administrações interessadas, com base nos pareceres pertinentes da CCIR.

2620 (2) As estações espaciais instaladas a bordo de satélites geostacionários que não utilizarem qualquer faixa de frequências atribuídas ao serviço fixo por satélite ou ao serviço de radiodifusão por satélite:

2621 a) Devem poder ser mantidas em posição a menos de ± 0,5° de longitude da sua posição nominal;

2622 b) Devem ser mantidas em posição a menos de ± 0,5° de longitude da sua posição nominal;

2623 c) Contudo, não são obrigadas a observar as disposições do n.º **2622** desde que a rede de satélite a que pertencem não cause interferência inaceitável (1) a qualquer outra rede de satélite cuja estação espacial respeite os limites fixados no n.º **2622**.

2624 (3) As estações (2) instaladas a bordo de satélites geostacionárias que forem postas em serviço antes de 1 de Janeiro de 1987 não são obrigadas a observar as disposições dos n.os **2615** a **2623** desde que a publicação antecipada das informações relativas à rede a que pertencem tenha sido efectuada antes de 1 de Janeiro de 1982. Contudo:

2625 a) Devem poder ser mantidas em posição a menos de ± 1° de longitude da sua posição nominal, mas deverá ser feito um esforço para se poder reduzir essa tolerância a ± 0,5°, pelo menos;

2626 b) Devem ser mantidas em posição a menos de ± 1° de longitude da sua posição nominal;

2627 c) Contudo não são obrigadas a observar as disposições do n.º **2626** desde que a rede de satélites a que elas pertencem não cause interferência inaceitável (1) a qualquer outra rede de satélite cuja estação espacial respeite os limites fixados no n.º **2626**.

SECÇÃO IV

Precisão da orientação das antenas dos satélites geostacionários

2628 § 5. (1) Deve ser possível manter a direcção da orientação da radiação máxima de qualquer feixe dirigido para a Terra de uma antena de satélite geostacionário (3) a menos de:

a) 10 % da abertura do feixe a meia potência em relação à direcção de orientação nominal; ou

b) 0,3 em relação à direcção de orientação nominal,

mantendo-se apenas o mais elevado destes dois valores. Esta disposição aplica-se unicamente quando o feixe é destinado a uma cobertura inferior à cobertura mundial.

2629 (2) No caso de o feixe não apresentar simetria de revolução em torno do eixo de radiação máxima, a tolerância em qualquer plano que contenha esse eixo deve referir-se à abertura do feixe a meia potência nesse plano.

2630 (3) Esta precisão só deve ser mantida se tal for necessário para evitar que sejam causadas interferências inaceitáveis (4) outros sistemas.

SECÇÃO V

Densidade de fluxo de potência na órbita dos satélites geostacionários

2631 § 6. Na faixa de frequências 8025-8400 MHz, que o serviço de exploração de Terra por satélite utilizando satélites não geostacionários partilha com o serviço fixo por satélite (Terra para espaço) ou com o serviço de meteorologia por satélite (Terra para espaço), a densidade de fluxo de potência máxima produzida na órbita dos satélites geostacionários por qualquer faixa com largura de 4 kHz.

SECÇÃO VI

Radioastronomia na zona tranquila da Lua

2632 § 7. (1) Na zona tranquila da Lua (5) são proibidas na totalidade do espectro as emissões que causem interferência prejudicial às observações da radioastronomia (6) ou a outros usuários de serviços passivos, com excepção das seguintes faixas de frequências:

2633 a) As faixas de frequências atribuídas ao serviço de pesquisa espacial utilizando detectores activos;

2623.1 (1) O nível de interferência aceite é fixado por acordo entre as administrações interessadas, com base nos pareceres pertinentes da
2627.1 CCIR.

2624.1 (2) V. o n.º **2615.1**.

2628.1 (3) As antenas de emissão das estações espaciais do serviço de radiodifusão por satélite que funcionam na faixa 11,7–12,7 GHz não são obrigados a observar estas disposições, mas deverão conservar a precisão de orientação especificada no § 3.14.1 do anexo 8 do apêndice 30.

2630.1 (4) V. o n.º **2627.1**.

2632.1 (5) A zona tranquila da Lua compreende a parte da superfície da Lua e o volume de espaço adjacente que estão protegidos de emissões provenientes de qualquer ponto situado a menos de 100 000 km do centro da Terra.

2632.2 (6) O nível de interferência prejudicial é fixado por acordo entre as administrações interessadas, tendo em conta os pareceres pertinentes da CCIR.

2634 *b*) As faixas de frequências atribuídas ao serviço de exploração espacial, ao serviço de exploração da Terra por satélite utilizando detectores activos e ao serviço de radiolocalização utilizando estações instaladas em engenhos espaciais que são necessários como auxiliares da pesquisa espacial e para as radiocomunicações e as emissões de pesquisa espacial na zona tranquila da Lua.

2635 (2) Nas faixas de frequências em que as emissões não sejam proibidas pelas disposições dos n.os **2632** a **2634** as observações da radioastronomia e da pesquisa espacial (passiva) na zona tranquila da Lua podem ser protegidas contra interferências prejudiciais por acordo entre as administrações interessadas.

SECÇÃO VII

Limitações da potência das estações terrenas fora do eixo do feixe principal

2636 § 8. O nível de potência isotrópica radiada equivalente (p. i. r. e.) emitido por uma estação terrena fora do eixo do feixe principal na direcção da órbita dos satélites geostacionários exerce uma influência significativa nas interferências causadas às outras redes de satélite geostacionário. A redução ao mínimo das radiações fora desse eixo asseguraria uma utilização mais eficaz da órbita dos satélites geostacionários e facilitaria a coordenação. Convidam-se as administrações a obter, a este respeito, os valores mais fracos praticamente possíveis, tendo em conta os mais recentes pareceres da CCIR sobre o assunto. A redução ao mínimo desses níveis é particularmente importante nas faixas de frequências utilizadas de modo intensivo nas ligações ascendentes.

2637 a 2663 *(Não atribuídos.)*

ARTIGO 30

Serviços de radiodifusão e serviço de radiodifusão por satélite

SECÇÃO I

Serviço de radiodifusão

2664 A) Generalidades

2665 § 1. (1) É proibido instalar e explorar estações de radiodifusão (radiodifusão sonora e televisão) a bordo de navios, de aeronaves ou de qualquer objecto flutuante ou aerotransportado fora dos territórios nacionais.

2666 (2) Em princípio, a potência das estações de radiodifusão que utilizam frequências inferiores a 5060 kHz ou superiores a 41 MHz não deve ultrapassar (excepto na faixa 3900-4000 kHz) o valor necessário para assegurar economicamente um serviço nacional de boa qualidade no interior das fronteiras do país considerado.

2667 B) Radiodifusão na zona tropical

2668 § 2. (1) No presente Regulamento, a expressão «radiodifusão na zona tropical» designa um tipo especial de radiodifusão para o uso interno nacional dos países incluídos na zona definida nos n.os **406** a **411**, onde se pode verificar que, em virtude do nível elevado dos parasitas atmosféricos e das dificuldades de propagação, não é possível realizar economicamente um serviço de melhor qualidade pela utilização das ondas quilométricas, hectométricas ou métricas.

2669 (2) A utilização pelo serviço de radiodifusão das faixas de frequências abaixo indicadas é limitada á zona tropical:

2300-2498 kHz (Região 1);
2300-2495 kHz (Regiões 2 e 3);
3200-3400 kHz /todas as Regiões);
4750-4995 kHz (todas as Regiões);
5005-5060 kHz (todas as Regiões).

2670 (3) A potência da onda portadora dos emissores que funcionam neste serviço nas faixas indicadas no n.º **2669** não deve ultrapassar 50 KW.

2671 (4) Na zona tropical o serviço de radiodifusão tem prioridade sobre os serviços que com ele partilham as faixas de frequências indicadas no n.º **2669**.

2672 (5) Todavia, na parte da Líbia situada a norte do paralelo 30 º o serviço de radiodifusão, nas faixas indicadas no n.º **2669**, funciona em base de igualdade de direitos com os outros serviços com os quais partilha essas faixas na zona tropical.

2673 (6) O serviço de radiodifusão no interior da zona tropical e os outros serviços no exterior desta zona devem funcionar em conformidade com as disposições do n.º **346**.

SECÇÃO II

Serviço de radiodifusão por satélite

2674 § 3. Ao definirem-se as características de qualquer estação espacial do serviço de radiodifusão por satélite serão utilizados todos os meios técnicos disponíveis para reduzir o mais possível a radiação sobre o território de outros países, salvo acordo prévio destes últimos.

2675 a 2699 *(Não atribuídos.)*

ARTIGO 31

Serviço fixo

SECÇÃO I

Generalidades

2700 § 1. (1) As administrações são instantemente convidadas a abandonar o emprego, no serviço fixo, das emissões radiotelefónicas por faixa lateral dupla (classe A3E).

2701 (2) As emissões da classe F3E ou G3E não são autorizadas, no serviço fixo, nas faixas inferiores a 30 MHz.

SECÇÃO II

Frequências para a permuta internacional de informações da polícia

2702 § 2. (1) As frequências necessárias para a permuta internacional de informações que tenham por fim auxiliar a prisão dos criminosos são escolhidas as faixas atribuídas ao serviço fixo, se necessário por acordos especiais concluídos entre as administrações interessadas no quadro do artigo 31 da Convenção, relativo aos acordos especiais.

2703 (2) A fim de economizar o mais possível, as frequências, convém que a Comissão Internacional do Registo de Frequências seja consultada pelas administrações interessadas sempre que tais acordos venham a ser discutidos numa base regional ou mundial.

SECÇÃO III

Frequências para a permuta intenacional de informações meteorológicas sinópticas

2704 § 3. (1) As frequências necessárias para a permuta internacional de informações relativas à meteorologia sinóptica escolhem-se nas faixas atribuídas ao serviço fixo, se necessário por acordos especiais concluídos pelas administrações interessadas no quadro do artigo 31 da Convenção, relativo aos acordos especiais.

2705 (2) A fim de economizar o mais possível as frequências, convém que a Comissão Internacional do Registo de Frequências seja consultada pelas administrações interessadas sempre que tais acordos venham a ser discutidos numa base regional ou mundial.

2706 a 2730 *(Não atribuídos.)*

ARTIGO 32

Serviço de amador e serviço de amador por satélite

SECÇÃO I

Serviço de amador

2731 § 1. As radiocomunicações entre estações de amador de países diferentes ficam proibidas logo que a administração de um dos países interessados notificar a sua oposição.

2732 § 2. (1) Quando forem autorizadas, as transmissões entre estações de amador de países diferentes devem efectuar-se em linguagem clara e limitar-se a mensagens de ordem técnica relativas a ensaios e a observações de carácter puramente pessoal que, em virtude da sua reduzida importância, não justifiquem o recurso ao serviço público de telecomunicações.

2733 (2) É absolutamente proibido utilizar as estações de amador para transmitir comunicações internacionais emanadas de ou com destino a terceiras pessoas.

2734 (3) As disposições antecedentes podem ser modificadas por acordos especiais entre as administrações dos países interessados.

2735 § 3. (1) Qualquer pessoa que deseje obter uma licença para manobrar os aparelhos de uma estação de amador deve provar que está apta à transmissão manual correcta e à recepção auditiva correcta de textos em sinais do código Morse. Contudo, as administrações responsáveis podem não exigir a aplicação desta prescrição quando se tratar de estações que utilizem exclusivamente frequências superiores a 30 MHz.

2736 (2) As administrações tomarão as medidas que julguem necessárias para verificar as aptidões operacionais e técnicas de qualquer pessoa que deseje manobrar os aparelhos de uma estação de amador.

2737 § 4. A potência máxima das estações de amador será ficxada pelas administrações responsáveis, tendo em atenção as aptidões técnicas dos operadores e as condições em que essas estações deverão funcionar.

2738 § 5. (1) Aplicam-se às estações de amador todas as regras gerais fixadas pela Convenção e pelo presente Regulamento. Em especial, a frequência emitida deverá ser tão estável e tão isenta de radiações não essenciais quanto o permita o estado da técnica para estações desta natureza.

2739 (2) Durante as suas emissões as estações de amador deverão transmitir frequentemente o seu indicativo de chamada.

SECÇÃO II

Serviço de amador por satélite

2740 § 6. Quando para tal houver lugar, as disposições da secção I aplicam-se do mesmo modo ao serviço de amador por satélite.

2741 § 7. As estações espaciais do serviço de amador por satélite que funcionem em faixas partilhadas com outros serviços estarão equipadas com dispositivos apropriados ao comando das suas emissões, para o caso de serem assinaladas interferências prejudiciais, em conformidade com o procedimento especificado no artigo 22. As administrações que autorizarem tais estações espaciais informarão disso a IFRB e procederão de modo que sejam instaladas, antes do lançamento, estações terrenas de comando suficientes para que qualquer interferência prejudicial assinalada possa ser eliminada pelas referidas administrações (v. o n.º **2612**).

2742 a 2766 *(Não atribuídos.)*

ARTIGO 33

Serviço de frequências padrão e de sinais horários

2767 § 1. (1) Para permitir uma utilização mais eficaz do espectro das frequências radioelétricas e para favorecer outras actividades técnicas e científicas, as administrações que assegurem ou projectem assegurar um serviço de frequências padrão e de sinais horários devem coordenar, em conformidade com as disposições do presente artigo, o estabelecimento e a exploração deste serviço no plano mundial, providenciando para o estender às regiões do mundo que estão insuficientemente servidas.

2768 (2) Para esse efeito, as administrações tomam as medidas necessárias para coordenar com o concurso da Comissão Internacional do Registo de Frequências qualquer nova emissão de frequências padrão ou de sinais horários ou qualquer modificação introduzida nas emissões existentes nas faixas de frequência padrão. Trocam entre si e comunicam à Comissão todas as informações úteis a esse respeito. A Comissão consulta sobre essa matéria o director da CCIR, o qual continuará a socorrer-se da parecer e da cooperação da Comissão Internacional da Hora (CIH), da União Radiocientífica Internacional (URSI) e de outros organismos internacionais que têm interesse directo e essencial neste domínio.

2769 (3) Tanto quamto possível, não se consignará qualquer nova frequência nas faixas do serviço de frequências padrão nem se notificará à Comissão sem se ter efectuado a coordenação mencionada anteriormente.

2770 § 2. A fim de reduzir as interferências nas faixas do serviço de frequências padrão, as administrações cooperarão entre si de acordo com os pareceres da CCIR.

2771 § 3. As addministrações que asseguram este serviço colaborarão entre si, por intermédio da CCIR, para coligir e distribuir os resultados das medidas de frequências padrão e de sinais horários, assim como os valores dos ajustes das frequências e dos sinais horários.

2772 § 4. Ao escolher as características técnicas das emissões de frequências padrão e de sinais horários, as administrações deverão inspirar-se nos pareceres pertinentes da CCIR.

2773 a 2797 *(Não atribuídos.)*

ARTIGO 34

Estações experimentais

2798 § 1. (1) Uma estação experimental não poderá entrar em comunicação com estações experimentais de outros países senão com o acordo da administração de que depende. Cada administração notificará as administrações de que depende. Cada administração notificará as administrações interessadas das autorizações que conceder.

2799 (2) As administrações interessadas fixarão, por acordos particulares, as condições em que poderão ser estabelecidas as comunicações.

2800 § 2. (1) Nas estações experimentais, qualquer pessoa que manobre aparelhos radiotelegráficos por sua própria conta ou por conta de terceiros deverá ter provcado que está apta à transmissão manual e à recepção auditiva de textos em sinais do código Morse.

2801 (2) As adminsitrações tomarão as medidas que julgarem necessárias para verificar as aptidões operacionais e técnicas de qualquer pessoa que deseje manobrar os aparelhos de uma estação experimental.

2802 § 3. A potência máxima das estações experimentais será fixada pelas administrações responsáveis, tendo em conta a finalidade para que foi autorizada a sua criação e as condições em que essas estações deverão funcionar.

2803 § 4. (1) Aplicam-se às estações experimentais todas as regras gerais fixadas pela Conveção e pelo presente Regulamento. Além disso, estas estações devem satisfazer as condições técnicas impostas aos emissores que trabalham nas mesmas faixas de frequências, salvo quando o próprio princípio técnico das experiências a isto se oponha. Neste caso, a administração que autorizar a exploração destas estações poderá conceder uma dispensa sob a forma apropriada.

2804 (2) Durante as suas emissões, as estações experimentais decerão transmitir frequentemente o seu indicativo de chamada ou qualquer outra forma de identificação reconhecida (v. o artigo 25).

2805 § 5. A administração responsável poderá, se o julgar desejável, adoptar disposições das previstas no presente artigo para uma estação experimental não susceptível de produzir interferência prejudicial a um serviço de outro país.

2806 a 2830 *(Não atribuídos.)*

ARTIGO 35

Serviços de radiodeterminação e serviço de radiodeterminação por satélite

SECÇÃO I

Disposições gerais

2831 § 1. As administrações que tenham organizado um serviço de radiodeterminação tomam todas as disposições necessárias para assegurar a eficácia e a regularidade desse serviço. Todavia, não aceitam qualquer responsabilidade relativamente às consequências eventuais tanto da inexactidão dos resultados fornecidos como do funcionamento defeituoso ou da paragem do funcionamento das suas estações.

2832 § 2. Em caso de medida duvidosa ou aleatória, a estação que determinar um azimute ou uma posição deve, se possível, avisar dessa incerteza a estação móvel a que fornece essa informação.

2833 § 3. As administrações notificam o secretário-geral das características de cada estação de radiodeterminação que assegure um serviço internacional que interessa ao serviço móvel marítimo, e, especialmente, se for necessário, para cada estação ou grupo de estações, os sectores nos quais os resultados fornecidos serão normalmente certos. Essas informações são publicadas na nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais; é notificada ao secretário-geral qualquer alteração de carácter permanente.

2834 § 4. Os processos de identificação das estações de radiodeterminação devem ser escolhidos de modo a evitar qualquer incerteza quando se trate de reconhecer uma estação.

2835 § 5. Os sinais emitidos por estações de radiodeterminação devem permitir medidas exactas e precisas.

2836 § 6. Qualquer informação relativa a uma modificação ou a uma irregularidade do funcionamento de uma estação de radiodeterminação deve ser difundida sem demora. Para esse fim:

2837 *a*) As estações terrestres dos países onde funcione um serviço de radiodeterminação emitem cada dia, em caso de necessidade, avisos de modificação ou de irregularidade de funcionamento até ao momento em que se retome o funcionamento normal ou, se se verificar uma modificação permanente, até ao momento em que se possa razoavelmente admitir ter sido avisada toda a navegação interessada;

2838 *b*) As modificações permanentes ou as irregularidades de longa duração serão publicadas nos avisos à navegação no mais breve prazo.

SECÇÃO II

Disposições relativas ao serviço de radiodeterminação por satélite

2839 § 7. (1) Aplicam-se ao serviço de radionavegação marítima por satélite as disposições dos n.os **2831** a **2838**, com excepção do n.º **2832**.

2840 (2)Aplicam-se ao serviço de radionavegação areonáutica por satélite as disposições dos n.os **2831** a **2838**, com excepção dos n.os **2832** e **2833**.

SECÇÃO III

Estações radiogoniométricas

2841 § 8. (1) No serviço de radionavegação marítima, a frequência de 410 kHz é a frequência normal de radiogoniometria um radiotelegrafia. Todas as estações radiogoniométricas do serviço de radionavegação marítima que usem a radiotelegrafia devem poder utilizá-la. Além disso, devem estar em condições de determinar azimutes na frequência de 500 kHz, especialmente para localizar as estações que emitam sinais de perigo, de alarme e de urgência.

2842 (2) Quando exista um serviço de radiogoniometria nas faixas autorizadas entre 1605 kHz e 2850 kHz convém que as estações radiogoniométricas estejam em condições de determinar azimutes na frequência da chamada e de perigo radiotelefónico de 2182 kHz.

2843 § 9. O procedimento a seguir pelas estações radiogoniométricas está definido no apêndice 41.

2844 § 10. Na falta de arranjo prévio, uma estação de aeronave que se dirija a uma estação radiogoniométrica para obter uma azimute deve utilizar, para esse efeito, uma frequência na qual a estação chamada normalmente escute.

2845 § 11. No serviço de radionavegação aeronáutica é aplicável o procedimento referido na presente secção para a radiogoniometria, salvo quando vigorarem procedimentos especiais resultantes de arranjos concluídos pelas administrações interessadas.

SECÇÃO IV

Estações de radiofarol

2846 A) Generalidades

2847 § 12. Quando uma administração julgar útil no interesse da navegação, organizar um serviço de estações de radiofarol, pode utilizar para esse fim:

2848 *a*) Radiofaróis propriamente ditos, instalados em terra firme ou em navios permanentemente ancorados ou, excepcionalmente, em navios que naveguem numa zona restrita cujos limites sejam conhecidos e publicados. O diagrama de emissão desses radiofaróis poderá ser direccional ou não direccional;

2849 *b*) Estações fixas, estações costeiras ou estações aeronáuticas designadas para funcionar como radiofaróis a pedido das estações móveis.

2850 § 13. (1) Os radiofaróis propriamente ditos utilização as frequências das faixas que lhes são atribuídas consoante o capítulo III.

2851 (2) As outras estações notificadas como radiofaróis utilização para esse efeito a sua frequência normal de trabalho e a sua classe normal de emissão.

2852 (3) A potência radiada por cada radiofarol propriamente dito deverá ser regulada para o valor necessário para que a intensidade de campo tenha o valor estipulado no limite do alcance que se pretende (v. os n.^{os} **2855** e **2860**).

2853 B) Radiofaróis aeronáuticos

2854 § 14. (1) A consignação das frequências aos radiofaróis aeronáuticos que funcionam nas faixas compreendidas entre 160 kHz e 435 kHz é baseada numa relação de protecção contra interferências de, pelo menos, 15 dB em toda a zona de serviço de cada radiofarol.

2855 (2) Convém que a potência seja mantida no valor mínimo necessário para que a intensidade de campo tenha o valor pretendido no limite ao alcance.

2856 (3) O limite de alcance de dia dos radiofaróis indicados no n.º **2854** é definido pelos valores de intensidade de campo especificados abaixo:

2857 (4) Regiões 1 e 2:

70μ V por metro para os radiofaróis situados ao norte do paralelo 30° N.;
120μ V por metro para os radiofaróis situados entre os paralelos 30° N. e 30° S.;
70μV por metro para os radiofaróis situados ao sul do paralelo 30° N.;

2858 (5) Região 3:

70μ V por metro para os radiofaróis situados ao norte do paralelo 40° N.;
120μ V por metro para os radiofaróis situados entre os paralelos 40° N. e 50° S.;
70μV por metro para os radiofaróis situados ao sul do paralelo 40° N.;

2859 C) Radiofaróis marítimos

2860 § 15. (1) Os valores das relações de protecção aplicáveis aos radiofaróis marítimos que funcionam nas faixas compreendidas entre 283,5 kHz e 335 kHz são determinados admitindo que a potência radiada é mantida no valor necessário para obter a intensidade de campo desejada no limite do alcance.

2861 (2) O limite de alcance de dia dos radiofaróis indicados no n.º **2860** é definido pela condição de que, nesse limite, as intensidades de campo seja as seguintes:

2862 (3) Região 1:

50μ V por metro para os radiofaróis situados ao norte do paralelo 43° N.;
75μ V por metro para os radiofaróis situados entre os paralelos 43° N. e 30° S.;
100μ V por metro para os radiofaróis situados entre os paralelos 30° N. e 30° S.;
75μ V por metro para os radiofaróis situados entre os paralelos 30° S. e 43° S.;
50μV por metro para os radiofaróis situados ao sul do paralelo 43° S.

2863 (4) Região 2:

50μ V por metro para os radiofaróis situados ao norte do paralelo 40º N.;
75μ V por metro para os radiofaróis situados entre os paralelos 40º N. e 31º S.;
100μ V por metro para os radiofaróis situados entre os paralelos 31º N. e 30º S.;
75μ V por metro para os radiofaróis situados entre os paralelos 30º S. e 43º S.;
50μV por metro para os radiofaróis situados ao sul do paralelo 43º S.

2864 (5) Região 3:

75μ V por metro para os radiofaróis situados ao norte do paralelo 40º N.;
100μ V por metro para os radiofaróis situados entre os paralelos 40º N. e 50º S.;
75μV por metro para os radiofaróis situados ao sul do paralelo 50º S.

2865 (6) Na região 1, a consignação de frequências aos radiofaróis marítimos é feita na base de um espaçamento de 2,3 kHz entre frequências adjacentes utilizadas para as emissões de classe A2A.

2866 (7) Na região 1, convém que a percentagam de modulação das emissões dos radiofaróis marítimos seja de, pelo menos, 70 %.

2867 a 2891 (*Não atribuídos.*)

ARTIGO 36

Serviço de radioastronomia

SECÇÃO I

Disposições gerais

2892 § 1. As administrações colaboração entre si para proteger o serviço de radioastronomia contra interferência, tendo em conta:

2893 *a*) A sensibilidade excepcionalmente elevada das estações de radioastronomia;
2894 *b*) A necessidade frequente de longos períodos de observação isentos de interferências prejudiciais;
2895 *c*) O facto de que o reduzido número de estações de radioastronomia em cada país e o conhecimento da sua localização permitem frequentemente prestar atenção especial ao modo de evitar as interferências.

2896 § 2. A localização das estações de radioastronomia a proteger e as frequências de observação que elas utilizam são notificadas à IFRB em conformidade com o n.º **1492** e publicadas pelo secretário-geral, em conformidade com o n.º **2237**, para comunicação aos Membros.

SECÇÃO II

Medidas a tomar no serviço de radioastronomia

2897 § 3. A localização das estações de radioastronomia é escolhida tendo em conta as possibilidades de interferências prejudiciais a essas estações.

2898 § 4. Serão adoptados nas estações de radioastronomia todos os meios técnicos praticáveis para reduzir a sua susceptibilidade às interferências. Dever-se-á prosseguir o desenvolvimento de técnicas aperfeiçoadas para reduzir a susceptibilidade às interferências, incluindo a participação em estudos conjuntos por intermédio da CCIR.

SECÇÃO III

Protecção do serviço de radioastronomia

2899 § 5. O estatuto do serviço de radioastronomia nas diversas faixas de frequência está especificado no quadro de atribuição das faixas de frequência (artigo 8). As administrações assegurarão a protecção das estações do serviço de radioastronomia contra interferências, em observância do estatuto deste serviço nas faixas consideradas (v., também, os n.ºs **344**, **2632** a **2634** e **2635**).

2900 § 6. Quando assegurem, a título permanente ou temporário, a protecção do serviço de radioastronomia contra interferências, as administrações utilizarão, consoante o caso, meios tais como a separação geográfica, o efeito de blindagem do terreno, a directividade da antena, a utilização da partilha no tempo e mais fraca potência de emissão que se possa conseguir na prática.

2901 § 7. Solicita-se instantemente às administrações que, ao consignarem frequências às estações dos outros serviços nas faixas adjacentes àquelas que o serviço de radioastronomia utiliza para as suas observações em conformidade com as disposições do presente Regulamento, tomem todas as medidas dentro das possibilidades práticas para proteger o serviço de radioastronomia contra interferências prejudiciais, de acordo com o n.º **343**.

Além das medidas mencionadas no n.º **2900**, convém examinar especialmente os meios técnicos que permitem reduzir ao mínimo a potência radiada nas frequências compreendidas na faixa utilizada para a radioastronomia (v., também, o n.º **344**).

2902 § 8. Solicita-se instantemente às administrações que, ao consignarem frequências e estações noutras faixas, tenham em conta a necessidade de, dentro das possibilidades práticas, evitar as radiações não essenciais susceptíveis de causar interferências prejudiciais ao serviço de radioastronomia explorado em conformidade com o presente Regulamento (v., também, o n.º **344**).

2903 § 9. Solicita-se instantemente às administrações que, ao aplicarem as disposições definidas na presente secção, não percam de vista que o serviço de radioastronomia é extremamente sensível às interferências causadas pelas emissões provenientes de estações espaciais ou de aeronave.

2904 § 10. As administrações deverão tomar nota dos pareceres pertinentes da CCIR para limitar as interferências causadas por outros serviços ao serviço de radioastronomia.

2905 a 2929 *(Não atribuídos.)*

CAPÍTULO IX

Comunicação de perigo e de segurança

ARTIGO 37

Disposições gerais

2930 § 1. O procedimento indicado no presente capítulo é obrigatório no serviço móvel marítimo, assim como nas comunicações entre estações de aeronave e estações do serviço móvel marítimo. As disposições do presente capítulo são igualmente aplicáveis no serviço móvel aeronáutico, excepto no caso de acordos especiais concluídos pelos governos interessados.

2931 § 2. O procedimento indicado no presente capítulo é obrigatório no serviço móvel marítimo por satélite, assim como nas comunicações entre as estações a bordo de aeronaves e as estações do serviço móvel marítimo por satélite em todos os casos em que este serviço ou estas estações sejam expressamente mencionados.

Aplicam-se igualmente as disposições dos n.ºs **3086, 3090, 3095, 3096, 3097, 3098, 3200, 3203** e **3223.**

2932 § 3. (1) Nenhuma disposição do presente Regulamento pode constituir obstáculo à utilização, por uma estações móvel ou uma estação terrena de navio em perigo, de todos os meios de que disponha para chamar a atenção, assinalar a sua situação e obter socorro.

2933 (2) Nenhuma disposição do presente Regulamento pode constituir obstáculo à utilização, por estações a bordo de aeronaves ou de navios que participem em operadores de busca e salvamento em circunstâncias excepcionais, de todos os meios de que disponham para prestar assistência a uma estação móvel em perigo.

2934 (3) Nenhuma disposição do presente Regulamento pode constituir obstáculo à utilização, por uma estação terrestre, em circunstâncias excepcionais, de todos os meios de que disponha para prestar assistência a uma estação móvel em perigo (v. igualmente o n.º **959**).

2935 § 4. Nos casos de perigo, de urgência ou de segurança, as transmissões:

2936 *a*) Em radiotelegrafia, não devem em geral ultrapassar a velocidade de 16 palavras por minuto;

2937 *b*) Em radiotelefonia, devem ser efectuadas lenta e distintamente, pronunciando-se distintamente cada palavra para facilitar a sua transcrição.

2938 § 5. Convém aplicar, se for caso disso, as abreviaturas e os sinais do apêndice 14, bem como os quadros de soletração das letras e dos algarismos do apêndice 24. Além disso, em caso de dificuldades linguísticas, recomenda-se a utilização do Código Internacional de Sinais.

2939 § 6. (1) A Convenção Internacional para a Salvaguarda da Vida Humana no Mar determina quais os navios e os respectivos engenhos de salvamento que devem ser equipados com instalações radioeléctricas, assim como os navios que devem ser equipados com aparelhos radioeléctricos portáteis para serem utilizados pelos engenhos de salvamento. A Convenção prescreve também as condições a que devem satisfazer tais aparelhos.

2940 (2) Os anexos à Convenção Relativa à Aviação Civil Internacional definem quais as aeronaves que convém equipar com instalaçoes radioeléctricas, bem como as aeronaves que convém equipar com aparelhos radioeléctricos portáteis para serem utilizados pelos engenhos de salvamento. Definem igualmente as condições a que convém que tais aparelhos satisfaçam.

2941 § 7. Todavia, as prescrições do presente Regulamento devem ser observadas por todos os aparelhos dessa natureza.

2942 § 8. As estações móveis do serviço móvel marítimo podem comunicar para fins de segurança com as estações do serviço móvel aeronáutico.

2943 § 9. Qualquer estação instalada a bordo de uma aeronave e obrigada por regulamentação nacional ou internacional a entrar em comunicação, por motivos de perigo, de urgência ou de segurança, com as estações do serviço móvel marítimo deve estar em condições de efectuar emissões, de preferência da classe A2A ou H2A, e de receber emissões, de preferência das classes A2A e H2A, na frequência portadora de 500 kHz, ou de efectuar emissões da classe A3E ou H3E e de receber emissões das classes A3E e H3E na frequência portadora de 2182 kHz, ou então de efectuar e receber emissões da classe G3E na frequência de 156,8 MHz.

2944 a 2968 *(Não atribuídos.)*

ARTIGO 38

Frequências para o perigo e a segurança

SECÇÃO I

Frequências disponíveis

2669 A) 500 kHz

2970 § 1. (1) A frequência de 500 kHz é a frequência internacional de perigo em radiotelegrafia (v. igualmente o n.º **472**; deve ser utilizada para esse fim pelas estações de navio, de aeronave e de engenho de salvamento que usem frequências compreendidas entre 405 kHz e 535 kHz quando essas estações peçam a assistência dos serviços marítimos. Empregar-se-á a chamada e o tráfego de perigo, bem como para o sinal e as mensagens de urgência, para o sinal de segurança e, fora das regiões de tráfego intenso, para curtas mensagens de segurança. Quando for praticável, as mensagens de segurança serão emitidas na frequência de trabalho, depois de um aviso preliminar na frequência de 500 kHz (v., também, o n.º **4236**).

2971 (2) Todavia, convém que as estações de navio e de aeronave que não possam emitir na frequência de 500 kHz utilizem qualquer outra frequência disponível na qual possam chamar a atenção.

2972 B) 2182 kHz

2973 § 2. (1) A frequência de 2182 kHz (1) é a frequência internacional de perigo em radiotelefonia (v. igualmente os n.ºs **500** e **501**); deverá ser utilizada para esse fim pelas estações de navio, de aeronave e de engenho de salvamento e pelas radiobalizas de sinistros que usem faixas autorizadas compreendidas entre 1605 kHz, quando essas estações peçam a assistência dos serviços marítimos. É utilizada para a chamada e o tráfego de perigo, para os sinais de radiobaliza de localização de sinistros, para o sinal e as mensagens de urgência, bem como para o sinal de segurança. As mensagens de segurança são transmitidas, quando praticável, numa frequência de trabalho, depois de um aviso preliminar na frequência de 2182 kHz. A classe de emissão em radiotelefonia na frequência de 2182 kHz é a classe A3E ou H3E (v. o n.º **4127**). A classe de emissão a utilizar pelas radiobalizas de localização de sinistros é a especificada no apêndice 37 (v. igualmente o n.º **3265**).

2974 (2) Na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N., se uma mensagem de perigo transmitida na frequência portadora 2182 kHz não obtiver confirmação de recepção, é permitido, se tal for possível, transmitir de novo o sinal de alarme radiofónico seguido da chamada e da mensagem de perigo numa ou noutra, consoante o caso, das duas frequências portadoras 4125 kHz ou 6215,5 kHz (v. os n.ºs **2982**, **2986** e **3054**).

2975 (3) Todavia, convém que as estações de navio e de aeronave que não possam emitir na frequência portadora 2182 kHz nem, nas condições do n.º **2974**, nas frequências portadoras 4125 kHz ou 6215,5 kHz utilizem qualquer outra frequência disponível na qual possam chamar a atenção.

2976 (4) As chamadas selectivas efectuadas segundo as disposições do artigo 62 podem ser emitidas na frequência portadora 2182 kHz, nos sentidos estação costeira-navio e navio-estação costeira e entre navios; devem ser limitadas, nesta frequência, aos casos de perigo e de urgência e aos avisos de extrema importância para a navegação. Este procedimento não pode, em caso algum, substituir os indicados nos n.ºs **3101**, **3102**, **3116**, **3117** e **3270**.

2977 (5) Qualquer estação costeira que utilizar para fins de perigo a frequência 2182 kHz deve estar em condição de transmitir o sinal de alarme radiotelefónico descrito no n.º **3270** (v., também, os n.ºs **3277**, **3278** e **3279**).

2978 (6) Convém que qualquer estação costeira autorizada a emitir avisos à navegação possa transmitir o sinal de aviso aos navegantes descrito nos n.ºs **3284**, **3285** e **3286**.

2979 C) 3023 kHz

2980 § 3. A frequência portadora (frequência de referência) aeronáutica 3023 kHz pode ser utilizada para estabelecer comunicações entre as estações móveis que participem em operações coordenadas de busca e salvamento, bem como comunicações entre essas estações e as estações terrestres participantes, em conformidade com as disposições dos apêndices 27 (*) e 27 Aer2 (*) (v. igualmente os n.ºs **501** e **505**).

2973.1 (1) Quando as administrações assegurem nas suas estações costeiras uma escuta aturada em 2182 kHz para receber emissões das classes R3E e J3E, bem como emissões das classes A3E e H3E, as estações de navio que se encontrem para além da distância a que poderiam comunicar com essas estações costeiras por meio de emissões das classes A3E ou H3E poderão chamar, para fins de segurança, as estações utilizando as classes de emissão R3E ou J3E. Esta utilização só será autorizada quando tenham sido infrutuosas as chamadas efectuadas com emissões das classes A3E e H3E.

(*) Nota do Secretariado-Geral (v. o n.º **5189** e a Resolução n.º 400).

2981 D) 4125 kHz

2982 §4. Na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N., a frequência portadora 4125 kHz é designada, além da frequência portadora 2182 kHz, para o perigo e a segurança, bem como para a chamada e a resposta (v. igualmente o n.° **520**. As estações que utilizarem esta frequência, 4125 kHz, podem continuar a utilizar a classe de emissão H3E até 1 de Janeiro de 1984.

2983 E) 5680 kHz

2984 §5. A frequência portadora (frequência de referência) aeronáutica 5680 kHz pode ser utilizada para estabelecer comunicações entre as estações móveis que participem em operações coordenadas de busca e de salvamento, bem como para comunicações entre essas estações e as estações terrestres participantes, em conformidade com as disposições dos apêndices 27(*) e 27 Aer2(*) (v. igualmente os n.os **501** e **505**).

2985 F) 6215,5 kHz

2986 §6. Na zona da Região 3 situada ao sul do paralelo 25° N., a frequência portadora 6215,5 kHz é designada, além da frequência portadora 2182 kHz, para o perigo e a segurança, bem como para a chamada e a resposta (v. igualmente o n.° **523**). As estações que utilizarem esta frequência, 6215,5 kHz, podem continuar a utilizar a classe de emissão H3E até 1 de Janeiro de 1984.

2987 G) 8364 kHz

2988 §7. A frequência 8364 kHz é designada para ser utilizada pelas estações de engenho de salvamento, se estas estiverem equipadas para emitir nas frequências das faixas compreendidas entre 4000 kHz e 27 500 kHz e se desejarem estabelecer com as estações dos serviços móveis marítimo e aeronáutico comunicações relativas às operações de busca e de salvamento (v. igualmente o n.° **501**).

2989 H) 121,5 MHz e 123,1 MHz

2990 §8. (1) As estações móveis do serviço móvel marítimo podem comunicar para fins de segurança com as estações do serviço móvel aeronáutico.

2991 (2) É apenas nessas ocasiões que elas podem utilizar a frequência aeronáutica de urgência 121,5 MHz e a frequência aeronáutica auxiliar 123,1 MHz em emissões da classe A3E para as duas frequências (v. igualmente os n.os **501** e **593**). Devem então satisfazer aos acordos especiais concluídos pelos governos interessados que regulam o serviço móvel aeronáutico.

2992 I) 156,3 MHz e 156,8 MHz

2993 §9. As frequências 156,3 MHz e 156,8 MHz poderão ser utilizadas pelas estações de aeronave, mas unicamente para fins relativos à segurança [v. igualmente a nota *h*) do apêndice 18].

2994 §10. (1) A frequência 156,8 MHz é a frequência internacional de perigo, de segurança e de chamada em radiotelefonia para as estações do serviço móvel marítimo, quando utilizarem frequências das faixas autorizadas compreendidas entre 156 MHz e 174 MHz (v. igualmente os n.os **501** e **613**). Ela é utilizada para o sinal, as chamadas e o tráfego de perigo, para o sinal e o tráfego de urgência e para o sinal de segurança (v. igualmente o n.° **2993**). As mensagens de segurança deverão ser transmitidas, quando praticável, numa frequência de trabalho depois de aviso preliminar na frequência 156,8 MHz. A classe de emissão a utilizar para a radiotelefonia na frequência 156,8 MHz é a classe G3E (v. o apêndice 19).

2995 (2) Todavia, convém que as estações de navio que não possam emitir na frequência 156,8 MHz utilizem qualquer outra frequência disponível na qual possam chamar a atenção.

2996 J) 243 MHz

(V. os n.os **501** e **642**.)

2997 K) Faixa 406-406,1 MHz

(V. o n.° **649**.)

(*) Nota do Secretariado-Geral (v. o n.° **5189** e a Resolução n.° 400).

2998 L) Faixa 1544-1545 MHz e faixa 1645,5-1646,5 MHz

(V. o n.º 728.)

2999 M) Aeronave em perigo

3000 § 11.Qualquer aeronave em perigo transmite a chamada de perigo na frequência em que as estações terrestres ou móveis susceptíveis de lhe prestar assistência mantêm a escuta. Se essa chamada for destinada a estações do serviço móvel marítimo, deverão ser observadas as disposições dos n.ºs **2970** e **2971** ou dos n.ºs **2973** e **2975** ou **2994** e **2995**.

3001 N) Estações de engenho de salvamento

3002 § 12. Os aparelhos a utilizar nas estações de engenho de salvamento deverão, se lhes for possível usar frequências:

3003 *a*) *Nas faixas compreendidas entre 405 kHz e 535 kHz*, poder efectuar emissões das classes A2A e A2B(*) ou H2A e H2B(*) na frequência portadora 500 kHz. Se a instalação comportar um receptor para uma dessas faixas, este deverá poder receber emissões das classes A2A e H2A na frequência portadora 500 kHz;

3004 *b*) *Nas faixas compreendidas entre 1605 kHz e 2850 kHz*, poder efectuar da classe A3E ou H3E na frequência portadora 2182 kHz. Se a instalação comportar um receptor para uma dessas faixas, este deverá poder receber emissões das classes A3E e H3E na frequência portadora 2182 kHz;

3005 *c*) *Nas faixas compreendidas entre 4000 kHz e 27 500 kHz*, poder efectuar emissões da classe A2A ou H2A na frequência portadora 8364 kHz. Se a instalação comportar um receptor para uma dessas faixas, este deverá poder receber emissões das classes A1A, A2A e H2A em toda a faixa 8341, 75-8728,5 kHz;

3006 *d*) *Nas faixas compreendidas entre 118 MHz e 136 MHz*, poder efectuar emissões na frequência 121,5 MHz, utilizando de preferência a modulação de amplitude. Se a instalação comportar um receptor para uma dessas faixas, este deverá poder receber emissões da classe A3E em 121,5 MHz;

3007 *e*) *Nas faixas compreendidas entre 156 MHz e 174 MHz*, poder efectuar emissões da classe G3E na frequência 156,8 MHz. Se a instalação comportar um receptor para uma dessas faixas, este deverá receber emissões da classe G3E na frequência 156,8 MHz;

3008 *f*) *Nas faixas compreendidas entre 235 MHz e 328,6 MHz*, poder efectuar emissões na frequência 243 MHz.

SECÇÃO II

Protecção das frequências de perigo

3009 A) Generalidades

3010 § 13.É proibida qualquer emissão susceptível de produzir interferências prejudiciais às comunicações de perigo, alarme, urgência ou segurança nas frequências internacionais de perigo 500 kHz ou 2182 kHz (v. n.ºs **472, 500, 3018** e **3023**). É proibida qualquer emissão que produza interferências prejudiciais às comunicações de perigo, de segurança e de chamada na frequência 156,8 MHz (v. os n.ºs **613, 3033** e **4414**).

3011 § 14.(1) As emissões de ensaio deverão ser reduzidas ao mínimo, especialmente:

3012 *a*) Na frequência portadora 2182 kHz;

3013 *b*) Na frequência 156,8 MHz;

3014 *c*) Na frequência portadora 4125 kHz na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N.;

3015 *d*) Na frequência portadora 6215,5 kHz na zona da Região 3 situada ao sul do paralelo 25° N.

3016 (2) É proibido efectuar emissões de ensaios do sinal de alarme radiofónico na frequência portadora 2182 kHz e na frequência 156,8 MHz, excepto se se tratar de um equipamento de socorro que não possa emitir senão nessas frequências. Neste caso, será necessário tomar as medidas que se imponham para evitar a radiação. É necessário igualmente tomar medidas para impedir a radiação proveniente dos ensaios do sinal de alarme radiotelefónico em frequências diferentes de 2182 kHz e 156,8 MHz.

(*) Isto permite a recepção automática de sinais radiotelegráficos de alarme.

3017 B) 500 kHz

3018 § 15. (1) Exceptuando as emissões autorizadas na frequência 500 kHz, e sob reserva das disposições do n.º **4226**, é proibida qualquer emissão na faixa 490-510 kHz (v. o n.º **471** e a Recomendação n.º 200).

3019 (2) A fim de facilitar a recepção das chamadas de perigo, as outras emissões na frequência 500 kHz deverão ser reduzidas ao mínimo e a sua duração não deverá ultrapassar um minuto.

3020 (3) Antes de emitir na frequência 500 kHz, uma estação de serviço móvel deve escutar nessa frequência durante um período suficiente, a fim de se assegurar de que não está em curso qualquer tráfego de perigo (v. o n.º **3702** ou **4713**).

3021 (4) As disposições do n.º **3020** não se aplicam às estações em perigo.

3022 C) 2182 kHz

3023 § 16. (1) Exceptuando as emissões autorizadas na frequência portadora 2182 kHz, é proibida qualquer emissão nas frequências compreendidas entre 2173,5 kHz e 2190,5 kHz.

3024 (2) Antes de emitir na frequência portadora 2182 kHz, uma estação do serviço móvel deve escutar nesta frequência durante um período suficiente, a fim de se assegurar de que não está em curso qualquer tráfego de perigo (v. o n.º **4915**).

3025 (3) As disposições do n.º **3024** não se aplicam às estações em perigo.

3026 (4) A fim de facilitar a recepção das chamadas de perigo, deverão ser reduzidas ao mínimo todas as emissões na frequência 2182 kHz.

3027 (5) A fim de limitar as emissões inúteis de sinais de alarme, são proibidos os ensaios do sinal de alarme radiotelefónico na frequência portadora 2182 kHz (v. o n.º **3016**).

3028 (6) Excepcionalmente, esses ensaios serão autorizados para os equipamentos radiotelefónicos de socorro que disponham unicamente da frequência internacional de perigo 2182 kHz, desde que seja utilizada uma antena artificial apropriada.

3029 D) 4125 kHz e 6215,5 kHz

3030 § 17. (1) Na zona das Regiões 1 e 2 situada ao sul do paralelo 15º N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25º N., antes de emitir na frequência portadora 4125 kHz ou 6215,5 kHz, as estações escutarão nessa frequência durante um período suficiente, a fim de se assegurarem de que não está em curso qualquer tráfego de perigo (v. o n.º **4915**).

3031 (2) As disposições do n.º **3030** não se aplicam às estações em perigo.

3032 E) 156,8 MHz

3033 § 18. (1) É proibida qualquer emissão na faixa 156,725-156,875 MHz (1) que possa causar interferências prejudiciais às emissões autorizadas das estações do serviço móvel marítimo em 156,8 MHz.

3034 (2) Antes de emitir na frequência 156,8 MHz, convém que as estações do serviço móvel escutem nessa frequência durante um período suficiente para se certificarem de que não está em curso qualquer tráfego de perigo (v. o n.º **4915**).

3035 (3) As disposições do n.º **3034** não se aplicam às estações em perigo.

3036 (4) A fim de facilitar a recepção das chamadas de perigo, todas as emissões na frequência 156,8 MHz deverão ser reduzidas ao mínimo e não ultrapassar um minuto.

SECÇÃO III

Vigília nas frequências de perigo

3037 A) 500 kHz

3038 § 19. (1) A fim de aumentar a segurança da vida humana no mar e por cima do mar, todas as estações do serviço móvel marítimo que escutem normalmente nas frequências das faixas autorizadas entre 405 kHz e 535 kHz deverão, durante o seu período de serviço, tomar as providências necessárias para que a escuta na frequência de perigo 500 kHz, duas vezes por hora, durante três minutos, começando às X horas e 15 minutos e X horas e 45 minutos, tempo universal coordenado (UTC), seja assegurada por um operador utilizando auscultadores ou um altifalante.

3033.1 (1) A partir de 1 de Janeiro de 1983 esta faixa passará a 156,7625-156,8375 MHz (v. a Resolução n.º 308).

3039 (2) Durante os intervalos de tempo atrás indicados, com excepção das emissões previstas no presente capítulo:

3040 *a*) Deverão cessar as emissões nas faixas compreendidas entre 485 kHz e 515 kHz

3041 *b*) Fora dessas faixas, poderão continuar as emissões das estações do serviço móvel. As estações do serviço móvel marítimo poderão escutá-las, com a condição expressa de assegurarem em primeiro lugar a escuta na frequência de perigo, como está prescrito no n.º **3038**).

3042 § 20. (1) As estações do serviço móvel marítimo abertas ao serviço da correspondência pública e que utilizem frequências das faixas autorizadas entre 405 kHz e 535 kHz deverão, durante o seu período de serviço, ficar à escuta na frequência 500 kHz. Esta escuta é obrigatória apenas para as emissões das classes A2A e H2A.

3043 (2) Estas estações, mantendo a observância das prescrições do n.º **3038**, serão autorizadas a abandonar essa escuta apenas quando ocupadas numa comunicação noutras frequências.

3044 (3) Enquanto estiverem ocupadas com uma tal comunicação:

3045 *a*) As estações de navio poderão manter a escuta na frequência 500 kHz quer por meio de um operador utilizando auscultadores ou um altifalante quer por meio de qualquer outro dispositivo conveniente, tal como um receptor automático de alarme;

3046 *b*) As estações costeiras poderão manter a escuta na frequência 500 kHz por meio de um operador utilizando auscultadores ou um altifalante; neste último caso poderá fazer-se menção do facto na nomenclatura das estações costeiras.

3047 B) 2182 kHz

3048 § 21.(1) Todas as estações costeiras abertas à correspondência pública e que constituem um elemento essencial da protecção em caso de perigo na sua zona deverão assegurar a escuta na frequência 2182 kHz durante o seu período de serviço.

3049 (2) Essas estações assegurarão essa escuta por intermédio de um operador utilizando meios auditivos: auscultadores, dois auscultadores independentes ou altifalante.

3050 (3) Além disso, convém que as estações de navio assegurem uma escuta tão prolongada quanto possível na frequência portadora 2182 kHz, a fim de poderem receber, por todos os meios apropriados, o sinal de alarme radiofónico descrito no n.º **3270** e o sinal de aviso aos navegantes descrito nos n.ºs **3284, 3285** e **3286**, bem como os sinais de perigo, urgência e segurança.

3051 § 22. Convém que as estações de navio abertas à correspondência pública assegurem, tanto quanto possível, a escuta na frequência 2182 kHz durante o seu período de serviço.

3052 § 23. A fim de aumentar a segurança de vida humana no mar e por cima do mar, todas as estações do serviço móvel marítimo que efectuem normalmente escuta nas frequências das faixas autorizadas compreendidas entre 1605 kHz e 2850 kHz tomarão, dentro do possível, as medidas necessárias para assegurar, durante o seu período de serviço, a escuta na frequência internacional de perigo 2182 kHz duas vezes por hora, durante três minutos, começando às X horas e 30 minutos, tempo universal coordenado (UTC).

3053 C) 4125 kHz e 6215,5 kHz

3054 § 24. (1) Na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N., todas as estações costeiras abertas à correspondência pública e que constituem um elemento essencial da protecção em caso de perigo na zona por elas servida poderão manter escuta, durante o seu período de serviço, nas frequências portadoras 4125 kHz e ou 6215,5 kHz (v. os n.ºs **2982** e **2986**). Convém que esta escuta seja indicada na nomenclatura das estações costeiras.

3055 (2) Convém que as estações assegurem esta escuta por intermédio de um operador utilizando meios auditivos: auscultadores, dois auscultadores independentes ou altifalante.

3056 D) 156,8 MHz

3057 § 25. (2) Convém que qualquer estação costeira do serviço móvel marítimo radiotelefónico internacional na faixa 156-174 MHz, quando constitua um elemento essencial da protecção em caso de perigo na zona por ela servida, assegure, durante o seu período de serviço nesta faixa, uma escuta eficaz, por meios auditivos, na frequência 156,8 MHz (v. a Recomendação n.º 306).

3058 (2) Quando se encontrarem na zona de serviço de estações costeiras do serviço móvel marítimo radiotelefónico nas faixas compreendidas entre 156 MHz e 174 MHz, e quando tal for praticável, convém que as estações de navio assegurem a escuta na frequência 156,8 MHz. Convém que as equipadas apenas com aparelhos radiotelefónicos funcionando nas faixas autorizadas compreendidas entre 156 MHz e 174 MHz, assegurem, quando estiverem no mar, a escuta na frequência 156,8 MHz.

3059 (3) Quando estiverem em ligação com uma estação portuária, as estações de navio poderão, excepcionalmente e sob reserva de acordo da administração interessada, continuar a manter a escuta apenas na frequência prevista para as operações portuárias, desde que a estação portuária mantenha a escuta na frequência 156,8 MHz.

3060 (4) Quando estiverem em ligação com uma estação costeira do serviço de movimento de navios, as estações de navio poderão, sob reserva de acordo das administrações interessadas, continuar a manter a escuta somente na frequência apropriada do serviço de movimento de navios, desde que essa estação costeira mantenha a escuta na frequência 156,8 MHz

3061 a 3085 *(Não atribuídos.)*

ARTIGO 39

Comunicações de perigo

SECÇÃO I

Generalidades

3086 § 1.A chamada de perigo tem prioridade absoluta sobre todas as comunicações. Todas as estações que a oiçam devem cessar imediatamente qualquer emissão susceptível de perturbar o tráfego de perigo e continuar a escutar na frequência de emissão da chamada de perigo. Esta chamada não deve ser dirigida a uma estação determinada e não se deve dar o entendido antes de transmitida a mensagem de perigo que se lhe segue.

3087 § 2.A chamada e a mensagem de perigo só serão emitidas por ordem do comandante ou da pessoa responsável pelo navio, pela aeronave ou por qualquer outro veículo onde esteja a estação móvel ou a estação terrena de navio.

SECÇÃO II

Sinal de perigo

3088 § 3.(1) O sinal radiotelegráfico de perigo é constituído pelo grupo ... – – – ... simbolizado por $\overline{\text{SOS}}$, emitido como um só sinal e no qual se deverão acentuar os traços de modo que se distingam nitidamente dos pontos.

3089 (2) O sinal radiotelefónico de perigo é constituído pela palavra MAYDAY, pronunciada como a expressão francesa *m'aider*.

3090 (3) Estes sinais de perigo indicam que um navio, uma aeronave ou qualquer outro veículo está sob a ameaça de perigo grave iminente e pede assistência imediata.

SECÇÃO III

Chamada de perigo

3091 § 4. (1) A chamada de perigo emitida em radiotelegrafia compreende:

O sinal de perigo $\overline{\text{SOS}}$ (emitido três vezes);
A palavra DE;
O indicativo de chamada da estação móvel em perigo (emitido três vezes).

3092 (2) A chamada de perigo emitida em radiotelefonia compreende:

O sinal de perigo MAYDAY (pronunciado três vezes);
A palavra AQUI (ou DE soletrada, empregando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
O indicativo de chamada ou qualquer outra forma de identificação da estação móvel em perigo (pronunciado três vezes).

SECÇÃO IV

Mensagens de perigo

3093 § 5. (1) A mensagem radiotelegráfica de perigo compreende:

O sinal de perigo $\overline{\text{SOS}}$;
O nome de qualquer outra forma de identificação da estação móvel em perigo;
As informações relativas à posição desta;
A natureza do perigo e a natureza do socorro pedido;
Qualquer outro esclarecimento que possa facilitar esse socorro.

3094 (2) A mensagem radiotelefónica de perigo compreende:

O sinal de perigo MAYDAY;
O nome ou qualquer outra forma de identificação da estação móvel em perigo;
As informações relativas à posição desta;
Qualquer outro esclarecimento que possa facilitar esse socorro.

3095 § 6.(1) Como em regra geral, um navio assinala a sua posição em latitude e longitude (Greenwich) empregando algarismos para os graus e minutos, acompanhados de uma palavra NORTH ou SOUTH e de uma das palavras EAST ou WEST. Em radiotelegrafia, o sinal . – . – . – separa os graus dos minutos. Todavia, isto não deve necessariamente aplicar-se ao serviço móvel marítimo por satélite. Quando tal seja possível na prática, podem ser indicados o azimute verdadeiro e a distância em milhas marítimas em relação a um ponto geográfico conhecido.

3096 (2) Como regra geral, qualquer aeronave transmite na sua mensagem de perigo, se para isso tiver tempo, as informações seguintes:

Posição aproximada e hora da estimativa;
Rumo em graus (indicando se se trata do rumo magnético ou verdadeiro);
Velocidade no indicador em relação ao ar;
Altitude;
Tipo de aeronave;
Natureza do perigo e género de assistência desejada;
Quaisquer outras informações que facilitem o salvamento (especialmente a intenção do comandante de fazer, por exemplo, uma amaragem forçada ou uma aterragem com todos os riscos).

3097 (3) Como regra geral, uma aeronave em voo assinala a sua posição em radiotelefonia ou em radiotelegrafia:

Quer pela sua latitude e longitude (Greenwich), empregando algarismos para os graus e minutos, acompanhados de uma das palavras NORTH ou SOUTH e de uma das palavras EAST ou WEST;
Quer pelo nome da localidade mais próxima e da sua distância aproximada em relação a esta, acompanhada, segundo o caso, de uma das palavras NORTH, SOUTH, EAST ou WEST, ou, eventualmente, quando for possível, na prática, de palavras que indiquem as direcções intermédias.

3098 (4) Todavia, em radiotelegrafia, as palavras NORTH ou SOUTH, EAST ou WEST, indicadas nos n.ºs **3095** e **3097**, podem ser substituídas pelas letras N ou S e E ou W.

SECÇÃO V

Procedimentos

3099 A) Radiotelegrafia

3100 § 7. (1) O procedimento radiotelegráfico de perigo compreende:

3101 O sinal de alarme seguido consecutivamente de:

3102 Chamada de perigo e um intervalo de dois minutos;
3103 Chamada de perigo;
3104 Mensagem de perigo;
3105 Dois traços de dez a quinze segundos cada um;
3106 Indicativo de chamada da estação em perigo.

3107 (2) Todavia, quando o tempo tiver importância vital, pode omitir-se ou encurtar-se a segunda parte deste procedimento (n.º **3102**) ou mesmo a primeira e segunda partes (n.ºs **3101** e **3102**). A primeira e segundas partes podem igualmente ser omitidas em circunstâncias em que se não julge necessário a transmissão do sinal de alarme.

3108 § 8.(1) A mensagem de perigo da chamada de perigo, repete-se com intervalos, especialmente durante os períodos de silêncio no n.º **3038** para radiotelegrafia, até se obter resposta.

3109 (2) Todavia, os intervalos devem ser suficientemente longos para que as estações que se preparam para responder tenham tempo para pôr os seus aparelhos emissores em funcionamento.

3110 (3) Pode igualmente repetir-se o sinal de alarme, se necessário.

3111 § 9. As transmissões indicadas nos n.ºs **3105** e **3106**, cuja finalidade é permitir às estações radiogoniométricas determinar a posição da estação em perigo, podem ser repetidas a intervalos frequentes, em caso de necessidade.

3112 § 10. No caso em que a estação móvel não receba resposta a uma mensagem de perigo transmitida na frequência de perigo, pode repetir a mensagem em qualquer outra frequência disponível por meio da qual possa chamar a atenção.

3113 § 11. Imediatamente antes de uma aterragem com todos os riscos ou antes de uma aterragem ou amaragem forçada de uma aeronave, bem como antes do abandono total de um navio ou de uma aeronave, colocam-se os aparelhos radioeléctrivos em posição de emissão contínua, se parecer necessário e as circunstâncias o permitirem.

3114 B) Radiotelefonia

3115 § 12. O procedimento radiotelefónico de perigo compreende:

3116 O sinal de alarme (sempre que possível) seguido consecutivamente de:

3117 Chamada de perigo;

3118 Mensagem de perigo.

3119 § 13. Depois de transmitir em telefonia a sua mensagem de perigo, a estação móvel pode ser convidada a transmitir sinais apropriados seguidos do seu indicativo de chamada ou de qualquer outra forma de identificação, a fim de permitir às estações radiogoniométricas determinar a sua posição. Este pedido pode ser repetido a intervalos próximos, em caso de necessidade.

3120 § 14. (1) A mensagem de perigo, precedida da chamada de perigo, é repetida a intervalos, especialmente durante os períodos de silêncio previstos no n.º **3052** para a radiotelefonia, até que se receba resposta.

3121 (2) Todavia, os intervalos devem ser suficientemente longos para que as estações que se preparam para responder tenham tempo de pôr os seus aparelhos emissores em funcionamento.

3122 (3) Esta repetição é precedida do sinal de alarme, sempre que possível.

3123 § 15. No caso em que a estação móvel em perigo não receba resposta de perigo transmitida na frequência de perigo, poderá repetir a mensagem em qualquer outra frequência disponível por meio da qual possa chamar a atenção.

3124 § 16. Imediatamente antes de uma aterragem com todos os riscos ou antes de uma aterragem ou amaragem forçada de uma aeronave, bem como antes do abandono total de um anvio ou de uma aeronave, colocam-se os aparelhos radioeléctricos em posição de emissão contínua, se parecer necessário e as circustâncias o permitirem.

SECÇÃO VI

Entendido de uma mensagem de perigo

3125 § 17. (1) As estações do serviço móvel que receberem uma mensagem de perigo de uma estação móvel que se encontre, sem dúvida possível nas suas proximidades devem dar o entendido imediatamente.

3126 (2) Todavia, nas zonas em que se possam estabelecer ligações seguras com uma ou mais estações costeiras convém que as estações de navio deixem passar um pequeno espaço de tempo antes de dar o entendido, de forma que uma estação costeira possa transmitir o seu entendido.

3127 (3) As estações do serviço móvel que receberem uma mensagem de perigo de uma estação móvel que, sem dúvida possível, não se encontre nas suas proximidades devem deixar decorrer um pequeno espaço de tempo antes de darem o entendido, a fim de permitir às estações mais próximas da estação móvel em perigo darem o entendido sem interferência.

3128 (4) Todavia, as estações do serviço móvel marítimo que recebam uma mensagem de perigo de uma estação móvel que, sem qualquer dúvida possível, esteja muito longe, não são obrigadas a dar o entendido, excepto no caso previsto no n.º **3160**.

3129 § 18. O entendido de uma mensagem de perigo é dado pela seguinte forma:

3130 *a*) Em radiotelegrafia:

O sinal de perigo $\overline{\text{SOS}}$;
O indicativo de chamada da estação que emite a mensagem de perigo (emitido três vezes);
A palavra DE;
O indicativo de chamada da estação que dá o entendido (emitido três vezes);
O grupo RRR;
O sinal de perigo $\overline{\text{SOS}}$.

3131 *b*) Em radiotelefonia:

O sinal de perigo MAYDAY;
O indicativo de chamada ou qualquer outra identificação da estação que emite a mensagem de perigo (pronunciado três vezes);
A palavra AQUI (ou DE soletrada empregando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);

O indicativo de chamada ou qualquer outra identificação da estação que dá o entendido (pronunciado três vezes);
A palavra REÇU (ou RRR soletrada, empregando as palavras de código ROMEO ROMEO ROMEO em caso de dificuldades linguísticas);
O sinal de perigo MAYDAY.

3132 § 19. (1) Qualquer estação móvel que der o entendido de uma mensagem de perigo deve, por ordem do comandante ou da pessoa responsável do navio, aeronave ou veículo, fornecer, logo que possível, as seguintes indicações pela ordem indicada:

O seu nome;
A sua posição, pela forma descrita nos n.ºs **3095, 3097 e 3098;**
A velocidade com que se dirige para a estação móvel em perigo e o espaço de tempo aproximadamente de que necessitará para a alcançar;
Além disso, se a posição do navio em perigo parecer duvidosa, convirá que as estações de navio transmitam igualmente, se o conhecerem, o azimute verdadeiro do navio em perigo, precedido da abertura QTE (para a classificação do azimute, v. o apêndice 41).

3133 (2) Antes de emitir a mensagem descrita no n.º **3132,** a estação deve certificar-se de que não vai interferir as emissões de outras estações em melhor posição para prestar socorro imediato à estação em perigo.

SECÇÃO VII

Tráfego de perigo

3134 § 20. O tráfego de perigo compreende todas as mensagens relativas ao socorro imediato necessário à estação móvel em perigo.

3135 § 21. No tráfego de perigo transmite-se o sinal de perigo antes da chamada e o início do preâmbulo de qualquer radiotelegrama.

3136 § 22. A orientação do tráfego de perigo pertence à estação móvel em perigo ou à estação que, por aplicação das disposições da secção VIII do presente artigo, emitiu a mensagem de perigo. Essas estações podem, todavia, ceder a uma outra estação a orientação do tráfego de perigo.

3137 § 23. A estação em perigo ou a estação que orienta o tráfego de perigo pode impor o silêncio, quer a todas as estações do serviço móvel da região, quer a uma estação que perturbe o tráfego de perigo. Consoante o caso, dirigirá essas instruções a «todos» (CQ) ou somente a uma estação. Em ambos os casos usará:

3138 *a*) Em radiotelegrafia, a abreviatura QRT, seguida do sinal de perigo $\overline{\text{SOS}}$;

3139 *b*) Em radiotelefonia, o sinal SILENCE MAYDAY, pronunciado como palavras francesas *silence m'aider*.

3140 § 24. Quando o julge indispensável, qualquer estação de serviço móvel próxima do navio, da aeronave ou do veículo em perigo pode igualmente impor silêncio. Empregará para esse efeito:

3141 *a*) Em radiotelegrafia, a abreviatura QRT, seguida da palavra DETRESSE e do seu próprio indicativo de chamada;

3142 *b*) Em radiotelefonia, a palavra SILENCE, pronunciada como palavra francesa *silence*, seguida da palavra DETRESSE e do seu indicativo de chamada.

3143 § 25. (1) Em radiotelegrafia, o emprego do sinal QRT $\overline{\text{SOS}}$ deve ficar reservado à estação móvel em perigo e à estação que exerce a orientação do tráfego de perigo.

3144 (2) Em radiotelefonia, o emprego do sinal SILENCE MAYDAY fica reservado à estação móvel em perigo e à estação que exerce a orientação do tráfego de perigo.

3145 § 26. (1) Qualquer estação de serviço móvel que tenha o conhecimento de um tráfego de perigo e que não possa ela própria prestar assistência à estação em perigo deverá, contudo, acompanhar o tráfego até se certificar de que foi prestado socorro.

3146 (2) Enquanto não receberem uma mensagem indicando que podem retomar o trabalho normal (v. o n.º **3150**), é interdito a todas as estações que tenham conhecimento desse tráfego mas que nele não participam emitir nas frequências em que tem lugar o tráfego de perigo.

3147 § 27. Se uma estação do serviço móvel, ao mesmo que acompanha o tráfego de perigo, tiver possibilidade de continuar o seu serviço normal, pode fazê-lo, desde que o tráfego de perigo esteja bem estabelecido, mas com a condição de observar as disposições do n.º **3146** e de não pertubar o tráfego de perigo.

3148 § 28. Em casos muito excepcionais e se não resultar qualquer interferência ou atraso no escoamento do tráfego de perigo, podem ser anunciadas mensagens de urgência e de segurança durante um período morto do tráfego de perigo, de preferência por estações costeiras, numa frequência de perigo. Esse anúncio deve ser acompanhado da indicação na frequência de funcionamento em que a mensagem de urgência ou segurança será transmitida. Neste

caso, convém que os sinais previstos nos n.os **3196, 3197, 3221** e **3222** não sejam transmitidos mais de uma vez (exemplo: XXX DE ABC QSW...).

3149 § 29. Uma estação terrestre ou uma estação terrena do serviço móvel marítimo por satélite situada num ponto fixo determinado, ao receber uma mensagem de perigo, deve tomar sem demora as medidas necessárias para avisar as autoridades competentes responsáveis pela operação dos meios de salvamento.

3150 § 30. (1) Quando haja terminado o seu tráfego de perigo numa frequência que foi utilizada para o tráfego de perigo, a estação que teve a seu cargo a orientação desse tráfego transmite nessa mesma frequência uma mensagem endereçada «a todos» (CQ), indicando que pode recomeçar o trabalho normal.

3151 (2) Quando não seja necessário manter o silêncio completo numa frequência utilizada para o tráfego de perigo, a estação que tem a seu cargo a orientação desse tráfego transmite nessa mesma frequência uma mensagem endereçada «a todos» (CQ), indicando que pode recomeçar um trabalho limitado.

3152 (3):

a) Em radiotelegrafia, a mensagem mencionada no n.º **3150** apresenta a forma seguinte:

O sinal de perigo $\overline{\text{SOS}}$;
A chamada «a todos» CQ (emitida três vezes);
A palavra DE;
O indicativo de chamada da estação que emite a mensagem;
A hora da aceitação da mensagem;
O nome e indicativo da chamada da estação móvel que estava em perigo;
A abreviatura regulamentar QUM.

3153 *b*) Em radiotelegrafia, a mensagem mencionada no n.º **3151** apresenta a forma seguinte:

O sinal de perigo $\overline{\text{SOS}}$;
A chamada «a todos» CQ (emitida três vezes);
A palavra DE;
O indicativo de chamada da estação que emite a mensagem;
A hora de aceitação da mensagem;
O nome e o indicativo de chamada da estação móvel que está em perigo;
A abreviatura regulamentar QUZ.

3154 (4):

b) Em radiotelefonia, a mensagem no n.º **3250** apresenta a forma seguinte:

O sinal de perigo MAYDAY;
A chamada «a todos» ou CQ (soletrada, empregando as palavras do código CHARLIE QUEBEC) pronunciada três vezes;
A palavra AQUI (ou DE soletrada, empregando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
O indicativo de chamada ou de qualquer outra identificação da estação que emite a mensagem;
A hora de aceitação da mensagem;
O nome e indicativo de chamada da estação móvel que estava em perigo;
As palavras SILENCE FINI pronunciadas como palavras francesas *silence fini.*

3155 *b*) Em radiotelefonia, a mensagem mencionada no n.º **3151** apresenta a forma seguinte:

O sinal de perigo MAYDAY;
A chamada «a todos» ou CQ (soletrada utilizando as palavras do código CHARLIE QUEBEC) pronunciada três vezes;
A palavra AQUI (ou DE soletrada, empregando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
O indicativo de chamada ou de qualquer outra identificação da estação que emite a mensagem;
A hora de aceitação da mensagem;
O nome e indicativo de chamada da estação móvel que estava em perigo;
A palavra PRUDENCE pronunciada como a palavra francesa *prudence.*

3156 § 31. Se a pessoa responsável por uma estação em perigo que cedeu a uma outra estação a direcção do tráfego de perigo considerar que já não se justifica manter o silêncio, deverá imediatamente informar do facto a estação que orienta o tráfego de perigo, a qual actuará então em conformidade com as disposições do n.º **3150.**

Secção VIII

Transmissão de uma mensagem de perigo por uma estação que não se encontra em perigo

3157 § 32. Uma estação móvel ou uma estação terrestre que tem conhecimento de que está em perigo uma estação móvel deverá transmitir uma mensagem de perigo nos seguintes casos:

3158 *a*) Se a estação em perigo não estiver em condições de transmitir ela própria a mensagem de perigo;

3159 *b*) Se o comandante ou pessoa responsável pelo navio, aeronave ou outro veículo não em perigo, ou ainda o responsável pela estação terrestre, calcular que são necessários outros socorros;

3160 *c*) Se a estação não tiver possibilidades de prestar socorros mas tiver ouvido uma mensagem de perigo de que não foi dado entendido por outras estações.

3161 § 33.(1) A transmissão de uma mensagem de perigo nas condições descritas nos n.os **3158** a **3160** efectua-se numa ou em várias das frequências internacionais de perigo (500 kHz, 2182 kHz e 156,8 MHz) ou ainda em qualquer outra frequência que possa ser utilizada em caso de perigo (v. os n.os **2970, 2971, 2973, 2975, 2994, 2995** e **3000**).

3162 (2) A transmissão da mensagem de perigo é sempre precedida da chamada que se indica a seguir. Além disso, sempre que possível, essa chamada será precedida do sinal de alarme radiotelegráfico ou radiotelefónico.

3163 (3) Essa chamada compreende:

3164 *a*) Em radiotelegrafia:

O sinal $\overline{\text{DDD}}$ $\overline{\text{SOS}}$ $\overline{\text{SOS}}$ $\overline{\text{SOS}}$ $\overline{\text{DDD}}$;
A palavra DE;
O indicativo de chamada da estação que transmite (emitido três vezes).

3165 *b*) Em radiotelefonia:

O sinal MAYDAY RELAY, pronunciado como a expressão frances *m'aider relais* (pronunciado três vezes);
A palavra AQUI (ou DE soletrada, utilizando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
O indicativo de chamada ou qualquer outra identificação da estação que transmite (pronunciado três vezes).

3166 § 34. Quando se utilizar o sinal de alarme radiotelegráfico, um intervalo de dois minutos separará, o sinal de alarme, quando for julgado necessário, a chamada mencionada no n.º **3164.**

3167 § 35.Quando uma estação de serviço móvel emitir uma mensagem de perigo nas condições especificadas no n.º **3160**, deve tomar as providências para informar as autoridades susceptíveis de prestar socorro.

3168 § 36.Uma estação de navio não deve dar o entendido de uma mensagem de perigo transmitida por uma estação costeira nas condições indicadas nos n.os **3157** a **3160** antes de o comandante ou de a pessoa responsável ter confirmado que essa estação de navio está em condições de prestar socorro.

3169 a 3195 *(Não atribuídos.)*

ARTIGO 40

Transmissões de urgência e de segurança e transportes sanitários

SECÇÃO I

Sinal e mensagens de urgência

3196 § 1. (1) Em radiotelegrafia, o sinal de urgência consiste em três repetições do grupo «XXX», transmitidoseparando bem as letras de cada grupo e os grupos sucessivos. Emite-se antes da chamada.

3197 (2) Em radiotelefonia, o sinal de urgência consiste em três repetições do grupo «PAN PAN», sendo a palavra PAN pronunciada como a palavra francesa *panne*. Emite-se antes da chamada.

3198 § 2. (1) O sinal de urgência só pode transmitir-se com autorização do comandante ou da pessoa responsável pelo navio, pela aeronave ou por qualquer outro veículo em que se encontre a estação móvel ou a estação terrena móvel so serviço móvel marítimo por satélite.

3199 (2) O sinal de urgência só pode ser transmitido por uma estação terrestre ou por uma estação terrena do serviço móvel marítimo por satélite situada num ponto fixo determinado com a aprovação da autoridade responsável.

3200 § 3. (1) O sinal de urgência indica que a estação que chama tem para transmitir uma mensagem muito urgente relativa à segurança de um navio, de uma aeronave, de um outro veículo ou de uma pessoa.

3201 (2) O sinal de urgência e a mensagem que se segue são transmitidos numa das frequências internacionais de perigo (500 kHz, 2182 kHz, 156,8 MHz) ou em qualquer outra frequência que possa ser utilizada em caso de perigo.

3202 (3) Todavia, no serviço móvel marítimo, a mensagem é transmitida numa frequência de trabalho:

a) Se se tratar de uma mensagem comprida ou de um parecer médico; ou
b) Nas zonas de tráfego intenso, se se tratar da repetição de uma mensagem transmitida da acordo com as disposições do n.º **3201.**

No fim da chamada deverá ser dada uma indicação para esse efeito.

3203 (4) O sinal de urgência tem prioridade sobre todas as outras comunicações, excepto as de perigo. Todas as estações que oiçam o sinal de urgência deverão ter o cuidado de não interferir a transmissão da mensagem que se lhe segue.

3204 (5) No serviço móvel marítimo, as mensagens de urgência podem ser endereçadas quer a todas as estações quer a uma estação determinada.

3205 § 4.As mensagens precedidas pelo sinal de urgência devem, como regra geral, ser emitidas em linguagem clara.

3206 § 5. (1) As estações móveis que recebam o sinal de urgência devem ficar à escuta durante três minutos, pelo menos. Decorrido esse tempo, se não for ouvida qualquer mensagem de urgência, deve ser avisada, se possível, uma estação terrestre da recepção do sinal de urgência. O serviço normal poderá ser retomado em seguida.

3207 (2) Todavia, as estações terrestres e móveis que estejam em comunicação em frequências diferentes das utilizadas para transmissão do sinal de urgência e da chamada que se lhe segue podem continuar sem interrupção o seu trabalho normal, a não ser que se trate de mensagem dirigida a «a todos» (CQ).

3208 § 6. Quando o sinal de urgência precedeu a emissão de uma mensagem «a todos» (CQ) que inclua medidas a tomar pelas estações que recebam essa mensagem, a estação responsável pela emissão deve anulá-la logo que saiba já não ser necessário dar-lhe andamento. Essa mensagem de anulação deve ser igualmente uma mensagem «a todos» (CQ).

SECÇÃO II

Transportes sanitários

3209 § 7. A expressão «transportes sanitários», definida nas Convenções de Genebra de 1949 e nos Protocolos Adicionais, abrange qualquer meio de transporte, terrestre, marítimo ou aéreo, militar ou civil, permanente ou temporário, destinado exclusivamente ao transporte sanitário, colocado sob a direcção de uma autoridade competente de uma Parte num conflito.

3210 § 8. Para fins de anúncio e de identificação de transportes sanitários que estejam protegidos em conformidade com as Convenções acima mencionadas, qualquer transmissão completa dos sinais de urgência descritos nos n.os **3196** e **3197** é seguida, em radiotelegrafia, pela junção apenas do grupo «YYY» e, em radiotelefonia, pela junção apenas da palavra «MEDICAL» pronunciada como em francês.

3211 § 9. As frequências indicadas no n.º **3201** podem ser utilizadas pelos transportes sanitários para fins de auto-identificação e de estabelecimento das comunicações. Logo que seja possível, na prática, dever transferir-se a comunicação para uma frequência de trabalho apropriada.

3212 § 10. A utilização dos sinais descritos no n.º **3210** indica que a mensagem que se segue diz respeito a um transporte sanitário protegido. Essa mensagem deve conter os dados seguintes:

3213 *a*) Indicativo de chamada ou qualquer outro meio reconhecido de identificação do veículo de transporte sanitário;

3214 *b*) A posição do veículo de transporte sanitário;

3215 *c*) O número e o tipo de veículos de transporte sanitário;

3216 *d*) O itinerário previsto;

3217 *e*) A duração calculada da deslocação e as horas de partida e de chegada previstas, consoante o caso;

3218 *f*) Qualquer outra informação, tal como a altitude de voo, frequências radioeléctricas de escuta, línguas utilizadas, modos e códigos dos sistemas de radar secundários de vigilância.

3219 § 11. As disposições da secção I do presente artigo aplicam-se, quando necessário, à utilização dos sinais de urgência por transportes sanitários.

3220 § 12. A utilização das radiocomunicações para anunciar e identificar os transportes sanitários é facultativa. Todavia, se forem utilizadas, devem aplicar-se as disposições do presente Regulamento e, especialmente, as da presente secção e as dos artigos 37 e 38.

SECÇÃO III

Sinal e mensagens de segurança

3221 § 13. Em radiotelegrafia, o sinal de segurança consiste em três repetições do grupo «TTT», transmitido separando bem as letras de cada grupo e os grupos sucessivos. O sinal de segurança transmite-se antes da chamada.

3222 (2) Em radiotelefonia, o sinal de segurança consiste em três repetições da palavra «SÉCURITÉ», pronunciada distintamente como em francês. Transmite-se antes da chamada.

3223 § 14. (1) O sinal de segurança anuncia que a estação vai transmitir um aviso importante aos navegantes ou uma prevenção meteorológica importante.

3224 (2) O sinal de segurança e a chamada são transmitidos numa ou em várias das frequências internacionais de perigo (500 kHz, 2182 kHz, 156,8 MHz) ou em qualquer outra frequência que possa ser utilizada em caso de perigo.

3225 (3) Convém que a mensagem de segurança que se segue à chamada seja transmitida numa frequência de trabalho. No fim da chamada deve dar-se uma indicação apropriada para o efeito.

3226 (4) No serviço móvel marítimo, as mensagens de segurança são, como regra geral, endereçadas a todas as estações. Todavia, em certos casos podem ser endereçadas a uma dada estação.

3227 § 15. (1) Com excepção das mensagens transmitidas a hora fixa, o sinal de segurança, quando empregado no serviço móvel marítimo, deve transmitir-se cerca do fim do primeiro período de silêncio que se apresente

(v. o n.º **3038** para a radiotelegrafia e o n.º **3052** para a radiotelefonia). A mensagem transmite-se imediatamente depois do período de silêncio.

3228 (2) Nos casos previstos nos n.os **3328**, **3331** e **3335**, o sinal de segurança e a mensagem que se lhe segue deverão ser transmitidos no mais curto prazo possível, mas devem repetir-se no fim do primeiro período de silêncio seguinte.

3229 § 16. Todas as estações que recebam o sinal de segurança devem escutar a mensagem de segurança até obterem a certeza de que essa mensagem não lhes diz respeito. Não devem fazer qualquer emissão susceptível de interferir a mensagem.

3230 a 3254 *(Não atribuídos.)*

ARTIGO 41

Sinais de alarme e de prevenção

SECÇÃO I

Sinais das radiobalizas de localização de sinistros

3255 § 1. O sinal de radiobaliza de localização de sinistros compõe-se:

3256 *a*) Em ondas hectométricas, isto é, na frequência de 2182 kHz (1):

3257 1) De uma emissão modulada pela frequência acústica de 1300 Hz, manipulada de modo que a relação entre a duração da emissão e a duração do silêncio seja igual ou superior à unidade; a duração da emissão estará compreendida entre um e cinco segundos; *ou*

3258 2) Do sinal de alarme radiotelefónico (v. o n.º **3270**) seguido da letra B em código Morse, ou do indicativo de chamada do navio a que pertence a radiobaliza, ou de ambas as informações transmitidas por manipulação de uma onda portadora modulada pela frequência acústica de 1300 Hz ou de 2200 Hz;

3259 *b*) Em ondas métricas, isto é, nas frequências de 121,5 MHz e 243 MHz, de um sinal cujas características devem estar de acordo com as recomendadas pelas organizações mencionadas na Resolução n.º 601.

3260 § 2. (1) Os sinais das radiobalizas de localização de sinistros têm por fim essencial facilitar a determinação da posição de náufragos durante as operações de busca e salvamento.

3261 (2) Estes sinais indicam que uma ou mais pessoas estão em perigo, que elas se não encontram provavelmente já a bordo de um navio ou de uma aeronave e que possivelmente já não dispõem de aparelho receptor.

3262 (3) Qualquer estação de serviço móvel que receba um desses sinais quando não esteja em curso qualquer tráfego de perigo ou de urgência deve considerar como aplicáveis as disposições dos n.os **3157** e **3158**.

3263 § 3. (1) As radiobalizas e pequena potência (tipo L) apenas utilizam o sinal definido no n.º **3257**, o qual deve ser emitido continuamente.

3264 (2) As radiobalizas de grande potência (tipo H) podem emitir quer o sinal definido no n.º **3257** quer o definido no n.º **3258**, segundo um ciclo de manipulação constituído por um sinal de manipulação de duração compreendida entre trinta e cinquenta segundos, seguido de um período de silêncio com duração de trinta a sessenta segundos.

3265 (3) Todavia, os ciclos de manipulação especificados nos n.os **3263** e **3264** podem, se as administrações o desejarem, ser interrompidos para permitir emissões vocais.

3266 § 4. (1) O material destinado a transmitir sinais de radiobalizas de localização de sinistros na frequência portadora 2182 kHz deve satisfazer às especificações dadas no apêndice 37.

3267 (2) O material destinado a emitir nas frequências 121,5 MHz e 243 MHz os sinais das radiobalizas de localização de sinistros deve satisfazer às recomendações e normas das organizações mencionadas na Resolução n.º 601.

SECÇÃO II

Sinais de alarme radiotelegráfico e radiotelefónico

3268 § 5. (1) O sinal de alarme radiotelegráfico compõe-se de uma série de 12 traços transmitidos num minuto, sendo a duração de cada traço de quatro segundos e o intervalo entre dois traços consecutivos de um segundo. Pode transmitir-se à mão, mas recomenda-se a sua transmissão por meio de aparelho automático.

3256.1 (1) No Japão existem radiobalizas de localização de sinistros que utilizam emissões da classe A1A para emitir sinais de perigo e de identificação em frequências compreendidas entre 2089,5 kHz e 2092,5 kHz.

3269 (2) Qualquer estação de navio que funcione nas faixas compreendidas entre 405 kHz e 535 kHz e não disponha de uma aparelho automático para a emissão do sinal de alarme radiotelegráfico deve ter instalado permanentemente um relógio que indique nitidamente os segundos, munido, de preferência, de um ponteiro de segundos que dê uma volta por minuto. Este relógio deve estar colocado de modo a ficar visível da mesa de manipulação, para que o operador possa, seguindo-o com os olhos, dar sem dificuldade aos diferentes sinais elementares do sinal de alarme a sua duração normal.

3270 § 6. (1) O sinal de alarme radiotelefónico compõe-se de dois sinais sensivelmente sinusoidais de frequência audível emitidos alternadamente. Um deles tem uma frequência de 2200 Hz e o outro uma frequência de 1300 Hz. Ambos são emitidos durante 250 milissegundos.

3271 (2) Quando é produzido automaticamente, o sinal de alarme radiotelefónico deve ser emitido continuamente durante um mínimo de trinta segundos e um máximo de um minuto. Se for produzido por outros meios, este sinal deve ser emitido de modo tão contínuo quanto praticamente possível durante cerca de um minuto.

3272 (3) O sinal de alarme radiotelefónico emitido por uma estação costeira deve ser o que é descrito nos n.os **3270** e **3271** e poderá ser seguido de um sinal único em 1300 Hz com a duração de dez segundos.

3273 § 7. Estes sinais têm por fim:

3274 *a*) Em radiotelegrafia, fazer funcionar os dispositivos automáticos de alarme, cuja finalidade é chamar a atenção do operador quando não esteja assegurada a escuta na frequência de perigo;

3275 *b*) Em radiotelefonia, chamar a atenção da pessoa que assegura a escuta ou fazer funcionar os dispositivos automáticos que dão o alarme ou põem em funcionamento um altifalante silencioso para que este difunda a mensagem que se vai seguir.

3276 § 8. (1) Esses sinais apenas devem ser utilizados para anunciar:

3277 *a*) Que se segue uma chamada ou uma mensagem de perigo; ou

3278 *b*) A emissão de um aviso urgente de ciclone, o qual deve ser precedido do sinal de segurança (v. os n.os **3221** e **3222**). Neste caso, só podem ser utilizados pelas estações costeiras devidamente autorizadas pelo seu governo; ou

3279 *c*) Que uma ou mais pessoas caíram ao mar. Neste caso, só podem ser utilizados se for necessário o auxílio de outros navios e se o emprego apenas do sinal de urgência não permitir que esse auxílio seja obtido em condições satisfatórias, mas o sinal de alarme não deve ser repetido por outras estações. A mensagem deve ser precedida do sinal de urgência (v. os n.os **3196** e **3197**).

3280 (2) Nos casos previstos nos n.os **3278** e **3279**, convém que um intervalo de dois minutos separe, se possível, o fim do sinal de alarme radiotelegráfico do início do aviso ou da mensagem.

3281 § 9. Os dispositivos automáticos destinados à recepção dos sinais de alarme radiotelegráfico e radiotelefónico devem satisfazer às condições especificadas no apêndice 36.

3282 § 10. Antes de aprovar, para uso dos navios, um tal dispositivo automático, a administração de que dependem esses navios deve certificar-se, por ensaios práticos feitos em condições equivalentes às que se apresentam na prática (interferências, vibrações, etc.), de que o aparelho satisfaz às prescrições do presente Regulamento.

Secção III

Chamada selectiva a todos os navios

3283 § 11. As características da «chamada a todos os navios» no sistema de chamada selectiva, reservada exclusivamente ao alarme, são indicadas no apêndice 39.

Secção IV

Sinal de aviso à navegação

3284 § 12. (1) O sinal de aviso à navegação é constituído por uma frequência acústica sensivelmente sinusoidal de 2200 Hz, interrompida de tal modo que as durações do sinal acústico e do intervalo, sejam de 250 milissegundos cada uma.

3285 (2) Convém que este sinal seja transmitido pelas estações costeiras continuamente durante quinze segundos antes da transmissão dos avisos de grande importância para a navegação nas faixas de ondas hectométricas do serviço móvel marítimo radiotelefónico.

3286 (3) Este sinal tem por objectivo chamar a atenção da pessoa que assegura a escuta por meio de um altifalante ou de um altifalante de filtros, ou fazer funcionar um dispositivo automático que põe em funcionamento um altifalante silencioso para que este difunda a mensagem que se vai seguir.

3287 a 3311 *(Não atribuídos.)*

ARTIGO 42

Serviços especiais relativos à segurança

SECÇÃO I

Mensagens meteorológicas

3312 § 1. (1) As mensagens meteorológicas compreendem:

3313 *a*) Mensagens destinadas ao serviço de meteorologia oficialmente encarregado da previsão do tempo, utilizadas especialmente para a protecção das navegações marítima e aeronáutica;

3314 *b*) Mensagens originárias desses serviços meteorológicos e destinadas especialmente:

3315 Às estações de navio;
3316 À protecção das aeronaves;
3317 Ao público.

3318 (2) As informações contidas nessas mensagens podem ser:

3319 *a*) Observações a hora fixa;
3320 *b*) Avisos de fenómenos perigosos;
3321 *c*) Previsões e avisos;
3322 *d*) Exposições da situação meteorológica geral.

3323 § 2. (1) Os diferentes serviços meteorológicos nacionais colaboram para elaborar programas comuns de emissões, de modo a utilizar os emissores melhor colocados para servir as regiões interessadas.

3324 (2) Convém que as observações meteorológicas compreendidas nas categorias mencionadas nos n.os **3313** a **3316** sejam redigidas num código meteorológico internacional, quer sejam transmitidas por estações móveis, quer se destinem a elas.

3325 § 3. Para a transmissão de mensagens de observação destinadas a um serviço oficial de meteorologia devem ser utilizadas as frequências postas à sua disposição para as necessidades de meteorologia, em conformidade com os acordos regionais estabelecidos pelos serviços interessados no emprego dessas frequências.

3326 § 4. (1) As mensagens meteorológicas destinadas especialmente ao conjunto das estações de navio são emitidas, em princípio, segundo um horário determinado e, tanto quanto possível, às horas em que possam ser recebidas pelas estações de navio providas de um só operador. Em radiotelegrafia, a velocidade de transmissão não deve ultrapassar 16 palavras por minuto.

3327 (2) Durante as transmissões «a todos» das mensagens meteorológicas destinadas às estações do serviço móvel marítimo, todas as estações deste serviço, cujas estações possam interferir a recepção dessas mensagens devem guardar silêncio, a fim de permitir que todas as estações que o desejem recebam as referidas mensagens.

3328 (3) As mensagens de avisos meteorológicos destinadas ao serviço móvel marítimo transmitem-se imediatamente, e devem ser repetidas no fim do primeiro período de silêncio a seguir à sua recepção (v. os n.os **3038** e **3052**, assim como durante o período de difusão seguinte previsto na nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais. Serão precedidas do sinal de segurança e transmitidas nas frequências apropriadas (v. o n.º **3224**).

3329 (4) Além dos serviços regulares de informação previstos nas alíneas precedentes, as administrações tomarão as proveniências necessárias para que certas estações comuniquem, a pedido, mensagens meteorológicas às estações do serviço móvel marítimo.

3330 (5) As disposições dos n.os **3326** a **3329** são aplicáveis ao serviço móvel aeronáutico, na medida em que não estejam em contradição com arranjos especiais mais precisos que assegurem à navegação aérea uma protecção pelo menos igual.

3331 § 5. (1) As mensagens provenientes de estações móveis e que contenham informações sobre a presença de ciclone deverão ser transmitidas, no mais curto prazo possível, às outras estações móveis vizinhas e às autoridades competentes do primeiro ponto da costa com que se possa estabelecer contacto.

3332 (2) Qualquer estação móvel pode escutar, par seu próprio uso, as mensagens de observações meteorológicas emitidas por outras estações móveis, mesmo quando elas sejam endereçadas a um serviço meteorológico nacional.

3333 (3) As estações dos serviços móveis que transmitem observações meteorológicas endereçadas a um serviço meteorológico nacional não são obrigadas a transmiti-las a outras estações. Todavia, fica autorizada a permuta entre estações móveis, a pedido, de informações relativas ao estado do tempo.

SECÇÃO II

Avisos à navegação marítima

3334 § 6. As prescrições dos n.os **3326** a **3330**, inclusive, são aplicáveis aos avisos à navegação marítima.

3335 § 6. As mensagens que contenham informações sobre a presença de gelos perigosos, destroços perigosos ou qualquer outro perigo iminente para a navegação marítima deverão transmitir-se, no mais curto prazo pos-

sível, às outras estações de navio vizinhas e às autoridades competentes do primeiro ponto da costa com que se possa estabelecer contacto. Estas transmissões deverão ser precedidas do sinal de segurança.

3336 § 8. As administrações poderão, quando o julguem conveniente e com o consentimento do expedidor, autorizar as suas estações terrestres a comunicar informações relativas às avarias ou sinistros marítimos, ou que apresentem um interesse geral para a navegação, às agências de informação marítima aceites por elas e segundo condições também por elas fixadas.

Secção III

Pareceres médicos

3337 § 9. As estações móveis que desejem receber um parecer médico podem obtê-lo por intermédio das estações terrestres indicadas como assegurando tal serviço na nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais.

3338 § 10. Os radiotelegramas e as conversações radiotelefónicas relativos aos pareceres médicos podem ser precedidos do sinal de urgência apropriado (v. os n.os **3198** a **3208**).

3339 a 3363 *(Não atribuídos.)*

CAPÍTULO X

Serviço móvel aeronáutico

ARTIGO 43

Autoridade da pessoa responsável pelas estações móveis no serviço móvel aeronáutico

3364 § 1. O serviço de uma estação móvel depende da autoridade superior da pessoa responsável pela aeronave ou qualquer outro veículo em que se encontre a estação móvel.

3365 § 2. A pessoa investida dessa autoridade deve exigir dos operadores o cumprimento do presente Regulamento que a estação móvel, colocada sob a responsabilidade de um operador, seja sempre utilizada como estipula este Regulamento.

3366 § 3. A pessoa responsável assim como todas as pessoas que possam ter conhecimento do texto ou simplesmente da existência de radiotelegramas ou de qualquer outra informação obtida por intermédio do serviço de radiocomunicação, ficam obrigadas a guardar e assegurar o sigilo das correspondências.

3367 a 3391 *(Não atribuídos.)*

ARTIGO 44

Certificados dos operadores das estações de aeronave

Secção I

Disposições gerais

3392 § 1. (1) O serviço de qualquer estação radiotelegráfica de aeronave deve se assegurado por um operador titular de certificado concedido ou reconhecido pelo governo de que depende essa estação.

3393 (2) O serviço de qualquer estação radiotelefónica de aeronave deve ser orientado por um operador titular de certificado concedido ou reconhecido pelo governo de que depende essa estação. Com reserva desta disposições, a instalação radiotelefónica poderá ser utilizada por outras pessoas além do titular do certificado.

3394 (3) O serviço dos aparelhos automáticos de telecomunicação (1) instalados numa estação de aeronave deve ser orientado por um operador titular de certificado concedido ou reconhecido pelo governo de que depende essa estação. Com reserva desta disposição, podem utilizar esses aparelhos outras pessoas além do titular do certificado. Se o funcionamento desses aparelhos se basear essencialmente no emprego dos sinais do código Morse descritos nas instruções para a exploração do serviço telegráfico público internacional, o serviço deve ser assegurado por um operador titular de certificado de operador radiotelegrafista. Todavia, esta última condição não se aplica aos aparelhos automáticos, que podem utilizar os sinais do código Morse apenas para fins de identificação.

3394.1 (1) O termo «aparelhos automáticos de telecomunicações» compreende aparelhos tais como teleimpressores, aparelhos para transmissão de dados, etc.

3395 (4) Todavia, para o serviço das estações radiotelefónicas que funcionam unicamente em frequências superiores a 30 MHz, cada governo determina se é necessário um certificado e, no caso afirmativo, fixa os requisitos a preencher para a sua obtenção.

3396 (5) As disposições do n.º **3395** não são aplicáveis às estações de aeronave que funcionam nas frequências consignadas para uma utilização internacional.

3397 § 2. (1) No caso de improcedimento absoluto do operador no decorrer do voo, a pessoa responsável pela estação pode autorizar, mas somente a título temporário, que um operador titular de um certificado concedido pelo governo de outro Membro da União assegure o serviço das radiocomunicações.

3398 (2) Quando seja necessário recorrer, como operador provisório, a pessoa que não possua qualquer certificado ou a operador que não tenha certificado adequado, a sua intervenção deverá limitar-se unicamente aos sinais de perigo, de urgência e de segurança, às mensagens que a estes digam respeito, às mensagens que interessam directamente à segurança da vida humana e às mensagens essenciais relativas à navegação e à segurança da marcha da aeronave. As pessoas assim utilizadas ficam sujeitas ao sigilo das correspondências previsto no n.º **3402**.

3399 (3) Em todos os casos, o operador provisório deve ser substituído, logo que possível, por um operador titular do certificado previsto no § 1 do presente artigo.

3400 § 3. (1) Cada administração adopta as disposições necessárias para evitar, na maior medida possível, o emprego fraudulento de certificados. Para esse efeito, estes terão aposta a assinatura do titular e serão autenticados pela administração que os concedeu. As administrações podem empregar, se o desejarem, outros meios de identificação, tais como fotografias, impressões digitais, etc.

3401 (2) A fim de facilitar a verificação dos certificados, estes conterão, quando necessário, além do texto redigido na língua nacional, uma tradução desse texto numa das línguas de trabalho da União.

3402 § 4. Cada administração adopta as providências necessárias para submeter os operadores à obrigação do sigilo das correspondências previsto no n.º **2023**.

SECÇÃO II

Classes e categorias de certificados

3403 § 5. (1) Há duas classes de certificados, bem como um certificado especial para operadores radiotelegrafistas (1).

3404 (2) Há duas categorias de certificados, geral e restrito, para os operadores radiotelegrafistas (1).

3405 § 6. (1) O titular de certificado de operador radiotelegrafista de 1.ª ou de 2.ª classe pode assegurar o serviço radiotelegráfico ou radiotelefónico de qualquer estação de aeronave.

3406 (2) O titular de certificado geral de radiotelefonista pode assegurar o serviço radiotelefónico de qualquer estação de aeronave.

3407 (3) O titular de certificado restrito de radiotelefonista pode assegurar o serviço radiotelefónico de qualquer estação de aeronave que funcione nas frequências atribuídas ao serviço móvel marítimo, desde que:

3408 *a*) A potência de ponta do emissor não exceda 200 W; *ou*

3409 *b*) O comando do emissor apenas comporte a manobra de órgãos de comutação externos e simples e não necessite qualquer ajuste manual dos elementos que determinam a frequência, sendo o próprio emissor a manter a estabilidade das frequências, nos limites das tolerâncias especificadas no apêndice 7, e não devendo a potência de ponta do emissor exceder 1 kW.

3410 (4) O titular de certificado restrito de radiotelefonista pode assegurar o serviço radiotelefónico de qualquer estação de aeronave que funcione em frequências atribuídas exclusivamente ao serviço móvel aeronáutico, desde que o comando do emissor apenas comporte a manobra de órgãos de comutação externos e simples sem que seja necessário efectuar qualquer ajuste manual dos elementos que determinam a frequência, sendo o próprio emissor a manter a estabilidade das frequências nos limites das tolerâncias especificadas no apêndice 7.

3411 (5) O serviço radiotelefónico das estações de aeronave para as quais se exige o certificado restrito de radiotelefonista pode ser assegurado por um operador titular de certificado especial de radiotelegrafista.

3412 § 7. Excepcionalmente, o certificado de operador radiotelegrafista de 2.ª classe, bem como o certificado especial de operador radiotelegrafista, podem ser limitados exclusivamente ao serviço radiotelegráfico. Neste caso, deverá fazer-se menção desta limitação no certificado.

3403.1 }
3404.1 } (1) Para o emprego dos operadores titulares dos diferentes certificados, v. o artigo 45.

Secção III

Condições de obtenção de certificados de operador

3413 A) Generalidades

3414 § 8. (1) As condições a impor para a obtenção dos diferentes certificados são as mencionadas nos parágrafos seguintes. Devem ser consideradas como condições mínimas.

3415 (2) Cada administração tem a liberdade de fixar o número de exames que julgue necessários para obtenção de cada certificado.

3416 § 9. (1) A administração que concede um certificado pode, antes de autorizar o seu titular a assegurar o serviço a bordo de uma aeronave, exigir que esse operador satisfaça outras condições (por exemplo: conhecimento dos aparelhos automáticos de telecomunicação, conhecimentos técnicos e profissionais complementares, relativos principalmente à navegação, aptidões físicas, ter efectuado como operador um certo número de horas de voo, etc.).

3417 (2) Convém que as administrações tomem todas as medidas julgadas necessárias para verificar a aptidão dos operadores, quando estes tenham deixado de exercer as suas funções durante um período de tempo prolongado.

3418 B) Certificado de operador radiotelegrafista de 1.ª classe

3419 § 10. Concede-se certificado de 1.ª classe aos candidatos que provarem possuir os conhecimentos e aptidões técnicos e profissionais indicados a seguir:

3420 *a*) Conhecimento tanto dos princípios gerais da electricidade como da teoria da radioelectricidade, conhecimento de regulação e funcionamento prático dos diferentes tipos de aparelhos radiotelegráficos e radiotelefónicos utilizados no serviço móvel, incluindo os aparelhos utilizados para radiogoniometria e obtenção de azimutes radiogoniométricos, assim como conhecimento geral dos princípios de funcionamento de outros aparelhos habitualmente empregados para a radionavegação;

3421 *b*) Conhecimento teórico e prático do funcionamento dos aparelhos, tais como grupos electrogéneos, acumuladores, etc., utilizados para pôr a funcionar e regular os aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos mencionados no n.º **3420**;

3422 *c*) Conhecimentos práticos necessários para reparar, com os meios existentes a bordo, as avarias que possam ocorrer nos aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos durante o voo;

3423 *d*) Aptidão para a transmissão manual correcta e auditiva correcta, em código Morse, de grupos de código (mistura de letras, algarismos e sinais de pontuação), à velocidade de 20 grupos por minuto, e de um texto em linguagem clara à velocidade de 25 palavras por minuto. Cada grupo de código deve compreender cinco caracteres, contando-se por dois caracteres cada algarismo ou sinal de pontuação. A palavra média do texto em linguagem clara deve comportar cinco caracteres. A duração de cada prova de transmissão e de recepção é, em geral, de cinco minutos;

3424 *e*) Aptidão para a transmissão correcta e para a recepção correcta em radiotelefonia;

3425 *f*) Conhecimento minucioso dos regulamentos aplicáveis às radiocomunicações, conhecimento dos documentos relativos à taxação das radiocomunicações, conhecimento das disposições da Convenção para a Salvaguarda da Vida Humana no Mar no que respeita à radioelectricidade e, no caso da navegação aérea, conhecimento das disposições especiais que regem os serviços aeronáuticos fixo e móvel, bem como a radionavegação aeronáutica. Neste último caso, o certificado estipulará que o titular ficou aprovado no exame relativo a estas disposições especiais;

3426 *g*) Conhecimentos suficientes da geografia do Mundo, especialmente das principais linhas de navegação marítima e aérea, bem como das vias de telecomunicação mais importantes;

3427 *h*) Conhecimento suficiente de uma das línguas de trabalho da União. Os candidatos devem poder exprimir-se nessa língua de modo conveniente, quer verbalmente quer por escrito. Cada administração indica a ou as línguas impostas.

3428 C) Certificado de operador radiotelegrafista de 2.ª classe

3429 § 11. Concede-se certificado de 2.ª classe aos candidatos que provarem possuir os conhecimentos e aptidões técnicos e profissionais indicados a seguir:

3430 *a*) Conhecimento elementar teórico e prático da electricidade e da radiolectricidade, conhecimento de regulação e do funcionamento prático dos diferentes tipos de aparelhos radiotelegráficos e radiotelefónicos utilizados no serviço móvel, incluindo os aparelhos utilizados para a radiogoniometria e obtenção de azimutes radiogoniométricos, bem como o conhecimento elementar dos princípios de funcionamento de outros aparelhos habitualmente empregados para a radionavegação;

3431 *b*) Conhecimento elementar teórico e prático do funcionamento e manutenção de aparelhos, tais como grupos electrogéneos, acumuladores, etc., utilizados para pôr a funcionar e regular os aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos mencionados no n.º **3430**;

3432 *c*) Conhecimentos práticos suficientes para poder reparar as pequenas avarias susceptíveis de ocorrer nos aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos durante o voo;

3433 *d*) Aptidão para a transmissão manual correcta e auditiva correcta, em código Morse, de grupos de código (mistura de letras, algarismos e sinais de pontuação), à velocidade de 16 grupos por minuto, e de um texto em linguagem clara à velocidade de 20 palavras por minuto. Cada grupo de código deve compreender cinco caracteres, contando-se por dois caracteres cada algarismo ou sinal de pontuação. A palavra média do texto em linguagem clara deve comportar cinco caracteres. A duração de cada prova de transmissão e de recepção é, em geral, de cinco minutos;

3434 *e*) Aptidão para a transmissão correcta e recepção correcta radiotelefónicas, salvo no caso previsto no n.º **3412**;

3435 *f*) Conhecimento dos regulamentos aplicáveis às radiocomunicações, conhecimento dos documentos relativos à taxação das radiocomunicações, conhecimento das disposições da Convenção para a Salvaguarda da Vida Humana no Mar no que respeita à radioelectricidade e, no caso da navegação aérea, conhecimento das disposições especiais que regem os serviços aeronáuticos fixo e móvel, bem como a radionavegação aeronáutica. Neste último caso, o certificado estipulará que o titular ficou aprovado no exame relativo às disposições especiais;

3436 *g*) Conhecimentos suficientes da geografia do Mundo, especialmente das principais linhas de navegação marítima e aérea, bem como das vias de telecomunicação mais importantes;

3437 *h*) Se necessário, conhecimento elementar de uma das línguas de trabalho da União. Os candidatos devem pode exprimir-se nessa língua de modo conveniente, quer verbalmente quer por escrito. Cada administração indica a ou as línguas impostas.

3438 D) Certificado especial de operador radiotelegrafista

3439 § 12. Concede-se certificado especial de radiotelegrafista aos candidatos que provarem possuir os conhecimentos e aptidões profissionais indicados a seguir:

3440 *a*) Aptidão para transmissão manual correcta e recepção auditiva correcta, em código Morse, de grupos de código (mistura de letras, algarismos e sinais de pontuação), à velocidade de 16 grupos por minuto, e de um texto em linguagem clara à velocidade de 20 palavras por minuto. Cada grupo de código deve compreender cinco caracteres, contando-se cada sinal de pontuação por dois caracteres. A palavra média do texto em linguagem clara deverá comportar cinco caracteres;

3441 *b*) Conhecimento da regulação e funcionamento dos aparelhos radiotelegráficos;

3442 *c*) Conhecimento dos regulamentos aplicáveis às radiocomunicações telegráficas, especialmente da parte desses regulamentos relativa à segurança da vida humana no mar.

3443 (2) É da competência de cada administração interessada fixar as outras condições para a obtenção desse certificado. Todavia, salvo caso previsto no n.º **3412**, deverão ser satisfeitas as condições enunciadas nos n.os **3450, 3451, 3452** e **3453** ou **3454**, consoante o caso.

3444 E) Certificado de operador radiotelegrafista

3445 § 13. Concede-se certificado geral de operador radiotelegrafista aos candidatos que provarem possuir os conhecimentos e aptidões profissionais indicados a seguir (v. igualmente os n.os **3405** e **3406**):

3446 *a*) Conhecimento dos princípios elementares da radiotelefonia;

3447 *b*) Conhecimento minucioso da regulação e do funcionamento prático dos aparelhos de radiotelefonia;

3448 *c*) Aptidão para a transmissão correcta e recepção correcta radiotelefónicas;

3449 *d*) Conhecimento minucioso dos regulamentos aplicáveis às radiocomunicações telefónicas e especialmente da parte desses regulamentos relativa à segurança da vida humana.

3450 § 14. (1) Concede-se certificado restrito de radiotelefonista aos candidatos que provarem possuir os conhecimentos e aptidões profissionais indicados a seguir:

3451 *a*) Conhecimento prático da exploração e do procedimento radiotelefónicos;

3452 *b*) Aptidão para transmissão correcta e recepção correcta radiotelefónicas;

3453 *c*) Conhecimento geral dos regulamentos aplicáveis às radiocomunicações telefónicas e especialmente da parte desses regulamentos relativa à segurança da vida humana.

3454 (2) Para as estações radiotelefónicas de aeronave que funcionem em frequências atribuídas exclusivamente ao serviço móvel aeronáutico, cada administração pode fixar as condições de obtenção de um certificado res-

trito de radiotelefonista, desde que o funcionamento do emissor apenas exija o emprego de dispositivos externos de comutação de concepção simples, excluindo qualquer regulação manual dos elementos que determinam a frequência, e desde que a estabilidade das frequências seja mantida pelo próprio emissor nos limites das tolerâncias fixadas no apêndice 7.

Todavia, ao fixar as condições, as administrações deverão assegurar-se de que o operador possui conhecimento suficiente da exploração e das formas de procedimento do serviço radiotelefónico, especialmente no que respeita ao perigo, urgência e segurança. As disposições acima indicadas em nada contradizem as do n.º **3457**.

3455 (3) As administrações dos países da Região 1 não concedem certificados correspondentes às disposições do n.º **3454**.

3456 § 15. No certificado de radiotelefonista deve indicar-se se é um certificado geral ou um certificado restrito e, neste último caso, se foi concedido em conformidade com as disposições do n.º **3454**.

3457 § 16. Para satisfazer necessidades especiais, podem acordos especiais entre administrações fixar as condições a preencher para a obtenção de certificado de radiotelefonista destinado a ser utilizado em estações radiotelefónicas que satisfaçam certas condições técnicas e certas condições de exploração. Tais acordos só podem ser concluídos desde que, pela sua aplicação, não resulte qualquer interferência prejudicial aos serviços internacionais.

Estas condições e esses acordos serão mencionados nos certificados assim concedidos.

3458 a 3482 *(Não atribuídos.)*

ARTIGO 45

Pessoal das estações aeronáuticas

SECÇÃO I

3483 As administrações tomam as providências necessárias para garantir que nas estações aeronáuticas o pessoal possua as aptidões profissionais que lhe permitam assegurar eficazmente o serviço dessas estações.

3484 a 3508 *(Não atribuídos.)*

ARTIGO 46

Inspecção das estações de aeronave

3509 § 1. (1) Os governos ou as administrações competentes dos países onde uma estação de aeronave faça escala podem exigir a apresentação da licença para a examinarem. O operador da estação, ou a pessoa responsável pela estação, deve prestar-se a esta verificação. A licença deverá conservar-se de maneira a poder ser apresentada quando pedida. Na medida do possível, a licença, ou uma cópia autenticada pela autoridade que a concedeu, deverá estar afixada permanentemente no local da estação.

3510 (2) Os inspectores devem possuir um cartão ou um distintivo de identidade passado pelas autoridades competentes, que devem mostrar a pedido da pessoa responsável pela aeronave.

3511 (3) Quando a licença não possa ser apresentada ou se verifiquem manifestas anomalias os governos ou administrações podem mandar proceder à inspecção das instalações radioeléctricas, a fim de se assegurarem de que elas satisfazem as disposições do presente Regulamento.

3512 (4) Os inspectores têm, além disso, o direito de exigir a apresentação dos certificados dos operadores, mas não podem pedir qualquer justificação de conhecimentos profissionais.

3513 § 2. (1) Quando um governo ou uma administração se vir obrigado a recorrer à medida prevista no n.º **3511**, ou quando não se apresentem os certificados de operador, deverá informar-se sem demora o governo ou administração de que depende a estação da aeronave em causa. Além disso, aplicam-se, se necessário, as disposições do artigo 21.

3514 (2) Antes de se retirar da aeronave, o inspector deve comunicar as suas observações à pessoa responsável. No caso de infracção às disposições do presente Regulamento, o inspector apresenta o seu relatório por escrito.

3515 § 3. Os Membros comprometem-se a não impor às estações de aeronave estrangeiras que se encontrem temporariamente nos seus limites territoriais ou que se detenham temporariamente no seu território condições técnicas e de exploração mais rigorosas do que as previstas no presente Regulamento. Esta prescrição em nada afecta as disposições que dependem de acordos internacionais relativos à navegação aérea e não estão mencionadas no presente Regulamento.

3516 a 3540 *(Não atribuídos.)*

ARTIGO 47

Horários das estações do serviço móvel aeronáutico

SECÇÃO I

Generalidades

3541 § 1. A fim de permitir a aplicação das regras seguintes relativas às horas de vigília, qualquer estação do serviço móvel aeronáutico deve ter um relógio que regule bem e esteja certo pelo tempo universal coordenado (UTC).

SECÇÃO II

Estações aeronáuticas

3542 § 2. Uma estação aeronáutica assegura um serviço contínuo durante todo o período em que lhe cabe a responsabilidade do serviço das radiocomunicações com as aeronaves em voo.

SECÇÃO III

Estações de aeronave

3543 § 3. Para o serviço internacional de correspondência pública as estações de aeronave constituem uma só categoria. Elas asseguram um serviço cuja duração não é fixada pelo presente Regulamento.

3544 a 3568 *(Não atribuídos.)*

ARTIGO 48

Condições de funcionamento do serviço móvel aeronáutico

SECÇÃO I

Generalidades

3569 § 1. Salvo disposições contrárias do presente Regulamento, o serviço móvel aeronáutico pode ser regido por acordos especiais concluídos pelos governos interessados, no quadro das disposições do artigo 31 da Convenção (Málaga, Torremolinos, 1973) relativas aos acordos especiais.

3570 § 2. Salvo acordos especiais, as disposições do presente Regulamento relativas ao escoamento e à contabilidade da correspondência pública são aplicáveis às estações do serviço móvel aeronáutico (v., também, o n.º 3633).

SECÇÃO II

Comunicações com estações do serviço móvel marítimo e do serviço móvel marítimo por satélite

3571 § 3. As estações a bordo de aeronaves podem comunicar com as estações do serviço móvel marítimo ou do serviço móvel marítimo por satélite. Devem então satisfazer as disposições do presente Regulamento relativas a esses serviços (v. o capítulo XI, especialmente o artigo 59, secção III).

3572 a 3596 *(Não atribuídos.)*

ARTIGO 49

Condições a que devem satisfazer as estações móveis do serviço móvel aeronáutico

3597 § 1. As estações móveis devem ser estabelecidas de modo a que satisfaçam as disposições dos capítulos III e X no que respeita às frequências e classes de emissão.

3598 § 2. As frequências de emissão das estações móveis devem ser verificadas o maior número de vezes possível pelo serviço de inspecção de que elas dependem.

3599 § 3. A energia radiada pelos aparelhos receptores deve ser tão reduzida quanto possível e não deverá causar interferência prejudicial às outras estações.

3600 § 4. As administrações tomam todas as medidas práticas necessárias para que o funcionamento dos aparelhos eléctricos ou electrónicos de qualquer natureza instalados nas estações móveis não cause interferência

prejudicial aos serviços radioeléctricos essenciais dessas estações, quando funcionam de acordo com as disposições do presente Regulamento.

3601 § 5. (1) As mudanças de frequência nos aparelhos emissores e receptores de qualquer estação móvel devem poder efectuar-se tão rapidamente quanto possível.

3602 (2) As instalações de qualquer estação móvel devem permitir, uma vez estabelecida a comunicação, passar da emissão à recepção, e vice-versa, num tempo tão curto quanto possível.

3603 § 6. Fica proibido às estações de aeronave no mar ou por cima do mar efectuar qualquer serviço de radiodifusão (v. o n.º **36** e igualmente o n.º **2665**).

3604 § 7. As estações móveis, excepto as de engenho de salvamento, devem estar providas com os documentos de serviço indicados na secção pertinente do apêndice 11 (secção VI, «Estações de aeronaves»).

3605 a 3629 *(Não atribuídos.)*

ARTIGO 50

Disposições especiais relativas à utilização das frequências no serviço móvel aeronáutico

3630 § 1. As frequências de todas as faixas atribuídas ao serviço móvel aeronáutico (R) são reservadas às comunicações entre quaisquer aeronaves e as estações aeronáuticas principalmente encarregadas de garantir a segurança e a regularidade dos voos ao longo das rotas nacionais ou internacionais da aviação civil.

3631 § 2. As frequências de todas as faixas atribuídas ao serviço móvel aeronáutico (OR) são reservadas às comunicações entre quaisquer aeronaves e as estações aeronáuticas que não sejam as principalmente encarregadas do serviço móvel aeronáutico ao longo das rotas nacionais ou internacionais da aviação civil.

3632 § 3. As frequências das faixas atribuídas ao serviço móvel aeronáutico entre 2850 kHz e 22 000 kHz (v. o artigo 8) são consignadas de acordo com as disposições dos apêndices 26, 27 (*) e 27 Aer2 (*) e com as outras disposições pertinentes do presente Regulamento.

3633 § 4. As administrações não devem autorizar a correspondência pública nas faixas de frequências atribuídas exclusivamente ao serviço móvel aeronáutico, a menos que se disponha de outro modo em regulamentos especiais do serviço aeronáutico, aprovados por uma conferência da União para a qual tenham sido convidados todos os Membros interessados. Esses regulamentos devem reconhecer prioridade absoluta às comunicações de segurança e de comando.

3634 § 5. A fim de reduzir as interferências, as estações de aeronave devem, de acordo com os meios de que disponham, esforçar-se por escolher para a chamada a faixa cujas frequências apresentem as características de propagação mais favoráveis para estabelecer uma comunicação satisfatória. Na falta de dados mais precisos, qualquer estação de aeronave deve, antes de emitir uma chamada, escutar os sinais da estação com a qual deseja entrar em comunicação. A intensidade e a inteligibilidade dos sinais recebidos fornecerão elementos úteis sobre as condições de propagação e indicarão em que faixa é preferível efectuar a chamada.

3635 § 6. Os governos podem, por meio de acordos, decidir quais as frequências a utilizar para a chamada e para a resposta no serviço móvel aeronáutico.

3636 a 3650 *(Não atribuídos.)*

ARTIGO 51

Ordem de prioridade das comunicações no serviço móvel aeronáutico

3651 A ordem de prioridade das comunicações (1) no serviço móvel aeronáutico deve ser a que se indica a seguir, salvo impossibilidade prática num sistema inteiramente automatizado. Todavia, mesmo neste caso, deve ser dada prioridade às comunicações da primeira categoria:

1) Chamadas de perigo, mensagens de perigo e tráfego de perigo;
2) Comunicações precedidas do sinal de urgência;
3) Comunicações precedidas do sinal de segurança;
4) Comunicações relativas aos azimutes radiogoniométricos;
5) Comunicações relativas à navegação e à segurança dos movimentos das aeronaves que participem em operações de busca e salvamento;
6) Comunicações relativas à navegação, aos movimentos e às necessidades das aeronaves e dos navios e mensagens de observação meteorológica destinadas a um serviço meteorológico oficial;

(*) Nota do Secretariado-Geral: v. o n.º **5189** e a Resolução n.º 400.

3651.1 (1) O termo «comunicações», empregado no presente artigo, engloba os radiotelegramas, as conversações radiotelefónicas, bem como as comunicações radiotelex.

7) ETATPRIORITENATIONS — radiotelegramas relativos à aplicação da Carta das Nações Unidas;
8) ETATPRIORITE — radiotelegramas de Estado com prioridade e comunicações de Estado para as quais foi expressamente pedido o direito de prioridade;
9) Comunicações de serviço relativas ao funcionamento do serviço de radiocomunicações ou a comunicações escoadas precedentemente;
10) Comunicações de Estado que não sejam as indicadas na alínea 8 anterior, comunicações particulares ordinárias, radiotelegramas RCT (1) e radiotelegramas da imprensa.

3652 a 3676 *(Não atribuídos.)*

ARTIGO 52

Procedimento geral radiotelegráfico no serviço móvel aeronáutico

SECÇÃO I

Disposições gerais

3677 § 1. (1) O procedimento pormenorizado no presente artigo é obrigatório, salvo nos casos de perigo, de urgência ou de segurança, aos quais são aplicáveis as disposições do capítulo XI.

3678 (2) O procedimento fixado nas secções IV, V e VI do presente artigo só é aplicável na ausência de acordos especiais que prevejam disposições contrárias e concluídos pelos governos interessados.

3679 § 2. No serviço móvel aeronáutico é obrigatório o emprego dos sinais do código Morse que figuram nas instruções para a exploração do serviço telegráfico público internacional. Todavia, não se exclui o uso de outros sinais nas radiocomunicações de carácter especial.

3680 § 3. Para facilitar as radiocomunicações, as estações utilizam as abreviaturas regulamentares definidas no apêndice 13.

SECÇÃO II

Chamadas

3681 A) Generalidades

3682 § 4. As disposições do presente artigo não são aplicáveis ao serviço móvel aeronáutico quando tenham sido concluídos acordos especiais pelos governos interessados.

3683 § 5. (1) Regra geral, incumbe à estação de aeronave estabelecer a comunicação com a estação aeronáutica. Para o efeito, a estação de aeronave só pode chamar a estação aeronáutica depois de ter entrado na sua zona de serviço, isto é, na zona em que, utilizando uma frequência apropriada, a estação de aeronave pode ser ouvida pela estação aeronáutica.

3684 (2) Todavia, uma estação aeronáutica que tenha tráfego para uma estação de aeronave pode chamar esta estação se tiver razões para supor que a estação de aeronave se encontra na sua zona de serviço e está à escuta.

3685 § 6. Quando uma estação aeronáutica receber praticamente ao mesmo tempo chamadas de várias estações de aeronave, decidirá a ordem pela qual estas estações poderão transmitir-lhe o seu tráfego. A sua decisão basear-se-á na ordem de prioridade (v. o n.º **3651**) dos radiotelegramas pendentes nas estações de aeronave e na necessidade de permitir a cada uma das estações que chama escoar o maior número possível de comunicações.

3686 § 7. (1) Quando uma estação chamada não responder à chamada emitida três vezes com intervalos de dois minutos, a chamada deverá cessar e só poderá recomeçar quinze minutos depois.

3687 (2) Antes de renovar a chamada, a estação que chama deve certificar-se de que a estação chamada não está em comunicação com outra estação.

3688 (3) Se não houver razão para recear que interferências prejudiciais afectem comunicações em curso, não se aplicam as disposições do n.º **3686**. Nesse caso, a chamada emitida três vezes com intervalos de dois minutos pode ser renovada depois de um intervalo de duração inferior a quinze minutos, mas, pelo menos, igual a três minutos.

3689 § 8. As estações de aeronave não devem emitir a sua portadora entre as chamadas.

3690 § 9. Quando o nome e endereço da administração ou da exploração particular de que depende uma estação de aeronave não vêm mencionados na nomenclatura apropriada ou não estão de acordo com as indica-

---

3651.2 (1) RCT (Red Cross Telegrams — Telegramas da Cruz Vermelha): telegramas respeitantes às pessoas protegidas em tempo de guerra pelas Convenções de Genebra de 12 de Agosto de 1949.

ções desta, é dever da estação de aeronave, como regra de procedimento, fornecer à estação aeronáutica a que transmite o tráfego todos os esclarecimentos necessários nesse sentido.

3691 § 10. (1) A estação aeronáutica pode, por meio da abreviatura TR, pedir à estação de aeronave que lhe dê as indicações seguintes:

3692 *a*) Posição e, tanto quanto possível, rumo e velocidade;

3693 *b*) Próximo ponto de escala..

3694 (2) Convém que as informações indicadas nos n.os **3691** a **3693**, precedidas da abertura TR, sejam fornecidas pelas estações de aeronave, sempre que pareça apropriado e sem pedido prévio da estação aeronáutica. Essas informações só são prestadas mediante autorização prévia da pessoa responsável pela aeronave.

3695 B) Chamadas a várias estações

3696 § 11. Reconhecem-se dois tipos de sinais de chamada «a todos»:

3697 *a*) Chamada CQ seguida da letra K (v. o n.º **3699**);

3698 *b*) Chamada CQ não seguida da letra K (v. o n.º **3700**).

3699 § 12. As estações que desejarem entrar em comunicação com estações do serviço móvel sem todavia saberem quais dessas estações estão na sua zona de serviço podem utilizar o sinal de pesquisa CQ para substituir, na chamada, o indicativo da estação chamada. A chamada deverá então ser seguida da letra K (chamada geral a todas as estações do serviço móvel, com pedido de resposta).

3700 § 13. A chamada CQ não seguida da letra K (chamada geral a todas as estações sem pedido de resposta) utiliza-se antes da transmissão de informações de qualquer natureza destinadas a serem lidas ou utilizadas por quem quer que as possa captar.

3701 § 14. A chamada CP seguida de dois ou mais indicativos de chamada ou de uma palavra convencional (chamada a certas estações receptoras sem pedido de resposta) só se utiliza para a transmissão de informações de qualquer natureza destinadas a serem lidas ou utilizadas pelas pessoas autorizadas.

Secção III

Operações preliminares

3702 § 15. (1) Antes de emitir, uma estação toma as precauções necessárias para se assegurar de que as suas emissões não interferirão transmissões em curso; se for provável uma tal interferência, a estação esperará uma paragem oportuna da transmissão que ela poderia interferir. Esta obrigação não se aplica às estações que podem funcionar sem vigilância por meios automáticos (v. o n.º **3394**) em frequências destinadas aos sistemas de faixa estreita de telegrafia com impressão directa.

3703 (2) No caso em que, mesmo procedendo assim, a emissão dessa estação venha interferir uma transmissão já em curso, aplicar-se-ão as regras seguintes:

3704 *a*) A estação de aeronave cuja emissão interfere a comunicação entre uma estação móvel, de um lado, e uma estação terrestre, de outro, deve deixar de emitir ao primeiro pedido da estação terrestre interessada;

3705 *b*) A estação de aeronave cuja emissão interfere as comunicações entre estações móveis deve deixar de emitir ao primeiro pedido de uma qualquer dessas estações;

3706 *c*) A estação que solicita essa paragem deve indicar a duração aproximada da espera imposta à estação cuja emissão ela suspende.

Secção IV

Fórmula da chamada, resposta à chamada e sinais preparatórios do tráfego

3707 A) Fórmula da chamada

3708 § 16. (1) A chamada é constituída como segue:

Três vezes, no máximo, o indicativo de chamada da estação chamada;
A palavra DE;
Três vezes, no máximo, o indicativo de chamada da estação que chama.

3709 (2) Todavia, nas faixas compreendidas entre 4000 kHz e 27 500 kHz, e se as condições de estabelecimento do contacto forem difíceis, podem-se emitir os indicativos de chamada mais de três vezes, mas não mais de dez. Nesse caso os indicativos de chamada da estação chamada e da estação que chama devem ser emitidos em sequências alternadas (exemplo: ABC ABC de WXYZ ... *ou* ABC ABC ABC de WXYZ WXYZ WXYZ ...) até completar um máximo de vinte indicativos. Esta chamada pode ser emitida três vezes com intervalos de dois minutos. Só pode recomeçar quinze minutos mais tarde.

3710 § 17. Para fazer a chamada, assim como para transmitir os sinais preparatórios, a estação que chama utiliza uma frequência na qual a estação chamada assegura a escuta.

3711 B) Indicação da frequência a utilizar para o tráfego

3712 § 18. (1) A chamada, tal como se indica nos n.os **3708** e **3709**, deve ser seguida da abreviatura regulamentar, indicando a frequência de trabalho e, se for útil, a classe de emissão que a estação que chama se propõe utilizar para transmitir o seu tráfego.

3713 (2) Quando, por excepção a esta regra, a chamada não for seguida da indicação da frequência a utilizar para o tráfego, isso significa que:

3714 *a*) Se a estação que chama for uma estação aeronáutica, ela se propõe utilizar para o tráfego a sua frequência normal de trabalho indicada no documento apropriado;

3715 *b*) Se a estação que chama é uma estação de aeronave, a frequência a utilizar para o tráfego fica à escolha da estação chamada de entre as frequências em que pode emitir a estação que chama.

3716 C) Indicação de prioridade, do motivo da chamada e da transmissão dos radiotelegramas por séries

3717 § 19. (1) Quando a estação que chama tem mais de um radiotelegrama para transmitir à estação chamada, os sinais preparatórios anteriores são seguidos da abreviatura regulamentar e do número que especifica a quantidade desses telegramas.

3718 (2) Além disso, quando a estação que chama desejar transmitir os seus radiotelegramas por séries, indica-o acrescentando a abreviatura regulamentar para pedir o assentimento da estação chamada.

3719 D) Fórmula da resposta à chamada

3720 § 20. A resposta à chamada é constituída como segue:

Três vezes, no máximo, o indicativo de chamada da estação que chama;
A palavra DE;
Uma vez somente o indicativo de chamada da estação chamada.

3721 E) Frequência de resposta

3722 § 21. Salvo indicação contrária no presente Regulamento, para transmitir a resposta às chamadas e aos sinais preparatórios, a estação chamada utiliza a frequência de escuta da estação que chama, a não ser que esta tenha designado uma outra frequência para a resposta.

3723 F) Acordo sobre a frequência a utilizar para o tráfego

3724 § 1. (1) Se a estação chamada estiver de acordo com a estação que chama, transmite:

3725 *a*) A resposta à chamada;

3726 *b*) A abreviatura regulamentar que indica que a partir desse momento ela escuta na frequência de trabalho anunciada pela estação que chama;

3727 *c*) Eventualmente, as indicações previstas no n.º **3736**;

3728 *d*) Se for útil, a abreviatura regulamentar e o número que indique a intensidade e ou a inteligibilidade dos sinais recebidos (v. o apêndice 13);

3729 *e*) A letra K, se a estação chamada está pronta a receber o tráfego da estação que chama.

3730 (2) Se a estação chamada não estiver de acordo com a estação que chama sobre a frequência de trabalho a empregar, transmite:

3731 *a*) A resposta à chamada:

3732 *b*) A abreviatura regulamentar que indique a frequência de trabalho a utilizar pela estação que chama e, quando necessário, a classe de emissão;

3733 *c*) Eventualmente, as indicações previstas no n.º **3736.**

3734 (3) Realizado acordo relativamente à frequência de trabalho que a estação que chama deve utilizar para o seu tráfego, a estação chamada transmite a letra K a seguir às indicações contidas na sua resposta.

3735 G) Resposta ao pedido de transmissão por séries

3736 § 23. A estação chamada, ao responder a uma estação que chama e que pediu para transmitir os seus radiotelegramas por séries (v. o n.º **3718**), indica, por meio da abreviatura regulamentar, a sua aceitação ou a sua recusa. No primeiro caso especifica, se necessário, o número de radiotelegramas que está pronta a receber numa série.

3737 H) Dificuldades de recepção

3738 § 24. (1) Se a estação chamada estiver impedida de receber o tráfego imediatamente, responde à chamada como preceituam os n.os **3724** a **3729**, mas substituindo a letra K pelo sinal . — . . . (espera) seguido do número que indique em minutos a duração provável da espera. Se essa duração provável ultrapassar dez minutos (cinco minutos no caso de uma estação de aeronave em comunicação com uma estação do serviço móvel marítimo), deverá justificar-se o motivo da espera.

3739 (2) Quando uma estação recebe uma chamada sem ter a certeza de que se lhe destina, não deve responder sem que essa chamada se repita e seja compreendida. Quando, por outro lado, uma estação recebe uma chamada que se lhe destina mas tem dúvidas sobre o indicativo de chamada da estação que chama, deve responder imediatamente, utilizando a abreviatura regulamentar em substituição do indicativo de chamada desta última estação.

Secção V

Escoamento do tráfego

3740 A) Frequência de tráfego

3741 § 25. (1) Como regra geral, uma estação do serviço móvel aeronáutico transmite o seu tráfego utilizando uma das suas frequências de trabalho da faixa em que se efectuou a chamada.

3742 (2) Com excepção do tráfego de perigo (v. o capítulo IX), é proibido para o tráfego o emprego das frequências reservadas para a chamada.

3743 (3) Se a transmissão de um radiotelegrama se fizer numa frequência e ou numa classe de emissão diferentes das empregadas para a chamada, essa transmissão será precedida:

De duas vezes, no máximo, o indicativo de chamada da estação chamada;
Da palavra DE;
Do indicativo de chamada da estação que chama, uma vez somente.

3744 (4) Se a transmissão se fizer nas mesmas frequências e classe de emissão que a chamada, a transmissão do radiotelegrama será precedida, se necessário:

Do indicativo de chamada da estação chamada;
Da palavra DE;
Do indicativo de chamada da estação que chama.

3745 B) Numeração por séries quotidianas

3746 § 26. (1) Como regra geral, os radiotelegramas de correspondência pública transmitidos pelas estações de aeronave serão numerados por séries quotidianas, dando-se o n.º 1 ao primeiro radiotelegrama transmitido em cada dia para cada estação diferente.

3747 (2) Convém que uma série de números começada em radiotelegrafia seja continuada em radiotelefonia e inversamente.

3748 C) Radiotelegramas extensos

3749 § 27. (1) No caso em que duas estações estão providas de dispositivos que lhes permitem passar da emissão à recepção sem manobra de comutação, a estação emissora pode prosseguir a sua transmissão até ao fim da mensagem ou até que a estação receptora a interrompa por meio da abreviatura regulamentar BK. As duas estações pôr-se-ão, em geral, antecipadamente de acordo relativamente a um tal método de trabalho, por meio da abreviatura regulamentar QSK.

3750 (2) Se não puder ser empregado este método de trabalho, os radiotelegramas extensos, tanto em linguagem clara como em linguagem secreta, serão, como regra geral, transmitidos por partes, contendo cada parte 50 palavras no caso de linguagem clara e 20 palavras ou grupos no caso de linguagem secreta.

3751 (3) No fim de cada parte transmitir-se-á o sinal . . — — . . (?), que significa «recebeu bem o radiotelegrama até aqui?». Se essa parte se recebeu correctamente, a estação receptora responde transmitindo a letra K e prossegue-se na transmissão do radiotelegrama.

3752 D) Suspensão do tráfego

3753 § 1. Quando uma estação de aeronave transmite numa frequência de trabalho de uma estação aeronáutica e interfere a transmissão da referida estação aeronáutica, deve suspender o seu trabalho ao primeiro pedido desta última.

SECÇÃO VI

Fim do tráfego e do trabalho

3754 A) Sinal de fim de transmissão

3755 § 29. (1) A transmissão de um radiotelegrama terminará pelo sinal . — . — . (fim de transmissão) seguido da letra K.

3756 (2) No caso de uma transmissão por séries, indica-se o fim de cada radiotelegrama pelo sinal . — . — . (fim de transmissão) e o fim de cada série pela letra K.

3757 B) Entendido

3758 § 30. (1) Dá-se o entendido de um radiotelegrama ou de uma série de radiotelegramas pela seguinte forma:

O indicativo de chamada da estação emissora;
A palavra DE;
O indicativo de chamada da estação receptora;
A letra R seguida do número do radiotelegrama; *ou*
A letra R seguido do número do último radiotelegrama de uma série.

3759 (2) O entendido é transmitido pela estação receptora na frequência de tráfego (v. o n.º **3741**).

3760 C) Fim do trabalho

3761 § 31. (1) O fim do trabalho entre as duas estações é indicado por cada uma delas por meio do sinal . . . — . — (fim do trabalho).

3762 (2) O sinal . . . — . — (fim do trabalho) utiliza-se também:

No fim de qualquer transmissão de radiotelegramas de informação geral, de avisos gerais de segurança e de informações meteorológicas;
No fim da transmissão no serviço das radiocomunicações a grande distância, com entendido diferido ou sem entendido.

SECÇÃO VII

Orientação do trabalho

3763 § 32. As disposições da presente secção não se aplicam aos casos de perigo, urgência e segurança (v. o n.º **3677**).

3764 § 33. Nas comunicações entre estação aeronáutica e estação de aeronave, a estação de aero- nave seguirá as instruções dadas pela estação aeronáutica em tudo o que se refere à ordem e hora de transmissão, escolha da frequência e da classe de emissão, duração e suspensão do trabalho.

3765 § 34. Nas comunicações entre estações de aeronave incumbe à estação chamada a direcção do trabalho, segundo as indicações do n.º **3764**. Contudo, de uma estação aeronáutica julgar necessário intervir, aquelas estações conformar-se-ão com as instruções que lhes forem dadas pela estação aeronáutica.

SECÇÃO VIII

Ensaios

3766 § 35. Quando for necessário a uma estação de aeronave emitir sinais de ensaio ou de ajuste susceptível de interferir o trabalho das estações costeiras ou aeronáuticas vizinhas, deverá obter-se o assentimento destas estações antes de se efectuarem tais emissões.

3767 § 36. Quando for necessário a uma estação do serviço móvel aeronáutico emitir sinais de ensaio, quer para ajuste de um emissor antes de transmitir uma chamada, quer para ajuste de um receptor, esses sinais não devem durar mais de dez segundos. Devem ser constituídos por uma série de «VVV» seguida do indicativo de chamada da estação que emite para ensaios.

3768 a 3792 *(Não atribuídos.)*

ARTIGO 53

Procedimento radiotelefónico no serviço móvel aeronáutico — Chamadas

3793 § 1. As disposições do presente artigo não são aplicáveis ao serviço móvel aeronáutico quando existam acordos especiais entre os governos interessados.

3794 § 2. (1) Como regra geral, compete à estação de aeronave estabelecer a comunicação com a estação aeronáutica. Para isso, a estação de aeronave só pode chamar a estação aeronáutica depois de ter entrado na sua zona de serviço, quer dizer, na zona em que, utilizando uma frequência apropriada, a estação de aeronave poderá ser ouvida pela estação aeronáutica.

3795 § 2. Todavia, uma estação aeronáutica que tenha tráfego para uma estação de aeronave poderá chamar essa estação se tiver razões para supor que a referida estação de aeronave se encontra na sua zona de serviço e está à escuta.

3796 § 3. Quando uma estação aeronáutica receber praticamente ao mesmo tempo chamadas de várias estações de aeronave, decidirá a ordem pela qual essas estações lhe poderão transmitir o seu tráfego. A sua decisão basear-se-á na ordem de propriedade (v. o n.º **3651**) dos radiotelegramas ou das conversações radiotelefónicas pendentes nas estações de aeronave e na necessidade de permitir a cada uma das estações que chamam escoar o maior número possível de comunicações.

3797 § 4. (1) Quando uma estação chamada não responder à chamada emitida três vezes com intervalos de dois minutos, a chamada deverá cessar e não deverá recomeçar antes de passados quinze minutos.

3798 (2) Antes de renovar a chamada, a estação que chama deve verificar se a estação chamada não está em comunicação com outra estação.

3799 (3) Se não houver motivo para recear que interferências prejudiciais afectem as comunicações em curso, não serão aplicáveis as disposições do n.º **3797**. Nesses casos, a chamada emitida três vezes com intervalos de dois minutos poderá ser renovada depois de um intervalo de duração inferior a quinze minutos, mas, pelo menos, igual a três minutos.

3800 § 5. As estações de aeronave não devem emitir a sua portadora entre as chamadas.

3801 § 6. Quando o nome e o endereço da administração ou da exploração particular de que depende uma estação de aeronave não estiverem mencionados na nomenclatura apropriada ou já não estiverem em conformidade com esta, a estação de aeronave tem por dever fornecer à estação aeronáutica a que transmite tráfego todos os esclarecimentos necessários a esse respeito.

3802 § 7. (1) A estação aeronáutica pode, por meio da abreviatura TR (soletrada, utilizando palavras do código TANGO ROMEO), pedir à estação de aeronave que lhe forneça as seguintes informações:

3803 *a*) Posição e, tanto quanto possível, rumo e velocidade;

3804 *b*) Próximo ponto de escala.

3805 (2) Convém que as informações indicadas nos n.ºs **3802** a **3804**, precedidas da abreviatura TR, sejam fornecidas pelas estações de aeronave, sempre que pareça apropriado, sem pedido prévio da estação aeronáutica. Essas informações só são fornecidas após autorização da pessoa responsável pela aeronave.

3806 a 3830 *(Não atribuídos.)*

CAPÍTULO XI

Serviço móvel marítimo e móvel marítimo por satélite

ARTIGO 54

Autoridade do comandante

3831 § 1. O serviço de uma estação de navio depende da autoridade superior do comandante ou da pessoa responsável pelo navio ou por qualquer outra embarcação em que se encontre essa estação.

3832 § 2. A pessoa investida dessa autoridade deve exigir dos operadores o cumprimento do presente Regulamento e que a estação de navio, colocada sob a responsabilidade de um operador, seja sempre utilizada como estipula este Regulamento.

3833 § 3. O comandante ou a pessoa responsável, assim como todas as outras pessoas que possam ter conhecimento do texto ou simplesmente da existência de radiotelegramas ou de qualquer outra informação obtida por intermédio do serviço de radiocomunicação, ficam obrigados a guardar e assegurar o sigilo das correspondências.

3834 § 4. As disposições dos n.ºs **3831**, **3832** e **3833** aplicam-se igualmente ao pessoal das estações terrenas de navio.

3835 a 3859 *(Não atribuídos.)*

ARTIGO 55

Certificados dos operadores das estações de navio e das estações terrenas de navio

SECÇÃO I

Disposições gerais

3860 § 1. (1) O serviço de qualquer estação radiotelegráfica de navio deve ser assegurado por um operador titular de certificado concedido ou reconhecido pelo governo de que depende essa estação.

3861 (2) O serviço de qualquer estação radiotelefónica de navio deve ser orientado por um operador titular de certificado concedido ou reconhecido pelo governo de que depende essa estação. Com reserva desta disposição, a instalação radiotelefónica pode ser utilizada por outras pessoas além do titular do certificado.

3862 (3) O serviço de qualquer estação terrena de navio deve ser orientado por uma pessoa titular de certificado concedido ou reconhecido pelo governo de que depende essa estação. Com reserva desta disposição, a instalação pode ser utilizada por outras pessoas além do titular do certificado.

3863 (4) O serviço dos aparelhos automáticos de telecomunicação (1) instalados numa estação de navio deve ser orientado por um operador titular de certificado concedido ou reconhecido pelo governo de que depende essa estação. Com reserva desta disposição, podem utilizar esses aparelhos outras pessoas além do titular do certificado. Se o funcionamento desses aparelhos se basear essencialmente no emprego dos sinais do código Morse descritos nas instruções para a exploração do serviço telegráfico público internacional, o serviço deve ser assegurado por um operador titular de certificado de operador radiotelegrafista. Todavia, esta última condição não se aplica aos aparelhos automáticos que podem utilizar os sinais do código Morse apenas para fins de identificação.

3864 (5) Todavia, para o serviço das estações radiotelefónicas que funcionam unicamente em frequências superiores a 30 MHz, cada governo determina se é necessário um certificado e, no caso afirmativo, fixa os requisitos a preencher para a sua obtenção.

3865 (6) As disposições do n.º **3864** não são aplicáveis às estações de navio que funcionam nas frequências consignadas para utilização internacional.

3866 § 2. (1) No caso de impedimento absoluto do operador no decorrer da travessia, o comandante ou a pessoa responsável pela estação pode autorizar, mas somente a título temporário, que um operador titular de um certificado concedido pelo governo de outro Membro assegure o serviço de radiocomunicação.

3867 (2) Quando seja necessário recorrer, como operador provisório, a pessoa que não possua qualquer certificado ou a operador que não tenha certificado adequado, a sua intervenção deverá limitar-se unicamente aos sinais de perigo, de urgência e de segurança, às mensagens que a estes digam respeito, às mensagens que interessam directamente à segurança da vida humana e às mensagens urgentes relativas à marcha do navio. As pessoas assim utilizadas ficam sujeitas ao sigilo das correspondências previsto no n.º **3877**.

3868 (3) Em todos os casos o operador provisório deve ser substituído, logo que possível, por um operador titular do certificado previsto no § 1 do presente artigo.

3869 § 3. (1) Cada administração adopta as disposições necessárias para evitar, na maior medida possível, o emprego fraudulento de certificados. Para esse efeito, estes terão aposta a assinatura do titular e serão autenticados pela administração que os concedeu. As administrações podem utilizar, se o desejarem, outros meios de identificação, tais como fotocópias, impressões digitais, etc.

3870 (2) No serviço móvel marítimo os certificados concedidos a partir de 1 de Janeiro de 1978 devem incluir a fotografia e a data de nascimento do titular.

3871 (3) A fim de facilitar a verificação dos certificados, estes conterão, quando necessário, além do texto redigido na língua nacional, uma tradução desse texto numa das línguas de trabalho da União.

3872 (4) No serviço móvel marítimo todos os certificados que não sejam redigidos numa das línguas de trabalho da União e que tenham sido concedidos a partir de 1 de Janeiro de 1978 devem incluir, pelo menos, as indicações seguintes, redigidas numa das línguas de trabalho:

3873 *a*) Nome e data de nascimento do titular;

3874 *b*) Título do certificado e data em que foi concedido;

3875 *c*) Número e prazo de validade do certificado, se for caso disso;

3876 *d*) Nome da administração que concedeu o certificado.

3877 § 4. Cada administração adopta as providências necessárias para submeter os operadores à obrigação do sigilo das correspondências previsto no n.º **2023**.

3863.1 (1) O termos «aparelhos automáticos de telecomunicação» compreende aparelhos tais como teleimpressores, aparelhos para transmissão de dados, etc.

Secção II

Categorias de certificados para os operadores de estações de navio

3878 § 5. (1) Há quatro categorias de certificados para operadores radiotelegrafistas (1). São elas:

3879 *a*) O certificado geral do operador de radiocomunicações;
3880 *b*) O certificado de operador radiotelegrafista de 1.ª classe;
3881 *c*) O certificado de operador radiotelegrafista de 2.ª classe;
3882 *d*) O certificado especial de operador radiotelegrafista.

3883 (2) Há duas categorias de certificados para operadores radiotelefonista (1): o certificado geral e o certificado restrito.

3884 § 6. (1) O titular de um certificado geral de operador de radiocomunicações ou de um certificado de operador radiotelegrafista de 1.ª ou de 2.ª classe pode assegurar o serviço radiotelegráfico ou radiotelefónico de qualquer estação de navio.

3885 (2) O titular de um certificado geral de operador radiotelefonista pode assegurar o serviço radiotelefónico de qualquer estação de navio.

3886 (3) O titular de um certificado restrito de operador radiotelefonista pode assegurar o serviço radiotelefónico de qualquer estação de navio desde que o comando do emissor apenas comporte a manobra de órgãos de comutação externos e simples, sem que seja necessário efectuar qualquer ajuste manual dos elementos que determinam a frequência, sendo o próprio emissor a manter a estabilidade das frequências nos limites das tolerâncias especificadas no apêndice 7 e não devendo a potência de ponta do emissor ser superior a 1,5 kW.

3887 (4) O certificado restrito de operador de radiotelefonista pode ser limitado exclusivamente a uma ou várias faixas de frequência do serviço móvel marítimo. Neste caso, deve fazer-se menção dessa limitação no certificado.

3888 (5) O serviço radiotelegráfico dos navios aos quais nenhum acordo internacional imponha instalação radiotelegráfica, assim como o serviço radiotelefónico das estações de navio para as quais apenas se exiga o certificado restrito de radiotelefonista, podem ser assegurados pelo titular de um certificado especial de operador radiotelegrafista.

3889 (6) Todavia, sempre que sejam satisfeitas as condições no n.º **3934,** o serviço radiotelegráfico dos navios aos quais nenhum acordo internacional imponha instalação radiotelegráfica, assim como o serviço radiotelefónico de qualquer estação de navio, podem ser assegurados pelo titular de um certificado especial de operador radiotelegrafista.

3890 § 7. Excepcionalmente, o certificado de operador telegrafista de 2.ª classe, bem como o certificado especial de operador radiotelegrafista, podem ser limitados exclusivamente ao serviço radiotelegráfico. Neste caso, deve fazer-se menção desta limitação no certificado.

Secção III

Condições de obtenção de certificados de operador

3891 **A) Generalidades**

3892 § 8. (1) As condições a impor para a obtenção dos diferentes são as mencionadas nos parágrafos seguintes. Devem ser consideradas como condições mínimas.

3893 (2) Cada administração tem a liberdade de fixar o número de exames que julge necessários para obtenção de cada certificado.

3894 § 9. (1) A administração que concede um certificado pode, antes de autorizar o seu titular a assegurar o serviço a bordo de um navio, exigir que esse operador satisfaça outras condições (por exemplo: conhecimentos de aparelhos automáticos de telecomunicação, conhecimentos técnicos e profissionais complementares relativos especialmente à navegação, aptidões físicas, etc.).

3895 (2) Convirá que as administrações tomem todas as medidas julgadas necessárias para verificar a aptidão dos operadores, quando estes tenham deixado de exercer as suas funções durante um período de tempo prolongado.

3896 (3) Todavia, no que respeita ao serviço móvel marítimo, convém que as administrações tomem igualmente todas as medidas julgadas necessárias para verificar a aptidão dos operadores em serviço.

3778.1.1 } (1) Para o emprego dos operadores titulares dos diferentes certificados, v. o artigo 56.º
3883.1 }

3897 B) Certificado geral de operador de radiocomunicações do serviço móvel marítimo

3898 § 10. Concede-se certificado geral de operador de radiocomunicações do serviço móvel marítimo aos candidatos que provarem possuir os conhecimentos e aptidões técnicas e profissionais indicados a seguir:

3899 *a*) Conhecimento tanto dos princípios gerais de electricidade como da teoria da radioelectricidade e da electrónica que permitam satisfazer as condições estipuladas nos n.os **3900, 3901** e **3902;**

3900 *b*) Conhecimento teórico dos equipamentos modernos da radiocomunicação, nomeadamente de emissores, de receptores e de sistemas de antenas utilizados no serviço móvel marítimo radiotelegráfico e radiotelefónico, dos aparelhos automáticos de alarme, da aparelhagem radioeléctrica das embarcações e outros engenhos de salvamento, dos aparelhos utilizados para a radiogoniometria e todo o material auxiliar, incluindo unidades de alimentação de energia eléctrica (motores, alternadores, geradores, conversores, rectificadores e acumuladores), assim como conhecimentos gerais de outros equipamentos habitualmente utilizados para a radionavegação, particularmente com vista a assegurar a manutenção dos aparelhos;

3901 *c*) Conhecimento prático do funcionamento, ajuste e manutenção dos equipamentos mencionados no n.º **3900,** incluindo os conhecimentos práticos necessários para a obtenção de azimutes radiogoniométricos e conhecimento dos princípios de calibração dos radiogoniométros;

3902 *d*) Conhecimentos práticos necessários para localizar e reparar, com aparelhos de medida e ferramentas apropriados, as avarias que possam ocorrer durante a viagem nos aparelhos mencionados no n.º **3900;**

3903 *e*) Aptidão para a transmissão manual correcta e recepção auditiva correcta, em código Morse, de grupos de código (misturas de letras, algarismos e sinais de pontuação), à velocidade de 16 grupos por minuto, e de um texto em linguagem clara, à velocidade de 20 palavras por minuto. Cada grupo de código deve compreender 5 caracteres, contando-se por 2 caracteres cada algarismo ou sinal de pontuação. A palavra média do texto em linguagem clara deve comportar 5 caracteres. A duração de cada prova de transmissão e de recepção é, em geral, de cinco minutos;

3904 *f*) Aptidão para a transmissão correcta e para a recepção correcta em radiotelefonia;

3905 *g*) Conhecimento dos regulamentos aplicáveis às radiocomunicações, dos documentos relativos à taxação das radiocomunicações e das disposições da Convenção para a Salvaguarda da Vida Humana no Mar, no que respeita à radioelectricidade;

3906 *h*) Conhecimentos suficientes da geografia do Mundo, especialmente das principais linhas de navegação marítima e das vias de telecomunicações mais importantes;

3907 *i*) Conhecimento de uma das línguas de trabalho da União. Os candidatos deveriam poder exprimir-se nessa língua de modo conveniente, quer verbalmente quer por escrito. Cada administração indicará a ou as línguas impostas.

3908 C) Certificado de operador radiotelegrafista de 1.ª classe

3909 § 11. Concede-se certificado de 1.ª classe aos candidatos que provarem possuir os conhecimentos e aptidões técnicas e profissionais indicados a seguir:

3910 *a*) Conhecimento tanto dos princípios gerais da electricidade como da teoria da radioelectricidade, conhecimentos de regulação e funcionamento prático dos diferentes tipos de aparelhos radiotelegráficos e radiotelefónicos utilizados no serviço móvel, incluindo os aparelhos utilizados para a radiogoniometria e obtenção de azimutes radiogoniométricos, assim como conhecimento geral dos princípios de funcionamento de outros aparelhos, habitualmente empregados para a radionavegação;

3911 *b*) Conhecimento teórico e prático do funcionamento e manutenção dos aparelhos, tais como grupos electrogéneos, acumuladores, etc., utilizados para pôr a funcionar e regular os aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos mencionados no n.º **3910;**

3912 *c*) Conhecimentos práticos necessários para reparar, com os meios existentes a bordo, as avarias que possam ocorrer nos aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos durante a travessia;

3913 *d*) Aptidão para a transmissão manual correcta e recepção auditiva correcta, em código Morse, de grupos de código (mistura de letras, algarismos e sinais de pontuação), à velocidade de 20 grupos por minuto, e de um texto em linguagem clara, à velocidade de 25 palavras por minuto. Cada grupo de código deve compreender 5 caracteres, contando-se por 2 caracteres cada algarismo ou sinal de pontuação. A palavra média do texto em linguagem clara deve comportar 5 caracteres. A duração de cada prova de transmissão e de recepção é, em geral, de cinco minutos;

3914 *e*) Aptidão para a transmissão correcta e para a recepção correcta em radiotelefonia;

3915 *f*) Conhecimento minucioso dos regulamentos aplicáveis às radiocomunicações e conhecimento dos documentos relativos à taxação das radiocomunicações e conhecimento das disposições da Convenção para a Salvaguarda da Vida Humana no Mar, no que respeita à radioelectricidade;

3916 *g*) Conhecimentos suficientes da geografia do Mundo, especialmente das principais linhas de navegação marítima e aérea, bem como das vias de telecomunicações mais importantes;

3917 *h*) Conhecimento suficiente de uma das línguas de trabalho da União. Os candidatos devem poder exprimir-se nessa língua de modo conveniente, quer verbalmente quer por escrito. Cada administração indicará a ou as línguas impostas.

3918 D) Certificado de operador de radiotelegrafistas de 2.ª classe

3919 § 12. Concede-se certificado de 2.ª classe aos candidatos que provarem possuir os conhecimentos e aptidões técnicas e profissionais indicados a seguir:

3920 *a*) Conhecimento elementar teórico e prático da electricidade e da radioelectricidade e do funcionamento prático dos diferentes tipos de aparelhos radiotelegráficos e radiotelefónicos utilizados no serviço móvel, incluindo os aparelhos utilizados para a radiogoniometria e obtenção de azimutes radiogoniométricos, bem como o conhecimento elementar dos princípios de funcionamento de outros aparelhos, habitualmente empregados para a radionavegação;

3921 *b*) Conhecimento elementar teórico e prático do funcionamento e manutenção dos aparelhos, tais como grupos electrogéneos, acumuladores, etc., utilizados para pôr a funcionar e regular os aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos mencionados no n.º **3920**;

3922 *c*) Conhecimentos práticos suficientes para poder reparar as pequenas avarias susceptíveis de ocorrer nos aparelhos radiotelegráficos, radiotelefónicos e radiogoniométricos durante a travessia;

3923 *d*) Aptidão para a transmissão manual correcta e recepção auditiva correcta, em código Morse, de grupos de código (mistura de letras, algarismos e sinais de pontuação), à velocidade de 16 grupos por minuto, e de um texto em linguagem clara, à velocidade de 20 palavras por minuto. Cada grupo de código deve compreender 5 caracteres, contando-se por 2 caracteres cada algarismo ou sinal de pontuação. A palavra média do texto em linguagem clara deve comportar 5 caracteres. A duração de cada prova de transmissão e de recepção é, em geral, de cinco minutos;

3924 *e*) Aptidão para a transmissão correcta e recepção radiotelefónicas, salvo no caso previsto no n.º **3890**;

3925 *f*) Conhecimento dos regulamentos aplicáveis às radiocomunicações, conhecimento dos documentos relativos à taxação das radiocomunicações e conhecimento das disposições da Convenção para a Salvaguarda da Vida Humana no Mar, no que respeita à radioelectricidade;

3926 *g*) Conhecimentos suficientes da geografia do Mundo, especialmente das principais linhas de navegação marítima e aérea, bem como das vias de telecomunicações mais importantes;

3927 *h*) Se necessário, conhecimento elementar de uma das línguas de trabalho da União. Os candidatos devem ser capazes de se exprimir nessa língua de modo conveniente, quer verbalmente quer por escrito. Cada administração indica a ou as línguas impostas.

3928 E) Certificado especial de operador radiotelegrafistas

3929 § 13. (1) Concede-se certificado especial de radiotelegrafista aos candidatos que provarem possuir os conhecimentos e aptidões profissionais indicados a seguir:

3930 *a*) Aptidão para transmissão manual correcta e recepção auditiva correcta, em código Morse, de grupos de código (mistura de letras, algarismos e sinais de pontuação), à velocidade de 16 grupos por minuto, e de um texto em linguagem clara, à velocidade de 20 palavras por minuto. Cada grupo de código deve compreender 5 caracteres, contando-se cada sinal de pontuação por 2 caracteres. A palavra média do texto em linguagem clara deve comportar 5 caracteres;

3931 *b*) Conhecimento da regulação do funcionamento dos aparelhos de radiotelegrafia;

3932 *c*) Conhecimento dos regulamentos aplicáveis às radiocomunicações telegráficas, especialmente da parte desses regulamentos relativa à segurança da vida humana no mar.

3933 (2) É da competência de cada administração interessada fixar as outras condições para a obtenção deste certificado. Todavia, devem ser satisfeitas as condições enunciadas nos n.ºs **3941, 3942, 3943** e **3944** ou **3945**, consoante o caso.

3934 (3) No serviço móvel marítimo é da competência de cada administração interessada fixar as outras condições para a obtenção deste certificado. Todavia, salvo nos casos previstos no n.º **3890**, as condições enunciadas nos n.ºs **3936, 3937, 3938, 3939** e **3940** devem ser satisfeitas para um tal certificado concedido aos operadores de estação de navio a partir de 1 de Janeiro de 1976.

F) Certificados de operadores radiotelefonistas

§ 14. Concede-se certificado geral de operador radiotelefonista aos candidatos que provarem possuir conhecimentos e aptidões profissionais indicados a seguir (v. igualmente os n.os **3884, 3885, 3888** e **3889**):

a) Conhecimento dos princípios elementares da radiotelefonia;

b) Conhecimento minucioso da regulação e do funcionamento prático dos aparelhos de radiotelefonia;

c) Aptidão para a transmissão correcta e recepção correcta radiotelefónicas;

d) Conhecimento minucioso dos regulamentos aplicáveis às radiocomunicações telefónicas e especialmente da parte desses regulamentos relativa à segurança da vida humana.

§ 15. (1) Concede-se certificado restrito de radiotelefonista aos candidatos que provarem possuir os conhecimentos e aptidões indicados a seguir:

a) Conhecimento prático da exploração e da forma de procedimento radiotelefónicos;

c) Aptidão para a transmissão correcta e recepção correcta telefónicas;

d) Conhecimento geral dos regulamentos aplicáveis às radiocomunicações telefónicas e especialmente da parte desses regulamentos relativa à segurança da vida humana.

(2) Para as estações telefónicas de navio cuja potência de ponta do emissor não exceda 400 W, cada administração pode fixar as condições de obtenção de um certificado restrito de radiotelefonista, desde que o funcionamento de emissor apenas exiga o emprego de dispositivos externos de comutação de concepção simples, excluindo qualquer regulação manual dos elementos que determinam a frequência, e desde que a estabilidade das frequências seja mantida pelo próprio emissor nos limites das tolerâncias fixadas no apêndice 7. Todavia, ao fixar as condições, as administrações devem assegurar-se de que o operador possui conhecimento suficiente da exploração e das formas de procedimento do serviço radiotelefónico, especialmente no que respeita ao perigo, urgência e segurança. As disposições acima indicadas em nada contradizem ao do n.º **3949.**

(3) As administrações dos países da Região 1 não concedem certificados correspondentes às disposições do n.º **3945.**

§ 16. No certificado da radiotelefonista deve indicar-se se é um certificado geral ou um certificado restrito e, neste último caso, se foi concedido em conformidade com as disposições do **n.º 3945.**

§ 17. No serviço móvel marítimo, o certificado restrito de operador radiotelefonista deve, se for cado disso, mencionar igualmente a limitação prevista no n.º **3887.**

§ 18. Para satisfazer necessidades especiais, podem acordos especiais entre as administrações fixar as condições a preencher para a obtenção de certificado de radiotelefonista destinado a ser utilizado em estações radiotelefónicas que satisfaçam certas condições técnicas e certas condições de exploração. Tais acordos só podem ser concluídos desde que, pela sua aplicação, não resulte qualquer interferência prejudicial aos serviços internacionais. Essas condições e esses acordos serão mencionados nos certificados assim concedidos.

SECÇÃO IV

Estágios profissionais

§ 19. (1) O titular de um certificado de operador de radiocomunicações ou de um certificado de operador radiotelegrafista de 1.ª ou de 2.ª classe fica autorizado a embarcar como chefe de estação num navio cuja estação esteja classificada na IV categoria (v. o n.º **4056**).

(2) Todavia, para poder embarcar como chefe de estação ou apenas como operador num navio cuja estação esteja classificada na IV categoria (v. o n.º **4056** e que, nos termos dos acordos internacionais, deve contar com um operador radiotelegrafista, o titular de um certificado geral de operador de radiocomunicações ou de um certificado de operador telegrafista de 1.ª ou de 2.ª classe tem de ter prática suficiente como operador a bordo de um navio no mar.

(3) Antes de poder embarcar como chefe de uma estação de navio de II ou III categoria (v. os n.os **4054** e **4055**), o titular de um certificado geral de operador de radiocomunicações ou de um certificado geral de operador de radiocomunicações ou de um certificado de operador de radiotelegrafista de 1.ª ou de 2.ª classe deve ter, pelo menos, seis meses de experiência como operador a bordo de um navio ou numa estação costeira, devendo, neste último caso, ter, pelo menos três meses de experiência a bordo de um navio.

(4) Antes de poder embarcar como chefe de navio de I categoria (v. o n.º **4053**) o titular de um certificado geral de operador de radiocomunicações ou de um certificado de radiotelegrafista de 1.ª classe deve ter, pelo menos, um ano de experiência como operador a bordo de um navio ou numa estação costeira, devendo, neste último caso, ter, pelo menos, seis meses de experiência a bordo de um navio

3954 a 3978 *(Não atribuídos.)*

ARTIGO 56

Pessoal das estações do serviço móvel marítimo

SECÇÃO I

Pessoal das estações costeiras

3979 § 1. As administrações tomam as previdências necessárias para garantir que nas estações costeiras o pessoal possua qualificações profissionais que lhe permitam assegurar eficazmente o serviço dessas estações.

SECÇÃO II

Classe e número mínimo de operadores nas estações a bordo de navios

3980 § 2. No que respeita ao serviço de correspondência pública, compete a cada governo tomar as providências necessárias para que as estações a bordo dos navios da sua nacionalidade estejam dotadas de pessoal suficiente para assegurar um serviço eficaz.

3981 § 3. Tendo em conta as disposições do artigo 55, o pessoal das estações de navio do serviço de correspondência pública deve comportar, pelo menos:

3982 *a*) Para estações de navio de I categoria, excepto no caso previsto no n.º **3986:** um chefe de estação titular de certificado geral de operador de telecomunicações ou de certificado de operador radiotelegrafista de 1.ª classe;

3983 *b*) Para as estações de navio de II e III categorias, excepto nos casos previstos no n.º **3986:** um chefe de estação titular de certificado geral de operador de radiocomunicações ou de certificados de operador radiotelegrafista de 1.ª ou de 2.ª classe;

3984 *c*) Para os casos de navio de IV categoria, excepto nos casos previstos nos n.ºs **3985** e **3986:** um operador titular de certificado geral de operador de radiocomunicações ou de certificado de operador radiotelegrafista de 1.ª ou de 2.ª classe;

3985 *d*) Para as estações de navio com instalação radiotelegráfica não imposta por acordos internacionais: um operador titular do certificado geral de operador de radiocomunicações ou de um certificado de operador de radiotelegrafista de 1.ª ou de 2.ª classe ou um certificado especial de operador de radiotelegrafista;

3986 *e*) Para as estações de navio que dispõem unicamente de uma instalação radiotelefónica: um operador titular quer de certificado de radiotelefonista quer de certificado de radiotelegrafista.

3987 a 4011 *(Não atribuídos.)*

ARTIGO 57

Inspecção das estações de navio e das estações terrenas de navio

4012 § 1. (1) Os governos ou as administrações competentes dos países onde uma estação de navio ou uma estação terrena de navio faça escala podem exigir a apresentação da licença para a examinarem. O operador da estação, ou a pessoa responsável pela estação, deve prestar-se a esta verificação. A licença deverá conservar-se de maneira a poder ser apresentada quando pedida. Na medida do possível, a licença, ou uma cópia autenticada pela autoridade que a concedeu, deverá estar afixada permanentemente no local da estação.

4013 (2) Os inspectores devem possuir um cartão ou um distintivo de identidade passado pelas autoridades competentes, que devem mostrar o pedido do comandante ou da pessoa responsável pelo navio ou por qualquer outra embarcação em que se encontre a estação de navio ou a estação terrena de navio.

4014 (3) Quando a licença não possa ser apresentada, ou se verifiquem manifestas anomalias, os governos ou administrações podem mandar proceder à inspecção das instalações radioeléctricas, a fim de se assegurarem de que elas satisfazem as disposições do presente Regulamento.

4015 (4) Os inspectores têm, além disso, o direito de exigir a apresentação dos certificados dos operadores, mas não podem pedir qualquer justificação de conhecimento profissionais.

4016 § 2. (1) Quando um governo ou uma administração se vir obrigado a recorrer à medida prevista no n.º **4014,** ou quando não se apresentem os certificados de operador, deverá informar-se sem demora o governo ou a administração de que depende a estação de navio ou a estação terrena de navio em causa. Além disso, aplicam-se, se necessário, as disposições do artigo 21.

4017 (2) Antes de se retirar do navio ou de qualquer outra embarcação em que se encontre a estação de navio ou a estação terrena de navio o inspector deverá comunicar as suas observações ao comandante ou à pessoa responsável. No caso de infracção às disposições do presente Regulamento, o inspector apresenta o seu relatório por escrito.

4018 § 3. Os Membros da União comprometem-se a não impor às estações estrangeiras ou às estações terrenas de navio estrangeiras que se encontrem temporariamente nas suas águas territoriais ou que se detenham temporariamente no seu território condições técnicas e de exploração mais rigorosas do que as previstas no presente Regulamento. Esta prescrição em nada afecta as disposições que dependem de acordos internacionais relativos à navegação marítima e não previstas no presente Regulamento.

4019 a 4043 *(Não atribuídos.)*

ARTIGO 58

Horários das estações do serviço móvel marítimo

4044 § 1. A fim de permitir a aplicação das regras seguintes relativas às horas de vigília, qualquer estação do serviço móvel marítimo deve ter um relógio que regule bem e esteja certo pelo tempo universal coordenado (UTC).

4045 § 2. O tempo universal coordenado (UTC), contado das 00.00 às 23.59 horas a partir da meia-noite, empregar-se-á para todas as inscrições no diário do serviço de radiocomunicação e em todos os documentos análogos dos navios obrigatoriamente munidos de aparelhos de radiocomunicação em consequência de acordo internacional. O mesmo se observará, tanto quanto possível, nos outros navios.

SECÇÃO II

Estações costeiras

4046 § 3. (1) O serviço das estações costeiras é, tanto quanto possível, permanente de dia e de noite. Todavia, o serviço de certas estações pode ser de duração limitada. Cada administração ou exploração particular reconhecida devidamente autorizada para o efeito fixa o horário de serviço das estações suas dependentes.

4047 (2) Esses horários são notificados ao secretário-geral, que os publica na nomenclatura das estações costeiras.

4048 § 4. As estações costeiras cujo serviço não é permanente não podem encerrar antes de terem:

4049 *a*) Terminado todas as operações motivadas por uma chamada de perigo ou um sinal de urgência ou de segurança;

4050 *b*) Escoado todo o tráfego originário ou destinado às estações de navio que se encontram na sua zona de serviço e que assinalaram a sua presença antes da cessação efectiva do trabalho;

4051 *c*) Feito uma chamada geral a todas as estações para anunciar o fecho do serviço e indicar a hora de reabertura, se esta foi diferente das suas horas normais de serviço.

SECÇÃO III

Estações de navio

4052 § 5. (1) Para o serviço internacional de correspondência pública, as estações de navio classificam-se em quatro categorias:

4053 *a*) Estações de I categoria: estas estações desempenham um serviço permanente;

4054 *b*) Estações de II categoria: estas estações desempenham um serviço de 16 horas por dia;

4055 *c*) Estações de III categoria: estas estações desempenham um serviço de 8 horas por dia;

4056 *d*) Estações de IV categoria: estas estações desempenham um serviço de duração mais limitada que o das estações de III categoria ou um serviço cuja duração o presente Regulamento não fixa.

4057 (2) Cada administração determina as regras segunda as quais as estações de navio suas dependentes são repartidas pelas quatro categorias acima definidas.

4058 § 6. (1) As estações de navio classificadas na II categoria assegurão o serviço durante as seguinte horas:

00.00-04.00
08.00-12.00
16.00-18.00
20.00-22.00
} hora local do navio ou hora do fuso horário;

e durante quatro horas fixadas pela administração, pelo comandante ou pela pessoa responsável, a fim de satisfazer as necessidades essenciais do navio em matéria de comunicações, tendo em conta as condições de propagação e as necessidades do tráfego.

4059 (2) As estações de navio classificadas na III categoria assegurarão o serviço durante as seguintes horas: 08.00-12.00 — hora local do navio ou hora do fuso horário;

e duas horas seguidas entre as 18.00 e as 22.00 horas, local do navio ou do fuso horário, fixadas pela administração, pelo comandante ou pela pessoa responsável, e ainda durante duas horas fixadas pela administração, pelo comandante ou pela pessoa responsável, a fim de satisfazer as necessidades essenciais do navio em matéria de comunicações, tendo em conta as condições de propagação e as necessidades do tráfego.

4060 (3) Cada administração decide-se a hora local do navio observada pelos seus navios deve ser ou não a hora do fuso horário, conforme indicado no apêndice 12 (v. os n.os **4058** e **4059**).

4061 (4) No caso de curtas travessias, essas estações asseguram o serviço durante o horário fixado pelas administrações de que dependem.

4062 § 7. Recomenda-se às estações de navio de IV categoria que assegurem o serviço das 08.30 às 09.30 horas, hora local do navio ou hora do fuso horário.

4063 § 8. (1) As estações de navio cujo serviço não é permanente só podem encerrar depois de :

4064 *a*) Terem terminado todas as operações motivadas por uma chamada de perigo ou um sinal de urgência ou de segurança;

4065 *b*) Terem escoado, tato quanto praticamente possível, todo o tráfego originário ou destinado às estações costeiras que se encontram na sua zona de serviço e das estações de navio que, encontrando-se na sua zona de serviço, assinalaram a sua presença antes da cessação efectiva do trabalho.

4066 (2) Uma estação de navio que não tenha horário de serviço determinado deve informar a ou as estações costeiras com as quais está em comunicação das horas de encerramento e de reabertura do seu serviço.

4067 § 9. (1) Qualquer estação de navio, ao chegar a um porto e cujo serviço está, por consequência, prestes a cessar, deve:

4068 *a*) Avisar desse facto a estação costeira mais próxima e, sento útil, as outras estações costeiras com que em geral se corresponde;

4069 *b*) Proceder ao encerramento só depois de estar concluído o tráfego pendente, a não ser que as disposições em vigor no país em que faz escala o não permitam.

4070 (2) Por ocasião da saída do porto, a estação de navio deve informar da sua reabertura a ou as estações costeiras interessadas, desde que essa reabertura lhe seja consentida pelas disposições em vigor no país do porto de saída. Todavia, uma estação de navio cujo horário não seja fixado no presente Regulamento pode esperar o próprio momento da sua reabertura, depois da partida do porto, para informar do facto a ou as estações costeiras interessadas.

4071 a 4095 *(Não atribuídos.)*

ARTIGO 59

Condições a satisfazer no serviço móvel marítimo e no serviço móvel por satélite

SECÇÃO I

Serviço móvel marítimo

4096 A) Disposições gerais

4097 § 1. As estações de navio devem ser estabelecidas de modo que satisfaçam as disposições dos capítulos III e XI, no que respeita às frequências e classes de emissão.

4098 § 2. As frequências de emissão das estações de navio deverão ser verificadas o maior número de vezes possível pelo serviço de inspecção de que as estações dependem.

4099 § 3. A energia radiada pelos aparelhos receptores deverá ser tão reduzida quanto possível e não deverá causar interferência prejudicial às outras estações.

4100 § 4. As administrações tomam todas as medidas práticas necessárias para que o funcionamento dos aparelhos eléctricos ou electrónicos de qualquer natureza instalados nas estações de navio não cause interferência prejudicial aos serviços radioeléctricos essenciais das estações que funcionam de acordo com as disposições do presente Regulamento.

4101 § 5. (1) As mudanças de frequência nos aparelhos emissores e receptores de qualquer estação de navio deverão poder efectuar-se tão rapidamente quanto possível.

4102 (2) As instalações de qualquer estação de navio devem permitir, uma vez estabelecida a comunicação passar da emissão à recepção, e vice-versa, num tempo tão curto quanto possível.

4103 § 6. É proibido às estações de navio no mar efectuar serviço de radiodifusão (v. o n.° **36** e, igualmente, o n.° **2665**.)

4104 § 7. As estações de navio, exceptuando as estações de engenho de salvamento, deverão estar providas com os documentos de serviço indicados na secção pertinente do apêndice 11.

4105 § 8. Quando o emissor de uma estação de navio não seja susceptível de ser regulado de maneira que a frequência satisfaça a tolerância fixada no apêndice 7, a estação de navio deve estar munida de um dispositivo que lhe permita medir a frequência de emissão com uma precisão, pelo menos, igual a metade daquela tolerância.

4106 B) Estações de navio que utilizam a radiotelegrafia

4107 § 9. As estações de navio providas de aparelhos radioeléctricos destinados a ser utilizados para o tráfego normal em telegrafia morse devem estar equipadas com dispositivos quer permitam passar da emissão à recepção, e vice-versa, sem manobra de comutação. Convém, além disso, que as estações de navio possam escutar na frequência de recepção durante os períodos de emissão.

4108 B1) Faixas compreendidas entre 405 kHz e 535 kHz

4109 § 10. Os emissores utilizados nas estações de navio que funcionam nas faixas autorizadas compreendidas entre 405 kHz e 535 kHz devem ser providos de dispositivos que permitam, de maneira fácil, reduzir apreciavelmente a potência.

4110 § 11. Qualquer estação de navio provida de aparelhos radiotelegráficos destinados a funcionar nas faixas autorizadas compreendidas entre 405 kHz e 535 kHz deve poder:

4111 *a*) Efectuar emissões das classes A2A e A2B (*) ou H2B (*) e receber emissões das classes A2A, A2B (*), H2A e H2B (*) na frequência portadora de 500 kHz;

4112 *b*) Efectuar, além disso, emissões da classe A1A e da classe A2A ou H2A, pelo menos, em duas frequências de trabalho;

4113 *c*) Receber, além disso, emissões das classes A1A, A2A e H2A em todas as outras frequências necessárias à execução do seu serviço.

4114 § 12. As disposições dos n.os **4112** e **4113** não se aplicam aos aparelhos previstos unicamente para os casos de perigo, de urgência ou de segurança.

4115 B2) Faixas compreendidas entre 1605 kHz e 2850 kHz

4116 § 13. Na Região 2, qualquer estação radiotelegráfica instalada a bordo de um navio utilizando a faixa 2089,5-2092,5 kHz para a chamada e a resposta deve dispor de, pelo menos, uma outra frequência nas faixas autorizadas compreendidas entre 1605 kHz e 2850 kHz.

4117 B3) Faixas compreendidas entre 4000 kHz e 27 500 kHz

4118 § 14. Todos os aparelhos de estação de navio que utilizam emissões da classe A1A nas frequências das faixas autorizadas compreendidas entre 4000 kHz e 27 500 kHz devem satisfazer as seguintes condições:

4119 *a*) Em cada uma das faixas necessárias à execução do seu serviço devem permitir o emprego de, pelo menos, duas frequências de trabalho, além de uma frequência da faixa de chamada (v. o n.º **4306**);

4120 *b*) As mudanças de frequência nos aparelhos emissores devem poder efectuar-se tão rapidamente quanto possível e, em qualquer caso, em menos de quinze segundos;

4121 *c*) Os aparelhos receptores devem apresentar as mesmas qualidades que os aparelhos emissores no que se refere a mudança de frequência.

4122 C) Estações de navio que utilizam a telegrafia com impressão directa de faixa estreita

4123 § 15. As características dos aparelhos de telegrafia com impressão directa de faixa estreita devem estar de acordo com as disposições do apêndice 38.

4124 D) Estações de navio que utilizam a radiotelefonia

4125 D1) Faixas compreendidas entre 1605 kHz e 4000 kHz

4126 § 16. Qualquer estação de navio provida de aparelhos radiotelefónicos destinados a funcionar nas faixas autorizadas compreendidas entre 1605 kHz e 2850 kHz deve poder:

4127 *a*) Efectuar emissões das classes A3E e H3E na frequência portadora de 2182 kHz e receber emissões das classes A3E e H3E na frequência portadora de 2182 kHz. Todavia, a partir de

---

(*) Isto permite a recepção automática de sinais radiotelegráficos de alarme.

1 de Janeiro de 1982 as emissões da classe A3E não serão mais autorizadas na frequência portadora de 2182 kHz, excepto para os aparelhos a que se refere o n.º **4130**;

4128 *b*) Efectuar, além disso, emissões das classes:

1) A3E, ou
2) H3E, R3E,e J3E (1);

em duas frequências de trabalho, pelo menos (2). Todavia, a partir de 1 de Janeiro de 1982 as emissões das classes A3E e H3E deixarão de ser autorizadas nas frequências de trabalho;

4129 *c*) Receber, além disso, emissões das classes:

1) A3E e H3E, ou
2) A3E, H3E, R3E, e J3E;

em todas as frequências necessárias à execução do seu serviço. Todavia, a partir de 1 de Janeiro de 1982 deixará de ser exigida a capacidade para receber emissões das classes A3E e H3E.

4130 § 17. As disposições dos n.ºs **4128** e **4129** não se aplicam aos aparelhos previstos unicamente para casos de perigo, urgência e segurança.

4131 **D2) Faixas compreendidas entre 4000 kHz e 23 000 kHz**

4132 § 18. Na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N. é conveniente que todas as estações de navio providas de aparelhos radiotelefónicos destinados a funcionar nas faixas autorizadas compreendidas entre 4000 kHz e 23 000 kHz possam emitir e receber nas frequências portadoras de 4125 kHz e 6215,5 kHz (v. os n.ºs **2982** e **2896**).

4133 **D3) Faixas compreendidas entre 156 MHz e 174 MHz**

4134 § 19. Qualquer estação de navio provida de aparelhos radiotelefónicos destinados a funcionar nas faixas autorizadas compreendidas entre 156 MHz e 174 MHz (v. o n.º **613** e o apêndice 189) deve poder efectuar e receber emissões da classe G3E (v. a Resolução n.º 308):

4135 *a*) Na frequência de perigo, de segurança e de chamada 156,8 MHz;
4136 *b*) Na primeira frequência «navio-navio» 156,3 MHz;
4137 *c*) Em todas as frequências necessárias à execução do seu serviço.

Secção II

Condições a satisfazer pelas estações terrenas de navio

4138 § 20. As estações terrenas de navio devem ser estabelecidas de modo que satisfaçam as disposições do capítulo III no que respeita às frequências.

4139 § 21. As frequências das emissões das estações terrenas de navio devem ser verificadas o maior número de vezes possível pelo serviço de inspecção de que dependem.

4140 § 22. A energia radiada pelos aparelhos receptores deve ser tão reduzida quanto possível na prática e não deve causar interferência prejudicial às outras estações.

4141 § 23. As administrações tomam todas as medidas práticas necessárias para que o funcionamento dos aparelhos eléctricos ou electrónicos de qualquer natureza instalados nas estações terrenas de navio não cause interferência prejudicial aos serviços radioeléctricos essenciais dessas estações que funcionam de acordo com as disposições do presente Regulamento.

Secção III

Comunicações de aeronaves com estações do serviço móvel marítimo e do serviço móvel marítimo por satélite

4142 A) Disposições gerais

4143 § 24. (1) As estações a bordo de aeronaves podem comunicar com as estações do serviço móvel marítimo ou do serviço móvel marítimo por satélite. Elas devem então satisfazer as disposições do presente Regulamento relativas a esses serviços.

4128.1 (1) Até 1 de Janeiro de 1982 as administrações podem, em certas zonas, restringir esta cláusula às emissões das classes H3E e J3E nas frequências de trabalho.

4128.2 (2) Em certas zonas, as administrações podem restringir esta cláusula a uma única frequência de trabalho.

4144 (2) É conveniente que, para esse fim, as estações a bordo de aeronaves utilizem as frequências atribuídas ao serviço móvel marítimo ou ao serviço móvel marítimo por satélite.

4145 (3) Quando transmitem ou recebem correspondência pública por intermédio das estações do serviço móvel marítimo ou do serviço móvel marítimo por satélite, as estações a bordo de aeronaves devem proceder de acordo com todas as disposições aplicáveis à transmissão da correspondência pública no serviço móvel marítimo ou no serviço móvel marítimo por satélite (v. especialmente os artigos 61, 62, 63, 65 e 66).

4146 § 25. Quando se trate de uma comunicação entre uma estação do serviço móvel marítimo e uma estação de aeronave, a chamada poderá recomeçar cinco minutos depois, não obstante as disposições do n.º **4735.**

4147 B) Disposições relativas à utilização das frequências compreendidas entre 156 MHz e 174 MHz

4148 § 26. (1) Em virtude das interferências que as estações de aeronave a altitudes elevadas podem causar, as frequências do serviço móvel marítimo compreendidas nas faixas superiores a 30 MHz não devem ser utilizadas pelas estações de aeronave, com excepção das frequências compreendidas entre 156 MHz e 174 MHz que estão especificadas no apêndice 18 e cuja utilização está sujeita às condições seguintes:

4149 *a*) A altitude das estações de aeronave não deve ultrapassar 300 m (1000 pés), excepto para as aeronaves de reconhecimento que participam nas operações dos quebra-gelos, às quais é autorizada uma altitude de 450 m (1500 pés);

4150 *b*) A potência média dos emissores das estações de aeronave não deve exceder 5 W. Todavia, na medida do possível, deve utilizar-se uma potência igual ou inferior a 1 W;

4151 *c*) As estações de aeronave devem utilizar as vias designadas para o efeito no apêndice 18;

4152 *d*) Salvo o previsto no n.º **4150**, os emissores das estações de aeronave devem satisfazer as características técnicas indicadas no apêndice 19;

4153 *e*) As comunicações de uma estação de aeronave devem ser breves e limitar-se às operações nas quais as estações do serviço móvel marítimo desempenham o papel principal e em que é necessário estabelecer comunicações directas entre a aeronave e a estação de navio ou a estação costeira.

4154 (2) As frequências de 165,3 MHz e 156,8 MHz podem ser utilizadas pelas estações de aeronave, mas unicamente para fins relativos à segurança.

4155 a 4179 *(Não atribuídos.)*

ARTIGO 60

Disposições especiais relativas à utilização das frequências no serviço móvel marítimo

SECÇÃO I

Disposições gerais

4180 A) Emissões radiotelegráficas de faixa lateral única

4181 § 1. As estações que efectuam emissões radiotelegráficas de faixa lateral única utilizam para esse fim a faixa lateral superior. As frequências especificadas no presente Regulamento para emissões das classes H2A e H2B (*), tais como as frequências de 410 kHz, 425 kHz, 454 kHz, 468 kHz, 480 kHz, 500 kHz, 512 kHz e 8364 kHz, são utilizadas como frequências portadoras.

4182 B) Faixas compreendidas entre 405 kHz e 535 kHz

4183 § 2. As estações de navio autorizadas a funcionar nas faixas compreendidas entre 415 kHz e 535 kHz devem emitir nas frequências indicadas no presente artigo (v. o n.º **4237**), excepto nos casos previstos no n.º **961.**

4184 § 3. Como regra geral, o espaçamento mínimo entre frequências adjacentes utilizadas, respectivamente, por estações costeiras e estações de navio é de 4 kHz.

4185 § 4. Na Região 1 não será consignada às estações costeiras qualquer frequência da faixa 405-415 kHz, a fim de proteger a frequência de 410 kHz, designada para o serviço de radionavegação marítima (radiogoniometria).

4186 § 5. Na zona africana da Região 1, a consignação de frequências às estações costeiras que funcionam nas faixas 415-490 kHz e 510-525 kHz é efectuada, como regra geral, na base de um espaçamento de 3 kHz

(*) Isto permite a recepção automática de sinais radiotelegráficos de alarme.

entre frequências adjacentes. Todavia, esse espaçamento é reduzido em certos casos, a fim de que as frequências possam coincidir com as utilizadas na zona europeia nas mesmas faixas.

4187 C) Faixas compreendidas entre 1605 kHz e 4000 kHz

4188 § 6. (1) Na Região 1 é conveniente que as frequências consignadas às estações que funcionam nas faixas compreendidas entre 1606,5 kHz e 3800 kHz (v. o artigo 8) sejam escolhidas, na medida do possível, nas seguintes faixas:

1606,5-1625 kHz: exclusivamente radiotelegrafia;
1625-1670 kHz: radiotelefonia de pequena potência;
1670-1950 kHz: estações costeiras;
1950-2053 kHz: emissões das estações de navio destinadas às estações costeiras;
2053-2065 kHz: comunicações de navios entre si;
2065-2170 kHz: emissões das estações de navio destinadas às estações costeiras;
2170-2173,5 kHz: chamada das estações de navio pelas estações costeiras (incluindo a chamada selectiva) e, a título excepcional, transmissão de mensagens de segurança pelas estações costeiras;
2173,5-2190,5 kHz: *faixa de guarda da frequência de perigo e chamada 2182 kHz;*
2190,5-2194 kHz: chamada das estações costeiras pelas estações de navio;
2194-2440 kHz: comunicações de navios entre si;
2440-2578 kHz: emissões das estações de navio com destino às estações costeiras;
2578-2850 kHz: estações costeiras;
3155-3340 kHz: emissões das estações de navio com destino às estações costeiras;
3340-3400 kHz: comunicações de navios entre si;
3500-3600 kHz: comunicações de navios entre si;
3600-3800 kHz: estações costeiras.

4189 (2) Sempre que possível, as frequências destas faixas consignadas na Região 1 são espaçadas de:

7 kHz, quando as duas frequências adjacentes são utilizadas para a radiotelefonia por faixa lateral dupla:
3 kHz, quando as duas frequências adjacentes são utilizadas para a radiotelegrafia;
5 kHz, quando as duas frequências adjacentes são utilizadas uma para a radiotelefonia por faixa lateral dupla e a outra para a radiotelegrafia.

4190 (3) Todavia, nas faixas atribuídas na Região 1 às comunicações entre navios, o espaçamento entre frequências adjacentes utilizadas para a radiotelefonia por faixa lateral dupla é reduzido a 5 kHz.

4191 (4) Quando estas faixas são utilizadas para a radiotelefonia por faixa lateral única, uma estação que funciona na metade inferior de uma via de dupla faixa lateral utiliza a faixa lateral superior com uma frequência portadora 3 kHz inferior à frequência central dessa via.

4192 (5) Todavia, nas faixas atribuídas às comunicações entre navios, a frequência portadora de uma estação que funciona na metade inferior de uma via de dupla faixa lateral é apenas 2,5 kHz inferior à frequência central dessa via.

4193 § 7. Nas Regiões 2 e 3 as frequências portadoras de 2635 kHz (frequência consignada 2636,4 kHz) e de 2638 kHz (frequência consignada 2639,4 kHz), além das frequências prescritas para utilização comum em certos serviços, são utilizadas como frequências de trabalho navio-navio pelas estações radiotelefónicas de navio em faixa lateral única. A frequência portadora de 2635 kHz pode ser utilizada somente para emissões das classes R3E e J3E. A frequência portadora de 2638 kHz pode ser utilizada para emissões das classes A3E, H3E, R3E e J3E. Todavia, as emissões das classes A3E e H3E deixam de estar autorizadas a partir de 1 de Janeiro de 1982. Na Região 3 essas frequências são protegidas por uma faixa de guarda compreendida entre 2634 kHz e 2642 kHz.

4194 § 8. A frequência consignada de uma via radiotelefónica em faixa lateral única é 1400 superior à frequência portadora.

4195 D) Faixas compreendidas entre 4000 kHz e 27 500 kHz

4196 § 9. (1) As faixas atribuídas em exclusivo ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz (v. o artigo 8) são subdivididas do modo seguinte:

4197 *a) Estação de navio,* telefonia, exploração dúplex (vias de duas frequências):

4063-4143,6 kHz;
6200-6218,6 kHz;
8195-8291,1 kHz;
12 330-12 429,2 kHz;
16 460-16 587,1 kHz;
22 000-22 124 kHz;

4198 *b) Estações costeiras,* telefonia, exploração dúplex (vias de duas frequências):

4357,4-4438 kHz;
6506,4-6525 kHz;
8718,9-8815 kHz;
13 100,8-13 200 kHz;
17 232,9-17 360 kHz;
22 596-22 720 kHz;

4199 *c) Estações de navio e estações costeiras,* telefonia, exploração *simplex* (vias de uma frequência) e exploração de faixas cruzadas entre navios (duas frequências):

4143,6-4146,6 kHz;
6218,6-6224,6 kHz;
8291,1-8297,3 kHz;
12 429,2-12 439,5 kHz;
16 587,1-16 596,4 kHz;
22 124-22 139,5 kHz;

4200 *d) Estações de navio,* telegrafia de faixa larga, fac-símile e sistemas especiais de transmissão:

4146,6-4162,5 kHz;
4166-4170 kHz;
6224,6-6244,5 kHz;
6248-6256 kHz;
8300-8328 kHz;
8331,5-8343,5 kHz;
12 439,5-12 479,5 kHz;
12 483-12 491 kHz;
16 596,4-16 636,5 kHz;
16 640-16 660 kHz;
22 139,5-22 160,5 kHz;
22 164-22 192 kHz;

4201 *e) Estações de navio,* transmissão de dados oceanográficos [v. a nota *c*) do apêndice 31]:

4162,5-4166 kHz;
6244,5-6248 kHz;
8328-8331,5 kHz;
12 479,5-12 483 kHz;
16 636,5-16 640 kHz;
22 160,5-22 164 kHz;

4202 *f) Estações de navio,* sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados, com velocidades de modulação não superiores a 100 bauds (frequências emparelhadas com as indicadas no n.º **4207**).

4170-4177,25 kHz;
6256-6267,75 kHz;
8343,5-8357,25 kHz;
12 491-12 519,75 kHz;
16 660-16 694,75 kHz;
22 192-22 225,75 kHz;

4203 *g) Estações de navio,* sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados, com velocidades de modulação não superiores a 100 bauds (frequências não emparelhadas):

4177,25-4179,75 kHz;
626,75-6269,75 kHz;
8297,3-8300 kHz;
8357,25-8357,75 kHz;
12 519,75-12 526,75 kHz;
16 694,75-16 705,8 kHz;
22 225,75-22 227 kHz;
25 076-25 090,1 kHz;

4204 *h*) *Estações de navio,* telegrafia, morse de classe A1A, Chamada:

4179,75-4187,2 kHz;
6269,75-6280,8 kHz;
8359,75-8374,4 kHz;
12 539,6-12 561,6 kHz;
16 719,8-16 748,8 kHz;
22 227-22 247 kHz;
25 070-25 076 kHz;

4205 *i*) *Estações de navio,* chamada selectiva numérica:

4187,2-4188 kHz;
6280,8-6282 kHz;
8374,4-8376 kHz;
12 561,6-12 564 kHz;
16 748,8-16 752 kHz;
22 247-22 250 kHz;

4206 *j*) *Estações de navio,* telegrafia morse de classe A1A, trabalho:

4188-4299,4 kHz;
6282-6325,4 kHz;
8357,75-8359,75 kHz;
8376-8435,4 kHz;
12 526,75-12 539,6 kHz;
12 564-12 652,3 kHz;
16 705,8-16 719,8 kHz;
16 752-16 859,4 kHz;
22 250-22 310,5 kHz;
25 090,1-25 110 kHz:

4207 *k*) *Estações costeiras,* sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados, com velocidades de modulação não superiores a 100 bauds (frequências emparelhadas com as indicadas no n.° **4202**);

4349,4-4356,75 kHz;
6493,9-6505,75 kHz;
8704,4-8718,25 kHz;
13 070,8-13 099,75 kHz;
17 196,9-17 231,75 kHz;
22 561-22 594,75 kHz;

4208 *l*) *Estações costeiras,* chamada selectiva numérica:

4356,75-4357,4 kHz;
6505,75-6506,4 kHz;
8718,25-8718,9 kHz;
130 99,75-13 100,8 kHz;
17 231,75-17 232,9 kHz;
22 594,75-22 596 kHz;

4209 *m*) *Estações costeiras,* telegrafia morse de classe A1A e telegrafia de faixa larga, fac-símile, sistemas especiais de transmissão de dados e telegrafia com impressão directa:

4219,4-4349,4 kHz;
6325,4-6493,9 kHz;
8435,4-8704,4 kHz;
12 652,3-13 070,8 kHz;
16 859,4-17 196,9 kHz;
22 310,5-22 561 kHz.

4210 (2) Podem consignar-se às estações costeiras as frequências das faixas 25 010-25 070 kHz, 25 110-25 600 kHz e 26 100-27 500 kHz.

4211 § 10. (1) O apêndice 16 indica as vias radiofónicas nas faixas de frequências indicadas nos n.os **4197** e **4199.**

4212 (2) O plano de adjudicação de frequências às estações costeiras radiotelefónicas em ondas decamétricas consta do apêndice 25 Mar2.

4213 E) Faixas compreendidas entre 156 MHz e 174 MHz

4214 § 11. Convém que o serviço do movimento de navios seja explorado unicamente nas frequências atribuídas ao serviço móvel marítimo na faixa 156-174 MHz.

SECÇÃO II

Emprego das frequências em radiografia

4215 A) Generalidades

4216 § 12. Sempre que no presente Regulamento se faça menção no que respeita ao serviço móvel marítimo, à classe de emissão A2A, A2B (*), H2A ou H2B (**), o tipo de transmissão considerado é, excepto para fins de chamada selectiva, a telegrafar por manipulação por tudo ou nada da emissão modulada, com exclusão da manipulação por tudo ou nada de apenas as frequências acústicas de modulação.

4217 B) Faixas compreendidas entre 405 kHz e 535 kHz

B1) Chamada e resposta

4218 § 13. (1) A frequência de 500 kHz é a frequência internacional de perigo em radiotelegrafia (v. o n.º **2970** para os pormenores da sua utilização nas comunicações de perigo, de segurança e de urgência).

4219 (2) Além desse fim, a frequência de 500 kHz só poderá ser utilizada:

4220 *a*) Para a chamada e a resposta (v. os n.os **4225** e 4229);

4221 *b*) Pelas estações costeiras, para anunciarem a emissão das suas listas de chamadas, nas condições previstas nos n.os **4727, 4728** e **4729**.

4222 (3) A fim de facilitar a recepção das chamadas de perigo, as outras emissões na frequência de 500 kHz devem reduzir-se ao mínimo e a sua duração não deve ultrapassar um minuto.

4223 (4) Antes de emitir na frequência de 500 kHz, uma estação deve escutar essa frequência durante um espaço de tempo suficiente, a fim de se certificar de que não está em curso qualquer tráfego de perigo (v. o n.º **4713**).

4224 (5) As disposições do n.º **4223** não se aplicam às estações em perigo.

4225 § 14. (1) A frequência geral de chamada que, excepto no caso indicado no n.º **4849,** devem utilizar todas as estações de navio ou todas as estações costeiras que funcionem em radiografia nas faixas autorizadas entre 405 kHz e 535 kHz, assim como as aeronaves que desejem entrar em comunicação com uma estação do serviço marítimo que utilize frequências dessas faixas, é a frequência de 500 kHz.

4226 (2) Contudo, a fim de reduzir as interferências nas regiões de tráfego intenso, as administrações podem considerar como satisfeitas as disposições do n.º **4225** quando as frequências chamada consignadas às estações costeiras abertas à correspondência pública não se afastem mais de 3 kHz da frequência geral de chamada de 500 kHz.

4227 § 15. (1) Uma estação de navio que chama uma estação costeira deve, sempre que possível, especialmente nas zonas de tráfego intenso, indicar à estação costeira que está apta a receber na frequência de trabalho dessa estação.

4228 (2) A estação de navio deve assegurar-se previamente de que essa frequência não está já a ser utilizada pela estação costeira.

4229 § 16. (1) A frequência de resposta a uma chamada emitida na frequência geral de chamada (v. o n.º **4225**) é:

Quer a frequência de 500 kHz;
Quer a frequência indicada pela estação que chama (v. os n.os **4227** e **4769**).

4230 (2) Nas regiões de tráfego intenso, uma estação costeira pode responder às chamadas dos navios da sua própria nacionalidade, conforme arranjos especiais efectuados pela administração interessada (v. o n.º **4769**).

4231 § 17. Na frequência de 500 kHz podem ser feitas chamadas selectivas, de acordo com as disposições do artigo 62, no sentido estação costeira-navio e navio-estação costeira e entre navios.

B2) Tráfego

4232 § 18. (1) As estações costeiras que funcionam nas faixas autorizadas entre 405 kHz e 535 kHz devem estar em condições de utilizar, pelo menos, uma frequência além da frequência de 500 kHz. Uma dessas

---

(*) Isto permite a recepção automática de sinais radiotelegráficos de alarme.
(**) Isto permite a recepção automática de sinais radiotelegráficos de alarme e a chamada selectiva.

frequências adicionais, impressas em normando na nomenclatura das estações costeiras, é a frequência normal de trabalho da estação.

4233 (2) Além da sua frequência normal de trabalho, as estações costeiras podem utilizar, nas faixas autorizadas, frequências suplementares, mencionadas na nomenclatura das estações costeiras em caracteres ordinários. Todavia a faixa 405-415 kHz é atribuída à radiogoniometria e só poderá ser utilizada pelo serviço móvel marítimo nas condições fixadas no capítulo III.

4234 (3) As frequências de trabalho das estações costeiras devem ser escolhidas de modo a evitar interferir as estações vizinhas.

4235 (4) Convém que, nas regiões de tráfego intenso, as estações costeiras e as estações de navio usem emissões de classe A1A nas suas frequências de trabalho.

4236 § 19. Por exemplo às disposições dos n.os **2970, 4219, 4220** e **4221** e com a condição de não interferir os sinais de perigo, de urgência, de segurança, de chamada e de resposta, a frequência de 500 kHz pode utilizar-se com discrição, para a radiogoniometria, foras das regiões de tráfego intenso.

4237 § 20. (1) As estações de navio que funcionam nas faixas autorizadas entre 405 kHz e 535 kHz devem utilizar frequências de trabalho escolhidas entre as seguintes: 425 kHz, 454 kHz, 468 kHz, 480 kHz e 512 kHz, excepto nos casos em que são satisfeitas as condições especificadas no n.° **961**.

4238 (2) Nenhuma estação costeira é autorizada a emitir nas frequências de trabalho reservadas ao uso das estações de navio no mundo inteiro.

4239 (3) As estações de navio podem utilizar a frequência de 512 kHz como frequências de chamada suplementar quando se esteja a utilizar a frequência de 500 kHz para o serviço de perigo.

4240 (4) Durante esses períodos as estações costeiras podem:

4241 *a*) Utilizar a frequência de 512 kHz como frequência suplementar de chamada e de resposta; *ou*

4242 *b*) Aplicar, para a chamada e a resposta, outras disposições, que devem ser especificadas na Nomenclatura das estações costeiras.

4243 (5) Quando a frequência de 500 kHz for utilizada para o serviço de perigo, as estações de navio não deverão empregar a frequência de 512 kHz como frequência de trabalho nas zonas em que ela é utilizada como frequência de chamada suplementar.

4244 C) Faixas compreendidas entre 1605 kHz e 4000 kHz

C1) Região 2

4245 § 21. Na Região 2, as frequências da faixa 2068,5-2078,5 kHz são consignadas às estações de navio equipadas com sistemas telegráficos de faixa larga, fac-símile e sistemas especiais de transmissão. São aplicáveis as disposições do n.° **4254**.

C2) Disposições suplementares aplicáveis somente nas zonas da Região 3 situadas ao norte do Equador

4246 § 22. (1) A faixa 2089,5-2092.5 kHz é a faixa das frequências de chamada e de segurança em radiotelegrafia nas faixas compreendidas entre 1605 kHz e 2850 kHz em que é admitida a radiotelegrafia.

4247 (2) As frequências da faixa 2089,5-2092,5 kHz podem ser utilizadas para a chamada, a resposta e a segurança. Essas frequências podem também ser utilizadas para a transmissão de mensagens precedidas dos sinais de urgência ou de segurança.

4248 (3) Qualquer estação costeira que utilize a faixa de chamada 2089,5-2092,5 kHz deve, tanto quanto possível, assegurar a escuta nessa faixa durante as suas horas de serviço.

4249 (4) As estações costeiras que utilizam frequências da faixa 2089,5-2092,5 kHz para a chamada devem estar em condições de utilizar, pelo menos, uma outra frequência escolhida nas faixas compreendidas entre 1605 kHz e 2850 kHz em que é admitida a radiotelegrafia.

4250 (5) Uma dessas frequências, impressa em normando na nomenclatura das estações costeiras, é a frequência normal de trabalho da estação. As frequências suplementares eventuais figuram em caracteres ordinários.

4251 (6) As frequências de trabalho das estações costeiras devem ser escolhidas de modo a evitar interferir outras estações.

4252 D) Faixas compreendidas entre 4000 kHz e 27 500 kHz

D1) Generalidades

4253 § 23. (1) As estações de navio equipadas para trabalhar em radiotelegrafia nas faixas especificadas nos n.os **4204** e **4206** devem efectuar unicamente emissões de telegrafia morse da classe A1A com uma velocidade de modulação que não ultrapasse 40 bauds. As estações de engenho de salvamento podem efectuar nessas faixas emissões da classe A2A ou H2A (v. os n.os **3002** e **3005**).

4254 (2) As estações de navio equipadas com sistemas telegráficos de faixa larga, com fac-símile ou com sistemas especiais de transmissão podem empregar nas faixas reservadas para esse efeito qualquer classe de emissão, desde que as suas emissões possam ficar contidas nas vias de faixa larga indicadas no apêndice 31. Todavia, não podem utilizar nem a telegrafia morse de classe A1A nem a telefonia, excepto para permitir o ajuste dos circuitos.

4255 (3) Sob reserva das disposições do n.º **4376.1**, as estações costeiras radiotelegráficas que funcionam nas faixas atribuídas exclusivamente ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz não devem fazer transmissões do tipo 2 (v. o n.º **4216**).

4256 (4) As estações costeiras radiotelegráficas que efectuem emissões da classe A1A ou F1B a uma só via e que funcionem nas faixas atribuídas exclusivamente ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz não devem, em qualquer caso, utilizar uma potência média superior aos valores seguintes:

Faixas	Potência média máxima
4 Mhz	5 kW
6 MHz	5 kW
8 MHz	10 kW
12 MHz	15 kW
16 MHz	15 kW
22 MHz	15 kW

4257 (5) As estações costeiras radiotelegráficas que efectuem emissões telegráficas multiviais e que funcionem nas faixas atribuídas exclusivamente ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz não devem utilizar, em qualquer caso, uma potência média superior a 2,5 kW por 500 Hz de largura de faixa.

4258 § 24. Os n.os **4200** a **4209** e as colunas correspondentes do apêndice 31 indicam quais as partes das faixas atribuídas exclusivamente ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz que se destinam a ser utilizadas para a radiotelegrafia pelas estações costeiras e pelas estações de navio.

D) Chamada e resposta

4259 § 25. (1) Para entrar em comunicação com uma estação costeira, qualquer estação de navio empregará uma frequência de chamada apropriada compreendidas numa das faixas indicadas no n.º **4204**.

4260 (2) As frequências das faixas de chamada em telegrafia morse da classe A1A são consignadas a cada estação de navio de acordo com as disposições dos n.os **4277** a **4285**.

4261 § 26. A fim de reduzir as interferências, as estações de navio devem, de acordo com os meios de que disponham, esforçar-se por escolher para a chamada a faixa cujas frequências apresentam as características de propagação mais favoráveis para estabelecer uma comunicação satisfatória. Na falta de dados mais precisos, qualquer estação de navio deve, antes de emitir uma chamada, escutar os sinais da estação com a qual deseja entrar em comunicação. A intensidade e a inteligibilidade dos sinais recebidos fornecerão então elementos úteis sobre as condições de propagação e indicarão em que faixa é preferível efectuar a chamada.

4262 § 27. A fim de reduzir as interferências nas vias de chamada comum, estas só devem ser utilizadas quando um navio não puder utilizar uma frequência de chamada do grupo apropriado designado como via de recepção para a estação costeira com a qual o navio deseja entrar em comunicação, ou quando a estação costeira tenha indicado que só assegura a escuta nas vias de chamada comuns.

4263 § 28. (1) Uma estação costeira utilizará para a chamada, em cada uma das faixas em que o seu equipamento lhe permite trabalhar, a sua frequência normal de trabalho indicada em normando na nomenclatura das estações costeiras (v. os n.os **4207** e **4209**).

4264 (2) Quando for praticável, uma estação costeira transmitirá as suas chamadas a horas determinadas, sob a forma de listas de chamadas, na ou nas indicadas na nomenclatura das estações costeiras (v. os n.os **4722** e **4726**).

4265 § 29. As frequências exclusivas para a chamada selectiva numérica compreendidas nas faixas indicadas no n.º **4208** (v. o n.º **4684**) podem consignar-se a qualquer estação costeira. Essas frequências serão utilizadas de acordo com as disposições do n.º **4681**.

4266 § 30. A menos que a estação que chama tenha indicado outra, a frequência de resposta a uma chamada é:

4267 *a*) Para uma estação de navio, uma das frequências de chamada que lhe foram consignadas na mesma faixa, tendo em conta as disposições do n.º **4262**;

4268 *b*) Para uma estação costeira, a sua frequência normal de trabalho da faixa em que foi chamada.

4269 § 31. As administrações indicarão, para cada estação costeira, quais são as faixas de chamada de navios e as vias de recepção de estações costeiras em que essa estação fará a escuta e, tanto quanto possível, o horário aproximado dessa escuta em tempo universal coordenado (UTC). Essas indicações serão inseridas na nomenclatura das estações costeiras.

4270 § 32. Excepcionalmente, uma estação costeira poderá indicar que faz a escuta em frequências de chamada diferentes das fixadas como suas frequências de recepção próprias.

4271 § 33. A fim de reduzir as interferências nas frequências de chamada, as estações costeiras devem tomar as medidas necessárias para assegurar, em condições normais, a recepção rápida das chamadas (v. o n.º **4755**).

D3) Tráfego

4272 § 34. (1) Uma estação de navio, depois de ter estabelecido a comunicação numa frequência de chamada (v. o n.º **4259**), passará a uma frequência de trabalho para transmitir o seu tráfego. As frequências das faixas de chamada não deverão ser utilizadas para outras emissões diferentes da chamada.

4273 (2) As frequências de trabalho são consignadas às estações de navio de acordo com as disposições dos n.os **4288** a **4306**, inclusive.

4274 § 35. (1) Uma estação costeira transmitirá o seu tráfego na sua frequência normal de trabalho ou nas outras frequências de trabalho que lhe estão consignadas.

4275 (2) Convém que os países que partilham uma via numa das faixas exclusivas atribuídas ao serviço móvel marítimo entre 4000 kHz e 27 500 kHz dêem atenção especial àqueles que não disponham de outra via nessa faixa e se esforcem por utilizar a sua via principal na maior medida possível, a fim de permitir que esses últimos satisfaçam as necessidades mínimas da sua exploração.

4276 ### E) Consignação de frequências às estações de navio

E1) Frequência de chamada das estações de navio

4277 § 36. Cada uma das faixas de chamada compreendidas entre 4000 kHz e 23 000 kHz e indicadas no n.º **4204** divide-se em quatro grupos de vias e duas vias comuns. A faixa de 25 MHz divide-se em três vias, uma das quais é uma via comum (v. o apêndice 34).

4278 § 37. (1) As estações costeiras, quando assegurem um serviço internacional indicado na nomenclatura das estações costeiras, devem manter-se em escuta nas vias de chamada comuns de cada faixa durante o período de tempo em que estejam em serviço nessa faixa e na via ou vias correspondentes ao seu grupo durante os períodos de tráfego intenso. Os períodos durante os quais a escuta será feita na via ou vias do grupo são indicadas, para cada país, na nomenclatura das estações costeiras.

4279 (2) Se necessário, as estações costeiras indicarão nas suas emissões as vias nas quais asseguram a escuta.

4280 § 38. Nas faixas compreendidas entre 4000 kHz e 23 000 kHz, a administração de que depende uma estação de navio consigna-lhe, pelo menos, duas frequências de chamada em cada uma das faixas que a estação pode utilizar ([1]). Em cada faixa, uma das frequências de chamada deve estar compreendida numa das vias comuns de recepção das estações costeiras cuja lista figura no apêndice 34; outra deve ser escolhida entre as outras vias cuja lista figura no apêndice 34, tendo em conta a via ou vias de recepção da estação costeira com a qual a estação de navio comunica mais frequentemente. Na faixa dos 25 MHz, as administrações consignam às estações de navio sob a sua jurisdição uma frequência na via comum. Nesta faixa, uma outra frequência de chamada deve ser escolhida na via A ou B do apêndice 34, tendo em conta a via de recepção da estação costeira com a qual a estação de navio comunica mais frequentemente.

4281 § 39. Sempre que possível, convém consignar a uma estação de navio frequências de chamada suplementares (v. o n.º **4262**).

4282 § 40. A fim de se obter uma repartição uniforme das chamadas, as administrações que não tencionem assegurar a escuta em todas as vias de recepção do respectivo grupo fixarão a via ou vias nas quais assegurarão a escuta, mas somente após coordenação, na medida do possível, com as outras administrações que pertencem ao mesmo grupo (v. a Resolução n.º 312).

4283 § 41. As administrações que consignem às suas estações de navio frequências em várias vias de chamada do respectivo grupo tomarão as medidas necessárias para repartir esses consignações uniformemente pelas vias que utilizam.

4284 § 42. A fim de assegurar uma repartição uniforme das chamadas nas vias de chamada comuns, convém que as administrações consignem, tanto quanto possível, frequências de cada uma das duas vias a um número igual de estação de navio.

4285 § 43. As administrações devem assegurar, tanto quanto possível, que as estações de navio sob a sua jurisdição sejam capazes de manter as respectivas emissões entre os limites da via que lhes está consignada (v. o apêndice 7).

4286 § 44. As frequências exclusivas para a chamada selectiva numérica compreendidas nas faixas indicadas no n.º **4205** (v. o n.º **4683**) podem ser consignadas a qualquer estação de navio; essas frequências devem ser utilizadas de acordo com as disposições do n.º **4681**.

4280.1 ([1]) Até 1 de Janeiro de 1980, às estações de navio cujos emissores só podem utilizar três frequências em cada uma das faixas compreendidas entre 4000 kHz e 23 000 kHz pode, excepcionalmente, ser consignada uma só frequência de chamada em cada umas das faixas em que podem emitir. Esta excepção só poderá verificar-se se a administração interessada considerar que é necessária a consignação à estação de navio de, pelo menos, duas frequências de trabalho em cada faixa para assegurar o seu serviço.

E2) Frequência de trabalho das estações de navios

4287 *a) Espaçamento das vias e consignação das frequências:*

4288 § 45. Em todas as faixas, as frequências de trabalho das estações de navio equipadas com sistemas telegráficos de faixa larga, com fac-símile ou com sistemas especiais de transmissão, são espaços de 4 kHz. As frequências a consignar estão indicadas no apêndice 31.

4289 § 46. Em todas as faixas, as frequências a consignar para as transmissões de dados oceanográficos são espaçadas de 0,3 kHz. As frequências a consignar estão indicadas no apêndice 31.

4290 § 47. Em todas as faixas, as frequências de trabalho das estações de navio que utilizam sistemas de faixa estreita de telegrafia com impressão directa e de transmissões de dados, com velocidades de modelação não superiores a 100 bauds, incluindo as frequências emparelhadas com as frequências de trabalho a consignar às estações costeiras (v. o n.º **4207**), são espaçadas de 0,5 kHz. As frequências a consignar às estações de navio e emparelhadas com as frequências utilizadas pelas estações costeiras estão indicadas no apêndice 32 (v., também, o n.º **4202**). As frequências a consignar às estações de navio e não emparelhadas com as frequências utilizadas pelas estações costeiras estão indicadas no apêndice 33 (v., também, o n.º **4203**).

4291 § 48. Em todas as faixas,excepto na dos 6 MHz, as frequências de trabalho das estações de navio que utilizam a telegrafia morse da classe A1A com velocidades de modulação não superiores a 40 bauds são espaçadas de 0,5 kHz; na faixa dos 6 MHz, são espaçadas de 0,75 kHz [v., também, a nota *e*) do apêndice 31]. As frequências extremas a consignar em cada uma destas faixas estão indicadas no apêndice 31.

4292 § 49. Nas faixas dos 4, 6, 8, 12 e 16 MHz há um certo número de frequências em relação harmónica, como é indicado no apêndice 35.

4293 *b) Frequência de trabalho das estações de navio equipadas com sistemas telegráficos de faixa larga, com fac-símile ou com sistemas especiais de transmissão:*

4294 § 50. (1) Cada administração consigna a cada uma das estações de navio sob a sua autoridade e que empreguem sistemas especiais de transmissão, de fac-símile ou sistemas telegráficos de faixa larga pelo menos uma série de frequências de trabalho reservadas para esse fim (v. o apêndice 31). O número de séries a consignar a cada navio deve ser determinado em função das necessidades do seu tráfego.

4295 (2) Às estações de navio equiparadas com sistemas especiais de transmissão, com fac-símile ou com sistemas telegráficos de faixa larga, a que não forem consignadas todas as frequências de trabalho de uma faixa, as administrações interessadas consignarão frequências de trabalho segundo um sistema ordenado de permuta, de modo que todas as frequências seja consignadas aproximadamente o mesmo número de vezes.

4296 (3) Todavia, nos limites das faixas especificadas no n.º **4200**, as administrações podem, para satisfazer as necessidades de sistemas especiais, consignar frequências diferentes das indicadas no apêndice 31. Contudo, as administrações respeitarão, na medida do possível, as disposições do apêndice 31 relativas á distribuição das vias e ao espaçamento de 4 kHz.

4297 *c) Frequências de trabalho das estações de dados oceanográficos:*

4298 § 51. As faixas de frequências indicadas no n.º **4201** podem igualmente ser utilizadas pelas estações de bóia para as transmissões de dados oceanográficos e pelas estações que interroguem essas bóias.

4299 § 52. Cada administração pode consignar a cada uma das estações dos tipos indicados nos n.os **4201** e **4298** dependentes da sua autoridade uma ou várias das frequências a considerar indicadas no apêndice 31.

4300 *d) Frequências de trabalho (empenhadas com as indicações no n.º* **4207** *das estações de navio que utilizam sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados, com velocidades de modulação não superiores a 100 bauds:*

4301 § 53. As frequências emparelhadas a consignar às estações costeiras e às estações de navio que utilizam sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados estão indicados no apêndice 32.

4302 § 54. Ao consignarem as frequências indicadas no apêndice 32 para a telegrafia com impressão directa de faixa estreita e para a transmissão de dados, as administrações aplicam o procedimento descrito na Resolução n.º 300.

4303 *e) Frequências de trabalho (não emparelhadas) das estações de navio que utilizam sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados com velocidades de modulação não superiores a 100 bauds:*

4304 § 55. Ao consignarem as frequências indicadas no apêndice 33 para sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados, as administrações devem ter devidamente em conta as informações inscritas no ficheiro de referência, em aplicação do procedimento de notificação descrito na Resolução n.º 301.

4305 *f) Frequências de trabalho das estações de navio que utilizam a telegrafia Morse de classe A1A:*

4306 § 56. Cada administração consignará a cada uma das estações de navio que dependem da sua autoridade frequências de trabalho escolhidas nas faixas dos 4, 6, 8, 12, 16, 22 e 25 MHz, em número suficiente para satisfazer as necessidades do navio. Em cada faixa assim utilizada convém consignar, de preferência, pelo menos, duas frequências de trabalho a cada navio. As administrações devem assegurar repartição uniforme das consignações em todas as faixas.

4307 § 57. Para o fim exclusivo de comunicações com estações do serviço móvel marítimo, podem ser consignadas a uma estação de aeronave uma ou várias frequências de trabalho nas faixas indicadas no n.º **4206**. A consignação destas frequências efectuar-se-á segundo o mesmo princípio de repartição uniforme aplicável às estações de navio.

4308 *g) Abreviaturas para indicação das frequências de trabalho:*

4309 § 58. Nas faixas compreendidas entre 4000 kHz e 27 500 kHz podem-se utilizar as seguintes abreviaturas para designar uma frequência de trabalho:

4310 *a)* Se a frequência, expressa em kHz, não contiver decimais, transmitem-se os três últimos algarismos;

4311 *b)* Se a frequência, expressa em kHz, não contiver decimais, transmitem-se os três últimos algarismos da sua parte inteira, seguidos do primeiro algarismo decimal.

SECÇÃO III

Utilização das frequências em telegrafia de faixa estreita com impressão directa

4312 A) Generalidades

4313 § 59. As frequências consignadas às estações costeiras estão indicadas na nomenclatura das estações costeiras (lista IV). Esta nomenclatura contém, além disso, todas as informações úteis relativas ao serviço assegurado por cada uma dessas estações.

4314 B) Faixas compreendidas entre 405 kHz e 535 kHz

4315 § 60. (1) Todas as estações de navio equipadas com aparelhos de telegrafia de faixa estreita com impressão directa destinadas a funcionar nas faixas autorizadas compreendidas entre 405 kHz e 535 kHz devem poder efectuar e receber emissões da classe F1B em, pelo menos, duas frequências de trabalho (v. o n.º **4237**) (1).

4316 (2) A telegrafia de faixa estreita com impressão directa é proibida na faixa 490-510 kHz.

4317 C) Faixas compreendidas entre 1605 kHz e 4000 kHz

4318 § 61. (1) todas as estações de navio equipadas com aparelhos de telegrafia de faixa estreita com impressão directa destinadas a funcionar nas faixas autorizadas compreendidas entre 1605 kHz e 4000 kHz devem poder efectuar e receber emissões da classe F1B em, pelo menos, duas frequências de trabalho.

4319 (2) A telegrafia de faixa estreita com impressão directa é proibida na faixa 2170-2194 kHz.

4320 D) Faixas compreendidas entre 4000 kHz e 27 500 kHz

4321 § 62. Todas as estações de navio equipadas com aparelhos de telegrafia de faixa estreita com impressão directa destinadas a funcionar nas faixas autorizadas compreendidas entre 4000 kHz e 27 500 kHz devem poder efectuar e receber emissões da classe F1B em, pelo menos, duas frequências de cada faixa necessária à execução do seu serviço. As frequências a consignar estão indicadas nos apêndices 32 e 33.

4322 E) Faixas compreendidas entre 156 MHz e 174 MHz

4323 § 63. Todas as estações de um navio equipadas com aparelhos de telegrafia de faixa estreita com impressão directa podem funcionar nas faixas autorizadas compreendidas entre 156 MHz e 174 MHz de acordo com as disposições do apêndice 18.

4315.1 (1) Na zona europeia marítima, a utilização das emissões da classe F1B está subordinada a acordos particulares entre as administrações interessadas e aquelas cujos serviços são susceptíveis de ser desfavoravelmente influenciados.

SECÇÃO IV

Utilização das frequências em radiotelefonia

4324 A) Generalidades

4325 § 64. Excepto no que respeita às disposições do artigo 12 relativas à notificação e registo de frequências, as frequências destinadas às emissões radiotelefónicas de faixa lateral única devem sempre ser designadas pela frequência portadora. A frequência consignada é determinada em conformidade com as disposições do n.º **4194.**

4326 § 65. As estações costeiras não devem ocupar vias radiotelefónicas livres com a emissão de sinais de identificação produzidos, por exemplo, por anéis ou fitas de chamada. A título excepcional e a pedido de uma estação de navio, uma estação costeira pode, com o fim de estabelecer uma comunicação radiotelefónica, emitir sinais de ajuste de receptor por um período não superior a dez segundos.

4327 § 66. A nomenclatura das estações costeiras mencionará as frequências de emissão (e de recepção, quando essas frequências são associadas por pares, como no caso da radiotelefonia dúplex) consignadas a cada estação costeira. Ela dará, além disso, todas as outras informações convenientes sobre o serviço assegurado por cada estação costeira.

4328 § 67. Os aparelhos de faixa lateral única das estações radiotelefónicas do serviço móvel marítimo que funcionem nas faixas atribuídas a este serviço entre 1605 kHz e 4000 kHz e nas faixas atribuídas em exclusivo a este mesmo serviço entre 4000 kHz e 23 000 kHz devem satisfazer as condições técnicas e de exploração especificadas no apêndice 17 e na Resolução n.º 307.

4329 § 68. Quando forem utilizados sistemas de compressores e expansores acoplados, as suas características deverão estar de acordo com as especificações da alínea *a*) do apêndice 40.

4330 § 69. As características dos aparelhos de faixa lateral única associados a sistemas de compressores e expansores acoplados deverão estar de acordo com as especificações do apêndice 17. Convém igualmente que estejam de acordo com as especificações do apêndice 17. Convém igualmente que estejam de acordo com as especificações da alínea *b*) do apêndice 40.

4331 B) Faixas compreendidas entre 1605 kHz e 4000 kHz

B1) Modo de funcionamento das estações

4332 § 70. (1) Excepto nos casos especificados nos n.os **2973, 4127** e **4342,** as classes de emissão a utilizar nas faixas compreendidas entre 1605 kHz e 4000 kHz são:

4333 *a*) A classe A3E; *ou*

4334 *b*) As classes H3E, R3E e J3E.

4335 Todavia, salvo especificações contrárias contidas no presente Regulamento (v. os n.os **2973, 3004, 4127, 4342** e **4354**):

4336 A classe de emissão A3E não deve ser utilizada pelas estações costeiras; e

4337 A partir de 1 de Janeiro de 1982, a classe de emissão H3E deixa de ser autorizada para as estações costeiras e as classes de emissão A3E e H3E deixam de ser autorizadas para as estações de navio.

4338 (2) A potência de ponta das estações costeiras radiotelefónicas que funcionam nas faixas autorizadas compreendidas entre 1605 kHz e 4000 kHz não deve exceder os valores seguintes:

4339 5 kW para as estações situadas ao norte do paralelo 32° N.;

4340 10 kW para as estações situadas ao sul do paralelo 32° N.

4341 (3) O modo normal de funcionamento de cada estação costeira é indicado na nomenclatura das estações costeiras.

4342 (4) As emissões nas faixas 2170-2173,5 kHz e 2190,5-2194 kHz efectuadas, respectivamente, nas frequências portadoras de 2170,5 kHz e de 2191 kHz são limitadas às classes de emissão R3E e J3E e a uma potência de pontas de 400 W.

Todavia, a frequência de 2170,5 kHz é igualmente utilizada, com o mesmo limite de potência, pelas estações costeiras para emissões de classe H2B, quando se utiliza o sistema de chamada selectiva definido no apêndice 39 e, além disso, a título excepcional, nas Regiões 1 e 3 e na Gronelândia, para emissões de classe H3E, a fim de transmitir mensagens de segurança.

B2) Chamada e resposta

4343 § 71. (1) A frequência de 2182 kHz (1) é a frequência internacional de perigo em radiotelefonia (v. o n.º **2973** para os pormenores da sua utilização para as comunicações de perigo de urgência e de segurança e para as chamadas de radiobalizas de localização de sinistros). A classe de emissão a utilizar em radiotelefonia na frequência de 2182 kHz é a classe A3E ou H3E (v. o n.º **4127**).

4344 (2) A frequência de 2182 kHz poderá ser igualmente utilizada:

4345 *a*) Para a chamada e a resposta, segundo as disposições do artigo 65;

4346 *b*) Pelas estações costeiras para anunciar a emissão das suas linhas de chamadas numa outra frequência (v. os n.os **4925** a **4929**).

4347 (3) Além disso, qualquer administração pode consignar às suas estações outras frequências para utilização para a chamada e a resposta.

4348 § 72. A fim de facilitar a recepção das chamadas de perigo, deverão ser reduzidas ao mínimo todas as emissões na frequência de 2182 kHz.

4349 § 73. Convém que as estações de navio abertas à correspondência pública assegurem, tanto quanto possível, a escuta na frequência de 2182 kHz durante o seu horário de serviço.

4350 § 74. (1) Antes de emitir na frequência portadora de 2182 kHz, uma estação deve escutar essa frequência durante um espaço de tempo suficiente a fim de se certificar de que não está em curso qualquer tráfego de perigo (v. o n.º **4915**).

4351 (2) As disposições do n.º **4350** não se aplicam às estações em perigo.

B3) Tráfego

4352 § 75. (1) As estações costeiras que utilizam para a chamada a frequência de 2182 kHz deverão estar em condições de usar, pelo menos, uma outra frequência escolhida nas faixas autorizadas compreendidas entre 1605 kHz e 2850 kHz.

4353 (2) As estações costeiras autorizadas a efectuar emissões radiotelefónicas numa ou em várias frequências diferentes da frequência 2882 kHz nas faixas autorizadas compreendidas entre 1605 kHz e 2850 kHz deverão poder efectuar, nessas frequências, emissões da classe A3E ou emissões das classes H3E, R3E e J3E. Todavia, a partir de 1 de Janeiro de 1982, as emissões da classe H3E deixam de estar autorizadas, excepto na frequência de 2182 kHz (v., igualmente, o n.º **4342**).

4354 (3) As estações costeiras abertas ao serviço de correspondência pública numa ou em várias frequências compreendidas entre 1605 kHz e 2850 kHz devem, além disso, poder efectuar emissões da classe H3E na frequência portadora de 2182 kHz e recebe emissões das classes A3E e H3E na frequência portadora de 2182 kHz.

4355 (4) Uma das frequências que as estações costeiras deverão estar em condições de utilizar em conformidade com o n.º **4352** é impressa em normando na nomenclatura das estações costeiras, para indicar que ela é a frequência normal de trabalho da estação. As frequências suplementares eventuais são indicadas em caracteres normais.

4356 (5) As frequências de trabalho das estações costeiras devem ser escolhidas de modo a evitar interferências com outras estações.

B4) Disposições adicionais aplicáveis à Região 1

4357 § 76. A potência de ponta dos emissores das estações radiotelefónicas de navio que funcionam nas faixas autorizadas compreendidas entre 1605 kHz e 2850 kHz não deverá exceder 400 W.

4358 § 77. (1) Convém que todas as estações de navio que efectuam viagens internacionais estejam em condições de utilizar:

4359 *a*) As frequências de trabalho navio-estação costeira seguintes, se as necessidades do seu serviço o exigirem:

4360 A frequência portadora de 2046 kHz (frequência consignada de 2047, 4 kHz) e a frequência portadora de 2049 kHz (frequência consignada de 2050,4 kHz) para emissões das classes R3E e J3E;

4361 A frequência portadora de 2020 kHz igualmente para emissões das classes A3E e H3E até 1 de Janeiro de 1982;

4343.1 (1) Quando as administrações asseguram, através das suas estações costeiras, a escuta em 2128 kHz para receber emissões das classes R3E e J3E, assim como emissões das classes A3E e H3E as estações de navio que se encontrem para além da distância em que conseguiriam comunicar com essas estações costeiras por meio de emissões das classes A3E ou H3E podem, para fins de segurança, chamar as estações costeiras utilizando a classe de emissão R3E ou J3E. Esta utilização só é autorizada se as chamadas feitas com emissões das classes A3E e H3E não tiverem resultado.

4362 *b*) As frequências navio-navio seguintes, se as necessidades do seu serviço o exigirem:

4363 A frequência portadora de 2053 kHz (frequência consignada de 2054,4 kHz) e a frequência portadora de 2056 kHz (frequência consignada de 2057,4 kHz) para emissões das classes R3E e J3E;

4364 A frequência portadora de 2056 kHz igualmente para emissões das classes A3E e H3E até 31 de Janeiro de 1982.

4365 Estas frequências podem ser utilizadas como frequências suplementares navio-estação costeira.

4366 (2) Essas frequências não serão utilizadas para o tráfego entre estações de uma mesma nacionalidade.

4367 § 78. (1) Os navios que permutam frequentemente correspondência com uma estação costeira de nacionalidade diferente da sua poderão utilizar as mesmas frequências que os navios da nacionalidade dessa estação, quando as administrações interessadas assim tiverem acordado.

4368 (2) Em circunstâncias excepcionais, se a utilização das frequências de acordo com as disposições dos n.os **4358** a **4365** ou o n.º **4367** se revelar impossível, uma estação de navio pode utilizar uma das frequências navio-estação costeira que lhe estão consignadas à escala nacional para comunicar com uma estação costeira de outra nacionalidade, sob reserva expressa de a estação costeira, bem como a estação de navio, em aplicação das disposições do n.º **4915**, tomar as precauções necessárias para que a utilização da referida frequência não cause interferências prejudiciais ao serviço para o qual está autorizado o seu emprego.

B5) Disposições adicionais aplicáveis às Regiões 2 e 3

4369 § 79. Convém que todas as estações de navio que efectuam viagens internacionais estejam em condições de utilizar, se as necessidades do seu serviço o exigirem, as seguintes frequências portadoras navio-navio:

2635 kHz (frequência consignada de 2636,4 kHz);
2638 kHz (frequência consignada de 2639,4 kHz).

As condições de utilização destas frequências são especificadas no n.º **4193.**

4370 ### C) Faixas compreendidas entre 4000 kHz e 23 000 kHz

C1) Modo de funcionamento das estações

4371 § 80. (1) As classes de emissão a utilizar para a radiotelefonia nas faixas compreendidas entre 4000 kHz e 23 000 kHz são as classes H3E (1), R3E e J3E.

4372 (2) O modo de funcionamento normal de cada estação costeira é indicado na nomenclatura das estações costeiras.

4373 (3) As estações costeiras radiotelefónicas que utilizam as classes de emissão H3E (1), R3E ou J3E nas faixas compreendidas entre 4000 kHz e 23 000 kHz devem ter a potência mínima necessária para cobrir a respectiva zona de serviço e não devem, em caso algum, ter uma potência de ponta superior a 10 kW por via.

4374 (4) As estações radiotelefónicas de navio que utilizam as classes de emissão H3E (1), R3E ou J3E nas faixas compreendidas entre 4000 kHz e 23 000 kHz não devem, em caso algum, ter uma potência de ponta que exceda 1,5 kW por via.

C2) Chamada e resposta

4375 § 81. (1) As estações de navio podem utilizar para a chamada em radiotelefonia as seguintes frequências portadoras:

4125 kHz (2) (3);
6215,5 kHz (4);
8257 kHz;
12 392 kHz;
16 522 kHz;
22 062 kHz.

4371.1 / 4373.1 / 4374.1 (1) Para a utilização da classe de emissão H3E v. os n.os **2982** e **2986.**

4375.1 (2) Nos Estados Unidos e no Canadá é igualmente autorizada a utilização em comum da frequência portadora de 4125 kHz pelas estações costeiras e pelas estações de navio para a radiotelefonia *simplex* em faixa lateral única, com a condição de a potência de ponta dessas estações não exceder 1 kW (v., também, o n.º **4376.2**).

4375.2 (3) Na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N. é igualmente autorizada a utilização em comum da frequência portadora de 4125 kHz pelas estações costeiras e pelas estações de navio para a radiotelefonia *simplex* de faixa lateral única para a chamada, a resposta e a segurança, com a condição de a potência de ponta dessas estações não exceder 1 kW. Nessas zonas não é autorizada a utilização da frequência portadora de 4125 kHz como frequência de trabalho (v., também, os n.os **2982, 3030** e **4375.1**).

4375.3 (4) Na zona da Região 3 situada ao sul so paralelo 25° N. é igualmente autorizada a utilização em comum da frequência portadora de 6215,5 kHz pelas estações costeiras e pelas estações de navio para a radiotelefonia *simplex* de faixa lateral única para a chamada, a resposta e a segurança com a condição de a potência de ponta dessas estações não exceder 1 kW. Nessa zona não é autorizada a utilização da frequência de 6215,5 kHz como frequência de trabalho (v., também, o n.º **2986**).

4376 (2) As estações costeiras podem utilizar para a chamada em radiotelefonia as seguintes frequências portadoras (1):

4419,4 kHz (2);
6521,9 kHz (2);
8780,9 kHz;
13 162,8 kHz;
17 294 kHz;
22 658 kHz.

4377 § 82. As estações de navio e as estações costeiras que utilizem a chamada selectiva númerica mencionada no n.º **4681** podem utilizar as frequências indicadas nos n.os **4683** e **4684,** respectivamente.

4378 § 83. As horas de serviço das estações costeiras abertas à correspondência pública e a ou as frequências em que é mantida a escuta são indicadas na nomenclatura das estações costeiras.

4379 § 84. (1) Na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N., antes de emitir na frequência portadora de 4125 kHz ou de 6215,5 kHz, qualquer estação deve manter-se em escuta nessa frequência durante um espaço de tempo suficiente a fim de se certificar de que não há em curso qualquer tráfego de perigo (v. o n.º **4915**).

4380 (2) As disposições do n.º **4379** não se aplicam às estações em perigo.

C3) Tráfego

4381 § 85. (1) Para exploração em radiotelefonia dúplex, as frequências de emissão das estações costeiras e das estações de navio que se correspondem com elas são emparelhadas, como se indica no apêndice 16, excepto, provisoriamente, quando as condições de trabalho impeçam a utilização de frequências emparelhadas para satisfazer as necessidades de exploração.

4382 (2) A secção B do apêndice 16 indica as frequências a utilizar para a exploração em radiotelefonia *simplex*. Neste caso, a potência de ponta dos emissores das estações costeiras não deve exceder 1 kW.

4383 (3) As frequências indicadas no apêndice 16 para a emissão das estações de navio podem ser utilizadas pelos navios de todas as categorias, segundo as necessidades de tráfego.

4384 (4) As características técnicas dos emissores utilizados para a radiotelefonia nas faixas compreendidas entre 4000 kHz e 23 000 kHz estão especificadas no apêndice 17.

4385 ### D) Faixas compreendidas entre 156 MHz e 174 MHz

D1) Chamada e resposta

4386 § 86. (1) A frequência de 156,8 MHz é a frequência internacional de perigo, de segurança e de chamada em radiotelefonia para as estações que utilizam frequências das faixas autorizadas compreendidas entre 156 MHz e 174 MHz (v. o n.º **2994** para os pormenores da sua utilização). A classe de emissão a utilizar para a radiotelefonia na frequência de 156,8 MHz é a classe G3E (v. o apêndice 19).

4387 A frequência de 156,8 MHz pode também ser utilizada:

4388 *a*) Pelas estações costeiras e pelas estações de navio para a chamada e a resposta, em conformidade com as disposições dos artigos 62 e 65;

4389 *b*) Pelas estações costeiras para anunciar a emissão, numa outra frequência, das suas listas de chamadas e de informações marítimas importantes (v. os n.os **4925** a **4929**).

4390 (3) A frequência de 156,8 MHz pode ser utilizada pelas estações de navio e pelas estações costeiras para a chamada selectiva.

4391 (4) As administrações poderão, se o desejarem, utilizar para a chamada uma das vias de correspondência pública designadas no apêndice 18. Será nesse caso feita menção disso na nomenclatura das estações costeiras.

4392 (5) As estações costeiras e de navio do serviço de correspondência poderão utilizar para a chamada uma frequência de trabalho nas condições prescritas nos artigos 62 e 65.

4393 (6) É proibido na faixa 156,725-156,875 MHz (3) qualquer emissão que possa causar interferências prejudiciais às emissões autorizadas das estações do serviço móvel marítimo em 156,8 MHz.

4394 (7) A fim de facilitar a recepção das chamadas de perigo, todas as emissões na frequência de 156,8 MHz devem ser reduzidas ao mínimo e não devem ultrapassar um minuto.

4376.1 (1) Estas frequências podem, além disso, ser utilizadas pelas estações costeiras para emissões da classe H2B, quando se utiliza o sistema de chamada selectiva definido no apêndice 39.

4376.2 (2) Nas Regiões 2 e 3 é igualmente autorizada a utilização em comum das frequências portadoras de 4419,4 kHz e de 6521,9 kHz pelas estações costeiras e pelas estações de navio para a radiotelefonia *simplex* de faixa lateral única, com a condição de a potência de ponta dessas estações não exceder 1 kW. Convém que a utilização para tal fim da frequência portadora de 6521,9 kHz fique limitada às horas do dia (v., também, o n.º **4375.1**).

4393.1 (3) A partir de 1 de Janeiro de 1983 esta faixa passará a 156,7625-156,8375 MHz (v. a Resolução n.º 308).

4395 (8) Antes de emitir na frequência de 156,8 MHz uma estação deve escutar essa frequência durante um espaço de tempo suficiente a fim de se certificar de que não está em curso qualquer tráfego de perigo (v. o n.º **4915**).

4396 (9) As disposições do n.º **4395** não se aplicam às estações em perigo.

D2) Vigília

4397 § 87. (1) Convém que, além da escuta prescrita no n.º **3057,** as estações costeiras abertas ao serviço internacional de correspondência pública assegurem, durante o seu horário de serviço, a escuta na sua frequência de recepção ou nas frequências que estão indicadas na nomenclatura das estações costeiras.

4398 (2) A escuta na ou nas frequências de trabalho não deverá ser menos eficaz do que a escuta assegurada por um operador.

4399 (3) Convém que as estações de navio, quando se encontrem na zona de serviço de estações costeiras do serviço móvel marítimo radiotelefónico nas faixas compreendidas entre 156 MHz e 174 MHz, assegurem a escuta na frequência de 156,8 MHz, sempre que isso lhes seja possível na prática. Convém que aquelas que só estejam equipadas com aparelhos radiotelefónicos a funcionar nas faixas autorizadas compreendidas entre 156 MHz e 174 MHz assegurem, quando no mar, a escuta na frequência de 156,8 MHz.

4400 (4) Quando estejam em ligação com uma estação portuária, as estações de serviço de navio podem, a título excepcional e sob reserva de acordo da administração interessada, continuar a manter a escuta apenas na frequência prevista para as operações portuárias, com a condição de a estação portuária manter a escuta na frequência de 156,8 MHz.

4401 (5) Quando as estações de navio estão em ligação com uma estação costeira de serviço de movimento de navios podem, sob reserva de acordo das administrações interessadas, continuar a manter a escuta apenas na frequência apropriada do serviço de movimento de navios, desde que essa estação costeira mantenha a escuta na frequência de 156,8 MHz.

4402 § 88. As estações costeiras do serviço de operações portuárias situadas numa zona em que a frequência de 156,8 MHz seja temporariamente utilizada para comunicações de perigo, de urgência ou de segurança assegurarão, durante o seu horário de serviço, uma escuta suplementar das chamadas emitidas na frequência de 156,6 MHz ou em qualquer outra frequência do serviço de operações portuárias que figure em normando na nomenclatura das estações costeiras.

4403 § 89. As estações costeiras do serviço de movimento de navios situadas numa zona em que a frequência de 156,8 MHz seja utilizada para o perigo, a urgência e a segurança assegurarão, durante o seu horário de serviço, uma escuta suplementar nas frequências do serviço de movimento de navios que figurem em normando na nomenclatura das estações costeiras.

D3) Tráfego

4404 § 90. (1) Quando for praticável, as estações costeiras abertas ao serviço internacional de correspondência pública deverão poder funcionar em dúplex ou semidúplex com as estações de navio equipadas para tal.

4405 (2) Convém que nos serviços internacionais se utilize o modo de trabalho (a uma frequência ou a duas frequências) especificando para cada via no apêndice 18 (v. a Resolução n.º 308).

4406 § 91. As mensagens permutadas no serviço de operações portuárias devem limitar-se às relativas à manutenção, movimento e segurança dos navios e, em caso de urgência, à salvaguarda das pessoas. Excluem-se deste serviço as mensagens que têm o carácter de correspondência pública.

4407 § 92. As mensagens permutadas no serviço de movimento de navios devem limitar-se às relativas ao movimento de navios. Excluem-se deste serviço as mensagens com carácter de correspondência pública.

4408 § 93. As estações costeiras que utilizam a frequência de 156,8 MHz para a chamada deverão poder utilizar, pelo menos, outra via autorizada para o serviço móvel marítimo radiotelefónico internacional na faixa 156-174 MHz.

4409 (2) Quando foi praticável, as administrações consignam às estações costeiras e às estações de navio, para os serviços internacionais que julguem necessários, frequências da faixa 156-174 MHz, de acordo com o quadro das frequências de emissão que figura no apêndice 18 (v. a Resolução n.º 308).

4410 (3) A ordem normal pela qual convém que sejam postas em serviço as vias na faixa 156-174 MHz é indicada pelos números inscritos nas colunas correspondentes do apêndice 18.

4411 (4) Convém que as administrações procedam, tanto quanto possível, de modo que as estações de navio que dispõe das vias correspondentes aos números dentro de círculos do quadro de apêndice 18 possam obter uma utilização razoavelmente suficiente dos serviços disponíveis.

4412 (5) Ao consignarem frequências às suas estações costeiras, convém que as administrações cooperem nos casos em que sejam de recear interferências prejudiciais.

4413 (6) As vias são designadas por números no quadro das frequências de emissão que figura no apêndice 18 (v. a Resolução n.º 308).

4414 § 94. (1) Ao consignante frequências às estações de serviços diferentes do serviço móvel marítimo, as administrações deverão evitar causar interferências ao serviço marítimo internacional nas faixas compreendidas entre 156 MHz e 174 MHz.

4415 (2) A utilização das vias pelo serviço móvel marítimo para fins diferentes dos indicados no quadro das frequências de emissão contido no apêndice 18 deverá ser de modo a não provocar qualquer interferência prejudicial aos serviços que funcionam em conformidade com esse quadro e não deverá causar qualquer prejuízo ao desenvolvimento desses serviços (v. a Resolução n.° 308).

4416 § 95. A potência da onda portadora dos emissores das estações de navio não devem exceder 25 W para os aparelhos postos em serviço depois de 1 de Janeiro de 1970.

4417 a 4440 *(Não atribuídos.)*

ARTIGO 61

Ordem de prioridade das comunicações no serviço móvel marítimo e no serviço móvel marítimo por satélite

4441 A ordem de prioridade das comunicações (1) no serviço móvel marítimo e no serviço móvel marítimo por satélite deverá ser a seguinte, salvo impossibilidade prática num sistema inteiramente automatizado. Todavia, mesmo neste caso deverá ser dada prioridade às comunicações da primeira categoria:

1) Chamadas de perigo, mensagens de perigo e tráfego de perigo;
2) Comunicações precedidas do sinal de urgência;
3) Comunicações precedidas do sinal de segurança;
4) Comunicações relativas aos azimutes radiogoniométricos;
5) Comunicações relativas à navegação e à segurança dos movimentos das aeronaves que participem em operações de busca e salvamento;
6) Comunicações relativas à navegação, aos movimentos e às necessidades dos navios e das aeronaves e mensagens de observação meteorológica destinadas a um serviço meteorológico oficial;
7) ETATPRIORITENATIONS — radiotelegramas relativos à aplicação da Carta das Nações Unidas;
8) ETATPRIORITE — radiotelegramas de Estado com prioridade e comunicações de Estado para as quais se pediu expressamente o direito de prioridade;
9) Comunicações de serviço relativas ao funcionamento do serviço de telecomunicações ou a comunicações anteriormente escoadas;
10) Comunicações de Estado diferentes das indicadas na alínea 8) anterior, comunicações particulares ordinárias, radiotelegramas RTC (1) e radiotelegramas noticiosos.

4442 a 4664 *(Não atribuídos.)*

ARTIGO 62

Procedimento relativo à chamada selectiva no serviço móvel marítimo

SECÇÃO I

Generalidades

4665 § 1. (1) Na faixa 1605-4000 kHz, a chamada selectiva pode ser emitida em frequências de trabalho apropriadas à radiotelefonia nos sentidos estação costeira-navio e navio-estação costeira e entre navios.

4666 (2) Podem ser emitidas chamadas selectivas na frequência de 156,8 MHz e em frequências de trabalho apropriadas à radiotelefonia nos sentidos estação costeira-navio e navio-estação costeira e entre navios.

SECÇÃO II

Sistema sequencial a uma frequência

4667 A) Generalidades

4668 § 2. As caraterísticas do sistema internacional de chamada selectiva sequencial a uma frequência devem estar de acordo com as disposições do apêndice 39.

4441.1 (1) O termo «comunicações» empregado no presente artigo engloba os radiotelegramas, as conversas radiotelefónicas, assim como as comunicações radiotelex.

4441.1 (2) RCT (Red Cross Telegrams — Telegramas da Cruz Vermelha): telegramas relativos às pessoas protegidas em tempo de guerra pelas Convenções de Genebra de 12 de Agosto de 1949.

4669 B) Método de chamada

4670 § 3. (1) A chamada compõe-se:

4671 *a*) Do número de chamada selectiva ou do número ou sinal de identificação da estação chamada, seguido

b) Do número de chamada selectiva ou do número ou sinal de identificação da estação que chama.

4672 Todavia, em ondas métricas, quando a chamada é feita por uma estação costeira, o número da via a utilizar para a resposta e para o tráfego pode substituir o número ou sinal de identificação da estação costeira.

Esta chamada é transmitida duas vezes.

4673 (2) Se uma estação chamada não responder, convém normalmente esperar, pelo menos, cinco minutos antes de repetir a chamada; em seguida, convém aguardar ainda quinze minutos antes de renovar a chamada.

4674 (3) A utilização de uma «chamada a todos os navios» é limitada aos casos de perigo e urgência nas faixas das ondas hectométricas, assim como ao anúncio de aviso de grande importância para a navegação emitido nessa faixas. Além disso, pode ser utilizada para fins de segurança na faixa de ondas métricas. A «chamada a todos os navios» só pode ser utilizada para completar, se for caso disso, os procedimentos de perigo especificados nos n.os **3101, 3102, 3110** e **3117** e não deve, em caso algum, substituir esses procedimentos, nomeadamente os sinais de alarme mencionados nos n.os **3268** e **3270**.

4675 C) Respostas às chamadas

4676 § 4. A resposta às chamadas deve fazer-se:

4677 *a*) Em radiotelegrafia, de acordo com as disposições dos n.os **4767 e 4769;**

4678 *b*) Em radiotelefonia, de acordo com as disposições dos n.os **4982** a **5002.**

4679 D) Frequências a utilizar

4680 § 5. Convém que as chamadas selectivas sejam emitidas numa ou em várias das seguintes frequências portadoras:

500 kHz;
2170,5 kHz (1);
4125 kHz;
4419,4 kHz;
6521,9 kHz;
8780,9 kHz;
13 162,8 kHz;
17 249,9 kHz;
22 658 kHz;
156,8 MHz (2).

SECÇÃO III

Sistema de chamada selectiva numérica

4681 § 6. É possível utilizar um sistema de chamada selectiva numérica que esteja totalmente de acordo com as disposições dos pareceres pertinentes da CCIR, tendo em conta todos os aspectos técnicos, de exploração e de compatibilidade envolvidos.

4682 § 7. As frequências que podem ser consignadas às estações de navio e às estações costeiras para a chamada selectiva numérica são as seguintes:

4683 *a*) Estações de navio:

4187,6 kHz;
6281,4 kHz;
8375,2 kHz;
12 562,3 kHz;
12 562,8 kHz;
16 479,9 kHz;
16 750,4 kHz;
22 248 kHz;
22 248,5 kHz;

4680.1 (1) Esta frequência substitui a frequência portadora de 2182 kHz para a chamada selectiva, sob reserva das disposições do n.º **2976.**

4680.2 (2) Normalmente, convém que a chamada relativa nesta frequência se faça somente no sentido costeira-navio ou entre navios e que as chamadas selectivas de navio para a estação costeira sejam sempre que possível emitidas noutras frequências apropriadas que figuram no apêndice 18.

4684 *a*) Estações costeiras:

4357 kHz;
6506 kHz;
8718,5 kHz;
13 100 kHz;
13 100,5 kHz;
17 232 kHz;
17 232,5 kHz;
22 595 kHz;
22 595,5 kHz.

4685 a 4709 *(Não atribuídos.)*

ARTIGO 63

Procedimento geral radiotelegráfico no serviço móvel marítimo

SECÇÃO I

Disposições gerais

4710 § 1. É obrigatório o procedimento pormenorizado no presente artigo, excepto nos casos de perigo, de urgência ou de segurança, a que se aplicam as disposições do capítulo IX.

4711 § 2. É obrigatório o emprego dos sinais do código Morse que figura nas instruções para a exploração do serviço telegráfico público internacional. Todavia, não se exclui a utilização de outros sinais para as radiocomunicações de carácter especial.

4712 § 3. Devem ser utilizadas as abreviaturas regulamentares definidas no apêndice 14.

SECÇÃO II

Operações preliminares

4713 § 4. (1) Antes de emitir, uma estação toma as precauções necessárias para se assegurar de que as suas emissões não interferirão transmissões em curso; se for provável uma tal interferência, a estação esperará uma paragem oportuna da transmissão que ela poderia interferir. Esta obrigação não se aplica às estações que podem funcionar sem vigilância, por meios automáticos (v. o n.° **3863**), em frequências destinadas aos sistemas de faixa estreita de telegrafia com impressão directa.

4714 (2) No caso em que, mesmo procedendo assim, a emissão dessa estação venha interferir uma transmissão já em curso, aplicar-se-ão as regras seguintes:

4715 *a*) A estação de navio cuja emissão interfere a comunicação entre uma estação móvel e uma estação costeira deve deixar de emitir ao primeiro pedido da estação costeira;

4716 *b*) A estação de navio cuja emissão interfere as comunicações entre estações móveis deve deixar de emitir ao primeiro pedido de uma qualquer dessas estações;

4717 *c*) A estação que solicita essa paragem deve indicar a duração aproximada da espera imposta à estação cuja emissão ela suspende.

SECÇÃO III

Chamadas em radiotelegrafia

4718 A) Generalidades

4719 § 5. As disposições da presente secção não são aplicáveis ao serviço móvel marítimo por satélite.

4720 § 6. (1) Como regra geral, incumbe à estação de navio estabelecer a comunicação com a estação costeira. Para este efeito a estação de navio só poderá chamar a estação costeira após ter entrado na zona de serviço desta, isto é, na zona em que, utilizando uma frequência apropriada, a estação de navio pode ser escutada pela estação costeira.

4721 (2) Contudo, uma estação costeira que tenha tráfego para uma estação de navio pode chamar esta estação se tiver razões para supor que ela se encontra na sua zona de serviço e está à escuta.

4722 § 7. (1) Além disso, as estações costeiras devem tanto quanto possível, na prática transmitir as suas chamadas sob a forma de listas de chamadas, constituídas pelos indicativos de chamada, classificados por ordem alfabética, das estações de navio para as quais tenham tráfego pendente. Essas chamadas far-se-ão em momentos determinados estabelecidos por acordos entre as administrações interessadas e espaçados de, pelo menos, duas horas e, no máximo, de quatro horas, durante o horário de serviço da estação costeira.

4723 (2) Todavia, nas faixas compreendidas entre 4000 e 27 500 kHz, as listas de chamadas podem ser transmitidas com intervalos de, pelo menos, uma hora.

4724 (3) Convém que as estações costeiras evitem repetir contínua ou frequentemente o seu indicativo de chamada ou o sinal CQ (v. os n.os **1799** a **1803**).

4725 (4) Todavia, nas faixas compreendidas entre 4000 kHz e 27 500 kHz, uma estação costeira pode transmitir de vez em quando o seu indicativo de chamada utilizando emissões do tipo A1A, a fim de permitir às estações de navio escolher para a chamada a faixa cujas frequências apresentem as características de propagação mais favoráveis para estabelecer uma comunicação satisfatória (v. o n.º **4261**).

4726 (5) As estações costeiras transmitem essas listas de chamadas, nas suas frequências normais de trabalho, nas faixas apropriadas. Essa transmissão é precedida de uma chamada geral a todas as estações (CQ).

4727 (6) A chamada geral a todas as estações para anunciar a lista de chamadas pode ser emitida numa frequência de chamada, sob a forma seguinte:

CQ (três vezes no máximo);
A palavra DE;
Três vezes, no máximo, o indicativo de chamada da estação que chama;
QSW seguido da indicação da ou das frequências de trabalho na qual ou nas quais se vai transmitir imediatamente a seguir a lista de chamadas.

Em nenhum caso este preâmbulo poderá ser repetido.

4728 (7) As disposições do n.º **4727**:

4729 *a*) São obrigatórias quando se utiliza a frequência de 500 kHz;

4730 *b*) Não se aplicam quando se tratar de frequências das faixas compreendidas entre 4000 kHz e 27 500 kHz.

4731 (8) Deverão mencionar-se na nomenclatura das estações costeiras as horas a que as estações costeiras transmitem as suas listas de chamadas, bem como as frequências e as classes de emissão que utilizam para esse efeito.

4732 (9) Convém que as estações de navio escutem, tanto quanto possível, as emissões das listas de chamadas das estações costeiras. Quando ouvirem o seu indicativo numa lista de chamadas deverão responder logo que possam.

4733 (10) Quando não se possa escoar imediatamente o tráfego, a estação costeira indicará a cada estação de navio interessada a hora provável a que o trabalho poderá começar, bem como, se isso for necessário, a frequência e a classe de emissão que serão utilizadas.

4734 § 8. Quando uma estação costeira receber praticamente ao mesmo tempo chamadas de várias estações de navio, decidirá a ordem pela qual essas estações poderão transmitir-lhe o seu tráfego. Essa decisão basear-se-á na ordem de prioridade (v. o n.º **4441**) dos radiotelegramas pendentes nas estações de navio e na necessidade de permitir a cada uma das estações que chamam escoar o maior número possível de comunicações.

4735 § 9. (1) Quando uma estação chamada não responder á chamada emitida três vezes com intervalos de dois minutos, a chamada deverá cessar e não deverá ser renovada antes de quinze minutos.

4736 (2) Quando se trate de uma comunicação entre uma estação do serviço móvel marítimo e uma estação de aeronave, a chamada poderá ser renovada cinco minutos depois, apesar das disposições do n.º **4735**.

4737 (3) Antes de renovar a chamada, a estação que chama deverá certificar-se de que a estação chamada não está em comunicação com outra estação.

4738 (4) Se não houver razão para recear interferências prejudiciais às comunicações em curso, não se aplicam as disposições dos n.os **4146** e **4735**. Nesse caso, a chamada, emitida três vezes com intervalos de dois minutos, pode ser renovada depois de um intervalo de duração inferior a quinze minutos, mas pelo menos igual a três minutos.

4739 § 10. As estações de navio não devem emitir a sua onda portadora entre as chamadas.

4740 § 11. Quando o nome e o endereço da administração ou da exploração particular de que depende uma estação de navio não vêm mencionados na nomenclatura apropriada ou não estão de acordo com as indicações desta, é dever da estação de navio, como regra de procedimento, fornecer à estação costeira a que transmite tráfego todos os esclarecimentos necessários nesse sentido.

4741 § 12. (1) A estação costeira pode, por meio da abreviatura TR, pedir à estação de navio que lhe dê as indicações seguintes:

4742 *a*) Posição e, tanto quanto possível, rota e velocidade;

4743 *b*) Próximo ponto de escala

4744 (2) Convém que as informações indicadas nos n.os **4741** a **4743**, precedidas da abreviatura TR, sejam fornecidas pelas estações de navio, sempre que pareça apropriado e sem pedido prévio da estação costeira. Essas informações só são prestadas mediante autorização prévia do comandante ou da pessoa responsável pelo navio ou por qualquer outra embarcação em que se encontre a estação.

4745 B) Chamadas a várias estações

4746 § 13. As disposições da presente secção não se aplicam ao serviço móvel marítimo por satélite.

4747 § 14. Reconhecem-se dois tipos de sinais de chamada «a todos»:

4748 *a*) Chamada CQ seguida da letra K (v. os n.os **4750** e **4751**);

4749 *b*) Chamada CQ não seguida da letra K (v. o n.º **4752**).

4750 § 15. As estações que desejarem entrar em comunicação com estações do serviço móvel marítimo sem todavia conhecerem o nome das estações que estações que estão na sua zona de serviço podem empregar o sinal de pesquisa CQ para substituir, na chamada, o indicativo da estação chamada. A chamada deverá então ser seguida da letra K (chamada geral a todas as estações do serviço móvel marítimo, com pedido de resposta).

4751 § 16. É proibido o emprego da chamada CQ seguida da letra K nas regiões de tráfego intenso. Excepcionalmente, poderá utilizar-se com sinais de urgência.

4752 § 17. A chamada CQ não seguida da letra K (chamada geral a todas as estações sem pedido de resposta) utiliza-se antes da transmissão de informações de qualquer natureza destinadas a serem lidas ou utilizadas por quem quer que as possa captar.

4753 § 18. A chamada CP seguida de dois ou mais indicativos de chamada ou de uma palavra convencional (chamada a certas estações receptoras sem pedido de resposta) só se utiliza para a transmissão de informações de qualquer natureza destinadas a serem lidas ou utilizadas pelas pessoas autorizadas.

Secção IV

Método de chamada, resposta à chamada e sinais preparatórios do tráfego

4754 A) Método de chamada — Telegrafia morse

4755 § 19. (1) A chamada é constituída como segue:

Duas vezes, no máximo, o indicativo de chamada de estação chamada;
A palavra DE;
Duas vezes, no máximo, o indicativo de chamada da estação que chama;
As informações pedidas no n.º **4761** e, eventualmente, nos n.os **4764** e **4765**;
A letra K.

4756 (2) Para a chamada normal, quando tenham sido satisfeitas as condições do n.º **4261**, a chamada prevista no n.º **4755** pode transmitir-se segunda vez, após um intervalo de, pelo menos, um minuto, depois do que não deverá ser renovada antes de três minutos.

4757 B) Frequência a utilizar para a chamada e sinais preparatórios

4758 § 20. (1) Para fazer a chamada, assim como para transmitir os sinais preparatórios, a estação que chama utiliza uma frequência na qual a estação chamada assegura a escuta.

4759 (2) Uma estação de navio que chama uma estação costeira numa das faixas de frequências situadas entre 4000 kHz e 27 500 kHz deve utilizar uma frequência da faixa de chamada especialmente reservada para esse fim.

4760 C) Indicação da frequência a utilizar para o tráfego

4761 § 21. (1) A chamada, tal como se indica no n.º **4755**, deve incluir a abreviatura regulamentar indicando a frequência de trabalho e, se for útil, a classe de emissão que a estação que chama se propõe utilizar para transmitir o tráfego.

4762 (2) Quando a chamada emitida por uma estação costeira não incluir a indicação da frequência a utilizar para o tráfego, isso significa que essa estação se propõe utilizar para o tráfego a sua frequência normal de trabalho indicada na nomenclatura das estações costeiras.

4763 D) Indicação de prioridade, do motivo de chamada e da transmissão dos radiogramas por séries

4764 § 22. (1) A estação que chama transmite a abreviatura regulamentar depois dos sinais preparatórios acima referidos, para indicar que se trata de uma mensagem prioritária diferente de uma mensagem de perigo, de urgência ou de segurança (v. o n.º **4441**) e indicar o motivo da chamada.

4765 (2) Além disso, quando a estação que chama deseja transmitir os seus radiotelegramas por séries, indica-o acrescentando a abreviatura regulamentar para pedir o assentimento da estação chamada.

4766 E) Fórmula da resposta à chamada

4767 § 23. A resposta à chamada é constituída como segue:

Duas vezes, no máximo, o indicativo de chamada da estação que chama;
A palavra DE;
Uma vez somente o indicativo de chamada da estação chamada.

4768 F) Frequência de resposta

4769 § 24. Salvo indicação contrária no presente Regulamento, para transmitir a resposta às chamadas e aos sinais preparatórios, a estação chamada utiliza a frequência em que escuta a estação que chama, a não ser que esta haja designado uma outra frequência para a resposta.

4770 G) Acordo sobre a frequência a utilizar para o tráfego

4771 § 25. (1) Se a estação chamada estiver de acordo com a estação que chama, transmite:

4772 *a*) A resposta à chamada;
4773 *b*) A abreviatura regulamentar que indica que a partir desse momento ela escuta na frequência de trabalho anunciada pela estação que chama;
4774 *c*) Eventualmente, as indicações previstas no n.º 4783;
4775 *d*) Se for útil, a abreviatura regulamentar e o número que indique a intensidade e ou a inteligibilidade dos sinais recebidos (v. o apêndice 14);
4776 *e*) A letra K, se a estação chamada está pronta a receber o tráfego da estação que chama.

4777 (2) Se a estação chamada não estiver de acordo com a estação que chama sobre a frequência de trabalho a empregar, transmite:

4778 *a*) A resposta à chamada;
4779 *b*) A abreviatura regulamentar que indique a frequência de trabalho a utilizar pela estação que chama e, se para tanto houver lugar, a classe de emissão;
4780 *c*) Eventualmente, as indicações previstas no n.º 4783;

4781 (3) Realizado acordo relativamente à frequência de trabalho que a estação que chama deve utilizar para o seu tráfego, a estação chamada transmite a letra K a seguir às indicações contidas na sua resposta.

4782 H) Resposta ao pedido de transmissão por séries

4783 § 26. A estação chamada, ao responder a uma estação que chama e que pediu para transmitir os seus telegramas por séries (v. o n.º 4765), indica, por meio da abreviatura regulamentar, a sua aceitação ou a sua recusa. No primeiro caso especifica, se necessário, o número de radiotelegramas que está pronta a receber numa série.

4784 I) Dificuldades de recepção

4785 § 27. (1) Se a estação chamada estiver impedida de receber o tráfego imediatamente, responde à chamada como preceituam os n.os 4771 a 4776, mas substitui a letra K pelo sinal . — ... (espera) seguido do número que indique em minutos a duração provável da espera. Se essa duração provável ultrapassar dez minutos (cinco minutos no caso de uma estação de aeronave em comunicação com uma estação do serviço móvel marítimo), deverá justificar-se o motivo da espera.

4786 (2) Quando uma estação recebe uma chamada sem ter a certeza de que se lhe destina, não deve responder sem que essa chamada se repita e seja compreendida. Quando, por outro lado, uma estação recebe uma chamada que se lhe destina mas tem dúvidas sobre o indicativo de chamada da estação que chama, deve responder imediatamente, utilizando a abreviatura regulamentar em substituição do indicativo de chamada desta última estação.

Secção V

Escoamento do tráfego

4787 A) Frequência de tráfego

4788 § 2. (1) Como regra geral, uma estação do serviço móvel marítimo transmite o seu tráfego utilizando uma das suas frequências de trabalho da faixa em que se efectuou a chamada.

4789 (2) Além da sua frequência normal de trabalho, impressa em normando na nomenclatura das estações costeiras, cada estação costeira pode utilizar uma ou várias frequências suplementares da mesma faixa, de acordo com as disposições do artigo 60.

4790 (3) Com excepção do tráfego de perigo (v. o capítulo IX), é proibido para o tráfego o emprego das frequências reservadas para a chamada.

4791 (4) Se a transmissão de um radiotelegrama se fizer numa outra frequência e ou numa outra classe de emissão diferente das empregadas para a chamada, essa transmissão será precedida:

Do indicativo de chamada da estação chamada, duas vezes no máximo;
Da palavra DE;
Do indicativo de chamada da estação que chama, uma vez somente.

4792 (5) Se a transmissão se fizer na mesma frequência e classe de emissão que a chamada, a transmissão do radiotelegrama será precedida, se necessário:

Do indicativo de chamada da estação chamada;
Da palavra DE;
Do indicativo de chamada da estação que chama.

4793 B) Numeração por séries quotidianas

4794 § 29. (1) Como regra geral, os radiotelegramas de qualquer natureza transmitidos pelas estações de navio serão numerados por séries quotidianas, dando-se o n.° 1 ao primeiro radiotelegrama transmitido em cada dia a cada estação diferente.

4795 (2) Convém que uma série de números começada em radiotelegrafia seja continuada em radiotelefonia e inversamente.

4796 C) Radiotelegramas extensos

4797 § 30. (1) No caso em que duas estações estão providas de dispositivos que lhes permitem passar da emissão à recepção sem manobra de comutação, a estação emissora pode prosseguir a sua transmissão até ao fim da mensagem ou até que a estação receptora a interrompa por meio da abreviatura regulamentar BK. As duas estações pôr-se-ão, em geral, antecipadamente de acordo sobre um tal método de trabalho, utilizando a abreviatura regulamentar QSK.

4798 (2) Se não puder ser empregado este método de trabalho, os radiotelegramas extensos, tanto em linguagem clara como em linguagem secreta, serão, como regra geral, transmitidos por partes, contendo cada parte 50 palavras no caso de linguagem clara e 20 palavras ou grupos no caso de linguagem secreta.

4799 (3) No fim de cada parte transmitir-se-á o sinal .. ——.. (?), que significa «recebeu o radiotelegrama até aqui?». Se essa parte se recebeu correctamente, a estação receptora responde transmitindo a letra K e prossegue-se na transmissão do radiotelegrama.

4800 D) Suspensão do tráfego

4801 § 31. Quando uma estação de navio transmite numa frequência de trabalho de uma estação costeira e interfere as emissões da referida estação costeira, deve suspender o seu trabalho ao primeiro pedido desta última.

Secção VI

Fim do tráfego e do trabalho

4802 A) Sinal de fim de transmissão

4803 § 32. (1) A transmissão de um radiotelegrama terminará pelo sinal .—.—. (fim de transmissão) seguida da letra K

4804 (2) No caso de uma transmissão por séries, indica-se o fim de cada radiotelegrama pelo sinal .—.—. (fim de transmissão) e o fim de cada série pela letra K.

4805 B) Entendido

4806 § 33. (1) Dá-se o entendido de um radiotelegrama ou de uma série de radiotelegramas pela seguinte forma:

O indicativo de chamada da estação emissora;
A palavra DE;
O indicativo de chamada da estação receptora;
A letra R seguida do número do radiotelegrama; *ou*
A letra R seguida do número do último radiotelegrama de uma série.

4807 (2) A estação receptora transmite o entendido na frequência de tráfego (v. os n.os **4788** e **4789**).

4808 C) Fim do trabalho

4809 § 34. (1) O fim do trabalho entre duas estações é indicado por cada uma delas por meio do sinal ... ___ . ___ (fim do trabalho).

4810 (2) O sinal ... ___ . ___ (fim do trabalho) utiliza-se também:

No fim de qualquer transmissão de radiotelegramas de informação geral, de avisos gerais de segurança e de informações meteorológicas;
No fim da transmissão no serviço das radiocomunicações a grande distância, com entendido diferido ou sem entendido.

SECÇÃO VII

Direcção do trabalho

4811 § 35. As disposições da presente secção não se aplicam aos casos de perigo, urgência e segurança (v. o n.º **4710**).

4812 § 36. Nas comunicações entre estação costeira e estação de navio, a estação de navio seguirá as instruções dadas pela estação costeira em tudo o que se refere à ordem e hora de transmissão, escolha da frequência e da classe de emissão, duração e suspensão do trabalho.

4813 § 37. Nas comunicações entre estações de navio, incumbe à estação chamada a direcção do trabalho segundo as indicações do n.º **4812**. Contudo, se uma estação costeira julgar necessário intervir, as estações de navio seguirão as suas instruções.

SECÇÃO VIII

Ensaios

4814 § 38. Quando for necessário a uma estação de navio emitir sinais de ensaio ou de afinação susceptíveis de interferir o trabalho de estações costeiras vizinhas, deverá obter-se o assentimento dessas estações antes de se efectuarem tais emissões.

4815 § 39. Quando for necessário a uma estação do serviço móvel marítimo efectuar sinais de ensaio, quer para regulação do emissor antes de transmitir uma chamada, quer para regulação de um receptor, esses sinais não devem durar mais de dez segundos. Devem ser constituídos por uma série de «VVV» seguida do indicativo de chamada da estação que emite para ensaios.

4816 a **4840** *(Não atribuídos.)*

ARTIGO 64

Procedimentos gerais aplicáveis à telegrafia com impressão directa de faixa estreita no serviço móvel marítimo (1)

SECÇÃO I

Generalidades

4841 § 1. As estações que utilizam a telegrafia com impressão directa de faixa estreita devem satisfazer às disposições dos artigos 59 e 60.

4842 § 2. Convém que sejam aplicados os procedimentos especificados no presente artigo, excepto nos casos de perigo, de urgência ou de segurança.

A.64 (1) Podem igualmente ser consultados os pareceres pertinentes da CCIR.

4843 § 3. (1) O tráfego pode ser permutado com ou sem a utilização de dispositivos de correcção de erros.

4844 (2) Nas comunicações entre duas estações convém utilizar o modo «correcção de erros com circuito de retorno» (ARQ) quando as duas estações funcionem segundo esse modo.

4845 (3) Nas transmissões de uma estação ou de uma estação de serviço com destino a várias outras estações convém utilizar o modo «correcção de erros sem circuito de retorno» quando as estações em causa funcionem segundo esse modo.

4846 § 4. Os serviços assegurados por cada estação aberta à correspondência pública devem ser indicados na nomenclatura das estações costeiras e na nomenclatura das estações de navio, assim como as informações relativas à taxação.

4847 § 5. Sempre que a transmissão se faça através das vias de telecomunicação abertas à correspondência pública, com exclusão das vias de telecomunicação do serviço móvel e do serviço móvel por satélite e as suas ligações de conexão, convém ter em conta as disposições do Regulamento Telegráfico e os pareceres pertinentes da CCITT.

SECÇÃO II

Procedimentos aplicáveis à exploração manual

4848 A) Generalidades

4849 § 6. No caso de utilização de sistemas de telegrafia com impressão directa ou de sistemas semelhantes numa faixa de frequência atribuída ao serviço móvel marítimo, a chamada pode ser emitida, por acordo prévio, numa frequência de trabalho disponível para esses sistemas.

4850 B) Sentido navio-estação costeira

4851 § 7. O operador da estação de navio estabelece a comunicação com a estação costeira por telegrafia morse da classe A1A, por telefonia ou por outro meio, utilizando os procedimentos normais de chamada. O operador pede, em seguida, à estação costeira uma comunicação com impressão directa, troca com ela informações sobre as frequências a utilizar e, se for caso disso, indica-lhe o número de chamada selectiva da estação de navio para a impressão directa, atribuído de acordo com as disposições do apêndice 38.

4852 (2) O operador da estação costeira estabelece então a comunicação com impressão directa na frequência escolhida de comum acordo utilizando a identificação apropriada do navio.

4853 § 8. (1) O operador da estação de navio pode igualmente recorrer ao equipamento de impressão directa para chamar a estação costeira numa frequência de recepção predeterminada desta. Utiliza então o sinal de identificação da estação costeira atribuído de acordo com as disposições do apêndice 38.

4854 (2) O operador da estação costeira estabelece então a comunicação com impressão directa na frequência de emissão corresponde da sua estação.

4855 C) Sentido estação costeira-navio

4856 § 9. (1) O operador de estação costeira chama a atenção de navio por telegrafia morse da classe A1A, por telefonia ou por outro meio, utilizando os procedimentos normais de chamada.

4857 (2) O operador da estação de navio aplica então os procedimentos descritos nos n.os **4851** ou **4853**.

4858 D) Comunicações entre navios

4859 § 10. (1) O operador de situação de navio que chama estabelece a comunicação com a estação de navio chamada por telegrafia morse da classe A1A, por telefonia ou por outro meio, aplicando os procedimentos normais de chamada. Pede-lhe, em seguida, uma comunicação com impressão directa, troca informações sobre as frequências a utilizar e, se for caso disso, indica o número de chamada selectiva da sua estação a utilizar para a impressão directa, atribuído de acordo com as disposições do apêndice 38.

4860 (2) O operador de estação de navio chamada estabelece então a comunicação com impressão directa na frequência escolhida de comum acordo utilizando a identificação apropriada do navio que chama.

SECÇÃO III

Procedimentos aplicáveis à exploração automática

4861 A) Sentido navio-estação costeira

4862 § 11. (1) A estação de navio chama a estação costeira numa frequência de recepção predeterminadas da estação costeira recorrendo ao equipamento de impressão directa e utilizando o sinal de identificação atribuído à estação costeira, de acordo com as disposições do apêndice 38.

4863 (2) O equipamento de impressão directa da estação costeira detecta a chamada e a estação costeira responde directamente, quer automaticamente, quer manualmente, na frequência da emissão correspondente.

4864 B) Sentido estação costeira-navio

4865 § 12. (1) A estação costeira chama a estação de navio numa frequência de emissão predeterminada da estação costeira recorrendo ao equipamento de impressão directa e utilizando o número de chamada selectiva para impressão directa da estação de navio, atribuído de acordo com as disposições do apêndice 38.

4866 (2) O equipamento de impressão directa da estação de navio, sintonizado para receber a frequência de emissão predeterminadas da estação costeira, detecta a chamada; a estação de navio responde então utilizando um dos métodos seguintes:

4867 *a*) Responde ou imediatamente na frequência de recepção correspondente da estação costeira ou após um certo espaço de tempo, aplicando o procedimento indicado no n.º **4853**; *ou*

4868 *b*) O emissor da estação de navio é ligado automaticamente na frequência de recepção correspondente da estação costeira; o equipamento de impressão directa do navio emite então sinais apropriados para indicar que está pronto a receber o tráfego por via automática.

SECÇÃO IV

Forma das mensagens

4869 § 13. Quando a estação costeira dispõe de instalações apropriadas, o tráfego pode fazer-se através da rede telex:

4870 *a*) Quer pelo modo «conversação»; as estações interessadas são então ligadas automática ou manualmente;

4871 *b*) Quer pelo modo «registo e retransmissão»; as mensagens são então armazenadas numa memória na estação costeira até ser possível estabelecer um circuito, automaticamente ou por comando manual, com a estação chamada.

4872 § 14. No sentido estação costeira-navio, convém que a forma das mensagens esteja de acordo com a que é normalmente utilizada na rede telex.

4873 § 15. No sentido navio-estação convém que a forma das mensagens esteja de acordo com a que é normalmente utilizadas na rede telex, com a adição de um preâmbulo como segue:

4874 *a*) No modo «conversação», o preâmbulo é composto pelos caracteres DIRTLXyz + transmitidos em sequência e precedidos de, pelo menos, um sinal de «retorno do carreto» e de um sinal de «mudança de linha», representando «y» o código telex de destino, de acordo com os pareceres pertinentes da CCITT, representando «z» o número telex do assinante em terra, e indicando «+» o fim da sequência;

4875 *b*) No modo «registo e retransmissão», o preâmbulo é composto pelos caracteres TLXyz + transmitidos em sequência e precedidos de, pelo menos, um sinal de «retorno do carreto» e de um sinal de «mudança de linha», representando «y» o código telex de destino, de acordo com os pareceres pertinentes da CCITT, representado «z» o número telex do assinante em terra e indicando «+» o fim da sequência.

SECÇÃO V

Procedimentos aplicáveis à exploração com «correcção de erros sem circuito de retorno»

4876 § 16. Quando existem acordos prévios nesse sentido, as mensagens podem ser transmitidas a partir de uma estação costeira ou de uma estação de navio com destino a uma ou mais estações de navio segundo o modo «correcção de erros sem circuito de retorno», nos seguintes casos:

4877 *a*) A estação de navio que deve receber a mensagem não está em condições de utilizar o seu emissor ou não está autorizada a fazê-lo;

4878 *b*) A mensagem é destinada a vários navios;

4879 *c*) É necessário efectuar a recepção sem vigilância segundo o modo «correcção de erros sem circuito de retorno» e não é exigido o recebido automático.

4880 § 17. Convém que todas as mensagens transmitidas segundo o modo «correcção de erros sejam precedidas dos sinais «retorno do carreto» e «mudança de linha», transmitidos pelo menos uma vez.

4881 § 18. As estações de navio podem dar o recebido das mensagens transmitidas segundo o modo «correcção de erros sem circuito de retorno» por telegrafia morse da classe A1A, por telefonia ou por qualquer outro meio.

4882 a 4902 *(Não atribuídos.)*

ARTIGO 65

Procedimento geral radiofónico no serviço móvel marítimo

SECÇÃO I

Disposições gerais

4903 § 1. O procedimento pormenorizado no presente artigo é aplicável às estações radiotelefónicas, excepto nos casos de perigo, de urgência ou de segurança, a que se aplicam as disposições do capítulo IX.

4904 § 2. (1) O serviço das estações radiotelefónicas de navio deverá ser assegurado por um operador que satisfaça as condições fixadas no artigo 55.

4905 (2) Para os indicativos de chamada ou outros meios de identificação das estações radiotelefónicas costeiras ou de navio (v. o artigo 25).

4906 § 3. Convém que o serviço radiotelefónico aberto à correspondência pública a bordo dos navios seja, se possível, explorado em dúplex.

4907 § 4. (1) Poderão utilizar-se dispositivos que emitam um sinal que indique a ocupação de uma via desde que não causem interferência prejudicial ao serviço assegurado pelas estações costeiras.

4908 (2) Não é autorizada a utilização de dispositivos que emitam sinais de chamada ou de identificação contínuos ou repetidos.

4909 (3) Uma estação não pode emitir informações idênticas simultaneamente em várias frequências quando estiver a comunicar com uma só estação.

4910 (4) As estações não devem emitir onda portadora entre as chamadas.

4911 (5) Convém que as estações radiotelefónicas estejam, tanto quanto possível, equipadas com dispositivos que lhes permitam passar instantaneamente da emissão para a recepção e vice-versa. Estes dispositivos serão necessários em todas as estações que assegurem comunicações entre os navios e os assinantes da rede telefónica terrestre.

4912 § 5. (1) As estações equipadas para a radiotelefonia podem transmitir e receber os radiotelegramas em radiotelefonia. As estações costeiras que assegurem um tal serviço e que estejam abertas à correspondência pública devem estar assinaladas na nomenclatura das estações costeiras.

4913 (2) Para facilitar as radiocomunicações podem ser utilizadas as abreviaturas de serviço indicadas no apêndice 14.

4914 (3) Se for necessário soletrar certas expressões, palavras difíceis, abreviaturas de serviço, algarismos, etc., utilizar-se-ão os quadros de soletração fonética do apêndice 24.

SECÇÃO II

Operações preliminares

4915 § 6. (1) Antes de emitir, uma estação tomará as precauções necessárias para se certificar de que as suas emissões não interferirão transmissões em curso. Se tal interferência for provável, a estação esperará uma paragem oportuna da transmissão que poderia interferir.

4916 (2) No caso em que, mesmo seguindo este procedimento, a emissão dessa estação interfira uma transmissão já em curso aplicar-se-ão as seguintes regras:

4917 *a*) A estação de navio cuja emissão interfere a comunicação entre uma estação móvel e uma estação costeira deverá deixar de emitir ao primeiro pedido da estação costeira;

4918 *b*) A estação de navio cuja emissão interfere as comunicações entre estações móveis deve suspender a emissão ao primeiro pedido de uma qualquer dessas estações;

4919 *c*) A estação que pede essa suspensão deve indicar a duração aproximada da espera imposta à estação cuja emissão faz suspender.

SECÇÃO III

Chamadas em radiotelefonia

4920 § 7. (1) As disposições da presente secção relativas aos intervalos entre as chamadas não se aplicam a uma estação a operar em condições de perigo, de urgência ou de segurança.

4921 (2) As disposições da presente secção não se aplicam ao serviço móvel marítimo por satélite.

4922 § 8. (1) Como regra geral, compete à estação de navio estabelecer a comunicação com a estação costeira. Para isso a estação de navio só pode chamar a estação costeira depois de ter entrado na sua zona de serviço, quer dizer, na zona em que, utilizando uma frequência apropriada, a estação de navio poderá ser ouvida pela estação costeira.

4923 (2) Todavia, uma estação costeira que tenha tráfego para uma estação de navio poderá chamar essa estação se tiver razões para supor que ela se encontra na sua zona de serviço e mantém escuta.

4924 § 9. (1) Além, disso, cada estação costeira deverá, tanto quanto for praticável, transmitir as suas chamadas sob forma de «listas de chamadas» formadas com os indicativos de chamada ou outros meios de identi-

ficação, classificados por ordem alfabética, das estações de navio para que tem tráfego pendente. Essa chamadas serão efectuadas em momentos determinados por acordos concluídos entre as administrações interessadas, espaçados pelo menos de duas horas e no máximo de quatro horas, durante as horas de serviço da estação costeira.

4925 (2) As estações costeiras transmitirão essas listas de chamadas nas suas frequências normais de trabalho nas faixas apropriadas. Esta transmissão é precedida de uma chamada geral a todas as estações.

4926 (3) A chamada geral a todas as estações, anunciando a lista de chamadas, pode ser feita numa frequência de chamada sob a forma seguinte:

Três vezes, no máximo, «Chamada a todos os navios» ou CQ (soletrado utilizando as palavras de código CHARLIE QUEBEC);
A palavra AQUI (ou DE soletrada, utilizando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
Três vezes, no máximo, «... Rádio»;
«Escutem a minha lista de chamadas em ... kHz.»

Em nenhum caso será repetido este preâmbulo.

4927 (4) Todavia, nas faixas compreendidas entre 156 MHz e 174 MHz, a chamada descrita no n.º **4926** poderá, quanto o contacto for fácil de estabelecer, ser substituída pela chamada descrita a seguir:

Uma vez «Chamada a todos os navios» ou CQ (soletrado utilizando as palavras de código CHARLIE QUEBEC);
A palavra AQUI (ou DE soletrada, utilizando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
Duas vezes, «... Rádio»;
«Escutem a minha lista de chamadas na via ... »

Em nenhum caso será repetido este preâmbulo.

4928 (5) As disposições do n.º **4926** são obrigatórias quando se utilizarem as frequências de 2182 kHz e de 156,8 MHz.

4929 (6) As horas a que as estações costeiras transmitem as suas listas de chamadas, bem como as frequências e as classes de emissão que utilizam para esse fim, deverão ser mencionadas na nomenclatura das estações costeiras.

4930 (7) Convém que as estações de navio escutem, em toda a medida do possível, as emissões das listas de chamadas das estações costeiras. Quando ouvirem o seu indicativo de chamada ou o seu sinal de identificação numa lista, deverão responder logo que possam.

4931 (8) Quando o tráfego não puder ser imediatamente escoado, a estação costeira indicará a cada estação de navio interessada a hora provável a que poderá começar o trabalho, assim como, se for necessário, a frequência e a classe de emissão a utilizar.

4932 § 10. Quando uma estação costeira receber praticamente ao mesmo tempo chamadas de várias estações de navio, decidirá a ordem pela qual essas estações lhe poderão transmitir o seu tráfego. A sua decisão será baseada na ordem de prioridade (v. o n.º **4441**) dos radiotelegramas ou das conversações radiotelefónicas pendentes nas estações de navio e na necessidade de permitir a cada uma das estações que chama o escoamento do maior número possível de comunicações.

4933 § 11. (1) Quando uma estação chamada não responder à chamada emitida três vezes com intervalos de dois minutos, a chamada deverá cessar.

4934 (2) Todavia, quando uma estação chamada não responder, a chamada poderá ser repetida com intervalos de 3 minutos.

4935 (3) Nas zonas em que seja possível, na prática, estabelecer, em ondas métricas, ligações seguras com as estações costeiras, a estação de navio que chama poderá repetir a chamada depois de se ter certificado de que a estação costeira deixou de escoar tráfego.

4936 (4) Quando se tratar de uma comunicação entre uma estação do serviço móvel marítimo e uma estação de aeronave, a chamada poderá recomeçar cinco minutos mais tarde.

4937 (5) Antes de renovar a chamada, a estação que chama deverá certificar-se de que a estação chamada não está em comunicação com outra estação.

4938 (6) Se não houver motivo para recear que interferências prejudiciais afectem as comunicações em curso, não serão aplicáveis as disposições do n.º **4936**. Nesses casos, a chamada, emitida três vezes com intervalos de dois minutos, poderá ser renovada após um intervalo, pelo menos, igual a três minutos.

4939 (7) Todavia, antes de renovar a chamada, a estação que chama deverá certificar-se de que não há o risco de uma nova chamada causar interferências a outras comunicações em curso e de que a estação chamada não está em comunicação com uma outra estação.

4940 (8) As estações de navio não devem transmitir a sua onda portadora entre as chamadas.

4941 § 12. Quando o nome e o endereço da administração ou da exploração particular de que depende uma estação de navio não estiverem mencionados na nomenclatura apropriada ou já não estiverem em conformidade com as indicações desta, é dever da estação de navio, como regra de procedimento, fornecer à estação costeira a que transmite o tráfego todos os esclarecimentos necessários a esse respeito.

4942 § 13. (1) A estação costeira pode, por meio da abreviatura TR (soletrada as palavras de código TANGO ROMEO), pedir à estação de navio que lhe forneça as informações seguintes:

4943 *a*) Posição e, tanto quanto possível, rumo e velocidade;

4944 *b*) Próximo ponto de escala.

4945 (2) Convém que as informações referidas nos n.os **4942** a **4944**, precedidas da abreviatura TR, sejam fornecidas pelas estações de navio, sempre que apropriado, sem pedido prévio da estação costeira. Essas informações só serão fornecidas após autorização do comandante ou da pessoa responsável pelo navio.

Secção IV

Método de chamada, resposta à chamada e sinais preparatórios do tráfego

4946 A) Método de chamada

4947 § 14. (1) A chamada é constituída como segue:

Três vezes, no máximo, o indicativo de chamada ou qualquer outro sinal de identificação da estação chamada;
A palavra AQUI (ou DE soletrada, utilizando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
Três vezes, no máximo, o indicativo de chamada ou qualquer outro sinal de identificação da estação que chama.

4948 (2) Todavia, nas faixas compreendidas entre 156 MHz e 174 MHz, a chamada descrita no n.º **4947** poderá, quando o contacto for fácil de estabelecer ser substituída pela chamada descrita a seguir:

Uma vez o indicativo de chamada da estação chamada;
A palavra AQUI (ou De soletrada, utilizando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
Duas vezes o indicativo de chamada ou qualquer outro sinal de identificação da estação que chama.

4949 (3) Quando uma estação de navio chamar numa frequência de trabalho uma estação costeira que funcione em várias vias em ondas métricas, convém que inclua na sua chamada o número da via utilizada.

4950 (4) Depois do estabelecimento do contacto, o indicativo de chamada ou qualquer outro sinal de identificação só pode ser emitido uma vez.

4951 (5) Se a estação costeira estiver munida de um dispositivo de chamada selectiva e se a estação de navio estiver munida de um dispositivo de recepção das chamadas selectivas, a estação costeira chamará o navio emitindo os sinais de código apropriados e a estação de navio chamará vocalmente a estação costeira, segundo o procedimento indicado no n.º **4947** (v., também, o artigo 62).

4952 § 15. As chamadas para as comunicações internas a bordo dos navios que se encontrem nas águas territoriais são constituídas como segue:

4953 *a*) Chamadas provenientes da estação principal:

Três vezes, no máximo, o nome do navio, seguido de uma única letra (ALFA, BRAVO, CHARLIE, etc.) que indique a subestação;
A palavra AQUI;
O nome do navio, seguido da palavra CONTROLE;

4954 *b*) Chamadas provenientes da subestação:

Três vezes, no máximo, o nome do navio, seguido da palavra CONTROLE;
A palavra AQUI;
O nome do navio, seguido de uma única letra (ALFA, BRAVO, CHARLIE, etc.) que indique a subestação.

4955 B) Frequência a utilizar para a chamada e os sinais preparatórios

4956 **B1) Faixas compreendidas entre 1605 kHz e 4000 kHz**

4957 § 16. (1) Quando uma estação radiotelefónica de navio chame uma estação costeira convém que utilize para a chamada, por ordem de preferência:

4958 *a*) Uma frequência de trabalho em que a estação costeira assegure a escuta;

4959 *b*) A frequência portadora de 2182 kHz;

4960 *c*) Nas Regiões 1 e 3 e na Gronelândia, a frequência portadora de 2191 kHz (frequência consignada de 2192,4 kHz), quando a frequência portadora de 2182 kHz é utilizada para o perigo.

4961 (2) Quando uma estação radiotelefónica de navio chama uma outra estação de navio convém que utilize para a chamada:

4962 *a*) A frequência portadora de 2182 kHz;

4963 *b*) Uma frequência navio-navio onde e quando a densidade do tráfego for elevada e quando tiver sido possível combinação prévia para tal.

4964 (3) Sob reserva das disposições do n.º **4967** e segundo as disposições regulamentares do seu país, as estações costeiras chamam as estações de navio da sua própria nacionalidade quer numa frequência de trabalho quer, quando se trate de chamadas individuais a navios determinados, na frequência portadora de 2182 kHz.

4965 (4) Todavia, no caso em que uma estação de navio mantenha simultaneamente escuta na frequência portadora de 2182 kHz e numa frequência de trabalho, convém chamá-la nessa frequência de trabalho.

4966 (5) Como regra geral, convém que as estações costeiras utilizem a frequência portadora de 2182 kHz para chamar as estações radiotelefónicas de navio de nacionalidade diferente da sua.

4967 (6) As estações costeiras podem chamar as estações de navio equipadas para receber sinais de chamada selectiva de acordo com as disposições do artigo 62.

4968 **B2) Faixas compreendidas entre 4000 kHz e 23 000 kHz**

4969 § 17. (1) Quando uma estação de navio chamar uma estação costeira em radiotelefonia, utilizará quer uma das frequências de chamada mencionadas no n.º **4375**, quer a frequência de trabalho associada, conforme a secção A do apêndice 16, à da estação costeira.

4970 (2) Quando uma estação costeira chamar em radiotelefonia uma estação de navio, utilizará para esse fim uma das frequências de chamada mencionadas no n.º **4376**, uma das suas frequências de trabalho indicadas na nomenclatura das estações costeiras ou uma das duas frequências portadoras 4125 kHz e 6215,5 kHz, de acordo com as disposições dos n.os **4375.2** e **4375.3**.

4971 (3) As operações preliminares do estabelecimento das comunicações radiotelefónicas poderão efectuar-se igualmente em radiotelegrafia, seguindo o procedimento próprio da radiotelegrafia (v. os n.os **4758** e **4759**).

4972 (4) As disposições dos n.os **4969** e **4970** não se aplicam às comunicações entre estações de navio e estações costeiras nas frequências para a exploração *simplex* especificadas na secção B do apêndice 16.

4973 **B3) Faixas compreendidas entre 156 MHz e 174 MHz**

4974 § 18. (1) Nas faixas compreendidas entre 156 MHz e 174 MHz convém que, como regra geral, a chamada entre as estações de navio e a chamada no sentido estação costeira-estação de navio se efectue na frequência de 156,8 MHz. Todavia, a chamada no sentido estação costeira-estação de navio pode ser efectuada numa via de trabalho ou numa via de duas frequências destinada à chamada que tenha sido posta em serviço de acordo com o n.º **4391**. Excepto para as comunicações de perigo, urgência ou segurança, para as quais convém utilizar a frequência de 156,8 MHz, a chamada no sentido estação de navio-estação costeira deve, sempre que possível, ser efectuadas numa via de trabalho ou numa via de duas frequências destinada à chamada que tenha sido posta em serviço de acordo com o n.º **4391**. Convém que os navios que desejem participar no serviço de operações portuárias ou no serviço de movimento de navios chamem numa frequência de trabalho destinada ao serviço de operações portuárias ou ao serviço de movimento de navios, indicada em normando na nomenclatura das estações costeiras.

4975 (2) Se a frequência de 156,8 MHz estiver a ser utilizada para comunicações de perigo, urgência ou segurança, uma estação de navio que deseje participar no serviço de operações portuárias poderá estabelecer contacto em 156,6 MHz ou utilizando uma outra frequência do serviço de operações portuárias, impressa em normando na nomenclatura das estações costeiras.

4976 **B4) Procedimento a aplicar para chamar uma estação que assegure um serviço de pilotagem**

4977 § 19. Quando uma estação radiotelefónica de navio chama uma estação que assegura um serviço de pilotagem, convém que utilize para a chamada, por ordem de preferência:

4978 *a*) Uma via apropriada das faixas compreendidas entre 156 MHz e 174 MHz;

4979 *b*) Uma frequência de trabalho seleccionada nas faixas compreendidas entre 1605 kHz e 4000 kHz;

4980 *c*) A frequência portadora de 2182 kHz, mas então só para designar a frequência de trabalho a utilizar.

4981 C) Fórmula da resposta à chamada

4982 § 20. A resposta à chamada é constituída como segue:

Três vezes, no máximo, o indicativo de chamada ou qualquer outro sinal de identificação da estação que chama;
A palavra AQUI (ou DE soletrada, utilizando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);
Três vezes, no máximo, o indicativo de chamada ou qualquer outro sinal de identificação chamada.

4983 D) Frequência de resposta

4984 D1) Faixas compreendidas entre 1605 kHz e 4000 kHz

4985 § 21. (1) Quando uma estação de navio for chamada na frequência portadora de 2182 kHz, convém que responda nessa mesma frequência portadora, a não ser que tenha sido indicada pela estação que chama uma outra frequência para esse fim.

4986 (2) Quando uma estação de navio for chamada por meio da chamada selectiva, deverá responder numa frequência em que a estação costeira assegure a escuta.

4987 (3) Quando uma estação de navio for chamada numa frequência de trabalho por uma estação costeira da sua nacionalidade, deverá responder na frequência de trabalho normalmente associada à frequência utilizada pela estação costeira para a chamada.

4988 (4) Ao chamar uma estação costeira ou uma estação de navio, uma estação de navio deverá indicar a frequência em que lhe deve ser transmitida a resposta, a menos que essa frequência seja a que está normalmente associada à frequência utilizada para a chamada.

4989 (5) Uma estação de navio que permuta frequentemente tráfego com uma estação costeira de nacionalidade diferente da sua poderá, quando as administrações interessadas estiverem de acordo neste particular, utilizar o mesmo procedimento para a resposta que os navios da nacionalidade da estação costeira.

4990 (6) Como regra geral, uma estação costeira deverá responder:

4991 *a*) Na frequência portadora de 2182 kHz, às chamadas transmitidas nessa mesma frequência portadora, a não ser que tenha sido indicada pela estação que chama uma outra frequência para esse fim;

4992 *b*) Numa frequência de trabalho, às chamadas transmitidas numa frequência de trabalho;

4993 *c*) Nas Regiões 1 e 3 e na Gronelândia, numa frequência de trabalho, às chamadas feitas na frequência portadora de 2191 kHz (frequência consignada de 2192,4 kHz).

4994 D1) Faixas compreendidas entre 4000 kHz e 23 000 kHz

4995 § 22. (1) Uma estação de navio chamada por uma estação costeira responderá quer numa das frequências de chamada mencionadas no n.º **4375**, quer na frequência de trabalho associada à da estação costeira, de acordo com a secção A do apêndice 16.

4996 (2) Uma estação costeira chamada por uma estação de navio responderá utilizando uma das frequências de chamada mencionadas no n.º **4376** ou uma das suas frequências de trabalho indicadas na Nomenclatura das estações costeiras.

4997 (3) Na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N., quando uma estação for chamada na frequência portadora de 4125 kHz, convém que responda nessa mesma frequência portadora, a não ser que tenha sido indicada pela estação que chama uma outra frequência para esse fim.

4998 (4) Na zona da Região 3 situada ao sul do paralelo 25° N., quando uma estação for chamada na frequência portadora de 6215,5 kHz, convém que responda nessa mesma frequência portadora, a não ser que tenha sido indicada pela estação que chama uma outra frequência para esse fim.

4999 (5) As disposições dos n.os **4995** e **4996** não se aplicam às comunicações entre estações de navio e estações costeiras nas frequências para a exploração *simplex* especificadas na secção B do apêndice 16.

5000 D3) Faixas compreendidas entre 156 MHz e 174 MHz

5001 § 23. (1) Quando uma estação for chamada na frequência de 156,8 MHz, convém que responda nesta frequência, a não ser que tenha sido indicada pela estação que chama uma outra frequência para esse fim.

5002 (2) Quando uma estação costeira aberta à correspondência pública chama uma estação de navio, quer vocalmente, quer por chamada selectiva, numa via a duas frequências, a estação de navio responderá vocalmente na frequência associada à da estação costeira; inversamente, uma estação costeira responderá a uma chamada de uma estação de navio na frequência associada à da estação de navio.

5003 E) Indicação da frequência a utilizar para o tráfego

5004 **E1) Faixas compreendidas entre 1605 kHz e 4000 kHz**

5005 § 24. Se for estabelecido o contacto na frequência portadora de 2182 kHz, a estação costeira e a estação de navio devem passar para uma das frequências de trabalho a fim de permutar o tráfego.

5006 **E2) Faixas compreendidas entre 4000 kHz e 23 000 kHz**

5007 § 25. Depois do estabelecimento do contacto entre uma estação de navio e uma estação costeira ou outra estação de navio, na frequência de chamada da faixa escolhida, o tráfego deve ser permutado nas frequências de trabalho respectivas dessas estações.

5008 **E3) Faixas compreendidas entre 156 MHz e 174 MHz**

5009 § 26. Uma vez estabelecido o contacto entre uma estação costeira do serviço de correspondência pública e uma estação de navio, na frequência de 156,8 MHz ou, quando for o caso, na via de chamada a duas frequências (v. o n.º **4392**), as duas estações passam para um dos seus pares de frequências normais de trabalho para permutar o tráfego. Convém que a estação que chama indique a via para onde pretende passar, identificando essa via pela frequência expressa em megahertz ou, de preferência, pelo número que designa a via.

5010 (2) Uma vez estabelecido o contacto na frequência de 156,8 MHz entre uma estação costeira do serviço de operações portuárias e uma estação de navio, convém que a estação de navio indique a natureza do serviço que deseja (informações sobre a navegação, instruções relativas ao movimento nas docas, etc.); a estação costeira indicará então a via a empregar para a permuta do tráfego, identificando essa via pela frequência expressa em megahertz ou, de preferência, pelo número que designa a via.

5011 (3) Uma vez estabelecido o contacto na frequência de 156,8 MHz entre uma estação costeira do serviço de movimento de navios e uma estação de navio, a estação costeira indica a via a utilizar para a permuta do tráfego, identificando essa via pela frequência expressa em megahertz ou, de preferência, pelo número que designa a via.

5012 (4) Convém que depois de ter estabelecido o contacto com uma outra estação de navio na frequência de 156,8 MHz uma estação de navio comunique a via navio-navio que ela pretende utilizar para a permuta do tráfego, identificando essa via pela frequência expressa em megahertz ou, de preferência, pelo número que designa a via.

5013 (5) Todavia, uma breve permuta de tráfego, que não deve durar mais de um minuto, relativa à segurança da navegação pode não ser efectuada numa frequência de trabalho, quando for importante que todos os navios que se encontram na zona de serviço recebam a emissão.

5014 (6) As estações que ouvirem uma emissão relativa à segurança da navegação devem escutar a mensagem até que tenham adquirido a certeza de que tal mensagem não lhe diz respeito. Não devem efectuar qualquer emissão susceptível de interferir a mensagem.

5015 F) Acordo sobre a frequência a utilizar para o tráfego

5016 § 27. Se a estação chamada estiver de acordo com a estação que chama, transmite:

5017 *a*) A indicação de que a partir desse momento escutará na frequência ou via de trabalho anunciada pela estação que chama;

5018 *b*) A indicação de que está pronta a receber o tráfego da estação que chama.

5019 (2) Se a estação chamada não estiver de acordo com a estação que chama sobre a frequência ou a via de trabalho a empregar, transmitirá a indicação de trabalho ou da via que propõe.

5020 (3) Numa ligação entre uma estação costeira e uma estação de navio, a estação costeira decide finalmente a frequência ou a via a utilizar.

5021 (4) Efectuado o acordo sobre a frequência ou a via de trabalho que a estação que chama deverá empregar para o tráfego, a estação chamada anuncia que está pronta a receber o tráfego.

5022 G) Indicação do tráfego

5023 § 28. Quando a estação que chama desejar escoar várias comunicações radiotelefónicas ou transmitir mais de um radiotelegrama, convém que indique o facto depois de estabelecer contacto.

5024 H) Dificuldades de recepção

5025 § 29. (1) Se a estação não estiver em condições de receber imediatamente o tráfego, convém que responda à chamada como se indica no n.º **4982** e que faça seguir a sua resposta da expressão «espere ... minutos» [ou AS soletrado, utilizando as palavras de código ALFA SIERRA ... (minutos) em caso de dificuldades linguísticas], precisando a duração provável da espera em minutos. Se essa duração provável ultrapassar dez minutos, a espera deverá ser justificada. Em vez deste procedimento, a estação chamada pode indicar por um meio apropriado que não está em condições de receber imediatamente o tráfego.

5026 (2) Quando uma estação receber uma chamada sem ter a certeza de lhe ser destinada, não deverá responder antes de a chamada ter sido repetida e compreendida.

5027 (3) Quando uma estação receba uma chamada que lhe é destinada mas tenha dúvidas quanto à identificação da estação que chama, deverá responder imediatamente pedindo a esta que repita o seu indicativo de chamada ou qualquer outro sinal de identificação que use.

Secção V

Escoamento do tráfego

5028 A) Frequência do tráfego

5029 § 30. (1) Convém que cada estação utilize para o escoamento do seu tráfego (comunicações radiotelefónicas e radiotelegramas) uma das suas frequências de trabalho da faixa em que se efectuou a chamada.

5030 (2) Além da sua frequência normal de trabalho, impressa em normando na nomenclatura das estações costeiras, cada estação costeira poderá empregar uma ou várias frequências suplementares da mesma faixa, em conformidade com as disposições do artigo 60.

5031 (3) Com excepção do tráfego de perigo (v. o capítulo IX), é proibido o emprego para o tráfego das frequências reservadas à chamada.

5032 (4) Quando tiver sido estabelecido contacto na frequência a utilizar para o tráfego, a transmissão de um radiotelegrama ou de uma comunicação radiotelefónica é precedida:

5033 Do indicativo de chamada ou de qualquer outro sinal de identificação da estação chamada;

5034 Da palavra AQUI (ou DE soletrada, utilizando as palavras de código DELTA ECHO em caso de dificuldades linguísticas);

5035 Do indicativo de chamada de qualquer outro sinal de identificação da estação que chama.

5036 (5) Não é necessário que o indicativo de chamada ou qualquer outro sinal de identificação seja emitido mais de uma vez.

5037 B) Estabelecimento das comunicações radiotelefónicas e transmissão dos radiotelegramas

5038 B1) Estabelecimento das comunicações radiotelefónicas

5039 § 31. (1) Para escoar uma comunicação radiotelefónica convém que a estação costeira estabeleça, tão depressa quanto possível, a ligação com a rede telefónica. Durante esse espaço de tempo a estação de navio deverá manter a escuta na frequência de trabalho indicada pela estação costeira.

5040 (2) Todavia, se a ligação não puder ser estabelecida rapidamente, a estação costeira deverá informar a estação de navio. Neste caso, esta última poderá:

5041 *a*) Ou manter a escuta na frequência apropriada até que se possa estabelecer a ligação;

5042 *b*) Ou tornar a estabelecer contacto com a estação costeira no momento combinado.

5043 (3) Quando se tiver escoado uma comunicação radiotelefónica, é aplicável o procedimento indicado no n.º **5054**, salvo se estiverem pendentes outras comunicações numa das duas estações.

5044 B2) Transmissão dos radiotelegramas

5045 § 32. (1) Convém que a transmissão de um radiotelegrama se efectue do modo seguinte:

O radio telegrama começa: de ... (nome do navio ou da aeronave);
N.º... (número de série do radiotelegrama);
Número de palavras ...;
Data ...;
Hora ... (hora a que o radiotelegrama foi aceite bordo do navio ou da aeronave);
Indicações de serviço, se existirem;
Endereço ...;
Texto ...;
Assinatura ... (se houver);
Terminada a transmissão do radiotelegrama, escuto.

5046 (2) Como regra geral, os radiotelegramas de qualquer natureza transmitidos pelas estações de navio serão numerados por séries quotidianas, dando-se o n.º 1 ao primeiro radiotelegrama transmitido em cada dia para cada estação diferente.

5047 (3) Convém que uma série de números começada em radiotelegrafia continue em radiotelefonia e inversamente.

5048 (4) Cada radiotelegrama será transmitido uma única vez pela estação emissora. Todavia, em caso de necessidade, poderá ser repetido integralmente ou em parte pela estação receptora ou pela estação emissora.

5049 (5) Quando se transmitem grupos de algarismos, cada algarismo será transmitido separadamente e a transmissão de cada grupo ou série de grupos deverá ser precedida das palavras «em algarismos».

5050 (6) Os números escritos por extenso serão pronunciados como se escrevem, fazendo preceder a sua transmissão pelas palavras «por extenso».

5051 **B3) Entendido**

5052 § 33. (1) O entendido de um radiotelegrama ou de uma série de radiotelegramas é dado pelas seguinte forma:

O indicativo de chamada ou qualquer outro sinal de identificação da estação emissora;
A palavra AQUI (ou De soletrada, utilizando as letras de código DELTA ECHO em cado de dificuldades linguísticas);
O indicativo de chamada ou qualquer outro sinal de identificação da estação receptora;
«Recebido o seu n.º ... , escuto» [ou R soletrado, utilizando a palavra de código ROMEO... (número), K soletrado, empregando a palavra de código KILO em caso de dificuldades linguísticas]; ou
«Recebidos os seus n.º... a n.º..., escuto» [ou R soletrado, empregando a palavra de código ROMEU ... (número), K soletrado, empregando a palavra de código KILO em caso de dificuldades linguísticas].

5053 (2) Não se deverá considerar terminada a transmissão de um radiograma ou série de radiotelegramas sem que o entendido tenha sido devidamente recebido.

5054 (3) O fim do trabalho entre duas estações será indicado, por cada uma delas, por meio da palavra «terminado» (ou $\overline{VA}$ soletrada, utilizando as palavras de código VICTOR ALFA em caso de dificuldades.

SECÇÃO VI

Duração e orientação do trabalho

5055 § 34. (1) A transmissão da chamada e dos sinais preparatórios do tráfego na frequência portadora de 2182 kHz ou na frequência de 156,8 MHz não deverá exceder um minuto, excepto nos casos de perigo, de urgência ou de segurança, aos quais se aplicam as disposições do capítulo IX.

5056 (2) Nas comunicações entre estação costeira e estação de navio a estação de navio seguirá as instruções dadas pela estação costeira em tudo o que diga respeito à ordem e hora de transmissão, escolha da frequência, duração e suspensão do trabalho.

5057 (3) Nas comunicações entre estações de navio, a estação chamada orientará o trabalho nas condições indicadas no n.º **5056**. Todavia, se uma estação costeira julgar necessário intervir, as estações de navio seguirão as suas instruções.

SECÇÃO VII

Ensaios

5058 § 35. Quando for necessária a uma estação de navio emitir sinais de ensaio ou de regulação susceptíveis de interferir o trabalho das estações costeira vizinhas, deverá obter-se o consentimento dessas estações antes de efectuar tais emissões.

5059 § 36. (1) Quando for necessário a uma estação emitir sinais de ensaio, quer para regular um emissor antes de transmitir uma chamada, quer para regular um receptor, esse sinais não deverão durar mais de dez segundos e devem incluir o indicativo de chamada ou qualquer outro sinal de identificação da estação que emite para ensaios; esse indicativo ou esse sinal de identificação deverá ser pronunciado lenta e distintamente.

5060 (2) As emissões de ensaio devem ser reduzidas ao mínimo, especialmente:

Na frequência portadora de 2182 kHz;
Na frequência de 156,8 MHz;
Na frequência portadora de 4125 kHz na zona das Regiões 1 e 2 situada ao sul do paralelo 15° N., incluindo o México, e na zona da Região 3 situada ao sul do paralelo 25° N.;
Na frequência portadora de 6215,5 kHz na zona da Região 3 ao sul do paralelo 25° N.

5061 (3) É proibido fazer emissões de ensaio do sinal de alarme radiotelefónico na frequência portadora de 2182 kHz e na frequência de 156,8 MHz, excepto se se tratar de um equipamento de emergência que só possa emitir nessas frequências: neste caso, deverão ser tomadas as medidas necessárias para evitar a radiação. É necessário igualmente tomar medidas para evitar a radiação proveniente dos ensaios do sinal de alarme radiotelefónico em frequências diferentes de 2182 kHz e de 156,8 MHz.

5062 a 5084 *(Não atribuídos.)*

ARTIGO 66

Correspondência pública no serviço móvel marítimo e no serviço móvel marítimo por satélite (1)

SECÇÃO I

Generalidades

5085 § 1. As disposições do Regulamento Telegráfico e as do Regulamento Telefónico, tendo em conta os pareceres da CCITT, são aplicáveis às radiocomunicações, excepto quando o presente Regulamento dispuser de outro modo.

SECÇÃO II

Autoridade responsável pela contabilidade

5086 § 2. Em princípio, e em conformidade com a legislação e a prática nacionais, as taxas das radiocomunicações no sentido navio-terra devem ser cobradas ao detentor da licença de estação móvel marítima:

5087 *a*) Pela administração que concedeu a licença; *ou*
5088 *b*) Por uma exploração particular reconhecida; *ou*
5089 *c*) Por qualquer (ou quaisquer outro(s) organismo(s) designado(s) pela administração mencionada no n.° **5087**.

5090 § 3. No presente artigo, a administração ou a exploração particular reconhecida ou o(os) organismo(s) designado(s) são denominados «autoridade responsável pela contabilidade».

5091 § 4. O(s) nome(s) e endereço(s) da(s) autoridade(s) responsável(eis) pela contabilidade devem ser notificados ao Secretário-Geral, a fim de serem publicados na nomenclatura das estações de navio. O número desses nomes e endereços deve ser tão reduzido quanto possível, tendo em conta os pareceres da CCITT.

SECÇÃO III

Contabilidade

5092 § 5. A permuta e a verificação das contas devem ser efectuadas em conformidade com o Regulamento Telegráfico e o Regulamento Telefónico, tendo em conta os pareceres da CCITT.

5093 § 6. As contas serão enviadas tão rapidamente quanto possível e, em qualquer caso, antes do fim do 3.° mês a seguir a que se referem.

5094 § 7. Em princípio, uma conta deve ser considerada aceite sem que seja necessária a notificação explícita do aceite à administração (ou à exploração particular reconhecida) que a apresentou.

5095 § 8. Contudo, qualquer autoridade responsável pela contabilidade tem o direito de contestar os elementos de uma conta durante o prazo de seis meses a contar da data de envio.

5096 § 9. Todas as contas radiomarítimas devem ser pagas sem demora pela autoridades responsável pela contabilidade e, o mais tardar, seis meses após o envio da conta.

5097 § 10. Se as contas radiomarítimas internacionais não forem pagas no fim de seis meses, a administração que concedeu licença à estação móvel deve, a pedido, e dentro dos limites da legislação nacional em vigor, tomar todas as medidas possíveis para obter do detentor da licença a regularização das contas por liquidar.

A.66 (1) V. a Resolução n.° 201.

5098 § 11. No caso previsto no n.º 5095 se a conta sofrer um atraso importante no encaminhamento, convém que a autoridade responsável pela contabilidade, e que espera a conta, informe imediatamente a administração (ou a exploração particular reconhecida) de origem de que os eventuais pedidos de informações e a regularização são susceptíveis de sofrer atrasos. Todavia, o atraso não deverá exceder três meses a contar da data de recepção da conta.

5099 § 12. A autoridade debitadora responsável pela contabilidade poderá recusar a regularização e a rectificação das contas apresentadas mais de 18 meses depois da data de aceitação dos radiotelegramas ou depois da data de estabelecimento das comunicações radiotelefónicas ou das comunicações radiotelex a que essas contas se referem.

SECÇÃO IV

Pagamento dos saldos

5100 § 13. O pagamento dos saldos deve ser efectuado em conformidade com o Regulamento Telegráfico e o Regulamento Telefónico, tendo em conta os pareceres pertinentes da CCITT.

SECÇÃO V

Arquivos

5101 § 14. Os originais dos radiotelegramas e os documentos que lhe dizem respeito, assim como os que se referem às comunicações radiotelefónicas e às comunicações radiotelex, devem ser conservados pelas administrações (ou explorações particulares reconhecidas), com todas as precauções necessárias à salvaguarda do sigilo, até à liquidação das contas que a eles se referem e, em qualquer caso, durante seis meses a contar do mês em foram enviadas as contas. As administrações (ou explorações particulares reconhecidas) podem conservar essas informações por qualquer outro meio, tal como registos magnéticos ou electrónicos.

5102 § 15. Todavia, se uma administração (ou exploração particular reconhecida) considerar útil destruir os originais dos radiotelegramas ou de qualquer outro documento ou registo mencionados no n.º 5101 antes de expirarem os prazos indicados acima e se, por causa disso, ficar impossibilitada de efectuar um inquérito relativo a serviços por que for responsável, essa administração (ou exploração particular reconhecida) deverá suportar todas as consequências, tanto no que respeita ao reembolso das taxas como às diferenças que possam verificar-se nas contas em causa.

5103 a 5127 *(Não atribuídos.)*

CAPÍTULO XII

Serviço móvel terrestre

ARTIGO 67

Condições a que devem satisfazer as estações móveis do serviço móvel terrestre

5128 § 1. As estações móveis terrestres devem ser estabelecidas de modo que satisfaçam às disposições do capítulo III no que respeita às frequências e classes de emissão.

5129 § 2. As frequências de emissão das estações móveis terrestres devem ser verificadas o maior número de vezes possível pelo serviço de inspecção de que dependem.

5130 § 3. A energia radiada pelos aparelhos receptores deve ser tão reduzida quanto possível e não deverá causar interferência prejudicial às outras estações.

5131 § 4. As administrações tomam todas as medidas práticas necessárias para que o funcionamento dos aparelhos eléctricos ou electrónicos de qualquer natureza instalados nas estações móveis terrestres não cause interferência prejudicial aos serviços radioeléctricos essenciais dessas estações, quando funcionam de acordo com as disposições do presente Regulamento.

5132 § 5. (1) As mudanças de frequência nos aparelhos emissores e receptores de qualquer estação móvel terrestre deverão poder efectuar-se tão rapidamente quanto possível.

5133 (2) As instalações de qualquer estação móvel terrestre devem permitir, uma vez estabelecida a comunicação, passar da emissão à recepção e vice-versa, num tempo tão curto quanto possível.

5134 a 5158 *(Não atribuídos.)*

ARTIGO 68

Procedimentos gerais aplicáveis à radiotelefonia no serviço móvel terrestre — Chamadas

5159 § 1. (1) Uma estação móvel terrestre só pode chamar uma estação terrestre depois de ter entrado na sua zona de serviço, quer dizer, na zona em que, utilizando uma frequência apropriada, a estação móvel terrestre poderá ser ouvida pela estação terrestre.

5160 (2) Uma estação terrestre que tenha tráfego para uma estação terrestre poderá chamar essa estação se tiver razões para supor que a dita estação móvel terrestre se encontra na sua zona de serviço e mantém escuta.

5161 § 2. As estações móveis terrestres não deverão emitir a sua onda portadora entre as chamadas.

5162 a 5186 *(Não atribuídos.)*

CAPÍTULO XIII

ARTIGO 69

Entrada em vigor do Regulamento das Radiocomunicações

5187 § 1. O presente Regulamento das Radiocomunicações, anexo à Convenção Internacional das Telecomunicações, entrará em vigor em 1 de Janeiro de 1982, com excepção das disposições dos n.os **5188** e **5189.**

5188 § 2. O artigo 25 e o apêndice 43 — mas não os apêndices 42 e 44 relativos a este artigo — e o artigo 66 do presente Regulamento entrarão em vigor em 1 de Janeiro de 1981.

5189 § 3. O Plano de adjudicação de frequências para o serviço móvel aeronáutico (R), bem como as disposições do apêndice 27 Aer2 (*) ao presente Regulamento que se lhe referem directamente, entrarão em vigor às 00.01 horas UTC de 1 de Fevereiro de 1983.

5190 § 4. À data de entrada em vigor do artigo 25 e do artigo 66 do presente Regulamento, indicada no n.° **5188** (1 de Janeiro de 1981), as disposições revistas do Regulamento das Radiocomunicações (Genebra, 1959):

a) Artigo 19, com excepção das disposições dos n.os **745** a **747** e dos apêndices que se lhe referem; e

b) Os artigos 38, 39, 40 e 40-A, incluindo os apêndices 21, 21-A e 22 que se lhes referem, bem como o Regulamento Adicional das Radiocomunicações,

ficam revogadas e são substituídas, respectivamente, pelas disposições dos artigos 25 e 26 do presente Regulamento.

5191 § 5. À data indicada no n.° **5187** (1 de Janeiro de 1982) todas as outras disposições do Regulamento das Radiocomunicações (Genebra, 1959), revistas em parte pela:

a) Conferência Administrativa Extraordinária das Radiocomunicações Encarregada de Atribuir Faixas de Frequências às Radiocomunicações Espaciais (Genebra, 1963);

b) Conferência Administrativa Extraordinária das Radiocomunicações Encarregada de Elaborar Um Plano de Adjudicação Revisto para o Serviço Móvel Aeronáutico (R) (Genebra, 1966);

c) Conferência Administrativa Mundial das Radiocomunicações encarregada de tratar questões relacionadas com o serviço móvel marítimo (Genebra, 1967);

d) Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971);

e) Conferência Administrativa Mundial das Radiocomunicações Marítimas (Genebra, 1974);

f) Conferência Administrativa Mundial das Radiocomunicações do Serviço Móvel Aeronáutico (R) (Genebra, 1978),

ficam revogadas e são substituídas pelas disposições do presente Regulamento.

5192 § 6. De acordo com o convite formulado pela Conferência Administrativa Mundial das Radiocomunicações Encarregada de Estabelecer Um Plano para o Serviço de Radiodifusão por Satélite nas Faixas de Frequências 11,7-12,2 GHz (Regiões 2 e 3) e 11,7-12,5 GHz (Região 1) (Genebra, 1977), as disposições e o plano associado adoptados por essa Conferência ficam anexos, sob forma apropriada, que não altera o seu conteúdo nem a sua integridade, como apêndice 30 ao presente Regulamento, de que constituem parte integrante.

(*) Nota do Secretário-Geral: v. o n.° **1314** e a Resolução n.° 400.

APÊNDICE 1

(V. o artigo 12)

Introdução — O apêndice 1 é constituído por seis secções e um anexo:

Secção A — Características fundamentais a fornecer no caso de uma notificação nos termos dos n.os **1214** a **1217** do Regulamento das Radiocomunicações;

Secção B — Características fundamentais a fornecer no caso de uma notificação nos termos do n.º **1219** do Regulamento das Radiocomunicações;

Secção C — Características fundamentais a fornecer no caso de uma notificação nos termos dos n.os **1223** a **1227** do Regulamento das Radiocomunicações;

Secção D — Informações a comunicar para uma notificação nos termos do n.º **1218** do Regulamento das Radiocomunicações;

Secção E — Modelo de ficha de notificação;

Secção F — Instruções gerais:

I. Notas gerais;

II. Notas relativas às informações a inserir na ficha com vista à sua inscrição nas diversas colunas do ficheiro de referência;

Anexo — Mapa das zonas geográficas para a radiodifusão.

SECÇÃO A

Características fundamentais a fornecer no caso de uma notificação nos termos dos n.os 1214 a 1217 do Regulamento das Radiocomunicações

Coluna 1 Frequência consignada.

Coluna 2c Data de entrada em serviço.

Coluna 3 Indicativo de chamada (sinal de identificação).

Não é uma característica fundamental no caso das estações a que se refere o n.º **2055.1.**

Coluna 4a Nome da estação de emissão.

Coluna 4b País ou zona geográfica onde se situa a estação de emissão.

Coluna 4c Longitude e latitude da localização do emissor.

Coluna 5a Nome da estação de recepção.

Não é uma característica fundamental no caso das estações de radiodifusão, das estações terrestres, das estações terrestres de radionavegação, das estações terrestres de radiolocalização, das estações de frequências padrão e de sinais horários e das estações de terra do serviço dos auxiliares da meteorologia.

Coluna 5b País ou zona geográfica onde se situa a estação de recepção.

Não é uma característica fundamental no caso das estações de radiodifusão, das estações terrestres, das estações terrestres de radionavegação, das estações terrestres de radiolocalização, das estações de frequências padrão e de sinais horários e das estações de terra do serviço dos auxiliares da meteorologia.

Coluna 5c Longitude e latitude da localização da estação de recepção.

Não é uma característica fundamental no caso das estações de radiodifusão, das estações terrestres, das estações terrestres de radionavegação, das estações terrestres de radiolocalização das estações de frequências padrão e de sinais horários e das estações de terra do serviço dos auxiliares da meteorologia.

Coluna 5d Localidade ou zonas(s) onde se situam as estações de recepção.

Só é uma característica fundamental no caso das estações de radiodifusão, das estações terrestres, das estações terrestres de radionavegação, das estações terrestres de radiolocalização e das estações de frequências padrão e de sinais horários.

Colunas 5e e 5f A utilizar somente se a zona não estiver suficientemente bem definida na coluna 5d.

Coluna 5e Longitude e latitude do centro da zona circular de recepção.

Só é uma característica fundamental no caso das estações terrestres, das estações terrestres de radionavegação, das estações terrestres de radiolocalização e das estações de frequências padrão e de sinais horários.

A utilizar somente se a zona não estiver suficientemente bem definida na coluna 5d.

Coluna 5f Raio nominal (km) da zona circular de recepção.

Só é uma característica fundamental no caso das estações terrestres, das estações terrestres de radionavegação, das estações terrestres de radiolocalização e das estações de frequências padrão e de sinais horários.

A utilizar somente se a zona não estiver suficientemente bem definida na coluna 5d.

Coluna 6 Classe da estação e natureza do serviço efectuado.

Coluna 7a Classe de emissão, largura de faixa necessária e natureza da transmissão.

Coluna 7b Classe de funcionamento da consignação.

Só é uma característica fundamental no caso das consignações às estações do serviço fixo nas faixas atribuídas a este serviço entre 3000 kHz e 27 500 kHz.

Coluna 8 Potência (dBW).

Coluna 9a Azimute da radiação máxima.

Coluna 9b Ângulo de elevação de directividade máxima.

Só é uma característica fundamental para as estações que funcionam nas faixas superiores a 1 GHz atribuídas numa base de partilha aos serviços de radiocomunicação espacial e aos serviços de radiocomunicação de Terra. Deverá ser fornecido com uma precisão de um décimo de grau (1).

Coluna 9c Ângulo de abertura do lóbulo principal da radiação.

Não é uma característica fundamental se forem indicados os dados da coluna 9j.

Coluna 9d Polarização.

Só é uma característica fundamental para as estações que funcionam nas faixas superiores a 1 GHz atribuídas numa base de partilha aos serviços de radiocomunicação espacial e de radiocomunicação de Terra e para as estações de radiodifusão que funcionam nas faixas de ondas métricas e decimétricas, nas zonas africana e europeia de radiodifusão.

Coluna 9e Altura da antena (metros) para uma antena vertical simples.

Esta informação é uma característica fundamental para as estações de radiodifusão que funcionam nas faixas de ondas quilométricas e hectométricas, na Região 1 e nas faixas de ondas hectométricas na Região 3.

Coluna 9f Altura equivalente máxima da antena.

Esta informação é uma característica fundamental para as estações de radiodifusão de ondas métricas e decimétricas nas zonas africana e europeia de radiodifusão e vem definida nos actos finais das conferências apropriadas.

Esta informação é uma característica fundamental para as estações de Terra que funcionam nas faixas superiores a 1 GHz partilhadas entre serviços espaciais e serviços de Terra e deverá ser indicada em metros acima do nível médio do mar.

Coluna 9g Ganho máximo de antena (isotrópico, em relação a uma antena vertical curta ou em relação a um dipolo de meia onda, consoante o caso).

Não é uma característica fundamental se a potência aparente radiada, ou a p. i. r. e., for notificada na coluna 8 ou se forem indicados os dados da coluna 9j.

Coluna 9h Azimutes que definem os sectores de radiação limitada, em graus (no sentido do movimento dos ponteiros do relógio), em relação ao norte verdadeiro.

Esta informação é uma característica fundamental para as estações de radiodifusão que funcionam nas faixas de ondas quilométricas e hectométricas, na Região 1, e nas faixas de ondas hectométricas, na Região 3.

Coluna 9i Radiação máxima admitida nos sectores.

Esta informação é uma característica fundamental para as estações de radiodifusão que funcionam nas faixas de ondas quilométricas e hectométricas, na Região 1 e nas faixas de ondas hectométricas na Região 3.

---

(1) Esta informação só será fornecida com uma precisão de 0,1° se a estação estiver situada na zona de coordenação de uma estação terrena ou se a direcção da radiação máxima não se afastar de mais de 3° da órbita dos satélites geostacionários.

Coluna 9j Tipo de antena (v. o manual da CCIR, intitulado *Diagramas de Antenas*).

Não é uma característica fundamental se forem indicados os dados das colunas 9c e 9g.

Coluna 10b Horário normal (UTC) de funcionamento da consignação de frequência.
Coluna 11 Coordenação com outras administrações.

Esta informação é uma característica fundamental para as faixas e serviços concernentes.

Informações suplementares:

a) Indicar a ou as *frequências de referência* sempre que uma determinada emissão as incluir; por exemplo, a frequência da onda portadora reduzida de uma emissão de faixa lateral única, ou de faixas laterais independentes, ou as frequências das ondas portadoras do som e da imagem de uma emissão de televisão;
b) Qualquer coordenação pedida nos termos dos n.os **1148 a 1154;**
c) Nome de qualquer administração com a qual tenha sido concluído um acordo para ultrapassar os limites prescritos no presente Regulamento e o conteúdo desse acordo.

SECÇÃO B

Características fundamentais a fornecer no caso de uma notificação, nos termos do n.º 1219 do Regulamento das Radiocomunicações

Coluna 1 Frequência consignada.
Coluna 2c Data de entrada em serviço.
Coluna 4a Nome da estação de emissão: inscrever a letra «M» (para móvel).
Coluna 4b Indicar o país ou a zona geográfica onde se situam as estações móveis de emissão.
Coluna 4c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) do centro da zona circular da emissão.
Coluna 4d Indicar o raio nominal (quilómetros) da zona circular de emissão.
Coluna 4e Indicar uma zona para a qual exista uma definição normalizada, utilizando símbolos contidos nas referências normalizadas,por exemplo, ZLAMP, ZLARN, zonas geográficas, etc. (v., igualmente, o prefácio da Lista Internacional das Frequências).
Coluna 5a Nome da estação de recepção.
Coluna 5b País ou zona geográfica onde se situa a estação de recepção.
Coluna 5c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) da localização da estação de recepção.
Coluna 6 Classe das estações móveis e natureza do serviço efectuado.
Coluna 7a Classe de emissão das estações móveis, largura de faixa necessária e natureza da transmissão.
Coluna 8 Potência (dBW).
Coluna 10b Horário normal (UTC) de funcionamento da consignação de frequência.

Informações suplementares:

a) Qualquer coordenação pedida nos termos dos n.os **1148 a 1154;**
b) Nome de qualquer administração com a qual tenha sido concluído um acordo para ultrapassar os limites prescritos no presente Regulamento, e conteúdo desse acordo.

SECÇÃO C

Características fundamentais a fornecer no caso de uma notificação nos termos dos n.os 1223 a 1227 do Regulamento das Radiocomunicações

Coluna 1 Frequência consignada.
Coluna 2c Data de entrada em serviço.
Coluna 4b Indicar o país ou a zona geográfica onde se situa a estação de emissão.

Para o resto da coluna *4* quer *4e* somente, quer *4c* e *4d*.

Coluna 4c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) do centro da zona circular de emissão.
Coluna 4d Indicar o raio nominal (quilómetros) da zona circular de emissão.
Coluna 4e Indicar uma zona para a qual exista uma definição normalizada, utilizando os símbolos indicados na prefácio da Lista Internacional das Frequências.
Coluna 6 *Classe* da estação e natureza do serviço efectuado.
Coluna 7a Classe de emissão, largura de faixa necessária e natureza da transmissão.

Coluna 8 *Potência* (dBW).
Coluna 10b Horário normal (UTC) de funcionamento da consignação de frequência.

Informações suplementares:

Nome de qualquer administração com a qual tenha sido concluído um acordo para ultrapassar os limites prescritos no presente Regulamento, e conteúdo desse acordo.

SECÇÃO D

Informações a comunicar para qualquer notificação, nos termos do n.º 1228 do Regulamento das Radiocomunicações

1. *Instruções gerais:*

a) A assistência da IFRB refere-se à escolha de uma ou de várias frequências para qualquer consignação a uma estação do serviço fixo, nas faixas frequências compreendidas entre 3000 kHz e 27 500 kHz atribuídas a esse serviço;
b) A administração fornecerá:

Uma descrição geral das dificuldades encontradas;
As informações técnicas e quaisquer outras que possam orientar as pesquisas ulteriores da IFRB;

c) Poderão igualmente aplicar-se as instruções dadas na secção F.

2. *Informações a fornecer pela administração:*

Coluna 1 Frequência.

1) Deixar esta coluna em branco ou indicar a faixa preferida se o pedido for referente à escolha de uma frequência ou de um jogo de frequências para a ligação em causa;
2) Se o pedido se referir a uma frequência determinada, especificar essa frequência.

Coluna 2c Data de entrada em serviço.

Indicar a data proposta para a entrada em serviço da consignação de frequência.

Coluna 3 Indicativo de chamada (sinal de identificação).
Coluna 4 Características da estação de emissão.
Coluna 4a Indicar o nome da localização por que se designa ou onde está situada a estação.
Coluna 4b Indicar o país ou a zona geográfica onde se situa a estação. Para isso convirá utilizar os símbolos que figuram no prefácio da Lista Internacional das Frequências.
Coluna 4c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) da localização do emissor.
Coluna 5 Características da estação de recepção.
Coluna 5a Nome da estação de recepção. Indicar o nome da localidade pelo qual é designada a estação de recepção ou na qual ela se situa. Desde que, numa dada zona, a zona de recepção seja bem definida e suficientemente reduzida para se prever facilmente as condições de utilização da frequência no que se refere à propagação, bastará notificar um número de estações suficiente para delimitar a zona de recepção.
Coluna 5b País ou zona geográfica onde se situa a estação de recepção.
Coluna 5c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) da localização da estação de recepção.
Coluna 6 Classe da estação e natureza do serviço efectuado.

Utilizando os símbolos que figuram no apêndice 10, indicar a classe da estação e a natureza do serviço efectuado.

Coluna 7a Classe de emissão, largura de faixa necessária e natureza da transmissão.

Indicar, para cada uma das localidades ou zonas de recepção mencionadas na coluna 5a, a classe de emissão, a largura da faixa necessária e a natureza da transmissão, em conformidade com o artigo 4 e com o apêndice 6.

Coluna 8 Potência (dBW).

1) Conforme a classe de emissão, indicar do modo seguinte a potência fornecida à linha de alimentação da antena (dBW):

a) Potência média (PY), se se tratar de uma emissão de modulação de amplitude com onda portadora completa não manipulada ou de uma emissão de modulação de frequência (v. n.° **152**);

b) Potência de ponta (PX), se se tratar de uma emissão diferente das referidas acima na alínea *a*) (v. n.º **151**);
c) Deixar em branco se a potência for para o IFRB calcular;

2) Indicar a potência normalmente utilizada na direcção de cada uma das localidades ou zonas de recepção mencionadas na coluna *5*.

Coluna Característica da antena de emissão (indicar todas as informações disponíveis).

Coluna 9a Azimute da radiação máxima.

1) Se se utilizar uma antena direccional de emissão, indicar, em graus, o azimute da radiação máxima dessa antena, a partir do norte verdadeiro, no sentido do movimento dos ponteiros do relógio;
2) Se se utilizar uma antena não direccional de emissão, inscrever «ND» nesta coluna.

Coluna 9c Se as características de radiação da antena respectiva diferirem das características recomendadas pela CCIR, inscrever as informações pedidas nas colunas *9c* e *9g*. Quando as características de radiação se encontrarem no manual *Diagramas de Antenas* da CCIR, indicar a referência na coluna *9j*.

Coluna 9c Ângulo de abertura do lóbulo principal de radiação.

Convém indicar, em graus, o ângulo total medido em projecção horizontal num plano que contém a direcção da radiação máxima e no interior do qual a potência radiada em qualquer direcção não é mais de 3 dB inferior à potência radiada na direcção da radiação máxima.

Coluna 9g Ganho de antena.

Convém indicar o ganho relativo da antena na direcção de radiação máxima para a frequência consignada (v. n.º **154**).

Coluna 9j Tipo de antena (v. o manual *Diagramas de Antenas* da CCIR).

Indicar a referência apropriada do *Diagramas de Antenas* da CCIR. V. as colunas *9c* e *9g* acima.

Coluna 10 Horário de funcionamento.

Coluna 10a Horário máximo (UTC) de funcionamento da ligação para cada localidade ou zona.

A título de informação suplementar, indicar pela letra «I» os períodos em que o funcionamento da ligação for intermitente.

Coluna 10b Horário normal (UTC) de funcionamento da consignação de frequência.

Indicar o horário em tempo universal coordenado (UTC), utilizando um grupo de quatro algarismos (00.00 a 23.59). Senão, indicar as horas de funcionamento diurno (HJ), nocturno (HN) ou o horário de serviço em período de transição (HT).

Coluna 11 Coordenação com outras administrações.

Se for caso disso, indicar o país ou a zona geográfica com que a coordenação pertinente foi efectuada com êxito.

Coluna 12a Administração ou companhia exploradora.

Coluna 12b Endereço postal e endereço telegráfico da administração de que depende a estação.

Informações suplementares:

Indicar todas as informações disponíveis relativas à antena de recepção.

SECÇÃO E

Modelo de ficha de notificação

A Comissão elabora e mantém em dia um modelo de ficha de notificação de modo a respeitar a totalidade das disposições regulamentares do presente apêndice e as decisões sobre o assunto tomadas por futuras conferências.

SECÇÃO F

Instruções gerais

1. Deverá ser enviada à Comissão Internacional do Registo de Frequência uma ficha distinta para notificar:

Cada nova consignação de frequência:

Qualquer modificação das características de uma consignação de frequência inscrita no Ficheiro de Referência Internacional das Frequências, denominado daqui em diante «Ficheiro de referência»;

Qualquer anulação total de uma consignação de frequência inscrita no Ficheiro de referência.

2. Quando uma consignação de frequência for utilizada por uma estação para assegurar diferentes serviços, deverá ser enviada uma ficha distinta para cada tipo de serviço (por exemplo, FA, FB, FC, FX, etc.).

3. Não serão objecto de notificação as frequências prescritas neste Regulamento para serem utilizadas em comum de acordo com o prefácio da Lista Internacional das Frequências (v. o n.º **1220**).

4. Nas colunas *5a* a *10* convém inscrever separadamente as características, quando não forem válidas para a totalidades da consignação, por exemplo, quanto a classe de emissão ou a potência diferirem segundo as localidades ou zonas de recepção.

5. Pelo que respeita às estações de televisão da Região 1 deverão ser apresentadas fichas de notificação distintas para a via de som e para a via de imagem. Nesse caso, as frequências a indicar serão as das ondas portadoras do som e da imagem.

I. Notas gerais

a) Indicar o nome da administração donde provém o ficha de notificação.

b) Inscrever a letra «X» neste Rectângulo quando a ficha se referir:

A primeira utilização de uma frequência por uma estação;

A primeira utilização de uma frequência suplementar por uma estação.

c) Inscrever a letra «X» neste rectângulo quando a ficha se referir a uma modificação das características de uma consignação de frequência inscrita no ficheiro de referência.

1) No caso de haver alteração das características existentes (incluindo a frequência), convém indicar, no espaço apropriado, as novas características, sublinhá-las e mencionar, por baixo ou ao lado, entre parênteses, as características originais que foram modificadas;
2) No caso de a modificação consistir numa adjunção às características existentes, convém indicar, no espaço apropriado, as características adicionadas e sublinhá-las;
3) No caso de a modificação consistir na anulação de uma ou várias características, convém indicar isto com um traço no espaço apropriado e mencionar por baixo ou ao lado desse traço, entre parênteses, a ou as características anuladas.

d) Inscrever a letra «X» neste rectângulo quando a ficha se referir à anulação da totalidade das características notificadas de uma consignação.

e) O número de série da ficha e a data do seu envio à Comissão deverão ser indicados aqui.

II. Notas relativas às informações a incluir na ficha para serem inscritas nas diversas colunas do ficheiro de referência

Coluna 1 Frequência consignada.

1) Indicar a frequência consignada (1) (2) (3) tal como é definida no artigo 1: em kHz até 28 000 kHz, inclusive, em MHz acima de 28 000 kHz e até 10 500 MHz, inclusive, e em GHz acima de 10 500 MHz;
2) *Esta informação é uma característica fundamental.*

Coluna 2c Data de entrada em serviço.

1) No caso de uma nova consignação, indicar a data de entrada em serviço efectiva ou prevista, segundo o caso, da consignação de frequência;

---

(1) No que se refere às estações de televisão da Região 1, as frequências a notificar são as das ondas portadoras do som e da imagem.
(2) No que se refere às estações radiofónicas do serviço móvel marítimo, v. o n.º **4194**.
(3) No que se refere às estações do serviço móvel aeronáutico (R), v. o n.º **27/72** revisto do apêndice 27 Aer2.

2) Quando da modificação de qualquer das características fundamentais de uma consignação, tais como definidas no presente apêndice, excepto das que figuram nas colunas *3*, *4a*, *10a* ou *11*, a data a inscrever nesta coluna deverá ser a da última modificação efectiva ou prevista, conforme o caso;
3) *Esta informação é uma característica fundamental.*

Coluna 3 Indicativo de chamada (sinal de identificação).

1) Inscrever o indicativo de chamada ou qualquer outro sinal de identificação utilizado nos termos do artigo 25;
2) *Esta informação é uma característica fundamental, excepto nos casos de que tratam os n.os* **1224** *a* **1227** *e* **2055.1.** *ou quando se tratar de uma frequência utilizada na recepção nas circunstâncias especificadas no n.º* **1219.**

Coluna 4 Características da estação de emissão.

Se a consignação de frequência for utilizada nas circunstâncias especificadas nos n.os **1214** *a* **1217**, *as características fundamentais a inscrever na coluna 4 são as seguintes:*

Coluna 4a Indicar o nome da localidade por que se designa ou onde está situada a estação de emissão.

Coluna 4b Indicar o país ou a zona geográfica onde está situada a estação. Convém, para esse fim, utilizar os símbolos que figuram no prefácio da Lista Internacional das Frequências.

Coluna 4c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) da localização do emissor. Quando se trate de consignações de frequência acima de 1 GHz nas faixas partilhadas pelos serviços de radiocomunicações de Terra e de radiocomunicação espacial, indicar as coordenadas geográficas (longitude e latitude em graus, minutos e segundos com uma precisão de um décimo de minuto (1), também se pode indicar a longitude e a latitude em graus e minutos e, na coluna *9a*, o azimute da radiação máxima da antena com uma precisão de um 0,1º).

Se a consignação de frequência for utilizada na recepção nas circunstâncias especificadas no n.º **1219**, *as características fundamentais a inscrever na coluna 4 são as seguintes:*

Coluna 4a Nome da estação de emissão: inscrever a letra M (para móvel).

Coluna 4b Indicar o país ou a zona geográfica onde estão situadas as estações de emissão móvel. Se as estações não estiverem situadas num país, indicar o país responsável. Convém que para isso se utilizem os símbolos que figuram no prefácio da Lista Internacional das Frequências.

Coluna 4c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) do centro da zona circular de emissão.

Coluna 4d Indicar o raio nominal (quilómetro) da zona circular de emissão.

Coluna 4e Indicar uma zona para a qual exista uma definição normalizada, utilizando símbolos contidos nas referências normalizadas, por exemplo, ZLAMP, ZLARN, zonas geográficas, etc. (v., igualmente, o prefácio da Lista Internacional das Frequências).

Se a consignação de frequência for utilizada nas circunstâncias especificadas nos n.os **1223** a **1227**, *as características fundamentais a inscrever na coluna 4 são as seguintes:*

Coluna 4b Indicar o país ou a zona geográfica onde está situada a estação. Convém, para esse fim, utilizar os símbolos que figuram no prefácio da Lista Internacional das Frequências. O resto da coluna 4 é constituído quer por *4e* somente, quer por *4c* e *4d*.

Coluna 4c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) do centro da zona circular de emissão.

Coluna 4d Indicar o raio nominal (quilómetros) da zona circular de emissão.

Coluna 4e Indicar uma zona para as qual exista uma definição normalizada, utilizando os símbolos que figuram no prefácio da Lista Internacional das Frequências.

Coluna 4e Indicar uma zona para a qual exista uma definição normalizada, utilizando os símbolos que figuram no prefácio da Lista Internacional das Frequências.

Coluna 5 Características da estação de recepção.

Se a consignação de frequência for utilizada nas circunstâncias especificadas nos n.os **1214** *a* **1217**, *as características fundamentais a inscrever na coluna 5 são as seguintes:*

Coluna 5a Nome da estação de recepção. Indicar o nome da localidade pelo qual a estação de recepção é designada ou na qual ela está situada.

1) Desde que, no serviço fixo, a zona de recepção seja bem definida e suficientemente reduzida para prever facilmente as condições de utilização da frequência no que se refere à propagação, bastará notificar um número de estações suficiente para demilitar a zona de recepção;

---

(1) Os segundos só serão notificados com uma precisão de um décimo de minuto no caso em que a estação esteja situada na zona de coordenação de uma estação terrena.

2) Todavia, no caso de estações de radiodifusão, de estações terrestres, de estações terrestres de radionavegação, de estações terrestres de radiolocalização, de estações de frequências padrão e de sinais horários e de estações de Terra do serviço dos auxiliares da meteorologia, não é necessário inscrever seja o que for nesta coluna;
3) No caso de uma rede de estações que comuniquem entre si na mesma frequência, inscrever na coluna 5a o símbolo ZN. Quando a mesma frequência for utilizada por várias redes dependentes da mesma administração, convém designar cada rede por uma letra distinta colocada a seguir ao símbolo ZN, por exemplo ZN-A, ZN-B, etc.;
4) No caso de uma rede, assim como no caso de numerosas estações dependentes da mesma administração utilizarem a mesma frequência numa determinada zona é necessário notificar apenas um número de estações suficientes para delimitar a zóna de utilização da frequência, desde que esta zona seja bem definida e suficientemente reduzida para que, tendo em conta as condições de propagação, se possam prever facilmente as condições de utilização da frequência.

Coluna 5b País ou zona geográfica onde está situada a estação de recepção. Convém, para esse fim, utilizar os símbolos que figuram no prefácio à Lista Internacional das Frequências.

Todavia, no caso de estações de radiodifusão, de estações terrestres, de estações terrestres de radionavegação, de estações de frequências padrão e de sinais horários e de estações de Terra do serviço dos auxiliares da meteorologia, não é necessário inscrever seja o que for nesta coluna.

Coluna 5c Indicar as coordenadas geográficas (longitude e latitude em graus e em minutos) da localização da estação de recepção.

Contudo, no caso de estações de radiodifusão, de estações terrestres, de estações terrestres de radiolocalização, de estações de frequências padrão e de sinais horários e de estações de Terra do serviço dos auxiliares da meteorologia, não é necessário inscrever seja o que for nesta coluna.

Coluna 5d Localidade ou zona(s) em que a(s) estação(ões) de recepção está (estão) situada(s).

1) Para as estações de radiodifusão, convém indicar a zona de recepção. Cada zona deverá ser caracterizada do seguinte modo:

Interior (INTR):
Ou símbolos que designe um país ou países ou zona(s) geográfica(s) (prefácio à Lista Internacional das Frequências);
Ou uma das zonas geográficas delimitadas no mapa anexo ao presente apêndice. Se a zona de recepção não puder ser definida do modo acima indicado, será necessário preencher as colunas *5e* e *5f*.

Não é uma característica fundamental no caso das estações de radiodifusão que funcionam nas faixas de ondas quilométricas/hectométricas ou métricas/decimétricas, salvo especificação num acordo regional pertinente;

2) Para as estações terrestres, as estações terrestres de radionavegação, as estações terrestres de radiolocalização, as estações de frequências padrão e de sinais horários e as estações de Terra do serviço dos auxiliares da meteorologia, só se indicará uma zona de recepção se ela for objecto de uma descrição normalizada. Se não for esse o caso, inscrevem-se as informações relativas a essa zona nas colunas *5e* e *5f*.

Coluna 5e Longitude e latitude do centro da zona circular de recepção.

1) Indicar as coordenadas geográficas (graus e minutos);
2) Esta coluna não é para utilizar se a zona de recepção estiver suficientemente bem definida na coluna *5d*. Se for utilizada a coluna *5e*, deve ser feita na coluna *5f* uma inscrição correspondente.

Coluna 5f Raio nominal da zona circular de recepção.

1) Indicar o raio (quilómetros) da zona circular de recepção;
2) Esta coluna não é para utilizar se a zona de recepção estiver bem definida na coluna *5d*. Se for utilizada a coluna *5f*, deve ser feita na coluna *5e* uma inscrição correspondente.

Se a consignação de frequência for utilizada nas circunstâncias especificadas no n.º **1219**, *as características fundamentais a inscrever na coluna 5 são as seguintes:*

Coluna 5a Nome da estação de recepção. Indicar o nome da localidade por que se designe ou onde está situada a estação de recepção.

Coluna 5b *País* ou zona geográfica onde se situa a estação de recepção. Convém, para esse fim, utilizar os símbolos que figuram no prefácio da Lista Internacional das Frequências.

Coluna 5c Indicar as coordenadas geográficas (longitude e latitude em graus e minutos) da localização da estação de recepção.

Se a consignação de frequência for utilizada nas circunstâncias especificadas nos n.os **1223** *a* **1227**, *não é necessário inscrever seja o que for na coluna 5.*

Coluna 6 Classe da estação e natureza do serviço efectuado.

1) Utilizando os símbolos que figuram no apêndice 10, indicar a classe da estação e a natureza do serviço efectuado;
2) Quando se tratar de uma frequência utilizada na recepção nas circunstâncias especificadas no n.º **1219**, é a classe das estações móveis e a natureza do serviço que elas efectuam que convém indicar;
3) *Estas informações são características fundamentais.*

Coluna 7 Classe de emissão e classe de funcionamento.

Coluna 7a Classe de emissão, largura de faixa necessária e natureza da transmissão.

1) Indicar para cada uma das localidades ou zonas de recepção mencionadas na coluna *5a*, a classe de emissão, a largura de faixa necessária e a natureza da transmissão, de acordo com o artigo 4 e o apêndice 6;
2) Quando se tratar de uma frequência utilizada na recepção nas circunstâncias especificadas no n.º **1219**, as características a indicar são as das estações móveis;
3) *Estas informações são características fundamentais.*

Coluna 7b Classe de funcionamento da consignação.

Esta informação é uma característica fundamental. Para as consignações a estações do serviço fixo nas faixas de frequências atribuídas a este serviço entre 3000 kHz e 27 500 kHz, indicar a classe de funcionamento da consignação utilizando os símbolos A, B ou C como segue:

Símbolo A — consignação destinada a ser utilizada para exploração regular que não seja assegurada por outro meio satisfatório de telecomunicação;

Símbolo B — consignação destinada a ser utilizada como consignação de reserva para qualquer outro meio de telecomunicação;

Símbolo C — consignação de reserva para utilização ocasional que não exija protecção internacional reconhecida contra interferências prejudiciais.

Coluna 8 Potência (dBW).

1) Segundo a classe de emissão, indicar do seguinte modo a potência, em dBW, fornecida à linha de alimentação da antena:
   a) Potência da portadora (PZ), se se tratar de uma emissão de radiodifusão sonora de classe A3E (v. o n.º **153**);
   b) Potência média (PY), se se tratar de uma emissão de modulação de amplitude de onda portadora completa não manipulada diferente de uma emissão de radiodifusão sonora, ou de uma emissão de modulação de frequência (v. o n.º **152**);
   c) Potência de ponta (PX), se se tratar de uma emissão diferente das referidas nas alíneas *a*) e *b*) anteriores, incluindo as emissões de televisão (imagem) da classe C3F (v. o n.º **151**).
2) Nas faixas superiores a 28 000 kHz que não sejam atribuídas em base de partilha aos serviços de radiocomunicação espacial e aos serviços de radiocomunicações de Terra, exceptuando as fichas de notificação indicadas nos n.os **1223** a **1227**, convém notificar a potência aparente radiada (v. o n.º **156**);
3) Nas faixas superiores a 1 GHz, atribuídas em base de partilha aos serviços de radiocomunicação espacial e aos serviços de radiocomunicação de Terra, convém notificar a potência isotrópica radiada equivalente (p. i. r. e.) (v. o n.º **155**);
4) O símbolo apropriado (PZ, PY ou PX) deverá seguir a indicação do valor da potência. Tratando-se da potência aparente radiada, esse símbolo deverá ser seguido da letra «e». Se se tratar da p. i. r. e., esse símbolo deverá ser seguido da letra «i»;
5) Indicar a potência normalmente utilizada para cada uma das localidades ou zonas de recepção;
6) Quando se tratar de uma frequência utilizada na recepção nas circunstâncias especificadas no n.º **1219**, convém indicar a potência das estações móveis. Se estas não forem todas da mesma potência, convém indicar a mais elevada;
7) *Esta informação é uma característica fundamental.*

Coluna 9 Características da antena de emissão.

Coluna 9a Azimute da radiação máxima.

1) Se se utilizar uma antena direccional de emissão, indicar, em graus, o azimute da radiação máxima dessa antena, a partir do norte verdadeiro, no sentido do movimento dos ponteiros do relógio;
2) Se se utilizar uma antena não direccional de emissão, inscrever «DN» nesta coluna;
3) Para as consignações de frequência superiores a 1 GHz nas faixas partilhadas entre serviços de radiocomunicação de Terra e serviços de radiocomunicação espacial, indicar o azimute com uma precisão de um décimo de grau (1) nos casos em que a precisão com que devem ser indicadas as coordenadas geográficas [um décimo de minuto (2)] não foi especificada na coluna *4c;*
4) *Esta informação é uma característica fundamental, excepto quando se trate de estações referidas nos n.os* **1223** *a* **1227** *ou de uma frequência utilizada na recepção nas circunstâncias especificadas no n.º* **1219.**

Coluna 9b Ângulo de elevação para o qual a directividade é máxima.

Só é uma característica fundamental para as estações que funcionem nas faixas superiores a GHz atribuídas em base de partilha aos serviços de radiocomunicação espacial e aos serviços de radiocomunicação de Terra. Deverá ser fornecido com uma precisão de um décimo de grau (1).

Coluna 9c Se as características da radiação da antena em causa diferirem das características recomendadas pela CCIR, inscrevem-se as informações pedidas nas colunas *9c* e *9g*. Quando as características de radiação se encontram no manual da CCIR intitulado *Diagramas de Antenas,* indicar a referência na coluna *9j*.

Coluna 9c Ângulo de abertura do lóbulo principal de radiação.

Convém indicar, em graus, o ângulo total medido em projecção horizontal num plano que contenha a direcção da radiação máxima e no interior do qual a potência radiada em qualquer direcção não seja mais de 3 dB inferior à potência radiada na direcção da radiação máxima.

Coluna 9d Polarização.

Esta informação é uma característica fundamental para as estações que funcionam nas faixas superiores a 1 GHz atribuídas em base de partilha aos serviços de radiocomunicação espacial e de radiocomunicação de Terra e para as estações de radiodifusão que funcionam nas faixas de ondas métricas e decimétricas, nas zonas africana e europeia de radiodifusão.

Coluna 9e Altura de antena (metros) para uma antena vertical simples.

Esta informação é uma característica fundamental para as estações de radiodifusão que funcionam nas faixas de ondas quilométricas e hectométricas na Região 1 e nas faixas de ondas hectométricas na Região 3.

Coluna 9f Altura equivalente máxima da antena.

Esta informação é uma característica fundamental para as estações de radiodifusão que funcionam nas faixas de ondas métricas e decimétricas nas zonas africana e europeia de radiodifusão. Esta altura está definida nos actos finais das conferências correspondentes;

Esta informação é uma característica fundamental para as estações de Terra que funcionam nas faixas superiores a 1 GHz partilhadas entre serviços de radiocomunicação espacial e serviços de radiocomunicação de Terra. Esta altura deve ser indicada em metros acima do nível médio do mar.

Coluna 9g Ganho máximo de antena (isotrópico, em relação a uma antena vertical curta ou em relação a um dipolo de meia onda, segundo o caso).

1) Convém indicar o ganho relativo da antena na direcção da radiação máxima para a frequência consignada (v. o n.º **154**).
2) *Não é uma característica fundamental se a potência aparente radiada ou a p. i. r. e. estiver notificada na coluna 8.*

---

(1) Esta informação só será fornecida com uma precisão de 0,1° se a estação estiver situada na zona de coordenação de uma estação terrena ou se a direcção da radiação máxima não se afastar mais de 3° da órbita dos satélites geostacionários.

(2) Os segundos só serão notificados com uma precisão de um décimo de minuto no caso em que a estação esteja situada na zona de coordenação de uma estação terrena.

Coluna 9h Azimutes que definem, em graus, os sectores de radiação limitada a partir do Norte verdadeiro no sentido do movimento dos ponteiros do relógio.

1) Indicar os azimutes que definem, em graus, os sectores de radiação limitada a partir do Norte verdadeiro no sentido do movimento dos ponteiros do relógio;
2) *Esta informação é uma característica fundamental para as estações de radiodifusão que funcionam nas faixas de ondas quilométricas e hectométricas na Região 1 e nas faixas de ondas hectométricas na Região 3.*

Coluna 9i Radiação máxima admitida nos sectores.

1) Indicar, em dB, a radiação máxima admitida no sector em relação a uma força cimomotriz (f. c. m.) de 300 V ou a uma potência aparente radiada por uma antena vertical curta (p. a. r. v.) de 1 kW determinada segundo a potência nominal do emissor e o ganho teórico da antena, sem margem para as diversas perdas;
2) *Esta informação é uma característica fundamental para as estações de radiodifusão que funcionam nas faixas de ondas quilométricas e hectométricas na região 1 e nas faixas das ondas hectométricas na Região 3.*

Coluna 9j Tipo de antena (v. manual *Diagramas de Antenas* da CCIR).

Indicar a referência apropriada do manual *Diagramas de Antenas* da CCIR. V. as colunas *9c* e *9g* anteriores.

Coluna 10 Horário de funcionamento.
Coluna 10a Horário máximo (UTC) de funcionamento da ligação para cada localidade ou zona.

1) No caso de se tratar de uma frequência utilizada na recepção nas circunstâncias especificadas no n.º **1219**, o horário máximo de funcionamento a indicar é o das estações móveis;
2) A título de informação suplementar, indicar com a letra «I» os períodos em que o funcionamento da ligação é intermitente;
3) *Não é uma característica fundamental.*

Coluna 10b Horário normal (UTC) de funcionamento da consignação de frequência.

1) Indicar, se for conhecido, o horário normal (UTC) de funcionamento da consignação de frequência. No caso de se desconhecer esse horário, indicar o horário de funcionamento como segue: serviço de dia (HJ), serviço de noite (HN) ou serviço de transição (HT);
2) *Esta informação é uma característica fundamental.*

Coluna 11 Coordenação com outras administrações.

1) Indicar o país ou a zona geográfica com que a coordenação foi efectuada com êxito e indicar a disposição que exige essa coordenação (número do Regulamento das Radiocomunicações, acordo regional ou outro);
2) *Esta informação é uma característica fundamental para as faixas e os serviços abrangidos.*

Coluna 12a Administração ou companhia exploradora (1).

Esta informação não é uma característica fundamental, mas é recomendável que seja fornecida quando se tratar de uma organização que explore estações em vários países.

Coluna 12b Endereço postal e endereço telegráfico da administração de que depende a estação.

1) Estes endereços são aqueles para onde convirá enviar qualquer comunicação urgente respeitante a interferências, qualidade das emissões e questões relativas à exploração técnica da ligação (v. artigo 22);
2) *Esta informação não é uma característica fundamental.*

Informações suplementares:

Qualquer informação suplementar fornecida pela administração deverá figurar na parte da ficha a isso destinada.

1) Se a consignação for feita em execução de um acordo regional ou de serviço, mencionar esse acordo no espaço apropriado da ficha; caso contrário, inscrever a indicação «NIL»;

---

(1) Quando estas informações constarem já do prefácio da Lista Internacional das Frequências, convém utilizar o número ou a letra de referência apropriados.

2) Indicar a seguir ao símbolo «COORD» o nome de qualquer administração com a qual tenha sido efectuada coordenação para utilização da frequência; se não tiver havido qualquer coordenação, inscrever a indicação «NIL». No caso de uma notificação nos termos dos n.os **1223** a **1227** numa faixa de frequências acima de 28 000 kHz, indicar, se for caso disso, a ou as zonas em que ficou acordado, em resultado da coordenação, que a frequência em causa seria utilizada;
3) Indicar a ou as frequências de referência sempre que determinada emissão as contenha; por exemplo, a frequência da onda portadora reduzida de uma emissão em faixa lateral única, ou em faixas laterais independentes, ou as frequências das ondas portadoras do som e da imagem de uma emissão de televisão. Pelo que respeita às estações de televisão da Região 1, cada ficha de notificação deverá indicar, a título de informação suplementar, simultaneamente a frequência da outra onda portadora e a frequência consignada;
4) Acrescentar qualquer outra informação que a administração julgue oportuna; por exemplo, a indicação de que a consignação em causa será utilizada em conformidade com o n.° **342** do presente Regulamento ou então esclarecimentos acerca da utilização da frequência notificada, se essa utilização for restrita ou se a frequência não for utilizada durante todo o tempo em que tal seria possível segundo as condições de propagação;
5) *Apenas as informações especificadas no § 3 acima são consideradas características fundamentais, mas é recomendável dar as indicadas nos n.os 1 e 2 acima. Todavia, no caso das estações dos serviços de radiocomunicação de Terra referidas nos n.os* **1148** *a* **1154** *são características fundamentais o nome de qualquer administração junto da qual foi procurada uma coordenação com vista à utilização da frequência e o nome de qualquer administração com a qual tenha sido efectuada essa coordenação.*

SECÇÃO B

Instruções gerais

1. Deverá ser enviada à IFRB uma ficha distinta para notificar:

Cada consignação de frequência para entrar em serviço durante determinado período;
Qualquer modificação das características de uma consignação de frequência que figure no horário de radiodifusão em ondas decamétricas de um período;
Qualquer anulação de uma consignação de frequência que figure no horário de radiodifusão em ondas decamétricas de um período.

2. Nas colunas *5a* e *8* a *11*, convém inscrever separadamente as características quando não são válidas para a totalidade da consignação; por exemplo, quando a potência, as características da antena ou o horário de funcionamento diferirem segundo as zonas ou regiões de recepção.

I. Notas gerais

a) Indicar o nome da administração notificadora.

b) Inscrever a letra «X» neste rectângulo quando a ficha se referir à primeira utilização de uma frequência por uma estação durante um dado período.

c) Inscrever a letra «X» neste rectângulo quando a ficha se referir a uma modificação das características de uma consignação de frequência inscrita no horário de radiodifusão em ondas decamétricas de um período.

1) No caso de serem modificadas características existentes, convém indicar, no espaço apropriado, as novas características, sublinhá-las e mencionar por baixo ou ou lado, entre parêntesis, as características originais que se modificaram;
2) No caso em que a modificação consista num aditamento feito às características existentes, convém indicar, no espaço apropriado, as características aditadas e sublinhá-las;
3) No caso em que a modificação consista na anulação de uma ou mais características, convém indicar o facto por um traço no espaço apropriado e mencionar por baixo ou ao lado desse traço, entre parêntesis, a ou as características anuladas.

d) Inscrever a letra «X» neste rectângulo quando a ficha se referir à anulação, durante o período, da totalidade das características notificadas de uma consignação.

e) O número de série da ficha e a data do seu envio à Comissão deverão ser aqui indicados.

II. Notas sobre as informações a inserir nas várias colunas da ficha

Coluna 1 Frequência.

Coluna 1a Indicar a frequência consignada, em kHz, de acordo com a definição que figura no artigo 1.

Coluna 1b Indicar qualquer outra frequência proposta, em kHz.

Coluna 1c Ou então a faixa de frequências desejada, em MHz, se nenhuma frequência for indicada nos termos dos *§§ 1a* e *1b* acima.

Coluna 2c Data de entrada em serviço durante o período.

1) Se a consignação for para entrar em serviço na data de entrada em vigor do horário periódico, inscrever os dois últimos algarismos do ano no ou nos rectângulos que correspondem aos períodos durante os quais será utilizada a consignação;
2) Se a consignação for para entrar em serviço ou for modificada numa data que não seja a da entrada em vigor do horário periódico, essa data deverá ser inscrita no espaço a isso destinado.

Coluna 3 Indicativo de chamada (sinal de identificação).

Inscrever o indicativo de chamada ou qualquer outro sinal de identificação utilizado nos termos do artigo 25.

Coluna 4 Nome e localização da estação de emissão.

Coluna 4a Indicar o nome da localidade por que se designa ou onde está situada a estação de emissão.

Coluna 4b Indicar o país onde está situada a estação. Convém, para esse fim, utilizar os símbolos contidos no prefácio da Lista Internacional das Frequências.

Coluna 4c Indicar as coordenadas geográficas (em graus e minutos) da localização do emissor.

Coluna 5a Zona(s) ou região(ões) de recepção.

1) Indicar a ou as zonas de recepção, tais como delimitadas no mapa anexo ao apêndice 1;

2) Se a região de recepção for menos extensa que a totalidade de uma zona, convém que corresponda a um país ou a uma parte de um país e que seja designada, na medida do possível, por meio de símbolos contidos no prefácio das Lista Internacional de Frequências;
3) Indicar, a título de informação suplementar, a distância máxima de serviço, em quilómetros, quando esta informação for julgada necessária.

Coluna 7 Classe de emissão e largura de faixa necessária.

Indicar a classe de emissão e largura de faixa necessária, em conformidade com o artigo 4 e o apêndice 6.

Coluna 8 Potência (kV).

Indicar a potência da onda portadora fornecida pelo emissor à linha de alimentação da antena.

Características da antena de emissão:

Coluna 9a Azimute de radiação máxima.

1) Se se utilizar uma antena direccional de emissão, indicar, em graus, a azimute de radiação máxima dessa antena, a partir do norte verdadeiro, no sentido do movimento dos ponteiros do relógio;
2) Se se utilizar uma antena não direccional de emissão, inscrever «ND» nesta coluna.

Coluna 9b Ângulo de abertura do lóbulo principal de radiação.

Convém indicar, em graus, o ângulo total em projecção no plano horizontal, no interior do qual a potência radiada em qualquer direcção não seja inferior de mais de 6 dB à potência radiada na direcção da radiação máxima.

Coluna 9c Ganho de antena (dB).

Convém indicar o ganho relativo da antena na direcção máxima para a frequência consignada.

Coluna 9d Ângulo de elevação.

Convém indicar, em graus, o ângulo da direcção da radiação máxima com o plano horizontal.

Coluna 9e Tipo de antena.

Utilizar, quando for possível, a nomenclatura de *Diagramas de Antenas* da CCIR. Os diferentes tipos de antena estão indicados no final das presentes instruções (v. a subsecção III da presente secção).

Coluna 10 Horário de funcionamento (UTC).
Coluna 11 Outras frequências utilizadas simultaneamente para o mesmo programa destinado à(s) mesma(s) região(ões).

1) Se a frequência notificada for a única frequência utilizada para o horário em causa, inscrever «NIL» nesta coluna.
2) Caso contrário, indicar as outras frequências utilizadas simultaneamente para o mesmo programa destinado à mesma região.

Coluna 12b Endereço postal e endereço telegráfico da administração de que depende a estação (1).

Estes endereços são aqueles para onde convirá enviar qualquer comunicação urgente respeitante a interferências, qualidade das emissões e questões relativas à exploração técnica (v. o artigo 22).

Informações suplementares:

Qualquer informação suplementar fornecida pela administração deverá figurar na parte da ficha a isso destinada:

1) Indicar a seguir ao símbolo «COORD» o nome de qualquer administração com a qual se tenha efectuado coordenação para a utilização da frequência; se não tiver sido efectuada qualquer coordenação, inscrever a indicação «NIL»;

(1) Quando estas informações constatarem já do prefácio da Lista Internacional de Frequências, utilizar o número ou a letra de referência apropriados.

2) Acrescentar qualquer outra informação que a administração julge oportuna; por exemplo, a distância máxima de serviço, quando for inferior a 2000 km, ou esclarecimentos acerca da utilização da frequência notificada, se essa utilização for restrita ou se a frequência não for utilizada durante todo o horário indicado na coluna 10, ou só for utilizada em certos dias da semana, ou se for aplicada a técnica da sincronização.

III. Símbolos correspondentes aos diferentes tipos de antena

HOR	Antena horizontal não direccional.
VER	Antena vertical não direccional.
DP	Dipolo.
H	Horizontal.
V	Vertical.
R	Com reflector.

(Exemplo: DPHR significa dipolo horizontal com reflector.)

H	Antena de cortina com dipolos horizontais.
R	Com reflector.
S	Antena deslocada.
/..	Número de elementos de meia onda por fila horizontal.
/..	Número de elementos de meia onda por fila vertical.
/..	Altura acima do solo da fila de elementos mais baixa (em comprimentos de onda).
S..	Ângulo de deslocamento, havendo-o.

(Exemplo: HRS/4/3/2S significa sistema horizontal com reflector, 4 filas horizontais, 3 filas verticais de dipolos, fila horizontal inferior situada a 2 comprimentos de onda acima do solo, deslocamento 15°.)

RHO	Antena rômbica.
/..	Comprimento do lado do losango (em comprimentos de onda).
/..	Altura do losango acima do solo (em comprimentos de onda).
/..	Metade do ângulo interior do losango.

(Exemplo: RHO/2,5/0,4/65 significa antena rômbica, comprimento de um lado 2,5 comprimentos de onda, altura acima do solo 0,4 comprimentos de onda, semiângulo interior 65°.)

TRO	Antena para a radiodifusão na zona tropical.
/..	Número de filas.
/..	Altura acima do solo (em comprimentos de onda).

[Exemplo: TRO/4/0,2 significa antena para a radiodifusão tropical de 4 filas (e 4 dipolos por fila), a uma altura de 0,2 comprimentos de onda acima do solo.]

APÊNDICE 3

Fichas de notificação relativas às estações de radiocomunicação espacial e de radioastronomia

(V. os artigos 11 e 13)

SECÇÃO A

Instruções gerais

1. Deverá ser enviada à Comissão Internacional do Registo de Frequências uma ficha de notificação distinta, para notificar:

Cada nova consignação de frequência a uma estação terrena, para a emissão ou a recepção, ou a uma estação espacial, para a emissão ou a recepção;

Qualquer modificação das características de uma consignação de frequência inscrita no ficheiro de referência internacional das frequências, denominado daqui em diante ficheiro de referência;

Qualquer anulação total de uma consignação de frequência inscrita no ficheiro de referência.

2. No que respeita às consignações de frequência às estações terrenas e espaciais notificadas nos termos dos n.os **1488** a **1491**, consoante se trate de frequências de emissão ou de recepção, deverá ser apresentada à Comissão uma ficha de notificação distinta para cada consignação a uma estação terrena ou espacial. Em cada um destes casos, quando são

idênticas as características fundamentais, excepto a frequência, poderá ser apresentada uma única ficha de notificação, indicando essa ficha todas as características fundamentais e dando a lista das frequências consignadas. No caso de um sistema de satélites reflectores, deverão ser objecto de notificação apenas as consignações às estações terrenas para a emissão e a recepção.

3. No caso de um sistema de satélites que comporte várias estações espaciais com as mesmas características gerais, deverá ser apresentada à Comissão uma ficha distinta para cada estação espacial, para as consignações de frequência de emissão e de recepção:

Se ela estiver colocada a bordo de um satélite geostacionário;

Se estiver colocada a bordo de um satélite não geostacionário, excepto se vários satélites tiverem as mesmas características quanto às frequências radioeléctricas e as mesmas características de órbita (com exclusão da posição do nodo ascendente); nesse caso, poderá ser apresentada à Comissão uma ficha única válida para todas essas estações espaciais.

4. Cada ficha de notificação deverá conter as informações de base seguintes:

a) O número de série da ficha e a data do seu envio à Comissão;
b) O nome da administração donde provém;
c) Informações suficientes para permitir identificar a rede de satélite particular na qual funcionará a estação terrena ou espacial, incluindo a posição orbital no caso de um satélite geostacionário;
d) A indicação de que a ficha se refere:

1) A primeira utilização de uma frequência por uma estação;
2) A uma modificação das características de uma consignação de frequência inscrita no ficheiro de referência (indicar se esta notificação constitui uma substituição, uma adição ou uma anulação das características existentes);
3) A anulação da totalidade das características notificadas de uma consignação;

e) Uma referência à circular semanal da IFRB que contém a publicação antecipada exigia nos termos do n.º **1042**.
f) As características fundamentais definidas nas secções B, C, D, E ou F, consoante o caso;
g) Qualquer outra informação que a administração julgue oportuna, por exemplo, qualquer factor tomado em consideração quando da aplicação das disposições do apêndice 28 para determinar a zona de coordenação, bem como a indicação eventual de que a consignação será utilizada de acordo com o n.º **342**, informações relativas à utilização da frequência notificada, no caso de essa utilização ser restrita ou, quando se trate de uma ficha de notificação relativa a uma estação espacial, se as emissões desta forem definitivamente interrompidas ao fim de um período determinado.

SECÇÃO B

Características fundamentais a fornecer no caso da notificação de uma frequência de emissão de uma estação terrena

Ponto 1 Frequência(s) consignada(s).

Indicar a(s) freguesia(s) consignada(s) tal como definida(s) no artigo 1 (v. o n.º **142**), em kHz, até 28 000 kHz, inclusive, em MHz, acima de 28 000 kHz e até 10 500 MHz, inclusive, em GHz, acima de 10 500 MHz.

Ponto 2 Faixa de frequências consignada.

Indicar a largura da faixa de frequências consignada, em kHz (v. o n.º **141**).

Ponto 3 Data de entrada em serviço.

a) No caso de uma nova consignação, indicar a data de entrada em serviço efectiva ou prevista, consoante o caso, da consignação de frequência;
b) Quando da modificação de uma qualquer das características fundamentais de uma consignação, tais como especificadas na presente secção, com excepção da que figura no ponto 4, alínea *a*), a data a indicar deverá ser a da última modificação efectiva ou prevista, consoante o caso.

Ponto 4 Identidade e localização da estação terrena de emissão.

a) Indicar o nome por que é designada a estação ou o nome da localidade onde ela se situa;
b) Indicar o país ou a zona geográfica onde se situa a estação. Convém utilizar para esse fim os símbolos que figuram no prefácio da Lista Internacional das Frequências;
c) Indicar as coordenadas geográficas da localização do emissor (longitude e latitude, em graus e minutos). Indicar igualmente os segundos (1) com uma precisão de um décimo de minuto.

(1) Esta informação só é necessária se a zona de coordenação da estação terrena se estender sobre o território de outra administração.

Ponto 5 Estação(ões) com a qual (quais) a comunicação deve ser estabelecida.

Indicar a identidade da (ou das) estação(ões) espacial(ais) de recepção associada(s) com a estação terrena, fazendo referência às notificações a elas relativas ou por qualquer outro modo apropriado, ou então, no caso de um satélite reflector, a identidade do satélite e a localização da (ou das) estação(ões) terrena(s) de recepção que lhe está(ão) associada(s). No caso de um satélite geostacionário, indicar também a sua posição orbital.

Ponto 6 Classe da estação e natureza do serviço.

Utilizando os símbolos que figuram no apêndice 10, indicar a classe da estação e a natureza do serviço efectuado.

Ponto 7 Classe de emissão, largura de faixa necessária e natureza da transmissão.

De acordo com o artigo 4 e o apêndice 6:

a) Indicar a classe de emissão;
b) Indicar a(s) frequência(s) portadora(s) de emissão (1);
c) Indicar, para cada portadora, a classe de emissão, a largura de faixa necessária e a natureza da transmissão (1);
d) Indicar, para a portadora com a mais pequena largura de faixa das consignações do sistema, a classe de emissão, a largura de faixa necessária e a natureza da transmissão (1).

Ponto 8 Características de potência da emissão.

a) Indicar, para cada portadora, a potência de ponta (dBW) fornecida à entrada da antena (1);
b) Indicar a potência total de ponta (dBW) e a densidade máxima de potência por Hz [dB(W/Hz)] (2) fornecida à entrada da antena (valor médio calculado na faixa de 4 kHz, mais desfavorecida para as portadoras inferiores a 15 GHz, ou na faixa de 1 MHz, mais desfavorecida para as portadoras superiores a 15 GHz);
c) Indicar, para cada portadora, o valor mínimo da potência de ponta fornecida à entrada da antena (1).

Ponto 9 Características da antena de emissão.

a) Indicar o ganho iostrópico ou absoluto (dB) da antena na direcção máxima (v. o n.º **154**);
b) Indicar, em graus, o ângulo formado pelas direcções nas quais a potência fica reduzida a metade (dar uma descrição pormenorizada se o diagrama de radiação não for simétrico);
c) Juntar à ficha o diagrama de radiação da antena, medida tomando como referência a direcção da radiação máxima, ou indicar o diagrama de radiação de referência a utilizar para a coordenação;
d) Juntar à ficha um gráfico que indique o ângulo de elevação do horizonte em cada azimute à volta da estação terrena;
e) Indicar, em graus, em relação ao plano horizontal, o ângulo mínimo de elevação, previsto em exploração, da direcção da radiação máxima da antena;
f) Indicar, em graus, a partir do norte verdadeiro, no sentido do movimento dos ponteiros do relógio, os limites entre os quais o azimute da direcção da radiação máxima da antena pode variar durante a exploração;
g) Indicar o tipo de polarização da onda emitida na direcção da radiação máxima; indicar, também, o sentido da polarização, caso esta seja circular, e o plano da polarização, no caso de ser linear (v. os n.os **148** e **149**) (1);
h) Indicar, em metros, a altitude da antena acima do nível do mar.

Ponto 10 Características de modulação (1).

Para cada portadora, consoante a natureza do sinal que modula a portadora e consoante o tipo de modulação, indicar as seguintes características:

a) Portadora modulada em frequência por uma faixa de base telefónica multivia de divisão em frequência (MRF/MF) ou por um sinal que pode ser representado por uma faixa de base telefónica multivia de divisão em frequência: indicar as frequências inferior e superior da faixa de base e o desvio de frequência eficaz do tom de ensaio em função da frequência da faixa de base;

---

(1) Esta informação só é necessária se serviu de base para efectuar a coordenação com uma outra administração.
(2) Convém utilizar a versão mais recente do Relatório n.º 792 da CCIR, na medida em que se aplique ao cálculo da densidade máxima de potência por hertz.

b) Portadora modulada em frequência por um sinal de televisão; indicar a norma do sinal de televisão (incluindo, se for caso disso, a norma utilizada para a cor), o desvio de frequência para a frequência de referência da características de pré-acentuação, e esta característica de pré-acentuação; indicar igualmente, se for caso disso, as características de multiplexagem do sinal imagem com o(s) som (sons) ou outros sinais;

c) Portadora modulada por variação de fase por um sinal de modulação por impulsos codificados (MIC/MDP): indicar o débito binário e número de fases;

d) Portadora modulada em amplitude (incluindo em faxia lateral única): indicar com toda a precisão possível a natureza do sinal modulante e o tipo de modulação de amplitude utilizado;

e) Para todos os outros tipos de modulação, fornecer as informações que possam ser úteis para um estudo de interferência;

f) Qualquer que seja o tipo de modulação utilizado, indicar as características de dispersão da energia, tais como o desvio ponta de frequência (MHz) e a frequência de varrimento (kHz) da onda de dispersão.

Ponto 11 Horário normal de funcionamento.

Indicar o horário normal de funcionamento (UTC) na frequência de cada portadora.

Ponto 12 Coordenação.

Indicar o nome de qualquer administração com a qual tenha sido coordenada com êxito a utilização da frequência, em conformidade com os n.^{os} **1060** e **1107**, e, se tanto for o caso, o nome de qualquer administração junto da qual tenha sido tentada mas não efectuada a coordenação da utilização da frequência.

Ponto 13 Acordos.

Indicar, se for caso disso, o nome de qualquer administração com a qual tenha sido concluído um acordo para ultrapassar os limites prescritos no presente Regulamento, assim como o conteúdo desse acordo.

Ponto 14 Administração ou companhia exploradora.

Indicar o nome da administração ou da companhia exploradora e os endereços postal e telegráfico da administração à qual convém enviar qualquer comunicação urgente relativa às interferências, à qualidade das emissões e às questões relacionadas com a exploração técnica das estações (v. o artigo 22).

SECÇÃO C

Características fundamentais a fornecer no caso da notificação de uma frequência de recepção de uma estação terrena

Ponto 1 Frequência(s) consignada(s).

Indicar a ou as frequências consignadas da emissão a receber, tal como definida(s) no artigo 1 (v. o n.º **142**), em kHz, até 28 000 kHz, inclusive, em MHz, acima de 28 000 kHz e até 10 500 MHz, inclusive, em GHz, acima de 10 500 MHz.

Ponto 2 Faixa de frequências consignada.

Indicar a largura da faixa de frequências consignada, em kHz (v. o n.º **141**).

Ponto 3 Data de entrada em serviço.

a) No caso de uma nova consignação, indicar a data efectiva ou prevista, consoante o caso, em que começa a recepção na frequência consignada;

b) Quando de uma modificação de qualquer das características fundamentais de uma consignação, tais como especificadas na presente secção, com excepção da que figura no ponto 4, alínea *a*), a data a indicar deve ser a da última modificação efectiva ou prevista, consoante o caso.

Ponto 4 Identidade e localização da estação terrena de recepção.

a) Indicar o nome por que é designada a estação terrena de recepção ou o nome da localidade em que ela se situa;

b) Indicar o país ou a zona geográfica onde se situa a estação terrena de recepção. Convém utilizar para esse fim os símbolos que figuram no prefácio da Lista Internacional das Frequências;

c) Indicar as coordenadas geográficas da localização do receptor (longitude e latitude, em graus e minutos). Indicar igualmente os segundos (1) com uma precisão de um décimo de minuto.

Ponto 5 Estação(ões) com a qual (as quais) a comunicação deve ser estabelecida.

Indicar a identidade da (ou das) estação(ões) espacial(ais) de emissão associada(s) à estação terrena, fazendo referência às notificações a ela(s) relativas ou por qualquer outro modo apropriado, ou então, no caso de um satélite reflector, a identidade do satélite e da (ou das) estação(ões) terrena(s) de emissão que lhe está (estão) associada(s). No caso de um satélite geostacionário, indicar também a sua posição orbital.

Ponto 6 Classe da estação e natureza do serviço.

Utilizando os símbolos que figuram no apêndice 10, indicar a classe da estação e a natureza do serviço efectuado.

Ponto 7 Classe de emissão, largura de faixa necessária e natureza da transmissão a receber.

Em conformidade com o artigo 4 e o apêndice 6:

a) Indicar a classe de emissão da transmissão a receber;
b) Indicar a (ou as) frequência(s) portadora(s) da transmissão a receber (2);
c) Indicar, para cada frequência portadora a receber, a classe de emissão, a largura de faixa necessária e a natureza da transmissão (2).

Ponto 8 Características da antena de recepção da estação terrena.

a) Indicar, o ganho isotrópico ou absoluto (dB) da antena na direcção da radiação máxima (v. o n.º **154**);
b) Indicar, em graus, o ângulo formado pelas direcções nas quais a potência fica reduzida a metade (dar uma descrição pormenorizada se o diagrama de radiação não for simétrico);
c) Juntar à ficha o diagrama de radiação da antena medida tomando como referência a direcção da radiação máxima ou indicar o diagrama da radiação de referência a utilizar para a coordenação;
d) Juntar à ficha um gráfico que indique o ângulo de elevação do horizonte em cada azimute à volta da estação terrena;
e) Indicar, em graus, em relação ao plano horizontal, o ângulo de elevação mínima, previsto em exploração, da direcção, da radiação, máxima da antena;
f) Indicar, em graus, a partir do norte verdadeiro e no sentido do movimento dos ponteiros do relógio, os limites entre os quais pode variar o azimute da direcção da radiação máxima da antena durante a exploração;
g) Indicar, em metros, a altitude da antena acima do nível médio do mar;
h) Indicar o tipo de polarização da antena. No cado de polarização, indicar o sentido dela (v. os n.ºs **148** e **149**). No caso de polarização rectilínea, indicar o plano de polarização. Indicar igualmente se é dada autorização para a utilização geral desta informação, a fim de determinar a necessidade de coordenação com outras redes de satélite em conformidade com o apêndice 29 (2).

Ponto 9 Temperatura de ruído, temperatura de ruído da ligação e ganho de transmissão.

a) Indicar, em graus Kelvin, a mais baixa temperatura de ruído do sistema de recepção total relativa à saída da antena de recepção da estação terrena nas condições de «céu calmo». Este valor deve ser indicado para o valor nominal do ângulo de elevação no caso em que a estação de emissão associada esteja colocada a bordo de um satélite geostacionário e, nos outros casos, para o valor mínimo do ângulo de elevação;
b) Quando sejam utilizados a bordo da estação espacial associada simples repetidores-conversores de frequência, indicar as mais baixas temperatura de ruído equivalentes da ligação por satélite nas condições do ponte 9. alínea *a*), acima para a consignação (v. o n.º **168**);
c) Indicar o valor do ganho de transmissão associado a cada temperatura de ruído equivalente da ligação por satélite dada no ponto 9, alínea *b*), acima. O ganho de transmissão avalia-se entre a saída da antena de recepção da estação espacial e a saída da antena de recepção da estação terrena.

---

(1) Esta informação só é necessária se a zona de coordenação da estação terrena se estender sobre o território de outra administração.
(2) Esta informação só é necessária se serviu de base para efectuar a coordenação com outra administração.

Ponto 10 Horário normal de recepção.

Indicar, em tempo UTC, o horário normal de recepção na frequência de cada portadora.

Ponto 11 Coordenação.

Indicar o nome de qualquer administração com a qual tenha sido coordenada com êxito a utilização da frequência, em conformidade com os n.os **1060** e **1107**, e, se tanto for o caso, o nome de qualquer administração junto da qual tenha sido tentada mas não efectuada a coordenação da utilização da frequência.

Ponto 12 Acordos.

Indicar, se for caso disso, o nome de qualquer administração com a qual tenha sido concluído um acordo para ultrapassar os limites prescritos no presente Regulamento, assim como o conteúdo desse acordo.

Ponto 13 Administração ou companhia exploradora.

Indicar o nome da administração ou da companhia exploradora e os endereços postal e telegráfico da administração à qual convém enviar qualquer comunicação urgente relativa às interferências, e às questões relacionadas com a exploração técnica das estações (v. o artigo 22).

SECÇÃO D

Características fundamentais a fornecer no caso da notificação de uma frequência de emissão de estações espaciais

Ponto 1 Frequência(s) consignada(s).

Indicar a (ou as) frequência(s) consignada(s) tal como definida(s) no artigo 1 (v. o n.º **142**), em kHz, até 28 000 kHz, inclusive, em MHz, acima de 28 000 kHz e até 10 500 MHz, inclusive, em GHz, acima de 10 500 MHz. Convém que cada feixe de radiação de antena seja objecto de, pelo menos, uma ficha de notificação distinta.

Ponto 2 Faixa de frequências consignada.

Indicar a largura da faixa de frequências consignada, em kHz (v. o n.º **141**).

Ponto 3 Data de entrada em serviço ([1]).

a) No caso de uma nova consignação, indicar a data de entrada em serviço efectiva ou prevista, consoante o caso, da consignação de frequência;

b) Quando da modificação de uma qualquer das características fundamentais de uma consignação, tais como especificadas na presente secção, com excepção da que figura no ponto 4, a data a indicar deverá ser a da última modificação efectiva ou prevista, consoante o caso.

Ponto 4 Identidade da (ou das) estação(ões) espacial(ais).

Indicar a identidade da (ou das) estação(ões) espacial(ais).

Ponto 5 Informações relativas à órbita.

a) No caso de uma estação espacial situada a bordo de um satélite geostacionário, indicar a longitude geográfica nominal a órbita dos satélites geostacionários, assim como a tolerância de longitude e a variação de inclinação previstas. Indicar igualmente, no caso em que esteja previsto que um satélite geostacionário comunique com uma estação terrena:

1) O arco da órbita dos satélites geostacionários sobre o qual a estação espacial é visível sob o ângulo de elevação de, pelo menos, 10° a partir das estações terrenas ou zonas de serviço que lhes estão associadas;
2) O arco da órbita dos satélites geostacionários ao longo do qual a estação espacial pode assegurar o serviço exigido com as estações terrenas ou zonas de serviço que lhe estão associadas;
3) Se o arco a que se refere a alínea 2) anterior for mais pequeno do que aquele a que se refere a alínea 1) precedente, indicar as razões dessa diferença;

Nota. — Os arcos a que se referem as alíneas 1) e 2) devem ser definidos pela longitude geográfica das suas extremidades sobre a órbita dos satélites geostacionários.

([1]) V., também, a Resolução n.º 4.

b) No caso de uma ou de várias estações espaciais situadas a bordo de um ou de vários satélites não geostacionários, indicar a inclinação da órbita, o período e as altitudes (em quilómetros) do apogeu e do perigeu da (ou das) estação(ões) espacial(ais), assim como o número de satélites utilizados.

Ponto 6 Zonas(s) de serviço ou estação(ões) de recepção.

a) No caso de as estações de recepção associadas serem estações terrenas, indicar a (ou as) zonas(s) de serviço prevista(s) sobre a Terra ou o nome da localidade e do país ou a zona geográfica onde se situa cada estação de recepção;

b) No caso de as estações de recepção associadas serem estações espaciais, indicar a identidade de cada uma delas fazendo referência às notificações que lhes são relativas ou por qualquer outro modo apropriado.

Ponto 7 Classe da estação e natureza do serviço.

Utilizando os símbolos que figuram no apêndice 10, indicar a classe da (ou das) estação(ões) e a natureza do serviço efectuado.

Ponto 8 Classe de emissão, largura de faixa necessária e natureza da transmissão.

Em conformidade com o artigo 4 e o apêndice 6:

a) Indicar a classe de emissão da transmissão;

b) Indicar a (ou as) frequência(s) portadora(s) da transmissão (1);

c) Indicar, para cada portadora, a classe de emissão, a largura de faixa necessária e a natureza da transmissão (1);

d) Indicar, para a portadora que tem a mais pequena largura de faixa das consignações do sistema, a classe de emissão, a largura de faixa necessária e a natureza da transmissão (1).

Ponto 9 Características de potência da emissão.

a) Indicar, para cada portadora, a potência de ponta (dBW) fornecida à entrada da antena (1);

b) Indicar a potência total de ponta (dBW) e a densidade máxima de potência por Hz [dB(W/Hz)] (2) fornecida à entrada da antena (valor médio calculado na faixa de 4 kHz, mais desfavorecida para as portadoras inferiores a 15 GHz, ou na faixa de 1 MHz, mais desfavorecida para as portadoras superiores a 15 GHz);

c) Indicar, para cada portadora, o valor mínimo da potência de ponta fornecida à entrada da antena (1).

Ponto 10 Características da antena de emissão da estação espacial.

Para cada zona de serviço ou cada feixe de radiação da antena:

a) No caso de uma estação espacial situada a bordo de um satélite geostacionário e destinada a comunicar com uma estação terrena, indicar o ganho máximo da antena de emissão da estação espacial e os contornos de ganho traçados sobre um mapa de superfície terrestre, de preferência numa projecção radial a partir do satélite e num plano perpendicular ao eixo que liga o centro da Terra ao satélite. Indicar o ganho isotrópico ou absoluto em cada contorno que corresponde a um ganho inferior 2 dB, 4 dB, 6 dB, 10 dB e 20 dB ao valor máximo, e assim por diante, de 10 dB em 10 dB, se necessário. Sempre que possível, os contornos do ganho da antena de emissão da estação espacial deveriam igualmente ser indicados na forma de uma equação numérica ou na forma de um quadro;

b) No caso de uma estação espacial situada a bordo de um satélite geostacionário e cujo feixe de radiação da antena dirigido para um outro satélite, ou no caso de uma estação espacial colocada a bordo de um satélite não geostacionário, indicar o ganho isotrópico ou absoluto da antena de emissão da estação espacial na direcção de radiação máxima e o diagrama de radiação dessa antena, tomando como referência o ganho na direcção de radiação máxima;

c) Indicar o tipo de polarização da radiação emitida pela antena. No caso de polarização circular, indicar o sentido da polarização (v. os n.os **148** e **149**). No caso de polarização

(1) Esta informação só é necessária se serviu de base para efectuar a coordenação com outra administração.

(2) Convém utilizar a versão mais recente do Relatório n.º 792 da CCIR, na medida em que se aplique ao cálculo da densidade máxima de potência por Hz.

rectilínea, indicar, em graus, o ângulo medido no sentido inverso do movimento dos ponteiros do relógio, no plano normal ao eixo do feixe desde o plano equatorial até ao vector eléctrico da onda visto do satélite (1);

d) No caso de um satélite geostacionário, indicar a precisão de orientação da antena;

e) No caso de uma estação espacial situada a bordo de um satélite geostacionário e que funcione numa faixa atribuída no sentido Terra-espaço e no sentido espaço-Terra, indicar também o ganho da antena de emissão da estação espacial na direcção das partes da órbita dos satélites geostacionários não ocultas pela Terra, por meio de um diagrama que indique o ganho de antena estimado em função da longitude orbital.

Ponto 11 Características de modulação (1).

Para cada frequência portadora, segundo a natureza do sinal que modula a portadora e segundo o tipo de modulação, indicar as características seguintes:

a) Portadora modulada em frequência por uma faixa de base telefónica multivia de divisão em frequência (MDF/MF) ou por um sinal que pode ser representado por uma faixa de base telefónica multivia de divisão em frequência: indicar as frequências inferior e superior da faixa de base e o desvio de frequência eficaz do tom de ensaio em função da frequência da faixa de base;

b) Portadora modulada em frequência por um sinal de televisão: indicar a norma do sinal de televisão (incluindo, se for caso disso, a norma utilizada para a cor), o desvio de frequência para a frequência de referência da características de pré-acentuação, e esta característica de pré-acentuação; indicar igualmente, se for caso disso, as características de multiplexagem do sinal imagem com o(s) som (sons) ou outros sinais;

c) Portadora modulada por variação de fase por um sinal de modulação por impulsos codificados (MIC/MDP): indicar o débito binário e número de fases;

d) Portadora modulada em amplitude (incluindo a de faixa lateral única): indicar, de forma tão precisa quanto possível a natureza do sinal modulador e o tipo de modulação de amplitude utilizado;

e) Para todos os outros tipos de modulação, fornecer as informações que possam ser úteis para um estudo de interferência;

f) Qualquer que seja o tipo de modulação utilizado: indicar, se for caso disso, as características de dispersão da energia.

Ponto 12 Horário normal de funcionamento.

Indicar o horário normal (UTC) de funcionamento na frequência de cada portadora.

Ponto 13 Coordenação.

Indicar o nome de qualquer administração ou grupo de administrações com as quais foi coordenada com êxito a utilização da rede de satélite a que pertence a estação espacial, em conformidade com o n.º **1060**.

Ponto 14 Acordos.

Indicar, se for caso disso, o nome de qualquer administração com a qual tenha sido concluído um acordo com vista a ultrapassar os limites prescritos no presente Regulamento, assim como o conteúdo desse acordo.

Ponto 15 Administração ou companhia exploradora.

Indicar o nome da administração ou da companhia exploradora e os endereços postal e telegráfico da administração à qual convém enviar qualquer comunicação urgente relativa às interferências, à qualidade das emissões e às questões relacionadas com a exploração das estações (v. o artigo 22).

SECÇÃO E

Características fundamentais a fornecer no caso da notificação de uma frequência de emissão de estações espaciais

Ponto 1 Frequência(s) consignada(s).

Indicar a (ou as) frequência(s) consignada(s) tal como definida(s) no artigo 1 (v. o n.º **142**), em kHz, até 28 000 kHz, inclusive, em MHz, acima de 28 000 kHz e até 10 500 MHz, inclusive, em GHz,

(1) Esta informação só é necessária se serviu de base para efectuar a coordenação com outra administração.

acima de 10 500 MHz. Convém que cada feixe de radiação de antena seja objecto de, pelo menos, uma ficha de notificação distinta.

Ponto 2 Faixa de frequências consignada.

Indicar a largura da faixa de frequências consignada, em kHz (v. o n.º **141**).

Ponto 3 Data de entrada em serviço ([1]).

a) No caso de uma nova consignação, indicar a data efectiva ou prevista, consoante o caso, em que começa a recepção na frequência consignada;

b) Quando de uma modificação de qualquer das características fundamentais de uma consignação, tais como especificadas na presente secção, com excepção da que figura no ponto 4, a data a indicar deverá ser a da última modificação efectiva ou prevista, consoante o caso.

Ponto 4 Identidade da (ou das) estação(ões) espacial(ais) de recepção.

Indicar a identidade da (ou das) estação(ões) espacial(ais) de recepção.

Ponto 5 Informações relativas à órbita.

a) No caso de uma estação espacial situada a bordo de um satélite geostacionário, indicar a longitude geográfica nominal sobre a órbita dos satélites geostacionários, assim como a tolerância de longitude e a variação de inclinação previstas. Indicar igualmente, no caso em que esteja previsto que um satélite geostacionário comunique com uma estação terrena:

1) O arco da órbita dos satélites geostacionários sobre o qual a estação espacial é visível sob o ângulo de elevação de, pelo menos, 10° a partir das estações terrenas ou zonas de serviço que lhes estão associadas;
2) O arco da órbita dos satélites geostacionários ao longo do qual a estação espacial pode assegurar o serviço exigido com as estações terrenas ou zonas de serviço que lhe estão associadas;
3) Se o arco a que se refere a alínea 2) anterior for mais pequeno do que aquele a que se refere a alínea 1) precedente, indicar as razões dessa diferença;

Nota. — Os arcos a que se referem as alíneas 1) e 2) devem ser definidos pela longitude geográfica das suas extremidades sobre a órbita dos satélites geostacionários.

b) No caso de uma ou de várias estações espaciais situadas a bordo de um ou de vários satélites não geostacionários, indicar a inclinação da órbita, o período e as altitudes (em quilómetros) do apogeu e do perigeu da (ou das) estação(ões) espacial(ais), assim como o número dos satélites utilizados.

Ponto 6 Estação(ões) terrena(s) ou especial(ais) de emissão associada(s).

Indicar a identidades da (ou das) estação(ões) terrena(s) ou espacial(ais) de emissão associada(s) à(s) estação(ões) espacial(ais), fazendo referência às notificações a elas relativas ou de qualquer outro modo apropriado.

Ponto 7 Classe de estação e natureza do serviço.

Utilizando os símbolos que figuram no apêndice 10, indicar a classe da (ondas) estação(ões) e a natureza do serviço efectuado.

Ponto 8 Classe de emissão, largura de faixa necessária e natureza da (ou das) transmissão(ões) a receber.

Em conformidade com o artigo 4 e o apêndice 6:

a) Indicar a classe de emissão da (ou das) transmissão(ões) a receber;
b) Indicar a (ou as) frequência(s) portadora(s) da (ou das) transmissão(ões) ou receber ([2]);
c) Indicar, para cada frequência portadora a receber, a classe de emissão, a largura de faixa necessária e a natureza da (ou das) transmissão(ões) a receber ([2]).

Ponto 9 Características da antena de recepção da estação espacial.

Para cada feixe de antena de recepção:

a) No caso de uma estação espacial situada a bordo de um satélite geostacionário e destinada a comunicar com uma estação terrena, indicar o ganho máximo da antena de emissão

---

([1]) V., também, a Resolução n.º 4.
([2]) Esta informação só é necessária se serviu de base para efectuar a coordenação com outra administração.

da estação espacial e os contornos de ganho traçados sobre um mapa de superfície terrestre, de preferência numa projecção radial a partir do satélite e num plano perpendicular ao eixo que liga o centro da Terra ao satélite. Indicar o ganho isotrópico ou absoluto em cada contorno que corresponde a um ganho inferior 2 dB, 4 dB, 6 dB, 10 dB e 20 dB ao valor máximo, e assim por diante, de 10 dB em 10 dB, se necessário. Sempre que possível, os contornos do ganho da antena de emissão da estação espacial deveriam igualmente ser indicados na forma de uma equação numérica ou na forma de um quadro;

b) No caso de uma estação espacial situada a bordo de um satélite geostacionário e cujo feixe de radiação da antena esteja dirigido para um outro satélite, ou no caso de uma estação espacial colocada a bordo de um satélite não geostacionário, indicar o ganho isotrópico ou absoluto da antena de emissão da estação espacial na direcção de radiação máxima e o diagrama de radiação dessa antena, tomando como referência o ganho na direcção de radiação máxima;

c) Indicar o tipo de polarização da radiação emitida pela antena. No caso da polarização circular, indicar o sentido dela (v. os n.^{os} **148** e **149**). No caso de polarização rectilínea, indicar, em graus, o ângulo medido no sentido inverso do movimento dos ponteiros do relógio, no plano normal ao eixo do feixe desde o plano equatorial até ao vector eléctrico da onda visto do satélite. Indicar igualmente se foi dada autorização para a utilização geral desta informação a fim de determinar a necessidade da coordenação com outras redes de satélite em coformidade com o apêndice 29 ([1]);

d) No caso de um satélite geostacionário, indicar a precisão de orientação da antena;

e) No caso de uma estação espacial situada a bordo de um satélite geostacionário e que funcione numa faixa atribuída no sentido Terra-espaço e no sentido espaço-Terra, indicar também o ganho da antena de recepão da estação espacial na direcção das partes da órbita dos satélites geostacionários não ocultas pela Terra por meio de um diagrama que indique o ganho de antena estimado em função da longitude orbital.

Ponto 10 Temperatura de ruído.

Indicar, em graus Kelvin, a temperatura de ruído do conjunto do sistema de recepção à saída da antena de recepção da estação espacial.

Ponto 11 Horário normal de recepção.

Indicar, em tempo UTC, o horário normal de recepção na frequência de cada portadora.

Ponto 12 Coordenação.

Indicar o nome de qualquer administração ou grupo de administrações com que tenha sido coordenada com êxito a utilização da rede de satélite a que pertence a estação espacial, em conformidade com o n.º **1060**.

Ponto 13 Acordos.

Indicar, se tanto for o caso, o nome de qualquer administração com a qual tenha sido concluído um acordo para ultrapassar os limites prescritos no presente Regulamento, assim como o conteúdo desse acordo.

Ponto 14 Administração ou companhia exploradora.

Indicar o nome da administração ou da companhia exploradora e os endereços postal e telegráfico da administração à qual convém enviar qualquer comunicação urgente relativa às interferências e às questões relacionadas com a exploração das estações (v. o artigo 22).

SECÇÃO F

Características fundamentais a fornecer no caso da notificação de uma frequência de recepção de estações de radioastronomia

Ponto 1 Frequência observada.

Indicar o centro da faixa de frequência observada, em kHz, até 28 000 kHz, inclusive, em MHz, acima de 28 000 kHz e até 10 500 MHz, inclusive, e em GHz, acima de 10 500 MHz.

([1]) Esta informação só é necessária se serviu de base para efectuar a coordenação com outra administração.

Ponto 2 Data de entrada em serviço.

a) Indicar a data efectiva ou prevista, consoante o caso, em que começa a recepção na faixa de frequências;

b) Quando de uma modificação de qualquer das características fundamentais especificadas na presente secção, com excepção da que figura no ponto 3, alínea *b*), a data a indicar deverá ser a da última modificação efectiva ou prevista, consoante o caso.

Ponto 3 Nome e localização da estação.

a) Indicar as letras «RA»;

b) Indicar o nome por que é designada a estação ou o nome da localidade em que ela se situa, ou então esses dois nomes;

c) Indicar o país ou a zona geográfica onde se situa a estação. Para esse fim convém utilizar os símbolos que figuram no prefácio da Lista Internacional das Frequências;

d) Indicar as coordenadas geográficas da localização da estação (longitude e latitude em graus e minutos).

Ponto 4 Largura de faixa.

Indicar a largura da faixa de frequências (em kHz) na qual se efectuam as observações.

Ponto 5 Características da antena.

Indicar o tipo e as dimensões da antena, a sua superfície efectiva e os limites entre os quais podem variar o seu azimute e o seu ângulo de elevação.

Ponto 6 Horário normal de recepção.

Indicar o horário normal (UTC) de recepção na frequência observada.

Ponto 7 Temperatura de ruído.

Indicar, em graus Kelvin, a temperatura de ruído do conjunto do sistema de recepção referida à saída da antena de recepção.

Ponto 8 Classe das observações.

Indicar a classe das observações efectuadas na faixa de frequência indicada no ponto 4. As observações da classe A são aquelas em que a sensibilidades dos aparelhos não é um factor essencial. As observações da classe B são as que se não podem efectuar senão com receptores de pequeno ruído muito aperfeiçoados.

Ponto 9 Administração ou companhia exploradora.

Indicar a classe das observações efectuadas na faixa de frequência indicada no ponto 4. As obsfico da administração à qual convém enviar qualquer comunicação urgente relativa às interferências e às questões relacionadas com a exploração técnica das estações (v. o artigo 22).

SECÇÃO G

Modelos de ficha de notificação (estação terrena)

A Comissão elabora e mantém em dia modelos de ficha de notificação de forma a respeitar a totalidade das disposições regulamentares do presente apêndice e as decisões conexas de conferências futuras.

SECÇÃO H

Modelos de ficha de notificação (estação espacial)

A Comissão elabora e mantém em dia modelos de ficha de notificação de forma a respeitar a totalidade das disposições regulamentares do presente apêndice e as decisões conexas de conferências futuras.

ANEXO AO APÊNDICE 3

Informações minimamente necessárias à coordenação em conformidade com as disposições dos n.os 1060 e 1107

Informações gerais:

a) Para a coordenação em conformidade com as disposições do n.º **1060**:

No caso da coordenação da utilização de uma ou de várias consignações de frequência a uma estação espacial, as informações a fornecer de acordo com a secção B ou C do

apêndice 3 são as características da estação terrena real associadas da rede, se essas características forem conhecidas, ou as características de uma estação terrena tipo;

No caso da coordenação da utilização de uma ou de várias consignações de frequência a uma estação terrena, são fornecidas as informações referidas no ponto 4, alíneas *c*) e *e*) da secção A do apêndice 3, se não tiver sido efectuada qualquer modificação às características fundamentais da consignação ou das consignações à estação espacial para ter em consideração as necessidades da estação terrena (ou das estações terrenas). Nos outros casos é necessária a coordenação da consignação (das consignações) de frequência à estação espacial;

b) Para a coordenação em conformidade com as disposições do n.º **1107** são apenas necessárias as informações indicadas nas colunas 9 e 10 do quadro junto;

c) Um X numa coluna do quadro indica que é necessária a informação em questão.

Informações relacionadas com o título do apêndice 3 — *Título de coordenação requerida*

Títulos das colunas

1 — Consignações a uma estação terrena de emissão dotadas de um simples repetidor-conversor de frequência a bordo do satélite, em conformidade com as disposições do n.º **1060**.

2 — Como em 1, nos casos que necessitem de um tratamento separado da ligação ascendente e da ligação descendente (por exemplo: telemedida, telecomando.

3 — Consignações a uma estação terrena de recepção dotada de um simples repetidor-conversor de frequência a bordo do satélite, em conformidade com as disposições do n.º **1060**.

4 — Como em 3, nos casos que necessitem de um tratamento separado da ligação ascendente e da ligação descendente (por exemplo: telemedida, telecomando).

5 — Consignações a uma estação espacial de emissão dotada de um simples repetidor-conversor de frequência a bordo do satélite, em conformidade com as disposições do n.º **1060**.

6 — Como em 5, nos casos que necessitem de um tratamento separado da ligação ascendente e da ligação descendente (por exemplo: telemedida, telecomando).

7 — Consignações a uma estação espacial de recepção dotada de um simples repetidor-conversor de frequência a bordo do satélite, em conformidade com as disposições do n.º **1060**.

8 — Como em 7, nos casos que necessitem de um tratamento separado da ligação ascendente e da ligação descendente (por exemplo: telemedida, telecomando).

9 — Consignações a uma estação terrena de emissão, em conformidade com as disposições do n.º **1107**.

10 — Consignações a uma estação terrena de recepção, em conformidade com as disposições do n.º **1107**.

APÊNDICE 4

Informações a fornecer para a publicação antecipada relativa a uma rede de satélite

(V. o artigo 11)

SECÇÃO A

Instruções gerais

Ponto 1 As informações são fornecidas separadamente para cada rede de satélite.

Ponto 2 As informações a fornecer por cada rede de satélite compreende as características gerais (secção B) e, consoante o caso, as características para o sentido Terra-espaço (secção C), as características para o sentido espaço-Terra (secção D) e as características para as ligações espaço-espaço (secção E). Além disso, a administração ou uma administração agindo em nome de um grupo de administrações, expressamente nomeadas, que forneça as informações para a publicação antecipada poderá fornecer, a título de informações suplementares, dados relativos ao cálculo das interferências, tendo em vista a coordenação entre redes (secção F).

SECÇÃO B

Características gerais a fornecer para uma rede satélite

Ponto 1 Identidade da rede de satélite.

Indicar a identidade da rede de satélite por meio de informações suficientes para evitar qualquer ambiguidade e, se for caso disso, a identidade do sistema de satélites de que a rede constituirá um elemento.

Ponto 2 Data de entrada em serviço ([1]).

Indicar a data prevista para a primeira entrada em serviço da rede de satélite.

Ponto 3 Administração ou grupo de administrações que fornece as informações para a publicação antecipada.

Indicar o nome da administração (ou os nomes das administrações) do grupo que fornece as informações relativas à rede de satélite com vista á sua publicação antecipada, bem como os endereços postal e telegráfico da(s) administração(ões) a que convém qualquer comunicação.

([1]) V., também, a Resolução n.º 4.

Ponto 4 Informações relativas à órbita da(s) estação(ões) espacial(ais).

a) No caso de uma estação espacial situada a bordo de um satélite geostacionário, indicar a longitude geográfica nominal sobre a órbita dos satélites geostacionários, assim como a tolerância de longitude e o desvio de inclinação previstos, indicando igualmente:

1) O arco da órbita dos satélites geostacionários sobre o qual a estação espacial é visível sob um ângulo de elevação de, pelo menos, 10° a partir das estações terrenas ou zonas de serviço que lhe estão associadas;
2) O arco da órbita dos satélites geostacionários ao longo do qual a estação espacial pode assegurar o serviço necessário com as estações terrenas ou zonas de serviço que lhe estão associadas;
3) Se o arco a que se refere a alínea 2) anterior for mais pequeno do que o referido na alínea 1) precedente, indicar as razões dessa diferença;

Nota. — Os arcos a que se referem as alíneas 1) e 2) devem ser definidos pela longitude geográfica das suas extremidades sobre a órbita dos satélites geostacionários.

b) No caso de uma ou de várias estações espaciais situadas a bordo de um ou de vários satélites não geostacionários, indicar a inclinação da órbita, o período e as altitudes (em quilómetros) do apogeu e do perigeu da(s) estação(ões) espacial(ais), assim como o número de satélites utilizados com as mesmas características.

SECÇÃO C

Características da rede de satélite para o sentido Terra-espaço

Ponto 1 Zona(s) de serviço Terra-espaço.

Para cada antena de recepção da estação espacial, indicar a(s) zona(s) de serviço associada(s) na superfície da Terra.

Ponto 2 Classe das estações e natureza do serviço.

Para cada zona de serviço Terra-espaço, indicar, utilizando os símbolos que figuram no apêndice 10, a classe das estações da rede de satélite e a natureza do serviço a efectuar.

Ponto 3 Faixa de frequências.

Para cada zona de serviço Terra-espaço, indicar a faixa de frequências em que se situarão as portadoras.

Ponto 4 Características de potência da onda emitida.

a) Para cada zona de serviço Terra-espaço, indicar a densidade espectral máxima de potência [dB(W/Hz] (1) fornecida à antena das estações terrenas de emissão (a largura de faixa em que é calculada depende da natureza do serviço de que se trata) para cada dimensão de antena de estação terrena de emissão e, se conhecida, a potência de ponta total (dBW) e a largura de faixa necessária dessa emissão;
b) Se essa informação estiver disponível, indicar, para cada zona de serviço Terra-espaço, tomando por referência o nível isotrópico, o diagrama de radiação real da antena da estação terrena de emissão para o qual a densidade espectral de potência isotrópica radiada equivalente fora do feixe principal é a mais elevada para cada dimensão de antena de estação terrena de emissão;
c) Se essa informação estiver disponível, para as portadoras de televisão e para cada zona serviço Terra-espaço, a potência de ponta fornecida à entrada da antena de emissão da estação terrena;
d) Se essa informação estiver disponível, indicar o valor mínimo da potência da portadora fornecida à antena da estação terrena para portadoras de faixa estreita.

Ponto 5 Características de antenas de recepção da estação espacial.

Para cada zona de serviço Terra-espaço:

a) No caso de uma estação espacial situada a bordo de um satélite geostacionário, indicar o ganho máximo da antena de recepção da estação espacial e os contornos de ganho traçados num mapa da superfície terrestre, de preferência por meio de uma projecção

(1) Convém utilizar a versão mais recente do Relatório n.º 792 da CCIR, na medida em que se aplique ao cálculo da densidade máxima de potência por Hz.

radial a partir do satélite num plano perpendicular ao eixo que liga o centro da Terra ao satélite. Indicar o ganho isotrópico ou absoluto em cada contorno que corresponda a um ganho inferior 2 dB, 4 dB, 6 dB, 10 dB e 20 dB ao valor máximo, e assim por diante, de 10 dB em 10 dB, se necessário. Sempre que possível, os contornos de ganho estimados da antena de recepção da estação espacial deveriam igualmente ser indicados na forma de uma equação numérica ou na forma de um quadro;

b) No caso de uma estação espacial situada a bordo de um satélite não geostacionário, indicar o ganho isotrópico ou absoluto da antena de recepção da estação espacial na direcção de radiação máxima e o diagrama de radiação dessa antena, tomando como referência o ganho na direcção de radiação máxima;

c) Se essa informação estiver disponível, indicar, para cada antena de recepção da estação espacial, o tipo de polarização da antena. No caso de polarização circular, indicar o sentido dela (v. os n.os **148** e **149**);

d) No caso de uma estação espacial situada a bordo de um satélite geostacionário e que funcione numa faixa atribuída na direcção Terra-espaço e na direcção espaço-Terra, indicar igualmente o ganho estimado da antena de recepção da estação espacial na direcção das partes da órbita dos satélites geostacionários que não estão ocultas pela Terra por meio de um diagrama que indique o ganho de antena estimado em relação à longitude da órbita.

Ponto 6 Temperatura de ruído da estação espacial de recepção.

Para cada zona de serviço Terra-espaço, indicar, quando não é usado um simples repetidor-conversor de frequência a bordo da estação espacial, a temperatura de ruído mais baixa do conjunto do sistema de recepção à saída da antena de recepção.

Ponto 7 Largura de faixa necessária.

Se essa informação estiver disponível, indicar, no caso de portadoras de faixa estreita, a largura de faixa necessária.

Ponto 8 Características de modulação.

Se essa informação estiver disponível, no caso de portadoras de televisão, indicar as características de dispersão da energia, tais como o desvio de frequência ponta a ponta (em MHz) e a frequência de varrimento (kHz) da onda de dispersão.

SECÇÃO D

Características da rede de satélite no sentido espaço-Terra

Ponto 1 Zona(s) de serviço espaço-Terra.

Para cada antena de emissão da estação espacial, indicar a(s) zona(s) de serviço associada(s) na superfície da Terra.

Ponto 2 Classe das estações e natureza do serviço.

Para cada zona de serviço espaço-Terra, indicar, utilizando os símbolos que figuram no apêndice 10, a classe das estações da rede de satélite e a natureza do serviço a efectuar.

Ponto 3 Faixa de frequências.

Para cada zona de serviço espaço-Terra, indicar a faixa de frequências em que se situarão as portadoras.

Ponto 4 Características de potência da emissão.

a) Para cada zona de serviço espaço-Terra, indicar a densidade espectral máxima de potência [dB(W/Hz] (1) fornecida à antena de emissão da estação espacial (a largura de faixa em que é calculada depende da natureza do serviço de que se trata) e, se forem conhecidas, a potência de ponta total (dBW) e a largura de faixa necessária dessa emissão;

b) Se essa informação estiver disponível, indicar, para as portadoras de faixa estreita e para as portadoras de televisão, a potência de ponta fornecida à entrada da antena de emissão da estação espacial;

(1) Convém utilizar a versão mais recente do Relatório n.º 792 da CCIR, na medida em que se aplique ao cálculo da densidade máxima de potência por Hz.

c) Se essa informação estiver disponível, indicar o valor mínimo da potência da portadora fornecida à antena da estação espacial, para portadoras de faixa estreita.

Ponto 5 Características das antenas de emissão da estação espacial.

Para cada zona de serviço espaço-Terra:

a) No caso de uma estação espacial situada a bordo de um satélite geostacionário, indicar o ganho máximo da antena de emissão da estação espacial e os contornos de ganho traçados num mapa da superfície terrestre, de preferência numa projecção radial a partir do satélite, num plano perpendicular ao eixo que liga o centro da Terra ao satélite. Indicar o ganho isotrópico ou absoluto em cada contorno que corresponda a um ganho inferior 2 dB, 4 dB, 6 dB, 10 dB e 20 dB ao valor máximo, e assim por diante, de 10 dB em 10 dB, se necessário. Sempre que possível, os contornos de ganho estimados da antena de emissão da estação espacial deveriam igualmente ser indicados na forma de uma equação numérica ou na forma de um quadro;

b) No caso de uma estação espacial situada a bordo de um satélite não geostacionário, indicar o ganho isotrópico ou absoluto da antena de emissão da estação espacial na direcção de radiação máxima e o diagrama de radiação dessa antena, tomando como referência o ganho na direcção de radiação máxima;

c) Se a informação estiver disponível, indicar, para cada antena de emissão da estação espacial, o tipo de polarização da antena. No caso de polarização circular, indicar o sentido dela (v. os n.^{os} **148** e **149**);

d) No caso de uma estação espacial situada a bordo de um satélite geostacionário que funcione numa faixa atribuída no sentido Terra-espaço e no sentido espaço-Terra, indicar igualmente o ganho estimado da antena de emissão da estação espacial na direcção das partes da órbita dos satélites geostacionários que não estão ocultas pela Terra por meio de um diagrama que mostre o ganho de antena estimado em relação à longitude da órbita.

Ponto 6 Características de recepção das estações terrenas.

a) Para cada zona de serviço espaço-Terra, indicar, quando não é usado um simples repetidor-conversor de frequência a bordo da estação espacial, a temperatura de ruído, mais baixa do conjunto do sistema de recepção das estações terrenas à saída da antena de recepção;
Para cada zona de serviço espaço-Terra e para cada utilização ([1]) projectada, indicar, quando são usados simples repetidores-conversores de frequência a bordo da estação espacial:

1) A mais baixa temperatura de ruído equivalente de ligação por satélite e o valor associado do ganho de transmissão;
2) Os valores do ganho de transmissão e da temperatura de ruído equivalente de ligação associada que correspondem à relação mais elevada «ganho de transmissão/temperatura de ruído equivalente de ligação por satélite». O ganho de transmissão avalia-se entre a saída da antena de recepção da estação espacial e a saída da antena de recepção da estação terrena. Para cada utilização projectada, indicar igualmente a que antena(s) de recepção da estação espacial será ligado cada simples repetidor-conversor de frequência;

b) Se essa informação estiver disponível, indicar para cada zona de serviço espaço-Terra, tomando como referência o nível isotrópico, o diagrama de radiação real da antena da estação terrena de recepção cujo nível fora do feixe principal seja o mais elevado para cada dimensão de antena de estação terrena de recepção. Quando se usam simples repetidores-conversores de frequência a bordo da estação espacial, indicar igualmente, se essa informação estiver disponível, o diagrama que está associado a cada uma das estruturas de ruído equivalentes de ligação por satélite indicadas acima.

Ponto 7 Largura de faixa necessária.

Se essa informação estiver disponível, indicar, no caso de portadoras de faixa estreita, a largura de faixa necessária.

Ponto 8 Características de modulação.

Se essa informação estiver disponível, no caso de portadoras de televisão, indicar as características de dispersão da energia, tais como o desvio de frequência ponta a ponta (MHz) e a frequência de varrimento (kHz) da onda de dispersão.

([1]) Considerar-se-á que se trata de utilizações diferentes quando se usam tipos diferentes de portadora (pela sua densidade espectral máxima de potência ou de tipos diferentes de estações terrenas de recepção (pelo seu ganho de antena de recepção).

SECÇÃO E

Características a fornecer para as ligações espaço-espaço

Se a rede de satélite estiver ligada a uma ou várias outras redes de satélite por meio de ligações espaço-espaço, indicar:

a) A entidade da(s) rede(s) de satélite(s) à(s) qual(ais) está ligada a rede de satélite considerada;
b) As faixas de frequência de emissão e de recepção;
c) As classes de emissão;
d) As potências isotrópicas radiadas equivalentes (p. i. r. e.) nominais no eixo dos feixes de antena.

SECÇÃO F

Informações suplementares (se disponíveis)

Ponto 1 Generalidades.

Uma administração ou uma administração agindo em nome de um grupo de administrações, expressamente nomeadas, que o deseje poderá fornecer informações suplementares. Essas informações poderão servir para os cálculos de interferência relativos ao processo de publicação antecipada. Podem compreender todos ou parte dos dados indicados nos pontos seguintes, cuja lista não é limitativa, mas dão uma indicação do tipo de informações que podem ser dadas.

Ponto 2 Sentido Terra-espaço.

Para cada zona de serviço Terra-espaço, podem fornecer-se as informações seguintes:

a) Classe de emissão, largura de faixa necessária e características de modulação (inclusive, se for caso disso, a dispersão da energia) para cada tipo de portadora emitida;
b) P. i. r. e. da estação terrena para cada tipo de portadora associada a cada tipo e diâmetro de antena de estação terrena;
c) A descrição técnica e as características do sistema de telecomando (excepto para os dados de código).

Ponto 3 Sentido espaço-Terra.

Para cada zona de serviço espaço-Terra, podem fornecer-se as informações seguintes:

a) Classe de emissão, largura de faixa necessária e características de modulação (inclusive, se for caso disso, a dispersão da energia) para cada tipo de portadora;
b) Potência de emissão do satélite fornecida à antena de emissão desse satélite para cada tipo de portadora;
c) A descrição técnica e as características do sistema de emissões de seguimento e de telemedida (excepto para os dados de código).

Ponto 4 Qualquer outra informação que possa ser útil.

APÊNDICE 5

Informações a fornecer em conformidade com as disposições dos n.os 1682 a 1684

(V. o artigo 16)

Adjudicação inicial	Adjudicação adicional	Adjudicação de substituição (n.º 1721)

1. País ou zona de adjudicação.....

2.2.1. Frequência proposta ..... { Frequência portadora ... kHz. / Frequência consignada ... kHz.
2.2. Outra frequência proposta ..... { Frequência portadora ... kHz. / Frequência consignada ... kHz.
2.3. Frequência a substituir (n.º 1721) ..... { Frequência portadora ... kHz. / Frequência consignada ... kHz.

3.3.1. Zona de serviço principal ...
3.2. Comprimento máximo da ligação (em km)...
4. Natureza do serviço (por exemplo: CP, CO, CV ou OT) ...

5. Classe de emissão ...
6. Potência de ponta (em kW) ...
7. Características da antena de emissão (v. pormenores no apêndice 1):
7.1 Se se tratar de uma antena não direccional, inscrever o símbolo «ND» ...
7.2 Se se trata de uma antena direccional, indicar:

a) O azimute da radiação máxima ...
b) O ângulo de abertura do lóbulo principal ...
c) O ganho relativo da antena, em dB ...

8. Horário de utilização previsto da frequência proposta ... às ... h (UTC).
9. Indicar, se possível:

a) As horas de ponta do tráfego (estimativa) ... às ... h (UTC);
b) O volume diário do tráfego em minutos (estimativa) ...

10. Data prevista para a primeira utilização da via ... (mês) ... (ano).

APÊNDICE 6

Características adicionais para a classificação das emissões; determinação das larguras de faixa necessárias, exemplos de cálculo da largura de faixa necessária e exemplos conexos de designação das emissões

(V. o artigo 4)

PARTE A

Características adicionais para a classificação das emissões

O artigo 4 do presente Regulamento descreve, empregando três símbolos, as características fundamentais para a classificação das emissões. Para uma descrição mais pormenorizada das emissões convém recorrer a duas características adicionais facultativas.

Essas características adicionais facultativas (v., também, a Recomendação n.º 62) são as seguintes:

Quarto símbolo — pormenores relativos ao sinal (ou aos sinais);
Quinto símbolo — natureza da multiplexagem.

Se não se utilizar o quarto nem o quinto símbolos, convém mencionar esse facto por um traço colocado no lugar onde cada símbolo deveria figurar.

1. *Quarto símbolo* — pormenores relativos ao sinal (ou aos sinais):

1.1 Código bivalente com elementos de sinal que diferem quer em número quer em duração	A
1.2 Código bivalente, com elementos de sinal idênticos em número e em duração, sem correcção de erros	B
1.3 Código bivalente, com elementos de sinal idênticos em número e em duração, sem correcção de erros	C
1.4 Código quadrivalente, no qual cada estado representa um elemento de sinal (de um ou vários bits)	D
1.5 Código plurivalente, no qual cada estado representa um elemento de sinal (de um ou vários bits)	E
1.6 Código plurivalente, no qual cada estado ou combinação de estados representa um carácter	F
1.7 Som de qualidade radiofónica (monofónico)	G
1.8 Som de qualidade radiofónica (estereofónico ou quadrifónico)	H
1.9 Som de qualidade comercial (com exclusão das categorias indicadas em 1.10 e 1.11)	J
1.10 Som de qualidade comercial com emprego da inversão das frequências ou do corte da faixa	K
1.11 Som de qualidade comercial, com sinais separados modulados em frequência para comandar o nível do sinal desmodulado	L
1.12 Imagem em preto e branco	M
1.13 Imagem em cor	N
1.14 Combinação dos casos acima	W

2. 4 Multiplexagem por divisão no tempo ..... T
2. 5 Combinação da multiplexagem por divisão em frequência e da multiplexagem por divisão no tempo ..... W
2. 6 Outros tipos de multiplexagem X

PARTE B

Determinação das larguras de faixa necessárias, exemplos de cálculo da largura de faixa necessária e exemplos conexos de designação das emissões

Para designar completamente uma emissão é preciso acrescentar, imediatamente antes dos símbolos de classificação, a largura de faixa necessária, indicada por quatro carecteres. Quando utilizada, a largura de faixa necessária deve ser determinada por um dos métodos seguintes:

1) Utilização das fórmulas contidas no quadro seguinte, que contém igualmente exemplos de larguras de faixa necessárias e de designação das emissões correspondentes;
2) Cálculo baseado nos pareceres da CCIR (1);
3) Medida, nos casos não previstos nas alíneas 1) e 2) anteriores.

Contudo, a largura de faixa necessária assim determinada não é a única característica de uma emissão que convém tomar em consideração quando se trata de avaliar a interferência que essa emissão é susceptível de causar.

Na redacção do quadro foram utilizadas as seguintes notações:

B_m = Largura de faixa necessária, em hertzs;
B = Velocidade de modulação, em bauds;
N = Número máximo possível de elementos «pretos mais brancos» a transmitir por segundo no caso do fac-símile;
M = Frequência máxima de modulação, em hertzs;
C = Frequência da subportadora em hertzs;
D = Desvio de ponta, quer dizer, metade da diferença entre os valores máximo e mínimo da frequência instantânea. A frequência instantânea em hertzs obtém-se dividindo a velocidade de variação da fase, em radianos, por 2π;
t = Duração do impulso, em segundos, em meia amplitude;
t_c = Tempo de subida do impulso, em segundos, entre 10 % e 90 % de amplitude;
K = Factor numérico geral, que varia segundo a emissão e que depende da distorção admissível do sinal;
N_c = Número de vias na faixa de base nos sistemas radioeléctricos *multiplex* de várias vias;
f_p = Frequência da subportadora piloto de continuidade, em hertz (sinal contínuo utilizado para controlar a qualidade de funcionamento dos sistemas de multiplexagem por divisão em frequência).

Descrição da emissão	Largura de faixa necessária		Designação da emissão
	Fórmula	Exemplo de cálculo	
I. Nenhum sinal modular			
Onda persistente pura	—	—	Não
II. Modulação de amplitude			
1. Sinal contendo informação quantificada ou numérica			
Telegrafia por ondas persistentes, código Morse.	$B = BK$. $K = 5$ para as ligações afectadas de desvanecimento. $K = 3$ para as ligações sem desvanecimento.	25 palavras por minuto. $B = 20$, $K = 5$. Largura de faixa: 100 Hz	100HA1AAN
Telegrafia de manipulação por tudo ou nada de uma portadora modulada por uma frequência audível, código Morse.	$B = BK + 2M$. $K = 5$ para as ligações afectadas de desvanecimento. $K = 3$ para as ligações sem desvanecimento.	25 palavras por minuto. $B = 20$, $M = 100$. $K = 5$. Largura de faixa: 2100 Hz = 2,1 kHz ..	2K10A2AAN

(1) V., igualmente, a Recomendação n.º 63.

Descrição da emissão	Largura de faixa necessária		Designação da emissão
	Fórmula	Exemplo de cálculo	
Sinal de chamada selectiva com emprego de um código sequencial a uma única frequência, faixa lateral única, onda portadora completa.	$B_n = M$. $M = \frac{B}{2}$.	Frequência máxima do código: 2110 Hz. M = 2110. Largura de faixa: 2110 Hz = 2,11 kHz	2K11H2BFN
Telegrafia com impressão directa, com emprego de uma suportadora modulante por variação de frequência, correcção de erros, faixa lateral única, onda portadora suprimida (uma única via).	$B_n = 2M + 2DK$.	B = 50. D = 35 Hz (deslocamento 70 Hz). K = 1,2. Largura de faixa: 134 Hz	134HJ2BCN
Telegrafia harmónica multivia com correcção de erros, algumas vias são multiplexadas por divisão no tempo, faixa lateral única, onda portadora reduzida.	B_n = frequência central mais elevada + $M + DK$. $M = \frac{B}{2}$.	15 vias, frequência central mais elevada = 2805 Hz. B = 100. D = 42,5 Hz (deslocamento 85 Hz). K = 0,7. Largura de faixa: 2885 Hz = 2,885 kHz	2K89R7BCW

2. Telefonia (qualidade comercial)

Telefonia, dupla faixa lateral (uma única via.	$B_n = 2M$.	M = 3000. Largura de faixa: 6000 Hz = 6 kHz	6K00A3EJN
Telefonia, faixa lateral única, onda portadora completa (uma única via).	$B_n = M$.	M = 3000. Largura de faixa: 3000 Hz = 3 kHz	3K00H3EJN
Telefonia, faixa lateral única, onda portadora suprimida (uma única via).	$B_n = M$ — a mais baixa frequência de modulação.	M = 3000. Frequência de modulação mais baixa = 300 Hz. Largura de faixa: 2700 Hz = 2,7 kHz ..	2K70J3EJN
Telefonia com sinais distintos modelados em frequência para regular o nível do sinal vocal desmodulado, faixa lateral única, onda portadora reduzida (Lincompex) (uma única via).	$B_n = M$.	Frequência máxima de ajuste: 2990 Hz. M = 2990. Largura de faixa: 2990 Hz = 2,99 kHz	2K99R3ELN
Telefonia com dispositivo de segredo, faixa lateral única, onda portadora suprimida (duas vias ou mais).	$B_n = NM$ — a mais baixa frequência de modulação.	N = 2. M = 3000, a mais baixa frequência de modulação: 250 Hz. Largura de faixa: 5750 Hz = 5,75 kHz	5K75J8EKF
Telefonia, faixa lateral independente (duas via ou mais).	B_n = soma de M para cada faixa lateral.	2 vias. M = 3000. Largura de faixa: 6000 Hz = 6 kHz	6K00B8EJN

3. Radiodifusão sonora

Radiodifusão sonora, faixa lateral dupla.	$B_n = 2M$. M pode variar entre 4000 e 10 000, segundo a qualidade desejada.	Palavra e música, M = 4000. Largura de faixa: 8000 Hz = 8 kHz	8K00A3EGN
Radiodifusão sonora, faixa lateral única, onda portadora reduzida (uma única via).	$B_n = M$. M pode variar entre 4000 e 10 000, segundo a qualidade desejada.	Palavra e música, M = 4000. Largura de faixa: 4000 Hz = 4 kHz	4K00R3EGN
Radiodifusão sonora, faixa lateral única, onda portadora suprimida.	$B_n = M$ — a mais baixa frequência de modulação.	Palavra e música, M = 4500, a mais baixa frequência de modulação = 50 Hz. Largura de faixa: 4450 Hz = 4,45 kHz	4K45J3EGN

Descrição da emissão	Largura de faixa necessária		Designação da emissão
	Fórmula	Exemplo de cálculo	
4. Televisão			
Televisão, imagem e som.	Para as larguras de faixa comummente utilizadas para os sistemas de televisão, v. os documentos correspondentes da CCIR.	Número de linhas: 625. Largura de faixa vídeo nominal: 5 MHz. Portadora sonora em relação à portadora imagem: 5,5 MHz. Largura de faixa total para a imagem: 6,25 MHz ..... Largura de via de transmissão sonora modulada em frequência, incluindo as faixas de guarda: 750 kHz ..... Largura de faixa da via nas frequências radioeléctricas: 7 MHz.	6M25C3F – – 750KF3EGN
5. Fac-símile			
Fac-símile analógico por modulação em frequência da subportadora de uma emissão de faixa lateral única, onda portadora reduzida, preto e branco.	$B_n = C + \frac{N}{2} + DK.$ $K = 1,1.$ (Valor tipo.)	N = 1100, correspondente a um módulo de cooperação de 352 e a uma velocidade de rotação do ciclindro de 60 voltas por minuto. O módulo de cooperação é o produto do diâmetro do cilindro pelo número de linhas por unidade de comprimento. C = 1900, D = 400 Hz. Largura de faixa: 2890 Hz = 2,89 kHz	2H89R3CMN
Fac-símile analógico; modulação em frequência de uma subportadora audiofrequência modulando a portadora principal, faixa lateral única, onda portadora suprimida.	$B_n = 2M + 2DK.$ $M = \frac{N}{2}$ $K = 1,1.$ (Valor tipo.)	N = 1100. D = 400 Hz. Largura de faixa: 1980 Hz = 1,98 kHz	1K98J3C – –
6. Emissões compósitas			
Dupla faixa lateral, feixe hertziano de televisão.	$B_n = 2C + 2M + 2D.$	Frequências vídeo limitadas a 5 MHz, som na subportadora 6,5 MHz, modulada em frequência com desvio de 50 kHz: $C = 6,5 \times 10^6$; $D = 50 \times 10^3$ Hz; M = 15 000. Largura de faixa: 13,13 x 10^6 Hz = 13,13 MHz	13M1A8W – –
Dupla faixa lateral, feixe hertziano, multiplexagem por divisão em frequência.	$B_n = 2M.$	10 vias telefónicas, ocupando a faixa de base 1-164 kHz. M = 164 000. Largura de faixa: 328 000 Hz = 328 kHz	328KA8E – –
Dupla faixa lateral de VOR com telefonia (VOR = radiofarol de alinhamento equidireccional VHF).	$B_n = 2C_{mod} + 2M + 2DK.$ $K = 1.$ (Valor tipo.)	A portadora principal é modulada por: Uma subportadora de 30 Hz; Uma portadora resultante de uma tonalidade de 9960 Hz, modula em frequência por uma tonalidade de 30 Hz; Uma via telefónica; Uma tonalidade de 1020 Hz, manipulada para identificação contínua em morse. C_{mod} = 9960. M = 30. D = 480 Hz. Largura de faixa: 20 940 Hz = 20,94 kHz	20K9A9WWF

Descrição da emissão	Largura de faixa necessária		Designação da emissão
	Fórmula	Exemplo de cálculo	
Faixas laterais independentes; várias vias telegráficas com correcção de erros, assim como várias vias telefónicas com dispositivo de segredo; multiplexagem por divisão em frequência.	B_n = soma de M para cada faixa lateral.	Normalmente, os sistemas compósitos são explorados em conformidade com as disposições normalizadas das vias (por exemplo: parecer n.º 348-2 da CCIR). Para 3 vias telefónicas e 15 vias telegráficas a largura de faixa necessária é de 12 000 Hz = 12 kHz	12K0B9WWF

III-A. Modulação de frequência

1. Sinal contendo informação quantificada ou numérica

Telegrafia sem correcção de erros (uma única via).	$B_n = 2M + 2DK$. $M = \frac{B}{2}$. $K = 1,2$. (Valor tipo.)	$B = 100$. $D = 85$ Hz (deslocamento 170 Hz). Largura de faixa: 304 Hz	304HF1BBN
Telegrafia com impressão directa de faixa estreita, com correcção de erros (uma única via).	$B_n = 2M + 2DK$. $M = \frac{B}{2}$. $K = 1,2$. (Valor tipo.)	$B = 100$. $D = 85$ Hz (deslocamento 170 Hz). Largura de faixa: 304 Hz	304HF1BCN
Sinal de chamada selectiva.	$B_n = 2M + 2DK$. $M = \frac{B}{2}$. $K = 1,2$. (Valor tipo.)	$B = 100$. $D = 85$ Hz (deslocamento 170 Hz). Largura de faixa: 304 Hz	304HF1BCN
Telegrafia dúplex a quatro frequências.	$B_n = 2M + 2DK$. B = velocidade de modulação em bauds da via mais rápida. Se as vias forem sincronizadas: $M = \frac{B}{2}$ (se não o forem: $M = 2B$). $K = 1,1$. (Valor tipo.)	Espaçamento entre frequências adjacentes = 400 Hz. Vias sincronizadas: $B = 100$; $M = 50$; $D = 600$ Hz. Largura de faixa: 1420 Hz = 1,42 kHz	1K42F7BDX

2. Telefonia (qualidade comercial)

Telefonia comercial.	$B = 2M + 2DK$. $K = 1$. (Valor tipo, mas em determinadas condições podem ser necessários valores maiores de K.)	Caso médio de telefonia comercial. $D = 5000$ Hz. $M = 3000$. Largura de faixa: 16 000 Hz = 16 kHz	16K0F3EJN

3. Radiodifusão sonora

Radiodifusão sonora.	$B_n = 2M + 2DK$. $K = 1$. (Valor tipo.)	Monofónica. $D = 75\,000$ Hz. $M = 15\,000$. Largura de faixa: 180 000 Hz = 180 kHz	180KF3EGN

Descrição da emissão	Largura de faixa necessária		Designação da emissão
	Fórmula	Exemplo de cálculo	
4. Fac-símile			
Fac-símile por modulação directa em frequência da portadora; preto e branco.	$B_n = 2M + 2DK$. $M = \frac{N}{2}$. $K = 1,1$. (Valor tipo.)	N = 1100 elementos por segundo; D = 400 Hz. Largura de faixa: 1980 Hz = 1,98 kHz	1K98F1C--
Fac-símile analógico.	$B_n = 2M + 2DK$. $M = \frac{N}{2}$. $K = 1,1$. (Valor tipo.)	N = 1100 elementos por segundo; D = 400 Hz. Largura de faixa: 1980 = 1,98 kHz	1K98F3C--
5. Emissões compósitas (v. o quadro III-B)			
Feixe hertziano, multiplexagem por divisão em frequência.	$B_n = 2f_p + 2DK$. $K = 1$. (Valor tipo.)	60 vias telefónicas ocupando a faixa de base 60-300 kHz; desvio efectivo por via: 200 kHz; a frequência piloto de continuidade (331 kHz) dá lugar a um desvio efectivo da portadora principal de 100 kHz. $D = 200 \times 10^3 \times 3,76 \times 2,02 = 1,52 \times 10^6$ Hz. $f_p = 0,331 \times 106$ Hz. Largura de faixa : 3,702 × 106 Hz = 3,702 MHz	3M70F8EJF
Feixe hertziano, multiplexagem por divisão em frequência.	$B_n = 2M + 2DK$. $K = 1$. (Valor tipo.)	960 vias telefónicas ocupando a faixa de base 60-4028 kHz; desvio efectivo por via: 200 kHz; a frequência piloto de continuidade (4715 kHz) dá lugar a um desvio efectivo da portadora principal de 140 kHz. $D = 200 \times 10^3 \times 3,76 \times 5,5 = 4,13 \times 10^6$ Hz. $M = 4,028 \times 10^6$. $f_p = 4,715 \times 10^6$: $(2M + 2DK) > 2 f_p$. Largura de faixa: $16,32 \times 10^6$ Hz = 16,32 MHz	16M3F8EJF
Feixe hertziano, multiplexagem por divisão em frequência.	$B_n = 2f_p$.	600 vias telefónicas ocupando a faixa de base 60-2540 kHz; desvio efectivo por via: 200 kHz; a frequência piloto de continuidade (8500 kHz) dá lugar a um desvio efectivo da portadora principal de 140 kHz. $D = 200 \times 10^3 \times 3,76 \times 4,36 = 3,28 \times 10^6$ Hz. $M = 2,54 \times 10^6$. $K = 1$. $f_p = 8,5 \times 10^6$; $(2M + 2DK) < 2 f_p$. Largura de faixa: 17×10^6 Hz = 17 MHz.	17M0F8EJF
Radiodifusão sonora estereofónica com subportadora subsidiária de telefonia multiplexada.	$B_n = 2M + 2DK$. $K = 1$. (Valor tipo.)	Sistema com frequência piloto. M = 75 000. D = 75 000 Hz. Largura de faixa: 300 000 Hz = 300 kHz	300 KF8EHF

III-B. Factores de multiplicação a utilizar para calcular *D*, desvio de frequência de ponta, nas emissões multivias de modulação de frequência e multiplexagem por divisão em frequência (MF/MRF)

Para os sistemas MF/MRF, a largura de faixa necessária é:

$$B_n = 2M + 2DK$$

Calcula-se o valor de *D*, ou de desvio de frequência de ponta, nas fórmulas para B_n, multiplicando o valor efectivo de desvio por via pelo factor multiplicativo apropriado indicado abaixo.

No caso de uma onda piloto de continuidade de frequência f_p estar presente acima da frequência máxima de modulação *M*, a fórmula geral toma a seguinte forma:

$$B_n = 2f_p + 2DK$$

No caso de o índice de modulação da portadora principal produzido pela onda piloto ser inferior a 0,25 e de valor efectivo do desvio de frequência da portadora principal produzido pela onda piloto ser inferior ou igual a 70 % do valor efectivo do desvio por via, a fórmula geral é aquela das duas seguintes que dê o maior valor:

$$B_n = 2f_p \quad \text{ou} \quad B_n = 2M + 2DK$$

Número de vias telefónicas N_c	Factor multiplicativo (*a*)
	(Factor de ponta) × antilog $\left[\frac{\text{Valor de dB acima do nível de modulação de referência}}{20}\right]$
$3 < N_c < 12$	4,47 × antilog $\left[\frac{\text{Um valor em dB especificado pelo construtor do equipamento ou pelo explorador da estação, sob reserva da aprovação da administração}}{20}\right]$
$12 \leq N_c < 60$	3,76 × antilog $\left[\frac{2{,}6 - 2 \log N_c}{20}\right]$

(*a*) Neste quadro, os factores multiplicativos 3,76 e 4,47 correspondem, respectivamente, a factores de ponta de 11,5 dB e 13 dB.

Número de vias telefónicas N_c	Factor multiplicativo (*a*)
	(Factor de ponta) × antilog $\left[\frac{\text{Valor de dB acima do nível de modulação de referência}}{20}\right]$
$60 \leq N_c < 240$	3,76 × antilog $\left[\frac{-1 - 4 \log N_c}{20}\right]$
$N_c \geq 240$	3,76 × antilog $\left[\frac{-15 - 10 \log N_c}{20}\right]$

(*a*) Neste quadro, o factor multiplicativo 3,76 corresponde a um factor de ponta de 11,5 dB.

Descrição da emissão	Largura de faixa necessária		Designação da emissão
	Fórmula	Exemplo de cálculo	

IV. Modulação por impulsos

1. Radar

Emissão de impulsos não modulados.	$B_n = \frac{2k}{t}$. *K* depende da relação entre a duração do impulso e o tempo de subida do impulso. O seu valor situa-se geralmente entre 1 e 10 e em numerosos casos o seu valor não necessita de exceder 6.	Radar primário. Poder separador em distância: 150 m. $K = 1{,}5$ (impulso triangular em que $t = t_r$, sendo tomadas em consideração só as componentes mais fortes até 27 dB). Donde $t = \frac{2 \text{ (poder separador em distância)}}{\text{Velocidade da luz}} = \frac{2 \times 150}{3 \times 10^8} = 1 \times 10^{-6}$ segundo. Largura de faixa: 3×10^6 Hz = 3 MHz	3M00P0NAN

Descrição da emissão	Largura de faixa necessária		Designação da emissão
	Fórmula	Exemplo de cálculo	
2. Emissões compósitas			
Feixe hertziano.	$B_n = \frac{2k}{t}$ $K = 1,6$	Impulsos modulados em posição por uma faixa de base de 36 vias telefónicas. Duração do impulso em meia amplitude = 0,4 μs. Largura de faixa: 8×10^6 Hz = 8 MHz (Largura de faixa independente do número de vias telefónicas.)	8M00M7EJT

APÊNDICE 7

Quadro das tolerâncias de frequência dos emissores

(V. o artigo 5)

§ 1. A tolerância de frequência vem definida no artigo 1 e, salvo indicação contrária, exprime-se em milionésimas.

§ 2. A potência indicada para as diversas categorias de estações é, salvo indicação contrária, a potência de ponta dos emissores de faixa lateral única e a potência média para todos os outos emissores. O termo «potência de um emissor radioeléctrico» vem definido no artigo 1.

§ 3. Por razões técnicas ou de exploração certas categorias de estações podem necessitar tolerâncias mais apertadas do que as especificadas no quadro.

Faixas de frequência (limite inferior excluído, limite superior incluído) e categorias de estações	Tolerâncias aplicáveis até 1 de Janeiro de 1990 aos emissores actualmente em serviço e àqueles que foram instalados antes de 2 de Janeiro de 1985.	Tolerâncias aplicáveis aos novos emissores instalados depois de 1 de Janeiro de 1985 e a todos os emissores depois de 1 de Janeiro de 1990.
1	2	3
Faixa: de 9 kHz a 535 kHz		
1. *Estações fixas:*

Notas relativas ao quadro das tolerâncias de frequência dos emissores

(1) Para os emissores de estação costeira utilizados para a telegrafia com impressão directa ou para a transmissão de dados a tolerância é de 15 Hz.

(2) Para os emissores de estação costeira utilizados para a telegrafia com impressão directa ou para a transmissão de dados a tolerância é de 15 Hz. Esta tolerância é aplicável aos aparelhos instalados depois de 1 de Janeiro de 1976 e à totalidade dos aparelhos a partir de 1 de Janeiro de 1985. Para os aparelhos instalados antes de 2 de Janeiro de 1976, a tolerância é de 40 Hz.

(3) Para os emissores de estação de navio utilizados para a telegrafia com impressão directa ou para a transmissão de dados a tolerância é de 40 Hz. Esta tolerância é aplicável aos aparelhos instalados depois de 1 de Janeiro de 1976 e à totalidade dos aparelhos depois de 1 de Janeiro de 1985. Para os aparelhos instalados antes de 2 de Janeiro de 1976 esta tolerância é de 100 Hz (com desvio máximo de 40 Hz para curtos períodos, da ordem dos quinze minutos).

(4) Para os emissores de estações de navio utilizados para a telegrafia com impressão directa ou para a transmissão de dados a tolerância é de 40 Hz.

(5) Se o emissor de socorro servir de emissor de reserva para substituir, quando necessário, o emissor principal, é aplicável a tolerância prevista para os emissores das estações de navio.

(6) Nos países em que está em vigor o Acordo Regional de Radiodifusão da América do Norte (NARBA) poder-se-á continuar a aplicar a tolerância de 20 Hz.

(7) Para os emissores de radiotelefonia de faixa lateral única a tolerância é:

Nas faixas 1606,5 (1605 kHz, Região 2)-4000 kHz e 4-29,7 MHz, para potências de ponta de 200 W ou menos e 500 W ou menos, respectivamente: 50 Hz;

Nas faixas 1606,5 (1606 kHz, Região 2)-4000 kHz e 4-29,7 MHz, para potências de ponta superiores a 200 W e 500 W, respectivamente: 20 Hz;

(8) Para os emissores de radiotelegrafia com manipulação por variação de frequência a tolerância é de 10 Hz.

(9) Para os emissores de estações costeiras radiotelefónicas de faixa lateral única a tolerância é de 20 Hz.

(10) Para os emissores de faixa lateral única que funcionam nas faixas atribuídas em exclusivo ao serviço móvel aeronáutico (R) entre 1606,5 kHz (1605 kHz, Região 2) e 4000 kHz e entre 4 MHz e 29,7 MHz, a tolerância na frequência portadora (frequência de referência) é:

a) Para todas as estações aeronáuticas: 10 Hz;

b) Para todas as estações de aeronave que funcionam nos serviços internacionais: 20 Hz;
c) Para as estações de aeronave que funcionam exclusivamente em serviços nacionais: 50 Hz (*).

([11]) Para os emissores das estações radiotelefónicas de navio de faixa lateral única a tolerância é:

a) Nas faixas compreendidas entre 1606,5 kHz (1605 kHz, Região 2) e 4000 kHz:

100 Hz para os emissores em serviço ou instalados antes de 2 de Janeiro de 1982;
50 Hz para os emissores instalados depois de 1 de Janeiro de 1982, mas antes de 1 de Janeiro de 1985;

b) Nas faixas compreendidas entre 4000 KHz e 23 000 KHz:

100 Hz para os emissores em serviço instalados antes de 2 de Janeiro de 1978;
50 Hz para os emissores instalados após 1 de Janeiro de 1978. (V. igualmente o apêndice 17.)

([12]) Para os emissões de classe A1A a tolerância é de 50 milionésimas.
([13]) Para os emissores utilizados em radiotelefonia de faixa lateral única ou em radiotelegrafia com manipulação por variação de frequência a tolerância é de 40 Hz.
([14]) Para os emissores de radiobaliza na faixa 1606,5 (1605 kHz, Região 2)-1800 kHz a tolerância é de 50 milionésimas.
([15]) Para as emissões de classe A3E, de potência de portadora inferior ou igual a 10 kW, efectuadas nas faixas de 1606,5 (1605 kHz, Região 2)-4000 kHz e 4-29,7 MHz, a tolerância é, respectivamente, de 20 milionésimas e de 15 milionésimas.
([16]) Para os emissões de classe A1A a tolerância é de 10 milionésimas.
([17]) Nas faixas de frequências de trabalho em telegrafia morse de classe A1A pode ser aplicada aos emissores existentes uma tolerância de frequência de 200 milionésimas, sob reserva de que as emissões se mantenham no interior dessas faixas.
([18]) Nas faixas de frequências de chamada em telegrafia morse de classe A1A são recomendadas, na medida do possível, tolerâncias de frequência de 40 milionésimas nas faixas compreendidas entre 4 MHz e 23 MHz e de 30 milionésimas na faixa de 25 MHz.
([19]) Para os emissores de estações de navio de pequena tonelagem de potência de portadora igual ou inferior a 5 W, funcionando nas águas costeiras ou na vizinhança destas e utilizando emissões de classe A3E ou F3E e G3E na faixa 26 175-27 500 kHz, a tolerância é de 40 milionésimas.
([20]) A tolerância é de 50 Hz para os emissores de radiotelefonia de faixa lateral única, excepto para os emissores que funcionam na faixa 26 175-27 500 kHz cuja potência de ponte não ultrapasse 15 W. Para estes últimos, a tolerância de base aplicável é de 40 milionésimas.
([21]) Sugere-se que as administrações evitem diferenças de frequência portadora da ordem de alguns hertzes que causem degradações análogas às dos desvanecimentos periódicos. Convém, para esse efeito, que a tolerância de frequência seja de 0,1 Hz. Esta tolerância conviria igualmente para as emissões de faixa lateral única.
([22]) Para os equipamentos portáteis não montados em veículos e cuja potência média de emissão não exceda 5 W a tolerância é de 40 milionésimas.
([23]) Para os emissores de potência média inferior ou igual a 50 W que funcionam em frequências inferiores a 108 MHz é aplicável uma tolerância de 3000 Hz.
([24]) No caso de estações de radiodifusão (televisão):

De potência de ponta de imagem inferior ou igual a 50 W na faixa 29,7-100 MHz;
De potência de ponta de imagem inferior ou igual a 100 W na faixa 100-960 MHz,

e que recebam as suas emissões de outras estações de televisão ou que sirvam pequenas localidades isoladas, pode ser impossível, por razões de exploração, respeitar esta tolerância. Para estas estações a tolerância é de 2000 Hz. Para estações de potência de ponta de imagem inferior ou igual a 1 W esta tolerância pode ser de:

5 kHz na faixa 100-470 MHz;
10 kHz na faixa 470-960 MHz.

([25]) Para os emissores que utilizam o sistema M (NTSC) a tolerância é de 1000 Hz. Todavia, para os emissores de pequena potência que utilizam este sistema é aplicável a nota (24).
([26]) Para os sistemas de feixes hertzianos de vários saltos que empregam a conversão directa de frequência a tolerância é de 30 milionésimas.
([27]) Para os emissores de estação costeira e de estação de navio que funcionam na faixa 156-174 MHz e que entraram em serviço depois de 1 de Janeiro de 1973 a tolerância de frequência é de 10 milionésimas. Esta tolerância é aplicável a todos os emissores, incluindo os das estações de engenhos de salvamento, a partir de 1 de Janeiro de 1983.
([28]) Para um espaçamento entre vias de 50 kHz a tolerância é de 50 milionésimas.
([29]) Estas tolerâncias são aplicáveis para espaçamentos entre vias iguais ou superiores a 20 kHz.
([30]) Esta tolerância não é aplicável às estações de engenho de salvamento que funcionam na frequência de 243 MHz.
([31]) Para os emissores utilizados pelas estações de comunicações de bordo a tolerância de frequência é de 5 milionésimas.
([32]) Para os equipamentos portáteis não instalados em veículos e cuja potência média de emissão não exceda 5 W a tolerância é de 15 milionésimas.
([33]) Quando não estiverem consignadas frequências determinadas às estações de radar, a largura de faixa ocupada pelas suas emissões deve manter-se totalmente no interior da faixa atribuída a este serviço e não lhes é aplicável a tolerância mencionada.
([34]) Para os emissores que utilizam a multiplexagem por divisão no tempo, a tolerância de 300 milionésimas pode ser elevada para 500 milionésimas.
([35]) Esta tolerância aplica-se unicamente às emissões cuja largura de faixa necessária seja no máximo igual a 3000 kHz. Para as emissões cuja largura de faixa seja superior a 3000 kHz a tolerância é elevada para 300 milionésimas.
([36]) Ao aplicarem esta tolerância, convém que as administrações se refiram aos pareceres pertinentes mais recentes da CCIR.

APÊNDICE 8

Quadro dos níveis de potência máximos tolerados das radiações não essenciais

(V. o artigo 5)

1. O quadro seguinte indica os níveis máximos tolerados das radiações não essenciais em termos de nível de potência média de qualquer componente não essencial fornecida por um emissor à linha de alimentação da antena.

(*) Para obter a máxima inteligibilidade sugere-se às administrações que encoragem a redução desta tolerância a 20 Hz.

2. Nenhuma radiação não essencial proveniente de qualquer parte da instalação que não seja a antena e a sua linha de alimentação deve ter efeito superior ao que se produziria se este sistema radiante fosse alimentado com a potência máxima tolerada na frequência dessa radiação não essencial.

3. Todavia, esses níveis não se aplicam às radiobalizas de localização de sinistros, aos emissores de localização de urgência, aos emissores de socorro de navio, aos emissores de salva-vidas, ás estações de engenho de salvamento nem aos emissores de navio, quando sejam utilizados em caso de sinistro.

4. Por razões técnicas ou de exploração, certos serviços poderão ter necessidade de níveis mais estritos do que os especificados no quadro. Os níveis aplicáveis a esses serviços devem ser os que foram adoptados pela conferência administrativa mundial das radiocomunicações competente. Os níveis mais estritos podem ser igualmente fixados por acordo específico entre as administrações interessadas.

5. No caso das estações de radiodeterminação, enquanto se não dispuser de métodos de medida aceitáveis, convém que a potência das radiações não essenciais seja tão fraca quanto praticamente possível.

Faixas de frequências em que se situa a consignação (limite inferior excluído, limite superior incluído)	Para qualquer componente não essencial, a atenuação (potência média no interior da largura de faixa necessária em relação à potência média da componente não essencial considerada) deverá ter pelo menos o valor específico nas colunas A e B abaixo e os níveis absolutos de potência média dados não devem ser excedidos [nota (1)].	
	A	B
	Níveis aplicáveis até 1 de Janeiro de 1994 aos emissores actualmente em serviço e àqueles que forem instalados antes de 2 de Janeiro de 1985.	Níveis aplicáveis a qualquer emissor instalado a partir de 1 de Janeiro de 1985 e a todos os emissores a partir de 1 de Janeiro de 1994.
kHz a 30 MHz	40 dB 50 mW [Notas (2), (3) e (4)]	40 dB 50 mW [Notas (4), (7) e (8)]
30 MHz a 235 MHz:		
Potência média superior a 25 W	60 dB 1 mW [Nota (3)]	60 dB 1 mW [Nota (8)]
Potência média igual ou inferior a 25 W	40 dB 25 μW [Notas (3) e (6)]	40 dB 25 μW
235 MHz a 960 MHz:	Não é indicado qualquer nível para os emissores que funcionam em frequências consignadas superiores a 235 MHz. Para esses emissores, a potência das radiações não essenciais deverá ser tão fraca quanto possível na prática.	
Potência média superior a 25 W		60 dB 20 mW [Notas (10) e (11)]
Potência média igual ou inferior a 25 W		40 dB 25 μW [Notas (10) e (11)]
960 MHz a 17,7 GHz:		
Potência média superior a 25 W		50 dB 100 mW [Nota (10), (11), (12) e (13)]
Potência média igual ou inferior a 25 W		100 μW [Nota (10), (11), (12) e (13)]
Acima de 17,7 GHz		Tendo em conta a natureza diversa das técnicas aplicadas pelos serviços que funcionam acima de 17,7 GHz, é necessário que a CCIR continue os seus trabalhos antes de se especificarem os níveis. Na medida do possível, os valores que se deverá respeitar serão aqueles que indicarem os pareceres pertinentes da CCIR e enquanto não forem elaborados esses pareceres aplicar-se-ão os valores mais fracos que seja possível obter (v. a Recomendação n.º 66).

Notas relativas ao quadro dos níveis de potência máximos tolerados das radiações não essenciais

(1) Para adquirir a certeza de que as disposições do quadro estão a ser aplicadas, dever-se-á verificar se a largura das faixas do aparelho de medida é bastante grande para cobrir todas as componentes significativas da radiação não essencial em causa.

(2) Para os emissores cuja potência média é superior a 50 kW e que funcionam abaixo de 30 MHz numa faixa de frequência de cerca de uma oitava ou mais não é obrigatória uma redução para menos de 50 mW. Todavia, deverá ser obtida uma atenuação de 60 dB, no mínimo, e procurar-se-á atingir o nível de 50 mW.

(3) Para os aparelhos portáteis cuja potência média é inferior a 5 W e que funcionam abaixo de 30 MHz, a atenuação deve ser de, pelo menos, 30 dB. Contudo, procurar-se-á atingir a atenuação de 40 dB.

(4) Para os emissores móveis que funcionam abaixo de 30 MHz, qualquer componente não essencial deve ter uma atenuação de, pelo menos, 40 dB, sem exceder o valor de 200 mW. Contudo, sempre que praticável, procurar-se-á atingir o nível de 50 mW.

(5) Para os aparelhos de radiotelefonia de modulação de frequência do serviço móvel marítimo que funcionam acima de 30 MHz, a potência média de qualquer radiação não essencial devida a produtos de modulação em qualquer outra via do serviço móvel marítimo internacional não deve exceder um nível de 10 μW e a potência média de qualquer outra radiação não essencial em qualquer frequência discreta da faixa do serviço móvel marítimo internacional não deve exceder um nível de 2,5 μW. Nos casos excepcionais em que se utilizem emissores de mais de 20 W de potência média, poderão aumentar-se estes últimos níveis proporcionalmente à potência média do emissor.

(6) Para os emissores cuja potência média é inferior a 100 mW não é obrigatório atingir o nível de acentuação de 40 dB, desde que o nível da potência média não exceda 10 μW.

(7) Para os emissores cuja potência média é superior a 50 kW e que podem funcionar em várias frequências cobrindo uma faixa de frequência de cerca de uma oitava ou o mais não é obrigatória uma redução para menos de 50 mW. Contudo, deverá ser obtida uma atenuação mínima de 60 dB.

(8) Para os aparelhos portáteis cuja potência média é inferior a 5 W a atenuação deverá ser de 30 dB. Todavia, sempre que isso seja praticável. procurar-se-á atingir a atenuação de 40 dB.

(9) As administrações podem adoptar um nível de 10 mW, com condição de evitarem qualquer interferência prejudicial.

(10) Quando diversos emissores utilizem uma antena comum ou antenas muito pouco espaçadas em frequências vizinhas, procurar-se-á, sempre que isso seja praticável, atingir os níveis especificados.

(11) Visto que pode acontecer que estes níveis não assegurem protecção suficiente às estações de recepção do serviço de radioastrononia e dos serviços espaciais, poder-se-ia considerar, em cada caso específico, níveis mais estritos, tendo em conta a situação geográfica das estações interessadas.

(12) Estes níveis não se aplicam aos sistemas que utilizam as técnicas de modulação digital, mas podem servir de guia. Para os valores aplicáveis a esses sistemas, poderão observar-se os pareceres pertinentes da CCIR, quando houver (v. a Recomendação n.º 66).

(13) Estes níveis não se aplicam às estações dos serviços espaciais, mas convém que os níveis de radiações não essenciais dessas estações sejam reduzidos aos valores mais fracos possíveis compatíveis com os condicionamentos técnicos e económicos impostos ao material. Para valores aplicáveis a esses sistemas, poderão observar-se os pareceres pertinentes da CCIR, quando os houver (v. a Recomendação n.º 66).

APÊNDICE 9

Documentos de serviço (1)

(V. os artigos 10, 12, 13, 17 e 26)

LISTA I

Lista Internacional das Frequências

A IFRB estabelece e mantém em dia os títulos das colunas da Lista Internacional das Frequências de modo a respeitar a totalidade das disposições regulamentares dos apêndices 1 e 3, assim como as decisões pertinentes de futuras conferências. Por outro lado, a IFRB introduzirá na referida lista as melhorias necessárias sob o ponto de vista da apresentação, sem modificar seja de que maneira for os dados fundamentais especificados no Regulamento das Radiocomunicações.

LISTA II

Nomenclatura das estações fixas que asseguram ligações internacionais

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação da emissão	Indicativo de chamada (sinal de identificação)	Frequência consignada (kHz ou MHz)	Localidade(s) ou zona(s) com que a(s) comunicação(ões) é (são) estabelecida(s)	Observações
1	2	3	4	5

(1) A forma destes documentos pode ser modificada se a situação o exigir.

LISTA IV

Nomenclatura das estações costeiras

PARTE I

Quadros de interesse geral ou particular

PARTE II

Índice alfabético das estações costeiras

Nome da estação	V. parte III, p. ...	Nome da estação	V. parte III, p.	Nome da estação	V. parte III, p. ...

PARTE III

Estados sinaléticos das estações costeiras

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação (1)	Indicativo de chamada (2) e (3)	Emissão			Serviço			Taxas (4) e (5)	Coordenadas geográficas da antena de emissão (longitude e latitude, em graus, minutos e segundos).	Observações (6) e (7)
		Frequência (kHz ou MHz)		Classe	Potência (kW) (8)	Natureza (9) e (8)	Horas de abertura (UTC)			
1	2	3a (8)	3b (8)	4	5	6	7	8	9	10

(1) Para cada país indica-se a ou as estações costeiras para as quais é necessário dirigir os radiotelegramas destinados a ser transmitidos em ondas decamétricas com destino aos navios.

(2) Indicar se a estação tem uma identidade no serviço móvel marítimo.

(3) O indicativo de chamada da estação é seguido, se for caso disso, entre parêntesis, da identidade do serviço móvel marítimo ou do número ou do sinal de chamada selectiva que a estação utiliza.

(4) Frequência de emissão. A frequência normal de trabalho é impressa em normando.

(5) Frequência ou vias de escuta e ou de recepção.

(6) No caso de antenas direccionais, convém mencionar, por baixo da indicação da potência, o azimute da direcção ou das direcções do ganho máximo, em graus, a partir do norte verdadeiro, no sentido do movimento dos ponteiros do relógio.

(7) Indicar se a estação utiliza um sistema de chamada selectiva e precisar o sistema utilizado.

(8) Indicar se a estação utiliza um sistema de telegrafia com impressão directa de faixa estreita.

(9) A taxa de linha telegráfica do país de que depende a estação costeira e a taxa aplicada por este país aos telegramas com destino aos países limítrofes são indicados na parte IV da Nomenclatura das estações costeiras.

(10) Se as contas das taxas forem liquidadas por uma exploração particular, convém indicar, se necessário, o nome e o endereço dessa exploração particular.

(11) Indicar se a estação assegura um serviço de radiodetecção.

(12) Convém que a Nomenclatura contenha as informações relativas às horas de emissão das listas de chamadas, bem como as horas de escuta da estação nas diversas frequências, etc. As estações costeiras ou as estações costeiras terrenas abertas à correspondência pública e que asseguram um serviço de emissão e de recepção de radiotelegramas por radiotelefonia são indicadas na Nomenclatura das estações costeiras.

PARTE IV

Taxas telegráficas internas, limítrofes, etc.

LISTA V

Nomenclatura das estações de navio

Estados sinaléticos das estações de navio

As informações relativas a estas estações são publicadas como se indica a seguir:

Nome do navio	Indicativo de chamada	País	Instalações auxiliares	Classe do navio	Natureza do serviço	Horas de abertura	Taxas das frequências de emissão em telegrafia	Taxas das frequências de emissão em telefonia	Taxa de bordo por palavra aplicável aos radiotelegramas.	Taxa de bordo aplicável a uma conversação radiotelefónica de três minutos.	Observações
1	2	3	4	5	6	7	8	9	10	11	12

Coluna 1 — as estações são classificadas por ordem alfabética dos nomes de navio, sem consideração de nacionalidade. No caso de homonímia, o nome do navio é seguido do indicativo de chamada, sendo o nome e o indicativo separados por um traço de fracção.

Coluna 2 — indicativo de chamada. Esta coluna contém igualmente, se for caso disso, a identidade no serviço móvel marítimo ou o número ou sinal de chamada selectiva.

Coluna 3 — país de que depende a estação (indicação por meio de símbolo apropriado).

Coluna 4 — instalações auxiliares, incluindo informações relativas:

a) Ao número das embarcações de salvamento munidas de aparelhos radioeléctricos instalados a bordo;

b) Ao tipo e ao número das radiobalizas de localização de sinistros (facultativo), sendo a frequência utilizada designada por uma das letras seguintes:

A= 2182 kHz;
B= 121, 5 MHz;
C= 243 MHz.

Um algarismo a seguir à letra indica o número das radiobalizas e a letra «X» substitui esse algarismo quando o mesmo não tenha sido indicado.

Colunas 5 a 7 — em forma de anotações de serviço (v. o apêndice 10). Além disso, a lista dos símbolos utilizados na coluna 5 para designar a classe do navio figura no prefácio da Nomenclatura.

Colunas 8 e 9 — indicação das faixas de frequências e das classes de emissão empregando os símbolos seguintes:

Radiotelegrafia	*Radiotelefonia*
W = 100-150 kHz	T = 1605-4000 kHz
X = 405-535 kHz	U = 4000-27 500 kHz
Y = 1605-3800 kHz	V = 156-174 MHz
Z = 4000-27 5000 kHz	

Estes símbolos são, se necessário, seguidos de notas sucintas, no fim da nomenclatura, que contenham informações de natureza especial e a indicação das frequências para que os emissores estão regulados.

Coluna 10 — taxa de bordo de base aplicável por palavras aos radiotelegramas (1).

Coluna 11 — taxa mínima para uma conversação radiotelefónica de três minutos (1). As informações que figuram nas colunas 10 e 11 são seguidas de uma chamada para designar a administração ou a exploração particular a que se devem enviar as contas das taxas. Em caso de mudança de endereço do explorador, uma segunda chamada depois da taxa indicará o novo endereço e a data a partir da qual entrará em vigor essa alteração.

Coluna 12 — quando várias estações de navio da mesma nacionalidade tiverem o mesmo nome ou quando as contas das taxas devam ser dirigidas directamente ao proprietário do navio, menciona-se nesta coluna o nome da companhia de navegação ou de o armador a que pertence o navio.

Além disso, no caso de falta de espaço na coluna apropriada, podem figurar na coluna 12, por meio de uma chamada, informações suplementares relativas à coluna de 1 a 11. Esta coluna pode conter várias linhas.

Indicar se está prevista a identidade no serviço móvel marítimo.

Indicar se a estação utiliza um sistema de chamada selectiva e precisar o sistema utilizado.

Indicar se a estação utiliza um sistema de telegrafia com impressão directa de faixa estreita.

LISTA VI

Nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais

(Para a navegação, convém utilizar a presente nomenclatura com precaução. V. o artigo 35 do Regulamento das Radiocomunicações.)

PARTE A

Índice alfabético das estações

Nome da estação	Indicativo de chamada	Natureza do serviço	V. parte B, p. ...
1	2	3	4

(1) Estas taxas são fixadas ou aprovadas por cada administração.

PARTE B

Estados sinaléticos das estações

1. Estações radiogoniométricas

Nomes dos países por ordem alfabética das abreviaturas

Nome das estações por ordem alfabética

Nome da estação	Coordenadas geográfics (longitude e latitude, em graus, minutos e segundos): *a*) Da antena de recepção da estação goniométrica; *b*) Da antena de emissão da estação goniométrica; *c*) Da antena do emissor da estação visada na coluna 8.	Indicativo de chamada	Frequências (kHz ou MHz) e classes de emissões			Potência (em kW)	Nome e indicativo de chamada da estação com que deve ser estabelecida comunicação, se a estação goniométrica estiver dotada de emissor.	Taxas	Observações: *a*) Sectores de azimutes normalmente mais seguros e chamadas às publicações nacionais ou internacionais diferentes da presente nomenclatura; *b*) Horas de abertura (UTC), etc.
			Para chamar a estação goniométrica	Para transmitir à estação goniométrica os sinais necessários para que elas tome os azimutes.	Para a transmissão dos azimutes pela estação goniométrica				
1	2	3	4	5	6	7	8	9	10

2. Estações de radiofarol

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Coordenadas geográficas da antena de emissão do radiofarol (longitude e latitude, em graus, minutos e segundos)	Sinal característico do radiofarol	Indicativo de chamada do radiofarol, se existir	Emissão			Alcance normal (em milhas marítimas)	Nome e indicativo de chamada da estação a que se pode pedir uma emissão do radiofarol	Frequência a utilizar para chamar a estação mencionada na coluna 9 (em kHz ou MHz)	Observações: *a*) Sectores de azimutes normalmente mais seguros e chamadas às publicações nacionais ou internacionais diferentes da presente nomenclatura; *b*) Horas de abertura (UTC); *c*) Descrição da emissão; *d*) Taxas, etc.
				Frequência (em kHz ou MHz)	Classe	Frequência de modulação, se existir (em Hz)				
1	2	3	4	5	6	7	8	9	10	11

3. Navios — Estações oceânicas

Regiões oceânicas por ordem alfabética

Nome das estações por ordem alfabética

Nome da estação	Posição geográfica consignada à estação	Indicativo de chamada do navio-estação	Frequência para chamar a estação (em kHz ou MHz)	Radiofarol					Radiogoniometria			Observações: *a*) *Chamadas para publicações nacionais* ou internacionais diferentes da presente nomenclatura; *b*) Horas de abertura (UTC); *c*) Descrição da emissão de radiofarol.
				Sinal característico	Frequência de emissão (em kHz ou MHz)	Classe de emissão	Frequência de modulação, se existir (em Hz)	Alcance normal (em milhas marítimas)	Frequência de emissão dos sinais necessários para que a estação tome azimutes (em kHz ou MHz)	Frequência utilizada pela estação para a transmissão dos azimutes (em kHz ou MHz)	Potência do emissor (em kW)	
1	2	3	4	5	6	7	8	9	10	11	12	13

4. Estações que emitem sinais para a calibração dos goniómetros

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Coordenadas geográficas da antena de emissão (longitude e latitude, em graus, minutos e segundos)	Sinal característico do radiofarol	Indicativo de chamada do radiofarol, se existir	Emissão			Alcance normal (em milhas marítimas)	Nome e indicativo de chamada da estação a que se pode pedir uma emissão	Frequência a utilizar para chamar a estação mencionada na coluna 9 (em kHz ou MHz)	Observações: a) Sectores normalmente mais seguros e chamadas para publicações nacionais ou internacionais diferentes da presente nomenclatura; b) Horas de abertura (UTC); c) Descrição da emissão; d) Taxas, etc.
				Frequência (em kHz ou MHz)	Classe	Frequência de modulação, se existir (em Hz)				
1	2	3	4	5	6	7	8	9	10	11

5. Estações que emitem frequências padrão e sinais horários

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Indicativo de chamada	Frequências (em kHz ou MHz)	Classe de emissão	Horas de emissão (UTC)	Método (*a*)
1	2	3	4	5	6

(*a*) Instruções gerais relativas aos sinais horários.

7. Estações que emitem boletins meteorológicos regulares

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Indicativo de chamada	Frequências (em kHz ou MHz)	Classe de emissão	Horas de emissão (UTC)	Método (*a*)
1	2	3	4	5	6

(*a*) Instruções gerais relativas aos boletins meteorológicos, incluindo o código empregado.

8. Estações que emitem avisos à navegação

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Indicativo de chamada	Frequências (em kHz ou MHz)	Classe de emissão	Horas de emissão (UTC)	Observações
1	2	3	4	5	6

9. Estações que emitem pareceres médicos

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Indicativo de chamada	Frequências (em kHz ou MHz)	Classe de emissão	Horas de emissão (UTC)	Observações
1	2	3	4	5	6

10. Estações que emitem boletins epidemiológicos

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Indicativo de chamada	Frequência (em kHz o MHz)	Classe de emissão	Horas de emissão (UTIC)	Observações
1	2	3	4	5	6

11. Estações que emitem ursigramas

Nomes dos países por ordem alfabética das abreviaturas

Nomes das estações por ordem alfabética

Nome da estação	Indicativo de chamada	Frequência (em kHz o MHz)	Classe de emissão	Horas de emissão (UTIC)	Observações e natureza das informações
1	2	3	4	5	6

12. Estações terrenas fixas do serviço de radionavegação marítima por satélite

Nomes dos países notificadores por ordem alfabética dos símbolos que designam os países

Nomes das estações por ordem alfabética

Nome pelo qual a estação é designada	Coordenadas geográficas (em graus e minutos) da localização da estação	Emissão de informações de radionavegação			Recepção de informações de radionavegação		Identidade da (ou das) estação(ões) especial(ais) associada(s)	Administração ou companhia exploradora	Observações: Métodos especiais de modulação, taxas, etc.
		Frequência (em MHz ou GHz)	Classe de emissão, largura de faixa necessária e natureza da transmissão	Potência (em kW)	Frequência (em MHz ou GHz)	Classe de emissão, largura de faixa necessária e natureza da transmissão			
1	2	3a	3b	3c	4a	4b	5	6	7

13. Estações espaciais do serviço de radionavegação marítima por satélite

Nomes dos países notificados por ordem alfabética dos símbolos que designam os países

Nomes das estações por ordem alfabética

Identidade da estação	Emissão de informações de radionavegação destinadas aos navios			Recepção de informações de radionavegação provenientes dos navios		Zona(s) de serviço na Terra	Nome da localidade e do país onde está (estão) situada(s) a(s) estação(ões) terrena(s) fixa(s) associada(s)	Administração ou companhia exploradora	Observações: Informações relativas à órbita, disposições especiais dos canais, métodos especiais de modulação, taxas, etc.
	Frequência (em MHz ou GHz)	Classe de emissão, largura de faixa necessária e natureza da transmissão	Potência (em watts)	Frequência (em MHz ou GHz)	Classe de emissão, largura de faixa necessária e natureza da transmissão				
1	2a	2b	2c	3a	3b	4	5	6	7

Nota. — O secretário-geral, se julgar necessário, introduzirá nesta nomenclatura secções suplementares relativas a novos sistemas, à medida que o seu emprego se for alargando.

LISTA VIII

Nomenclatura das estações de fiscalização internacional das emissões

(V. o artigo 20)

Nota. — Nesta lista as estações designadas pelas administrações como susceptíveis de participarem no sistema de fiscalização internacional das emissões levam a indicação SCIE.

PARTE I

Organismos centralizadores

Nomes dos países, por ordem alfabética das abreviaturas.

Organismo centralizador nacional (endereços postal e telegráfico, número de telefone e quaisquer outras informações).

PARTE II

Fiscalização das emissões das estações dos serviços de radiocomunicação de Terra

A) Estados sinaléticos das estações de fiscalização que efectuam medidas de frequência

Nomes dos países, por ordem alfabética das abreviaturas.
Nomes das estações, por ordem alfabética.

Nome e coordenadas geográficas da estação (longitude e latitude, em graus e minutos).
Horas de serviço (UTC).
Faixas de frequências mensuráveis (em kHz, MHz e GHz).
Precisas das medidas (1).
Observações.

B) Estados sinaléticos das estações de fiscalização que efectuam medidas de intensidade de campo ou de densidade de fluxo de potência

Nomes dos países, por ordem alfabética das abreviaturas.
Nomes das estações, por ordem alfabética.

Nome e coordenadas geográficas da estação (longitude e latitude, em graus e minutos).
Horas de serviço (UTC).
Faixas de frequências (em kHz, MHz e GHz).
Valores máximo e mínimo das intensidades de campo ou das densidades de fluxo de potência mensuráveis.
Precisão das medidas, em decibéis (1).
Observações.

C) Estados sinaléticos das estações de fiscalização que efectuam medidas radiogoniométricas

Nomes dos países, por ordem alfabética das abreviaturas.
Nomes das estações, por ordem alfabética.

Nome e coordenadas geográficas da estação (longitude, em graus, minutos e segundos).
Horas de serviço (UTC).
Faixas de frequências (em kHz, MHz e GHz).
Tipos de antena utilizadas.
Observações.

D) Estados sinaléticos das estações de fiscalização que efectuam medidas de largura de faixa

Nomes dos países, por ordem alfabética das abreviaturas.
Nomes das estações, por ordem alfabética.

Nome e coordenadas geográficas da estação (longitude e latitude, em graus e minutos).
Horas de serviço (UTC).
Faixas de frequências (em kHz, MHz e GHz).
Método(s) de medida (2).
Poder separador a — 60 dB (se apropriado).
Observações.

---

(1) Indicar o máximo de precisão que se pode atingir em cada faixa de frequências.
(2) V. os pareceres e relatórios pertinentes da CCIR.

E) Estados sinaléticos das estações de fiscalização que efectuam registos automáticos do grau de ocupação do espectro

Nomes dos países, por ordem alfabética das abreviaturas.
Nomes das estações, por ordem alfabética.

Nome e coordenadas geográficas da estação (longitude e latitude, em graus e minutos).
Horas de serviço (UTC).
Gama de frequências (em kilohertzes, megahertzes ou gigahertzes).
Método(s) utilizado(s).
Observações.

PARTE III

Fiscalização das emissões de estações dos serviços de radiocomunicação espacial

Estados sinaléticos das estações de fiscalização que efectuam medidas referentes às estações dos serviços de radiocomunicação espacial

Nomes dos países, por ordem alfabética das abreviaturas.
Nomes das estações, por ordem alfabética.

Nome e coordenadas geográficas da estação (longitude e latitude, em graus, minutos e segundos).
Horas de serviço (UTC).
Informações sobre as antenas utilizadas (por exemplo: diâmetros ou ganho em função da frequência; se apropriado, velocidade de exploração, etc.).
Gama dos ângulos azimutais e de elevação.
Precisão máxima que se pode atingir na determinação das posições orbitais das estações espaciais.
Informações sobre o sistema de polarização.
Temperatura de ruído do sistema.
Faixas de frequências, com indicação do máximo de precisão de medida de frequência que se pode atingir em cada faixa.
Faixas de frequências em que é possível medir a intensidade de campo ou a densidade de fluxo de potência.
Valor mínimo mensurável da intensidade de campo ou da densidade de fluxo de potência, com indicação da precisão de medida que se pode atingir.
Informações disponíveis para a medida da largura de faixa (1).
Informações disponíveis para a medida da ocupação do espectro.
Informações disponíveis para a medida da ocupação da órbita.
Observações.

LISTA VIII-A

Nomenclatura das estações dos serviços de radiocomunicação espacial e do serviço de radioastronomia

A Comissão estabelece e mantém em dia o conteúdo desta lista, agrupando as suas rubricas de modo que as administrações possam identificar mais facilmente todas as estações pertencentes a uma dada rede de satélite. Além disso, a Comissão introduz as melhorias necessárias à apresentação da lista, sem modificar seja de que maneira for os dados fundamentais especificados no Regulamento das Radiocomunicações.

APÊNDICE 10

Notações utilizadas nos documentos de serviço

(V. o artigo 26 e o apêndice 9)

■	Estação classificada como situada numa região de tráfego intenso (v. o artigo 60) («TI») (2).
O	De dia («HJ») (2).
•	De noite («HN») (2).
[ ]	Navio provido de embarcações de salvamento equipadas com aparelhos radioeléctricos instalados a bordo; o número entre parênteses rectos indica a quantidade dessas embarcações de salvamento («S») (2).
AL	Estação terrestre de radionavegação aeronáutica.
AM	Estação móvel de radionavegação aeronáutica.

(1) V. os pareceres e relatórios pertinentes da CCIR.
(2) O símbolo entre parêntesis pode ser utilizado nas notificações, bem com nos documentos de serviço.

AT	Estação de amador.
AX	Estação fixa aeronáutica.
BC	Estação de radiodifusão sonora.
BT	Estação de radiodifusão, televisão.
C	Exploração contínua durante o período indicado.
CA	Navio de carga.
CO	Estação aberta exclusivamente à correspondência oficial.
CP	Estação aberta à correspondência pública.
CR	Estação aberta à correspondência pública restrita.
CV	Estação aberta exclusivamente à correspondência de uma empresa particular.
D30°	Antena cuja direcção de radiação máxima é 30° (direcção expressa em graus a partir do norte verdadeiro, de 0° a 360°, no sentido do movimento dos ponteiros do relógio).
DR	Antena direccional provida de um reflector.
EA	Estação espacial do serviço de amador por satélite.
EB	Estação espacial do serviço de radiodifusão por satélite (radiodifusão sonora).
EC	Estação espacial do serviço fixo por satélite.
ED	Estação espacial de telecomando espacial.
EG	Estação espacial do serviço móvel marítimo por satélite.
EH	Estação espacial de pesquisa espacial.
EK	Estação espacial de perseguição espacial.
EM	Estação espacial de satélite de meteorologia.
EN	Estação espacial de satélite de radionavegação.
ER	Estação espacial de telemedida espacial.
EV	Estação espacial do serviço de radiodifusão por satélite (televisão).
EX	Estação experimental.
FA	Estação aeronáutica.
FB	Estação de base.
FC	Estação costeira.
FL	Estação terrestre.
FP	Estação das operações portuárias.
FR	Estação exclusivamente receptora, ligada à rede geral das vias de telecomunicação.
FS	Estação terrestre instalada apenas para a segurança da vida humana.
FX	Estação fixa.
GS	Estação a bordo de um navio de guerra ou de uma aeronave do Exército ou da Marinha.
H	Exploração segundo um horário determinado.
H8	Serviço de 8 horas efectuado por uma estação de navio da III categoria.
H16	Serviço de 16 horas efectuado por uma estação de navio da II categoria.
H24	Exploração contínua de dia e de noite.
HJ	Serviço de dia.
HN	Serviço de noite.
HT	Exploração durante os períodos de transição entre o dia e a noite.
HX	Exploração intermitente de dia e de noite ou estação sem horas de serviço determinadas.
I	Exploração intermitente durante o período indicado.
LR	Estação terrestre de radiolocalização.
MA	Estação de aeronave.
ME	Estação espacial.
ML	Estação móvel terrestre.
MO	Estação móvel.
MR	Estação móvel de radiolocalização.
MS	Estação de navio.
ND	Antena não direccional.
NL	Estação terrestre de radionavegação marítima.
OD	Estação de transmissão de dados oceanográficos.
OE	Estação que interroga estações de transmissão de dados oceanográficos.
OT	Estação que escoa exclusivamente o tráfego de serviço do serviço interessado.
PA	Navio de passageiros.
RA	Estação de radioastronomia.
RC	Radiofarol não direccional.
RD	Radiofarol direccional.
RG	Estação radiogoniométrica marítima.
RM	Estação móvel de radionavegação marítima.
RT	Radiofarol rotativo.
SM	Estação do serviço dos auxiliares da meteorologia.
SS	Estação que emite frequências padrão e sinais horários.
TA	Estação terrena de exploração espacial do serviço de amador por satélite.
TC	Estação terrena do serviço fixo por satélite.
TD	Estação terrena de telecomando espacial.

TE Estação terrena de emissão.
TF Estação terrena fixa do serviço de radiodeterminação por satélite.
TG Estação terrena móvel do serviço móvel marítimo por satélite.
TH Estação terrena do serviço de pesquisa espacial.
TI Estação terrena do serviço móvel marítimo por satélite situada num ponto fixo determinado.
TK Estação terrena de perseguição espacial.
TL Estação terrena de móvel do serviço de radiodeterminação por satélite.
TM Estação terrena do serviço de meteorologia por satélite.
TMG Tempo médio de Greenwich.
TN Estação terrena do serviço de radionavegação por satélite.
TP Estação terrena de recepção.
TR Estação terrena de telemedida espacial.
TS Via som (televisão).
TT Estação terrena do serviço de exploração espacial.
TV Via imagem (televisão).
UTC Tempo universal coordenado.

(Os símbolos podem ser modificados segundo as necessidades.)

APÊNDICE 11

Documentos de que devem estar providas as estações de navio e as estações de aeronave

(V. os artigos 24, 26, 44, 46, 49, 55, 57 e 59 e o apêndice 9)

SECÇÃO I

Estações de navio obrigatoriamente providas de uma instalação radiotelegráfica em virtude de um acordo internacional

Estas estações devem estar providas:

1) Da licença previstas no artigo 24;
2) Do certificado de cada operador;
3) Do registo (diário do serviço radioeléctico) em que se anotam, no momento em que se efectuam e com indicação da hora:
   a) Na sua totalidade, todas as comunicações relativas ao tráfego de perigo;
   b) As comunicações de urgência e de segurança;
   c) A escuta assegurada na frequência internacional de perigo durante os períodos de silêncio;
   d) As comunicações entre a estação do navio e as estações terrestres ou móveis;
   e) Os incidentes de serviço de qualquer natureza;
   f) Se o regulamento de bordo o permitir, a posição do navio, pelo menos uma vez por dia;
   g) A abertura e o encerramento da cada período de serviço;
4) Da lista alfabética dos indicativos de chamada das estações utilizadas no serviço móvel marítimo;
5) Da nomenclatura das estações costeiras;
6) Da nomenclatura das estações de navio (é facultativo à estação dispor do suplemento);
7) Da nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais;
8) Do manual para uso dos serviços móvel marítimo e móvel marítimo por satélite;
9) Das tarifas telegráficas dos países para os quais a estação transmite radiotelegramas mais frequentemente.

SECÇÃO II

Outras estações radiotelegráficas de navio

Estas estações devem estar providas dos documentos referidos nas alíneas 1 a 6, inclusive, 8 e 9 da secção I.

SECÇÃO III

Estações de navio obrigatoriamente providas de uma instalação radiotelefónica em virtude de um acordo internacional

Estas devem estar providas:

1) Da licença prevista no artigo 24;
2) Do certificado de cada operador;

3) Do registo (diário do serviço radioeléctico) em que se anotam, no momento em que se efectuam e com a indicação da hora:
   a) Um resumo de todas as comunicações relativas ao tráfego de perigo, de urgência e de segurança;
   b) Um resumo das comunicações entre a estação do navio e as estações terrestres ou móveis;
   c) Uma menção dos incidentes de serviço importantes;
   d) Se o regulamento de bordo o permitir, a posição do navio, pelo menos um vez por dia;

4) De uma lista das estações costeiras com que são susceptíveis de permutar comunicações, mencionando essa lista as horas de vigília, as frequências e as taxas;
5) Das disposições do Regulamento das Radiocomunicações e das resoluções e pareceres da CCITT aplicáveis ao serviço móvel marítimo radiotelefónico, ou do manual para uso dos serviços móvel marítimo por satélite.

SECÇÃO IV

Outras estações radiotelefónicas de navio

Estas estações devem estar providas:

1) Dos documentos referidos nas alíneas 1 e 2 da secção III;
2) Dos documentos referidos nas alíneas 3, 4 e 5 da secção III, segundo as exigências das administrações interessadas.

SECÇÃO V

Estações de navio equipadas com várias instalações

Estas devem estar providas:

1) Para cada instalação, se for necessário, dos documentos referidos nas alíneas 1, 2 e 3 da secção I, ou nas alíneas 1, 2 e 3 da secção III, consoante o caso;
2) Para uma só delas, dos outros documentos referidos nas secções I ou III, consoante o caso.

SECÇÃO VI

Estações de aeronave

Estas estações devem estar providas:

1) Dos documentos referidos nas alíneas 1 e 2 da secção I;
2) Do registo (diário do serviço radioeléctrico) referido na alínea 3 da secção I, a não ser que as administrações interessadas tenham adoptado outras disposições para a inscrição de todas as informações que o dito registo deve mencionar;
3) Dos outros documentos que contenham as informações oficiais relativas às estações a que pode recorrer a estação de aeronave para executar o seu serviço.

APÊNDICE 12

Horas de serviço das estações de navio classificadas na 2.ª ou na 3.ª categoria

(V. os artigos 26 e 58)

SECÇÃO I

(Quadro)

Horas de serviço — Hora local do navio ou hora do fuso horário (V. os n.os 4058 e 4059)	
16 horas (H16)	8 horas (H8)
Das 0 às 4 horas. Das 8 às 12 horas. Das 16 às 18 horas. Das 20 às 22 horas. Mais quatro horas. (V. o n.º 4058.)	Das 8 às 12 horas. Das 18 às 22 horas (*a*). Mais duas horas. (V. o n.º 4059.)

(*a*) Duas horas de serviço contínuo entre as 18 e as 22 horas, hora local do navio ou hora do fuso horário, fixadas pela administração, pelo comandante ou pela pessoa responsável.

SECÇÃO II

Gráfico e mapa-múndi

Nota. — *a*) O gráfico indica os períodos de serviço *fixos* e os períodos de serviço *escolhidos* das estações de navio classificadas na 2.ª ou na 3.ª categoria, conforme os fusos horários. (Os períodos de serviço indicados não compreendem os que são fixados pela administração, pelo comandante ou pela pessoa responsável pelo navio.)

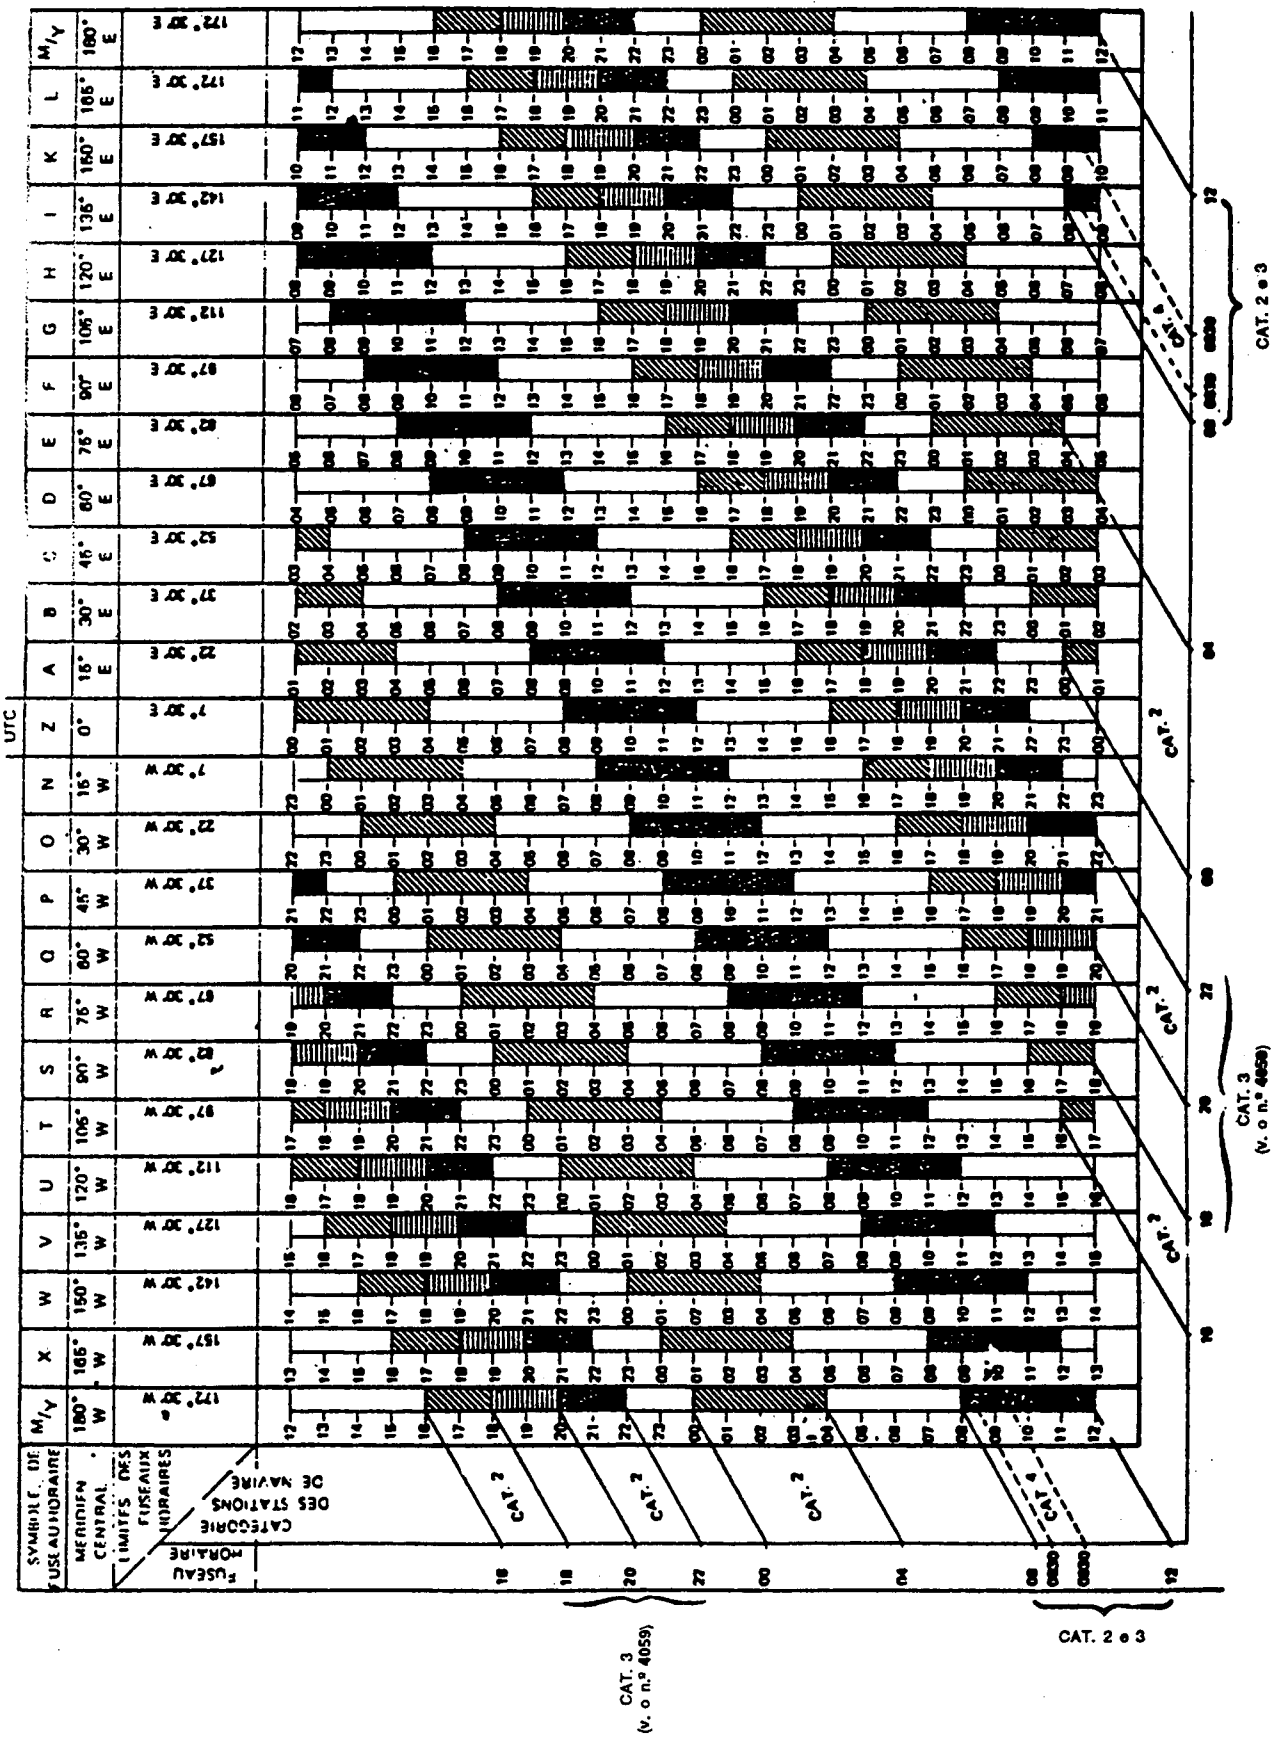
Os períodos de serviço fixos são representados do seguinte modo:

I) Para os navios classificados na 2.ª categoria .....

II) Para os navios classificados na 2.ª ou na 3.ª categoria .....

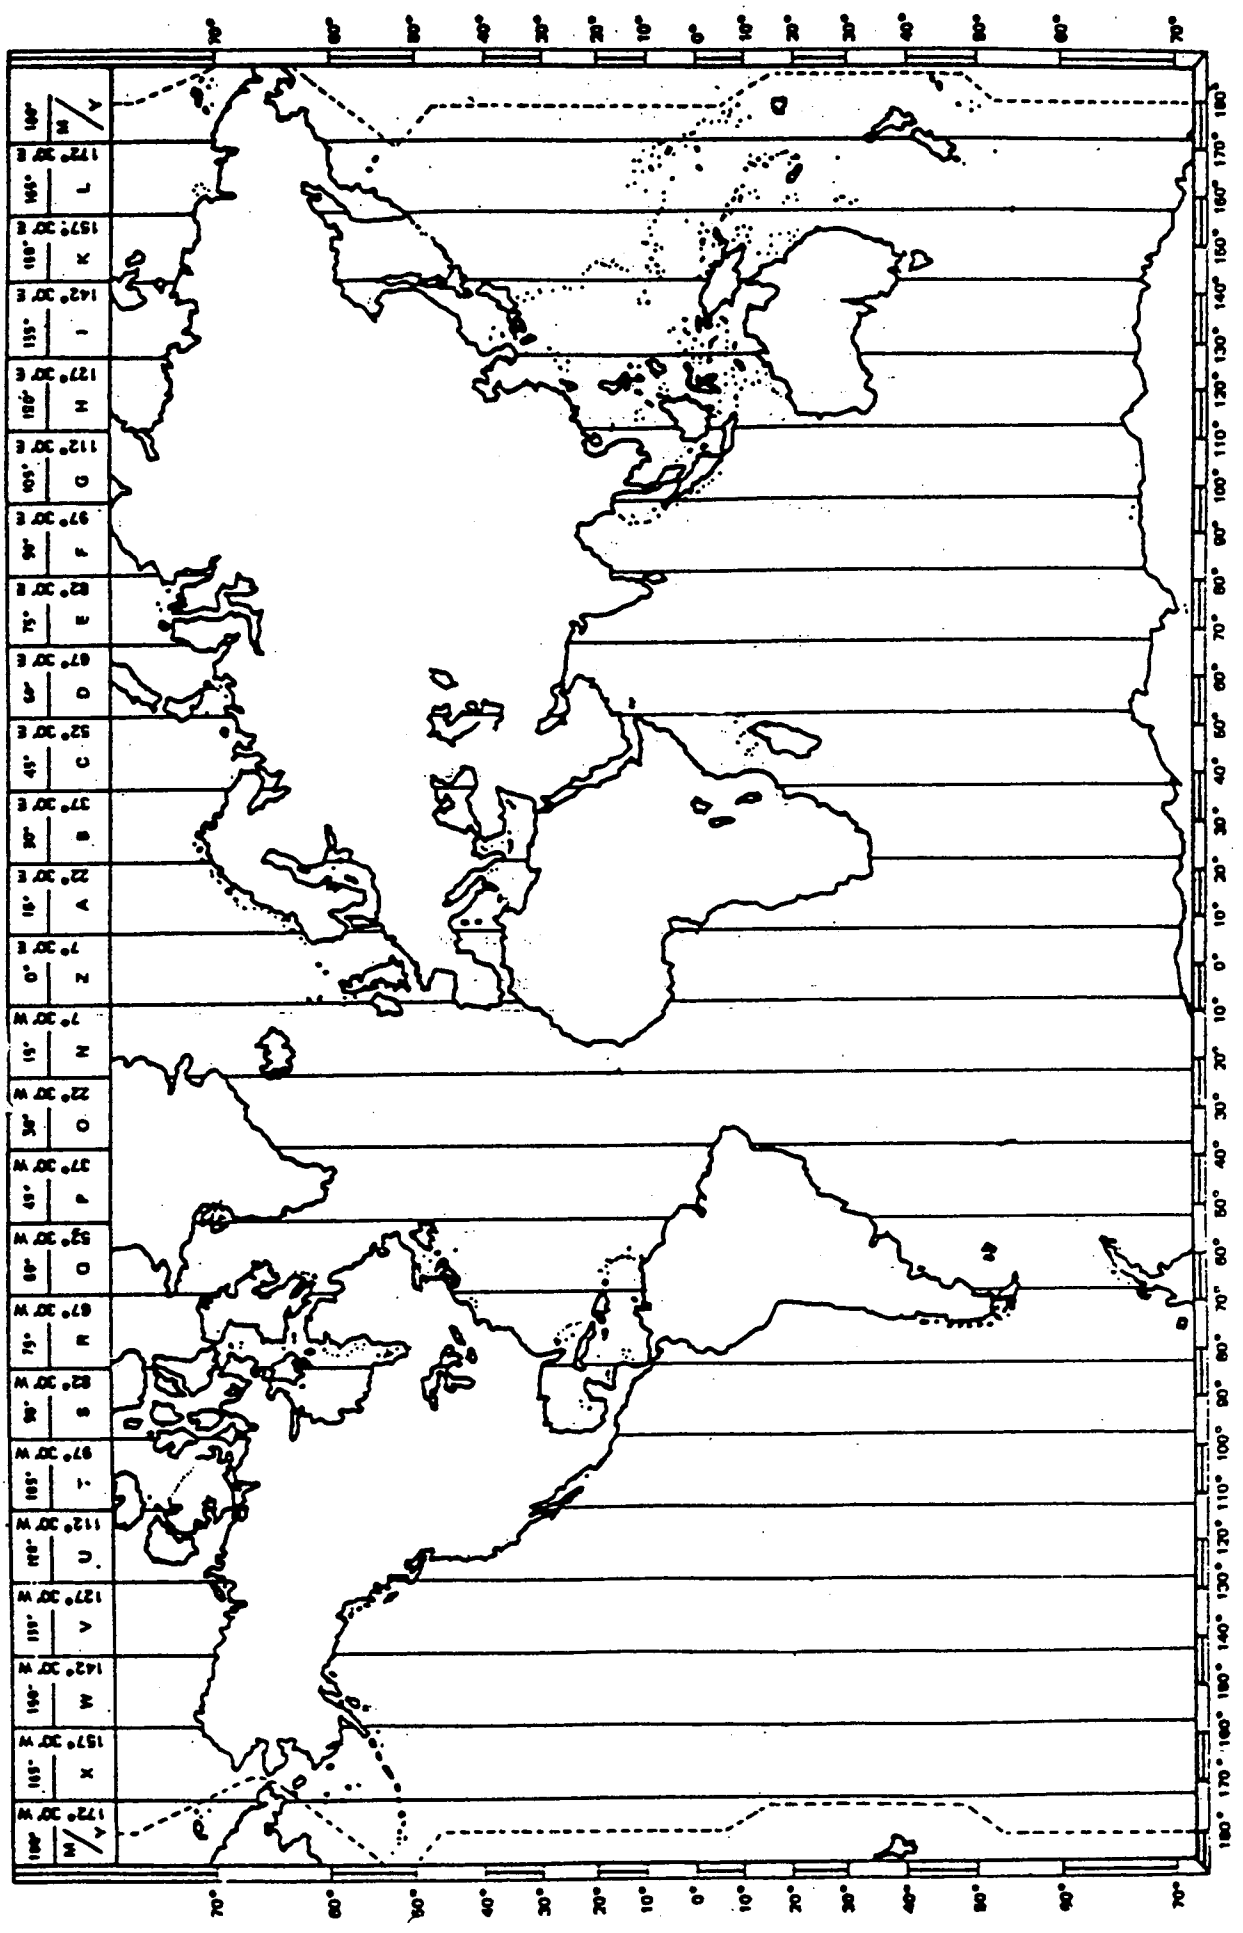
III) Para os navios classificados na 3.ª categoria, período em que se podem escolher as duas horas de serviço contínuo .....

Nota. — *b*) O gráfico indica igualmente (a preto) o período entre as 8 horas e 30 minutos e as 9 horas e 30 minutos, durante o qual se recomenda aos navios classificados na 4.ª categoria que assegurem o serviço (v. o n.º 4062).



UTC
CAT. 2 e 3
CAT. 3
(v. o n.º 4059)
CAT. 2
CAT. 2 e 3

MAPA-MÚNDI (FUSOS HORÁRIOS)



APÊNDICE 13

Abreviaturas e sinais diversos a empregar nas comunicações radiotelegráficas, com excepção das do serviço móvel marítimo

(V. o artigo 52)

SECÇÃO I

Código Q

Introdução

1. As séries de grupos QRA a QUZ, mencionadas seguidamente, são utilizáveis em todos os serviços.

2. As séries QAA a QNZ são reservadas ao serviço aeronáutico e as séries QOA a QQZ são reservadas aos serviços marítimos. Não fazem parte do presente Regulamento (*).

3. Pode dar-se um sentido afirmativo ou negativo a certas abreviaturas do código Q, transmitindo, respectivamente, YES ou NO imediatamente depois da abreviatura.

4. O significado das abreviaturas do código Q pode ser alargado ou completado pela adição apropriada de outras abreviaturas, indicativos de chamada, nomes de locais, algarismos, números, etc. Os espaços em branco contidos entre parêntesis correspondem a indicações facultativas. Essas indicações devem ser transmitidas pela ordem em que se encontram no texto dos quadros seguintes.

5. As abreviaturas do código Q tomam a forma de perguntas quando seguidas por um ponto de interrogação. Quando uma abreviatura empregada como pergunta for seguida de indicações complementares, convém que estas sejam seguidas de ponto de interrogação.

6. As abreviaturas do código Q que comportem várias significações numeradas deverão ser seguidas do número apropriado que precise o sentido escolhido. Este número é transmitido imediatamente a seguir à abreviatura.

7. As horas indicadas em tempo universal coordenado (UTC), a menos que se dêem indicações contrárias nas perguntas ou respostas.

Abreviaturas utilizáveis em todos os serviços

A) Lista das abreviaturas por ordem alfabética

Abreviatura	Pergunta	Resposta ou parecer
QRA	Qual é o nome da sua estação?	O nome da minha estação é ...
QRB	A que distância aproximada se encontra da minha estação?	A distância aproximada entre as nossas estações é ... milhas marítimas (*ou* quilómetros).
QRC	Por que exploração particular (*ou* administração de Estado) se liquidam as contas das taxas da sua estação?	As contas das taxas da minha estação são liquidadas pela exploração particular ... (*ou* pela administração do Estado ...).
QRD	Para onde vai e donde vem?	Vou para ... e venho de ...
QRE	A que horas conta chegar ... (*ou* por cima de ...) *(local)*?	Conto chegar a ... (*ou* por cima de ...) *(local)* às ... horas.
QRF	Volta a ... *(local)*?	Volto a ... *(local)*. *ou* Volte a ... *(local)*.
QRG	Quer indicar-me a minha frequência exacta (*ou* a frequência exacta de ...)?	A sua frequência exacta (ou a frequência exacta de ...) é ... (kHz ou MHz).
QRH	A minha frequência varia?	A sua frequência varia.
QRI	Qual è a tonalidade da minha emissão?	A tonalidade da sua emissão é: 1. Boa; 2. Variável; 3. Má.
QRJ	Quantas chamadas radiotelefónicas tem pendentes?	Tenho ... chamadas radiotelefónicas pendentes.
QRK	Qual é a intelegibilidade dos meus sinais (*ou* dos sinais de ...)?	A inteligibilidade dos seus sinais (ou dos sinais de ...) é: 1. Má; 2. Medíocre; 3. Suficiente; 4. Boa; 5. Excelente.
QRL	Está ocupado?	Estou ocupado (ou estou ocupado com ...). É favor não interferir.

(*) Nota do Secretariado-Geral: as séries QOA a QQZ figuram no apêndice 14.

Abreviatura	Pergunta	Resposta ou parecer
QRM	Está interferido?	Estou interferido ... 1. Não estou interferido; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.
QRN	Está sendo perturbado por parasitas?	Estou sendo perturbado por parasitas ... 1. Não estou sendo perturbado por parasitas; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.
QRO	Devo aumentar a potência de emissão?	Aumente a potência de emissão.
QRP	Devo diminuir a potência de emissão?	Diminua a potência de emissão.
QRQ	Devo transmitir mais depressa?	Transmita mais depressa (... palavras por minuto).
QRR	Está pronto para o emprego de aparelhos automáticos?	Estou pronto para o emprego de aparelhos automáticos.
QRS	Devo transmitir mais devagar?	Transmita à velocidade de ... palavras por minuto.
QRT	Devo parar a transmissão?	Transmita mais devagar (... palavras por minuto).
QRU	Tem alguma coisa para mim?	Pare a transmissão.
QRV	Está pronto?	Nada tenho para si.
QRW	Devo avisar ... que o chama em ... kHz (*ou* MHz)?	Estou pronto.
QRX	Quando me tornará a chamar?	É favor avisar ... que o chamo em ... kHz (*ou* MHz).
QRY	Qual é minha vez? *(refere-se às comunicações).*	Torno a chamá-lo às ... horas [em ... kHz (*ou* MHz)].
QRZ	Por quem estou sendo chamado?	A sua vez é o n.º... *(ou consoante qualquer outra indicação) (refere-se às comunicações).*
QSA	Qual é a intensidade dos meus sinais (*ou* dos sinais de ...)?	Está sendo chamado por ... [em ... kHz (*ou* MHz)]. A intensidade dos seus sinais (*ou* dos sinais de ...) é: 1. Apenas perceptível; 2. Fraca; 3. Regular; 4. Boa; 5. Muito boa.
QSB	A intensidade dos meus sinais varia?	A intensidade dos seus sinais varia.
QSC	Sois um navio de carga?	Sou um navio de carga.
QSD	É defeituosa a minha manipulação?	É defeituosa a sua manipulação.
QSE	Qual é a deriva estimada do engenho de salvamento?	A deriva estimada do engenho de salvamento é ... *(algarismo e unidade).*
QSF	Efectou o salvamento?	Efectuei o salvamento e dirijo-me para a base de ... (com ... feridos necessitando de ambulância).
QSG	Devo transmitir ... telegramas seguidos?	Transmita ... telegramas seguidos.
QSH	Pode guiar-se pelo seu radiogoniómetro?	Posso guiar-me pelo meu radiogoniómetro (pela estação de ...).
QSI	—	Foi-me impossível interromper a sua transmissão *ou* Queira informar ... *(indicativo de chamada)* de que me foi impossível interromper a sua transmissão [em ... kHz (*ou* MHz)].
QSJ	Qual á a taxa a cobrar para ..., incluída a sua taxa interna?	A taxa a cobrar para ... é de ... francos, incluída a minha taxa interna.
QSK	Pode receber-me entre os seus sinais? Caso afirmativo, posso interrompê-lo na sua transmissão?	Posso recebê-lo entre os meus sinais; pode interromper a minha transmissão.
QSI	Pode dar-me o entendido?	Dou-lhe o entendido.
QSM	Devo repetir o último telegrama que lhe transmiti (*ou* um telegrama precedente)?	Repita o último telegrama que me transmitiu [*ou* o(s) telegrama(s) número(s) ...].
QSN	Ouviu-me (ou ouviu ... *indicativo de chamada*) em ... kHz (*ou* MHz)?	Ouvi-o [ou ouvi ... *(indicativo de chamada)*] em ... kHz (*ou* MHz).
QSO	Pode comunicar com ... directamente (*ou* por *relais*)?	Posso comunicar com ... directamente (*ou* por intermédio de ...).
QSP	Quer retransmitir gratuitamente a ...?	Posso retransmitir gratuitamente a ...
QSQ	Tem um médico [*ou* ... *(nome de uma pessoa)*] a bordo?	Tenho um médico [*ou* ... *(nome de uma pessoa)*] a bordo.
QSR	Devo repetir a chamada na frequência de chamada?	Repita a chamada na frequência de chamada. Não o entendi (*ou* houve interferência).
QSS	Que frequência de trabalho vai utilizar?	Vou utilizar a frequência de trabalho ... kHz *(em regra geral, bastará indicar os três últimos algarismos da frequência).*
QSU	Devo transmitir ou responder na frequência actual [*ou* em ... kHz (*ou* MHz em emissão da classe ...?	Tansmita ou responda na frequência actual [*ou* em ... kHz (*ou* MHz)] em emissão da classe ...
QSV	Devo transmitir uma série de V nesta frequência [*ou* em kHz (*ou* MHz)]?	Transmita uma série de V nesta frequência [*ou* em ... kHz (*ou* MHz)].
QSW	Quer transmitir na frequência actual [ou em ... kHz (ou MHz)] em emissão da classe ...?	Vou transmitir na frequência actual [ou em ... kHz (*ou* MHz)] em emissão da classe ...
QSX	Quer escutar ... [*indicativo de chamada em* ... kHz (*ou* MHz)]?	Escuto ... [*indicativo de chamada em* ... kHz (*ou* MHz)].

Abreviatura	Pergunta	Resposta ou parecer
QSY	Devo passar à transmissão noutra frequência?	Passe à transmissão noutra frequência [ou em ... kHz (*ou* MHz)].
QSZ	Devo transmitir várias vezes cada palavra ou grupo?	Transmita cada palavra ou grupo de duas vezes (ou ... vezes).
QTA	Devo anular o telegrama número ...?	Anule o telegrama número ...
QTB	Está de acordo com a minha contagem de palavras?	Não estou de acordo com a sua contagem de palavras. Repito a primeira letra de cada palavra e o primeiro algarismo de cada número.
QTC	Quantos telegramas tem para transmitir?	Tenho ... telegramas para si (*ou* para ...).
QTD	Que recolheu o navio de salvamento ou a aeronave de salvamento?	... *(identificação)* recolheu: 1. ... *(número)* sobreviventes; 2. Destroços; 3. ... *(número)* cadáveres.
QTE	Qual o meu azimute verdadeiro em relação a si? *ou* Qual o meu azimete verdadeiro em relação a ... (indicativo de chamada)? *ou* Qual o azimute verdadeiro de ... *(indicativo de chamada)* em relação a ... *(indicativo de chamada)*?	O seu azimute verdadeiro em relação a mim é ... graus às ... horas. *ou* O seu azimute verdadeiro em relação a ... *(indicativo de chamada)* era de ... grau às ... horas. *ou* O azimute verdadeiro de ... *(indicativo de chamada)* em relação a ... *(indicativo de chamada)* era de ... grau às ... horas.
QTF	Quer indicar-me a posição da minha estação na base dos azimutes tomados pelas estações radiogoniométricas que essa estação comanda?	A posição da sua estação na base dos azimutes tomados pelas estações radiogoniométricas que comando era ... latitude, ... longitude *(ou outra indicação da posição)*, classe ... às ... horas.
QTG	Quer transmitir dois traços de dez segundos cada um, seguidos do seu indicativo de chamada (repetidos ... vezes) em ... kHz (*ou* MHz)? *ou* Quer pedir a ... que transmita dois traços de dez segundos, seguidos do seu indicativo de chamada (repetidos ... vezes) em ... kHz (*ou* MHz)?	Vou transmitir dois traços de dez segundos cada um, seguidos do meu indicativo de chamada (repetidos ... vezes) e ... kHz (*ou* MHz). *ou* Pedi a ... que transmita dois traços de dez segundos, seguidos do seu indicativo de chamada (repetidos ... vezes) em ... kHz (*ou* MHz).
QTH	Qual é a sua posição em latitude e longitude *(ou consoante qualquer outra indicação)*?	A minha posição é ... latitude, ... longitude *(ou consoante qualquer outra indicação)*.
QTI	Qual o seu caminho verdadeiro?	O meu caminho verdadeiro é de ... graus.
QTJ	Qual a sua velocidade? *(Pede a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivamente.)*	A minha velocidade é de ... nós (*ou* de ... quilómetros por hora *ou* de ... milhas terrestres por hora). *(Indica a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivametne.)*
QTK	Qual é a velocidade da sua aeronave em relação à superfície terrestre?	A velocidade da minha aeronave é de ... nós (*ou* de ... quilómetros por hora ou de ... milhas terrestres por hora) em relação à superfície terrestre.
QTL	Qual o seu rumo verdadeiro?	O meu rumo verdadeiro é de ... graus.
QTM	Qual é o seu rumo magnético?	O meu rumo magnético é de ... graus.
QTN	A que horas deixou ... *(local)*?	Deixei ... *(local)* às ...
QTO	Saiu da doca (*ou* do porto)? *ou* Descolou?	Saí da doca (*ou* do porto). *ou* Descolei.
QTP	Vai entrar na doca (*ou* no porto)? *ou* Vai amarar (*ou* aterrar)?	Vou entrar na doca (*ou* no porto). *ou* Vou amarar (*ou* aterrar).
QTQ	Pode comunicar com a minha estação por meio do Código Internacional de Sinais?	Vou comunicar com a sua estação por meio do Código Internacional de Sinais.
QTR	Qual é a hora exacta?	A hora exacta é ...
QTS	Quer transmitir o seu indicativo de chamada para regulação ou para permitir a medida da sua frequência agora (*ou* às ... horas) em ... kHz (*ou* MHz)?	Vou transmitir o seu indicativo de chamada para regulação ou para permitir a medida da minha frequência agora (*ou* às ... horas) em ... kHz (*ou* MHz).
QTT	—	O sinal de identificação que se segue está sobreposto a outra emissão.
QTU	Quais as horas em que a sua estação está aberta?	A minha estação está aberta das ... às ... horas.
QTV	Devo tomar a escuta em seu lugar na frequência ... kHz (*ou* MHz) das ... às ... horas?	Tome a escuta em meu lugar na frequência ... kHz (*ou* MHz) das ... às ... horas.
QTW	Qual o estado dos sobreviventes?	Os sobreviventes estão em ... estado e necessitam urgentemente de ...
QTX	Quer deixar a sua estação para comunicar com a minha até novo aviso da minha parte (*ou* até às ... horas)?	A minha estação fica aberta para comunicar com a sua até novo aviso da sua parte (*ou* até às ... horas).
QTY	Dirige-se para o local do acidente e, no caso afirmativo, quando pensa chegar?	Dirigo-me para o local do acidente e penso chegar às ... horas (... *data*).
QTZ	Continua a busca?	Continuo a busca (de ... aeronave, navio, engenho de salvamento, sobreviventes, destroços).
QUA	Tem notícias de ... *(indicativo de chamada)*?	Eis notícias de ... *(indicativo de chamada)*?
QUB	Pode dar-me, pela ordem indicada, informações sobre: a direcção verdadeira e a velocidade do vento à superfície; a visibilidade; o estado do tempo, a grandeza, tipo e altura da base das nuvens por cima de ... *(local de observação)*?	As informações pedidas são: ... *(Convém indicar as unidades utilizadas para as velocidades e distâncias.)*
QUC	Qual o número *(ou outra indicação)* da última mensagem que recebeu de mim [*ou* de ... *(indicativo de chamada)*]?	O número *(ou outra indicação)* da última mensagem que recebi de si [*ou* de ... *(indicativo de chamada)*] é ...

Abreviatura	Pergunta	Resposta ou parecer
QUD	Recebeu o sinal de urgência transmitido por ... *(indicativo de chamada de uma estação móvel)*?	Recebi o sinal de urgência transmitido por ... *(indicativo de chamada de uma estação móvel)* às ... horas.
QUE	Pode telefonar em ... *(língua)*, com intérprete, se necessário? Caso afirmativo, em que frequências?	Posso telefonar em ... *(língua)* em kHz (*ou* MHz).
QUF	Recebeu o sinal de perigo emitido por ... *(indicativo de chamada de uma estação móvel)*?	Recebi o sinal de perigo emitido por ... *(indicativo de chamada de uma estação móvel)* às ... horas.
QUG	Vai ser forçado a amarar (*ou* a aterrar)?	Sou forçado a amarar (*ou* a aterrar) imediatamente ou vou ser forçado a amarar (*ou* a aterrar) em ... *(posição ou local)* às ... horas.
QUH	Quer indicar-me a pressão barométrica actual ao nível do mar?	A pressão barométrica actual ao nível do mar é de ... *(unidades)*.
QUI	Estão acesos os seus faróis de navegação?	Os meus faróis de navegação estão acesos.
QUJ	Quer indicar-me o rumo verdadeiro a seguir para me dirigir para si (*ou* para me dirigir para ...)?	O rumo verdadeiro a seguir para se dirigir para mim (*ou* para se dirigir para ...) é de ... graus às horas.
QUK	Pode indicar-me o estado do mar observado em ... *(local ou coordenadas)*?	Por mar em ... *(local ou coordenadas)* está ...
QUL	Pode indicar-me a ondulação do mar observada em ... *(local ou coordenadas)*?	A ondulação do mar em ... *(local ou coordenadas)* é ...
QUM	Posso recomeçar o trabalho normal?	Pode-se recomeçar o trabalho normal.
QUN	Pede-se aos navios da minha vizinhança imediata *ou* (na vizinhança de ... latitude, ... longitude) *ou* (na vizinhança de ...) que indiquem a sua posição, rumo verdadeiro e velocidade.	A minha posição, rumo verdadeiro e velocidade são ...
QUO	Devo proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento; na vizinhança de ... latitude, ... longitude *(ou consoante qualquer outra indicação)*?	Queira proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento; na vizinhança de ... latitude, ... longitude *(ou consoante qualquer outra indicação)*?
QUP	Quer indicar a sua posição por: 1. Projector? 2. Fumo negro? 3. Luzes pirotécnicas?	A minha posição é indicada por: 1. Projector; 2. Fumo negro; 3. Luzes pirotécnicas.
QUQ	Devo dirigir o meu projector verticalmente para uma nuvem, de maneira intermitente, se possível, dirigir em seguida o feixe para a água (*ou* para o solo), contra o vento, quando veja ou ouça a sua aeronave, a fim de facilitar a sua amaragem (*ou* a sua aterragem)?	É favor dirigir o seu projector verticalmente para uma nuvem, de maneira intermitente, se possível, dirigir em seguida o feixe para a água (*ou* para o solo), contra o vento, quando veja ou ouça a minha aeronave, a fim de facilitar a minha amaragem (*ou* a minha aterragem).
QUR	Os sobreviventes: 1. Receberam o equipamento de salvamento? 2. Foram recolhidos por um navio? 3. Foram alcançados pelo grupo de salvamento em terra?	Os sobreviventes: 1. Receberam o equipamento de salvamento lançado por ... 2. Foram recolhidos por um navio; 3. Foram alcançados pelo grupo de salvamento em terra.
QUS	Avistou sobreviventes ou destroços? Na hipótese afirmativa, em que local?	Avistei: 1. Sobreviventes na água; 2. Sobreviventes em jangadas; 3. Destroços; em ... latitude, ... longitude *(ou segundo qualquer outra indicação)*.
QUT	O local do acidente está assinalado?	O local do acidente está assinalado por: 1. Facho ou bóia fumígena; 2. Bóia; 3. Produto corante; 4. ... *(outro dispositico a especificar)*.
QUU	Devo dirigir o navio ou a aeronave até à minha posição?	Dirija o navio ou a aeronave *(indicativo de chamada)* ... 1. Para a sua posição, transmitindo o vosso indicativo de chamada e traços prolongados em ... kHz (*ou* MHz); 2. Transmitindo em ... kHz (*ou* MHz) o rumo verdadeiro para vos alcançarem.
QUW	Está na zona de busca ... *(símbolo ou latitude e longitude)*?	Estou na zona de busca ... *(designação)*.
QUY	A posição do engenho de salvamento foi assinalada?	A posição do engenho de salvamento foi assinalada às ... horas por: 1. Facho ou bóia fumígena; 2. Bóia; 3. Produto corante; 4. ... *(outro dispositico a especificar)*.

B) Lista das abreviaturas consoante a natureza das perguntas, respostas ou pareceres

Abreviatura	Pergunta	Resposta ou parecer
	Nome	
QRA	Qual é o nome da sua estação?	O nome da minha estação é ...
	Percurso	
QRD	Para onde vai e donde vem?	Vou para ... e venho de ...
	Posição	
QRB	A que distância aproximada se encontra da minha estação?	A distância aproximada entre as nossas estações é de ... milhas marítimas (*ou* quilómetros).
QTH	Qual é a sua posição em latitude e longitude *(ou consoante qualquer outra indicação)*?	A minha posição é ... latitude ... longitude (*ou consoante qualquer outra indicação*).
QTN	A que horas deixou ... *(local)*?	Deixei... *(local)* às ... horas.
	Qualidade dos sinais	
QRI	Qual é a tonalidade da minha emissão?	A tonalidade da sua emissão é: 1. Boa; 2. Variável; 3. Má.
QRK	Qual é a intelegibilidade dos meus sinais (*ou* dos sinais de ...)?	A intelegibilidade dos seus sinais (*ou* dos sinais de ...) é: 1. Má; 2. Mediocre; 3. Suficiente; 4. Boa. 5. Excelente.
	Intensidade dos sinais	
QRO	Devo aumentar a potência de emissão?	Aumente a potência de emissão.
QRP	Devo diminuir a potência de emissão?	Diminua a potência de emissão.
QSA	Qual é a intensidade dos meus sinais (*ou* dos sinais de ...)?	A intensidade dos seus sinais (*ou* sinais de ...) é: 1. Apenas perceptível; 2. Fraca; 3. Regular; 4. Boa; 5. Muito boa.
QSB	A intensidade dos meus sinais varia?	A intensidade dos seus sinais varia.
	Manipulação	
QRQ	Devo transmitir mais depressa?	Transmita mais depressa (...palavra por minuto).
QRR	Está pronto para o emprego de aparelhos automáticos?	Estou pronto para o emprego de aparelhos automáticos. Transmita à velocidade de ... palavras por minuto.
QRS	Devo transmitir mais devagar?	Transmita mais devagar (... palavras por minuto).
QSD	É defeituosa a minha manipulação?	A sua manipulação é defeituosa.
	Interferências	
QRM	Está interferido?	Estou interferido ... 1. Não estou interferido; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.
QRN	Está a ser perturbado por parasitas?	Estou a ser perturbado por parasitas ... 1. Não estou a ser perturbado por parasitas; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.

Abreviatura	Pergunta	Resposta ou parecer
	Regulação da frequência	
QRG	Quer indicar-me a minha frequência exacta (*ou* a frequência exacta de ...)?	A sua frequência exacta (*ou* a frequência exacta de ...) é ... kHz (*ou* MHZ).
QRH	A minha frequência varia?	A sua frequência varia.
QTS	Quer transmitir o seu indicativo de chamada para regulação, ou para permitir a medida da sua frequência, agora (*ou* às ... horas), em ... kHz (*ou* MHz)?	Vou transmitir agora (*ou* às ... horas), em ... kHZ (*ou* MHz), o meu indicativo de chamada para regulação ou para permitir a medida da minha frequência.
	Escolha da frequência e ou da classe de emissão	
QSN	Ouviu-me [*ou* ouviu ... *(indicativo de chamada)*] em kHz (*ou* MHz)?	Ouviu-o [*ou* ouviu ... *(indicativo de chamada)*] em ... kHz (*ou* MHz).
QSS	Que frequência de trabalho vai utilizar?	Vou utilizar a frequência de trabalho ... kHz *(regra geral, bastará indicar os três últimos algarismos da frequência).*
QSU	Devo transmitir ou responder na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...)?	Transmita ou responda na frequência actual [*ou* em ... kHz, (*ou* MHz)] (em nissão da classe ...).
QSV	Devo transmitir uma série de V nesta frequência [*ou* em ... kHz (*ou* MHz)]?	Transmita uma série de V nesta frequência [*ou* em ... kHz (*ou* MHz).
QSW	Quer transmitir na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...)?	Vou transmitir na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...).
QSX	Quer escutar ... *(indicativo de chamada)* em ... kHz (*ou* MHz)?	Escuto ... *(indicativo de chamada)* em ... kHz (*ou* MHZ).
	Mudança de frequência	
QSY	Devo passar à transmissão noutra frequência?	Passe à transmissão noutra frequência [*ou* em ... kHz (*ou* MHz)].
	Estabelecimento da comunicação	
QRI	Está ocupado?	Estou ocupado (*ou* estou ocpado com ...). É favor não interferir.
QRV	Está pronto?	Estou pronto.
QRX	Quando me tornará a chamar?	Torno a chamá-lo às ... horas [em ... kHz (*ou* MHz)].
QRY	Qual é a minha vez *(refere-se às comunicações)?*	A sua vez é o número ... *(ou consoante qualquer outra indicação), (refere-se às comunicações).*
QRZ	Por quem estou sendo chamado?	Está sendo chamado por ... [em ... kHz (*ou* MHz)].
QSC	Sois um navio de carga?	Sou um navio de carga.
QSR	Devo repetir a chamada na frequência de chamada?	Repita a chamada na frequência de chamada. Não o entendi (*ou* houve interferência).
QTQ	Pode comunicar com a minha estação por meio do Código Internacional de Sinais?	Vou comunicar com a sua estação por meio do Código Internacional de Sinais.
QUE	Pode telefonar em ... *(língua)*, com um intérprete, se necessário? Caso afirmativo, em que frequências?	Posso telefonar em ... *(língua)*, em ... kHz (*ou* MHz).
	Hora	
QTR	Qual é a hora exacta?	A hora exacta é ...
QTU	Quais as horas em que a sua estação está aberta?	A minha estação está abertas das ... às ... horas.
	Taxas	
QRC	Por que exploração (*ou* administração do Estado) se liquidam as contas das taxas da sua estação?	As contas das taxas da minha estação são liquidadas pela exploração particular ... (*ou* pela administração do Estado ...).
QSJ	Qual é a taxa a cobrar para ..., incluída a sua taxa interna?	A taxa a cobrar para ... é de ... francos, incluída a minha taxa interna.
	Trânsito	
QRW	Devo avisar ... que o chama em ... kHz (*ou* MHz)?	É favor avisar ... que o chamo em ... kHz (*ou* MHz).
QSO	Pode comunicar com ... directamente (*ou* por *relais*)?	Posso comunicar com ... directamente (*ou* por intermédio de ...).
QSP	Quer retransmitir gratuitamente a ...?	Posso retransmitir gratuitamente a ...
QSQ	Tem médico [*ou* ... *(nome de uma pessoa)*] a bordo?	Tenho um médico [*ou* ... *(nome de uma pessoa)*] a bordo.
QUA	Tem notícias de ... *(indicativo de chamada)?*	Eis notícias de ... *(indicativo de chamada).*
QUC	Qual é o número *(ou outra indicação)* da última mensagem que recebeu de mim [*ou* de ... *(indicativo de chamada)*]?	O número (*ou outra indicação*) da última mensagem que recebi de si [*ou* de ... *(indicativo de chamada)*] é ...
	Encaminhamento da correspondência	
QRJ	Quantas chamadas radiotelefónicas tem pendentes?	Tenho ... chamadas radiotelefónicas pendentes.
QRU	Tem alguma coisa para mim?	Nada tenho para si.

Abreviatura	Pergunta	Resposta ou parecer
QSG	Devo transmitir ... telegramas seguidos?	Transmita ... telegramas seguidos.
QSI		Foi-me impossível interromper a sua transmissão. *ou* Queira informar ... *(indicativo de chamada)* de que me foi impossível interromper a sua transmissão [em ... kHz (*ou* MHz)].
QSK	Pode receber-me entre os seus sinais? Caso afirmativo, posso interromper a sua transmissão?	Posso recebê-lo entre os meus sinais. Pode interromper a minha transmissão.
QSL	Pode dar-me o entendido?	Dou-lhe o entendido.
QSM	Devo repetir o último telegrama que lhe transmiti (*ou* um telegrama precedente)?	Repita o último telegrama que me transmitiu [*ou* o(*s*) telegrama(*s*) número(*s*) ...].
QSZ	Devo transmitir várias vezes cada palavra ou grupo?	Transmita cada palavra ou grupo duas vezes (*ou* ... vezes).
QTA	Devo anular o telegrama número ...?	Anule o telegrama número ...
QTB	Está de acordo com a minha contagem de palavras?	Não estou de acordo com a sua contagem de palavras. Vou repetir a primeira letra de cada palavra e o primeiro algarismo de cada número.
QTC	Quantos telegramas tem para transmitir?	Tenho ... telegramas para si (*ou* para ...).
QTV	Devo tomar a escuta em seu lugar na frequência ... kHz (*ou* MHz) (das ... às ... horas)?	Tome a escuta em meu lugar na frequência ... kHz (*ou* MHz) (das ... às ... horas).
QTX	Quer deixar a sua estação aberta para comunicar com a minha até novo aviso da minha parte (*ou* até às ... horas)?	A minha estação fica aberta para comunicar com a sua até novo aviso da sua parte (*ou* até às ... horas).
	Movimento	
QRE	A que horas conta chegar a ... (*ou* por cima de ...) *(local)*?	Conto chegar a ... (*ou* por cima de ...) *(local)* às ... horas.
QRF	Volta a ... *(local)*?	Volto a ... *(local)*. *ou* Volte a ... *(local)*.
QSH	Pode guiar-se pelo seu radiogoniómetro?	Posso guiar-me pelo meu radiogoniómetro (pela estação de ...).
QTI	Qual o seu caminho VERDADEIRO?	O meu caminho VERDADEIRO é de ... graus.
QTJ	Qual é a sua velocidade? *(Pede a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivamente.)*	A minha velocidade é de ... nós (*ou* de ... quilómetros por hora *ou* de ... milhas terrestres por hora). *(Indica a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivamente).*
QTK	Qual é a velocidade da sua aeronave em relação à superfície da Terra?	A velocidade da minha aeronave é de ... nós (*ou* de ... quilómetros por hora *ou* de ... milhas terrestres por hora) em relação à superfície da Terra.
QTL	Qual é o seu rumo VERDADEIRO?	O meu rumo VERDADEIRO é de ... graus.
QTM	Qual é o seu rumo MAGNÉTICO?	O meu rumo MAGNÉTICO é de ... graus.
QTN	A que horas deixou ... *(local)*?	Deixei ... *(local)* às ... horas.
QTO	Saiu da doca (*ou* do porto)? *ou* Descolou?	Saí da doca (*ou* do porto). *ou* Descolei.
QTP	Vai entrar na doca (*ou* no porto)? *ou* Vai amarar (*ou* aterrar)?	Vou entrar na doca (*ou* no porto). *ou* Vou amarar (*ou* aterrar).
QUG	Vai ser forçado a amarar (*ou* a aterrar)?	Sou forçado a amarar (*ou* a aterrar) imediatamente. *ou* Vou ser forçado a amarar (*ou* a aterrar) em ... *(posição ou local)* às ... horas.
QUJ	Quer indicar-me o rumo VERDADEIRO a seguir para me dirigir para si (*ou* para me dirigir para ...)?	O rumo VERDADEIRO a seguir para se dirigir para mim (*ou* para se dirigir para ...) é de ... graus às ... horas.
QUN	Pede-se aos navios na minha vizinhança imediata *ou* (na vizinhança de ... latitude, ... longitude) *ou* (na vizinhança de ...) que indiquem a sua posição, rumo VERDADEIRO e velocidade.	A minha posição, meu rumo VERDADEIRO e velocidade são ...
	Meteorologia	
QUB	Pode dar-me, pela ordem indicada, informações sobre a direcção VERDADEIRA e a velocidade do vento à superfície, a visibilidade, estado do tempo, grandeza, tipo e altura da base das nuvens por cima de ... *(local de observação)*?	As informações pedidas são: *(Convém indicar as unidades utilizadas para as velocidades e distâncias.)*
QUH	Quer indicar-me a pressão barométrica actual ao nível do mar?	A pressão barométrica actual ao nível do mar é de ... *(unidades)*.
QUK	Pode indicar-me o estado do mar observado em ... *(local ou coordenadas)*?	O mar em ... *(local ou coordenadas)* está ...
QUL	Pode indicar-me a ondulação do mar observada em ... *(local ou coordenadas)*?	A ondulação em ... *(local ou coordenadas)* é ...

Abreviatura	Pergunta	Resposta ou parecer
	Radiogoniometria	
QTE	Qual o meu azimute VERDADEIRO em relação a si? *ou* Qual o meu azimute VERDADEIRO em relação a ... *(indicativo de chamada)*? *ou* Qual o azimute VERDADEIRO de ... *indicativo de chamada)* em relação a ... *(indicativo de chamada)*?	O seu azimute VERDADEIRO em relação a mim é de ... grau às ... horas. *ou* O seu azimute VERDADEIRO em relação a ... *(indicativo de chamada)* era de ... graus às ... horas. *ou* O azimute VERDADEIRO de ... *(indicativo de chamada)* em relação a ... *(indicativo de chamada)* era de ... graus às ... horas.
QTF	Quer indicar-me a posição da minha estação na base dos azimutes tomados pelas estações radiogoniométricas que essa estação comanda?	A posição da sua estação na base dos azimutes tomados pelas estações radiogoniométricas que comando era ... latitude, ... longitude *(ou outra indicação da posição)*, classe ... às ... horas.
QTG	Quer transmitir dos traços de dez segundos cada um, seguidos do seu indicativo de chamada (repetidos ... vezes) [em ... kHz *(ou* MHz)]? *ou* Quer pedir a ... que transmita dois traços de dez segundos cada um, seguidos do seu indicativo de chamada (repetidos ... vezes) em ... kHz *(ou* MHz)?	Vou transmitir dois traços de dez segundos cada um, seguidos do meu indicativo de chamada (repetidos ... vezes) em ... kHz *(ou* MHz)]. *ou* Pedi a ... que transmita dois traços de dez segundos, seguidos do seu indicativo de chamada (repetidos ... vezes) em ... kHz *(ou* MHz).
	Suspensão do trabalho	
QRT	Devo parar a transmissão?	Pare a transmissão.
QUM	Posso recomeçar o trabalho normal?	Pode-se recomeçar o trabalho normal.
	Urgência	
QUD	Recebeu o sinal de urgência transmitido por ... *(indicativo de chamada de uma estação móvel)*?	Recebi o sinal de urgência transmitido por ... *(indicativo de chamada de uma estação móvel)* às ... horas.
QUG	Vai ser forçado a amarar *(ou* a aterrar)?	Sou forçado a amarar *(ou* a aterrar) imediatamente. *ou* Vou ser forçado a amarar *(ou* a aterrar) em ... *(posição ou local)* às ... horas.
	Perigo	
QUF	Recebeu o sinal de perigo emitido por ... *(indicativo de chamada de uma estação móvel)*?	Recebi o sinal de perigo emitido por ... *(indicativo de chamada de uma estação móvel)* às ... horas.
QUM	Posso recomeçar o trabalho normal?	Pode-se recomeçar o trabalho normal.
	Busca e salvamento	
QSE	Qual é a deriva estimada do engenho de salvamento?	A deriva estimada do engenho de salvamento é ... *(algarismo e unidade)*.
QSF	Efectuou o salvamento?	Efectuei o salvamento e dirijo-me para a base de ... (com ... feridos necessitando de ambulância).
QTD	Que recolheu o navio de salvamento ou a aeronave de salvamento?	... *(identificação)* recolheu: 1. ... *(número)* de sobreviventes; 2. Destroços; 3. ... *(número)* cadáveres.
QTW	Qual é o estado dos sobreviventes?	Os sobreviventes estão em ... estado e necessitam urgentemente de ...
QTY	Dirige-se para o local do acidente e, no caso afirmativo, quando pensa chegar?	Dirijo-me para o local do acidente e penso chegar às ... horas (... data)
QTZ	Continua a busca?	Continuo a busca de ... (aeronave, navio, engenho de salvamento, sobreviventes, destroços).
QUI	Estão acesos os faróis de navegação?	Os meus faróis de navegação estão acesos.
QUN	Pede-se aos navios na minha vizinhança imediata *ou* (na vizinhança de ... latitude ... longitude) *ou* (na vizinhança de ...) que indiquem a sua posição, rumo VERDADEIRO e velocidade.	A minha posição, rumo VERDADEIRO e velocidade são ...
QUO	Devo proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento; na vizinhança de ... latitude, ... longitude *(ou consoante qualquer outra indicação)*?	Queira proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento; na vizinhança de ... latitude, ... longitude *(ou consoante qualquer outra indicação)*.

Abreviatura	Pergunta	Resposta ou parecer
QUP	Quer indicar a sua posição por: 1. Projecto? 2. Fumo negro? 3. Luzes pirotécnicas?	A minha posição é indicada por: 1. Projector; 2. Fumo negro; 3. Luzes pirotécnicas.
QUQ	Devo dirigir o meu projector verticalmente para uma nuvem, de maneira intermitente, se possível, dirigir em seguida o feixe para a água (*ou* para o solo), contra o vento, quando veja ou ouça a sua aeronave, a fim de facilitar a sua amaragem (*ou* a sua aterragem)?	É favor dirigir o seu projector verticalmente para uma nuvem, de maneira intermitente, se possível, dirigir em seguida o feixe para a água (*ou* para o solo), contra o vento, quando veja ou ouça a minha aeronave, a fim de facilitar a minha amaragem (*ou* a minha aterragem).
QUR	Os sobreviventes: 1. Receberam o equipamento de salvamento? 2. Foram recolhidos por um navio? 3. Foram alcançados pelo grupo de salvamento em terra?	Os sobreviventes: 1. Receberam o equipamento de salvamento lançado por ... 2. Foram recolhidos por um navio; 3. Foram alcançados pelo grupo de salvamento em terra.
QUS	Avistou sobreviventes ou destroços? Na hipótese afirmativa, em que local?	Avistei: 1. Sobreviventes na água; 2. Sobreviventes em jangadas; 3. Destroços; a ... latitude, ... longitude *(ou consoante qualquer outra indicação).*
QUT	O local do acidente está assinalado?	O local do acidente está assinalado por: 1. Facho ou bóia fumígena; 2. Bóia; 3. Produto corante; 4. ... *(outro dispositivo a especificar).*
QUU	Devo dirigir o navio ou a aeronave até à minha posição?	Dirija o navio ou a aeronave *(indicativo de chamada)* ... 1. Para a sua posição, transmitindo o vosso indicativo de chamada e traços prolongados em ...kHz (*ou* MHz); 2. Transmitindo em ... kHz (*ou* MHz) o rumo VERDADEIRO a tomar para vos alcançarem.
QUW	Está na zona de busca ... *(símbolo ou latitude e longitude)*	Estou na zona de busca ... *(designação).*
QUY	A posição do engenho de salvamento foi assinalada?	A posição do engenho de salvamento foi assinalada às ... horas por: 1. Facho ou bóia fumígena; 2. Bóia; 3. Produto corante; 4. ... *(outro dispositivo a especificar).*
	Identificação	
QTT	—	O sinal de identificação que se segue está sobreposto a outra emissão.

SECÇÃO II

Abreviaturas e sinais diversos

Abreviatura ou sinal	Definição
AA	Tudo depois de ... *(a empregar depois de um ponto de interrogação para pedir uma repetição).*
AB	Tudo antes de ... *(a empregar depois de um ponto de interrogação para pedir uma repetição).*
ADS	Endereço *(a empregar depois de um ponto de interrogação para pedir uma repetição).*
AR	Fim de transmissão *(. — . — . a transmitir como um só sinal).*
AS	Espera *(. — ... a transmitir como um só sinal).*
BK	Sinal empregado para interromper uma transmissão em curso.
BN	Tudo entre ... e ... *(a empregar depois de um ponto de interrogação para pedir uma repetição).*
BQ	Resposta a RQ.
CFM	Confirme (*ou* confirmo).
CL	Vou fechar a minha estação.
COL	Confira (*ou* confiro).
CP	Chamada geral a duas ou mais estações específicadas *(v. o artigo 52).*
CQ	Chamada geral a todas as estações *(v. o artigo 52).*
CS	Indicativo de chamada *(empregado para pedir um indicativo de chamada).*
DDD	Utilizado para identificar a transmissão de uma mensagem de perigo por uma estação que não se encontra em perigo *(v. o n.º* **3164**).
DE	De *(utilizado antes do indicativo de chamada da estação que chama).*

Abreviatura ou sinal	Definição
DF	O seu azimute às ... horas era ... graus, no sector duvidoso desta estação, como um erro possível de ... graus.
DO	Azimute duvidoso. Peça um azimute mais tarde (*ou* às ... horas).
E	Este *(ponto cardeal)*.
ER	Aqui ...
ETA	Hora estimada da chegada.
ITP	A pontuação conta.
K	Convite para transmitir.
KMH	Quilómetros por hora.
KTS	Milhas marítimas por hora *(nós)*.
MIN	Minuto (*ou* minutos).
MPH	Milhas terrestres por hora.
MSG	Prefixo que indica uma mensagem com destino ou proveniente do comandante de um navio e relativa à exploração do navio ou à sua navegação.
N	Norte *(ponto cardeal)*.
NIL	Nada tenho para lhe transmitir.
NO	Não *(negação)*.
NW	Agora.
OK	Estamos de acordo (*ou* Está certo).
OL	Carta transoceânica.
P	Prefixo que indica um radiotelegrama particular.
PBL	Preâmbulo *(a empregar depois de um ponto de interrogação para pedir uma repetição)*.
R	Recebido.
REF	Referência a ... (*ou* refira-se a ...).
RPT	Repita (*ou* repito) (*ou* repita ...).
RQ	Indicação de um pedido.
S	Sul *(ponto cardeal)*.
SIG	Assinatura *(a empregar depois de um ponto de interrogação para pedir uma repetição)*.
SLT	Carta radiomarítima.
SOS	Sinal de perigo *(... — — — ... a transmitir com um só sinal)*.
SS	Indicação que precede o nome de uma estação de navio.
SVC	Prefixo que indica um telegrama de serviço.
SYS	Refira-se ao seu telegrama de serviço.
TFC	Tráfego.
TR	Utilizado por uma estação terrestre para pedir a posição e o próximo ponto de escala de uma estação móvel (*v. o n.°* 3691); utilizado igualmente como prefixo à resposta.
TTT	Este grupo, quando transmitido três vezes, constitui o sinal de segurança (*v. o n.°* 3221).
TU	Muito obrigado.
TXT	Texto *(a empregar depois de um ponto de interrogação para pedir uma repetição)*.
VA	Fim do trabalho *(... — . — a transmitir com um só sinal)*.
W	Oeste *(ponto cardeal)*.
WA	Palavra depois de ... *(a empregar depois de um ponto de interrogação para pedir uma repetição)*.
WB	Palavra antes de ... *(a empregar depois de um ponto de interrogação para pedir uma repetição)*.
WD	Palavra(s) [*ou* grupo(s)].
XQ	Prefixo que indica uma comunicação estabelecida no serviço fixo.
XXX	Este grupo, quando transmitido três vezes, constitui o sinal de urgência (*v. o n.°* 3196).
YES	Sim *(afirmação)*.

APÊNDICE 14

Abreviaturas e sinais diversos a utilizar nas radiocomunicações do serviço móvel marítimo

(V. os artigos 37, 63 e 65)

SECÇÃO I

Código Q

Introdução

1. As séries de grupos mencionadas no presente apêndice vão de QOA a QUZ.

2. As séries QOA a QQZ são reservadas ao serviço móvel marítimo.

3. Pode dar-se um sentido afirmativo ou negativo a certas abreviaturas do código Q transmitindo, imediatamente depois da abreviatura, a letra C ou as letras NO (em radiotelefonia, palavra de código CHARLIE ou pronúncia NO).

4. O significado das abreviaturas do código Q pode ser alargado ou completado pela adição apropriada de outras abreviaturas, de indicativos de chamada, de nomes de locais, de algarismos, de números, etc. Os espaços em branco contidos entre parêntesis correspondem a indicações facultativas. Essas indicações são transmitidas pela ordem em que se encontram no texto dos quadros seguintes.

5. As abreviaturas do código Q tomam a forma de perguntas quando seguidas por um ponto de interrogação em radiotelegrafia e por RQ (ROMEO QUEBEC) em radiotelefonia. Quando uma abreviatura empregada como pergunta for seguida de indicações adicionais ou complementares, convém colocar depois destas o ponto de interrogação ou a abreviatura RQ.

6. As abreviaturas do código Q que comportem várias significações numeradas deverão ser seguidas do número apropriado que precise o sentido escolhido. Este número é transmitido imediatamente a seguir à abreviatura.

7. As horas são indicadas em tempo universal coordenado (UTC), a menos que se dêem indicações contrárias nas perguntas ou respostas.

8. Um asterisco (*) colocado depois de uma abreviatura do código Q significa que este sinal tem um significado análogo ao de um sinal que figura no Código Internacional de Sinais.

Abreviaturas utilizadas no serviço móvel marítimo

A) Lista das abreviaturas por ordem alfabética

Abreviatura	Pergunta	Resposta ou parecer
QOA	Pode comunicar em radiotelegrafia (500 kHz)?	Posso comunicar em radiotelegrafia (500 kHz).
QOB	Pode comunicar em radiotelefonia (2182 kHz)?	Posso comunicar em radiotelegrafia (2182 kHz).
QOC	Pode comunicar em radiotelefonia (via 16 — frequência 156,80 MHz)?	Posso comunicar em radiotelefonia (via 16 — frequência 156,80 MHz).
QOD	Pode comunicar comigo em: 0. Holandês? 1. Inglês? 2. Francês? 3. Alemão? 4. Grego? 5. Italiano? 6. Japonês? 7. Norueguês? 8. Russo? 9. Espanhol?	Posso falar consigo em: 0. Holandês; 1. Inglês; 2. Francês; 3. Alemão; 4. Grego; 5. Italiano; 6. Japonês; 7. Norueguês; 8. Russo; 9. Espanhol.
QOE	Recebeu o sinal de segurança transmitido por ... *(nome ou indicativo de chamada ou ambos)?*	Recebi o sinal de segurança transmitido por ... *(nome ou indicativo de chamada ou ambos).*
QOF	Qual a unidade comercial dos meus sinais?	A qualidade dos seus sinais é: 1. Não comercial; 2. Trangencialmente comercial; 3. Comercial.
QOG	Quantas fitas tem para transmitir?	Tenho ... fitas para transmitir.
QOH	Devo transmitir um sinal de ajuste de fase durante ... segundos?	Emita um sinal de ajuste de fase durante ... segundos.
QOI	Devo transmitir a minha fita?	Transmita a sua fita.
QOJ	Quer escutar na frequência ... kHz (*ou* MHz) sinais de radiobalizas de localização de sinistros?	Escuto na frequência ... kHz (*ou* MHz) sinais de radiobalizas de localização de sinistros.
QOK	Recebeu na frequência ... kHz (*ou* MHz) os sinais de uma radiobaliza de localização de sinistros?	Recebi na frequência ... kHz (*ou* MHz) os sinais de uma radiobaliza de localização de sinistros.
QOL	O seu navio pode receber chamadas selectivas? Na afirmativa, qual é o seu número ou sinal de chamada selectiva?	O meu navio pode receber chamadas selectivas; o número ou sinal de chamada selectiva é ...
QOM	Quais são as frequências a utilizar para que uma chamada selectiva chegue ao seu navio?	A ou as frequências a utilizar para uma chamada selectiva são as seguintes ... (se necessário, indicar também os períodos de tempo apropriados).
QOT	Está a ouvir a minha chamada? Quanto tempo (em minutos) aproximadamente terei de esperar para podermos permutar tráfego?	Estou a ouvir a sua chamada; a espera é aproximadamente de ... minutos.
QRA	Qual o nome do seu navio (*ou* da sua estação)?	O nome do meu navio (*ou* da minha estação) é ...
QRB	A que distância aproximada se encontra da minha estação?	A distância aproximada entre as nossas estações é de ... milhas marítimas (*ou* quilómetros).
QRC	Por que exploração particular (*ou* administração de Estado) se liquidam as contas das taxas da sua estação?	As contas das taxas da minha estação são liquidadas pela exploração particular ... (*ou* pela administração de Estado ...).
QRD	Para onde vai e donde vem?	Vou para ... e venho de ...
QRE	A que horas conta chegar a ... (*ou* por cima de ...) *(local)?*	Conto chegar a ... (*ou* por cima de ...) *(local)* às ... horas.
QRF	Volta a ... *(local)?*	Volto a ... *(local), ou* Volte a ... *(local).*
QRG	Quer indicar-me a minha frequência exacta (*ou* a frequência exacta de ...)?	A sua frequência exacta (*ou* frequência exacta de ...) é ... kHz (*ou* MHz).
QRH	A minha frequência varia?	A sua frequência varia.
QRI	Qual é a tonalidade da minha emissão?	A tonalidade da sua emissão é ... 1. Boa; 2. Variável; 3. Má.
QRJ	Quantos pedidos de conversação radiotelefónica tem pendentes?	Tenho ... pedidos de conversação radiotelefónica pendentes.
QRK	Qual é a inteligibilidade da minha transmissão [*ou* da transmissão de ... *(nome ou indicativo de chamada ou ambos)*]?	A inteligibilidade da sua emissão [*ou* da transmissão de ... *(nome ou indicativo de chamada ou ambos)*] é ... 1. Má; 2. Medíocre; 3. Suficiente; 4. Boa; 5. Excelente.

Abreviatura	Pergunta	Resposta ou parecer
QRL	Está ocupado?	Estou ocupado [*ou* estou ocupado com ... *(nome ou indicativo de chamada ou ambos)*]. É favor não interferir.
QRM	A minha emissão está interferida?	A sua emissão está interferida: 1. De modo nenhum; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.
QRN	Está sendo perturbado pelos atmosféricos?	Estou sendo perturbado pelos atmosféricos: 1. Nada; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.
QRO	Devo aumentar a potência de emissão?	Aumente a potência de emissão.
QRP	Devo diminuir a potência de emissão?	Diminua a potência de emissão.
QRQ	Devo transmitir mais depressa?	Transmita mais depressa (...palavras por minuto).
QRR	Está pronto para o emprego de aparelhos automáticos?	Estou pronto para o emprego de aparelhos automáticos. Transmita à velocidade de ... palavras por minuto.
QRS	Devo transmitir mais devagar?	Transmita mais devagar (... palavras por minuto).
QRT	Devo parar a transmissão?	Pare a transmissão.
QRU	Tem alguma coisa para mim?	Nada tenho para *si*.
QRV	Está pronto?	Estou pronto.
QRW	Devo avisar ... que o chamo em ... kHz (*ou* MHz)?	É favor avisar ... que o chamo em ... kHz (*ou* MHz).
QRX	Quando tornará a chamar-me?	Torno a chamá-lo às ... horas em ... kHz (*ou* MHz).
QRY	Qual é a minha vez? *(Refere-se às comunicações.)*	A sua vez é o número ... *(ou consoante qualquer outra indicação) (refere-se às comunicações).*
QRZ	Por quem estou sendo chamado?	Está sendo chamado por ... [em ... kHz (*ou* MHz)].
QSA	Qual é a intensidade dos meus sinais [*ou* dos sinais de ... *(nome ou indicativo de chamada ou ambos)*]?	A intensidade dos seus sinais [*ou* dos sinais de ... *(nome ou indicativo de chamada ou ambos)*] é: 1. Apenas perceptível; 2. Fraca; 3. Regular; 4. Boa; 5. Muito boa.
QSB	A intensidade dos meus sinais varia?	A intensidade dos seus sinais varia.
QSC	Sois uma estação de navio de pequno tráfego?	Sou uma estação de navio de pequeno tráfego.
QSD	Os meus sinais estão mutilados?	Os seus sinais estão mutilados.
QSE *	Qual é a deriva estimada do engenho de salvamento?	A deriva estimada do engenho de salvamento é ... *(algarismo e unidade).*
QSF *	Efectuou o salvamento?	Efectuei o salvamento e dirijo-me para a base de ... (com ... feridos necessitando de ambulância).
QSG	Devo transmitir ... telegramas seguidos?	Transmita ... telegramas seguidos.
QSH	Pode guiar-se pelo seu radiogoniómetro?	Posso guiar-me pelo meu radiogoniómetro [pela estação ... *(nome ou indicativo de chamada ou ambos)*].
QSI	—	Foi-me impossível interromper a sua transmissão. *ou* Queira informar ... *(nome ou indicativo de chamada ou ambos)* de que me foi impossível interromper a sua transmissão [em ... kHz (*ou* MHz)].
QSJ	Qual é a taxa a cobrar ... incluída a sua taxa interna?	A taxa a cobrar para ... é de ... francos, incluída a minha taxa interna.
QSK	Pode receber-me entre os seus sinais? Em caso afirmativo posso interrompê-lo na sua transmissão?	Posso recebê-lo entre os meus sinais; pode interromper a minha transmissão.
QSL	Pode dar-me o entendido?	Dou-lhe o entendido.
QSM	Devo repetir o último telegrama que lhe transmiti (*ou* um telegrama precedente)?	Repita o último telegrama que me transmitiu [*ou* o(s) telegrama(s) número(s) ...].
QSN	Ouviu-me [*ou* ouviu ... *(nome ou indicativo de chamada ou ambos)* em kHz (*ou* MHz)]?	Ouvi-o [*ou* ouvi ... *(nome ou indicativo de chamada ou ambos)* em ... kHz (*ou* MHz)].
QSO	Pode comunicar com ... *(nome ou indicativo de chamada ou ambos)* directamente (*ou* por *relais*)?	Posso comunicar com ... *(nome ou indicativo de chamada ou ambos)* directamente (*ou* por intermédio de ...).
QSP	Quer retransmitir gratuitamente a ... *(nome ou indicativo de chamada ou ambos)*?	Vou retransmitir gratuitamente a ... *(nome ou indicativo de chamada ou ambos).*
QSQ	Tem um médico a bordo [*ou* ... (nome de uma pessoa)]?	Tenho a bordo um médico [*ou* ... (nome de uma pessoa)].
QSR	Devo repetir a chamada na frequência de chamada?	Repita a chamada na frequência de chamada. Não o entendi (*ou* houve interferência).
QSS	Que frequência de trabalho vai utilizar?	Vou utilizar a frequência de trabalho ... kHz (*ou* MHz). *(Em ondas decamétricas bastará, como regra geral, indicar os três últimos algarismos da frequência).*
QSU	Devo retransmitir ou responder na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...)?	Transmita ou responda na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...).
QSV	Devo transmitir uma série de V (*ou* de sinais) para ajuste nesta frequência [*ou* em ... kHz (*ou* MHz)]?	Transmita uma série de V (*ou* de sinais) para regulação nesta frequência [*ou* em ... kHz (*ou* MHz)].
QSW	Quer transmitir na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...)?	Vou transmitir na frequência actual [*ou* em ... kHz (*ou* MHz)] (emissão da classe ...).

Abreviatura	Pergunta	Resposta ou parecer
QSX	Quer escutar ... *(nome ou indicativo de chamada ou ambos)* em ... kHz (*ou* MHz)?	Escuto ... *(nome ou indicativo de chamada ou ambos)* em ... kHz (*ou* MHz).
QSY	Devo passar à transmissão numa frequência?	Passe à transmissão noutra frequência [*ou* em ... kHz (*ou* MHz)].
QSZ	Devo transmitir cada palavra ou grupo várias vezes?	Transmita cada palavra ou grupo duas vezes (*ou* ... vezes).
QTA	Devo anular o telegrama (*ou* a mensagem) número ...?	Anule o telegrama (*ou* a mensagem) número ...
QTB	Está de acordo com a minha contagem de palavras?	Não estou de acordo com a sua contagem de palavras. Repito a primeira letra de cada palavra e o primeiro algarismo de cada número.
QTC	Quantos telegramas tem para transmitir?	Tenho ... telegramas para si [*ou* para ... *(nome ou indicativo de chamada ou ambos)*].
QTD *	Que recolheu o navio de salvamento ou a aeronave de salvamento?	... *(identificação)* recolheu: 1. ...*(número)* sobreviventes; 2. Destroços: 3. ... *(número)* cadáveres.
QTE	Qual o meu azimute VERDADEIRO em relação a si? *ou* Qual o meu azimute VERDADEIRO em relação a ... *(nome ou indicativo de chamada ou ambos)*? *ou* Qual o azimute VERDADEIRO de ... *(nome ou indicativo de chamada ou ambos)* em relação a ... *(nome ou indicativo de chamada ou ambos)*?	O seu azimute VERDADEIRO em relação a mim é de ... graus às ... horas. *ou* O seu azimute VERDADEIRO em relação a ... *(nome ou indicativo de chamada ou ambos)* era de ... graus às ... horas. *ou* O azimute VERDADEIRO de ... *(nome ou indicativo de chamada ou ambos)* em relação a ... *(nome ou indicativo de chamada ou ambos)* era de ... graus às ... horas.
QTF	Quer indicar-me a posição da minha estação na base dos azimutes tomados pelas estações radiogoniométricas que essa estação comanda?	A posição da sua estação na base dos azimutes tomados pelas estações radiogoniométricas que comando era ... latitude, ... longitude *(ou outra indicação da posição)*, classe ... às ... horas.
QTG	Quer transmitir dois traços de dez segundos cada um (*ou* a onda de suporte durante dois períodos de dez segundos), seguidos do seu indicativo de chamada (*ou* do seu nome) (repetidos ... vezes) em ... kHz (*ou* MHz)? *ou* Quer pedir a ... *(nome ou indicativo de chamada ou ambos)* que transmita dois traços de dez segundos (*ou* a portadora durante dois períodos de dez segundos) em seguida ao seu indicativo de chamada *(ou ao seu nome ou ambos)* (repetidos ... vezes) em ... kHz (*ou* MHz)?	Vou transmitir dois traços de dez segundos cada um (*ou* a onda de suporte durante dois períodos de dez segundos), em seguida o meu indicativo de chamada (*ou* o meu nome) (repetidas ... vezes) em ... kHz (*ou* MHz). *ou* Pedi a ... *(nome ou indicativo de chamada ou ambos)* que transmita dois traços de dez segundos (*ou* a portadora durante dois períodos de dez segundos), em seguida ao seu indicativo de chamada *(ou ao seu nome ou ambos)* (repetidos ... vezes) em ... kHz (*ou* MHz).
QTH	Qual é a sua posição em latitude e em longitude (*ou segundo qualquer outra indicação)?*	A minha posição é ... latitude, ... longitude *(ou segundo qualquer outra indicação).*
QTI *	Qual o seu caminho VERDADEIRO?	O meu caminho VERDADEIRO é de ... graus.
QTJ *	Qual a sua velocidade? *(Pede a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivamente.)*	A minha velocidade é de ... nós (*ou* de ... quilómetros por hora *ou* de ... milhas terrestres por hora). *(Indica a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivamente.)*
QTK *	Qual a velocidade da sua aeronave em relação à superfície terrestre?	A velocidade da minha aeronave é de ... nós (*ou* de ... quilómetros por hora *ou* de ... milhas terrestres por hora) em relação à superfície terrestre.
QTL *	Qual o seu rumo VERDADEIRO?	O meu rumo VERDADEIRO é de ... graus.
QTM *	Qual o seu rumo MAGNÉTICO?	O meu rumo MAGNÉTICO é de ... graus.
QTN	A que horas deixou ... *(local)?*	Deixei ... *(local)* às ... horas.
QTO	Saiu da doca (*ou* do porto)? *ou* Descolou?	Daí da doca (*ou* do porto). *ou* Descolei.
QTP	Vai entrar na doca (*ou* no porto)? *ou* Vai amarar (*ou* aterra)?	Vou entrar na doca (*ou* no porto). *ou* Vou amarar (*ou* aterrar).
QTQ	Pode continuar com a minha estação por meio do Código Internacional de Sinais (INTERCO)?	Vou comunicar com a sua estação por meio do Código Internacionalde Sinais (INTERCO).
QTR	Qual é a sua hora exacta?	A hora exacta é ...
QTS	Quer transmitir o seu indicativo da chamada (*ou* o seu nome *ou* ambos) durante ... segundos?	Vou transmitir o meu indicativo de chamada (*ou* o meu nome *ou* ambos) durante ... segundos.
QTT	—	O sinal de identificação que se segue está sobreposto a outra emissão.
QTU	Quais as horas em que a sua estação está aberta?	A minha estação está aberta das ... às ... horas.
QTV	Devo tomar a escuta em seu lugar na frequência ... kHz (*ou* MHz) das ... às ... horas?	Tome a escuta em meu lugar na frequência ... kHz (*ou* MHz) das ... às ... horas.
QTW *	Qual o estado dos sobreviventes?	Os sobreviventes estão em ... estado e necessitam urgentemente de ...
QTX	Quer deixar a sua estação aberta para comunicar com a minha até novo aviso da minha parte (*ou* até às ... horas)?	A minha estação fica aberta para comunicar com a sua até novo aviso da sua parte (*ou* até às ... horas).
QTY *	Dirige-se para o local do acidente e, no caso afirmativo, quando pensa chegar?	Dirijo-me para o local do acidente e penso chegar às ... horas (... *data*).
QTZ *	Continua a busca?	Continuo a busca de ... (aeronave, navio, engenho de salvamento, sobreviventes, destroços).
QUA	Tem notícias de ... *(nome ou indicativo de chamada ou ambos).*	Eis notícias de ... *(nome ou indicativo de chamada ou ambos).*

Abreviatura	Pergunta	Resposta ou parecer
QUB*	Pode dar-me, pela ordem indicada, informações sobre a direcção VERDADEIRA e a velocidade do vento à superfície; a visibilidade, o estado do tempo, a grandeza, tipo e altura da base das nuvens por cima de ... *(local de observação)?*	As informações pedidas são ... *(Convém indicar as unidades utilizadas para as velocidades e as distâncias.)*
QUC	Qual o número *(ou outra indicação)* da última mensagem que recebeu de mim [*ou* de ... *(nome ou indicativo de chamada ou ambos)*]?	O número *(ou outra indicação)* da última mensagem que recebi de si [*ou* de ... *(nome ou indicativo de chamada ou ambos)*] é ...
QUD	Recebeu o sinal de urgência transmitido por ... *(nome ou indicativo de chamada ou ambos)*?	Recebi o sinal de urgência transmitido por ... *(nome ou indicativo de chamada ou ambos)* às ... horas.
QUE	Pode conversar em ... *(língua)*, com um intérprete se necessário? Caso afirmativo em que frequência?	Posso conversar em ... *(língua)* em ... kHz (*ou* MHz).
QUF	Recebeu o sinal de perigo emitido por ... *(nome ou indicativo de chamada ou ambos)*?	Recebi o sinal de perigo emitido por ... *(nome ou indicativo de chamada ou ambos)* às ... horas.
QUH *	Quer indicar-me a pressão barométrica actual ao nível do mar?	A pressão barométrica actual ao nível do mar é de ... *(unidades)*.
QUM	Posso recomeçar o trabalho normal?	Pode-se recomeçar o trabalho normal.
QUN	1. *Feita a todas as estações:* Os navios na minha vizinhança imediata *ou* (na vizinhança de ... latitude, ... longitude) *ou* (na vizinhança de ...) podem indicar-me a sua posição, rumo VERDADEIRO e velocidade?	A minha posição, o meu rumo VERDADEIRO e a minha velocidade são ...
	2. *Feita a uma só estação:* Quer indicar a sua posição, rumo verdadeiro e velocidade?	
QUO *	Devo proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento na vizinhança de ... latitude, ... longitude; *(ou segundo qualquer outra indicação)?*	Queira proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento na vizinhança de ... latitude, ... longitude; *(ou segundo qualquer outra indicação).*
QUP *	Quer indicar a sua posição por: 1. Projector? 2. Fumo negro? 3. Luzes pirotécnicas?	A minha posição é indicada por: 1. Projector; 2. Fumo negro; 3. Luzes pirotécnicas.
QUR *	Os sobreviventes: 1. Receberam o equipamento de salvamento? 2. Foram recolhidos por um navio? 3. Foram alcançados pelo grupo de salvamento no solo?	Os sobreviventes: 1. Receberam o equipamento de salvação lançado por ...; 2. Foram recolhidos por um navio; 3. Foram lançados pelo grupo de salvamento no solo.
QUS *	Avistou sobreviventes ou destroços? Se sim, em que local?	Avistei: 1. Sobreviventes na água; 2. Sobreviventes em jangadas; 3. Destroços em ... latitude, ... longitude *(ou segundo qualquer outra indicação).*
QUT *	O local do acidente está assinalado?	O local do incidente está assinalado por: 1. Facho ou bóia fumígena; 2. Baliza marítima; 3. Produto corante; 4. ... *(outro dispositivo a especificar).*
QUU *	Devo dirigir o navio ou a aeronave até à minha posição?	Dirija o navio ou a aeronave ... *(nome ou indicativo de chamadas ou ambos):* 1. Para a sua posição, transmitindo o vosso indicativo de chamada e traços prolongados em ... kHz (*ou* MHz). 2. Transmitindo em ... kHz (*ou* MHz) o rumo VERDADEIRO para para vos alcançarem.
QUW *	Está na zona de busca ... *(símbolo ou latitude e longitude)*?	Estou na zona de busca ... *(designação).*
QUX	Possui alguns avisos relativos à navegação ou a uma tempestade?	Possuo o(s) aviso(s) seguinte(s) relativo(s) à navegação ou a uma tempestade.
QUY *	A posição do engenho de salvamento foi assinalada?	A posição do engenho de salvamento foi assinalada às ... horas por: 1. Facho ou bóia fumígena; 2. Bóia; 3. Produto corante; 4. ... *(outro dispositivo a especificar).*
QUZ	Posso retomar o funcionamento restrito?	Procedimento de perigo ainda em vigor, pode ser retomado o funcionamento restrito.

B) Lista das abreviaturas consoante a natureza das perguntas, respostas ou pareceres

Abreviatura	Pergunta	Resposta ou parecer
	Nome	
QRA	Qual é o nome do seu navio (*ou* da sua estação)?	O nome do meu navio (*ou* da minha estação) é ...
	Percurso	
QRD	Para onde vai e donde vem?	Vou para ... e venho de ...
	Posição	
QRB	A que distância aproximada se encontra da minha estação?	A distância entre as nossas estações é de ... milhas marítimas (*ou* quilómetros).
QTH	Qual é a sua posição em latitude e longitude (*ou segundo qualquer outra indicação*)?	A minha posição é ... latitude ... longitude (*ou segundo qualquer outra indicação*).
QTN	A que horas deixou ... (*local*)?	Deixei... (*local*) às ... horas.
	Qualidade dos sinais	
QOF	Qual é a qualidade comercial dos meus sinais?	A qualidade dos seus sinais é: 1. Não comercial; 2. Minimamente comercial; 3. Comercial.
QRI	Qual é a tonalidade da minha emissão?	A tonalidade da sua emissão é: 1. Boa; 2. Variável; 3. Má.
QRK	Qual é a inteligibilidade da minha transmissão [*ou* da transmissão de ... (*nome ou indicativo de chamada ou ambos*)]?	A inteligibilidade da sua transmissão [*ou* da transmissão de ... (*nome ou indicativo de chamada ou ambos*)]?: 1. Má; 2. Mediocre; 3. Suficiente; 4. Boa. 5. Excelente.
	Intensidade dos sinais	
QRO	Devo aumentar a potência de emissão?	Aumente a potência de emissão.
QRP	Devo diminuir a potência de emissão?	Diminua a potência de emissão.
QSA	Qual é a intensidade dos meus sinais (*ou* dos sinais de ... (*nome ou indicativo de chamada ou ambos*)]?	A intensidade dos seus sinais (*ou* sinais de ... (*nome ou indicativo de chamada ou ambos*)] é: 1. Apenas perceptível; 2. Fraca; 3. Regular; 4. Boa; 5. Muito boa.
QSB	A intensidade dos meus sinais varia?	A intensidade dos seus sinais varia.
	Manipulação	
QRQ	Devo transmitir mais depressa?	Transmita mais depressa (...palavra por minuto).
QRR	Está pronto para o emprego de aparelhos automáticos?	Estou pronto para o emprego de aparelhos automáticos. Transmita à velocidade de ... palavras por minuto.
QRS	Devo transmitir mais devagar?	Transmita mais devagar (... palavras por minuto).
QSD	Os meus sinais estão mutilados?	Os seus sinais estão mutilados.
	Interferências	
QRM	A minha emissão está interferida?	A sua emissão está interferida ... 1. A sua emissão não está interferida; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.

Abreviatura	Pergunta	Resposta ou parecer
QRN	Está a ser perturbado por atmosféricos?	Estou a ser perturbado por atmosféricos ... 1. Não estou a ser perturbado por atmosféricos; 2. Fracamente; 3. Moderadamente; 4. Fortemente; 5. Muito fortemente.
	Regulação da frequência	
QRG	Quer indicar-me a minha frequência exacta (*ou* a frequência exacta de ...)?	A sua frequência exacta (*ou* a frequência exacta de ...) é ... kHz (*ou* MHZ).
QRH	A minha frequência varia?	A sua frequência varia.
QTS	Quer transmitir o seu indicativo de chamada (*ou* o seu nome *ou ambos*) durante ... segundos?	Vou transmitir o meu indicativo de chamada (*ou* o meu nome *ou ambos*) durante ... segundos.
	Escolha da frequência e ou da classe de emissão	
QSN	Ouviu-me [*ou* ouviu ... *(nome ou indicativo de chamada ou ambos)*] em kHz (*ou* MHz)?	Ouviu-o [*ou* ouvi ... *(nome ou indicativo de chamada ou ambos)*] em kHz (*ou* MHz).
QSS	Que frequência de trabalho vai utilizar?	Vou utilizar a frequência de trabalho ... kHz (*ou* MHz) *(em ondas decamétricas, regra geral, bastará indicar os três últimos algarismos da frequência).*
QSU	Devo transmitir ou responder na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...)?	Transmita ou responda na frequência actual [*ou* em ... kHz, (*ou* MHz)] (em emissão da classe ...).
QSV	Devo transmitir uma série de V (*ou* de sinais) para regulação nesta frequência [*ou* em ... kHz (*ou* MHz)]?	Transmita uma série de V (*ou* de sinais) para regulação nesta frequência [*ou* em ... kHz, (*ou* MHz).
QSW	Quer transmitir na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...)?	Vou transmitir na frequência actual [*ou* em ... kHz (*ou* MHz)] (em emissão da classe ...).
QSX	Quer escutar ... *(nome ou indicativo de chamada ou ambos)* em ... kHz (*ou* MHz) ou nas faixas .../vias ...?	Escuto ... *(nome ou indicativo de chamada ou ambos)* em ... kHz (*ou* MHz) ou nas faixas .../vias ...
	Mudança de frequência	
QSY	Devo passar à transmissão noutra frequência?	Passe à transmissão noutra frequência [*ou* em ...kHz (*ou* MHz)].
	Estabelecimento da comunicação	
QOA	Pode comunicar em radiotelegrafia (500 kHz)?	Posso comunicar em radiotelegrafia (500 kHz)?
QOB	Pode comunicar em radiotelefonia (2182 kHz)?	Posso comunicar em radiotelefonia (2182 kHz)?
QOC	Pode comunicar em radiotelefonia (via 16 — frequência de 156,80 MHz)?	Posso comunicar em radiotelefonia (via 16 — frequência de 156,80 MHz)?
QOD	Pode comunicar comigo em: 0. Holandês? 1. Inglês? 2. Francês? 3. Alemão? 4. Grego? 5. Italiano? 6. Japonês? 7. Norueguês? 8. Russo? 9. Espanhol?	Posso comunicar consigo em: 0. Holandês; 1. Inglês; 2. Francês; 3. Alemão; 4. Grego; 5. Italiano; 6. Japonês; 7. Norueguês; 8. Russo; 9. Espanhol.
QOT	Está a ouvir a minha chamada? Quanto tempo (em minutos aproximadamente devo esperar antes de podermos permutar tráfego?	Estou a ouvir a sua chamada. Espere ... minutos aproximadamente.
QRL	Está ocupado?	Estou ocupado [*ou* estou ocupado com ...*(nome ou indicativo de chamada ou ambos)*]. É favor não interferir.
QRV	Está pronto?	Estou pronto.
QRX	Quando me tornará a chamar?	Torno a chamá-lo às ... horas [em ... kHz (*ou* MHz)].
QRY	Qual é a minha vez? *(Refere-se às comunicações.)*	O número da sua vez é ... *(ou segundo qualquer outra indicação). (Refere-se às comunicações.)*
QRZ	Por quem estou sendo chamado?	Está sendo chamado por ... [em ... kHz (*ou* MHz)].
QSC	Sois uma estação de navio de tráfego fraco?	Sou uma estação de navio de tráfego fraco.
QSR	Devo repetir a chamada na frequência de chamada?	Repita a chamada na frequência de chamada. Não o ouvi (*ou* houve interferência).
QTQ	Pode comunicar com a minha estação por meio do Código Internacional de Sinais?	Vou comunicar com a sua estação por meio do Código Internacional de Sinais.
QUE	Pode conservar em ... *(língua)*, com intérprete, se necessário? Caso afirmativo, em que frequências?	Posso conversar em ... *(língua)*, em ... kHz (*ou* MHz).

Abreviatura	Pergunta	Resposta ou parecer
	Chamadas selectivas	
QOL	O seu navio pode receber chamadas selectivas? Caso afirmativo, qual é o seu número ou sinal de chamada selectiva?	O meu navio pode receber chamadas selectivas. O seu número ou sinal de chamada selectiva é ...
QOM	Quais as frequências a utilizar para que o seu navio receba uma chamada selectiva?	A ou as frequências a utilizar para uma chamada selectiva são as seguintes ... (se necessário, indicar também os períodos de tempo apropriados).
	Hora	
QTR	Qual é a hora exacta?	A hora exacta é ...
QTU	Quais as horas em que a sua estação está aberta?	A minha estação está abertas das ... às ... horas.
	Taxas	
QRC	Por que exploração (*ou* administração do Estado) se liquidam as contas das taxas da sua estação?	As contas das taxas da minha estação são liquidadas pela exploração particular ... (*ou* pela administração do Estado ...).
QSJ	Qual é a taxa a cobrar para ..., incluída a sua taxa interna?	A taxa a cobrar para ... é de ... francos, incluída a minha taxa interna.
	Trânsito	
QRW	Devo avisar ... que o chama em ... kHz (*ou* MHz)?	É favor avisar ... que o chamo em ... kHz (*ou* MHz).
QSO	Pode comunicar com ... *(nome ou indicativo de chamada ou ambos)* directamente (*ou* por *relais*)?	Posso comunicar com ... *(nome ou indicativo de chamada ou ambos)* directamente (*ou* por *relais* por intermédio de ...).
QSP	Quer retransmitir gratuitamente a ... *(nome ou indicativo de chamada ou ambos)*?	Vou retransmitir gratuitamente a ... *(nome ou indicativo de chamada ou ambos).*
QSQ	Tem médico a bordo [*ou* ... *(nome de uma pessoa)*]?	Tenho um médico a bordo [*ou* ... *(nome de uma pessoa)*].
QUA	Tem notícias de ... *(nome ou indicativo de chamada ou ambos)?*	Eis notícias de ... *(nome ou indicativo de chamada ou ambos).*
QUC	Qual é o número *(ou outra indicação)* da última mensagem que recebeu de mim [*ou* de ... *(nome ou indicativo de chamada ou ambos)*]?	O número (*ou outra indicação*) da última mensagem que recebi de si [*ou* de ... *(nome ou indicativo de chamada ou ambos)*] é ...
	Encaminhamento da correspondência	
QOG	Quantas fitas tem para transmitir?	Tenho ... fitas para transmitir.
QOH	Devo transmitir um sinal de ajuste de fase durante ... segundos?	Emita um sinal de ajuste de fase durante ... segundos.
QOI	Devo transmitir a minha fita?	Transmita a sua fita.
QRJ	Quantos pedidos de conversação radiotelefónica tem pendentes?	Tenho ... pedidos de conversação radiotelefónica pendentes.
QRU	Tem alguma coisa para mim?	Nada tenho para si.
QSG	Devo transmitir ... telegramas seguidos?	Transmita ... telegramas seguidos.
QSI		Foi-me impossível interromper a sua transmissão. *ou* Queira informar ... *(nome ou indicativo de chamada ou ambos)* que me foi impossível interromper a sua transmissão [em ... kHz (*ou* MHz)].
QSK	Pode receber-me entre os seus sinais? Em caso afirmativo, posso interromper a sua transmissão?	Posso recebê-lo entre os meis sinais, pode interromper a minha transmissão.
QSL	Pode dar-me o entendido?	Dou-lhe o entendido.
QSM	Devo repetir o último telegrama que lhe transmitiu (*ou* um telegrama precedente)?	Repita o último telegrama que me transmitiu [*ou* o(s) telegrama(s) número(s) ...].
QSZ	Devo transmitir cada palavra ou grupo várias vezes?	Transmita cada palavra ou grupo duas vezes (*ou* ... vezes).
QTA	Devo anular o telegrama (*ou* a mensagem) número ...?	Anule o telegrama (*ou* mensagem) número ...
QTB	Está de acordo com a minha contagem de palavras?	Não estou de acordo com a sua contagem de palavras. Repito a primeira letra de cada palavra e o primeiro algarismo de cada número.
QTC	Quantos telegramas tem para transmitir?	Tenho ... telegramas para si *ou* para ... *(nome ou indicativo de chamada ou ambos)*].
QTV	Devo tomar a escuta em seu lugar na frequência ... kHz (*ou* MHz) (das ... às ... horas)?	Tome a escuta em meu lugar na frequência ... kHz (*ou* MHz) (das ... às ... horas).
QTX	Quer deixar a sua estação aberta para comunicar com a minha até novo aviso da minha parte (*ou* até às ... horas)?	A minha estação fica aberta para comunicar com a sua até novo aviso da sua parte (*ou* até às ... horas).
	Movimento	
QRE	A que horas conta chegar a ... (*ou* por cima de ...) *(local)*?	Conto chegar a ... (*ou* por cima de ...) *(local)* às ... horas.
QRF	Volta a ... *(local)*?	Volto a ... *(local) ou* volte a ... *(local).*
QSH	Pode guiar-se pelo seu radiogoniómetro?	Posso guiar-me pelo meu radiogoniómetro (por ...) *(nome ou indicativo de chamada ou ambos).*
QTI	Qual o seu caminho VERDADEIRO?	O meu caminho VERDADEIRO é de ... graus.
QTJ *	Qual é a sua velocidade? *(Pede a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivamente.)*	A minha velocidade é de ... nós (*ou* de ... quilómetros por hora *ou* de ... milhas terrestres por hora). *(Indica a velocidade do navio ou da aeronave em relação à água ou ao ar, respectivamente).*

Abreviatura	Pergunta	Resposta ou parecer
QTK *	Qual é a velocidade da sua aeronave em relação à superfície da Terra?	A velocidade da minha aeronave é de ... nós (*ou* de ... quilómetros por hora, *ou* de ... milhas terrestres por hora) em relação à superfície da Terra.
QTL *	Qual é o seu rumo VERDADEIRO?	O meu rumo VERDADEIRO é de ... graus.
QTM *	Qual é o seu rumo MAGNÉTICO?	O meu rumo MAGNÉTICO é de ... graus.
QTN	A que horas deixou ... *(local)*?	Deixei ... *(local)* às ... horas.
QTO	Saiu da doca (*ou* do porto)? *ou* Descolou?	Saí da doca (*ou* do porto). *ou* Descolei.
QTP	Vai entrar na doca (*ou* no porto)? *ou* Vai amarar (*ou* aterrar)?	Vou entrar na doca (*ou* no porto). *ou* Vou amarar (*ou* aterrar).
QUN	1. *Feita a todas as estações:* Os navios na minha vizinhança imediata *ou* (na vizinhança de ... latitude, ... longitude) *ou* (na vizinhança de ...) podem indicar-me a sua posição, rumo VERDADEIRO e velocidade. 2. *Feita só a uma estação:* Queira indicar-me a sua posição, rumo VERDADEIRO e velocidade.	A minha posição, meu rumo VERDADEIRO e velocidade são ...
	Meteorologia	
QUB *	Pode dar-me, pela ordem indicada, informações sobre a direcção VERDADEIRA, em graus, e a velocidade do vento à superfície; visibilidade, estado do tempo, grandeza, tipo e altura da base das nuvens por cima de ... *(local de observação)*?	As informações pedidas são: *(Convém indicar as unidades utilizadas para as velocidades e distâncias.)*
QUH *	Quer indicar-me a pressão barométrica actual ao nível do mar?	A pressão barométrica actual ao nível do mar é de ... *(unidades)*.
QUX	Possui alguns avisos relativos à navegação ou a uma tempestade?	Possuo o(s) aviso(s) seguinte(s) relativo(s) à navegação ou a uma tempestade ...
	Radiogoniometria	
QTE	Qual o meu azimute VERDADEIRO em relação a si? *ou* Qual o meu azimute VERDADEIRO em relação a ... *(nome ou indicativo de chamada ou ambos)*? *ou* Qual o azimute VERDADEIRO de ... *(nome ou indicativo de chamada ou ambos)* em relação a ... *(nome ou indicativo de chamada ou ambos)*?	O seu azimute VERDADEIRO em relação a mim é de ... graus às ... horas. *ou* O seu azimute VERDADEIRO em relação a ... *(nome ou indicativo de chamada ou ambos)* era de ... graus às ... horas. *ou* O azimute VERDADEIRO de ... *(nome ou indicativo de chamada ou ambos)* era de ... graus às ... horas.
QTF	Quer indicar-me a minha posição na base dos azimutes tomados pelas estações radiogoniométricas que essa estação comanda?	A posição na base dos azimutes tomados pelas estações radiogoniométricas que comando era ... latitude, ... longitude *(ou outra indicação da posição)*, classe ... às ... horas.
QTG	Quer transmitir dois traços de dez segundos cada um (*ou* a portadora durante dois períodos de dez segundos) seguidos do seu indicativo de chamada (*ou* do seu nome) (repetidos ... vezes) [em ... kHz (*ou* MHz)? *ou* Quer pedir a ... *(nome ou indicativo de chamada ou ambos)* que transmita dois traços de dez segundos (*ou* a portadora durante dois períodos de dez segundos) seguidos do seu indicativo de chamada *(ou do seu nome ou de ambos)* (repetidos ... vezes) em ... kHz (*ou* MHz)?	Vou transmitir dois traços de dez segundos cada um (*ou* a portadora durante dois períodos de dez segundos) seguidos do meu indicativo de chamada (*ou* do meu nome) (repetidos ... vezes) em ... kHz (*ou* Mhz)? *ou* Pedi a ... *(nome ou indicativo de chamada ou ambos)* que transmita dois traços de dez segundos (*ou* a portadora durante dois períodos de dez segundos) seguidos do seu indicatuvo de chamada *ou do seu nome ou de ambos)* (repetidos ... vezes) em ... kHz (*ou* MHz)?
	Suspensão dos trabalhos	
QRT	Devo parar a transmissão?	Pare a transmissão.
QUM	Posso recomeçar o trabalho normal?	Pode recomeçar o trabalho normal.
QUZ	Posso retomar o trabalho restrito?	Procedimento de perigo ainda em vigor; pode ser retomado o trabalho restrito.
	Segurança	
QOE	Recebeu o sinal de segurança transmitido por ... *(nome ou indicativo de chamada ou ambos)*?	Recebi o sinal de urgência transmitido por ... *(nome ou indicativo de chamada ou ambos)*.
QUX	Posui alguns avisos relativos à navegação ou a uma tempestade?	Possuo o(s) aviso(o) seguinte(s) relativo(s) à navegação ou a uma tempestade ...

Abreviatura	Pergunta	Resposta ou parecer
	Urgência	
QUD	Recebeu o sinal de urgência transmitido por ... *(nome ou indicativo de chamada ou ambos)*?	Recebi o sinal de urgência transmitido por ... *(nome ou indicativo de chamada ou ambos)* às ... horas.
	Perigo	
QOJ	Quer escutar na frequência ... kHz (*ou* MHz) sinais de radiobalizas de localização de sinistros?	Escuto a frequência ... kHz (*ou* MHz) sinais de radiobalizas de localização de sinistros).
QOK	Recebeu na frequência ... kHz (*ou* MHz) sinais de radiobalizas de localização de sinistros?	Recebi na frequência ... kHz (*ou* MHz) sinais de radiobalizas de localização de sinistros?
QUF	Recebeu o sinal de perigo emitido por ... *(nome ou indicativo de chamada ou ambos)*?	Recebeu o sinal de perigo emitido por ... *(nome ou indicativo de chamada ou ambos)* às ... horas.
QUM	Posso recomeçar o trabalho normal?	Pode-se recomeçar o trabalho normal.
QUZ	Posso retomar o trabalho restrito?	Procedimento de perigo ainda em vigor; pode ser retomado o trabalho restrito.
	Busca e salvamento	
QSE *	Qual é a deriva estimada do engenho de salvamento?	A deriva estimada do engenho de salvamento é ... *(algarismo e unidade)*.
QSF *	Efectuou o salvamento?	Efectuei o salvamento e dirijo-me para a base de ... (com ... feridos necessitando de ambulância).
QTD *	Que recolheu o navio de salvamento *ou* a aeronave de salvamento?	... *(identificação)* recolheu: 1. ... *(número)* de sobreviventes; 2. Destroços; 3. ... *(número)* cadáveres.
QTW *	Qual é o estado dos sobreviventes?	Os sobreviventes estão em ... estado e necessitam urgentemente de ...
QTY *	Dirige-se para o local do acidente e, no caso afirmativo, quando pensa chegar?	Dirijo-me para o local do acidente e penso chegar às ... horas *(... data)*
QTZ *	Continua a busca?	Continuo a busca de ... (aeronave, navio, engenho de salvamento, sobreviventes, destroços).
QUN	1. *Posta a todas as estações:* Os navios na minha vizinhança imediata *ou* (na vizinhança de ... latitude ... longitude *ou* (na vizinhança de ...) podem indicar-me a sua posição, rumo VERDADEIRO e velocidade?	A minha posição, rumo VERDADEIRO e velocidade são ...
	2. *Posta só a uma estação:* Queira indicar-me a sua posição, rumo VERDADEIRO e velocidade.	
QUO *	Devo proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento; na vizinhança de ... latitude, ... longitude *(ou segundo qualquer outra indicação)*?	Queira proceder à busca de: 1. Uma aeronave; 2. Um navio; 3. Um engenho de salvamento; na vizinhança de ... latitude, ... longitude *(ou segundo qualquer outra indicação)*.
QUP *	Quer indicar a sua posição por: 1. Projecto? 2. Fumo negro? 3. Luzes pirotécnicas?	A minha posição é indicada por: 1. Projector; 2. Fumo negro; 3. Luzes pirotécnicas.
QUR *	Os sobreviventes: 1. Receberam o equipamento de salvamento? 2. Foram recolhidos por um navio? 3. Foram alcançados pelo grupo de salvamento em terra?	Os sobreviventes: 1. Receberam o equipamento de salvamento lançado por ... 2. Foram recolhidos por um navio; 3. Foram alcançados pelo grupo de salvamento em terra.
QUS *	Avistou sobreviventes ou destroços? Na hipótese afirmativa, em que local?	Avistei: 1. Sobreviventes na água; 2. Sobreviventes em jangadas; 3. Destroços em ... latitude, ... longitude *(ou segundo qualquer outra indicação)*.

Abreviatura	Pergunta	Resposta ou parecer
QUT *	O local do acidente está assinalado?	O local do acidente está assinalado por: 1. Facho ou bóia fumígena; 2. Bóia; 3. Produto corante; 4. ... *(outro dispositivo a especificar).*
QUU *	Devo dirigir o navio ou a aeronave até à minha posição?	Dirija o navio ou a aeronave *(nome ou indicativo de chamada ou ambos)*: 1. Para a sua posição, transmitindo o vosso indicativo de chamada e traços prolongados em ... kHz (*ou* MHz); 2. Transmitindo em ... kHz (*ou* MHz) o rumo VERDADEIRO para vos alcançar.
QUW * QUY *	Está na zona de busca... *(símbolo ou latitude e longitude)*? A posição do engenho de salvamento foi assinalada?	Estou na zona de busca ... *(designação).* A posição do engenho de salvamento foi assinalada às ... horas por: 1. Facho ou bóia fumígena; 2. Bóia; 3. Produto corante; 4. ... *(outro dispositivo a especificar).*
QUZ	Posso retomar o trabalho restrito?	Procedimento de perigo ainda em vigor; pode ser retomado o trabalho restrito.
	Identificação	
QTT	—	O sinal de identificação que se segue está sobreposto a outra emissão.

SECÇÃO II

Abreviaturas e sinais diversos

Abreviatura ou sinal	Definição
AA	Tudo depois de ... *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
AB	Tudo antes de ... *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
ADS	Endereço *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
AR	Fim de transmissão.
AS	Espera.
BK	Sinal empregado para interromper uma transmissão em curso.
BN	Tudo entre ... e ... *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
BQ	Resposta a RQ.
BT	Sinal de separação entre as diferentes partes de uma mesma transmissão.
C	Sim *(resposta afirmativa), ou então:* o grupo que precede deve ser considerado como uma afirmação.
CFM	Confirme (*ou* confirmo).
CL	Vou fechar a minha estação.
COL	Confira (*ou* confiro).
CORRECTION	Anule a minha última palavra *ou* grupo. Dou a seguir a palavra ou grupo correctos *(utilizado em radiotelefonia e pronunciado* KOR-REK-CHÉUN).
CP	Chamada geral a várias estações específicas *(v. o artigo 63).*
CQ	Chamada geral a todas as estações.
CS	Indicativo de chamada *(empregado para pedir o indicativo de chamada).*
DE	De *(utilizado antes do nome ou de qualquer outra identificação da estação que chama).*
DF	O seu azimute às ... horas era de ... graus, no sector duvidoso desta estação, um erro possível de ... graus.

Abreviatura ou sinal	Definição
DO	Azimute duvidoso. Peça um azimute mais tarde (*ou* às ... horas).
E	Este *(ponto cardeal)* (*v. o n.º* **3098**).
ETA	Hora estimada da chegada.
INTERCO	Seguem grupos do Código Internacional de Sinais *(utilizado em radiotelefonia e pronunciado IN-TER-CO).*
K	Convite para transmitir.
KA	Sinal de começo de transmissão.
KTS	Milhas marítimas por hora *(nós).*
MIN	Minuto (*ou* minutos).
MSG	Prefixo que indica uma mensagem com destino ou proveniente do comandante de um navio relativa à exploração do navio ou à sua navegação.
N	Norte *(ponto cardeal)* (*v. o n.º* **3098**).
NIL	Nada tenho para lhe transmitir.
NO	Não *(negação).*
NW	Agora.
NX	Aviso à navegação marítima (*ou* segue aviso à navegação marítima).
OK	Estamos de acordo (*ou* está certo).
OL	Carta transoceânica.
P	Prefixo que indica um radiotelegrama particular.
PBL	Preâmbulo *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
PSE	Por favor.
R	Recebido.
REF	Referência a ... (*ou* refira-se a ...).
RPT	Repita (*ou* repito) (*ou* repitam ...).
RQ	Idicação de um pedido.
S	Sul *(ponto cardeal)* (*v. o n.º* **3098**).
SIG	Assinatura *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
SLT	Carta radiomarítima.
SVC	Prefixo que indica um telegrama de serviço.
SYS	Refira-se ao seu telegrama de serviço.
TFC	Tráfego.
TR	Utilizado por uma estação terrestre para pedir a posição e o próximo porto de escala de uma estação móvel (*v. os n.ºs* **4741** e **4942**); utilizado igualmente como prefixo à resposta.
TU	Muito obrigado.
TXT	Texto *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
VA	Fim do trabalho.
W	Oeste *(ponto cardeal)* (*v. o n.º* **3098**).
WA	Palavra depois de ... *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
WB	Palavra antes de ... *[a empregar depois de um ponto de interrogação em radiotelegrafia ou depois de RQ em radiotelefonia (em caso de dificuldades linguísticas) ou depois de RPT, para pedir uma repetição].*
WD	Palavra(*s*) ou grupo(*s*).
WX	Boletim meteorológico (*ou* segue o boletim meteorológico).
XQ	Prefixo que indica a transmissão de uma nota de serviço.
YZ	As palavras que seguem são em linguagem clara.

Nota. — Em radiotelefonia, um traço horizontal sobre as letras que compõem um sinal significa que essas letras devem ser transmitidas como um só sinal.

APÊNDICE 15

Códigos SINPO e SINPFEMO

(V. o parecer n.º 251 da CCIR)

Código SINPO

Escala	S	I	N	P	O
	Intensidade do sinal	Efeitos prejudiciais			Apreciação de conjunto
		Interferência	Ruído	Perturbações da propagação	
5	Excelente.	Nula.	Nulo.	Nulas.	Excelente.
4	Boa.	Ligeira.	Ligeiro.	Ligeiras.	Bom.
3	Satisfatória.	Moderada.	Moderado.	Moderadas.	Satisfatório.
2	Medíocre.	Severa.	Severo.	Severas.	Medíocre.
1	Dificilmente audível.	Muito grave.	Muito grave.	Muito graves.	Inutilizável.

Código SINPFEMO

Escala	S	I	N	P	F	E	M	O
	Intensidade do sinal	Efeitos prejudiciais			Frequência dos desvanecimentos	Modulação		Apreciação de conjunto
		Interferência	Ruído	Perturbações da propagação		Qualidade	Taxa	
5	Excelente.	Nula.	Nulo.	Nulas.	Nula.	Excelente.	Máxima.	Excelente.
4	Boa.	Ligeira.	Ligeiro.	Ligeiras.	Lenta.	Boa.	Boa.	Boa.
3	Satisfatória.	Moderada.	Moderado.	Moderadas.	Moderada.	Satisfatória.	Satisfatória.	Satisfatória.
2	Medíocre.	Severa.	Severo.	Severas.	Rápida.	Medíocre.	Medíocre ou nula.	Medíocre.
1	Dificilmente audível.	Muito grave.	Muito grave.	Muito graves.	Muito rápida.	Muito medíocre.	Sobremodulada permanentemente.	Inutilizável.

Observações especiais:

a) Uma informação em código será formada pela palavra SINPO ou SINPFEMO seguida de um grupo de 5 ou 8 algarismos, que descrevem, respectivamente, as 5 ou 8 características que figuram no código correspondente;

b) Para as características que não foram avaliadas utilizar-se-á a letra X em vez de um algarismo;

c) Se bem que o código SINPFEMO tenha sido previsto para a radiotelefonia, pode ser utilizado para a radiotelegrafia;

d) A apreciação de conjunto para a radiotelegrafia deve ser interpretada como se indica seguidamente nos quadros I e II:

QUADRO I

Apreciação de conjunto	Telegrafia automática
5. Excelente	*Multiplex*, quatro vias, com repartição no tempo.
4. Bom	*Multiplex*, duas vias, com repartição no tempo.
3. Satisfatório	Quase comercial, em sistema arrítmico, a uma via.
2. Medíocre	BK, XQ e indicativos legíveis.
1. Inutilizável	Ilegível.

QUADRO II

Apreciação de conjunto	Telegrafia morse
5. Excelente	Grande velocidade.
4. Bom	100 palavras por minuto.
3. Satisfatório	50 palavras por minuto.
2. Medíocre	BK, XQ e indicativos legíveis.
1. Inutilizável	Ilegível.

e) A apreciação de conjunto para a telefonia deve ser interpretada como se indica no quadro III:

QUADRO III

Apreciação de conjunto	Condições de recepção	Qualidade
5. Excelente	Sinal sem defeito	Comercial.
4. Bom	Sinal com ligeiros defeitos	
3. Sofrível	Sinal com graves defeitos. Via utilizável por operadores ou por assinantes experientes.	No limite comercial.
2. Medíocre	Via apenas utilizável por operadores	Não comercial.
1. Inutilizável	Via inutilizável por operadores	

APÊNDICE 16

Vias radiotelefónicas nas faixas do serviço móvel marítimo compreendidas entre 4000 kHz e 23 000 kHz

(V. o artigo 60, secção IV)

1. A distribuição das vias radiotelefónicas a utilizar pelas estações costeiras e pelas estações de navio nas faixas atribuídas ao serviço móvel marítimo está indicada nas duas secções seguintes:

Secção A — quadro das frequências de emissão em faixa lateral única para a exploração dúplex (vias a duas frequências), em kHz;

Secção B — quadro das frequências de emissão em faixa lateral única para a exploração *simplex* (vias a uma frequência) e para a exploração de faixas cruzadas entre navios (duas frequências), em kHz.

2. As características técnicas dos emissores de faixa lateral única estão especificadas no apêndice 17.

3. Uma ou várias séries de frequência da secção A (com excepção das frequências mencionadas abaixo no § 5) podem ser consignadas a cada estação costeira e esta utiliza essas frequências associadas por pares (v. o n.° **4381**); cada par compreende uma frequência de emissão e uma frequência de recepção. As séries devem ser escolhidas tendo em conta as zonas a servir e de modo a evitar, tanto quanto possível, as interferências prejudiciais entre as emissões das diferentes estações costeiras.

4. As frequências da secção B destinam-se a ser utilizadas em comum no mundo inteiro pelos navios de todas as categorias, tendo em conta as necessidades do tráfego, para as emissões dos navios com destino às estações costeiras e para as comunicações entre navios. Além disso, podem ser utilizadas em comum no mundo inteiro para as emissões das estações costeiras (exploração *simplex*), desde que a potência de ponta não exceda 1 kW (v. a Recomendação n.° 304).

5. São atribuídas para a chamada as seguintes frequências da secção A:

Via n.° 421 na faixa dos 4 MHz;
Via n.° 606 na faixa dos 6 MHz;
Via n.° 821 na faixa dos 8 MHz;
Via n.° 1221 na faixa dos 12 MHz;
Via n.° 1621 na faixa dos 16 MHz;
Via n.° 2221 na faixa dos 22 MHz.

As outras frequências das secções A e B são frequências de trabalho.

6:

a) As estações que utilizam emissões em faixa lateral única devem funcionar unicamente nas frequências portadoras indicadas nas secções A e B em conformidade com as características técnicas especificadas no apêndice 17. Essas estações deverão utilizar sempre a faixa lateral superior.

b) As estações que utilizam emissões em faixa lateral única devem efectuar unicamente emissões das classes R3E e J3E. Todavia, convém que as administrações se esforcem, tanto quanto possível, por limitar às emissões da classe J3E a utilização das vias n.^{os} 401, 601, 801, 1201, 1601 e 2201.

7. Se uma administração autorizar o emprego de frequências diferentes das indicações nas secções A e B as suas comunicações radiotelefónicas não devem causar interferência prejudicial às estações radiotelefónicas do serviço móvel marítimo que utilizam frequências especificadas nos quadros que seguem.

SECÇÃO

APÊNDICE 17

Características técnicas dos emissores de faixa lateral única utilizados no serviço móvel marítimo para a radiotelefonia nas faixas compreendidas entre 1606,5 kHz (1605 Região 2) e 4000 kHz e entre 4000 kHz e 23 000 kHz

(V. o artigo 60, secção IV)

1. Potência da portadora:

a) Para as emissões da classe R3E a potência da portadora será a seguinte:

Faixas compreendidas entre 1606,5 kHz (1605 Região 2) e 4000 kHz:

Emissores das estações costeiras até 1 de Janeiro de 1982 e emissores das estações de navio em serviço ou instalados antes de 2 de Janeiro de 1982: 16 ± 2 dB abaixo da potência de ponta da emissão;

Emissores das estações costeiras a partir de 1 de Janeiro de 1982 e emissores das estações de navio instaladas depois de 1 de Janeiro de 1982: 18 ± 2 dB abaixo da potência de ponta da emissão.

Faixas compreendidas entre 4000 kHz e 23 000 kHz:

Emissores das estações de navio instalados antes de 2 de Janeiro de 1978: 16 ± 2 dB abaixo da potência de ponta da emissão;

Emissores das estações costeiras a partir de 1 de Janeiro de 1978 e emissores das estações de navio instalados depois de 1 de Janeiro de 1978: 18 ± 2 dB abaixo da potência de ponta da emissão.

a) Para as emissões da classe J3E a potência da portadora será inferior à potência de ponta da emissão em, pelo menos, 40 dB.

2. As estações costeiras e as estações de navio devem emitir apenas na faixa lateral superior.

3. A faixa das frequências acústicas transmitida deve estender-se de 350 Hz a 2700 Hz, não devendo a variação da amplitude em função da frequência exceder 6 dB.

4. A frequência da portadora dos emissores deverá ser mantida dentro das tolerâncias seguintes:

a) Estações costeiras: ± 20 Hz;

b) Estações de navio:

Faixas compreendidas entre 1606,5 kHz (1605 Região 2) e 4000 kHz:

Tolerância aplicável aos emissores instalados antes de 2 de Janeiro de 1982: ± 100 Hz; a deriva máxima em curto período (da ordem de quinze minutos) é de ± 40 Hz;

Tolerância aplicável aos emissores instalados depois de 1 de Janeiro de 1982 mas antes de 2 de Janeiro de 1985: ± 50 Hz;

Tolerância aplicável aos emissores instalados depois de 1 de Janeiro de 1985 e a todos os emissores a partir de 1 de Janeiro de 1990: ± 40 Hz.

Faixas compreendidas entre 4000 kHz e 23 000 kHz:

Tolerância aplicável aos emissores instalados antes de 2 de Janeiro de 1978: ± 100 Hz; a deriva máxima em curto período (da ordem de quinze minutos) é de ± 40 Hz;

Tolerância aplicável aos emissores instalados depois de 1 de Janeiro de 1978 e a todos os emissores a partir de 1 de Janeiro de 1990: ± 50 Hz.

5. A modulação de frequência parasita da portadora deve ser suficientemente pequena para não criar distorções prejudiciais.

6. No caso das emissões da classe H3E, R3E ou J3E a potência de qualquer emissão não desejada fornecida à linha de alimentação da antena numa frequência específica qualquer deve, quando o emissor funciona na sua potência de ponta máxima, manter-se nos limites indicados no quadro seguinte:

a) Emissores em serviço ou instalados antes de 2 de Janeiro de 1982 (1):

Diferença Δ entre a frequência da radiação não desejada (*a*) e a frequência consignada (*b*) (kHz)	Atenuação mínima em relação à potência de ponta
$1,6 < \Delta \leq 4,8$	28 dB
$4,8 < \Delta \leq 8$	38 dB
$8 < \Delta$	43 dB, sem que a potência da radiação não desejada possa exceder 50 mW.

(*a*) *Radiação não desejada* (v. o artigo 1, n.º **140**).
(*b*) A frequência consignada é 1400 Hz superior à frequência portadora (v. o n.º **4194**).

No que respeita às emissões fora de faixa (2) e às radiações não essenciais (3) resultantes do processo de modulação mas que não caiam no espectro das emissões fora de faixa (2), pode-se, quando se deseje verificar se uma emissão com portadora reduzida ou suprimida satisfaz as condições acima indicadas, aplicar à entrada do emissor um sinal constituído por duas frequências acústicas suficientemente afastadas uma da outra para que todos os produtos de intermodulação caiam em frequências distantes de, pelo menos, 1,6 kHz da frequência consignada.

a) Emissores instalados depois de 1 de Janeiro de 1982 (1):

Diferença Δ entre a frequência da radiação não desejada (*a*) e a frequência consignada (*b*) (kHz)	Atenuação mínima em relação à potência de ponta
$1,5 < \Delta \leq 4,5$	31 dB
$4,5 < \Delta \leq 7,5$	38 dB
$7,5 < \Delta$	43 dB, sem que a potência da radiação não desejada possa exceder 50 mW.

(*a*) *Radiação não desejada* (v. o artigo 1, n.º **140**).
(*b*) A frequência consignada é 1400 Hz superior à frequência portadora (v. o n.º **4194**).

No que respeita às emissões fora de faixa (2) e às radiações não essenciais (3) resultantes do processo de modulação mas que não caiam no espectro das emissões de faixa (2), pode-se, quando se deseje verificar se uma emissão com portadora reduzida ou suprimida satisfaz as condições acima indicadas, aplicar à entrada do emissor um sinal constituído por duas frequências acústicas suficientemente afastadas uma da outra para que todos os produtos de intermodulação caiam em frequências distantes de, pelo menos, 1,5 kHz da frequência consignada.

APÊNDICE 18

Quadro das frequências de emissão para as estações do serviço móvel marítima na faixa 156-174 MHz

(V. o n.º **613** e os artigos 59 e 60)

Nota 1. — Para facilitar a compreensão do quadro, v. as notas (*a*) a (*q*) adiante.

Nota 2. — As vias 01 a 28, com excepção das vias 15 e 17, correspondem às vias do apêndice 18 ao Regulamento das Radiocomunicações de Genebra (1959) e as vias 15, 17 e 60 a 88 representam as vias suplementares disponíveis

(1) Todas as administrações reconhecem a necessidade de reduzir o nível das emissões não desejadas e, consequentemente, procurarão tomar as medidas necessárias para que todos os novos emissores sob a sua jurisdição estejam de acordo com as novas características, logo que possível antes de 2 de Janeiro de 1982.

(2) *Emissões fora de faixa* (v. o artigo 1, n.º **138**).

(3) *Radiação não essencial* (v. o artigo 1, n.º **139**).

para as consignações de acordo com as disposições do apêndice 18 MAR ao Regulamento das Radiocomunicações, Genebra (1967) (v. a Resolução n.º 308).

Nota 3. — Os n.^{os} 60 a 88 foram escolhidos para as vias suplementares, a fim de as distinguir claramente das vias originais.

Números das vias	Notas	Frequência de emissão (MHz)		Navio-navio	Operações portuárias		Movimento de navios		Correspondência pública

Notas relativas ao quadro

(*a*) Os algarismos que figuram na coluna «Navio-navio» indicam a ordem normal pela qual convém que as vias que sejam postas em serviço pela estação móvel.

(*b*) Os algarismos que figuram nas colunas «Operações portuárias», «Movimento de navios» e «Correspondência pública» indicam a ordem normal pela qual convém que as vias sejam postas em serviço por cada estação costeira. Todavia, pode ser necessário, em certos casos, omitir vias, a fim de evitar interferências prejudiciais entre estações costeiras vizinhas.

(*c*) As administrações podem designar frequências do serviço navio-navio, do serviço de operações portuárias ou do serviço do movimento de navios que poderão ser utilizadas por aeronaves ligeiras ou helicópteros para entrarem em comunicação com navios ou estações costeiras que participem em operações de apoio essencialmente marítimas, nas condições especificadas nos n.os **4144, 4148, 4149, 4150, 4151, 4152** e **4153**. Todavia, a utilização das vias partilhadas com o serviço de correspondência pública dependerá de um acordo prévio entre as administrações interessadas e aquelas cujos serviços são susceptíveis de ser desfavoravelmente influenciados.

(*d*) As vias do presente apêndice, com excepção das vias 6, 15, 16, 17, 75 e 76, poderão ser também utilizadas para a transmissão de dados a grande velocidade e de fac-símile, sob reserva de arranjos particulares entre as administrações interessadas e aquelas cujos serviços são susceptíveis de ser desfavoravelmente influenciados.

(*e*) Excepto nos Estados Unidos da América, as vias do presente apêndice e, de preferência, duas vias adjacentes das séries 87, 28, e 88, com excepção das vias 6, 15, 16, 17, 75 e 76, poderão ser utilizadas para os sistemas de faixa estreita de telegrafia com impressão directa e para a transmissão de dados, sob reserva de arranjos particulares entre as administrações interessadas e aquelas cujos serviços são susceptíveis de ser desfavoravelmente influenciados.

(*f*) As vias a duas frequências atribuídas ao serviço de operações portuárias (18, 19, 20, 21, 22, 79 e 80) poderão ser utilizadas para a correspondência pública, sob reserva de arranjos particulares entre as administrações interessadas e aquelas cujos serviços são susceptíveis de ser desfavoravelmente influenciados.

(*g*) Até 1 de Janeiro de 1983, nas vias 15 e 17, a potência aparente radiada pelos emissores das estações de navio não deverá exceder 1 W.

(*h*) A frequência de 156,300 MHz (via 6) (v. os n.os **2993** e **4154**) poderá também ser utilizada para as comunicações entre estações de navio e estações de aeronave que participem em operações coordenadas de busca e salvamento. As estações de navio devem evitar causar interferências prejudiciais a tais comunicações na via 6, assim como às comunicações entre as estações de aeronave, os quebra-gelos e os navios por estes assistidos durante a estação dos gelos.

(*i*) Na França e na Bélgica, as frequências de 156,050 MHz, 156,150 MHz e 156,175 MHz são utilizadas nas vias 1, 3 e 63, respectivamente, pelas estações de navio e nas vias 21, 23 e 83, respectivamente, pelas estações costeiras, no caso de sistemas especiais semidúplex de correspondência pública que funcionam com uma separação de 1 MHz entre as frequências de emissão e de recepção. Estas disposições especiais deixarão de ser aplicadas o mais tardar em 1 de Janeiro de 1983.

(*j*) As vias 60 e 88 poderão ser utilizadas sob reserva de arranjos particulares entre as administrações interessadas e aquelas cujos serviços são susceptíveis de ser desfavoravelmente influenciados.

(*k*) As frequências indicadas neste quadro poderão igualmente ser utilizadas para as radiocomunicações nas vias aquáticas interiores, nas condições previstas no n.º **613**.

(*l*) As vias 15 e 17 podem também ser utilizadas para as comunicações internas a bordo de navios, sob reserva de que a potência aparente radiada não exceda 1 W e dentro dos limites da regulamentação nacional da administração interessada, quando essas vias são utilizadas nas suas águas territoriais (v., todavia, a Recomendação n.º 305).

(*m*) Esta faixa de guarda aplicar-se-á a partir de 1 de Janeiro de 1983 (v. os n.os **3033, 3033.1, 4393** e **4393.1**.

(*n*) Na Zona Europeia Marítima e no Canadá estas frequências (vias 10, 67 e 73) podem também ser utilizadas, se necessário, pelas administrações interessadas, para as comunicações entre as estações de navio, as estações de aeronave e as estações terrestres que participem em operações coordenadas de busca e salvamento, assim como em operações de luta contra a poluição em áreas locais, nas condições especificadas nos n.os **4144, 4148, 4149, 4150, 4151, 4152** e **4153**.

(*o*) As três primeiras frequências a utilizar de preferência para a finalidade indicada na nota (*c*) são 156,450 MHz (via 9), 156,525 MHz (via 70) e 156,625 MHz (via 72).

(*p*) Estas vias (68, 69, 11, 71, 12, 13, 14, 74, 79 e 80) são as vias a utilizar de preferência para o serviço do movimento de navios, mas, se em determinada zona houver necessidade disso, poderão ser atribuídas ao serviço das operações portuárias enquanto não forem necessárias para o serviço do movimento de navios.

(*q*) Esta via (86) poderá ser utilizada como via de chamada, caso uma tal via seja necessária num sistema radiotelefónico automático que a CCIR tenha recomendado.

APÊNDICE 19

Características técnicas dos emissores e dos receptores utilizados no serviço móvel marítimo na faixa 156-174 MHz

(V. os artigos 59 e 60, o apêndice 18 e a Resolução n.º 308)

1. Só é utilizada a modulação de frequência com pré-acentuação de 6 dB por oitava (modulação de fase).

2. O desvio de frequência que corresponde a uma modulação de 100 % deve ser tão próximo quanto possível de ± 5 kHz. Não deverá, em qualquer caso, ultrapassar ± 5 kHz.

3. A tolerância de frequência de uma estação costeira ou de uma estação de navio é de 10 milionésimas [v. a nota 27 do apêndice 7].

4. Em qualquer das frequências indicadas no quadro do apêndice 18 das estações deve ser polarizada verticalmente na origem.

5. A faixa das frequências acústicas não deve ir além de 3000 Hz.

6. A potência média dos emissores das estações de navio deve poder ser reduzida facilmente a um valor inferior ou igual a 1 W.

APÊNDICE 20

Características dos aparelhos utilizados para as comunicações de bordo nas faixas de frequências compreendidas entre 450 MHz e 470 MHz

(V. os n.os **669** e **670**)

1. Convém que os equipamentos disponham de um número suficiente de vias que lhes permita um serviço satisfatório na zona de serviço prevista.

2. A potência aparente radiada deverá ser limitada ao mínimo necessário para obter um serviço satisfatório e em nenhum caso deverá exceder 2 W. Sempre que praticável, convém que os aparelhos estejam equipados com um dispositivo apropriado que permita reduzir facilmente a potência de saída de, pelo menos, 10 dB.

3. Quando sejam instalados aparelhos em pontos fixos do navio, a altura da antena não deverá ultrapassar em mais de 3,50 m o nível da ponte.

4. Só é utilizada a modulação de frequência com pré-acentuação de 5 dB por oitava (modulação de fase).

5. O desvio de frequência não deverá exceder ± 5 kHz.

6. A tolerância de frequência é de 5 milionésimas.

7. A faixa das frequências acústicas não deverá ir além de 3000 Hz.

8. Os sinais de telecomando, de telemedida e os sinais não telefónicos deverão ser codificados de forma a evitar tanto quanto possível a possibilidade de funcionamento intempestivo provocado por sinais interferentes.

9. Se for necessário utilizar a bordo de um navio uma estação repetidora, os pares de frequências a utilizar são os seguintes (v. igualmente o n.º **670**).

457,525 MHz e 467,525 MHz;
457,550 MHz e 467,550 MHz;
457,575 MHz e 467,575 MHz.

APÊNDICE 21

Relatórios sobre as observações de fiscalização internacional das emissões

(V. o artigo 20)

SECÇÃO I

Relatórios relativos às estações dos serviços de radiocomunicações de Terra

1. Convém que os relatórios sobre os resultados das medidas de frequência contenham, na medida necessária, as seguintes informações:

a) Identificação da estação de fiscalização (administração ou organização e localização);

b) Data da medida;
c) Hora da medida (UTC);
d) Indicativo de chamada ou qualquer outro meio de identificação da estação fiscalizada, ou ambos;
e) Classe de emissão ([1]);
f) Frequência consignada ou frequência de referência;
g) Tolerância de frequência;
h) Frequência medida;
i) Precisão da medida;
j) Afastamento em relação à frequência consignada ou em relação à frequência de referência;
k) Informações suplementares (por exemplo: período durante o qual foram efectuadas as medidas, deriva da frequência medida durante esse período, qualidade dos sinais recebidos e condições de recepção);
l) Observações.

2. Convém que os relatórios sobre os resultados das medidas de campo ou de densidade de fluxo de potência contenham, na medida necessária, as informações seguintes:

a) Identificação da estação de fiscalização (administração ou organização);
b) Data da medida;
c) Hora da medida (UTC);
d) Indicativo de chamada ou qualquer outro meio de identificação da estação fiscalizada, ou ambos;
e) Classe da emissão ([1]);
f) Frequência consignada;
g) Valor medido do campo ou da densidade de fluxo de potência;
h) Precisão da medida (estimativa);
i) Valor da componente de polarização medida;
j) Outros elementos ou características da medida;
k) Observações.

3. Convém que as listas de observações relativas ao grau de ocupação do espectro sejam fornecidas, na medida do praticamente possível, segundo a forma recomendada pela IFRB e contenham, se possível, as informações seguintes:

a) Identificação da estação de fiscalização (administração ou organização e localização);
b) Data da medida;
c) Hora da medida (UTC);
d) Indicativo de chamada ou qualquer outro meio de identificação da estação fiscalizada, ou ambos;
e) Classe da emissão ([1]);
f) Classe da estação e natureza do serviço;
g) Frequência medida;
h) Período durante o qual a emissão foi escutada ou registada;
i) Valor medido do campo, da densidade de fluxo de potência ou da intensidade do sinal, segundo a escala OSA;
j) Largura da faixa ocupada (indicar se foi medida ou estimada ou indicar a largura de faixa necessária notificada à IFRB;
k) Informações sobre a localidade ou sobre a zona de recepção pretendidas;
k) Observações.

4. Convém utilizar, tanto quanto possível, na transmissão destas informações os símbolos que figuram no Regulamento das Radiocomunicações ou no prefácio da Lista Internacional das Frequências.

SECÇÃO II

Relatórios relativos às estações dos serviços de radiocomunicações espacial

1. Convém que os relatórios sobre os resultados das medidas de frequência, na medida necessária, as informações seguintes:

a) Identificação da estação de fiscalização (administração ou organização e localização);
b) Data da medida;
c) Hora da medida (UTC);
d) Indicativo de chamada ou qualquer outro meio de identificação da estação fiscalizada, ou ambos;

([1]) A classe da emissão compreende as características fundamentais contidas no artigo 4 e, se possível, as características suplementares contida no apêndice 6. Os símbolos das características que não possam ser determinadas são substituídos por travessões. Todavia, no caso de incerteza para a classificação de uma estação entre modulação de frequência ou modulação de fase, é utilizado o símbolo de modulação de frequência (F).

e) Classe da emissão ([1]);
f) Frequência consignada ou frequência de referência;
g) Tolerância de frequência;
h) Frequência de medida;
i) Precisão da medida;
j) Afastamento em relação à frequência consignada ou em relação à frequência de referência;
k) Informações suplementares (por exemplo: período durante o qual foram efectuadas as medidas, deriva da frequência medida durante esse período, qualidade dos sinais recebidos e condições de recepção);
l) Observações.

2. Convém que os relatórios sobre os resultados das medidas de campo ou de densidade de fluxo de potência contenham, na medida necessária, as informações seguintes:

a) Identificação da estação de fiscalização (administração ou organização e localização);
b) Data da medida;
c) Hora da medida (UTC);
d) Indicativo de chamada ou qualquer outro meio de identificação da estação fiscalizada, ou ambos;
e) Classe da emissão ([1]);
f) Frequência consignada;
g) Valor medido do campo ou da densidade de fluxo de potência;
h) Precisão da medida (estimativa);
i) Valor da componente de polarização medida;
j) Outros elementos ou características da medida;
k) Observações.

3. Convém que as listas de observação relativas ao grau de ocupação do espectro sejam fornecidas, na medida do praticamente possível, segundo a forma recomendada pela IFRB e contenham, se possível, as informações seguintes:

3.1. Relatórios relativos às observações de emissões de estações espaciais:

a) Identificação da estação de fiscalização (administração ou organização e localização);
b) Data da medida;
c) Hora da medida (UTC);
d) Indicativo de chamada ou qualquer outro meio de identificação da estação fiscalizada, ou ambos;
e) Classe da emissão ([1]);
f) Classe da estação e natureza do serviço;
g) Frequência medida;
h) Período durante o qual a emissão foi observada ou registada;
i) Valor medido do campo, da densidade de fluxo de potência ou da intensidade do sinal, segundo a escala QSA;
j) Largura de faixa ocupada (indicar se foi medida ou estimada ou indicar a largura de faixa necessária à IFRB);
k) Polarização observada;
l) Informações relativas à órbita;
m) Informações relativas à localidade ou à zona de recepção pretendidas, se forem conhecidas;
n) Observações.

3.2. Relatórios relativos às observações de emissões de estações terrenas:

a) Identificação da estação de fiscalização (administração ou organização e localização);
b) Data da medida;
c) Hora da medida (UTC);
d) Indicativo de chamada ou qualquer outro meio de identificação da estação fiscalizada, ou ambos;
e) Classe da emissão ([1]);
f) Classe da estação e natureza do serviço;
g) Frequência medida;
h) Período durante o qual a emissão foi observada ou registada;
i) Valor medido do campo, da densidade de fluxo de potência ou da intensidade, segundo a escala QSA;
j) Largura de faixa ocupada (indicar se foi medida ou estimada ou indicar a largura de faixa necessária a IFRB;
k) Informações relativas à posição orbital de recepção pretendida;
l) Observações.

([1]) A classe da emissão compreende as características fundamentais contidas no artigo 4 e, se possível, as características suplementares contida no apêndice 6. Os símbolos das características que não possam ser determinadas são substituídos por travessões. Todavia, no caso de incerteza para a classificação de uma estação entre modulação de frequência ou modulação de fase, é utilizado o símbolo de modulação de frequência (F).

4. Tanto quanto possível, convém utilizar na transmissão destas informações os símbolos que figuram no Regulamento das Radiocomunicações ou no prefácio da Lista Internacional das Frequências.

APÊNDICE 22

Relatório sobre uma irregularidade ou uma infracção à Convenção ou ao Regulamento das Radiocomunicações

(V. os artigos 21 e 22)

Informações relativas à estação que transgride o Regulamento:

1. Nome (*a*), se for conhecido (em maiúsculas de imprensa)...
2. Indicativo de chamada ou outra forma de identificação (em maiúsculas de imprensa)...
3. Nacionalidade, se for conhecida ...
4. Frequência utilizada (kHz, MHz, GHz ou THz) ...
5. Classe da emissão (*b*) ...
6. Classe de estação e natureza do serviço, se forem conhecidas ...
7. Localização (*c*), (*d*) e (*e*) ...

Informações relativas à estação ou ao organismo centralizador ou ao serviço de inspecção que assinala a irregularidade ou a infracção:

8. Nome (maiúsculas de imprensa) ...
9. Indicativo de chamada ou outra forma de identificação (em maiúsculas de imprensa) ...
10. Nacionalidade ...
11. Localização (*c*) e (*d*) ...

Informação sobre a irregularidade ou a infracção:

12. Nome (*f*) da estação (em maiúsculas de imprensa) em comunicação com aquela que comete a irregularidade ou a infracção ...
13. Indicativo de chamada ou outra forma de identificação (em maiúsculas de imprensa) da estação em comunicação com aquela que comete a irregularidade ou a infracção ...
14. Data e hora (*g*) ...
15. Natureza da irregularidade ou da infracção (*h*) ...
16. Extractos do diário de bordo ou outras informações em apoio do relatório ...

Informações relativas à estação cuja emissão é indeferida (i):

17. Nome da estação (em maiúsculas de imprensa) ...
18. Indicativo de chamada ou outra forma de identificação (em maiúsculas de imprensa) ...
19. Frequência consignada (kHz, MHz, GHz ou THz) ...
20. Frequência medida no momento da interferência ...
21. Classe da emissão (*b*) e largura de faixa (indicar se foi medida ou estimada ou indicar a largura de faixa necessária notificada à IFRB) ...
22. Local de recepção (*c*) e (*d*) (em maiúsculas de imprensa) onde a interferência foi detectada ...
23. Certificado:

Certifico que o relatório acima é, tanto quanto sei, a descrição completa e fiel do que aconteceu.

...

Assinatura (*j*) ... Data ...

Indicações para preencher este impresso

(*a*) Cada relatório mencionará apenas uma única estação (v. nota 6) e deverá ser enviado em duplicado, se possível, dactilografado caso seja enviado por carta. Pode ser igualmente enviado por telegrama.

(*b*) A classe da emissão compreende as características fundamentais contidas no artigo 4 e, se possível, as características suplementares contidas no apêndice 6. Os símbolos das características que não possam ser determinadas são substituídos por travessões. Todavia, no caso de incerteza para a classificação de uma estação entre modulação de frequência ou modulação de fase, é utilizado o símbolo de modulação de frequência (F).

(*c*) No caso de se tratar de uma estação fixa, terrestre ou terrena, deverá indicar-se a posição em latitude e longitude (Greenwich) e, se isso não for possível, deverá indicar-se a zona de funcionamento.

(*d*) No caso de estações de navio ou de aeronave, deverá indicar-se a posição em latitude e longitude (Greenwich), ou por um azimute verdadeiro, em graus, e a distância em milhas marítimas ou em quilómetros em relação a qualquer ponto bem conhecido. Em caso de impossibilidade, deverá indicar-se a zona de funcionamento.

(*e*) No caso de estações espaciais, dar informações sobre a órbita.

(*f*) Se as duas estações em comunicação infringem o Regulamento, elabora-se um relatório separado para cada uma das estações.

(*g*) A hora deverá ser expressa em tempo universal coordenado (UTC) por um grupo de quatro algarismos (0000 a 2359). Se a infracção se prolongar ou repetir, deverão ser indicadas a data e as horas.

(*h*) Exige-se um relatório separado para cada uma das irregularidades ou infracções, a não ser que se repitam num curto período.

(*i*) Estas informações só terão de ser fornecidas no caso de queixa por interferência.

(*j*) Este relatório deverá ser assinado pelo operador que assinalou a infracção e rubricado pelo comandante do navio ou pela pessoa responsável pela aeronave ou pelo chefe da estação, quando se tratar de uma infracção assinalada por uma estação de serviço móvel. Quando o realtório provier de um organismo centralizador ou de um serviço de inspecção, deverá ser assinado pelo chefe desse organismo ou desse serviço e rubricado pelo funcionário da administração que o transmite.

Para uso exclusivo da administração

1. Companhia sob cuja dependência está a instalação da estação contra a qual a queixa foi apresentada ...
2. Nome do operador da estação tido como responsável pela irregularidade ou pela infracção aos regulamentos ...
3. Medida tomada ...

APÊNDICE 23

Relatório de interferência prejudicial

(V. o artigo 22)

Características da estação interferente:

a) Nome ou indicativo de chamada ou outros meios de identificação ...
b) Frequência medida ... Data ...
Hora (UTC) ...
c) Classe de emissão (*a*)...
d) Largura da faixa (indicar se foi medida ou estimada) ...
e) Valor de campo ou da densidade de fluxo de potência medidos (*a*) ...
Data ...
Hora (UTC) ...
f) Polarização observada ...
g) Classe da estação e natureza do serviço ...
h) Localização/posição/zona/azimute (QTE) ...
i) Localização do centro que efectuou as medidas acima ...

Características da estação cuja emissão é interferida:

j) Nome ou indicativo de chamada ou outros meios de identificação ...
k) Frequência consignada ...
l) Frequência medida ... Data ...
Hora (UTC) ...
m) Classe de emissão (*a*) ...
n) Largura de faixa (indicar se foi medida ou estimada ou indicar a largura de faixa necessária notificada à IFRB) ...
o) Localização/posição/zona ...
p) Localização do centro que efectuou as medidas acima ...

Informações fornecidas pela estação de recepção que verificou a interferência::

q) Nome da estação ...
r) Localização/posição/zona ...
s) Data e horas (UTC) da interferência prejudicial ...
t) Azimute (QTE) ou outros pormenores ...
u) Natureza da interferência ...
v) Campo ou densidade de fluxo de potência da emissão desejada na estação de recepção que sofre a interferência (*a*) ...
Data ...
Hora (UTC) ...
w) Polarização da antena de recepção ou polarização observada ...
x) Medidas a tomar ...

(*a*) Quando estas medidas não forem possíveis, deveria ser indicada a intensidade do sinal segundo a escala QSA.

Nota. — Por conveniência e brevidade, os relatórios telegráficos serão em conformidade com o modelo atrás indicado; utilizar-se-ão, pela ordem acima enumerada, as letras que designam cada uma das rubricas em vez das próprias rubricas, mas apenas aquelas para as quais existam informações disponíveis. Todavia, este relatório deverá conter informações suficientes de modo que a administração que o recebe possa empreender o inquérito apropriado.

APÊNDICE 24

Quadro de soletração das letras e dos algarismos

(V. os artigos 37 e 65)

1. Quando for necessário soletrar indicativos de chamada, abreviaturas regulamentares ou palavras, utiliza-se o quadro seguinte de soletração das letras:

Letra a transmitir	Palavra de código	Pronúncia da palavra de código (*)
A	Alfa	*AL* FAH
B	Bravo	*BRA* VO
C	Charlie	*TCHAH* LI, ou *CHAR* LI
D	Delta	*DEL* TAH
E	Echo	*ÉK* O
F	Foxtrot	*FOX* TROTT
G	Golf	GOLF
H	Hotel	HO *TÉLL*
I	Índia	*IN* DI AH
J	Juliett	*DJOU* LI ÊTT

Letra a transmitir	Palavra de código	Pronúncia da palavra de código (*)
K	Kilo	*KI* LO
L	Lima	*LI* MAH
M	Mike	MA IK
N	November	NO *VÈMM* BER
O	Oscar	*OSS* KAR
P	Papa	PAH *PAH*
Q	Quebec	KE *BEK*
R	Romeo	*RO* MIO
S	Sierra	SI *ER* RAH
T	Tango	*TANG* GO
U	Uniform	*YOU* NI FORM, ou *OU* NI FORM
V	Victor	*VIK TAR*
W	Whiskey	*OUISS* KI
X	X-ray	*EKSS RÉ*
Y	Yankee	*YANG* KI
Z	Zoulou	*ZOU* LOU

(*) As sílabas acentuadas estão em itálico.

2. Quando for necessário soletrar algarismos ou sinais, utiliza-se o quadro seguinte:

Número ou sinal a transmitir	Palavra de código	Pronúncia da palavra de código (*)
0	NADAZERO	NAH-DAH-ZE-ROH
1	UNAONE	OU-NAH-OUANN
2	BISSOTWO	BIS-SO-TOU
3	TERRATHREE	TE-RAH-TRI
4	KARTEFOUR	KAR-TE-FO-EUR
5	PANTAFIVE	PAN-TAH-FA-ÏF
6	SOXISIX	SOK-SI-SIKS
7	SETTESEVEN	SE-TE-SEV'N
8	OKTOEIGHT	OK-TOH-EÏT
9	NOVENINE	NO-VE-NAI-NEU
Vírgula Decimal	— DECIMAL	— DE-SI-MAL
Ponto	STOP	STOP

(*) Todas as sílabas são igualmente acentuadas.

3. Todavia, as estações de um mesmo país, ao comunicarem entre si, podem utilizar um outro quadro adoptado pela administração de que dependem.

APÊNDICE 25 MAR2

Plano de adjudicação de frequências às estações costeiras radiotelefónicas que funcionam nas faixas exclusivas do serviço móvel marítimo entre 4000 kHz e 23 000 kHz

(V. os n.^{os} **4198** e **4212** do Regulamento das Radiocomunicações e o apêndice 16)

Nota. — V. p. 1472.

APÊNDICE 26 Aer

Plano de adjudicação de frequências para o serviço móvel aeronáutico e informações correspondentes

Este apêndice ao Regulamento das Radiocomunicações (Genebra, 1959) foi publicado num fascículo à parte. Relativamente ao serviço móvel aeronáutico (R), foi adoptado, em 1966, pela Conferência Aeronáutica, um plano revisto que está contido no apêndice 27. Mas o plano adoptado, em 1959, para o serviço móvel aeronáutico (OR) continua em vigor, de modo que, no que respeita a este serviço, é ao apêndice 26 que se deverá reportar. Estão disponíveis no Secretariado-Geral da UIT exemplares do apêndice 26 (edição de 1959).

Nota. — V. p. 1552.

APÊNDICE 27 Aer (*)

Plano de adjudicação de frequências para o serviço móvel aeronáutico (R) e informações correspondentes entre 2850 kHz e 17 970 kHz

Este apêndice foi publicado num fascículo à parte e contém exclusivamente disposições relativas ao serviço móvel aeronáutico (R), que substituem as disposições relativas a esse serviço contidas no apêndice 26. Portanto, será exclusivamente às disposições do apêndice 27 que se deverá reportar quando se trate do serviço móvel aeronáutico (R).

APÊNDICE 27 Aer2 (*)

Plano de adjudicação de frequências para o serviço móvel aeronáutico (R) e informações correspondentes entre 2850 kHz e 22 000 kHz

Nota. — V. p. 1600.

APÊNDICE 28

Método de determinação da zona de coordenação de uma estação terrena nas faixas de frequência compreendidas entre 1 Ghz e 40 GHz, partilhadas entre serviços de radiocomunicações espacial e de radiocomunicação de Terra.

1. *Objectivos:*

Determina-se a zona de coordenação (v. o n.º **165**) calculando, em todos os azimutes e a partir da estação terrena, as distâncias de coordenação (v. o n.º **167**) e traçando o contorno de coordenação (v. o n.º **166**), à escala, sobre um mapa apropriado.

É necessário sublinhar que a existência ou a instalação de uma estação de Terra no interior da zona de coordenação de uma estação terrena não impede necessariamente o bom funcionamento da estação terrena ou dessa estação de Terra, dado que o método se baseia nas hipóteses mais desfavoráveis no que respeita às interferências.

Para determinar a zona de coordenação podem considerar-se dois casos:

1) O da estação terrena na emissão (susceptível de causar interferências a estações de Terra);
2) O da estação terrena na recepção (susceptível de ser interferida por estações de Terra).

Quando uma estação terrena se destina a funcionar em diversas classes de emissão, os parâmetros de estação terrena a utilizar para a determinação do contorno de coordenação devem ser aqueles que conduzem às maiores distâncias de coordenação, para cada feixe de antena de estação terrena e em cada faixa de frequências atribuída que a estação terrena se proponha partilhar com os serviços de Terra.

Quando uma estação terrena se destina a receber diversas classes de emissão, os parâmetros de estação terrena a utilizar para a determinação do contorno de coordenação devem ser aqueles que conduzem às maiores distâncias de coordenação, para cada feixe de antena de estação terrena e em cada faixa de frequências atribuída que a estação terrena se propomha partilhar com o serviços de Terra, excepto nos casos em que a administração responsável pela estação terrena verifique que um contorno de coordenação menor permitiria assegurar a protecção adequada de todas as emissões destinadas a ser recebidas pela estação terrena. Quando a determinação de tal contorno de coordenação diferir do procedimento descrito no presente apêndice, a administração notificada deverá indicar com precisão a natureza dessa diferença.

Se uma administração decidir ulteriormente proteger a sua estação terrena de recepção notificando um contorno de coordenação maior do que aquele que ela tinha determinado segundo um método diferente do descrito no presente apêndice, deverá coordenar de novo a estação terrena. Qualquer protecção maior resultante dessa nova coordenação deve entrar em vigor a partir da data de publicação da ficha de notificação na parte II da circular semanal da IFRB.

O presente apêndice apresenta métodos que permitem a determinação gráfica ou informática na zona de coordenação.

Sugere-se que, além do contorno de coordenação, sejam traçados contornos auxiliares baseados em hipóteses menos desfavoráveis do que utilizadas para a determinação do contorno de coordenação. Esses contornos auxiliares podem ser utilizados no decorrer de negociações posteriores entre as administrações interessadas, com vista a eliminar dessas negociações (sem que seja necessário recorrer a cálculos mais precisos) o caso de certas estações existentes ou em projecto situadas no interior da zona de coordenação. O método a aplicar para obter e utilizar esses contornos auxiliares é explicado no anexo I ao presente apêndice.

(*) Até 31 de Janeiro de 1983, as 23.59 UTC, e depois substituído pelo apêndice 27 Aer2.

(**) V. o anexo à Resolução n.º 404.

2. *Considerações gerais.*

2.1. *Noção de atenuação de transmissão mínima admissível.*

A determinação da distância de coordenação — distância a partir de uma estação terrena para além da qual pode considerar desprezável a interferência causada ou sofrida por uma estação de Terra — baseia-se no princípio de que a atenuação do sinal interferente aumenta regularmente em função da distância.

O valor da atenuação pretendido entre um emissor interferente e um receptor interferido é dado pela atenuação de transmissão mínima admissível (dB) durante p % do tempo, valor este que a atenuação de transmissão prevista deve exceder durante (110 — p)% do tempo:

$$L(p)=P_t' - P_r(p) \quad (1)$$

onde:

P_t (*) — nível de potência de emissão máxima disponível (em dBW) na largura de faixa de referência, à entrada da antena de uma estação interferente;

$p_r(p)$ — nível admissível de uma emissão interferente (em dBW), na largura de faixa de referência, que não deve ser excedido durante mais de p % do tempo à saída da antena de recepção de uma estação interferida, quando a emissão interferente tiver por origem uma única fonte.

P_t e $P_r(p)$ são definidos para a mesma largura de faixa radioeléctrica (largura de fauixa de referência) e $L(p)$ e $P_r(p)$ são definidos para a mesma percentagem de tempo, imposta pelos critérios de qualidade do sistema interferido.

Para as pequenas percentagens de tempo de que aqui se trata é necessário distinguir entre os mecanismos de atenuação nitidamente diferentes:

A atenuação de sinais sujeitos a uma propagação troposférica seguindo trajectos vizinhos do círculo máximo; modo (1), v. o § 3;

Atenuação de sinais à difusão por hidrometeoros; modo (2), v. o § 4.

2.2. *Noção de atenuação de transmissão de referência mínima admissível.*

No caso do modo de propagação (1), a atenuação de transmissão é definida pela forma de parâmetros separáveis, a saber: uma atenuação de transmissão de referência (quer dizer, entre antenas isotrópicas) e os ganhos efectivos das antenas em cada extremidade do trajecto de interferência. A atenuação de transmissão de referência mínima admissível pode exprimir-se por:

$$L_b(p) = P_t + G_t + G_r - P_r(p) \quad (2)$$

em que:

$L_b(p)$ — atenuação de transmissão de referência mínima admissível (dB) durante p % do tempo, valor este que a atenuação de transmissão de referência prevista deve exceder durante (100–p) % do tempo;

G_t — ganho isotrópico (dB) da antena de emissão da estação interferente. Se a estação interferente é uma estação terrena, trata-se aqui do ganho da antena na direcção do horizonte físico no azimute considerado; no caso de uma estação de Terra, utilizar-se-á o ganho máximo da antena dessa estação;

G_r — ganho isotrópico (dB) da antena de recepção da estação interferida. Se a estação interferida for uma estação terrena, trata-se aqui do ganho na direcção do horizonte físico no azimute considerado; no caso de uma estação de Terra, utilizar-se-á o ganho máximo da antena dessa estação.

O anexo II descreve métodos numéricos e gráficos que permitem determinar o ângulo formado pelo feixe principal da antena da estação e o horizonte físico, assim como ganho da antena na direcção do horizonte em função do ângulo azimutal.

Quando se trata do caso de satélites não geostacionários, aquele dos dois ganhos G_t e G_r que corresponde a uma antena de estação terrena varia com o tempo. Neste caso deve empregar-se um ganho equivalente (**) de antena de estação terrena invariável no tempo, e que seja igual à maior das duas seguintes quantidades: o ganho máximo da antena na direcção do horizonte, diminuído de 10 dB, ou o ganho dessa antena na direcção do horizonte que não seja excedido durante mais de 10 % do tempo (se for conhecido).

(*) Os símbolos afectados por uma plica referem-se às características da estação interferente.

(**) Este ganho equivalente não deve ser utilizado quando a antena da estação terrena se mantém apontada na mesma direcção durante períodos de duração apreciável (por exemplo, quando trabalha com sondas espaciais ou com satélites quase geostacionários).

2.3. *Determinação e listagem dos parâmetros de interferência.*

2.3.1. *Nível admissível de emissão indiferente.*

O nível admissível da emissão interferente (dBW) na largura de faixa de referência, que não deve ser excedido mais de p % do tempo à saída da antena de recepção de uma estação susceptível de ser interferida, sob o efeito de cada origem de interferência, é dado pela relação geral:

$$P_r(p) - 10 \log (kT_eB) + J + M(p) - W \quad (3)$$

em que:

$$M(p) = M(p_o/n) - M_o(p_o) \quad (4)$$

em:

K — Constante de Boltzmann $1{,}38 \times 10^{23}$ J/K;
T_e — temperatura de ruído do sistema de recepção (K), á saída da antena de recepção (v. nota 1);
B — largura de faixa de referência (Hz) (largura de faixa do sistema interferido, na qual se pode determinar o valor médio da potência da emissão interferente);
J — valor a longo prazo (20 % do tempo) da relação (dB) entre a potência admissível da emissão interferente e a potência de ruído térmico do sistema de recepção, referidas aos terminais de saída da antena de recepção (v. nota 2);
P_o — percentagem do tempo durante o qual a interferência proveniente de todas as origens pode exceder o valor admissível;
n — número de casos de interferência supostos sem correlação, que se esperam;
p — percentagem do tempo durante o qual a interferência proveniente de uma origem pode exceder o valor admissível; dada a não simultaneidade provável dos casos de interferência, $p = p_o/n$;
$M_o(p_o)$ — relação (dB) entre as potências admissíveis da emissão interferente, respectivamente, durante p_o % e durante 20 % do tempo para todos os casos de interferência (v. nota 3);
$M(p)$ — relação (dB) entre as potências admissíveis da emissão interferente, respectivamente, durante p % do tempo, para um caso de interferência, e durante 20 % do tempo para todos os casos de interferência;
W — factor de equivalência (dB) que permite estabelecer uma relação entre a interferência proveniente de emissões interferentes e a provocada pela introdução de um ruído térmico suplementar da mesma potência na largura de faixa de referência. Este factor é positivo nos casos em que as emissões interferentes causam maior degradação que o ruído térmico (v. a nota 4).

Os quadros I e II dão os valores dos parâmetros acima indicados.

Em certos casos, uma administração pode ter razões para pensar que, para a usa estação terrena, se pode justificar a adopção de valores diferentes dos indicados no quadro II. Convém chamar a atenção para o facto de que, para certos sistemas determinados, pode ser necessário modificar as larguras de faixas B ou, por exemplo, no caso de sistemas de consignação em função dos pedidos, as percentagens de tempo p e p_o em relação aos valores indicados no quadro II. O § 2.3.2 fornece outras informações sobre o assunto.

Nota 1. — A temperatura de ruído do sistema de recepção, em graus de Kelvin, referida aos terminais de saída da antena de recepção, pode ser determinada aplicando a fórmula:

$$T_r = T_a + (e - 1)\ 290 + eT_r$$

em que:

T_a — Temperatura de ruído (K) produzida pela antena de recepção;
e — Valor núnerico da atenuação na linha de transnuissão (por exemplo, um guia de ondas) entre a antena e os terminais de entrada do receptor;
T_r — Temperatura de ruído (K), incluindo a contribuição dos andares sucessivos, referida aos terminais de entrada do receptor.

Para os receptores de feixes hertzianos, e quando a atenuação no guia de ondas de uma estação terrena de recepção não for conhecida, utilizar-se-á um valor de e igual a 1,0.

Nota 2. — O factor J (dB) define-se como a relação entre a potência total admissível a longo prazo de emissões interferentes (durante 20 % do tempo) no sistema e a potência de ruído radioeléctrico térmico a longo prazo num só receptor. Quando se calcula o factor J, considera-se que a emissão interferente tem uma densidade espectral de potência uniforme e tem-se em conta a forma real do seu espectro, utilizando o factor W (v. abaixo). Por exemplo, num circuito fictício de referência para feixes hertzianos de 50 saltos, a potência total admissível de interferência acumulada é de 1000 pWOp (parecer n.° 357-3 da CCIR) e pode supor-se que a potência média de ruído térmico por salto é de 25 pWOp. Consequentemente, dado que, num sistema de multiplexagem por divisão de frequência e modulação de frequência (MRF/MF), a relação entre uma potência de ruído de interferência uniforme e o ruído térmico na mesma faixa de referência é a mesma antes e depois da desmodulação, J é dado pela relação 1000/25, ou seja, 16 dB, se for expresso em decibéis. Num sistema do serviço fixo por satélite, a potência total de interferência admissível é também de 1000 pWOp (parecer n.° 356-4 da CCIR), enquanto que a contribuição de ruído térmico da ligação descendente não deve exceder 7000 pWOp, resultando daqui que $J \geq -8{,}5$ dB.

Nos sistemas numéricos, especifica-se e mede-se a interferência pela taxa de erro em *bits* ou pelo aumento admissível desta taxa de erro. Se o aumento da taxa de erro em *bits* é cumulativo num circuito de referência que compreenda ligações em tandem, a potência radioeléctrica das emissões interferentes que é a causa desse aumento da taxa de erro em *bits* não é cumulativa, porque a taxa de erro em *bits* não é uma função linear do nível de potência radioeléctrica das emissões interferentes. Pode, portanto, ser necessário proteger separadamente cada receptor. Nos feixes hertzianos numéricos que funcionam acima de 10 GHz, e para todos os sistemas numéricos de satélites, a potência de interferência a longo prazo pode ser da mesma ordem de grandeza que o ruído térmico a longo prazo, donde $j = 0$ dB. Nos feixes hertzianos numéricos que funcionam abaixo de 10 GHz, convém que a

potência de interferência a longo prazo não reduza em mais de cerca de 1 dB a margem de desvanecimento do receptor. Assim, convém que a potência de interferência a longo prazo seja inferior cerca de 6 dB a potência de ruído térmico, donde $J = -6$ dB.

Nota 3. — M_u (p_u) é a «margem de interferência» (dB) entre as potências admissíveis a curto prazo (p_u %) e a longo prazo (20 %) de uma emissão interferente.

No caso dos sistemas analógicos de feixes hertzianos e dos do serviço fixo por satélite entre 1 GHz e 15 GHz, essa margem é igual à relação (dB) entre 50 000 pWOp e 1000 pWOp, ou seja, 17 dB.

No caso dos sistemas numéricos e na maior parte das regiões do Mundo, pode-se, em muitos casos, definir utilmente as características de um sistema que funcione nas frequências superiores a 10 GHz pela percentagem de tempo p, durante o qual o nível útil pode descer abaixo do limiar de funcionamento, definido por uma dada taxa de erro em *bits*. Durante o funcionamento do sistema sem desvanecimento, o nível do sinal útil ultrapassa o limiar de uma margem M_s que depende da zona hidrometeorológica na qual a estação funciona. Quanto maior for essa margem tanto maior é a elevação do nível da emissão interferente que degradaria o sistema até ao nível do limiar. Como primeira aproximação pode supor-se que, para pequenas percentagens do tempo (da ordem de 0,001 % a 0,003 %), o nível tolerável das emissões interferentes é igual, em potência, ao ruído térmico que existe à entrada do desmodulador em presença de desvanecimento. Pode, portanto, supor-se que, para os sistemas numéricos que funcionam acima de 10 GHz, M_u (quadros I e II) é igual à margem de desvanecimento M_s do sistema. Nos feixes hertzianos numéricos que funcionam abaixo de 10 GHz supõe-se que se pode admitir que a potência a curto prazo de uma emissão interferente ultrapassa a potência a longo prazo dessa emissão de uma quantidade igual à margem de desvanecimento do sistema menos J, ou seja, 41 dB, se $J = -6$ dB.

Nota 4. — O factor W (dB) é a relação entre a potência de ruído térmico radioeléctrico e a potência da emissão interferente na largura de faixa de referência, quando ambas produzem a mesma interferência após desmodulação (num sistema MRF/MF exprimir-se-ia que as potências de ruído são idênticas numa via telefónica e, num sistema numérico, que as probabilidades de erro em *bits* são idênticas). Para os sinais de modulação de frequência, este factor é definido do seguinte modo:

$$W = 10 \log \left\{ \frac{\text{Potência de ruído térmico na largura de faixa de referência à saída da antena de recepção}}{\text{Potência da emissão interferente em frequências radioeléctricas na largura de faixa de referência à saída da antena de recepção}} \times \frac{\text{Potência de interferência no sistema de recepção após desmodulação}}{\text{Potência de ruído térmico no sistema de recepção após desmodulação}} \right\} \quad (5b)$$

O factor W depende das características do sinal útil e do sinal interferente. Todavia, para evitar ter de considerar uma longa série de características, determinou-se para este factor um valor máximo. Quando o sinal útil é modulado em frequência, e para factores de modulação eficazes superiores à unidade, W não excede 4 dB. Em tais casos, fixar-se-á, por prudência, em 4 dB o valor do factor W nas relação (3), independentemente das características do sinal interferente. Para sistemas MRF/MF de baixo factor de modulação, uma largura de faixa de referência muito estreita (4 kHz) implica para W valores que não excedam 0 dB. Em tais casos fixar-se-á, por prudência, em 0 dB o valor do factor W na relação (3), independentemente das características do sinal interferente.

Quando o sinal útil é numérico, W é habitualmente inferior ou igual a 0 dB, sejam quais forem as características do sinal interferente.

2.3.2. *Parâmetros de coordenação para as emissões de faixa muito estreita (estação terrena de recepção).*

2.3.2.1. *Generalidades.*

No caso de uma estação terrena que receba ao memso tempo emissões de faixa larga e emissões de faixa muito estreita (por exemplo, nos sistemas de uma única via por portadora, SCPC), pode ser desejável traçar dois contornos de coordenação separados, um para as emissões de faixa estreita e o outro para as emissões de faixa larga, indicando especificamente as partes de faixa utilizadas para as emissões de faixa muito estreita.

2.3.2.2. *Emissões de faixa estreita com pré-consignação.*

Para estas emissões convém substituir o valor da largura de faixa de referência pelo da largura de faixa ocupada por uma emissão de faixa estreita do tipo considerado.

2.3.2.3. *Emissões de faixa estreita de consignação em função dos pedidos.*

Para estas emissões pode, além disso, ser útil ter em conta a probabilidade reduzida de uma dada via sofrer interferências no preciso momento em que é escolhida para ser utilizada numa estação terrena.

As administrações devem fornecer todos os dados técnicos pertinentes utilizados na determinação do(s) contorno(s) de coordenação para tais emissões.

3. *Determinação da distância de coordenação para o modo de propagação* (1) — *Mecanismos de propagação ao longo do círculo máximo.*

3.1. *Zonas radioclimáticas.*

Para calcular a distância de coordenação no caso do modo de propagação (1) divide-se a Terra em três grandes zonas radioclimáticas, as zonas A, B e C, que se definem como segue:

Zona A — terras;

Zona B — mares, oceanos e grandes extensões de água (como critério, uma extensão de água capaz de cobrir um círculo de 100 km de diâmetro), em latitudes superiores a 23° 30' N. ou S., com excepção do mar Negro e do mar Mediterrâneo;

Zona C — mares, oceanos e grandes extensões de água (como critério, uma extensão de água capaz de cobrir um círculo de 100 km de diâmetro), em latitudes inferiores a 23° 30' N. ou S., incluindo o mar Negro e o mar Mediterrâneo.

3.2. *Cálculo da distância de coordenação em trajectos compreendidos numa só zona radioclimática.*

3.2.1. *Generalidades.*

A fórmula (2) dá o valor da atenuação de transmissão de referência mínima admissível $L_b(p)$ durante p % do tempo. A partir desse valor, calcula-se a distância de coordenação em cada zona radioclimática utilizando um ou outro dos dois métodos seguintes: o primeiro, descrito no § 3.2.2., é um método numérico que recorre a diversas fórmulas matemáticas e que é sobretudo concebido para ser utilizado com um computador; o segundo, descrito no § 3.2.3., é um método gráfico.

Quando a distância determinada utilizando os métodos descritos, respectivamente, nos §§ 3.2.2. ou 3.2.3. fica inteiramente dentro dos limites da zona radioclimática a que pertence a estação terrena, essa distância é considerada como a distância de coordenação efectiva para o modo de propagação (1). Se essa distância não ficar dentro dos limites de uma só zona radioclimática, a distância global de coordenação calcula-se aplicando o método descrito no § 3.3.

3.2.2. *Método numérico.*

A relação entre a atenuação de transmissão de referência mínima admissível e a distância de coordenação exprime-se pela fórmula:

$$L_b(p) = A_o + \beta d_1 + A_h$$

em que:

A_O — 120+20 log f (decibéis);
β — factor de atenuação (decibéis por quilómetro);
d_1 — distância de coordenação para o modo de propagação (1) (quilómetro);
A_h — correcção devida ao ângulo do horizonte (decibéis);
f — frequência (gigahertzes).

A_h calcula-se como segue:

$$Ah = 20 \log (1 + 4{,}5 f^{1/2} \varepsilon) + f^{1/3} \varepsilon \text{ para } \varepsilon > 0° \quad (*) \ (7a)$$

$$Ah = 8\ \varepsilon \text{ para } -0{,}5° \leq \varepsilon \leq 0{,}5° \quad (7b)$$

$$Ah = -4 \text{ para } \varepsilon \leq -0{,}5° \quad (7c)$$

em que ε: ângulo do horizonte (**) (graus).

A partir da fórmula (6), a distância de coordenação d_1 calcula-se como segue:

$$d_1 = [L_b(p) - A_o - Ah]/\beta \quad (8)$$

O valor de β depende da zona radioclimática e da percentagem de tempo p e é resultado como a soma de três elementos:

$$\beta = \beta_z + \beta_v + \beta_o \quad (9)$$

em que:

β_z — factor de atenuação (decibéis por quilómetro) devido a todos os efeitos, excepto o dos gases atmosféricos;
β_v — factor de atenuação (decibéis por quilómetro) devido ao vapor de água atmosférico;
β_o — factor de atenuação (decibéis por quilómetro) devido ao oxigénio.

β_z depende da zona radioclimatérica, da frequência e da percentagem de tempo. O seu valor é dado pelas fórmulas:

Para a zona A:

$$\beta_{za} = 0{,}154\ (1 + 3{,}05 \log f)^{0{,}4}\ (0{,}9028 + 0{,}0486 \log p)^2 \quad (10)$$

Para as zonas B e C:

$$\beta_{zb} + \beta_{zc} = (0{,}272 + 0{,}047 \log p)^2 \quad (11)$$

(*) Deve-se utilizar a equação (7*a*) e, portanto, a figura 1 com precaução nas frequências superiores a cerca de 20 GHz e nos ângulos do horizonte superiores a 5°, até que a CCIR tenha completado novos estudos sobre o assunto, em conformidade com a Resolução n.º 60.

(**) Define-se aqui o «ângulo do horizonte» como sendo o ângulo do centro da antena da estação terrena, formado pelo plano horizontal e por um raio que passe em incidência rasante pelo horizonte físico visível na direcção considerada.

β_v depende da frequência e da densidade do valor de água atmosférico (β_v é desprezável se f<15 GHz). O seu valor é dado pela fórmula:

$$\beta_v = 3{,}5 \times 10^{-4} \rho \left[\frac{1}{\left(1 - \frac{22{,}3}{f}\right)^2 + \frac{9}{f}} + \frac{1}{\left(1 + \frac{22{,}3}{f}\right)^2} \right] + 3 \times 10^{-6} \rho f_2 \quad (12)$$

em que ρ representa a densidade do valor de água (gramas por metro cúbico) e depende da zona radioclimática. São utilizados os seguintes valores:

Zona A — ρ = 1 g/m³;
Zona B — ρ = 2 g/m³;
Zona C — ρ = 5 g/m³.

β_o depende da frequência; o seu valor é dado pela fórmula:

$$\beta_o = 68 \times 10^{-4} \times f^2 \left\{ \frac{1}{(60 - f)^2} \quad \frac{1}{(60 + f)^2} \quad \frac{1}{(f)^2 + 0{,}36)} \right\} \quad (13)$$

Calcula-se, pois, a distância de coordenação na zona A, para a frequência, a percentagem de tempo e o ângulo do horizonte apropriados, aplicando as fórmulas (7), (8), (9), (10), (12) e (13). De modo semelhante, calcula-se a distância de coordenação na zona B ou na zona C, utilizando as fórmulas (7), (8), (9), (11), (12) e (13).

3.2.3. *Método gráfico:*

As fórmulas do § 3.2.2. foram convertidas na forma de curvas, o que constitui o segundo método de avaliação da distância de coordenação para o modo de programação (1). É de notar que o método gráfico pode substituir o método do § 3.2.2. e que compete a cada administração utilizar o método que lhe pareça mais cómodo.

A atenuação de transmissão de referência mínima admissível L_b (p) calcula-se utilizando a fórmula (2). Deduz-se a «atenuação de coordenação» L_1 subtraindo da atenuação de transmissão de referência mínima admissível a correcção A_h devida ao ângulo do horizonte:

$$L_1 = L_b\ (p) - A_h \quad (14)$$

Os valores da correcção devida ao ângulo do horizonte deduzem-se da figura 1, para a frequência e o ângulo do horizonte apropriados (*).

Determina-se do seguinte modo a distância de coordenação em cada zona radioclimática. Comecemos pela zona A: a distância de coordenação durante 0,01 % do tempo, d_A (0,01), é tirada da figura 2 com base nos valores apropriados da atenuação de coordenação L_1 e da frequência para p % do tempo, a distância de coordenação na zona A obtêm-se então multiplicando a distância associada a 0,01 % do tempo pelo factor Δp_A dado na figura 3:

$$d_A = d_{A\,(0{,}01)} \times \Delta p_A \quad (15)$$

De modo semelhante, a distância de coordenação na zona B baseia-se nos valores de d_B (0,01) e de Δp_{BC} tirados respectivamente, das figuras 4 e 3; a distância de coordenação na zona C baseia-se nos valores de d_c (0,01) e de Δp_{BC} tirados, respectivamente, das figuras 5 e 3.

3.3. *Trajectos mistos.*

Se a distância a calcular se estender por várias zonas radioclimáticas (trajecto misto), a previsão faz-se do seguinte modo:

Se se designar pelos índices i, j, k, ... as secções do trajecto em zonas diferentes, tem-se:

$$L_b(p) - A_o - A_h = \beta_i d_i \quad (16)$$

em que b_i é o factor de atenuação na primeira zona (i).

Se d_i for superior à distância D_i na primeira zona (i) para a direcção considerada, o trajecto prolonga-se pela segunda zona (j) e pode escrever-se:

$$L_b(p) - A_o - A_h - \beta_i D_i = \beta_j d_j \quad (17)$$

(*) Define-se aqui D_i «ângulo do horizonte», como sendo o ângulo visto do centro da antena da estação terrena, formado pelo plano horizontal e por um raio que passe em incidência rasante pelo horizonte físico visível na direcção considerada.

donde se tira d_j do trajecto na segunda zona (j), pode escrever-se:

$$L_b(p) - A_o - A_h - \beta_i D_i - \beta_j d_j = \beta_k d_k \quad (18)$$

donde se tira d_k. O método pode ser repetido tantas vezes quantas se desejar; no caso considerado, a distância total d_i tem por expressão:

$$d^i = D_i + D_j + d_k \text{ (km)} \quad (19)$$

Encontram-se no anexo III exemplos de aplicação gráfica deste método.

3.4. *Distância de coordenação máxima para o modo de propagação (1).*

Se, ao determinar a distância de coordenação para o modo de propagação (1), se obtiverem valores superiores ao valor indicado na figura 6 no quadro III, a distância de coordenação para o modo de propagação (1) será o valor indicado na figura 6 ou no quadro III. No caso de trajectos mistos, os valores a considerar são os indicados para as zonas B ou C, consoante o caso. No caso de trajectos mistos com vários troços na zona A, a distância total na zona A não deve exceder o valor indicado para essa zona na figura 6 ou no quadro III.

4. *Determinação do contorno de coordenação para o modo de propagação (2) — Difusão pelos hidrometeoros.*

No caso do mecanismo de propagação por difusão pelos hidrometeoros (chuva), o contorno de coordenação é determinado por um trajecto cuja configuração é sensivelmente diferente da que intervém nos mecanismos da propagação no arco de círculo máximo. Em primeira aproximação, a chuva provoca uma difusão isotrópica da energia, de tal modo que a interferência se pode manifestar em ângulos de difusão muito grandes e em intersecções de faixas afastados do arco de círculo máximo.

4.1. *Atenuação de transmissões normalizada L_2 (0,01).*

Para determinar o contorno de coordenação correspondente à difusão pela chuva é preciso calcular a «atenuação de transmissão normalizada» aplicando a fórmula seguinte:

$$L_2\ (0{,}001) = P_t' + \Delta G - P_r(p) - F(p, f) \quad (20)$$

Nesta fórmula:

ΔG — diferença (decibéis) entre valor do ganho máximo das antenas das estações de Terra que funcionam na faixa de frequências considerada e o valor de 42 dB. Quando a estação terrena é uma estação de emissão, ΔG é dada pelo quadro I; quando a estação terrena é uma estação de recepção, ΔG é dada pelo quadro II.

$F(p, f)$ — correcção (decibéis) a aplicar para passar da percentagem de 0,01 % à percentagem de tempo efectivo p na faixa de frequências considerada (v. a figura 7).

Os outros parâmetros estão definidos no § 2. Para as estações de Terra, os valores de P_t' estão indicados no quadro II.

4.2. *Zonas hidrometeorológicas.*

A superfície terrestre foi dividida em cinco zonas hidrometeorológicas principais (zonas 1 a 5). Estas zonas estão representadas na figura 8. As características climáticas destas zonas para 0,01 % do tempo encontram-se no quadro IV.

4.3. *Cálculo da distância de difusão pela chuva d_r*

4.3.1. *Método numérico.*

A atenuação de transmissão normalizada é constituída por seis termos:

$$L_2\ (0{,}01) = A_1 + A_2 - A_3 - A_4 - A_5 + A_6 \quad (21)$$

em que

$$A_1 = 157 + 20 \log d_r - 20 \log f \text{ (dB)} \quad (22)$$

em que d_r é a distância de difusão pela chuva (quilómetros).

$$A_2 = 26 + 14 \log R - 5{,}88 \times 10^{-5} (d_r - 40)^2 \text{ dB} \quad (23)$$

em que R é a intensidade de precipitação à superfície da Terra em milímetros/hora (quadro IV). Considera-se que a distância da estação de Terra ao horizonte é de 40 km.

$$A_3 = 0{,}005\ (f - 10)^{1.7}\ R^{0.4}\ \text{(dB) para } 10 < f < 40\ \text{GHz} \quad (24a)$$

$$= 0\ \text{(dB) para } f \leq 10\ \text{GHz} \quad (24b)$$

$$A_4 = 10\ \log\left[\frac{2{,}7}{\gamma D}\ (1 - 10)^{-\gamma D/5}\right]\text{(dB) para } f < 5\ \text{GHz} \quad (25a)$$

$$= 0\ \text{(dB) para } f \leq 5\ \text{GHz} \quad (25b)$$

em que D é o diâmetro da célula de precipitação em quilómetro (quadro IV).

$$\gamma = 0{,}008\ R\ (f - 5) \text{ para } f > 5\ \text{GHz} \quad (26a)$$

$$= 0 \text{ para } f \leq 5\ \text{GHz} \quad (26b)$$

$$A_5 = 10\ \log D\ \text{(dB)} \quad (27)$$

$$A_6 = d_o b_o + d_v \beta_v \quad (28)$$

$$d_o = 0{,}7\ d_r + 32\ \text{km para } d_r < 340\ \text{km} \quad (29a)$$

$$= 270\ \text{km para } d_r \geq 340\ \text{km} \quad (29b)$$

$$d_v = 0{,}7\ d_r + 32\ \text{km para } d_r < 240\ \text{km} \quad (30a)$$

$$= 200\ \text{km para } d_r \geq 240\ \text{km} \quad (30b)$$

β_v é dado na fórmula (12), onde é preciso substituir p por p_m (quadro IV).

β_o é dado na fórmula (13).

Assim, para uma dada zona hidrometeorológica utilizam-se os parâmetros do quadro IV para calcular a distância de difusão pela chuva d_r, aplicando um procedimento iterativo.

4.3.2 *Método gráfico.*

As fórmulas do § 4.3.1. foram convertidas em forma gráfica para proporcionar um outro método de determinação da distância d_r.

Para calcular a distância de difusão pela chuva e para a zona hidrometeorológica 1, utiliza-se a atenuação de transmissão normalizada obtida por aplicação da fórmula (20) para a frequência apropriada (v. a figura 9), donde se deduz a distância de difusão pela chuva d_r.

As figuras 10 e 13 contêm curvas que correspondem às zonas 2 a 5. Em todos os casos escolhe-se a zona hidrometeorológica que corresponde à localização da estação terrena.

4.4. *Distâncias máximas de difusão pela chuva.*

Ao determinar-se a distância de difusão pela chuva pelo método de propagação (2), se se chegar a valores que excedas o valor apropriado no quadro V, tomar-se-á para d_r o valor do referido quadro.

4.5. *Traçado do contorno de coordenação no caso da difusão pela chuva.*

Devido à geometria de propagação da difusão pela chuva, o centro de contorno de coordenação que corresponde a este modo não coincide com a localização da estação terrena. A distância que os separa designa-se por Δd.

Utiliza-se a distância de difusão pela chuva d_r, bem como o ângulo de elevação ε_s, do feixe principal da antena da estação terrena para determinar Δd. A fórmula a utilizar é a seguinte:

$$\Delta d = 5{,}88 \times 10^{-5}\ (d_r - 40)^2\ \text{cotg}\ \varepsilon_s\ \text{(km)} \quad (31)$$

Pode-se ainda determinar Δd por meio da figura 14.

Esta distância Δd é medida a partir da estação terrena, num mapa de escala apropriada, segundo o azimude do feixe principal da sua antena. Traça-se um círculo de raio d_r, tendo por centro o ponto assim obtido. Este círculo é o contorno de coordenação no caso da difusão pela chuva.

A distância de coordenação no caso da difusão pela chuva, representada por d_2, é a distância compreendida entre a localização da estação terrena e o contorno de coordenação no azimude considerado.

4.6. *Ausência de efeitos dos trajectos mistos.*

Como o único efeito significativo da difusão pela chuva é o que produz na área da estação terrena, a questão dos trajectos mistos não se coloca. Tem-se em conta a zona hidrometeorológica que corresponde à estação terrena, bem como a distância máxima apropriada de difusão pela chuva (quadro V).

5. *Valores mínimos da distância de coordenação.*

Se o método de determinação da distância de coordenação para o modo de programação (1), d_1, conduzir a um resultado cujo valor seja inferior a 100 km, d_1, deve ser tomada como igual a 100 km. De igual modo, se o método de determinação da distância de difusão pela chuva, d_r, conduzir a um resultado cujo valor seja inferior a 100 km, d_r, deve ser tomada como igual a 100 km.

6. *Distância de coordenação.*

Em qualquer azimude, a maior das distâncias de coordenação, d_1 ou d_2, é a distância de coordenação a utilizar para o procedimento de coordenação.

A figura 15 dá um exemplo de contorno de coordenação.

7. *Estações terrenas móveis (excepto estações móveis aeronáuticas).*

Para verificar se é preciso procurar, com uma outra administração, o acordo previsto pelas disposições dos n.os **1108** a **1111**, é necessário determinar a zona de coordenação que engloba todas as zonas de coordenação relativas a cada localização no interior da zona de serviço em que se pretende explorar estações terrenas móveis.

Pode utilizar-se o método precedente com este objectivo, determinando os contornos de coordenação individuais apropriados para um número suficientemente elevado de localizações, no interior e na periferia da zona de serviço proposta, e determinando, a partir desses contornos, uma zona de coordenação resultante que englobe todas as zonas de coordenação individuais possíveis.

8. *Revisão dos dados relativos à propagação.*

As informações dadas nas secções 3, 4 e 6 e no anexo III do presente apêndice baseiam-se, directa ou indirectamente, em dados de propagação reunidos, interpretados e ilustrados nos relatórios e nos pareceres pertinentes da CCIR. Os conhecimentos referentes à propagação estão sujeitos a modificações, à medida que se disponha de novos dados, podendo então ser necessário ou vivamente recomendável introduzir emendas correspondentes nas informações sobre a propagação contidas no presente apêndice.

A Resolução n.° 60 fixa o processo a seguir para manter em dia os elementos do presente apêndice referentes à propagação.

(1) As características correspondentes a estes serviços podem variar entre limites bastante grandes. É necessário um estudo complementar para fornecer valores significados.
(2) A = modulação analógica; N = modulação numérica.
(3) Ver nota (3) do § 2. $M_2(p_0)$ pode tomar valores compreendidos entre 5 dB e 40 dB, consoante a frequência utilizada, a zona hidrometeorológica e a concepção do sistema.
(4) Valores estimados para uma faixa com a largura de 1 Hz e 30 dB inferiores à potência total suposta para cada emissão.
(5) Os valores supõem que as larguras de faixa radioeléctrica são de, pelo menos, 100 MHz e 20 dB inferiores à potência total suposta para cada emissão.
(6) Nestas faixas indicaram-se características das estações de Terra correspondentes aos sistemas transhorizonte. Se uma administração considerar que não é necessário tomar em consideração os sistemas transhorizonte, podem utilizar-se as características de feixes hertzianos de visibilidade directa correspondentes à faixa de frequência 3400-4200 MHz para determinar a zona de coordenação em conformidade com o § 2.3.1.
(7) Em certos sistemas do serviço fixo por satélite pode ser desejável escolher uma largura de faixa de referência B mais larga quando as exigências do sistema mostrem que é possível. Todavia, a escolha de uma faixa mais larga conduz a distâncias de coordenação mais pequenas e será talvez necessário proceder a nova coordenação da estação terrena se se decidir ulteriormente reduzir a faixa de referência. Para as emissões de faixa estreita deve tomar-se para a faixa de referência B a mesma largura que a da faixa ocupada pela portadora útil.
(8) Para a definição de B, ver o anexo 1.

———— Contorno de coordenação.
—·—·—·— Contorno para o modo de propagação (1).
---------- Contorno para o modo de propagação (2).
———— Contornos auxiliares para o modo de propagação (1).

Nota. — Se ao utilizar os contornos auxiliares for verificado que, sob o ponto de vista do modo de propagação (1), se pode eliminar uma estação de Terra, segue-se que:

Se a estação de Terra se encontrar no exterior do contorno correspondente ao modo de propagação (2), pode deixar-se de tê-la em conta;
Se a estação de Terra se encontrar no interior do contorno correspondente ao modo de propagação (2), continuar-se-á a tê-la em conta, mas somente para esta modo.

ANEXO I

Determinação e utilização dos contornos auxiliares

1. *Introdução.*

Para os mecanismos de propagação ao longo do círculo máximo, modo (1), os contornos auxiliares são de grande interesse, pois permitem eliminar dos estudos algumas das estações de Terra, existentes ou em projecto, que se encontram no interior da zona de coordenação, sem o recurso a cálculos precisos e difíceis. Deste modo, no decorrer de negociações posteriores, os trabalhos da administração responsável pela estação terrena e os das administrações em causa encontrar-se-ão facilitados se esses contornos auxiliares lhes forem fornecidos.

2. *Determinação dos contornos auxiliares.*

Podem determinar-se dois tipos de contornos, consoante a estação terrena funcione como estação de emissão ou de recepção.

2.1. *Estação terrena de emissão.*

Na equação (2) pode-se isolar o termo $G_r - P_r\ (p)$ e definir um factor de sensibilidade à interferência S (dBW) para as estações de Terra interferidas:

$$S = G_r - P_r\ (p) \tag{32}$$

O quadro I dá valores desse factor para diversos tipos de estações de Terra.

Associa-se o contorno de coordenação a um factor de sensibilidade (máxima) S, cujo valor se inscreve na curva.

A determinação dos contornos auxiliares faz-se do mesmo modo que a do contorno de coordenação correspondente ao modo de propagação (1), mas, para o factor de sensibilidade à interferência S (dBW) da estação de Terra, utilizam-se valores 5, 10, 15, 20 dB, etc., inferiores ao valor (dado no quadro I) que corresponde ao contorno de coordenação.

2.2. *Estação terrena de recepção.*

Na equação (2) pode-se também isolar o termo $P_t + G_t$ e definir a p. i. r. e. E (dBW) das estações de Terra interferentes:

$$E = P_t + G_t \tag{33}$$

cujos valores se encontram no quadro II.

Associa-se o contorno de coordenação a um valor máximo de E que se inscreve na curva.

A determinação dos contornos auxiliares faz-se do mesmo modo que a do contorno de coordenação correspondente ao modo de propagação (1) mas para a p. i. r. e. E (dBW) da estação Terra utilizam-se valores 5, 10, 15, 20 dB, etc., inferiores ao valor (dado no quadro II) que corresponde ao contorno de coordenação.

3. *Utilização dos contornos auxiliares.*

Para uma dada faixa partilhada, traçam-se no mesmo gráfico os contornos auxiliares, o contorno de coordenação para a propagação ao longo do círculo máximo, modo (1), e o contorno de coordenação para a difusão pelos hidrometeoros, modo (2). A título de ilustração, dá-se um exemplo na figura 15.

Para cada estação de Terra situada no interior da zona de coordenação pode aplicar-se um método de duas fases, por um lado, para a propagação ao longo do arco de círculo máximo, e, por outro, para a difusão pelos hidrometeoros.

3.1. *Mecanismos de propagação ao longo do círculo máximo, modo (1).*

Se uma estação de Terra de emissão se encontrar no interior da zona de coordenação correspondente ao modo (1), é inútil continuar a tê-la em conta no que respeita a este modo.

Para qualquer estação de Terra de emissão situada no interior da zona de coordenação correspondente ao modo (1), determina-se a p. i. r. e. na direcção da estação terrena. Se este valor for inferior ao correspondente ao contorno mais próximo que define uma zona no exterior da qual se encontra a estação, pode considerar-se que esta não causa interferência superior a um nível admissível, e que, por conseguinte, não será necessário continuar a tê-la em conta no que respeita ao modo (1).

Poderá aplicar-se o mesmo método para qualquer estação de terra de recepção, utilizando o factor de sensibilidade à interferência em substituição da p. i. r. e.

3.2. *Eliminação de uma estação de Terra e mecanismos de difusão pelos hidrometeoros, modo (2).*

As estações de Terra eliminadas pelo método anterior e que deixaram de ser tomadas em conta no que respeita ao modo (1) devem, todavia, ser tomadas em consideração no que respeita ao modo (2), caso estas estações se encontrem no interior da zona de coordenação para a difusão pelos hidrometeoros.

ANEXO II

Ganho de antena na direcção do horizonte da estação terrena para os satélites geostacionários

1. *Generalidades.*

A componente do ganho da antena de uma estação terrena da direcção do horizonte físico em redor da estação terrena é uma função do ângulo de separação φ para cada azimute.

Existe uma relação unívoca entre o ângulo de elevação ε e o azimute a dos satélites geostacionários vistos de uma estação terrena que se encontra à latitude ζ. A figura II-1 apresenta, num diagrama rectangular elevação/azimute, os segmentos e arco possíveis da órbita dos satélites geostacionários; cada arco corresponde a uma latitude de estação terrena.

É possível que não se conheçam antecipadamente as longitudes relativas exactas dos satélites. Mas, mesmo que essas longitudes sejam conhecidas, a possibilidade de acrescentar um novo satélite ou a possibilidade de deslocar um satélite existente sugerem que se deve considerar como contendo satélites todo ou parte do arco correspondente.

2. *Método de determinação gráfica de $\varphi(\alpha)$.*

No gráfico da figura II-1, depois de ser ter escolhido e marcado o arco ou o segmento de arco apropriados, sobrepõe-se o traçado do horizonte $\varepsilon(\alpha)$, como mostra a figura II-2, na qual é dado um exemplo para uma estação terrena situada a 45° de latitude N. e para um satélite cuja localização está prevista entre as longitudes relativas 10° E. e 45° O.

Para cada ponto situado no horizonte local $\varepsilon(a)$, determina-se e mede-se a mais curta distância ao arco, na escala dos ângulos de elevação. O exemplo da figura II-2 mostra como se determina o ângulo fora do lóbulo principal φ para um azimute α (=210°), com um ângulo de elevação ε (=4°). A medida dá para φ o valor de 26°.

Procedendo assim para todos os azimutes (por escalões apropriados, por exemplo de 5° em 5°), obtém-se uma relação $\varphi(\alpha)$.

3. *Método de determinação numérica de $\varphi(\alpha)$.*

Utilizam-se neste método as fórmulas seguintes:

$$\Psi = \arccos(\cos\zeta \cdot \cos\delta; \tag{34}$$

$$\alpha'_s = \arccos(\operatorname{tg}\zeta \cdot \operatorname{cotg}\psi); \tag{35}$$

$\alpha_s = \alpha'_s + 180°$ para estações terrenas situadas no hemisfério norte e satélites situados a oeste da estação terrena; (36*a*)

$\alpha_s = 180° - \alpha'_s$ para estações terrenas situadas no hemisfério norte e satélites situados a este da estação terrena; (36*b*)

$\alpha_s = 360° - a'_s$ para estações terrenas situadas no hemisfério sul e satélites situados a oeste da estação terrena; (36*c*)

$a_s = a'_s$ para estações terrenas situadas no hemisfério sul e satélites situados a este da estação terrena; (36*d*)

$$\varepsilon_s = \arctan\left(\frac{K - \cos\Psi}{\sin\Psi}\right) - \Psi; \tag{37}$$

$$\varphi(\alpha) = \arccos[\cos\varepsilon \cdot \cos\varepsilon_s \cdot \cos(\alpha - \alpha_s) + \sin\varepsilon \cdot \sin\varepsilon_s]. \tag{38}$$

em que:

ζ — latitude da estação terrena;
δ — diferença de longitude entre o satélite e a estação terrena;
Ψ — arco do círculo máximo entre a estação terrena e o ponto na vertical do satélite;
α_S — azimute do satélite visto da estação terrena;
ε_S — ângulo de elevação do satélite visto da estação terrena;
α — azimute da direcção considerada;
ε — ângulo de elevação do horizonte no azimute α considerado;
$\varphi(\alpha)$ — ângulo entre o eixo do lóbulo principal e a direcção do horizonte correspondente ao azimute α considerado;
K — relação entre o raio da órbita e o raio da Terra, igual a 6,62.

Todos os arcos acima mencionados são expressos em graus.

4. *Determinação do ganho de antena.*

Pode utilizar-se a relação $\varphi(\alpha)$ para obter o ganho de antena na direcção do horizonte G (dB), em função do azimute α, utilizando o diagrama real de radiação da antena da estação terrena ou uma fórmula que dê uma boa aproximação. Por exemplo, nos casos em que a relação entre o diâmetro da antena e o comprimento de onda seja superior ou igual a 100, convém utilizar as fórmulas:

$$G(\varphi) = G_{max} - 2{,}5 \times 10^{-3}\left(\frac{D}{\lambda}\varphi\right)^2 \text{ para } 0 < \varphi < \varphi_m \quad (39a)$$

$$G(\varphi) = G_1 \text{ para } \varphi_m \leq \varphi < \varphi, \quad (39b)$$

$$G(\varphi) = 32 - 25 \log \varphi \text{ para } \varphi, \leq \varphi < 48° \quad (39c)$$

$$G(\varphi) = -10 \text{ para } 48° \leq \varphi \leq 180° \quad (39d)$$

onde:

D — diâmetro da antena
λ — comprimento de onda
} expressos na mesma unidade;

G_1 — ganho do primeiro lóbulo lateral $= 2 + 15 \log \frac{D}{\lambda}$

$$\varphi_m = \frac{20\lambda}{D}\sqrt{G_{max} - G_1} \text{ (graus)}$$

$$\varphi_1 = 15{,}85\left(\frac{D}{\lambda}\right)^{-0{,}6} \text{ (graus)}$$

Para a antenas cuja relação $\frac{D}{\lambda}$ seja inferior a 100, quando não for possível utilizar o diagrama de radiação de referência acima mencionado e não se puder recorrer, em seu lugar, nem á um dado medido nem a um parecer pertinente da CCIR aceite pelas administrações em causa, as administrações podem utilizar o diagrama de referência representado por:

$$G(\varphi) = G_{max} - 2{,}5 \times 10^{-3}\left(\frac{D}{\lambda}\right)^2 \text{ para } 0 < \varphi < \varphi_m \quad (40a)$$

$$G(\varphi) = G_1 \text{ para } \varphi_m \leq \varphi < 100\frac{\lambda}{D} \quad (40b)$$

$$G(\varphi) = 52 - 10 \log\frac{D}{\lambda} - 25 \log \varphi \text{ para } 100\frac{\lambda}{D} \leq \varphi < 48° \quad (40c)$$

$$G(\varphi) = 10 - 10 \log\frac{D}{\lambda} \text{ para } 48° \leq \varphi \leq 180° \quad (40d)$$

onde:

D — diâmetro da antena
λ — comprimento de onda
} expressos na mesma unidade;

G_1 — ganho do primeiro lóbulo lateral $= 2 + 15 \log \frac{D}{\lambda}$

$$\varphi_m = \frac{20\lambda}{D}\sqrt{G_{max} - G_1} \text{ (graus)}$$

Os diagramas acima indicados podem ser modificados como convenha para obter uma melhor representação do diagrama real de radiação.

Nos casos em que $\frac{D}{\lambda}$ não é dado, pode ser calculado a partir da expressão $20 \log \frac{D}{\lambda} = G_{max} - 7{,}7$, na qual G_{max} é, em decibéis, o ganho do lóbulo principal da antena.

ANEXO III

Método gráfico de determinação da distância de coordenação no caso de trajectos mistos

1. *Duas zonas:*

O método a utilizar no caso de um trajecto misto envolvendo duas zonas é ilustrado pelo exemplo da figura III-1 (*a*). A estação terrena está situada na zona A a uma distância de 75 km da zona B. O método gráfico descrito abaixo é particularmente útil quando há, como neste exemplo, mais de uma fronteira entre zonas.

No exemplo abaixo supõe-se que a atenuação de coordenação é de 180 dB, a frequência de 20 GHz e a percentagem do tempo de 0,01 %. A sequência das operações é a seguinte:

1.1. Determinar a distância que, inteiramente na zona A, daria o valor da atenuação de coordenação; marcar esta distância (aqui 160 km), a partir da origem, no eixo das abcissas de uma folha de papel milimétrico, o que dá o ponto A [figura III-1 (*b*)];

1.2. Determinar a distância que, inteiramente na zona B, daria o mesmo valor da atenuação de coordenação; marcar esta distância (aqui 530 km), a partir da origem, no eixo das ordenadas da mesma folha, o que dá o ponto B;

1.3. Unir os pontos A e B por um segmento de recta;

1.4. Marcar no eixo das abcissas, a partir da origem, a distância de 75 km entre a estação terrena e a zona B, o que dá o ponto A_1;

1.5. Partindo do ponto A_1, marcar, paralelamente ao eixo das ordenadas, a distância de 150 km inteiramente compreendida na zona B, o que dá o ponto B_1;

1.6. A distância que falta percorrer na segunda parte da zona A determina-se traçando, a partir de B_1, uma paralela ao eixo das abcissas até ao ponto X onde ela encontra a curva a utilizar no caso de um trajecto misto. Na figura III-1 (*b*) lê-se: $B_1X = 40$ km;

1.7. A distância de coordenação é a soma das distâncias OA_1, A_1B_1 e B_1X, ou seja:

$$75 + 150 + 40 = 265 \text{ km}$$

2. *Três zonas:*

Em certos casos especiais, o trajecto misto atravessa as três zonas radioclimáticas A, B e C. Pode-se resolver o problema considerando uma terceira dimensão adicional ao método seguido no caso em que o trajecto misto atravesse apenas duas zonas. Teoricamente, isso equivale a dizer que se deve procurar a terceira coordenada de um ponto cujas duas primeiras coordenadas correspondam às distâncias conhecidas nas duas primeiras zonas e que se encontre no plano que passa pelos três pontos dos eixos Ox, Oy e Oz correspondendo às distâncias que, nas zonas A, B e C, respectivamente, dariam o valor pretendido da atenuação de transmissão de referência.

Na prática, pode reduzir-se essa determinação ao método gráfico simples apresentado na figura III-2 (*a*), para o qual se supõe, por exemplo, que a atenuação de coordenação (L_1) é igual a 180 dB para uma frequência de 20 GHz. O problema consiste em encontrar a distância de coordenação a partir da estação terrena na direcção indicada na figura III-2 (*a*). Nesta direcção e a partir de O, estação terrena situada na zona A, o comprimento do trajecto na zona A é de 75 km (OA), sendo seguido de um comprimento de 150 km na zona B (A_1B_1), na mesma direcção, e seguir de um comprimento desconhecido, que se pretende precisamente determinar, na zona C [figura III-2 (*a*)].

O método a aplicar é então o seguinte [figura III-2 (*b*)]:

2.1. Começar por aplicar o mesmo método que no caso em que estejam envolvidas apenas duas zonas, aplicando somente as etapas 1.1 a 1.5, e continuar como se segue:

2.2. Pelo ponto B_1, traçar uma paralela à recta AB. Essa paralela corta o eixo das abcissas em D;

2.3. Determinar a distância que, situada inteiramente na zona C, daria o mesmo valor da atenuação de coordenação. Marcar esta distância (aqui 350 km) no eixo das ordenadas em OC. Unir os pontos C e A por um segmento de recta;

2.4. Pelo ponto D, traçar uma paralela ao eixo das ordenadas. Essa paralela corta CA em X;

2.5. A distância DX é o comprimento procurado do trajecto na zona C. Verifica-se que é igual a 85 km;

2.6. A distância de coordenação é a soma dos comprimentos OA_1, A_1B_1 e DX e o seu valor é, neste exemplo:

$$75 + 150 + 85 = 310 \text{ km}$$

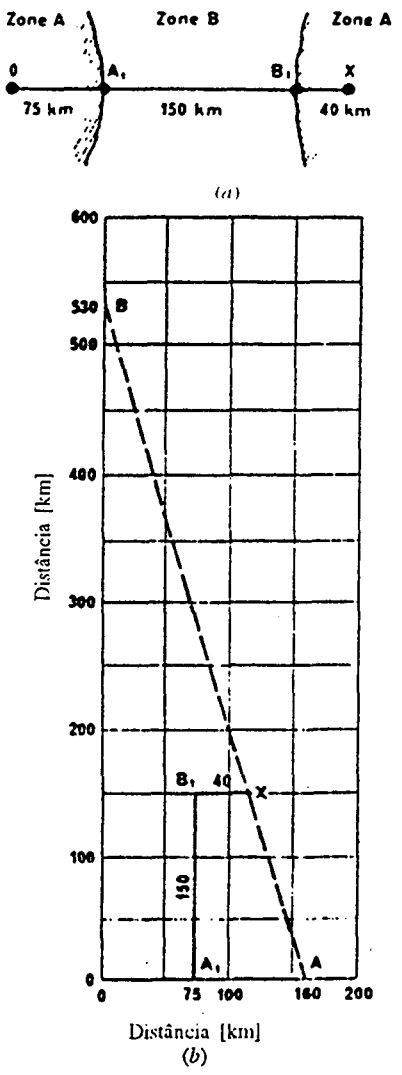

Fig. III-1 — Exemplo de determinação da distância de coordenação no caso de um trajecto misto envolvendo as zonas A e B

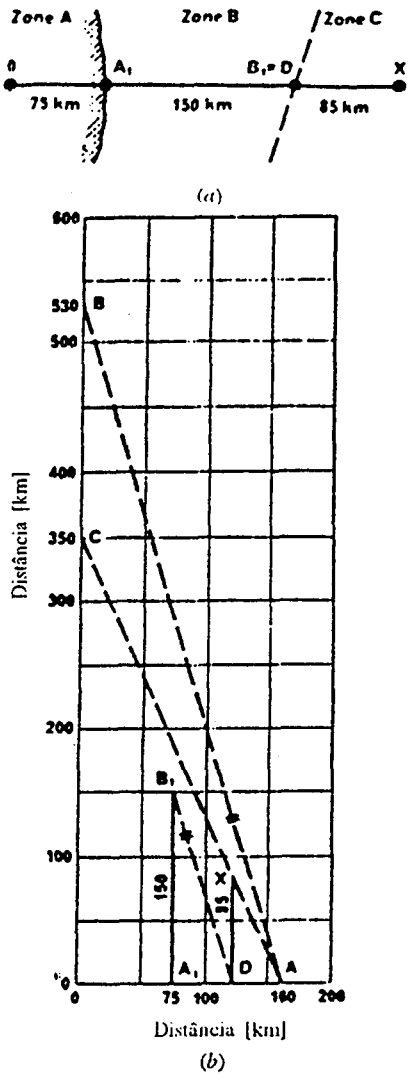

Fig. III-2 — Exemplo de determinação da distância de coordenação no caso de um trajecto misto envolvendo as zonas A, B e C

APÊNDICE 29

Método de cálculo para determinar se é necessária coordenação entre redes de satélite geostacionário que partilham as mesmas faixas de frequências

1. *Introdução.*

O método de cálculo para determinar se é necessária a coordenação de acordo com o n.º **1060** baseia-se no facto de que a temperatura de ruído de um sistema interferido aumenta com o nível da emissão interferente. Este método é, portanto, aplicável quaisquer que sejam quer as características de modulação das redes de satélite envolvidas, quer as frequências exactas que utilizem.

Segundo este método, calcula-se, para uma dada ligação por satélite, o acréscimo aparente da temperatura de ruído equivalente, resultante da emissão interferente de um dado sistema (v. § 2 a seguir), e a relação, expressa em percentagem, entre esse acréscimo e a temperatura de ruído equivalente da ligação é comparada com um valor limite (v. § 3 a seguir).

2. *Cálculo do acréscimo aparente da temperatura de ruído equivalente de uma ligação por satélite sujeita a interferência.*

Consideram-se dois casos possíveis:

Caso 1 — redes útil e interferente partilhando uma ou várias faixas de frequências, cada uma no mesmo sentido de transmissão;

Caso II — redes útil e interferente partilhando uma ou várias faixas de frequências, cada uma em sentidos de transmissão opostos (utilização bidireccional).

Estes dois casos são aplicáveis a todas as posições relativas dos satélites, desde posições próximas a posições quase antípodas.

2.1. *Notações.*

Seja A uma ligação por satélite da rede R associada ao satélite S e A´ uma ligação por satélite da rede R' associada ao satélite S´. Os símbolos relativos à ligação por satélite A´ são afectados por uma plica e os relativos à ligação por satélite A não são afectados por tal notação:

As notações utilizadas para a ligação por satélite A são as seguintes:

T — temperatura de ruído equivalente da ligação por satélite, referida à saída da antena de recepção da estação terrena (K);

T_s — temperatura de ruído do sistema de recepção da estação espacial, referida à saída da antena de recepção da estação espacial (K);

T_e — temperatura de ruído do sistema de recepção da estação terrena, referida à saída da antena de recepção da estação terrena (K);

ΔT_s — acréscimo aparente da temperatura de ruído do sistema de recepção do satélite S causado por uma emissão interferente, referida à saída da antena de recepção desse satélite (K);

ΔT_e — acréscimo aparente da temperatura de ruído do sistema de recepção da estação terrena e_R, causado por uma emissão interferente, referido à saída da antena de recepção dessa estação (K);

ps — densidade máxima de potência, por hertz, fornecida à antena do satélite S (média determinada na faixa de 4 kHz mais desfavorecida, quando a frequência da portadora for inferior a 15 GHz, ou na faixa de 1 MHz mais desfavorecida, quando a frequência da portadora for superior a 15 GHz) (watt/hertz);

$g_3(\eta)$ — ganho da antena de emissão do satélite S na direcção η (relação numérica de potências);

η_A — direcção, a partir do satélite S, da estação terrena de recepção e_R para a ligação por satélite A;

$\eta_{e'}$ — direcção, a partir do satélite S, da estação terrena de recepção e'_R para a ligação por satélite A´;

Nota. — O produto $p_s g_3(\eta_{e'})$ é a p. i. r. e. máxima, por Hz, do satélite S na direcção da estação terrena de recepção e'_R para ligação por satélite A´.

$\eta_{s'}$ — direcção do satélite S´, a partir do satélite S;

p_e — densidade máxima de potência, por hertz, fornecida à antena da estação terrena de emissão e_T (média determinada na faixa de 4 kHz mais desfavorecida, quando a frequência da portadora for inferior a 15 GHz, ou na faixa de 1 MHz mais desfavorecida, quando a frequência da portadora for superior a 15 GHz) (watt/hertz);

$g_2(\delta)$ — ganho da antena de recepção do satélite S na direcção δ (relação numérica de potências);

δ_A — direcção, a partir do satélite S, da estação terrena de emissão e_T para a ligação por satélite A;

$\delta_{e'}$ — direcção, a partir do satélite S, da estação terrena de emissão e'_T para a ligação por satélite A´;

$\delta_{s'}$ — direcção do satélite S´, a partir do satélite S;

θ_t — afastamento angular topocêntrico, em graus, entre os dois satélites (1), tendo em conta tolerâncias longitudinais de manutenção em posição;

Nota. — Só o ângulo topocêntrico θ_t deve ser utilizado no tratamento do caso I.

θ_g — afastamento angular geocêntrico, em graus, entre os dois satélites, tendo em conta as tolerâncias longitudinais de manutenção em posição;

Nota. — Só o ângulo geocêntrico θ_g deve ser utilizado no tratamento do caso II.

$g_1(\theta_1)$ — ganho da antena de emissão da estação terrena e_T na direcção do satélite S´ (relação numérica de potências);

$g_4(\theta_1)$ — ganho da antena de recepção da estação terrena e_R na direcção do satélite S´ (relação numérica de potências);

k — constante de Boltzmann ($1{,}38 \times 10^{-23}$ J/K);

l_d — atenuação de transmissão em espaço livre (2) na ligação descendente (relação numérica de potências), entre o satélite S e a estação terrena de recepção e_R para a ligação por satélite A;

Nota. — Considera-se que atenuação de transmissão em espaço livre em qualquer ligação descendente, entre os satélites S ou S´ e as estações terrenas de recepção e_R ou e'_R é igual a ld.

---

(1) O anexo I descreve um método de cálculo do afastamento angular topocêntrico.

(2) O anexo II descreve um método de cálculo de atenuação de transmissão em espaço livre.

l_u — Atenuação de transmissão em espaço livre (1) na ligação ascendente (relação numérica de potências), entre a estação terrena e_T e o satélite S para a ligação por satélite A;

Notas. — Considera-se que a atenuação de transmissão em espaço livre em qualquer ligação ascendente, entre as estações terrenas e_T ou e'_T e os satélites S ou S', é igual a l_u.

l_s — Atenuação de transmissão em espaço livre (1) na ligação intersatélites (relação numérica de potências), entre o satélite S' e o satélite S;

γ — Ganho de transmissão de uma ligação específica por satélite que sofre uma interferência, avaliado entre a saída da antena de recepção do satélite S e a saída da antena de recepção da estação terrena e_R (relação numérica de potências, habitualmente inferior a 1).

2.2. *Método geral.*

Nas expressões que se seguem, a frequência a utilizar para o calculo de dd_u, l_u e l_s é a frequência média da faixa comum às duas redes no sentido considerado. Se, num dado sentido, não houver sobreposição das faixas de frequências consignadas às duas redes, o valor correspondente ΔT_s ou ΔT_e) é considerado como sendo igual a zero. No caso em que para uma rede os dados do apêndice 3 não tenham sido publicados, considera-se que a faixa de frequências consignada a esse rede é a faixa de frequências indicada no apêndice 4.

2.2.1. *Caso 1 — Redes útil e interferente que partilham uma faixa de frequências no mesmo sentido de transmissão.*

Os ganhos $g_1(\theta_t)$ e $g_4(\theta_t)$ são os das estações terrenas consideradas. Quando não se dispuser de dados medidos num de um parecer pertinentes da CCIR aceite pelas administrações em causa, será preciso utilizar os diagramas de radiação dados no anexo III.

2.2.1.1. *Simples repetidor-conversor de frequência a bordo de um satélite.*

ΔT_S e ΔT_e podem ser calculados pelas seguintes expressões:

$$\Delta T_s = \frac{p_{e'}\, g_1{}'(\theta_t)\, g_2(\delta_{e'})}{k l_u} \tag{1}$$

$$\Delta T_e = \frac{p_{s'}\, g_3{}'(\eta_e)\, g_4(\theta_t)}{k l_d} \tag{2}$$

Utiliza-se o símbolo ΔT para representar o acréscimo aparente, causado pela emissão interferente da ligação A', da temperatura de ruído equivalente para a ligação por satélite completa referida à saída da antena de recepção da estação terrena de recepção e_r.

Este acréscimo da temperatura de ruído resulta das emissões interferentes que afectam tanto o receptor do satélite da ligação A como o da estação terrena dessa ligação. Pode, pois, escrever-se:

$$\Delta T = \gamma\, \Delta T_S + \Delta T_e \tag{3}$$

$$\Delta T = \gamma \frac{p_{e'}\, g_1{}'(\theta_t)\, g_2(\delta_{e'})}{k l_u} + \frac{p_{s'}\, g_3{}'(\eta_e)\, g_4(\theta_t)}{k l_d} \tag{4}$$

Encontrar-se-á no anexo IV um exemplo de cálculo para a aplicação, no caso I, do método formulado no presente apêndice.

Pode obter-se do mesmo modo o valor $\Delta T'$ do acréscimo da temperatura de ruído equivalente parta a ligação por satélite completa, referido à saída da antena de recepção da antena de recepção da estação terrena de recepção e_R que sofre as interferências causadas pela ligação por satélite A, utilizando as expressões seguintes:

$$\Delta T_{SS'} = \frac{p_e\, g_1(\theta_t)\, g_2{}'(\delta_e)}{k l_u} \tag{5}$$

$$\Delta T_{ee'} = \frac{p_s\, g_3(\eta_{e'})\, g_4{}'(\theta_t)}{k l_d} \tag{6}$$

$$\Delta T' = \gamma' \frac{p_e\, g_1(\theta_t)\, g_2{}'(\delta_e)}{k l_d} + \frac{p_s\, g_3(\eta_{e'})\, g_4{}'(\theta_t)}{k l_d} \tag{7}$$

(1) O anexo II descreve um método de cálculo da atenuação de transmissão em espaço livre.

2.2.1.2. Casos que necessitam de um tratamento separado da ligação ascendente e da ligação descendente.

Se houver uma mudança de modulação a bordo do satélite ou se a transmissão for feita a partir do satélite, o acréscimo aparente da temperatura de ruído deve ser referido à temperatura total de ruído do sistema de recepção da ligação considerada (na estação espacial ou na estação terrena, consoante o caso). Em tal caso, a temperatura de ruído equivalente da ligação total por satélite e o ganho de transmissão não são utilizadas e as expressões (1) e (2) anteriores são utilizadas separadamente como convier (v. o § 2.3).

2.2.2. *Caso II* — Redes útil e interferente que partilham uma faixa de frequências em sentidos de transmissão opostos (utilização bidireccional).

O método de cálculo seguinte aplica-se apenas às emissões interferentes entre satélites.

As interferências entre as estações terrenas que utilizam uma mesma faixa de frequência em sentidos de transmissão opostos (utilização direccional) devem ser tratadas segundo métodos de coordenação análogos aos utilizados para a coordenação entre estações terrenas e estações de Terra.

2.2.2.1. *Simples repetidor-conversor de frequência a bordo de um satélite.*

O acréscimo da temperatura de ruído ΔT_S, referido à saída da antena de recepção do satélite da ligação A, é dado por:

$$\Delta T_S = \frac{p_S' \, g_3' \, (\eta_S) \, g_2 \, (\delta_S')}{k l_S} \tag{8}$$

O acréscimo aparente da temperatura de ruído equivalente da ligação é então dado por:

$$\Delta T = g \, \Delta T_S \tag{9}$$

O valor $\Delta T'$ do acréscimo da temperatura de ruído equivalente da ligação A' causado pelas emissões interferentes do satélite associado à ligação A é dado por:

$$\Delta T' = g' \, \Delta T_{SS'} = \frac{\gamma \, p_S \, g_3 \, (\eta_{S'}) \, g_2' \, (\delta_S)}{k l_S} \tag{10}$$

2.2.2.2. *Caso que necessita de um tratamento separado da ligação ascendente e da ligação descendente.*

Neste caso, utiliza-se directamente a expressão (8), com T_S para obter a percentagem de acréscimo. O valor $\Delta T_{SS'}$ do acréscimo da temperatura de ruído da ligação A' causado pelas emissões interferentes do satélite associado à ligação A obtém-se do mesmo modo.

2.2.3. *Consideração eventual da discriminação de polarização.*

O factor de discriminação de polarização descrito neste parágrafo deve ser tomado em consideração se cada uma das administrações responsáveis pelas redes deu o seu assentimento para tal efeito e notificou ou publicou a sua polarização, para fins de coordenação, em conformidade com as disposições do n.º **1060**. Neste caso, o acréscimo aparente da temperatura de ruído equivalente da ligação obtém-se pelas fórmulas seguintes:

Caso I:

$$\Delta T = \frac{\gamma \, \Delta T_s}{Y_{us}} + \frac{\Delta T_c}{Y_{cl}}$$

Caso II:

$$\Delta T = \frac{\gamma \, \Delta T_s}{Y_{ss}}$$

em que ΔT_s e ΔT_c têm os valores dados nos §§ 2.2.1 e 2.2.2 e os valores dos factores de discriminação de polarização Y_{us} Y_{cl} e Y_{ss} são dados pelo seguintes quadro:

Polarização		Factor de discriminação de polarização (relação numérica) $\frac{}{Y}$
Rede *R*	Rede *R*	
CE	*CD*	4
CE	*R*	1,4
CD	*R*	1,4
CE	*CE*	1
CD	*CD*	1
R	*R*	1

em que:

CE = circular esquerda (levogira);
CD = circular direita (dextrogira);
R = rectilínea.

2.3. *Determinação da ligação por satélite a ter em consideração para o cálculo do acréscimo da temperatura de ruído equivalente (caso 1 apenas).*

É necessário determinar o maior acréscimo de temperatura de ruído equivalente causado a qualquer ligação de outra rede de satélite, existente ou em projecto, provocado por emissões interferentes da rede de satélite considerada.

Para cada antena de recepção do satélite da rede interferida convém determinar a localização mais desfavorável da estação terrena de emissão da rede interferente sobrepondo, num mapa da superfície terrestre, as zonas de serviço «Terra para espaço» da rede interferente aos contornos de ganho da antena de recepção da estação espacial. A localização mais desfavorável da estação terrena de emissão é aquela em cuja direcção é mais elevado o ganho da antena de recepção do satélite da rede interferida.

Para cada zona de serviço «espaço para Terra» da rede interferida convém também determinar, de forma análoga, a localização mais desfavorável da estação terrena de recepção dessa rede. A localização mais desfavorável da estação terrena de recepção é aquela em cuja direcção é mais elevado o ganho da antena de emissão do satélite da rede interferente.

2.4 *Utilização das informações fornecidas de acordo com o apêndice 4.*

Quando uma administração decidir utilizar as informações fornecidas de acordo com o apêndice 4, com os procedimentos de cálculo descritos nas secções 2.2.1.1. e 2.2.2.1. para formular observações relativas à publicação antecipada de uma nova rede, os cálculos devem ser efectuados para as duas séries de valores fornecidos para γ e T. O maior dos dois valores de $\Delta T/T$ resultantes desses cálculos é o que convém utilizar.

3. *Comparação entre o acréscimo relativo calculado da temperatura de ruído e o valor de limiar.*

3.1. *Simples repetidor-conversor de frequência a bordo do satélite.*

Os valores calculados de $\frac{\Delta T}{T}$ e $\frac{\Delta T'}{T'}$, expressos em percentagem, devem comparar-se com o valor de limiar de 4 %:

Se o valor calculado de $\frac{\Delta T'}{T}$, expresso em percentagem, devido a qualquer emissão interferente causada pela ligação *A'* à ligação *A* não for superior ao valor de limiar, não é necessária qualquer coordenação relativamente à interferencia da ligação *A* pela ligação *A'*;

Se o valor calculado de $\frac{\Delta T}{T}$, expresso em percentagem, for superior ao valor de limiar, a coordenação é necessária.

Deve fazer-se, de forma análoga, a comparação entre o valor calculado de $\frac{\Delta T'}{T'}$ e o valor de limiar, expressos em percentagem.

3.2. Casos que necessitam de um tratamento separado da ligação ascendente e da ligação descendente.

a) Num caso de interferência que afecte uma única ligação, a ligação ascendente ou a ligação descendente, o valor de $\Delta T_e/T_e$ ou de $\Delta T_s/T_s$, expresso em percentagem, deve ser comparado com o valor de limiar de 4 %;

b) Num caso de interferência que afecte simultaneamente a ligação descendente, entre as quais há uma mudança de modulação a bordo do satélite, os valores de $\Delta T_e/T_e$, ou de $\Delta T_s/T_s$, expressos em percentagem, devem ser comparados com o valor de limiar de 4 %.

Quando nenhum dos valores calculados devidos a qualquer emissão interferente causada pela ligação *A'* à ligação *A* for superior ao valor de limiar, não é necessária coordenação relativamente à interferência da ligação *A* pela ligação *A'*.

Se pelo menos um dos valores calculados for superior ao valor limiar, a coordenação é necessária.

Deve fazer-se, de forma análoga, a comparação dos valores de $\frac{\Delta T_e}{T_e}$ ou de $\frac{\Delta T_s}{T_s}$, expressos em percentagem, com o valor de limiar.

4. *Consideração das portadoras de faixa estreita.*

Pode acontecer que o método de cálculo descrito neste apêndice subestime a interferência causada a certas emissões de faixa estreita (de uma única via portadora — SCPC) por emissões de televisão de varrimento lento.

Para facilitar o procedimento de coordenação entre sistemas de satélites e reduzir o número das administrações implicadas neste procedimento, as administrações cujas consignações a estações que utilizam sistemas SCPC estão quer inscritas no ficheiro de referência quer em curso de coordenação podem dar a conhecer à administração que notifica uma nova consignação os canais radioeléctricos utilizados nos seus sistemas para as emissões SCPC. A administração notificadora poderá, assim, se for caso disso, evitar a utilização desses canais para as emissões de televisão em modulação de frequência.

Reciprocamente, as administrações que prevejam novos sistemas de emissões SCPC poderão procurar obter junto de outras administrações as informações apropriadas sobre as suas emissões de televisão em modulação de frequência.

ANEXO I

Cálculo do afastamento angular topocêntrico entre dois satélites geostacionários

O afastamento angular topocêntrico θ entre dois satélites geostacionários a partir de uma dada estação terrena pode ser calculado utilizando a fórmula:

$$\theta_t = \text{arc cos} \left[\frac{d_1^2 + d_2^2 - \left(84\ 332 \sin \frac{\theta_g}{2}\right)^2}{2\ d_1 \cdot d_2} \right]$$

em que d_1 e d_2 são as distâncias reespectivas, em quilómetros, entre a estação terrena e os dois satélites, determinadas pelo método descrito no anexo II para o cálculo de d, e θ_g, tem o valor indicado no § 2.1.

ANEXO II

Cálculo da atenuação de transmissão em espaço livre

A atenuação de transmissão L em espaço livre pode ser calculada utilizando a fórmula:

$$L = 20\ (\log f + \log d) + 32{,}45\ \text{(dB)}$$

em que:

f — Frequência (MHz);
d — Distância (km).

$$d = 42\ 644 \sqrt{1 - 0{,}2954 \cos \psi}\ \text{(km)}$$

a) A distância d entre uma estação terrena e um stélite geostacionário é dada pela fórmula:
na qual:

$$\cos \psi = \cos \zeta \times \cos \beta$$

em que:

ζ — Latitude da estação terrena;
β — Diferença de longitude entre o satélite e a estação terrena.

Nota. — Se cos ψ < 0,151 o satélite está abaixo do plano horizontal.

b) A distância *d*) entre dois satélites geostacionários é dada por:

$$d_S = 84\ 332 \sin \frac{\theta_g}{2}\ \text{(km)}$$

onde:

θ_g — Afastamento angular geocêntrico segundo a definição dada no § 2.1.

ANEXO III

Diagramas de radiação a utilizar para as antenas de estação terrena quando não estão publicados

Se não existirem nem dados medidos nem pareceres pertinentes da CCIR aceites pelas administrações interessadas, estas devem utilizar os diagramas de referência representados, em decibéis, por:

a) Para valores de $\frac{D}{\lambda} \geq 100$ (1) (ganho máximo cerca de ≥ 48 dB):

$G\ (\varphi) = G_{max} - 2{,}5 \times 10^{-3} \left(\frac{D}{\lambda}\ \varphi\right)^2$ para $0 < \varphi < \varphi_m$
$G\ (\varphi) = G_1$ para $\varphi_m \leq \varphi < \varphi_t$
$G\ (\varphi) = 32 - 23 \log \varphi$ para $\varphi'\ \varphi < 48°$
$G\ (\varphi) = -10$ para $48° \leq \varphi \leq 180°$

em que:

D — diâmetro de antena
λ — comprimento de onda
} expressos na mesma unidade;

(1) No caso de $\frac{D}{\lambda}$ não ser dado, pode ser avaliado a partir da expressão $20 \log \frac{D}{\lambda}$ $G_{máx.} - = 7{,}7$, na qual $G_{máx}$, é, em decibéis, o ganho do lóbulo principal da antena.

φ — ângulo em relação ao eixo principal da antena, em graus, e igual a θ_t ou θ_g, consoante o caso;

G_1 — ganho do primeiro lóbulo lateral = $2 + 15 \log \frac{D}{\lambda}$.

$$\varphi_m = \frac{20\lambda}{D} \sqrt{G_{máx.} - G_1} \text{ (graus)}$$

$$\varphi_t = 15{,}85 \left(\frac{D}{\lambda}\right)^{-0{,}6} \text{ (graus)}$$

b) Para valores de $\frac{D}{\lambda} < 100$ (1) (ganho máximo < 48 dB, aproximadamente):

$$G(\varphi) = G_{máx} - 2{,}5 \times 10^{-3} \left(\frac{D}{\lambda} \varphi\right)^2 \text{ para } 0 < \varphi < \varphi_m$$

$$G(\varphi) = G_1 \text{ para } \varphi_m \leq \varphi < 100$$

$$G(\varphi) = 52 - 10 \log \frac{D}{\lambda} - 25 \text{ logo } \varphi \text{ para } 100 \frac{\lambda}{D} \leq \varphi < 48°$$

$$G(\varphi) = 10 - 10 \log \frac{D}{\lambda} \text{ para } 48° \leq \varphi \leq 180°$$

Se necessário, os diagramas anteriores podem modificar-se para obter uma melhor representação do diagrama de radiação real:

ANEXO IV

Exemplo de aplicação do apêndice 29

1. *Considerações gerais:*

No presente exemplo, relativo ao caso 1 (v. § 2.2.1), admitem-se, por hipótese, duas redes de satélite idênticas, contendo cada uma um simples repetidor-conversor de frequência e uma antena de cobertura mundial.

Parte-se da suposição de que todos os ângulos topocêntricos têm um valor de 5°.

Para este afastamento angular e para uma antena de estação terrena cuja relação $\frac{D}{\lambda}$ seja maior que 100, o diagrama de radiação de referência ($32 - 25 \log \theta_t$) indica um ganho de 14,5 dB na direcção do satélite da outra rede.

Os dados de partida indicados no § 2 seguinte são expressos em decibéis, com excepção dos parâmetros T e θ_t. No § 3 seguinte, os cálculos são efectuados em decibéis.

Pode notar-se que, visto que os dois satélites utilizam feixes de cobertura mundial, a antena do satélite não proporcione praticamente qualquer discriminação entre o sinal útil e o sinal interferente. Trata-se, portanto, de um caso extremo favorável.

2. *Dados de partida.*

Os valores das características da rede dados no quadro são tirados dos valores publicados de acordo com o apêndice 3 ou com o apêndice 4.

	Símbolo (*a*)	Valor	Unidade
Ligação ascendente em 6175 MHz ...	P'	— 37	dB (W/Hz)
	$G'_1(\theta_e)$	14.5	dB
	$G_2(\delta_e)$	15.5	dB
	L_u	200	dB
Ligação descendente em 3950 MHz	P'_s	— 57	dB (W/Hz)
	$G'_3(\eta_e)$	15.5	dB
	$G_4(\theta_t)$	14.5	dB
	L_d	196	dB
—	10 log γ	— 15	dB
	T	105	k
	θ_t	5	Graus

(*a*) Com excepção de I, todos os símbolos em letras maiúsculas referem-se as características dadas em unidades logarítmicas.

(1) No caso de $\frac{D}{\lambda}$ não ser dado, pode ser avaliado a partir da expressão 20 log — $G_{máx.}$ — ≈ 7,7, na qual $G_{máx}$, é em decibéis, o ganho do lóbulo principal da antena.

3. Cálculo de $\frac{\Delta T}{T}$.

A partir da fórmula (1):

$$10 \log \Delta T_s = P'_e + G'_1 (\theta_t) + G_2 (\delta_{\acute{e}}) + 228{,}6 - L_u$$
$$= -37 + 14{,}5 + 15{,}5 + 228{,}6 - 200 = 21{,}6 \text{ dBK}$$

obtém-se:

$$\Delta T_s = 145 \text{ K}$$

A partir da fórmula (2):

$$10 \log \Delta T_e = P'_e + G'_3 (\eta_e) + G_4 (\theta_t) + 228{,}6 - L_d$$
$$= -57 + 15{,}5 + 14{,}5 + 228{,}6 - 196 = 5{,}6 \text{ dBK}$$

obtém-se:

$$\Delta T_e = 3{,}6 \text{ K}$$

A fórmula (3) dá:

$$\Delta T = \gamma \Delta T_s + \Delta T_e$$
$$= 0{,}032 \times 145 + 3{,}6 = 8{,}2 \text{ K}$$

donde:

$$\frac{\Delta T}{T} \times 100 = \frac{8{,}2 \times 100}{105} = 7{,}8 \%$$

4. *Conclusão.*

No exemplo acima, a percentagem de aumento da temperatura de ruído equivalente da ligação por satélite é de 7,8 %. Dado que este valor excede o valor de liminar de 4 %, é necessária uma coordenação das duas redes.

APÊNDICE 30

Disposições aplicáveis a todos os serviços e plano associado relativo ao serviço de radiodifusão por satélite nas faixas de frequências de 11,7-12,2 GHz (nas Regiões 2 e 3) e 11,7-12,5 GHz (na Região 1) (1)

(V. o artigo 15)

ARTIGO 1

Definições gerais

Para os fins do presente apêndice, os termos seguintes terão os sentidos abaixo definidos:

Conferência. — Conferência Administrativa Mundial das Radiocomunicações Encarregada de Elaborar Um Plano para o Serviço de Radiodifusão por Satélite nas Faixas de Frequência de 11,7-12,2 GHz (nas Regiões 2 e 3) e de 11,7-12,5 GHz (na Região 1), designada abreviadamente por Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

Plano. — O plano para as Regiões 1 e 3 e seus anexos.

Consignação de frequência em conformidade com o plano. — Consignação de frequência que figura no plano ou para o qual foi aplicado com êxito o procedimento do artigo 4 do presente apêndice.

ARTIGO 2

Faixas de frequências

2.1. As disposições do presente apêndice aplicam-se ao serviço de radiodifusão por satélite nas faixas de frequências compreendidas entre 11,7 GHz e 12,5 GHz, na Região 1, e entre 11,7 GHz e 12,2 GHz, nas Regiões 2 e 3 e aos outros serviços a que estas faixas estão atribuídas, no que respeita às relações desses serviços com o serviço de radiodifusão por satélite nesta faixas.

---

(1) As disposições e o plano associado do presente apêndice entraram em vigor em 1 de Janeiro de 1979, em aplicação do artigo 15 dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

ARTIGO 3

Execução das disposições e do plano associado

3.1. Os Membros da União pertencentes às Regiões 1 e 3 adoptam, para as suas estações espaciais de radiodifusão que funcionam nas faixas de frequências objecto do presente apêndice, as características especificadas no plano para essas Regiões.

3.2. Os Membros da União pertencentes à Região 2 aplicam as disposições transitórias contidas no artigo 12 do presente apêndice. Essas disposições regem o serviço de radiodifusão por satélite na Região 2, até à entrada em vigor dos planos pormenorizados da Região 2, que serão elaborados por uma futura conferência administrativa regional das radiocomunicações.

3.3. Os Membros da União só poderão modificar as características especificadas no plano ou colocar em serviço novas estações espaciais de radiodifusão por satélite ou estações dos outros serviços a que estas faixas de frequência estão atribuídas nas condições indicadas no Regulamento das Radiocomunicações e nos artigos e anexos pertinentes do presente apêndice.

ARTIGO 4

Procedimento relativo às modificações ao plano

4.1. Quando uma administração se propõe efectuar um modificação (1) ao plano:

Quer para modificar as características de uma das suas consignações de frequência a uma estação espacial (2) do serviço de radiodifusão por satélite que figura no plano ou para a qual foi aplicado com êxito o procedimento definido no presente artigo, esteja ou não essa estação em serviço;

Quer para inscrever no plano uma nova consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite;

Quer para anular uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite;

é aplicado o procedimento seguinte, antes de qualquer notificação pertinente à Comissão Internacional do Registo de Frequências (v. o artigo 5 do presente apêndice).

4.2. A expressão «consignação de frequência em conformidade com o plano», utilizada neste e nos seguintes artigos, está definida no artigo 1.

4.3. *Projecto de modificação de uma consignação de frequência em conformidade com o plano ou projecto de inscrição no plano de uma nova consignação de frequência.*

4.3.1. Uma administração que pretenda modificar características de uma consignação de frequência em conformidade com o plano ou inscrever uma nova consignação de frequência no plano procurará o acordo de qualquer outra administração:

4.3.1.1. Que tenha, no mesmo canal ou num canal adjacente, uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite em conformidade com o plano ou relativamente à qual a comissão tenha publicado modificações ao plano de acordo com as disposições do presente artigo.

4.3.1.2. Que tenha uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite na Região 2 com uma largura de faixa necessária que cubra parcialmente a da consignação pretendida e que essa consignação esteja inscrita no ficheiro de referência, ou:

Seja ou tenha sido objecto da coordenação segundo as disposições da Resolução n.º 33 (3);

Figure num plano para a Região 2 (4) a ser adoptado numa futura conferência administrativa regional das radiocomunicações, tendo em conta as modificações que possam ser feitas a esse plano de acordo com os actos finais dessa conferência.

4.3.1.3. Que não tenha qualquer consignação de frequência do serviço de radiodifusão por satélite no canal considerado, mas em cujo território, como resultado desse projecto de modificação, a densidade de fluxo de potência exceda o limite prescrito.

4.3.1.4. Que tenha uma consignação de frequência a uma estação espacial do serviço fixo por satélite inscrita no ficheiro de referência na faixa de 11,7-12,2 GHz e que essa consignação de frequência seja, ou tenha sido, objecto de uma coordenação nos termos do n.º **1060** do Regulamento das Radiocomunicações ou do § 7.2.1. do presente apêndice, e se considere que é desfavoravelmente influenciada.

Considera-se que uma consignação de frequência é desfavoravelmente influenciada quando são ultrapassados os limites indicados no anexo 1.

---

(1) A utilização de um valor da dispersão de energia diferente do especificado no § 3.18 do anexo 8 é considerada como uma modificação e, por isso, são-lhe aplicáveis as disposições pertinentes do presente artigo.

(2) A expressão «consignação de frequência a uma estação espacial», onde quer que figure no presente artigo, deve ser entendida como referindo-se a uma consignação de frequência associada a uma dada posição na órbita. V., no anexo 10, as restrições aplicáveis às posições na órbita.

(3) Substitui a Resolução Spa 2-3 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

(4) O plano para a Região 2, que será adoptado numa futura conferência administrativa regional das radiocomunicações, não deverá diminuir o grau de protecção às consignações de frequência que figuram no plano abaixo dos limites especificados no presente apêndice.

4.3.2. Uma administração que pretenda fazer uma modificação ao plano deve enviar à Comissão as informações pertinentes indicadas no anexo 2, antes da data em que a consignação deve entrar em serviço, mas não com uma antecedência superior a 5 anos nem inferior a 18 meses. Se a consignação não for posta em serviço o mais tardar nessa data, a modificação será considerada nula.

4.3.2.1. Se esse projecto de modificação não conduzir a que sejam ultrapassados os limites especificados no anexo 1, este facto deve ser indicado quando do envio à Comissão das informações pedidas no § 4.3.2. A Comissão publicará essas informações numa secção especial da sua circular semanal.

4.3.2.2. Nos outros casos, para se alcançar o acordo previsto no § 4.3.1, a administração comunica à Comissão das administrações junto das quais julga que deve ser procurado um acordo, bem como o nome das administrações com as quais foi já concluído um acordo.

4.3.3. A Comissão determina, na base do anexo 1, quais as administrações cujas consignações de frequência são consideradas como sendo desfavoravelmente influenciadas no sentido do § 4.3.1. A Comissão inclui o nome dessas administrações recebidas em aplicação do § 4.3.2.2 e publica o conjunto das informações numa secção especial da sua circular semanal. A Comissão comunica imediatamente os resultados dos seus cálculos à administração que pretende efectuar a modificação ao plano.

4.3.4. A Comissão envia um telegrama às administrações indicadas na secção especial da sua circular semanal, chamando a atenção delas para a publicação dessas informações, e comunica-lhes o resultado dos seus cálculos.

4.3.5. Qualquer administração que considere que deveria ter figurado na lista das administrações cujos serviços são considerados como sendo desfavoravelmente influenciados pode pedir à Comissão que a inclua nessa lista, fornecendo-lhe as razões técnicas em apoio do seu pedido. A Comissão estuda esse pedido na base do anexo 1 e envia uma cópia do referido pedido, acompanhada de uma recomendação apropriada, à administração que pretende a modificação do plano.

4.3.6. Qualquer modificação de uma consignação de frequência em conformidade com o plano ou qualquer inscrição no plano de uma nova consignação de frequência susceptível de conduzir a que sejam ultrapassados os limites especificados no anexo 1 está dependente do acordo de todas as administrações desfavoravelmente influenciadas.

4.3.7. A administração que procura um acordo ou a administração junto da qual é procurado um acordo pode pedir as informações técnicas que julgue necessárias. As administrações levam esses pedidos ao conhecimento da Comissão.

4.3.8. As observações feitas pelas administrações relativamente às informações publicadas por força do § 4.3.3 são enviadas à administração que pretende a modificação, quer directamente, quer por intermédio da Comissão. Em todos os casos, a Comissão deverá ser informada de quem foram formuladas observações.

4.3.9. Considera-se que deu o seu acordo à modificação pretendida a administração que, no prazo de 120 dias a partir da data da circular semanal mencionada nos §§ 4.3.2.1 ou 4.3.3, não tenha enviado as suas observações à administração notificadora, quer directamente, quer por intermédio da Comissão. Este prazo poderá ser prorrogado por 80 dias no caso de uma administração que tenha pedido informações suplementares em conformidade com o disposto no § 4.3.7 ou a ajuda em conformidade com o § 4.3.17. Neste último caso, a Comissão leva esse pedido ao conhecimento das administrações interessadas.

4.3.10. Quando, para chegar a um acordo, uma administração seja levada a modificar o seu projecto inicial, aplicará de novo as disposições do § 4.3.2 e o procedimento que daí decorre relativamente a qualquer administração cujos serviços possam ser desfavoravelmente influenciados em consequência das modificações efectuadas no projecto inicial.

4.3.11. Se, no prazo especificado no § 4.3.9, não lhe chegar qualquer observação ou se tiver sido concluído um acordo com as administrações que formularam observações e cujo acordo era necessário, a administração que pretende a modificação pode continuar a aplicar o procedimento apropriado do artigo 5 e informa disso a Comissão, indicando-lhe as características definitivas da consignação de frequência, bem como o nome das administrações com as quais foi concluído um acordo.

4.3.12. O acordo das administrações interessadas pode igualmente obter-se, nos termos do presente artigo, para um período determinado.

4.3.13. Quando um projecto de modificação ao plano interessar países em vias de desenvolvimento, as administrações procurarão todas as soluções práticas susceptíveis de assegurar o desenvolvimento económico do sistema de radiodifusão por satélite dos referidos países.

4.3.14. A Comissão publica numa secção especial da sua circular semanal as informações que receber nos termos do § 4.3.11, acompanhando-as, se for caso disso, do nome das administrações com as quais tenham sido aplicadas com êxito as disposições do presente artigo. A consignação de frequência beneficiará do mesmo estatuto das que figuram no plano e será considerada como uma consignação de frequência em conformidade com o plano.

4.3.15. Quando uma administração que pretenda modificar as características de uma consignação de frequência ou colocar em serviço uma nova consignação de frequência receber um aviso de desacordo da parte de uma administração a que tinha pedido o acordo, esforçar-se-á, em primeiro lugar, por resolver o problema, procurando todos os meios possíveis para satisfazer as suas necessidades. Se o problema ainda não puder ser resolvido pela utilização desses meios, a administração junto da qual foi procurado o acordo deve esforçar-se, em toda a medida do possível, por superar as dificuldades e dará as razões técnicas do desacordo se lhe forem pedidas pela administração que procura o acordo.

4.3.16. Se não for alcançado qualquer acordo entre as administrações interessadas, a Comissão procederá a qualquer estudo que essas administrações lhe possa pedir, informá-las-á do resultado desse estudo e apresentar-lhes-á as recomendações que possa formular para resolver o problema.

4.3.17. Em qualquer fase do procedimento descrito ou antes de aplicar esse procedimento, qualquer administração pode pedir a ajuda da Comissão, designadamente na procura do acordo de uma outra administração.

4.3.18. Aplicam-se as disposições pertinentes do artigo 5 do presente apêndice quando da notificação das consignações de frequência à Comissão.

4.4. *Anulação de uma consignação de frequência.*

Quando uma consignação de frequência em conformidade com o plano for definitivamente abandonada, como consequência ou não de uma modificação, a administração interessada informará disso imediatamente a Comissão, e esta publicará essa informação numa secção especial da sua circular semanal.

4.5. *Exemplar de referência do plano.*

4.5.1. A Comissão mantém em dia um exemplar de referência do plano tendo em conta a aplicação do procedimento descrito no presente artigo. A Comissão preparará um documento indicando as emendas a efectuar no plano em consequência das modificações feitas em conformidade com o procedimento do presente artigo.

4.4.2. O secretário-geral é informado pela Comissão de qualquer modificação efectuada no plano e publica, sob forma apropriada, numa versão actualizada do plano quando as circunstâncias o justificarem.

ARTIGO 5

Notificação, exame e inscrição no ficheiro de referência das consignações de frequência às estações espaciais do serviço de radiodifusão por satélite nas Regiões 1 e 3

5.1. *Notificação.*

5.1.1. Qualquer administração que se proponha pôr em serviço uma consignação de frequência a uma estação espacial do serviço de radiodifusão por satélite deve notificar essa consignação de frequência à Comissão. A administração notificadora aplica, para isso, as disposições seguintes:

5.1.2. Qualquer consignação de frequência notificada em execução do § 5.1.1 deve ser objecto de uma ficha individual de notificação elaborada pela forma prescrita no anexo 2, cujas diversas secções especificam as características fundamentais a fornecer consoante o caso. Recomenda-se que a administração notificadora comunique à Comissão qualquer outra informação que julgue útil.

5.1.3. A ficha de notificação deve ser recebida pela Comissão no máximo de 3 anos antes da data de entrada em serviço da consignação de frequência em causa e, em todo o caso, deve ser recebida o mais tardar 90 dias antes dessa data (1).

5.1.4. Qualquer consignação de frequência cuja notificação chegue à Comissão depois de expirado o prazo prescrito no § 5.1.3 levará, quando houver lugar à sua inscrição no ficheiro de referência, uma observação a indicar que a ficha de notificação não está em conformidade, com as disposições do § 5.1.3.

5.1.5. Quando a Comissão receber uma ficha de notificação, elaborada em execução do § 5.1.1, que não contenha as características fundamentais especificiadas no anexo 2, devolve-a imediatamente pelo correio aéreo à administração de origem, acompanhada dos motivos dessa devolução.

5.1.6. Quando a Comissão receber uma ficha de notificação completa, inclui as informações que ela contém, com a data de recepção, na sua circular semanal. Esta circular contém as informações que figuram em todas as fichas de notificação completas recebidas pela Comissão desde a publicação da circular precedente.

5.1.7. A circular será considerada pela administração notificadora como aviso de recepção pela Comissão de uma ficha de notificação completa.

5.1.8. A Comissão examina as fichas de notificação completas pela ordem em que as recebe e não pode adiar a conclusão a menos que lhe faltem informações suficientes para tomar uma decisão sobre o assunto. Além disso, a Comissão não resolverá sobre uma ficha de notificação que tenha relações técnicas com uma ficha recebida anteriormente e ainda em exame antes de tomar uma decisão no que respeita a esta última.

5.2. *Exame e inscrição.*

5.2.1. A Comissão examina cada ficha de notificação:

a) No que respeita à sua conformidade com as cláusulas da Convenção, com as disposições pertinentes do Regulamento das Radiocomunicações e do anexo 1 ao presente apêndice (com excepção das que se relacionam com a conformidade com o plano);

b) No que respeita à sua conformidade com o plano.

5.2.2. Quando a Comissão formular uma conclusão favorável relativamente ao § 5.2.1, a consignação de frequência notificada pela administração é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d. No que respeita às relações entre as administrações, todas as consignações de frequência postas em serviço em conformidade com o plano e inscritas no ficheiro de referência serão consideradas como beneficiando do mesmo estatuto, seja qual for a data inscrita na coluna 2d relativamente a cada uma delas.

5.2.3. Sempre que a Comissão inscreve uma consignação de frequência no ficheiro de referência, indicará a sua conclusão utilizando um símbolo colocado na coluna 13a.

5.2.4. Quando a Comissão formular uma conclusão desfavorável relativamente ao § 5.2.1, a ficha de notificação é devolvida imediatamente pelo correio aéreo à administração notificadora com uma exposição das razões que motivam a conclusão da Comissão e com as sugestões que ela possa fazer para se chegar a uma solução satisfatória do problema.

5.2.5. Quando a administração notificadora apresentar de novo a sua ficha de notificação e se a conclusão da Comissão passar a ser favorável relativamente ao § 5.2.1, a ficha é tratada como se indica no § 5.2.2.

---

(1) A administração notificadora inicia, se for caso disso, o procedimento relativo às modificações no plano com a antecedência necessária para que seja respeitada essa data limite.

5.2.6. Se a administração apresentar de novo a sua ficha não modificada insistindo em novo exame dessa ficha e se a conclusão da Comissão relativamente ao § 5.2.1 continuar desfavorável, a ficha de notificação é devolvida à administração notificadora, em conformidade com o § 5.2.4. Neste caso, a administração notificadora compromete-se a não pôr em serviço a consignação de frequência enquanto não for satisfeita a condição especificada no § 5.2.5. Nos termos do artigo 4, as administrações podem igualmente chegar a um acordo para um período determinado. Neste caso, o acordo é notificado, à Comissão e a consignação de frequência é inscrita no ficheiro de referência com uma nota a indicar, que é válida apenas para o período especificado. A administração notificadora que utilize a consignação de frequência durante o período assim determinado não deverá ulteriormente servir-se dessa utilização como pretexto para manter a consignação em serviço no fim desse período se não obtiver autorização da ou das administrações interessadas.

5.2.7. Se a consignação de frequência notificada antes da sua entrada em serviço em conformidade com as disposições do § 5.1.3 for objecto de uma conclusão favorável da Comissão relativamente às disposições do § 5.2.1, é inscrita provisoriamente no ficheiro de referida com um símbolo especial na coluna «Observações» a indicar o carácter provisório dessa inscrição.

5.2.8. Quando a Comissão receber a confirmação da entrada em serviço da consignação de frequência, suprime o símbolo no ficheiro de referência.

5.2.9. A data a inscrever na coluna 2c será a da entrada em serviço notificada pela administração interessada. É dada somente a título de informação.

5.3. *Anulação das inscrições do ficheiro de referência.*

5.3.1. Se a administração não tiver confirmado a entrada em serviço de uma consignação de frequência, como previsto no § 5.2.8, a Comissão efectuará um inquérito junto dessa administração não antes de 6 meses após a expiração do prazo indicado no § 5.1.3. Quando receber as informações pertinentes, a Comissão modifica a data de entrada em serviço ou anula a inscrição.

5.3.2. Se a utilização de uma consignação de frequência inscrita no ficheiro de referência vier a ser abandonada definitivamente, a administração deve informar do facto a Comissão no prazo de 90 dias, após o que é anulada a inscrição no ficheiro de referência.

ARTIGO 6

Coordenação, notificação e inscrição no ficheiro de referência internacional das frequências de consignações de frequência a estações de Terra que afectam consignações de frequência a estações de radiodifusão por satélite nas faixas de 11,7-12,2 GHz (nas Regiões 2 e 3) e de 11,7-12,5 GHz (na Região 1) (1) (2).

SECÇÃO I

Procedimento de coordenação a aplicar

6.1.1. Antes de notificar a Comissão de uma consignação de frequência a uma estação de emissão de Terra, uma administração deve iniciar a coordenação com qualquer outra administração que tenha uma consignação de frequência a uma estação de radiodifusão por satélite de acordo com o plano se:

As larguras de faixa necessárias das duas emissões se sobrepõem; e

Se a densidade de fluxo de potência que produziria a estação de emissão de Terra em projecto excedesse o valor calculado em conformidade com o anexo 3 num ou vários pontos situados no limite da zona de serviço compreendida na zona de cobertura da estação de radiodifusão por satélite.

6.1.2. Com vista a essa coordenação, a administração de que depende a estação de Terra envia às administrações interessadas, pelas vias mais rápidas, um diagrama de escala conveniente a indicar a localização da estação de Terra, e comunica-lhes todos os outros dados relativos à consignação de frequência em projecto, assim como a data aproximada prevista para a entrada em serviço da estação.

6.1.3. Qualquer administração junto da qual seja procurada a coordenação acusa imediatamente, por telegrama, a recepção dos dados relativos à coordenação. Se a administração que procura a coordenação não receber aviso de recepção no prazo de 15 dias a partir do envio dos dados relativos à coordenação, pode enviar um telegrama a pedir esse aviso de recepção, telegrama a que deve responder a administração que o recebe. Após a recepção dos dados relativos à coordenação, a administração junto da qual é procurada a coordenação estuda rapidamente a questão no que respeita ás interferências (3) que seriam causadas às suas consignações conformes com o plano. Depois, no prazo total de 60 dias a partir do envio dos dados relativos à coordenação, esta administração ou comunica à administração que procura a coordenação o seu acordo sobre a consignação em projecto ou então, em caso de impossibilidade, indica-lhe os motivos do seu desacordo e apresenta-lhe as sugestões que possa fazer, se for caso disso, para chegar a uma solução satisfatória do problema.

---

(1) Estes procedimentos não dispensam a aplicação dos procedimentos prescritos para as estações de Terra no artigo 12 do Regulamento das Radiocomunicações, quando estejam implicadas estações diferentes das do serviço de radiodifusão por satélite.

(2) Os procedimentos de coordenação, de notificação e de inscrição das consignações às estações de Terra que afectam estações de radiodifusão por satélite na Região 2 estação estabelecidos no artigo 12 do Regulamento das Radiocomunicações, excepto que a necessidade da coordenação mencionada nos n.os **1148** a **1154** do Regulamento das Radiocomunicações é determinada de acordo com as regras do anexo 3.

(3) Os critérios a utilizar para avaliar o nível de interferência baseiam-se nos pareceres pertinentes da CCIR ou, na falta de tais pareceres, são objecto de acordo entre as administrações interessadas.

6.1.4. Não é necessária qualquer coordenação quando uma administração se propuser modificar as características de uma consignação existente de tal modo que com isso não aumente o nível das interferências causadas aos serviços que devem ser assegurados pelas estações do serviço de radiodifusão por satélite de outras administrações cujas consignações estejam conformes com o plano.

6.1.5. A administração que procura a coordenação pode pedir à Comissão que procure efectuar essa coordenação nas circunstâncias seguintes:

a) Uma administração junto da qual foi procurada a coordenação não envia aviso de recepção, nos termos do § 6.1.3, no prazo de 30 dias a partir da data do envio dos dados relativos à coordenação;
b) Uma administração que enviou um aviso de recepção em conformidade com as disposições do § 6.1.3 não comunica a sua decisão no prazo de 90 dias a partir do envio dos dados relativos à coordenação;
c) A administração que procura a coordenação e uma administração junto da qual foi procurada a coordenação estão em desacordo no que respeita ao nível de interferência aceitável;
d) Ou ainda a coordenação não é possível por qualquer razão.

Ao apresentar o seu pedido à Comissão, a administração interessada comunicar-lhe-á as informações necessárias que lhe permitam procurar efectuar a coordenação.

6.1.6. A administração que procura a coordenação, ou qualquer administração junto da qual a coordenação tenha sido procurada, ou então a Comissão, podem pedir as informações de que julguem precisar para avaliar o nível das interferências causadas aos serviços interessados.

6.1.7. Quando a Comissão receber um pedido nos termos da alínea *a*) do § 6.1.5, envia sem demora um telegrama à administração interessada a pedir-lhe a recepção imediatamente.

6.1.8. Quando a Comissão receber um aviso de recepção em seguimento da medida que tomou nos termos do § 6.1.7 ou quando a Comissão receber um pedido nos termos da alínea *b*) do § 6.1.5, envia sem demora um telegrama à administração em causa pedindo-lhe que tome rapidamente uma decisão sobre o assunto.

6.1.9. Quando a Comissão receber um pedido nos termos da alínea *d*) do § 6.1.5, procurará efectuar a coordenação em conformidade com as disposições do § 6.1.2. Quando a Comissão não receber aviso de recepção do seu pedido de coordenação no prazo especificado no § 6.1.3, procederá em conformidade com as disposições do § 6.1.7.

6.1.10. Quando uma administração não responder no prazo de 30 dias a partir do envio do telegrama que a Comissão lhe enviou nos termos do § 6.1.7 pedindo-lhe um aviso de recepção, ou quando uma administração não comunicar a sua decisão sobre o assunto no prazo de 60 dias a contar do envio do telegrama da Comissão nos termos do § 6.1.8, considera-se que a administração junto da qual a coordenação é pedida se compromete a não formular queixa relativa às interferências prejudiciais que venham a ser causadas pela estação de Terra em via de coordenação ao serviço assegurado ou que deva ser assegurado pela sua sua estação de radiodifusão por satélite.

6.1.11. Se for caso disso, a Comissão avalia, de acordo com o procedimento especificado no § 6.1.5, o nível de interferência. Em qualquer caso, comunica às administrações interessadas os resultados obtidos.

6.1.12. No caso de desacordo persistente entre a administração que procura a coordenação e uma administração junto da qual é procurada a coordenação, as administrações interessadas podem encarar a possibilidade de concluir um acordo sobre a utilização, durante um dado período, da consignação de frequência proposta.

SECÇÃO II

Procedimento de notificação das consignações de frequência

6.2.1. Qualquer consignação de frequência a uma estação fixa, terrestre ou de radiodifusão deve ser notificada à Comissão Internacional do Registo de Frequências se a utilização em questão for susceptível de provocar interferências prejudiciais ao serviço assegurado ou que deva ser assegurado por uma estação de radiodifusão por satélite de qualquer outra administração, ou se se desejar obter o reconhecimento internacional da utilização dessa frequência (1).

6.2.2. Essa consignação de frequência deve ser objecto de uma ficha individual de notificação, elaborada pela forma prescrita no apêndice 1 do Regulamento das Radiocomunicações, cuja secção A especifica as características fundamentais a fornecer consoante o caso. Recomenda-se que a administração notificadora comunique igualmente à Comissão as outras informações indicadas nesse apêndice, assim como qualquer outra informação que possa julgar útil.

6.2.3. Cada ficha de notificação deve, na medida do possível, chegar à Comissão antes da data de entrada em serviço da consignação de frequência em causa. Qualquer ficha elaborada em conformidade com as disposições do § 6.2.2 deve ser recebida pela Comissão com uma antecipação de 3 anos no máximo e de 90 dias no mínimo em relação à data de entrada em serviço da consignação de frequência em causa.

6.2.4. Qualquer consignação de frequência cuja notificação seja recebida pela Comissão menos de 90 dias antes da data notificada de entrada em serviço leva, quando houver lugar à sua inscrição no ficheiro de referência, uma observação a indicar que a ficha de notificação não está em conformidade com as disposições do § 6.2.3.

---

(1) Chama-se especialmente a atenção das administrações para a aplicação das disposições da secção I do presente artigo.

Secção III

Procedimento para o exame das fichas de notificação e a inscrição das consignações de frequência no ficheiro de referência

6.3.1. Qualquer que seja o meio de comunicação, inclusive o telégrafo, pelo qual seja transmitida uma ficha à Comissão, esta será considerada completa quando contenha, pelo menos, as características fundamentais apropriadas, tais como estão especificadas na secção A do apêndice 1 do Regulamento das Radiocomunicações.

6.3.2. A Comissão examina as fichas de notificação completas pela ordem em que as recebe.

6.3.3. Quando a Comissão receber uma ficha de notificação incompleta, devolve-a imediatamente pelo correio aéreo à administração de origem, indicando os motivos dessa devolução.

6.3.4. Quando a Comissão receber uma ficha de notificação completa, inclui as informações que ela contém, com a data de recepção, na sua circular semanal. Esta circular contém as informações que figuram em todas as fichas de notificação completas recebidas pela Comissão desde a publicação da circular precedente.

6.3.5. A circular será considerada pela administração notificadora como aviso de recepção pela Comissão de uma ficha de notificação completa.

6.3.6. Cada ficha de notificação completa é examinada pela Comissão pela ordem especificada no § 6.3.2. A Comissão não pode adiar a conclusão, a menos que lhe faltem informações suficientes para tomar uma decisão sobre o assunto. Além disso, a Comissão não resolverá sobre uma ficha de notificação que tenha relações técnicas com uma ficha recebida anteriormente e ainda em exame antes de tomar uma decisão no que respeita a esta última.

6.3.7. A Comissão examina cada ficha de notificação:

6.3.8. — *a*) Sob o ponto de vista da sua conformidade com as cláusulas da Convenção, as cláusulas pertinentes do Regulamento das Radiocomunicações e as cláusulas do presente apêndice (com excepção das relativas ao procedimento de coordenação e à probabilidade de interferências prejudiciais).

6.3.9. — *b*) Sob o ponto de vista da sua conformidade com as disposições do § 6.1.1, as quais dizem respeito à cooperação da utilização da consignação de frequência com as outras administrações interessadas.

6.3.10. — *c*) Se for caso disso, sob o ponto de vista da probabilidade de interferência prejudicial em detrimento de uma estação cuja consignação de frequência com o plano.

6.3.11. Segundo as conclusões a que a Comissão chegar na sequência do exame previsto nos §§ 6.3.8, 6.3.9 e 6.3.10, o procedimento prossegue como a seguir se indica:

6.3.12. *Conclusão desfavorável relativamente ao § 6.3.8.*

6.3.13. Quando a ficha incluir uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342** do Regulamento das Radiocomunicações, é examinada imediatamente sob o ponto de vista dos §§ 6.3.9 e 6.3.10.

6.3.14. Se a conclusão for favorável relativamente aos §§ 6.3.9 ou 6.3.10, consoante o caso, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação inscreve-se na coluna 2d.

6.3.15. Se a conclusão for desfavorável relativamente aos §§ 6.3.9 ou 6.3.10, consoante o caso, a ficha é devolvida imediatamente pelo correio aéreo à administração notificadora com a exposição das razões que motivam a conclusão da Comissão. Nesse caso, a administração notificadora compromete-se a não utilizar a consignação de frequência até que possa ser preenchida a condição definida no § 6.3.14. Mas as administrações interessadas podem encarar a possibilidade de concluir um acordo sobre a utilização, durante um dado período, da consignação de frequência proposta.

6.3.16. Quando a ficha não incluir qualquer referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342** do Regulamento das Radiocomunicações, é devolvida imediatamente, por correio aéreo, à administração notificadora com a exposição das razões que motivam a conclusão da Comissão e com as sugestões que possa fazer, se for caso disso, para chegar a uma solução satisfatória do problema.

6.3.17. Se a administração notificadora apresentar de novo a sua ficha não modificada, esta é tratada segundo as disposições do § 6.3.16.

6.3.18. Se a administração notificadora apresentar de novo a sua ficha com uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342** do Regulamento das Radiocomunicações, a ficha de notificação é tratada de acordo com as disposições dos §§ 6.3.13 e 6.3.14 ou 6.3.15, consoante o caso.

6.3.19. Se a administração notificadora apresentar de novo a sua ficha com modificações tais que, após novo exame, a conclusão da Comissão passe a ser favorável relativamente ao § 6.3.8, a ficha de notificação é tratada segundo as disposições dos §§ 6.3.20 a 6.3.32. Se ulteriormente for necessário inscrever a consignação no ficheiro de referência, a data de recepção pela Comissão da ficha de notificação apresentada de novo é inscrita na coluna 2d.

6.3.20. *Conclusão favorável relativamente ao § 6.3.8.*

6.3.12. Quando a Comissão concluir que o procedimento de coordenação de que trata o § 6.3.9 foi aplicado com êxito junto de todas as administrações cujos serviços de radiodifusão por satélite podem ser desfavoravelmente influenciados, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d.

6.3.22. Quando a Comissão concluir que o procedimento de que trata o § 6.3.9 não foi aplicado e se a administração notificadora lhe pedir que efectue a coordenação pretendida, a Comissão toma as medidas necessárias para esse fim e comunica às administrações interessados os resultados obtidos. Se as tentativas da Comissão para levar a bom termo a coordenação tiverem êxito, a ficha de notificação é tratada em conformidade com as disposições do § 6.3.21. Se as tentativas da Comissão não tiverem êxito, examina a ficha de notificação sob o ponto de vista do § 6.3.10.

6.3.23. Quando a Comissão concluir que o procedimento de coordenação de que trata o § 6.3.9 não foi aplicado e se a administração notificadora não lhe pedir que efectue a coordenação pretendida, a ficha de notificação é devolvida imediatamente pelo correio aéreo à administração com uma exposição das razões que motivam essa devolução e com as sugestões que a Comissão possa fazer, se for o caso disso, para chegar a uma solução satisfatória do problema.

6.3.24. Quando a administração notificadora apresente de novo a sua ficha de notificação e se a Comissão concluir que o procedimento de coordenação de que trata o § 6.3.9 foi aplicado com êxito de todas as administrações cujos serviços de radiodifusão por satélite podem ser desfavoravelmente influenciados, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação inicial é inscrita na coluna 2d. A data de recepção pela Comissão da ficha de notificação apresentada de novo é indicada na coluna «Observações».

6.3.25. Quando a administração notificadora apresentar de novo a sua ficha de notificação pedindo à Comissão que efectue a coordenação pretendida, a ficha de notificação é tratada em conformidade com as disposições do § 6.3.22. Se ulteriormente for caso de inscrever a consignação no ficheiro de referência, a data de recepção pela Comissão da ficha de notificação apresentada de novo é indicada na coluna «Observações».

6.3.26. Quando a administração notificadora apresentar de novo a sua ficha de notificação declarando que tentou, sem êxito, efectuar a coordenação, a Comissão examina a ficha relativamente às disposições do § 6.3.10. Se ulteriormente for caso de inscrever a consignação no ficheiro de referência, a data de recepção pela Comissão da ficha de notificação apresentada de novo é indicada na coluna «Observações».

6.3.27. *Conclusão favorável relativamente aos §§ 6.3.8 e 6.3.10.*

6.3.28. A consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d.

6.3.29. *Conclusão favorável relativamente ao § 6.3.8, mas desfavorável relativamente ao § 6.3.10.*

6.3.30. A ficha de notificação é devolvida imediatamente pelo correio aéreo à administração de origem com uma exposição das razões que motivam a conclusão da Comissão e com as sugestões que esta possa fazer, se for caso disso, para chegar a uma solução satisfatória do problema.

6.3.31. Se a administração notificadora apresentar de novo a sua ficha com modificações que, após novo exame, motivem da parte da Comissão uma conclusão favorável relativamente ao § 6.3.10, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação (inicial) inscreve-se na coluna 2d. A data de recepção pela Comissão da ficha de notificação apresentada de novo é indicada na coluna «Observações».

6.3.32. No caso em que a administração notificadora apresente de novo a sua ficha de notificação, quer não modificada, quer com modificações cujo efeito seja diminuir a probabilidade de interferências prejudiciais mas em proporções insuficientes para permitir a aplicação das disposições do § 6.3.31, e em que essa administração insista por novo exame da ficha de notificação, mas em que as conclusões da Comissão se mantenham, a ficha de notificação é novamente devolvida à administração notificadora, em conformidade com o § 6.3.30. Neste caso, a administração notificadora compromete-se a não utilizar a consignação de frequência proposta até que possa ser preenchida a condição definida no § 6.3.31. Mas as administrações interessadas podem encarar a possibilidade de concluir um acordo sobre a utilização, durante um período especificado, da consignação de frequência proposta. Neste caso, a Comissão é avisada do acordo e a consignação de frequência inscreve-se no ficheiro de referência, acompanhada de uma nota indicando que a sua validade não vai além do período especificado. A administração notificadora que utiliza a consignação de frequência durante um período especificado não deverá ulteriormente servir-se dessa utilização como pretexto para manter a consignação em serviço no fim desse período, se não obtiver autorização da ou das administrações interessadas.

6.3.33. *Modificações das características fundamentais das consignações já inscritas no ficheiro de referência.*

6.3.34. Qualquer notificação de modificação das características fundamentais de uma consignação já inscrita no ficheiro de referência, tais como definidas no apêndice 1 do Regulamento das Radiocomunicações (exceptuando, todavia, as que figuram nas colunas 3 e 4a do ficheiro de referência), é examinada pela Comissão de acordo com as disposições dos §§ 6.3.8 e 6.3.9 e, se for caso disso, do § 6.3.10, e aplicam-se as disposições dos §§ 6.3.12 a 6.3.32. Sempre que seja necessário inscrever a modificação no ficheiro de referência, modifica-se a consignação inicial conforme a notificação.

6.3.35. Todavia, no caso de uma modificação das características fundamentais de uma consignação em conformidade com as disposições do § 6.3.8, em que a Comissão formule uma conclusão favorável relativamente ao § 6.3.9 e relativamente ao § 6.3.10, quando se apliquem as disposições deste, ou conclua que essa modificação não aumenta a probabilidade de interferências prejudiciais em detrimento de consignações de frequência já inscritas no ficheiro de referência, a consignação de frequência modificada conserva a data inicialmente inscrita na coluna 2d. Além disso, indica-se na coluna «Observações» a data de recepção pela Comissão da ficha de notificação relativa à modificação.

6.3.36. Na aplicação das disposições da presente secção, será considerada nova ficha de notificação toda aquela que seja apresentada de novo à Comissão e que seja recebida por esta mais de 2 anos após a data em que devolva a ficha à administração notificadora.

6.3.37. *Inscrição das consignações de frequência notificadas antes da sua entrada em serviço.*

6.3.38. Se uma consignação de frequência notificada antes da sua entrada em serviço for objecto de uma conclusão favorável formulada pela Comissão relativamente aos §§ 6.3.8 e 6.3.9 e, se for caso disso, 6.3.10, é inscrita provisoriamente no ficheiro de referência com um símbolo especial, na coluna de «Observações», a indicar o carácter provisório dessa inscrição.

6.3.39. A Comissão suprime o símbolo especial inserido na coluna «Observação» se, no prazo de 30 dias a partir da data prevista para a entrada em serviço, receber da administração notificadora a confirmação da data da entrada em serviço. No caso de, na sequência de um pedido recebido da administração notificadora antes de expirado este prazo de 30 dias, a Comissão concluir que circunstâncias especiais justificam um prazo suplementar, este não deverá em nenhum caso ir além de 150 dias.

6.3.40. Se a utilização, por uma estação de Terra, de uma consignação não em conformidade com as disposições anteriores causar qualquer interferência prejudicial à recepção das emissões de uma estação espacial do serviço de radiodifusão por satélite utilizando uma consignação em conformidade com o plano, a administração de que depende a estação de Terra deve, uma vez avisada, tomar imediatamente medidas para eliminar a referida interferência.

ARTIGO 7

Procedimentos preliminares, notificação e inscrição no ficheiro de referência internacional das frequências das consignações de frequência às estações do serviço fixo por satélite na faixa de 11,7-12,2 GHz (na Região 2) quando estejam implicadas consignações de frequência a estações de radiodifusão por satélite conformes com o plano (1).

SECÇÃO I

Procedimento para publicação antecipada de informações relativas aos sistemas do serviço fixo por satélite em projecto

7.1.1. Qualquer administração que se proponha estabelecer um sistema do serviço fixo por satélite, antes de iniciar, se for caso disso, o procedimento descrito no § 7.2.1, envia à Comissão Internacional do Registo de Frequências, no máximo 5 anos antes da entrada em serviço de cada rede de satélite do sistema em projecto, as informações indicadas no apêndice 4 ao Regulamento das Radiocomunicações.

7.1.2. Qualquer modificação às informações comunicadas em conformidade com as disposições do § 7.1.1 relativas a um sistema de satélites em projecto é igualmente comunicada à Comissão a partir do momento em que esteja disponível.

7.1.3. A Comissão publica as informações de que tratam os §§ 7.1.1 e 7.1.2 numa secção especial da sua circular semanal e, quando a circular semanal contiver informações desta natureza, avisa do facto as administrações por telegrama-circular.

7.1.4. Se, após ter estudado as informações publicadas nos termos do § 7.1.3, qualquer administração for de parecer que poderão ser causadas interferências inaceitáveis às suas consignações de frequência conformes com o plano, comunica as suas observações à administração interessada no prazo de 90 dias a contar da data da circular semanal na qual foram publicadas as informações indicadas no apêndice 4 do Regulamento das Radiocomunicações. Envia igualmente à Comissão uma cópia dessas observações. Se a administração interessada não receber de outra administração qualquer observação desta natureza durante o período acima mencionado, pode admitir que esta última não tem objecção de maior a formular contra a ou as redes em projecto do sistema do serviço fixo por satélite relativamente às quais foram publicadas informações.

7.1.5. Uma administração que receba observações formuladas nos termos do § 7.1.4 procurará resolver as dificuldades de qualquer natureza que se lhe apresentem, sem considerar a possibilidade de serem feitas modificações nas estações do serviço de radiodifusão por satélite dependentes de outras administrações. Se para isso não dispuser de meios, a administração poderá então dirigir-se às outras administrações em causa, a fim de resolver essas dificuldades sob reserva de que as modificações do plano que daí possam resultar sejam conformes com o artigo 4.

7.1.6. As administrações podem pedir o auxílio da Comissão nas suas tentativas para resolver as dificuldades mencionadas no parágrafo anterior.

7.1.7. Em observância das disposições dos §§ 7.1.5 e 7.1.6, uma administração responsável por um sistema do serviço fixo por satélite em projecto diferirá, se for necessário, o início do procedimento de coordenação definido no § 7.2.1 ou, se este procedimento não for aplicável, o envio das suas fichas de notificação à Comissão, até uma data 150 dias posterior à data da circular semanal que contém as informações indicadas no apêndice 4 do Regulamento das Radiocomunicações e relativas à rede de satélite pertinente. Todavia, relativamente às administrações com as quais foram resolvidas as dificuldades ou que responderam favoravelmente, o procedimento de coordenação poderá, se conveniente, ser iniciado antes de expirado o prazo de 150 dias atrás indicado.

7.1.8. Qualquer administração em nome da qual, em conformidade com as disposições dos §§ 7.1.1 a 7.1.3, tenham sido publicadas informações relativas às redes em projecto do seu sistema do serviço fixo por satélite, comunicará periodicamente à Comissão se recebeu ou não observações e informá-la-á do estado de adiantamento das negociações, com outras administrações, para a solução de eventuais dificuldades. A Comissão publicará essas informações numa secção especial da sua circular semanal e, quando a circular semanal contiver informações dessa natureza, avisará do facto as administrações por telegrama-circular.

SECÇÃO II

Procedimentos de coordenação a aplicar em certos casos

7.2.1. Antes de notificar à Comissão ou de pôr em serviço uma consignação de frequência a uma estação espacial do serviço fixo por satélite, uma administração deve procurar o acordo de qualquer outra administração que tenha uma consignação de frequência em conformidade com o plano se:

Qualquer porção da largura de faixa necessária prevista para a estação espacial do serviço fixo por satélite se sobrepuser, pelo menos parcialmente, à largura de faixa necessária associada à consignação da estação de radiodifusão por satélite; e

A densidade de fluxo de potência, que seria produzida pela estação espacial do serviço fixo por satélite, exceder o valor específico no anexo 4.

Para isso, a administração que procura a coordenação envia a qualquer outra administração visada no parágrafo anterior as informações indicadas no apêndice 3 do Regulamento das Radiocomunicações.

---

(1) Estas disposições não dispensam a aplicação dos procedimentos prescritos pelos artigos 11 e 13 do Regulamento das Radiocomunicações quando estejam implicadas estações diferentes das do serviço de radiodifusão por satélite que tenham consignações em conformidade com o plano.

7.2.2. Não é necessário qualquer acordo suplementar quando uma administração se propuser modificar as características de uma consignação existente de tal modo que as condições do § 7.2.1 anterior não obriguem à procura de um acordo relativamente ao serviço de radiodifusão por satélite de uma outra administração ou quando essa consignação tenha já sido objecto de um acordo e a sua modificação não cause interferência eventual que exceda os valores convencionados nesse acordo.

7.2.3. Ao mesmo tempo que procura a coordenação em conformidade com o § 7.2.1, a administração envia à Comissão uma cópia do pedido de coordenação, acompanhada das informações indicadas no apêndice 3 do Regulamento das Radiocomunicações, assim como o nome da ou das administrações cujo acordo procura. Baseando-se no anexo 4, a Comissão determina quais são as consignações de frequência conformes com o plano consideradas como sendo afectadas. A Comissão junta o nome dessas administrações às informações comunicadas pela administração que procura a coordenação e publica essas informações numa secção especial da sua circular semanal, com uma referência à circular semanal em que, nos termos da secção I do presente artigo, foram publicadas as informações relativas ao sistema de satélites. Quando a circular semanal contiver informações desta natureza, a Comissão avisa do facto as administrações por telegrama-circular.

7.2.4. Qualquer administração que considere que deveria ter sido incluída no procedimento de que trata o § 7.2.1 tem o direito para participar nesse procedimento.

7.2.5. Qualquer administração junto da qual se procure acordo nos termos do § 7.2.1, acusa imediatamente a recepção, por telegrama, dos dados relativos à coordenação. Se a administração que procura a coordenação não receber aviso de recepção no prazo de 30 dias a contar da data da circular semanal em que foram publicadas as informações pertinentes em conformidade com as disposições do § 7.2.3, envia um telegrama a pedir esse aviso de recepção, telegrama a que a administração que o recebe responde num novo prazo de 30 dias. Ao receber informações relativas à coordenação, a administração junto da qual é procurado o acordo, tendo em conta a data prevista de entrada ao serviço da consignação para a qual é procurada a coordenação, estuda rapidamente a questão relativamente às interferências (1) que seriam causadas ao serviço assegurado por aquelas das suas estações para as quais é procurado um acordo nos termos do § 7.2.1. Depois, no prazo, de 90 dias a partir da data da circular semanal pertinente, comunica o seu acordo à administração que procura a coordenação. No caso contrário, envia, dentro do mesmo prazo, à administração que procura a coordenação informações técnicas a indicar as razões que motivam o seu desacordo e apresenta-lhe as sugestões que possa fazer, se for caso disso, para chegar a uma solução satisfatória do problema. É enviada igualmente à Comissão uma cópia dessas observações.

7.2.6. A administração que procura a coordenação pode pedir à Comissão que tente efectuar essa coordenação, nas seguintes circunstâncias:

a) Uma administração junto da qual se procura o acordo nos termos do § 7.2.1 não envia aviso de recepção, nos termos do § 7.2.5, no prazo de 60 dias a contar da data da circular semanal em que foram publicadas as informações relativas ao pedido de coordenação;

b) Uma administração enviou um aviso de recepção nos termos do § 7.2.5, mas não comunica a sua decisão no prazo de 90 dias a contar da circular semanal pertinente;

c) A administração que procura a coordenação e a administração junto da qual é procurado o acordo não são do mesmo parecer relativamente ao nível de interferência aceitável; ou ainda

d) A coordenação não é possível por qualquer outra razão.

Ao apresentar o seu pedido à Comissão, a administração interessada comunica-lhe as informações necessárias que lhe permitam tentar efectuar a coordenação.

7.2.7. A administração que procura a coordenação, ou qualquer administração junto da qual é procurado o acordo, ou então a Comissão, pode pedir as informações suplementares de que julgue precisar para avaliar o nível das interferências causadas aos serviços interessados.

7.2.8. Quando a Comissão receber um pedido nos termos da alínea *a*) do § 7.2.6, envia sem demora um telegrama à administração junto da qual é procurado o acordo pedindo-lhe que acuse a recepção imediatamente.

7.2.9. Quando a Comissão receber um aviso de recepção na sequência da medida que tomou nos termos do § 7.2.8, ou quando a Comissão receber um pedido nos termos da alínea *b*) do § 7.2.6, envia sem demora um telegrama à administração junto da qual foi procurado o acordo pedindo-lhe que tome rapidamente uma decisão sobre a questão.

7.2.10. Quando a Comissão receber um pedido nos termos da alínea *d*) do § 7.2.6, procura efectuar a coordenação em conformidade com as disposições do § 7.2.1. A Comissão toma igualmente, se necessário, as medidas previstas no § 7.2.3. Quando a Comissão não receber, no prazo indicado no § 7.2.5, aviso de recepção ao seu pedido de coordenação, procede em conformidade com as disposições do § 7.2.8.

7.2.11. Quando uma administração não responda no prazo de 30 dias a contar do envio do telegrama que a Comissão lhe enviou nos termos do § 7.2.8, pedindo-lhe aviso de recepção, ou quando ela não comunique a sua decisão sobre o assunto no prazo de 30 dias a partir do envio do telegrama da Comissão nos termos do § 7.2.9, considera-se que a administração junto da qual foi procurado acordo se compromete:

a) A não formular queixa relativa a interferências prejudiciais que possam ser causadas ao serviço assegurado pelas suas estações de radiodifusão por satélite pela utilização da consignação de frequência para a qual foi procurada a coordenação;

b) A proceder de modo que as suas estações de radiodifusão por satélite não venham a causar interferências prejudiciais à utilização da consignação de frequência para a qual foi procurada a coordenação.

---

(1) Os critérios a utilizar para avaliar os níveis de interferência baseiam-se nas informações técnicas contidas no presente apêndice ou nos pareceres pertinentes da CCIR e são objecto de um acordo entre as administrações interessadas.

7.2.12. Quando necessário, a Comissão avalia, no quadro do procedimento especificado no § 7.2.6, o nível de interferência. Em qualquer caso, comunica às administrações interessadas os resultados obtidos.

7.2.13. Em caso de desacordo persistente entre a administração que procura a coordenação e a administração junto da qual foi procurado o acordo, a administração que procura a coordenação tem o direito de, 150 dias após a data em que pediu a coordenação, tendo em conta as disposições do § 7.3.4, enviar à Comissão a sua ficha de notificação relativa à consignação proposta, sob reserva de que tenha sido pedido o auxílio da Comissão. Em tais condições, a administração notificadora compromete-se a não pôr em serviço a sua consignação enquanto não puder ser preenchida a condição estipulada no § 7.4.11.2. Todavia, as administrações interessadas podem estudar a possibilidade de chegar a um acordo sobre o emprego da consignação proposta durante um período determinado.

SECÇÃO III

Notificação das consignações de frequência

7.3.1. Qualquer consignação de frequência a uma estação espacial do serviço fixo por satélite deve ser notificada à Comissão:

a) Se a utilização da frequência em questão for susceptível de provocar interferências prejudiciais a uma consignação de frequência conforme com o plano [1], pertencente a outra administração; ou ainda

b) Se se desejar obter o reconhecimento internacional oficial da utilizado dessa frequência.

7.3.2. Deverá fazer-se uma notificação análoga no caso de qualquer frequência destinada a ser utilizada na recepção por uma estação terrena, sempre que se apresente, pelo menos, uma das circunstâncias especificadas no n.º 7.3.1.

7.3.3. Qualquer consignação de frequência notificada em execução dos §§ 7.3.1 ou 7.3.2 deve ser objecto de uma ficha individual de notificação, elaborada pela forma prescrita no apêndice 3 ao Regulamento das Radiocomunicações, cujas diversas secções especificam as características fundamentais a fornecer consoante o caso. A administração notificadora comunica igualmente qualquer outra informação que considere útil.

7.3.4. Cada ficha de notificação deve ser recebida pela Comissão no máximo 3 anos antes da data da entrada em serviço da consignação de frequência em causa. Em todo o caso, deve ser recebida não mais tarde que 90 dias [2] antes dessa data.

7.3.5. Qualquer consignação de frequência a uma estação terrena ou espacial cuja notificação seja recebida pela Comissão depois de expirado o prazo necessário especificado no § 7.3.4 leva, quando for necessário inscrevê-la no ficheiro de referência, uma observação a indicar que a ficha de notificação não está em conformidade com as disposições do § 7.3.4.

SECÇÃO IV

Procedimento para o exame das fichas de notificação e a inscrição das consignações de frequência no ficheiro de referência

7.4.1. Quando a Comissão receber uma ficha de notificação que não contenha pelo menos as características fundamentais especificadas no apêndice 3 ao Regulamento das Radiocomunicações, devolve-a imediatamente, pelo correio aéreo, à administração de origem, acompanhada dos motivos dessa evolução.

7.4.2. Quando a Comissão receber uma ficha de notificação completa, inclui as informações que ela contém, com a data de recepção, na sua circular semanal; esta circular contém as informações que figuram em todas as fichas de notificação completas recebidas pela Comissão desde a publicação da circular precedente.

7.4.3. A circular será considerada, pela administração notificadora, como aviso de recepção pela Comissão de uma ficha de notificação completa.

7.4.4. A Comissão examina as fichas de notificação completas pela ordem em que as recebe. Não pode adiar a conclusão, a menos que lhe faltem informações suficientes para tomar uma decisão nesse sentido; além disso, a Comissão não resolverá sobre uma ficha de notificação que tenha relações técnicas com uma ficha recebida anteriormente e ainda em exame antes de tomar uma decisão no que respeita a esta última.

7.4.5. A Comissão examina cada ficha de notificação:

7.4.5.1. Sob o ponto de vista da sua conformidade com as cláusulas da Convenção, as disposições pertinentes do Regulamento das Radiocomunicações e as disposições do presente apêndice (com excepção das relativas ao procedimento de coordenação e à probabilidade de interferências prejudiciais).

7.4.5.2. Se for caso disso, sob o ponto de vista da sua conformidade com as disposições do § 7.2.1, as quais dizem respeito à coordenação da utilização da consignação de frequência com as outras administrações interessadas que tenham uma consignação em conformidade com o plano.

7.4.5.3. Se for caso disso, sob o ponto de vista da probabilidade de interferência prejudicial em detrimento do serviço assegurado ou que deva ser assegurado por uma estação de radiodifusão por satélite cuja consignação de frequência está em conformidade com o plano.

---

[1] Chama-se especialmente a atenção das administrações para a aplicação do § 7.2.1 anterior.

[2] A administração notificadora inicia, se for caso disso, o ou os procedimentos de coordenação com a antecedência necessária para que seja respeitada esta data limite.

7.4.6. Segundo as conclusões a que a Comissão chegar na sequência do exame previsto nos §§ 7.4.5.1, 7.4.5.2 e 7.4.5.3, consoante o caso, o procedimento prossegue como a seguir se indica:

7.4.7. *Conclusão favorável relativamente ao § 7.4.5.1, nos casos em que não sejam aplicáveis as disposições do § 7.4.5.2.*

7.4.7.1. A consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d.

7.4.8. *Conclusão desfavorável relativamente ao § 7.4.5.1.*

7.4.8.1. Quando a ficha incluir uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342** do Regulamento das Radiocomunicações e quando a conclusão for favorável relativamente aos §§ 7.4.5.2 e 7.4.5.3, consoante o caso, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d.

7.4.8.2. Quando a ficha incluir uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342** do Regulamento das Radiocomunicações e quando a conclusão for desfavorável relativamente aos §§ 7.4.5.2 ou 7.4.5.3, consoante o caso, a ficha é devolvida imediatamente pelo correio aéreo à administração notificadora com uma exposição das razões que motivam a conclusão da Comissão. Em tais condições, a administração notificadora compromete-se a não utilizar a consignação de frequência até que possa ser preenchida a condição especificada no § 7.4.8.1. Em conformidade com este artigo, o acordo das administrações interessadas pode igualmente obter-se por um período determinado. Neste caso o acordo será notificado a Comissão e a consignação de frequência será inscrita no ficheiro de referência com uma nota a indicar que é válida para o período especificado. A administração notificadora que utilize a consignação de frequência durante um período especificado não deverá ulteriormente servir-se dessa utilização como pretexto para manter a consignação em serviço depois desse período, se não obtiver autorização da ou das administrações interessadas. A data de recepção pela Comissão da ficha de notificação inicial é inscrita na coluna 2d.

7.4.8.3. Quando a ficha não comportar qualquer referência segundo a qual a estação funcionará em conformidade com as disposições do n.º 342 do Regulamento das Radiocomunicações, essa ficha é devolvida imediatamente, pelo correio aéreo, à administração notificadora com uma exposição das razões que motivam a conclusão da Comissão e com as sugestões que essa possa fazer, se for caso disso, para se chegar a uma solução satisfatória do problema.

7.4.8.4. Se a administração notificadora apresentar de nova a sua ficha não modificada, esta é tratada de acordo com as disposições do § 7.4.8.3. Se a administração notificadora apresentar de novo a sua ficha com uma referência segundo a qual a estação funcionará em conformidade com as disposições do n.º **342** do Regulamento das Radiocomunicações, a ficha de notificação é tratada de acordo com as disposições dos §§ 7.4.8.1 ou 7.4.8.2, consoante o caso. Se a ficha for apresentada de novo com modificações tais que, após novo exame, a conclusão da Comissão passe a ser favorável relativamente ao § 7.4.5.1, a ficha é tratada como uma nova ficha de notificação.

7.4.9. *Conclusão favorável relativamente ao § 7.4.5.1, nos casos em que são aplicáveis as disposições do § 7.4.5.2.*

7.4.9.1. Quando a Comissão concluir que os procedimentos de coordenação de que trata o § 7.4.5.2 foram aplicados com êxito relativamente a todas as administrações cujas consignações de frequência conformes com o plano podem ser desfavoravelmente influenciadas, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d.

7.4.9.2 Quando a Comissão concluir que o procedimento de coordenação de que trata o § 7.4.5.2 não foi aplicado e se a administração notificadora lhe pedir que efectue a coordenação pretendida, a Comissão toma as medidas necessárias para esse fim e comunica às administrações interessadas os resultados obtidos. Se as tentativas da Comissão para levar a bom termo a coordenação tiverem êxito, a ficha de notificação é tratada em conformidade com as disposições do § 7.4.9.1. Se não tiverem êxito as tentativas da Comissão esta examina a ficha de notificação sob o ponto de vista das disposições do § 7.4.5.3.

7.4.9.3. Quando a Comissão concluir que o procedimento de coordenação de que trata o § 7.4.5.2 não foi aplicado e se a administração notificadora lhe não pedir que efectue a coordenação pretendida, a ficha de notificação é enviada imediatamente pelo correio aéreo à administração notificadora com uma exposição das razões que motivam essa devolução e com as sugestões que a Comissão possa fazer, se for caso disso, para chegar a uma solução satisfatória do problema.

7.4.9.4. Quando a administração notificadora apresentar de nova a sua ficha de notificação e se a Comissão concluir que o procedimento de coordenação de que trata o § 7.4.5.2 foi aplicado com êxito relativamente a todas as administrações cujas consignações conformes com o plano podem ser desfavoravelmente influenciadas, a consignação é inscrita de no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação inicial é inscrita na coluna 2d. A data de recepção pela Comissão da ficha de notificação apresentada de novo indica-se na coluna «Observações».

7.4.9.5. Quando a administração notificadora apresentar de novo a sua ficha de notificação pedindo à Comissão que efectue a coordenação pretendida nos termos do § 7.2.1, a ficha de notificação é tratada em conformidade com as disposições do § 7.4.9.2. Se ulteriormente for necessário inscrever a consignação no ficheiro de referência, a data de recepção pela Comissão da ficha de notificação apresentada de novo indica-se na coluna «Observações».

7.4.9.6. Quando a administração notificadora apresentar de novo a sua ficha de notificação declarando que não teve êxito na tentativa para efectuar a coordenação, a Comissão informa do facto as administrações interessadas. A Comissão examina a ficha de notificação sob o ponto de vista das disposições do § 7.4.5.3. Se ulteriormente for necessário inscrever a consignação no ficheiro de referência, a data de recepção pela Comissão da ficha de notificação apresentada de novo indica-se na coluna «Observações».

7.4.10. *Conclusão favorável relativamente aos §§ 7.4.5.1 e 7.4.5.3.*

7.4.10.1. A consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação é inscrita na coluna 2d.

7.4.11. *Conclusão favorável relativamente ao § 7.4.5.1, mas desfavorável ao § 7.4.5.3.*

7.4.11.1. A ficha de notificação é devolvida imediatamente, pelo correio aéreo, à administração de origem, com uma exposição das razões que motivam a conclusão da Comissão e com as sugestões que esta possa fazer, se for caso disso, para chegar a uma solução satisfatória do problema.

7.4.11.2. Se a administração notificadora apresentar de novo a sua ficha com modificações que, após novo exame, motivem da parte da Comissão uma conclusão favorável relativamente ao § 7.4.5.3, a consignação é inscrita no ficheiro de referência. A data de recepção pela Comissão da ficha de notificação inicial é inscrita na coluna 2d. A data de recepção pela Comissão da ficha de notificação apresentada de novo indica-se na coluna «Observações».

7.4.11.3. No caso em que a administração notificadora apresente de novo a sua ficha de notificação, quer não modificada, quer com modificações cujo efeito seja diminuir de interferências prejudiciais mas em proporções insuficientes para permitir a aplicação das disposições do § 7.4.11.2, e em que essa administração insista por novo exame da ficha de notificação mas em que as conclusões da Comissão se mantenham, a ficha de notificação deve ser novamente devolvida à administração notificadora, em conformidade com o § 7.4.11.1. Nessas condições, a administração notificadora compromete-se a não utilizar a consignação de frequência até que possa ser preenchida a condição definida no § 7.4.11.2. Mas as administrações interessadas podem encarar a possibilidade de concluir um acordo sobre a utilização, durante um período especificado, da consignação de frequência proposta. Neste caso, a IFRB será avisada do acordo e a consignação de frequência será inscrita no ficheiro de referência, acompanhada de uma nota na coluna «Observações» a indicar que a sua validade não vai além do período especificado. A administração que utilize a consignação de frequência durante o período especificado não deverá posteriormente servir-se dessa utilização como pretexto para manter a consignação em serviço depois desse período, se não obtiver autorização da ou das administrações interessadas. A data de recepção pela Comissão da ficha de notificação inicial é inscrita na coluna 2d.

7.4.12. *Modificações das características fundamentais das consignações já inscritas no ficheiro de referência.*

7.4.12.1. Qualquer notificação de modificação das características fundamentais de uma consignação do serviço fixo por satélite já inscrita no ficheiro de referência, tais como definidas no apêndice 3 ao Regulamento das Radiocomunicações (exceptuando, todavia, o nome da estação e o nome da localidade onde está situada), é examinada pela Comissão de acordo com as disposições do § 7.4.5.1, e, se for caso disso, dos §§ 7.4.5.2 e 7.4.5.3, e aplicam-se as disposições dos §§ 7.4.7 a 7.4.11.3, inclusive. Quando seja necessário inscrever a modificação no ficheiro de referência, é modificada em conformidade a consignação inicial.

7.4.12.2. Todavia, no caso de uma modificação das características fundamentais de uma consignação conforme as disposições do § 7.4.5.1, e em que a Comissão formule uma conclusão favorável relativamente aos §§ 7.4.5.2 e 7.4.5.3, se for caso disso, ou conclua que essa modificação não aumenta a probabilidade de interferência prejudiciais em detrimento de consignações de frequência conformes com o plano, a consignação de frequência modificada conserva a data inicialmente inscrita na coluna 2d. Além disso, indica-se na coluna «Observações» a data da recepção pela Comissão da ficha de notificação relativa à modificação.

7.4.12.3. Na aplicação das disposições da presente secção, será considerada nova ficha de notificação toda aquela que seja apresentada de novo à Comissão e recebida por esta mais de dois anos após a data em que devolveu a ficha à administração notificadora.

7.4.13. *Inscrição das consignações de frequência do serviço fixo por satélite notificadas antes da sua entrada em serviço.*

7.4.13.1. Se uma consignação de frequência notificada antes da sua entrada em serviço for objecto de conclusões favoráveis formuladas pela Comissão relativamente ao § 7.4.5.1 e, se for cado disso, aos §§ 7.4.5.2 e 7.4.5.3, ela inscrita provisoriamente no ficheiro de referência com um símbolo especial, na coluna «Observações», a indicar o carácter provisório dessa inscrição.

7.4.13.2. A Comissão suprime o símbolo especial inserido na coluna «Observações» se, no prazo de 30 dias a contar da data prevista para a entrada em serviço, receber da administração notificadora a confirmação da data de entrada em serviço. No caso de a Comissão concluir, na sequência de um pedido recebido da administração notificadora antes da expirado este prazo de 30 dias, que circunstâncias excepcionais justificam um prazo suplementar, este não deverá, em nenhum caso, ir além de 150 dias.

7.4.13.3. Se a Comissão não receber confirmação nos prazos previstos no § 7.4.13.2, a inscrição em causa é anulada. A Comissão avisa a administração interessada antes de tomar esta medida.

Secção V

Inscrição das conclusões no ficheiro de referência

7.5. Sempre que a Comissão inscrever uma consignação de frequência no ficheiro de referência, indica a sua conclusão utilizando um símbolo colocado na coluna 13a. Além disso, indica na coluna «Observações» os motivos de qualquer conclusão desfavorável.

SECÇÃO VI

Categorias de consignações de frequência

7.6.1. A data a inscrever na coluna 2c é a data de entrada ao serviço notificada pela administração interessada e é dada somente a título de informação.

7.6.2. Se a utilização de uma consignação de frequência a uma estação de radiocomunicação espacial, que foi inscrita no ficheiro de referência em conformidade com as disposições do § 7.4.11.3, causar efectivamente interferência prejudicial à recepção de uma estação de radiodifusão por satélite cuja consignação de frequência está conforme com o plano, a estação que utiliza a consignação de frequência inscrita em conformidade com as disposições do § 7.4.11.3 deve fazer cessar imediatamente a interferência prejudicial quando dela for avisada.

7.6.3. Se a utilização de uma consignação de frequência não conforme com as disposições do § 7.4.5.1 causar efectivamente interferência prejudicial à recepção de qualquer estação de radiodifusão por satélite cuja consignação de frequência está em conformidade com o plano, a estação que utiliza a consignação de frequência não conforme com as disposições do § 7.4.5.1 deve fazer cessar imediatamente a interferência prejudicial logo que dela seja avisada.

SECÇÃO VII

Reexame das conclusões

7.7.1. Uma conclusão pode ser reexaminada pela Comissão:

A pedido da administração notificadora;

A pedidos de qualquer outra administração interessada no assunto, mas unicamente devido a uma interferência prejudicial verificada;

Por iniciativa da própria Comissão quando considerar justificada tal medida.

7.7.2. Apoiando-se em todas as informações de que disponha, a Comissão reexamina a questão tendo em conta as disposições do § 7.4.5.1 e, se for caso disso, as disposições dos §§ 7.4.5.2 e 7.4.5.3 e formula uma conclusão apropriada. Depois informa dessa conclusão a administração notificadora, quer antes de publicar a conclusão quer antes de a incluir no ficheiro de referência.

7.7.3. Se for, então, favorável a conclusão da Comissão, esta inclui no ficheiro de referência as modificações pretendidas para que a inscrição passe a figurar aí como se a conclusão inicial tivesse sido favorável.

7.7.4. Se a conclusão relativa à probabilidade de interferência prejudicial continuar desfavorável, a inscrição inicial não é modificada.

SECÇÃO VII

Modificação, anulação e revisão das inscrições do ficheiro de referência

7.8.1. Quando a utilização de uma consignação de frequência a uma estação do serviço fixo por satélite inscrita no ficheiro de referência for suspensa por um período de 18 meses, a administração notificadora informa a Comissão, no decorrer desse período de 18 meses, da data em que a utilização foi suspensa e da data em que será reiniciada a utilização regular dessa consignação.

7.8.2. Sempre que lhe pareça, em consequência ou não de medidas tomadas nos termos do § 7.8.1, que uma consignação de frequência a uma estação do serviço fixo por satélite inscrita no ficheiro de referência não foi utilizada regularmente durante mais de 18 meses, a Comissão consulta a administração notificadora sobre a data em que será reiniciada a utilização regular dessa consignação.

7.8.3. Se, num prazo de 6 meses, a Comissão não receber qualquer resposta ao seu pedido de informações nos termos do § 7.8.2, ou se a resposta recebida não confirmar que será reiniciada a utilização regular dessa consignação a uma estação do serviço fixo por satélite no prazo de 6 meses, insere-se um símbolo no ficheiro de referência em frente da inscrição.

7.8.4. Se a utilização de uma consignação de frequência inscrita no ficheiro de referência vier a ser abandonada definitivamente, a administração notificadora deverá informar do facto a Comissão num prazo de 90 dias, após o que será anulada a inscrição no ficheiro de referência.

7.8.5. Sempre que lhe apareça, segundo as informações de que disponha, que uma consignação inscrita no ficheiro de referência não entrou em serviço regular de acordo com as características fundamentais notificadas, ou não é utilizada de acordo com as características fundamentais notificadas, a Comissão consulta a administração notificadora e, sob reserva do seu acordo, anula a inscrição ou introduz-lhe as modificações convenientes.

7.8.6. Se,na sequência de um inquérito feito pela Comissão nos termos do § 7.8.5, a administração notificadora não fornecer à Comissão, no prazo de 45 dias, as informações necessárias ou pertinentes, a Comissão insere na coluna «Observações» do ficheiro de referência observações que indiquem a situação.

ARTIGO 8

Disposições diversas relativas aos procedimentos

8.1. Se para tal lhe for feito pedido por qualquer administração e se as circunstâncias parecerem justificá-lo, a Comissão, utilizando para o efeito os meios de que disponha e que sejam apropriados às circunstâncias, procede a um estudo dos casos de presunção de contravenção às presentes disposições ou de falta de observância destas, ou dos casos de interferência prejudicial.

8.2. A Comissão elabora em seguida um relatório, que comunica às administrações interessadas e no qual consigna as suas conclusões e as suas recomendações para a solução do problema.

8.3. No caso de, na sequência de um estudo, a Comissão apresentar a uma ou várias administrações propostas ou recomendações tendentes à solução de uma questão e de, no prazo de 90 dias, não receber resposta de uma ou várias dessas administrações, considerará que as suas propostas ou recomendações não são aceitáveis pela ou pelas administrações que não responderam. Se a própria administração requerente não responder nesse prazo, a Comissão não prosseguirá o estudo.

8.4. Se qualquer administração lho pedir, particularmente a administração de um país que tenha necessidade de assistência especial, e se as circunstâncias parecerem justificá-lo, a Comissão, utilizando para o efeito os meios de que disponha e que sejam apropriados às circunstâncias, fornecerá a seguinte assistência:

a) Cálculo necessário para a aplicação dos anexos 1, 3 e 4;

b) Qualquer outra assistência de carácter técnico a fim de que possam ser levados a bom termo os procedimentos descritos no presente apêndice.

ARTIGO 9

Limites da densidade de fluxo de potência entre 11,7 GHz e 12,2 GHz para a protecção, nas Regiões 1 e 3, dos serviços de Terra contra as interferências provenientes de estações espaciais de radiodifusão por satélite da Região 2

9.1. Sejam quais forem as condições e os métodos de modulação, a densidade de fluxo de potência produzida à superfície da Terra nas Regiões 1 e 3 pelas emissões de uma estação espacial do serviço de radiodifusão por satélite da Região 2 não deve exceder, no território de qualquer país, os limites indicados no anexo 5, salvo se a administração desse país aceitar o excesso.

ARTIGO 10

Limites da densidade de fluxo de potência entre 11,7 GHz e 12,2 GHz para a protecção, dos serviços espaciais da Região 2 contra as interferências provenientes de estações espaciais do serviço de radiodifusão por satélite das Regiões 1 e 3

10.1. As estações espaciais do serviço de radiodifusão por satélite das Regiões 1 e 3 devem utilizar antenas em que as características dos lóbulos laterais não excedam o diagrama de radiação de referência da figura 6 do anexo 8. Consequentemente, a densidade de fluxo de potência radiada sobre o território de qualquer administração da Região 2 na faixa 2 de 11,7-12,2 GHz, antes de qualquer modificação ao plano, não deverá exceder, quaisquer que sejam as condições e os métodos de modulação, os valores produzidos pelas estações de radiodifusão por satélite que funcionam em conformidade com o plano à data da sua entrada em vigor e que utilizam as características técnicas especificadas neste.

Os valores da densidade de fluxo de potência devem ser calculados pelo método descrito no anexo 11.

10.2. Em particular, num ponto de referência (35° de longitude O., 8° de latitude S.), antes de qualquer modificação ao plano, as densidades de fluxo de potência não devem exceder os valores indicados no anexo 11.

ARTIGO 11

Plano para o serviço de radiodifusão por satélite nas faixas de frequências de 11,7-12,2 GHz na Região 3 e de 11,7-12,5 GHz na Região 1

11.1. Informações incluídas nas colunas do plano.

Coluna 1 — *Símbolo que designa o país e número de referência da IFRB* (a coluna 1 contém o símbolo que designa o país ou a zona geográfica tirado do quadro n.º 1 do prefácio da Lista Internacional das Frequências).

Coluna 2 — *Posição nominal na órbita em graus.*

Coluna 3 — *Número do canal* (v. o quadro a seguir para a correspondência entre os números dos canais e as frequências consignadas).

Coluna 4 — *Coordenadas geográficas do ponto visado,* em graus e décimos de grau.

Coluna 5 — *Abertura do feixe de antena.* A coluna inclui dois valores que representam, respectivamente, o eixo maior e o eixo menor da secção recta do feixe elíptico entre os pontos de meia potência; estes valores são expressos em graus e décimos de grau.

Coluna 6 — *Orientação da elipse,* determinada como segue: num plano perpendicular ao eixo de feixe, a direcção do eixo maior da elipse é definida pelo ângulo, medido no sentido inverso do movimento dos ponteiros do relógio, a partir de uma linha paralela ao plano equatorial até ao eixo, maior da elipse com aproximação para o grau mais próximo.

Coluna 7 — *Polarização* (1 = directa, 2 = indirecta) (1).

Coluna 8 — *P. i. r. e.* na direcção da radiação máxima, em dBW.

Coluna 9 — *Observações.*

11.2. Notas relativas ao plano.

1. O ΔG desta consignação é ... dB.

2. A afectar ao propaganda islâmico nos documentos da Conferência(2).

3. Esta consignação resulta de uma necessidade comum das administrações da Dinamarca e da Islândia. A zona de serviço compreende as ilhas Féroe e Islândia. Na sequência de consultas entre as duas administrações, a consignação pode ser utilizada por uma ou outra.

4. IFB-IFRB. Esta consignação foi incluída no plano pela Conferência.

5. Consignação destinada a assegurar a cobertura da Argélia, da Líbia, de Marrocos, da Mauritânia e da Tunísia, após acordo destes países. Em caso de necessidade, pode ser utilizada com as características do feixe TUN 150.

6. As consignações inscritas no plano em nome da Somália devem ser coordenadas com cada um dos países interessados e particularmente com a Etiópia.

11.3. Quadro de correspondência entre o número do canal e da frequência consignada:

Canal número	Frequência consignada (MHz)	Canal número	Frequência consignada (MHz)
1	11 727,48	21	12 111,08
2	11 746,66	22	12 130,26
3	11 765,84	23	12 149,44
4	11 785,02	24	12 168,62
5	11 804,20	25	12 187,80

ARTIGO 12

Disposições que regem o serviço de radiodifusão por satélite na Região 2 antes do estabelecimento de um plano pormenorizado

12.1. Em conformidade com os princípios enunciados no anexo 6, aplicar-se-ão as disposições temporárias seguintes até que seja estabelecido, em virtude dos § 12.9 a § 12.12 abaixo, um plano pormenorizado para o serviço da radiodifusão por satélite, na faixa de 11,7-12,2 GHz, na Região 2.

12.2. As estações espaciais do serviço de radiodifusão por satélite serão colocadas nas porções de órbita seguintes:

Entre 75° O. e 100° O. de longitude (todavia, para uso do Canadá, Estados Unidos e México, a porção útil serão compreendida somente 75° O. e 95° O. de longitude);

Entre 140° O. e 170° O. de longitude.

12.2.1. As estações espaciais do serviço de radiodifusão por satélite poderão igualmente ser colocadas fora das porções de órbita acima indicadas e deverão então funcionar em conformidade com as disposições dos n.os **420 a 423** do Regulamento das Radiocomunicações. Excepcionalmente para uso da Gronelândia, pode aceitar-se a utilização de uma posição na órbita dos satélites geostacionários compreendida entre 55° O. e 60° O. para o serviço de radiodifusão por satélite (serviço primário). As administrações interessadas tudo devem fazer para permitir a partilha dessa porção do arco entre um satélite de radiodifusão destinado à Gronelândia e estações espaciais do serviço fixo de outras administrações da Região 2.

12.3. As estações espaciais do serviço fixo por satélite estarão situadas nas porções de órbita exteriores às porções mencionadas no § 12.2. Poderão igualmente estar situadas nas porções de órbita mencionadas no dito § 12.2. Neste caso deverão funcionar em conformidade com as disposições dos n.os **420** a **423** do Regulamento das Radiocomunicações.

12.3.1. As estações espaciais do serviço de radiodifusão por satélite situadas nas porções de órbita mencionadas no § 12.2 e as do serviço fixo por satélite situadas nas outras porções de órbita deverão funcionar de tal modo que as estações de um serviço não causem qualquer interferência inaceitável às estações dos outros serviços.

O nível de interferência inaceitável será determinado por acordo entre as administrações interessadas, na base dos mais recentes pareceres da CCIR e dos anexos 8 e 9 do presente apêndice. Todavia, as estações espaciais do serviço de radiodifusão por satélite poderão ser colocadas no limite da porção de órbita mencionada no § 12.2, na medida em que estejam conformes com as características técnicas permitentes, para a Região 2, expostas no anexo 8.

12.4. Antes da conferência administrativa regional das radiocomunicações mencionada no § 12.9, os sistemas do serviço de radiodifusão por satélite considerar-se-ão experimentais e serão explorados em conformidade com os critérios de partilha e com os parâmetros técnicos que figuram nos anexos 8 e 9.

12.5. As administrações podem pôr em serviço sistemas baseados em valores de características técnicas diferentes dos que figuram no anexo 8 do presente apêndice, sob condição de que daí não resulte para os sistemas em serviço ou previstos das outras administrações interferência mais intensa que a calculada em conformidade com o anexo 9.

12.6. A entrada em serviço de sistemas do serviço fixo por satélite efectuar-se-á em conformidade com as disposições pertinentes do Regulamentos das Radiocomunicações, especialmente com as do artigos 11 e 13 e, se for caso disso, com as disposições do artigo 7 do presente apêndice.

12.7. Na faixa 11,7-12,2 GHz, os sistemas espaciais utilizarão, na medida em que as questões técnicas e económicas o permitam, as técnicas que conduzam à utilização mais eficaz possível da órbita das satélites geostacionários e do espectro das frequências. A título de exemplo, encontrar-se-á no anexo 7 a descrição de tais técnicas.

12.8. Na Região 2, as disposições da Resolução n.º 33 (1) continuarão a aplicar-se ao serviço de radiodifusão por satélite na faixa de 11,7-12,2 GHz até ao momento em que venha a poder ser adoptado um plano pormenorizado para este serviço.

(1) Substitui a Resolução Spa 2-3 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

12.9. Em 1982, o mais tardar, deverá reunir-se uma conferência administrativa regional das radiocomunicações para proceder à planificação pormenorizada do serviço de radiodifusão por satélite e do serviço fixo por satélite em conformidade com as disposições enunciadas nos parágrafos seguintes.

12.9.1. Durante a referida conferência elaborar-se-á um plano pormenorizado de utilização do recurso órbita/espectro disponível para o serviço de radiodifusão por satélite na faixa de 11,7-12,2 GHz. Esse plano indicará a consignação pormenorizada das posições orbitais e dos canais disponíveis, garantindo, assim, que as necessidades em matéria de radiodifusão por satélite apresentadas por cada administração serão satisfeitas equitativamente para todos os países interessados. Por princípio, convirá garantir a cada administração da Região um número mínimo (4) de canais para a exploração do serviço de radiodifusão por satélite. Para além desse mínimo, ter-se-á em conta as características particulares dos países (superfície, zonas horárias, diversidade linguística, etc.).

12.9.2. A planificação basear-se-á na recepção individual, embora cada administração possa utilizar o sistema de recepção que melhor satisfaça as suas necessidades (recepção individual, comunitária ou ambas). Por outro lado ter-se-ão em conta as decisões das Conferências Administrativas Mundiais das Radiocomunicações de 1977 e 1979 e os mais recentes pareceres da CCIR relativamente aos parâmetros que ela estuda.

12.9.3. Logo que se estabeleça um plano para o serviço de radiodifusão por satélite convirá que os sistemas sejam concebidos de tal modo que sejam reduzidas ao mínimo as diferenças e as incompatibilidades técnicas com os outros sistemas das outras regiões.

12.9.4. A conferência terá igualmente em conta, e de modo equitativo, as necessidades do serviço fixo por satélite a que esta faixa de frequências é também atribuída na Região 2.

12.10. Todas as administrações da Região 2 deverão apresentar à IFRB as suas necessidades relativamente ao serviço de radiodifusão por satélite o mais tardar um ano antes do início da conferência administrativa regional das radiocomunicações encarregada de estabelecer um plano para este serviço na Região 2. Essas necessidades poderão ser actualizadas conforme as administrações considerem necessário, e deverão as mesmas administrações indicar o número e os limites de cada zona de serviço, bem como o número de canais necessários para cada zona. Seis meses antes da data limite fixada para enviar os pedidos, a IFRB lembrará às administrações, por circular e ou telegrama, que têm de apresentar as suas necessidades.

12.11. Qualquer sistema existente ou previsto antes da entrada em vigor de plano pormenorizado anteriormente referido não deverá causar interferência prejudicial a um sistema explorado em conformidade com tal plano.

12.12. No momento em que se efectue a planificação pormenorizada do serviço de radiodifusão por satélite na faixa de 11,7-12,2 GHz para a Região 2, não se terá necessariamente em conta os sistemas de radiodifusão por satélite existentes ou previstos. Por consequência, o estabelecimento ou a planificação de tais sistemas por uma administração antes da elaboração do plano não confere a esses sistemas qualquer direito ou reconhecimento.

ARTIGO 13

Relação com a Resolução n.º 507 (1)

13.1. As disposições e o plano associado que figuram no presente apêndice são considerados como contendo um acordo mundial e um plano associado para as Regiões 1 e 3, em virtude do ponto 1 do dispositivo da Resolução n.º 507, que requer que as estações do serviço de radiodifusão por satélite sejam estabelecidas e exploradas em conformidade com acordos e planos associados.

ARTIGO 14

Interferências

14.1. Os Membros da União procurarão estudar concertadamente as medidas necessárias com vista a reduzir as interferências prejudiciais que poderiam resultar da entrada em vigor das presentes disposições e do plano associado.

ARTIGO 15 (2)

Entrada em vigor dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977)

ARTIGO 16

Duração de validade das disposições e do plano associado

16.1. As disposições e o plano associado foram elaborados com vista a satisfazer as necessidades do serviço de radiodifusão por satélite nas faixas respectivas e a sua duração será, pelo menos, de 15 anos, a partir de 1 de Janeiro de 1979.

16.2. Em qualquer caso, as disposições e o plano associado continuarão em vigor até serem revistos por uma conferência administrativa das radiocomunicações competente, convocada em conformidade com as disposições pertinentes da Convenção em vigor.

---

(1) Substitui a Resolução Spa 2-3 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

(2) Este artigo não é reproduzido no presente apêndice. V. nota de fundo de página referente ao título do presente apêndice.

ANEXO 1

Limites a ter em consideração para determinar se um serviço de uma administração é desfavoravelmente influenciado por um projecto de modificação ao plano (artigo 4, § 4.3.1) (1)

1. *Limites impostos à modificação da relação sinal útil/sinal interferente em relação a consignações de frequência conformes com o plano.*

Em relação com o § 4. 3.1.1, uma administração é considerada como sendo desfavoravelmente influenciada se o projecto de modificação do plano tiver como consequência descer a relação sinal útil/sinal interferente, em qualquer ponto situado no interior da zona de serviço associada a uma das suas consignações de frequência conformes com o plano, quer abaixo de 30 dB, quer abaixo do valor resultante das consignações de frequência do plano à data de entrada em vigor dos Actos Finais (2), tomando-se o menor dos dois valores.

Nota. — Para efectuar o cálculo, o efeito, à entrada do receptor, de todos os sinais no mesmo canal ou nos canais adjacentes expressa-se em função de um sinal interferente equivalente no mesmo canal. Este valor é habitualmente expresso em decibéis.

2. *Limites impostos à modificação da densidade de fluxo de potência com vista à protecção do serviço de radiodifusão por satélite na faixa de 11,7-12,2 GHz na Região 2.*

Em relação com o § 4.3.1.2, uma administração da Região 2 é considerada como sendo desfavoravelmente influenciada, se do projecto de modificação do plano resultar que os seguintes valores da densidade de fluxo de potência são excedidos em qualquer ponto da zona de serviço desfavoravelmente influenciada:

147 dB (W/m²/27 MHz)	$0° \leq \theta < 0{,}48°$
139 + 25 log θ dB (W/m²/27 MHz)	$0{,}48 \leq \theta \leq 27{,}25°$
103 dB (W/m²/27 MHz)	$0 \geq 27{,}25°$

θ representa a diferença em graus entre a longitude da estação espacial de radiodifusão da Região 1 ou da Região 3 e a longitude da estação espacial de radiodifusão da administração desfavoravelmente influenciada na Região 2.

3. *Limites impostos à modificação do valor da densidade de fluxo de potência com vista à protecção dos serviços de Terra das outras administrações.*

Em relação com o § 4.3.1.3, uma administração da Região 1 ou da Região 3 é considerada como sendo desfavoravelmente influenciada se o projecto de modificação do plano tiver como consequência elevar o valor da densidade de fluxo de potência, em qualquer parte do território dessa administração, em mais de 0,25 dB relativamente ao resultante das consignações de frequência conformes com o Plano da entrada em vigor dos Actos Finais (2).

A mesma administração é considerada como não sendo desfavoravelmente influenciada se o valor da densidade de fluxo de potência produzida em todas as partes do seu território não exceder os limites especificados no anexo 5.

Uma administração da Região 2 é considerada como sendo desfavoravelmente influenciada, se do projecto de modificação do plano resultar que, em qualquer ponto do território dependente dessa administração e para todos os ângulos de chegada, a densidade de fluxo de potência exceda — 125 dB(W/m²/4 kHz), quando a estação de radiodifusão por satélite funcione como polarização circular, e — 128 dB (W/m²/4 kHz), quando ela funcione com polarização rectilínea.

4. *Limites impostos à modificação da densidade de fluxo de potência, com vista à protecção do serviço fixo por satélite da Região 2, na faixa de 11,7-12,2 GHz.*

Em relação com o § 4.3.1.4, uma administração da Região 2 é considerada como sendo desfavoravelmente influenciada se o projecto de modificação de plano tiver por efeito aumentar, no seu território, a densidade de fluxo de potência em 0,25 dB ou mais, relativamente ao valor resultante das consignações de frequência do plano no momento da entrada em vigor dos Actos Finais (2).

Todavia, no caso de uma consignação de frequência do plano ou de suas modificações posteriores produzir uma densidade de fluxo de potência inferior a — 138 dB (W/m²/27 MHz) em qualquer parte do território de uma administração da Região 2, essa administração não é considerada como sendo desfavoravelmente influenciada.

---

(1) Os limites especificados neste anexo referem-se à densidade de fluxo de potência obtida supondo uma propagação em espaço livre.

(2) Actos Finais de Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977) entrados em vigor em 1 de Janeiro de 1979.

ANEXO 2

Características fundamentais a inscrever nas notificações relativas às estações espaciais do serviço de radiodifusão por satélite

1. País e número IFRB.
2. Posição nominal na órbita (em graus, a partir do meridiano de Greenwich).
3. Frequência consignada ou número de canal.
4. Data de entrada em serviço.
5. Identidade da estação espacial.
6. Zona de serviço (a zona de serviço pode ser definida, se necessário, por um certo número de «pontos de cálculo»).
7. Coordenadas geográficas da intersecção do eixo do feixe de antena com a superfície da Terra.
8. Zona hidrometeorológica.
9. Classe de estação.
10. Classe de emissão e largura de faixa necessária.
11. Potência fornecida à antena (dBW).
12. Características da antena:

Ganho da antena em relação a uma antena telescópica;
Forma de feixe (elíptico ou circulante):

Eixo maior (graus) nos pontos a — 3 dB;
Eixo menor (graus) nos pontos a — 3 dB;

Orientação da elipse;
ΔG (diferença entre o ganho máximo e o ganho na direcção do ponto da zona de serviço em que a densidade de fluxo de potência é mínima);
Precisão de orientação;
Tipo de polarização;
Sentido de polarização;
Diagrama de radiação e características da componente contrapolar.

13. Precisão da manutenção em posição.
14. Características de modulação:

Tipo de modulação;
Características de pré-acentuação;
Norma de televisão;
Características de radiodifusão sonora;
Desvio de frequência;
Composição da faixa de base;
Tipo de multiplexagaun dos sinais imagem e som;
Características.

15. Ângulo de elevação mínimo na zona de serviço.
16. Tipo de recepção (individual ou comunitária).
17. Horário de funcionamento (UTC).
18. Coordenação.
19. Acordos.
20. Outras informações.
21. Administração ou companhia que explora a estação.

ANEXO 3

Método que permite determinar o valor limite da densidade de fluxo de potência interferente no limite da zona de serviço de uma estação espacial de radiodifusão por satélite nas faixas de frequências de 11,7-12,2 GHz (nas Regiões 2 e 3) e de 11,7-12,5 GHz (na Região 1) e cálculo da densidade de fluxo de potência produzida nesse limite por uma estação de Terra.

1. *Considerações gerais:*

1.1. O presente anexo descreve um método de cálculo da interferência susceptível de ser causada por emissores de Terra a receptores de radiodifusão por satélite na faixa de frequência de 11,7-12,2 GHz (11,7-12,5 GHz na Região 1).

1.2. O método a seguir compreende duas fases:

a) Cálculo do valor máximo admissível da densidade de fluxo de potência interferente no limite da zona de serviço da estação espacial de radiodifusão por satélite em causa;
b) Cálculo do valor provável da densidade de fluxo de potência produzida, em qualquer ponto do limite da zona de serviço, pelo emissor de Terra de outra administração.

1.3. É necessário examinar caso a interferência susceptível de ser causada pelos emissores de Terra; compara-se a densidade de fluxo de potência produzida por cada emissor de Terra com o valor limite da densidade de fluxo de potência em qualquer ponto do limite da zona de serviço de uma estação do serviço de radiodifusão por satélite de outra administração. Se, para um dado emissor, o valor de densidade de fluxo de potência for inferior ao valor admissível fixado para qualquer ponto do limite da zona de serviço, considera-se que a interferência causada pelo emissor ao serviço de radiodifusão por satélite é inferior ao valor admissível e as administrações estão dispensadas de coordenação antes da entrada em funcionamento do serviço de Terra. Quando acontecer o contrário, é necessário efectuar coordenação e cálculos mais precisos, numa base aceite pelas duas partes interessadas.

1.4. É preciso sublinhar que, se os cálculos descritos no presente anexo indicarem que é excedida a densidade de fluxo de potência máxima admissível, isso não interdiz necessariamente a introdução do serviço de Terra, pois os cálculos são obrigatoriamente baseados nas hipóteses mais desfavoráveis relativamente:

a) À natureza do terreno do trajecto da interferência;
b) À discriminação exercida pelas instalações de recepção de radiodifusão por satélite em relação às emissões fora do feixe;
c) Às relações de protecção necessárias ao serviço de radiodifusão por satélite;
d) Ao tipo de recepção no serviço de radiodifusão por satélite (na ocorrência a recepção individual); nos ângulos de elevação considerados, este tipo de recepção coloca mais problemas que a recepção comunitária;
e) Ao valor de densidade de fluxo de potência a proteger no serviço de radiodifusão por satélite;
f) Às condições de propagação entre a estação de Terra e a zona de serviço do satélite de radiodifusão.

2. *Limite da densidade de fluxo de potência:*

2.1. *Considerações gerais.*

O valor admissível da densidade de fluxo de potência a não exceder no limite da zona de serviço, para proteger o serviço de radiodifusão por satélite de uma administração, é dado pela fórmula:

$$F = F_o - R + D + P \qquad (1)$$

na qual:

F — valor máximo admissível da densidade de fluxo de potência interferente [em dB (W/m²)] na largura de faixa necessária das emissões de radiodifusão por satélite;
F_o — densidade de fluxo de potência útil [em dB (W/m²)] no limite da zona de serviço;
R — relação de protecção (dB) sinal útil/sinal interferente;
D — discriminação angular (dB) assegurada pelo diagrama de radiação da antena do receptor de radiodifusão por satélite;
P — discriminação de polarização (dB) entre os sinais útil e interferente.

2.2. *Densidade de fluxo de potência útil (F_o).*

O valor F_o é igual a:

a) — 103 em dB (W/m²) para as zonas de serviço nas Regiões 1 e 3;
b) — 105 em dB (W/m²) para as zonas de serviço na Região 2.

2.3. *Relação de protecção (R).*

2.3.1. No caso de uma única contribuição de interferência, a relação de protecção contra todos os tipos de emissões de Terra, excepto as emissões de sistema de televisão multicanais em modulação de amplitude, é de 35 dB quando a diferença entre as frequências portadoras do sinal útil e do sinal interferente é igual ou inferior a ± 10 MHz; desse linearmente de 35 dB a 0 dB quando a diferença entre as portadoras passa de 10 MHz a 35 MHz, e é igual a 0 dB no caso de diferenças de frequências que excedem 35 MHz (v. a fig. 1).

2.3.2. A diferença entre as frequências portadoras deve determinar-se na base das consignações de frequência que figuram no plano de radiodifusão por satélite ou, no caso de estações espaciais de radiodifusão que não estejam

compreendidas num plano, na base das características do sistema em serviço ou em projecto. Para sistemas de televisão multicanais em modulação em amplitude que produzem grandes pontas de densidade de fluxo de potência escalonadas em grande parte da largura de faixa ocupada a relação de protecção *R* é igual a 35 dB, qualquer que seja o espaçamento das frequências portadoras.

2.3.3. Só se tomará em consideração um sinal de uma estação de Terra quando a sua largura de faixa necessária se sobrepuser em parte à largura de faixa necessária de uma consignação a uma estação do serviço de radiodifusão por satélite.

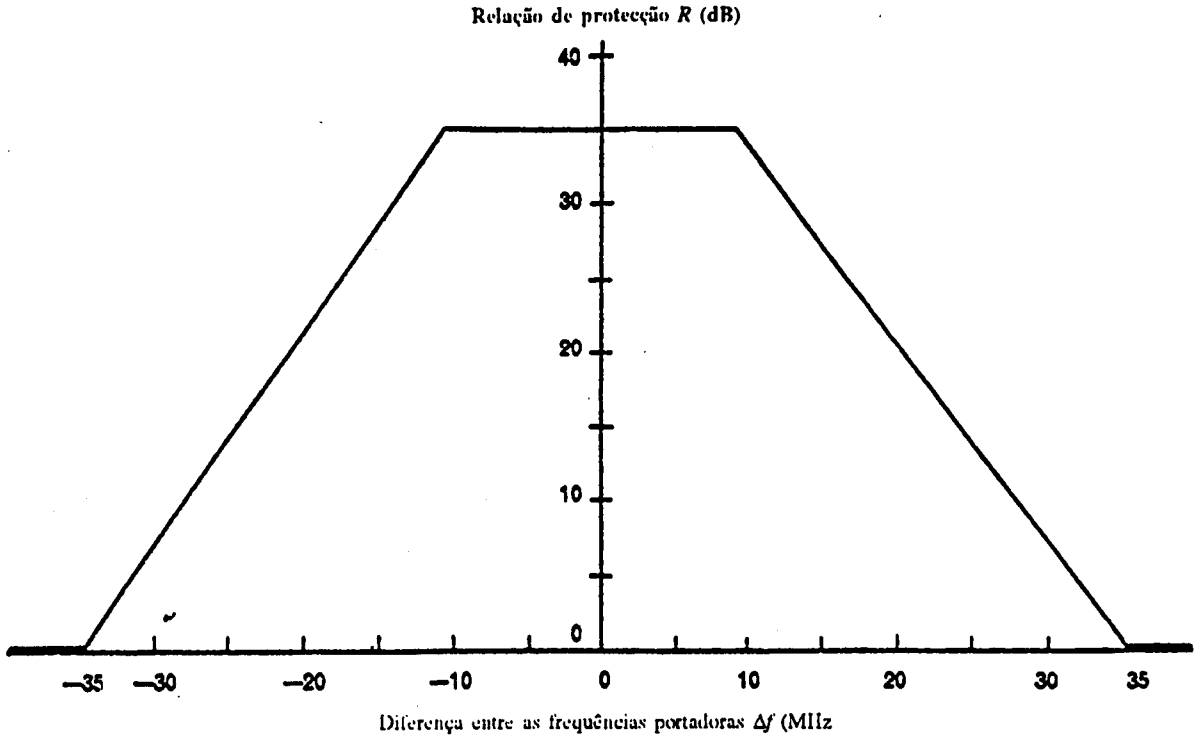

Fig. 1 — Relação de protecção R (dB) de um sinal de radiodifusão em presença de uma única fonte de interferência proveniente de um serviço de Terra (excepto para os sistemas de televisão multicanais em modulação de amplitude)

2.4. *Discriminação angular (D)*

2.4.1. *Zonas de serviço das estações espaciais do serviço de radiodifusão por satélite nas Regiões 1 e 3.*

Quando, para uma zona de serviço considerada, o ângulo de elevação (φ) escolhido para um sistema de radiodifusão por satélite, em serviço ou em projecto, é igual ou superior a 19°, admite-se que na fórmula (1) *(D)* = 33 dB. Se φ for inferior a 19°, calcula-se *(D)* utilizando as fórmulas (2a) e seguintes.

Nota. — Se são especificados vários valores de φ para uma dada zona de serviço, utiliza-se o valor apropriado a cada porção do limite da dita zona de serviço.

$$
\begin{aligned}
&D = 0 \text{ para } 0 \le \varphi \le 0{,}5° \\
&D = 3\,\varphi^{2} \text{ para } 0{,}5 < \varphi \le 1{,}41° \\
&D = 3 + 20 \log 10\ \varphi \text{ para } 1{,}41° < \varphi \le 2{,}52° \\
&D = 1 + 25 \log 10\ \varphi \text{ para } 2{,}52° < \varphi \le 19°
\end{aligned}
\qquad (2a)
$$

Nota. — Para determinação gráfica de *(D)* v. a figura 2.

2.4.2. *Zonas de serviço das estações espaciais do serviço de radiodifusão por satélite na Região 2*

Quando, para uma zona de serviço considerada, o ângulo de elevação φ escolhido para um sistema de radiodifusão por satélite, em serviço ou em projecto, for igual ou superior a 27°, admite-se que na fórmula (1) *(D)* = 38 dB.

Se φ for inferior a 27°, calcula-se *(D)* a partir das fórmulas (2b) e seguintes.

Nota. — Se forem especificados diversos valores de φ para uma dada zona de serviço, utiliza-se o valor apropriado a cada porção do limite da dita zona de serviço.

$$D = 0 \text{ para } 0 \leq \varphi \leq 0{,}45°$$
$$D = 3{,}7\ \varphi^2 \text{ para } 0{,}45 < \varphi \leq 1{,}27°$$
$$D = 3{,}9 + 20 \log_{10} \varphi \text{ para } 1{,}27° < \varphi \leq 2{,}27° \qquad (2b)$$
$$D = 2{,}1 + 25 \log_{10} \varphi \text{ para } 2{,}27° < \varphi \leq 27°$$

Nota. — Para a determinação gráfica de *(D)* v. a figura 2.

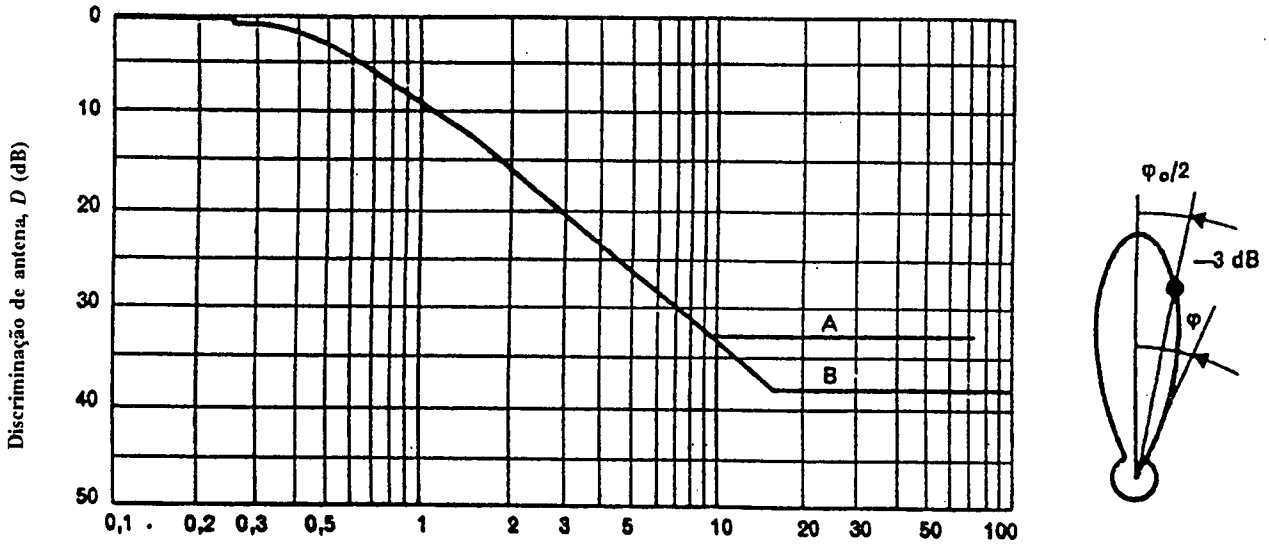

Fig. 2 — Discriminação de antena, *(D)* (dB), de um receptor de radiodifusão por satélite em função do ângulo de elevação do satélite

Para as zonas de serviço nas Regiões 1 e 3, $\varphi_o = 2°$; aplica-se a curva A.
Para as zonas de serviço na Região 2, $\varphi_o = 1{,}8°$; aplica-se a curva B.

2.5. Discriminação de polarização (P).

O valor de *P* é igual a:

a) 3 dB, quando o serviço de Terra interferente utilizar a polarização rectilínea e o serviço de radiodifusão por satélite a polarização circular, ou vice-versa;
b) 0 dB quando o serviço de Terra interferente e o serviço de radiodifusão por satélite utilizarem ambos a mesma polarização, circular ou rectilínea.

3. Densidade de fluxo de potência produzida por uma estação de Terra (F_p).

A densidade de fluxo de potência F_p [em dB(W/m²)] produzida por uma estação de Terra num ponto qualquer do limite da zona de serviço é determinada pela fórmula seguinte:

$$F_p = E - A + 43 \qquad (3)$$

na qual:

E — Potência isotrópica radiada equivalente (dBW) da estação de Terra na direcção do ponto considerado do limite da zona de serviço;
A — Atenuação de trajecto total (dB).

3.1. *Avaliação da atenuação de trajecto A no caso de uma estação de Terra situada a mais de 100 km do limite da zona de serviço de uma estação espacial de radiodifusão por satélite.*

Para trajectos de comprimento superior a 100 km, o valor de A é o seguinte:

$$A = 137{,}6 + 0{,}2324\ d_t + 0{,}0814\ d_m \qquad (4)$$

na qual d_t e d_m representam, respectivamente (em quilómetros), o comprimento do trajecto terrestre e o comprimento do trajecto marítimo.

3.2. *Avaliação da atenuação de trajecto A no caso de uma estação de Terra situada a uma distância igual ou inferior a 100 km do limite da zona de serviço de uma estação espacial de radiodifusão por satélite.*

Para trajectos de comprimento igual ou inferior a 100 km, calcula-se o valor de A empregando as fórmulas (4) e (5); o menor valor é introduzido na fórmula (3) para calcular a densidade de fluxo de potência produzida no ponto considerado do limite da zona de serviço:

$$A = 109{,}5 + 20 \log (d_t + d_m) \qquad (5)$$

A figura 3 dá o valor de A em função do comprimento total do trajecto e das percentagens de trajecto marítimo.

3.3. *Distância além da qual já não é necessária a aplicação do método.*

Deixa de ser necessário aplicar o método e é inútil a coordenação se a distância entre a estação de Terra e a zona de serviço da estação espacial de radiodifusão por satélite for superior a:

a) 400 km, no caso de trajectos inteiramente terrestres; ou
b) 1200 km, no caso de trajectos inteiramente marítimos ou de trajectos mistos.

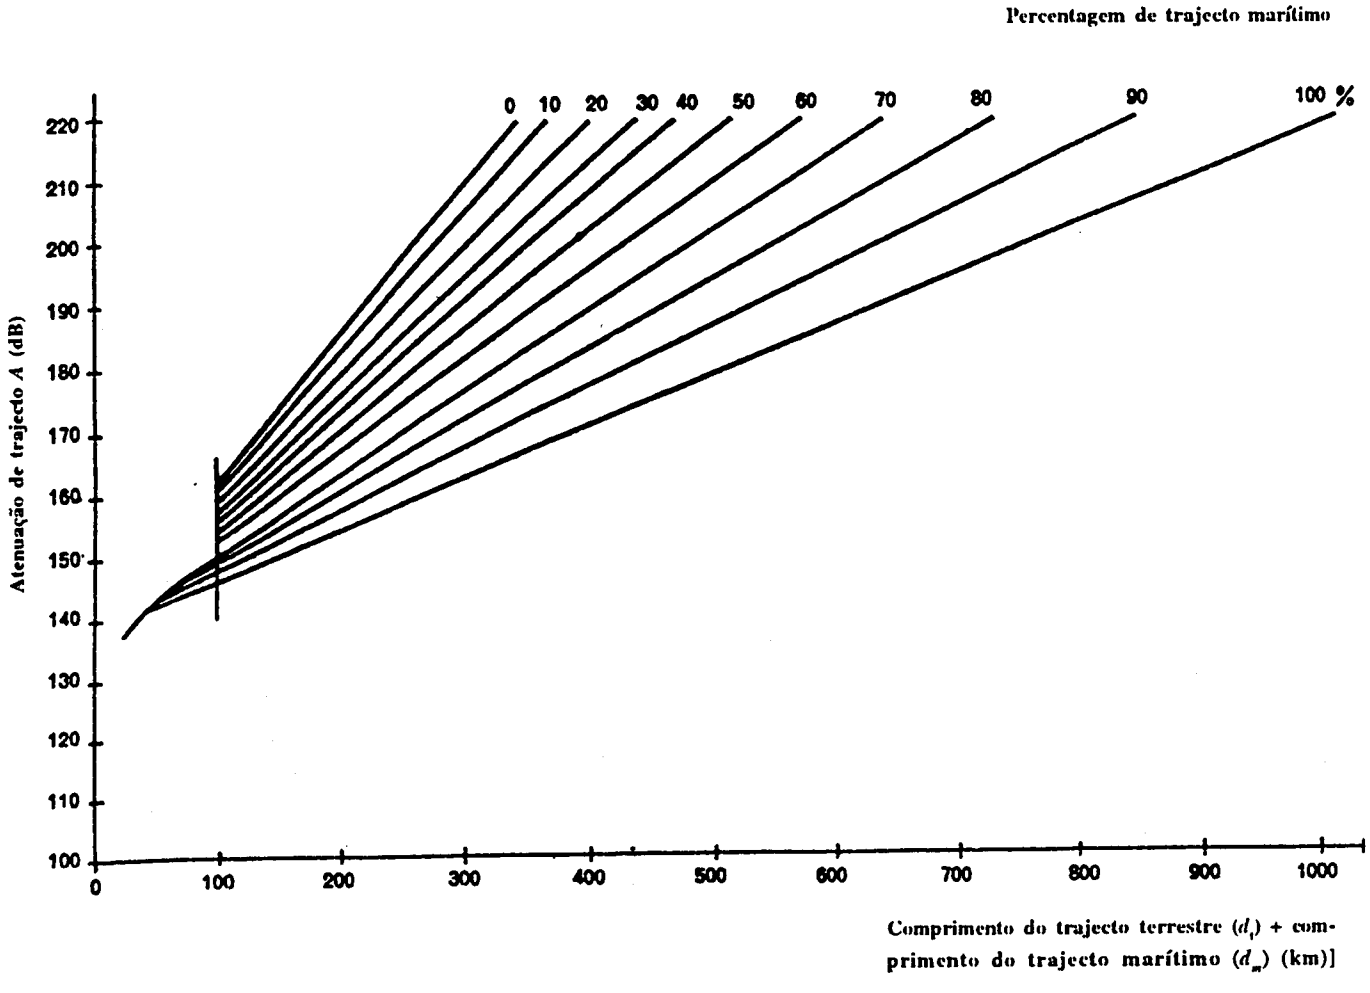

Fig. 3 — Atenuação total do trajecto, A (dB), em função do comprimento total do trajecto ($d_t + d_m$) e das percentagens de trajecto

ANEXO 4

Necessidade de coordenar, relativamente ao plano, uma estação espacial do serviço fixo por satélite ou uma estação espacial do serviço de radiodifusão por satélite da Região 2 (artigo 7)

Em relação com o § 7.2.1, a coordenação de uma estação espacial do serviço fixo por satélite ou do serviço de radiodifusão por satélite da Região 2 é necessária quando, na hipótese da programação em espaço livre, o valor de densidade de fluxo de potência produzida no território dependente de uma administração da Região 1 ou da Região 3 exceda o valor definido pelas seguintes expressões:

— 147 dB(W/m²/27 MHz) para $0 \leq \theta < 0{,}44°$;
— $138 + 25 \log \theta$ dB(W/m²/27 MHz) para $0{,}44 \leq \theta < 19{,}1°$;
— 106 dB(W/m²/27 MHz) para $19{,}1° \leq \theta$;

sendo θ a diferença, em graus, entre a longitude da estação espacial interferente do serviço de radiodifusão por satélite ou do serviço fixo por satélite na Região 2 e a longitude da estação espacial do serviço de radiodifusão por satélite desfavoravelmente influenciada nas Regiões 1 e 3.

ANEXO 5

Valores limites da densidade de fluxo de potência a aplicar para a protecção dos serviços de Terra nas Regiões 1 e 3 contra as interferências produzidas pelas estações espaciais do serviço de radiodifusão por satélite da Região 2, na faixa de 11,7-12,2 GHz (artigo 9)

Os valores limites da densidade de fluxo de potência são os seguintes:

1) Para todos os territórios das administrações das Regiões 1 e 3, para todos os ângulos de chegada:
   — 125 dB (W/m²/4 kHz) no caso das estações espaciais de radiodifusão por satélite que utilizam a polarização circular;
   — 128 dB(W/m²/4 kHz) no caso das estações espaciais de radiodifusão por satélite que utilizam a polarização rectilínea; e

2) Para os territórios das administrações da Região 3 e da parte ocidental da Região 1 situados a oeste da longitude 30° E.:
   — 132 dB(W/m²/5 MHz) no caso dos ângulos de chegada compreendidos entre 0° e 10° acima do horizonte;
   — $132 + 4{,}2(\gamma\text{-}10)$ dB (W/m²/5 MHz) no caso dos ângulos de chegada γ (em graus) compreendidos entre 10° e 15° acima do horizonte;
   — 111 dB (W/m²/5 MHz) no caso dos ângulos de chegada compreendidos entre 15° e 90° acima do horizonte.

ANEXO 6

Princípios de planificação na Região 2

Aplicaram-se os seguintes princípios ao serem elaboradas as disposições que regem a entrada em funcionamento dos serviços de radiocomunicação espacial na faixa de 11,7-12,2 GHz na Região 2:

1. *Igualdade de direitos entre os serviços a que é atribuída a faixa na Região 2.*

Nos termos do artigo 8 do Regulamento das Radiocomunicações, a faixa de 11,7-12,2 GHz é atribuída ao serviço de radiodifusão por satélite, ao serviço fixo por satélite e a serviços de radiocomunicação de Terra a título primário com igualdade de direitos. Cada administração da Região 2 tem o direito de ser ela a decidir sobre os serviços que porá em funcionamento no seu próprio território.

2. *Igualdade de direitos entre serviços de diferentes regiões.*

Em conformidade com as disposições do n.º **346** do Regulamento das Radiocomunicações, em todas as Regiões o funcionamento de serviços diferentes da mesma faixa de frequências baseia-se na igualdade de direitos, com a condição de não causarem qualquer interferência prejudicial aos serviços das outras regiões.

3. *Reconhecimento das necessidades nacionais.*

Todas as administrações da Região 2 terão em consideração as necessidades nacionais que foram apresentadas ou o serão no futuro.

4. *Direitos de acesso equitativos ao recurso órbita/espectro.*

Sob reserva das disposições da Convenção, do Regulamento das Radiocomunicações e das resoluções em vigor, reconhece-se que todas as administrações têm direito de acesso ao recurso órbita/espectro para prover às suas necessidades.

5. *Método de planificação flexível* (1).

O plano para a Região 2 a ser adoptado deverá ter bastante flexibilidade para permitir ter em conta: a evolução futura da técnica, a determinação das necessidades futuras, as modificações das necessidades actuais ou das necessidades formuladas, as necessidades das administrações não representadas na conferência (2), os novos dados relativos à propagação e os diversos métodos de concepção de sistemas. O plano só poderá ser modificado por uma conferência administrativa das radiocomunicações competente.

6. *Utilização eficaz da órbita dos satélites geostacionários e do espectro.*

O plano para a Região 2 aplicará, na medida em que isso seja técnica e economicamente possível, as técnicas mais recentes para utilizar com o máximo de eficácia a órbita dos satélites geostacionários e o espectro de frequências para satisfazer as necessidades globais das regiões, assim como as de cada administração.

7. *Consultas entre administrações.*

As administrações que projectem colocar sistemas em serviço na faixa de 11,7-12,2 GHz consultarão todas as outras administrações afectadas ou interessadas.

8. *Recepção.*

O plano para a Região 2 será estabelecido na base da recepção individual; todavia, cada administração poderá adoptar o sistema de recepção que melhor se ajuste às suas necessidades: recepção individual, recepção comunitária ou ambas.

ANEXO 7

Utilização do recurso órbita/espectro

Considerando que, na Região 2, a partilha dos recursos da órbita/espectro entre o serviço de radiodifusão por satélite e o serviço fixo por satélite na base de igualdade de direitos é difícil de efectuar e pode impor certas restrições aos dois serviços, importa escolher os parâmetros técnicos e aplicar as técnicas conducentes à utilização eficaz do recurso órbita/espectro de tal modo que os dois serviços espaciais daí tirem o melhor partido possível.

As técnicas abaixo indicadas fazem parte das que permitem a utilização mais eficaz do recurso órbita/espectro e devem, por isso, ser aplicadas com o máximo de eficácia na medida em que isso seja técnica e economicamente possível, tendo em conta a capacidade dos sistemas para responder às necessidades para que foram concedidos.

1. *Agrupamento.*

Análises muito rigorosas mostraram que a utilização da órbita melhora quando as estações espaciais são agrupadas segundo a vulnerabilidade à interferência do sistema a que pertencem e a interferência que esse sistema é susceptível de causar. Muitas vezes isso significa que estações espaciais de características semelhantes devem agrupar-se na mesma parte da órbita.

2. *Cruzamento de polarização.*

A utilização correcta do cruzamento de polarização pode melhorar notavelmente a utilização do recurso órbita/espectro, assegurando uma separação suplementar entre sistemas susceptíveis de se interferir.

3. *Geometria dos feixes cruzados.*

O princípio da geometria dos feixes cruzados é o seguinte: estações espaciais adjacentes não devem servir zonas de serviço adjacentes. Pode-se assim utilizar a discriminação das antenas de estação espacial e de estação terrena para chegar à separação máxima entre os sistemas.

4. *Zonas de serviço emparelhadas.*

Pode-se estender a este caso a aplicação do princípio da geometria das feixes cruzados. Com efeito, se as zonas de serviço estão bastante afastadas uma da outra, a discriminação da antena da estação espacial pode bastar, só por si, para que as estações espaciais que servem essas zonas ocupem a mesma posição na órbita, o que permite praticamente duplicar a capacidade da órbita.

5. *Entrelaçamento das frequências.*

Em sistemas diferentes, a interferência mútua entre os canais atinge geralmente o máximo quando as duas frequências portadoras coincidem. Quando a disposição dos canais for tal que as frequências estejam entrelaçadas, ou, mais geralmente, que se evite a coincidência das frequências portadoras, a interferência mútua pode frequentemente ser reduzida em proporções notáveis.

---

(1) O § 5 não implica o reconhecimento de sistemas explorados antes da entrada em vigor do plano.

(2) Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

6. *Espaçamento mínimo das estações espaciais.*

É evidente que, para se chegar à utilização máxima da órbita, convém colocar as estações espaciais o mais próximo possível umas das outras, na medida em que as interferências mútuas se possam manter em níveis aceitáveis.

7. *Discriminação da antena de estação espacial.*

A discriminação nos lóbulos laterais da antena de estação espacial determina o grau de separação existente entre os feixes que servem zonas de serviço que não se sobrepõem e que não são adjacentes. Para se chegar à separação máxima, tudo deve ser feito para melhorar a discriminação recorrente aos progressos da técnica de concepção e de construção de antenas.

8. *Discriminação da antena de estação terrena.*

A discriminação nos lóbulos laterais da antena de estação terrena determina o grau de separação obtido pelo espaçamento das estações espaciais. Para se chegar a uma separação máxima, tudo deve ser feito para melhorar a discriminação, tirando partido das técnicas modernas de concepção e de construção de antenas.

9. *Redução ao mínimo das diferenças de p. i. r. e.*

A interferência causada por estações espaciais de potência relativamente grande (satélites de radiodifusão ou certos tipos de satélites do serviço fixo) a estações terrenas de recepção é directamente proporcional à diferença entre as suas p. i. r. e. A partilha entre tais estações espaciais é grandemente facilitada quando essa diferença é mantida no valor mais fraco possível, tendo em conta as necessidades.

10. *Objectivos realistas de qualidade e de fiabilidade.*

Os objectivos de qualidade e de fiabilidade têm influência significativa sobre a utilização do recurso órbita/espectro. Objectivos inutilmente elevados provocam uma diminuição da capacidade da órbita e não devem, por isso, ser mais elevados que o absolutamente necessário.

ANEXO 8

Dados técnicos utilizados para o estabelecimento do plano e que devem ser utilizados para a aplicação do plano

1. *Definições.*

1.1. *Zona de serviço.*

Zona da superfície da Terra em que a administração responsável pelo serviço deve exigir que seja observada a protecção acordada.

Nota. — De acordo com a definição da zona de serviço, é óbvio que, no interior dessa zona, podem ser exigidas as condições de protecção acordadas. Na referida zona deverá haver, pelo menos, uma densidade de fluxo de potência apropriada e uma protecção contra interferências baseada numa relação de protecção acordada durante uma fracção de tempo igualmente acordada.

1.2. *Zona de cobertura.*

Zona delimitada na superfície da Terra por um contorno no qual, em todos os seus pontos, a densidade de fluxo de potência tem um valor constante acordado e, na interferência, permite obter a qualidade de recepção especificada.

Nota 1. — Em conformidade com as disposições do n.º **2674** do Regulamento das Radiocomunicações, a zona de cobertura deve ser a menor possível que englobe a zona de serviço.

Nota 2. — A zona de cobertura engloba normalmente a zona de serviço e resulta da intersecção do feixe (de secção elíptica ou circular) com a superfície da Terra. É definida por um dado valor da densidade de fluxo de potência. Por exemplo, no caso de um país da Região 1 ou da Região 3 cujo serviço esteja previsto para recepção individual, seria a zona limitada pelo contorno correspondente a uma densidade de fluxo de potência de — 103 dB (W/m²) durante 99 % do mês mais desfavorável. Em geral, existirá uma zona interior à zona de cobertura, mas exterior à zona de serviço, na qual a densidade de fluxo de potência será superior ao valor mínimo especificado, mas em que não será assegurada a protecção contra interferências.

1.3. *Área de um feixe.*

Zona delimitada pela intersecção do feixe, a meia potência, da antena de emissão do satélite com a superfície da Terra.

Nota. — A área do feixe não é senão a zona da superfície da Terra delimitada pelos pontos a — 3 dB do diagrama de radiação da antena de emissão do satélite. Em muitos casos, a área coincide quase com a zona de cobertura e, quando difere desta, isso explica-se pelas diferentes permanentes de comprimento dos trajectos entre o satélite e os diferentes pontos da área do feixe e também, se for caso disso, pelas variações igualmente permanentes dos factores de propagação relativos a essa zona. Todavia, no caso de uma zona de serviço cuja dimensão máxima é vista do satélite sob um ângulo inferior a 0,6° (valor admitido como sendo o mínimo realizável da abertura a meia potência do feixe), pode haver diferença importante entre a área do feixe e a zona de cobertura.

1.4. *Posição nominal na órbita.*

Longitude de uma posição na órbita dos satélites geostacionários associada a uma consignação de frequência a uma estação espacial de um serviço de radiocomunicação espacial. Esta posição é expressa em graus, a partir do meridiano de Greenwich.

2. *Factores de propagação radioeléctrica.*

2.1. A atenuação de propagação no trajecto espaço para Terra é igual à atenuação em espaço livre aumentada da atenuação suplementar excedida durante 1 %, no máximo, do mês mais desfavorável. Este último é indicado pela figura 1 para as cinco zonas hidrometeorológicas definidas na figura 2.

2.2. Quando se utilizam as curvas da figura 1, a diferença entre a atenuação em tempo claro e a atenuação durante 99 % do mês mais desfavorável deve limitar-se a 2 dB, no máximo, graças a uma escolha judiciosa do ângulo de elevação.

2.3. Na planificação do serviço de radiodifusão por satélite, para as emissões de polarização circular, deve-se utilizar a relação seguinte entre o nível da componente despolarizada e o da componente copolar:

Para as zonas hidrometeorológicas 1 e 2: — 27 dB;
Para as zonas hidrometeorológicas 3, 4 e 5: — 30 dB.

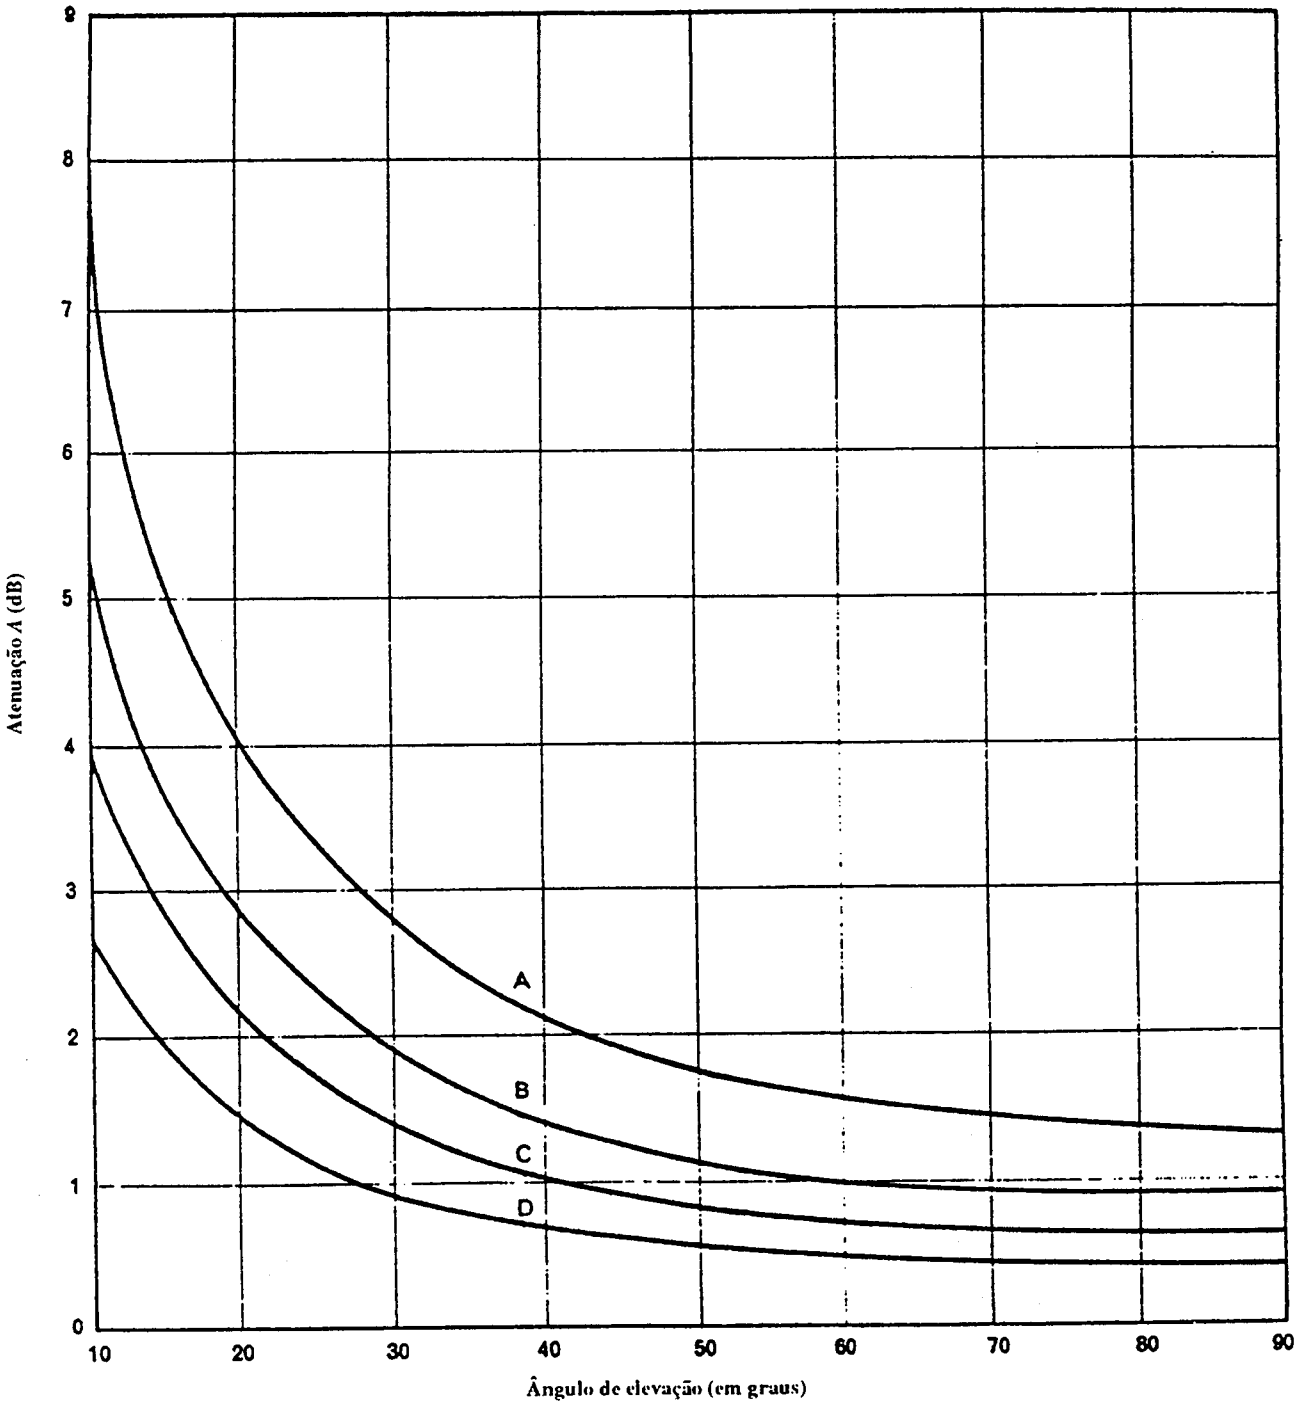

Fig. 1 — Valores previstos de atenuação suplementar excedida durante 1 %, no máximo, do mês mais desfavorável (0,25 % do tempo) em 12 GHz nas zonas hidrometeorológicas mencionadas na figura 2

A — Zona hidrometeorológica 1
B — Zona hidrometeorológica 2
C — Zonas hidrometeorológicas 3 e 4
D — Zona hidrometeorológica 5

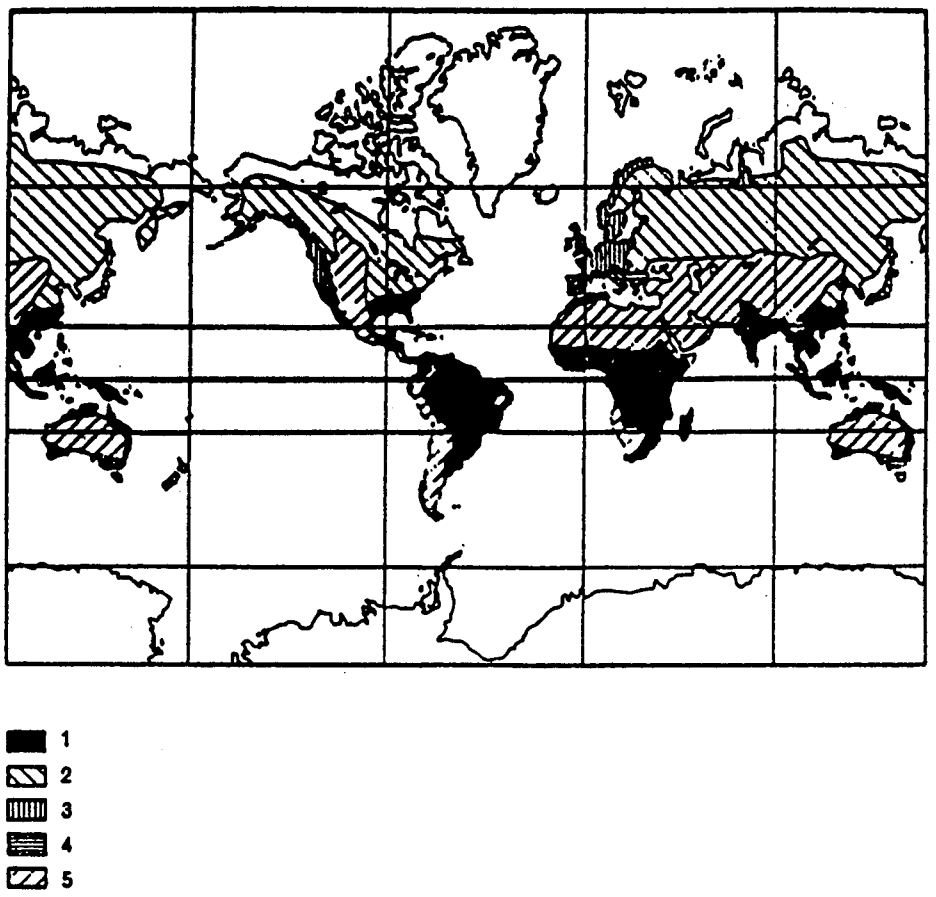

Fig. 2 — Zonas hidrometeorológicas

É de notar que não se fizeram muitas medidas de atenuação devido às precipitações nos países tropicais, particularmente na região africana.

3. *Características técnicas fundamentais.*

3.1. *Tipo de modulação.*

A planificação do serviço de radiodifusão por satélite baseia-se na utilização de um sinal composto por um sinal vídeo associado a uma via de som modulada em frequência; o conjunto modula em frequência uma portadora na faixa dos 12 GHz. A característica de pré-acentuação está de acordo com a figura 3, a qual provém do parecer n.º 405 da CCIR.

Isso não interdiz a utilização de sinais modulantes de características diferentes (por exemplo, uma modulação constituída por vias de som multiplexadas em frequência na faixa do canal de televisão, a modulação digital de sinais sonoros e de televisão ou ainda a utilização de características diferentes de pré-acentuação), com a condição de que a utilização dessas outras características não cause interferência mais importante que a causada pelo sistema considerado no plano.

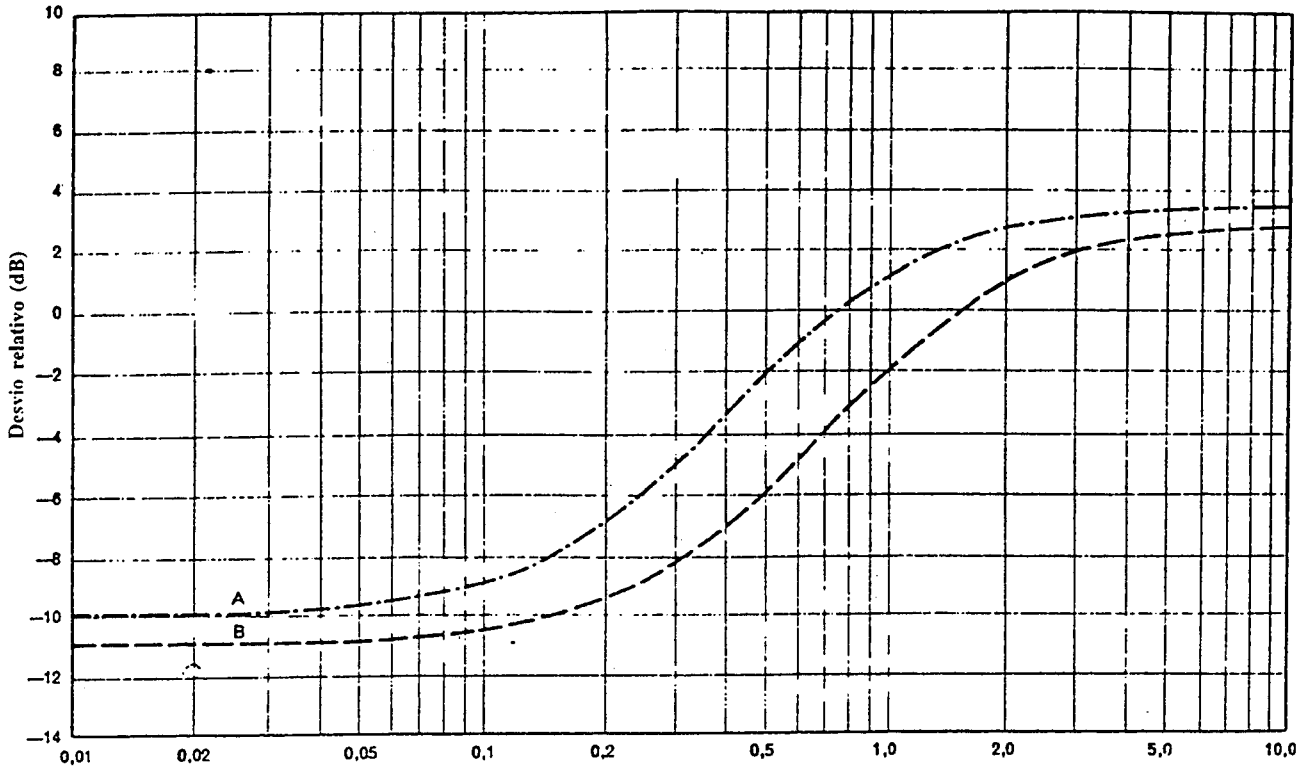

Fig. 3 — Características de pré-acentuação para os sistemas de televisão de 525 e 625 linhas

Curva A — Sistema de 525 linhas
Curva B — Sistema de 625 linhas

3.2. *Polarização.*

3.2.1. Para a planificação do serviço de radiodifusão por satélite, deve utilizar-se a polarização circular nas Regiões 1, 2 e 3 (1).

3.2.2. A polarização das emissões correspondente a feixes diferentes, concebidos de propósito para servir a mesma zona, deveria, se possível, ser a mesma.

3.2.3. Os termos «directo» e «indirecto», utilizados no plano para indicar o sentido de rotação das ondas polarizadas circularmente, correspondem a uma polarização dextrogira (no sentido do movimento dos ponteiros do relógio) ou levogira (no sentido inverso do movimento dos ponteiros do relógio), de acordo com as definições seguintes:

Sentido directo ou dextrogiro (sentido do movimento dos ponteiros do relógio):

Onda (electromagnética) polarizada elíptica ou circularmente, cujo vector campo eléctrico gira, *em função do tempo*, no sentido dextrorso, isto é, no sentido do movimento dos ponteiros do relógio. O movimento do vector campo eléctrico será verificado, num *plano fixo* qualquer normal à direcção de propagação, por um observador que olhe no sentido em que a onda se propaga.

Nota. — No caso de ondas planas polarizadas circularmente no sentido dextrorso, as extremidades dos vectores ligados aos diferentes pontos de uma recta qualquer normal aos planos que constituem as superfícies de ondas formam, num instante qualquer, uma hélice de *sentido sinistrorso.*

Sentido indirecto ou levogiro (sentido inverso do movimento dos ponteiros do relógio):

Onda (electromagnética) polarizada elíptica ou circularmente, cujo vector campo eléctrico gira, *em função do tempo*, no *sentido sinistrorso*, isto é, no sentido contrário ao do movimento dos

(1) A administração dos Estados Unidos da América expressou a sua preocupação quanto à adopção da polarização circular para a Região 2 e indicou que a adopção muito provável da polarização rectilínea pelo serviço fixo por satélite impedirá o emprego do cruzamento de polarização para facilitar a partilha entre os dois serviços e terá repercussões na utilização da órbita e do espectro na Região.

A administração do Irão formulou reservas quanto á adopção da polarização circular para a planificação do serviço de radiodifusão por satélite na Região 3. Precisou que tencionava adoptar a polarização rectilínea.

ponteiros do relógio. O movimento do vector campo eléctrico será verificado, num *plano fixo* qualquer normal à direcção de propagação, por um observador que olhe no sentido em que a onda se propaga.

Nota. — No caso de ondas planas polarizadas circularmente no sentido sinistrorso, as extremidades dos vectores ligados aos diferentes pontos de uma recta qualquer normal aos planos que constituem as superfícies de ondas formam, num instante qualquer, uma hélice de *sentido dextrorso.*

3.3. *Relação portadora/ruído.*

Para a planificação do serviço de radiodifusão por satélite, a relação portadora/ruído é igual a 14 dB durante 99 % do mês mais desfavorável.

Considera-se que a diminuição da qualidade no trajecto descendente devida ao ruído térmico no trajecto ascendente equivale a uma degradação da relação portadora/ruído que não excede 0,5 dB durante 99 % do mês mais desfavorável.

3.4. *Relação de protecção entre dois sinais de televisão modulados em frequência.*

Para a planificação nas Regiões 1 e 3 adoptaram-se os valores seguintes da relação de protecção para cálculo das margens de protecção equivalentes (1):

— 31 dB entre emissões de um mesmo canal;
— 15 dB entre emissões de canais adjacentes.

3.5. *Espaçamento entre canais.*

3.5.1. *Espaçamento entre canais do plano.*

O espaçamento entre as frequências consignadas de dois canais adjacentes é de 19,18 MHz. O plano contém a indicação da frequência consignada a cada canal.

3.5.2. *Agrupamento dos canais de um mesmo feixe.*

A planificação na Região 1 foi efectuada procurando agrupar todos os canais de um mesmo feixe de antena numa faixa de frequências de 400 MHz, a fim de facilitar a construção dos receptores.

3.5.3. *Espaçamento das frequências consignadas de canais utilizados com uma mesma antena.*

Devido a dificuldades técnicas no circuito de saída do emissor de um satélite, o espaçamento entre as frequências consignadas de dois canais utilizados com uma mesma antena deve ser superior a 40 MHz.

3.6. *Factor de qualidade (G/T) de uma instalação de recepção de serviço de radiodifusão por satélite.*

Para a planificação do serviço de radiodifusão por satélite utiliza-se um valor do factor de qualidade (G/T) de:

6 dB/K para a recepção individual;
14 dB/K para a recepção comunitária.

Estes valores são calculados empregando a fórmula seguinte, que inclui os erros de direcção, os efeitos de polarização e o envelhecimento dos equipamentos:

$$G/T = \frac{\alpha \beta G_r}{\alpha T_a + (1 - \alpha) T_o + (n - 1) T_o}$$

(1) A margem de protecção equivalente, M, é dada em decibéis, pela fórmula:

$$M = -10 \log [10^{-M_1/10} + 10^{-M_2/10} + 10^{-M_3/10}]$$

em que M_1 é o valor, em decibéis, da margem de protecção para o mesmo local. Esta é definida pela expressão seguinte, em que as potências são avaliadas à entrada do receptor (em decibéis):

$$\frac{\text{Potência útil}}{\text{Soma das potências de interferência no mesmo canal}} - (dB) \text{ de protecção no mesmo canal}$$

M_2 e M_3 são os valores, em decibéis, das margens de protecção para o canal adjacente inferior e para o canal adjacente superior.

A definição da margem de protecção no canal adjacente é similar à do mesmo canal, embora se faça intervir de um lado a relação de protecção no canal adjacente e do outro a soma das interferências devidas às emissões no canal adjacente.

na qual se define:

α — total das perdas de acoplamento, expresso em relação de potência;
β — total das perdas devidas ao erro de direcção, aos efeitos de polarização e a ao envelhecimento, expresso em relação de potência;
G_r — ganho efectivo da antena de recepção, expresso em relação de potência e tendo em conta o tipo de iluminação e o rendimento;
T_a — temperatura efectiva de antena;
T_o — temperatura de referência = 290 K;
n — factor de ruído global do receptor, expresso em relação de potência.

V., também, relatório n.º 473-1 (anexo 1) da CCIA.

3.7. *Antenas de recepção.*

3.7.1. *Diâmetro mínimo das antenas de recepção.*

Para planificação do serviço de radiodifusão por satélite do serviço de radiodifusão por satélite, considera-se que o diâmetro mínimo das antenas de recepção deve ser tal que a abertura do feixe a meia potência (φ_0) é:

a) Para a recepção individual: de 2° nas Regiões 1 e 3 e de 1,8° na Região 2;
b) Para a recepção comunitária: de 1° em todas as regiões.

3.7.2. *Diagramas de referência das antenas de recepção.*

Os diagramas de referência copolar e contrapolar das antenas de recepção são dados nas figuras 4 e 5.

a) O ganho relativo da antena, expresso em decibéis, é dado pelas curvas da figura 4 no caso:

Da recepção individual nas Regiões 1 e 3, para a qual convém utilizar:

Para a componente copolar, a curva A;
Para a componente contrapolar, a curva B.

Da recepção comunitária, para a qual convém utilizar:

Em todas as regiões para a componente copolar, a curva A', até à intersecção com a curva C, e depois a curva C;
Nas regiões 1 e 3, para a componente contrapolar, a curva B.

b) Para a Região 2, o ganho relativo da antena, expresso em decibéis, é dado pelas curvas da figura 5 no caso:

Da recepção individual, para a qual convém utilizar:

Para a componente copolar, a curva A;
Para a componente contrapolar, a curva B.

Da recepção comunitária, para a qual convém utilizar, para a componente, a curva B (sendo a componente copolar dada na figura 4).

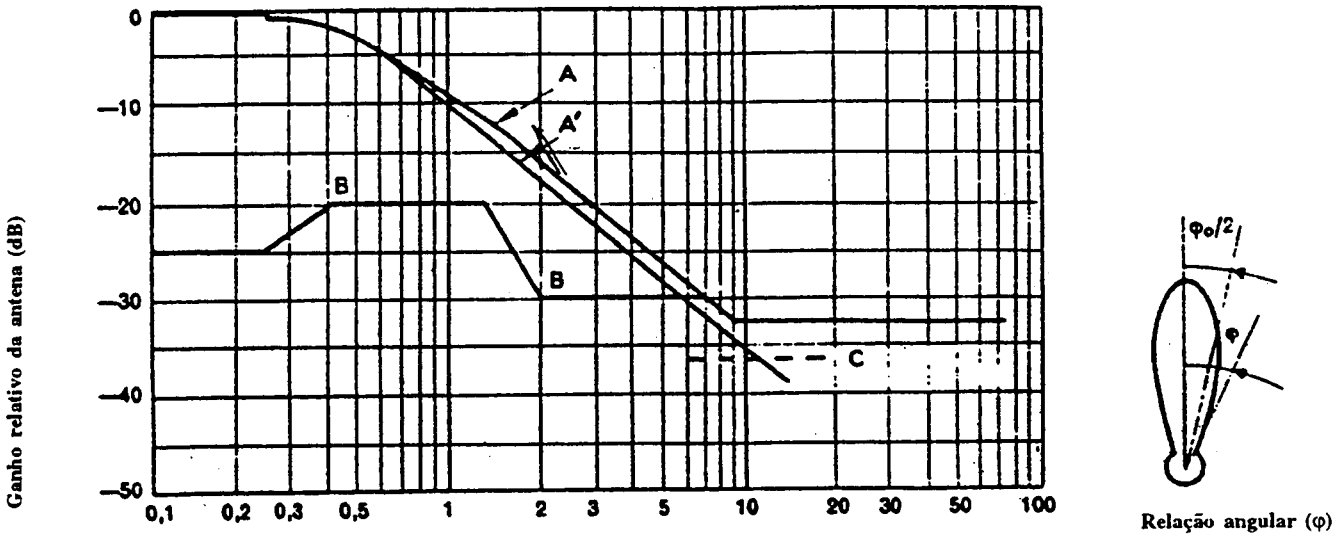

Fig. 4 — Diagramas de referência copolar e contrapolar da antena de recepção

Curva A — Componente copolar para a recepção individual sem supressão de lóbulos laterais:

0 para $0 \leq \varphi \supseteq \leq 0{,}25\ \varphi_0$;

$-\ 12 \left(\frac{\varphi}{\varphi_o}\right)^2$ para $0{,}25\ \varphi_0 < \varphi \leq 0{,}707\ \varphi_0$;

$-\ \left[9{,}0 + 20 \log_{10} \left(\frac{\varphi}{\varphi_o}\right)\right]$ para $0{,}707\ \varphi_0 < \varphi \leq 1{,}26\ \varphi_0$;

$-\ \left[8{,}5 + 25 \log_{10} \left(\frac{\varphi}{\varphi_o}\right)\right]$ para $1{,}26\ \varphi_0 < \varphi \leq 9{,}55\ \varphi_0$;

— 33 para $9{,}55\ \varphi_0 < \varphi$.

Curva A' — Componente copolar para a recepção comunitária sem supressão de lóbulos laterais:

0 para $0 \leq \varphi \leq 0{,}25\ \varphi_o$:

$-\ 12 \left(\frac{\varphi}{\varphi_o}\right)^2$ para $0{,}25\ \varphi_o < \varphi \leq 0{,}86\ \varphi_o$;

$-\ \left[\ 10{,}5 + 25 \log_{10} \left(\frac{\varphi}{\varphi_o}\right)\right]$ para $0{,}86 < \varphi_o < \varphi$, até à intersecção com a curva C (a seguir tomar a curca C).

Curva B — Componente copolar para os dois tipos de recepção:

— 25 para $0 \leq \varphi \leq 0{,}25\ \varphi_o$;

$-\ \left(30 + 40 \log_{10} \left|\frac{\varphi}{\varphi_o} - 1\right|\right)$ para $0{,}25\ \varphi_o < \varphi \leq 0{,}44\ \varphi_o$;

— 20 para $0{,}44\ \varphi_o < \varphi \leq 1{,}4\ \varphi_o$;

$-\ \left(30 + 25 \log_{10} \left|\frac{\varphi}{\varphi_o} - 1\right|\right)$ para $1{,}4\ \varphi_o < \varphi \leq 2\ \varphi_o$;

— 30 até à intersecção com a curva da componente copolar (em seguida tomar a curva de componente copolar).

Curva C — Oposto algébrico do ganho no eixo do feixe principal.

Nota. — Os valores de φ_o estão indicados no § 3.7.1.

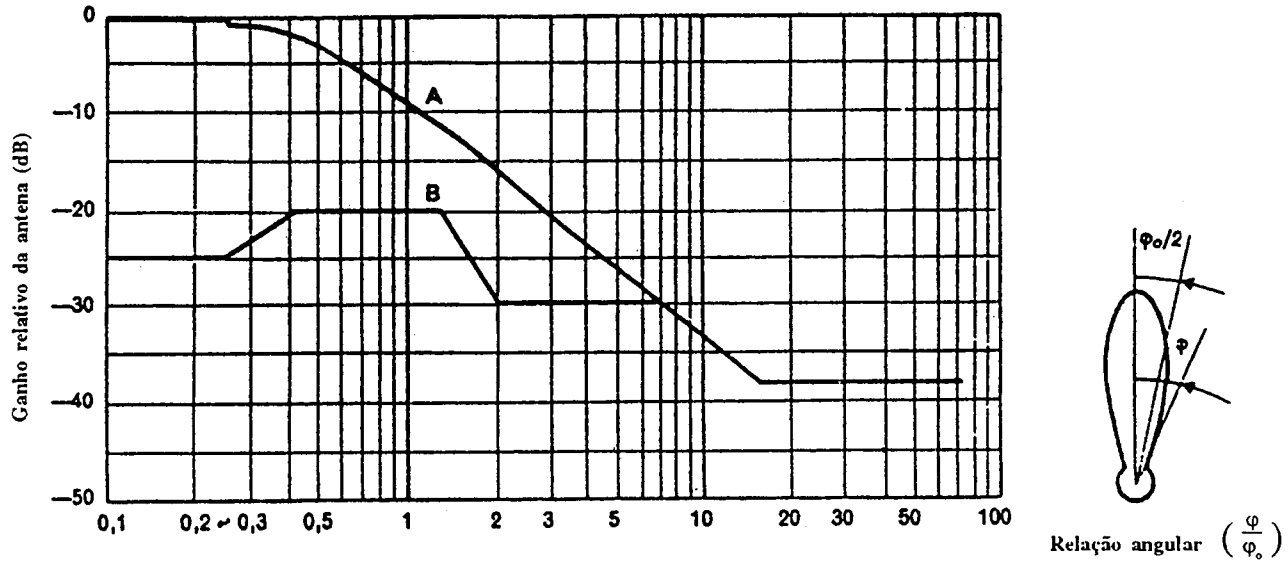

Fig. 5 — Diagramas de referência copolar e contrapolar da antena para recepção individual na Região 2

Curva A— Componente copolar sem supressão de lóbulos laterais:

0 para $0 \leq \varphi \leq 0{,}25\ \varphi_o$;

$-\ 12 \left(\frac{\varphi}{\varphi_o}\right)^2$ para $0{,}25\ \varphi_o < \varphi \leq 0{,}707\ \varphi_o$;

$-\ \left[\ 9{,}0 + 20 \log_{10} \left(\frac{\varphi}{\varphi_o}\right)\right]$ para $0{,}707\ \varphi_o < \varphi \leq 1{,}26\ \varphi_o$;

$-\ \left[\ 8{,}5 + 25 \log_{10} \left(\frac{\varphi}{\varphi_o}\right)\right]$ para $1.26\ \varphi_o < \varphi \leq 15{,}14\ \varphi_o$;

— 38 dB para $\varphi > 15{,}14\ \varphi_o$.

Curva B — Componente contrapolar:

— 25 para $0 \leq \varphi \leq 0{,}25\ \varphi_o$;

$-\ \left(30 + 40 \log_{10} \left|\frac{\varphi}{\varphi_o} - 1\right|\right)$ para $0{,}25\ \varphi_o < \varphi \leq 0{,}44\ \varphi_o$;

— 20 para $0{,}44\ \varphi_o < \varphi \leq 1{,}4\ \varphi_o$;

$-\ \left(30 + 25 \log_{10} \left|\frac{\varphi}{\varphi_o} - 1\right|\right)$ para $1{,}4\ \varphi_o < \varphi \leq 2\ \varphi_o$;

— 30 até à intersecção com a curva da componente copolar (em seguida tomar a curva da componente copolar).

Nota. — Os valores de φ_o estão indicados no § 3.7.1.

3.8. *Largura de faixa necessária.*

As larguras de faixa necessárias a tomar em consideração são:

Para os sistemas de 625 linhas: 27 MHz;
Para os sistemas de 525 linhas na Região 3: 27 MHz;
Para o sistema M de 525 linhas da Região 2: 18 MHz e 23 MHz.

3.9. *Faixas de guarda.*

3.9.1. Entende-se por faixa de guarda a porção do espectro radioélectrico compreendida entre o limite da faixa atribuída e o limite da faixa necessária à emissão no canal mais próximo.

3.9.2. Para a planificação do serviço de radiodifusão por satélite, as faixas de guarda necessárias para proteger os serviços assegurados nas faixas adjacentes estão indicadas no quadro seguinte:

Regiões	Faixa de guarda no limite inferior da faixa (11,7 GHz)	Faixa de guarda no limite superior da faixa (12,2–12,5 GHz)
1	14 MHz	11 MHz
2	12 MHz	9 MHz
3	14 MHz	11 MHz

Estas faixas de guarda foram calculadas na base de um valor de 67 dBW no caso das Regiões 1 e 3 e de um valor de 63 dBW no caso da Região 2, para p. i. r. e. máxima no centro do feixe e para uma atenuação de filtro de 2 dB/MHz. Estes valores referem-se à recepção individual. Se se admitirem valores mais baixos das p. i. r. e., as faixas de guarda poderão ser reduzidas 0,5 MHz por decibel de diminuição dessas p. i. r. e.

3.9.3. É provável que os progressos da técnica ou a adopção de p. i. r. e. menores que as p. i. r. e. indicadas acima venham a permitir a redução das faixas de guarda necessárias. Recomenda-se por isso que, para qualquer outro fim diferente da planificação pela Conferência (1), se observem os mais recentes pareceres da CCIR relativos às radiações não essenciais dos satélites de radiodifusão.

3.10. *Espaçamento na órbita.*

O plano para as Regiões 1 e 3 foi estabelecido espaçando, como regra geral, de 6° as posições nominais na órbita.

3.11. *Manutenção da posição do satélite.*

As estações espaciais do serviço de radiodifusão por satélite devem ser mantidas em posição com uma precisão melhor que ± 0,1°, tanto na direcção norte-sul como na este-oeste. (Estas tolerâncias conduzem a um afastamento máximo de ± 0,14° do satélite em relação à sua posição nominal.)

3.12. *Ângulo de elevação das antenas de recepção.*

O plano foi estabelecido considerando um ângulo de elevação de, pelo menos, 20° para reduzir o mais possível a p. i. r. e. do satélite, prevenir os efeitos de cortina e diminuir as possibilidades de interferências devidas aos serviços de Terra.

Todavia, nas zonas situadas a latitudes superiores a cerca de 60°, o ângulo de elevação é necessariamente inferior a 20° (v., também, o § 2.2.).

Nas zonas montanhosas em que possa ser insuficiente um ângulo de elevação de 20° considerou-se tanto quanto possível um ângulo de elevação mínimo de 30° para assegurar um serviço de qualidade aceitável. Considerou-se um ângulo de elevação de, pelo menos, 40° para zonas de serviço onde se produzem fortes precipitações (por exemplo, a zona hidrometeorológica 1).

Em certas zonas secas e não montanhosas poderá obter-se um serviço de qualidade aceitável com ângulos de elevação inferiores a 20°.

Nas zonas de ângulos de elevação baixos pode ser necessário ter em conta o efeito de cortina devido a edifícios muito elevados.

Ao escolher-se uma posição de satélite tal que o ângulo de elevação seja máximo no solo, considerou-se o período de eclipse correspondente a essa posição.

---

(1) Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977).

3.13. *Antenas de emissão.*

3.13.1. *Secção do feixe da antena de emissão.*

A planificação foi baseada na utilização de antenas de emissão de feixe de secção elíptica ou circular.

Se a secção recta do feixe emitido for elíptica, a abertura φ_0 a considerar é função do ângulo de rotação (q) entre o plano que passa pelo satélite e contém o eixo menor da secção recta do feixe e o plano em que é considerada a abertura da antena.

Pode calcular-se a relação existente entre o ganho máximo de uma antena e a abertura a meia potência a partir da expressão:

$$G_m = 27843/ab$$

ou

$$G_m(\text{dB}) = 44{,}44 - 10\log_{10a} - 10\log_{10b}$$

na qual a e b são respectivamente os ângulos (em graus) segundo os quais são vistos do satélite o eixo maior e o eixo menor do traço elíptico da secção recta do feixe.

Admite-se que o rendimento da antena é de 55 %.

3.13.2. *Abertura mínima da antena de emissão.*

Para a planificação que o valor mínimo actualmente realizável da abertura a meia potência é de 0,6°.

3.13.3 *Diagramas de referência da antena de emissão.*

Os diagramas de referência copolar e contrapolar das antenas de emissão das estações espaciais utilizadas para o estabelecimento do plano são reproduzidos na figura 6.

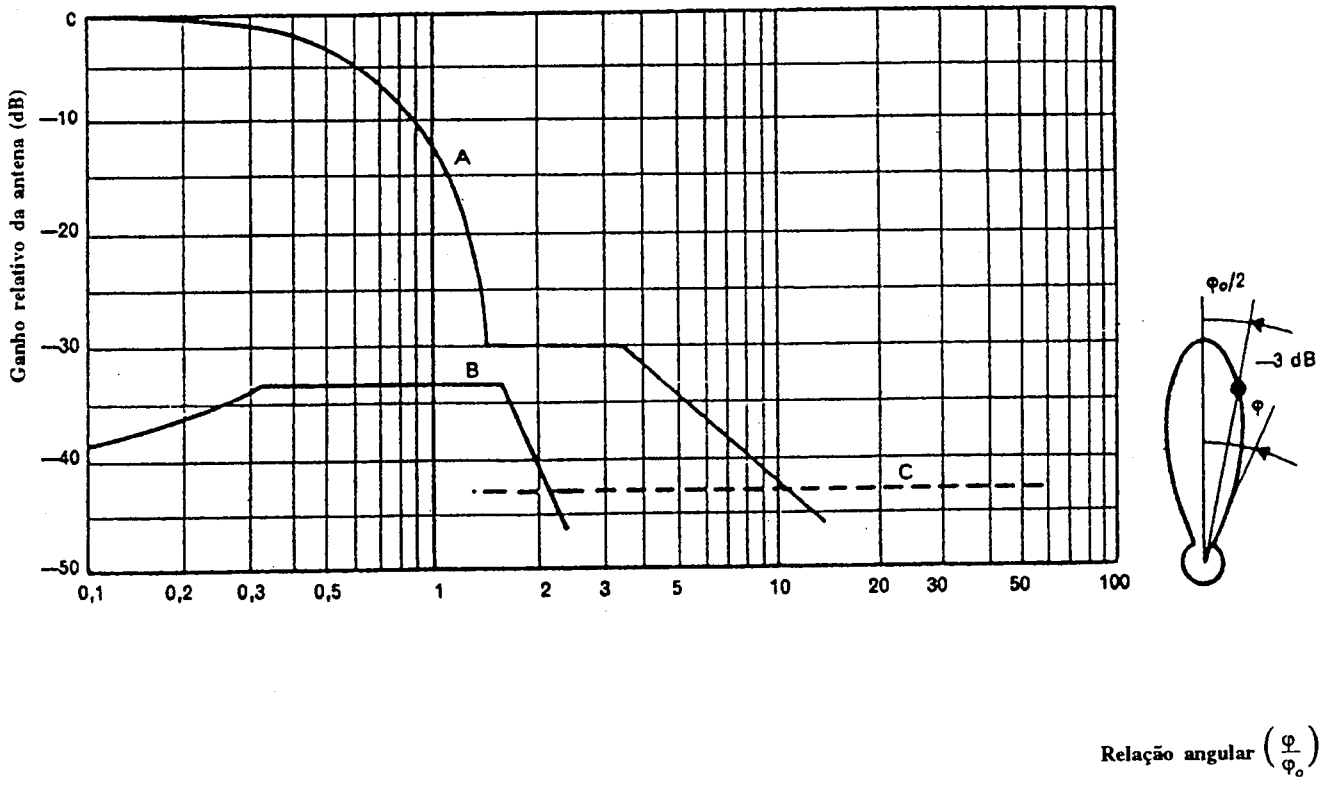

Fig. 6 — Diagramas de referência copolar e contrapolar da antena de emissão do satélite

Curva A — Componente copolar:

— $12\left(\frac{\varphi}{\varphi_o}\right)^2$ para $0\ \varphi_o \leq \varphi \leq 1{,}58\ \varphi_o$;

— 30 para $1{,}58\ \varphi_o < \varphi \leq 3{,}16\ \varphi_o$;

— $\left[17{,}5 + 25\ \log_{10}\left(\frac{\varphi}{\varphi_o}\right)\right]$ para $3{,}16\ \varphi_o < \varphi$, a seguir à intersecção com a curva C: como a curva C.

Curva B — Componente contrapolar:

— $\left(40 + 40\ \log_{10}\left|\frac{\varphi}{\varphi_o} - 1\right|\right)$ para $0 \leq \varphi \leq 0{,}33\ \varphi_o$;

— 33 para $0{,}33\ \varphi_o < \varphi \leq 1{,}67\ \varphi_o$;

— $\left(40 + 40\ \log_{10}\left|\frac{\varphi}{\varphi_o} - 1\right|\right)$ para $1{,}67\ \varphi_o < \varphi$, a seguir à intersecção com a curva C: como a curva C.

Curva C — Oposto algébrico do ganho no eixo do feixe principal.

3.14. *Precisão de orientação das antenas de satélite.*

3.14.1. O afastamento do feixe da antena relativamente à sua direcção de orientação nominal não deve exceder o valor de 0,1° em todas as direcções. Por outro lado, a rotação angular de um feixe de emissão em torno do seu eixo não deve exceder o valor de ± 2°. Não é necessário indicar este limite no caso dos feixes de secção circular que utilizam a polarização circular.

3.14.2. A zona coberta à superfície da Terra pelo feixe do satélite sofre outras deslocações devidas aos seguintes factores:

Imperfeição da manutenção em posição do satélite;
Efeito mais pronunciado das variações devidas às tolerâncias de orientações mencionadas acima nas zonas de coberturas associadas a baixos ângulos de elevação;
Aumento da importância do erro de desvio do eixo à medida que a elipse do feixe se torna mais alongada.

3.14.3. Convém avaliar caso por caso o efeito dessas variações eventuais, porque a sua influência global na zona coberta depende da modificação da geometria do feixe do satélite e não seria razoável especificar para todas as situações um valor único da deslocação da zona coberta.

3.14.4. No caso de uma emissão em polarização rectilínea, o erro de desvio do eixo contribui significativamente para intensificar a componente emitida em polarização cruzada, o que provoca o aumento da interferência com as outras portadoras inicialmente em polarização cruzada com essa emissão.

3.15. *Limitação da potência de saída do emissor do satélite.*

A potência de saída de um emissor de uma estação espacial do serviço de radiodifusão por satélite não deve exceder o seu valor nominal em mais de 0,25 dB durante toda a duração de utilização do satélite.

3.16. *Densidade de fluxo de potência no limite da zona de cobertura.*

O valor da densidade de fluxo de potência no limite da zona de cobertura durante 99 % do mês mais desfavorável é de:

103 dB(W/m²) para a recepção individual nas Regiões 1 e 3;
105 dB(W/m²) para a recepção individual na Região 2;
111 dB(W/m²) para a recepção comunitária em todas as Regiões.

3.17. *Diferença entre a p. i. r. e. dirigida para o limite da zona de cobertura e a p. i. r. e. no eixo do feixe.*

Para a planificação, considera-se que o valor absoluto da diferença entre a p. i. r. e. dirigida para o limite da zona de cobertura e a p. i. r. e. no eixo do feixe deve, de preferência, ser de 3 dB.

Se a área do feixe for superior à zona de cobertura, esse valor passa a ser inferior a 3 dB.

3.18. *Utilização da dispersão da energia.*

Para a planificação, adopta-se um valor da dispersão de energia que reduz em 22 dB a densidade espectral de densidade de fluxo de potência medida numa faixa de 4 kHz em relação a essa densidade medida em toda a faixa. Esta redução corresponde a um desvio ponta a ponta de 600 kHz.

ANEXO 9

Critérios de partilha entre serviços

1. *Características de protecção para a partilha entre serviços que utilizam a faixa de 12 GHz.*

1.1. A determinação dos critérios de partilha entre os diferentes serviços que utilizam a faixa de 12 GHz deve basear-se nas características de protecção especificadas no quadro seguinte:

Serviço útil (1)	Sinal útil (1)	Serviço interferente (1)	Sinal interferente (1)	Características de protecção (2)	
				Valor aceitável da interferência por diversos níveis (3)	Valor para uma contribuição única de interferência
SRS	TV/MF	SRS, SFS, SF e SR	TV/MF	*C/I* = 30 dB (4) (7)	*C/I* = 35 dB (4)
SFS	MRF/MF	SRS	TV/MF	*N* = 500 pWOp (8)	*N* = 300 pWOp
SFS	TV/MF	SRS e SFS	TV/MF	*C/I* = 32 dB (5)	*C/I* = 37 dB (5)
SFS	4φ-MDP	SRS e SFS	TV/MF	*C/I* = 30 dB	*C/I* = 35 dB
SFS	MRF/MF	SFS	MRF/MF	*N* = 1000 pWOp	*N* = 400 pWOp
SF	MRF/MF	SFS	TV/MF	*N* = 1000 pWOp	— 125 dB (W/m²/4 kHz) (6)
SR	TV/BLR	SFS	TV/MF	*C/I* = dB	Sem objecto

(1) SRS = Serviço de radiodifusão por satélite; SFS = Serviço fixo por satélite; SR = Serviço de radiodifusão; SF = Serviço fixo; TV = Televisão; MF = Modulação de frequência; MRF = Multiplexagem por repartição em frequência; 4φ-MDP = Modulação por variação de fase em quatro estados, e BLR = Faixa lateral residual.

(2) Estes limites abrangem simultaneamente a contribuição do trajecto ascendente e a do trajecto descendente. São expressos, consoante o caso:

Em decibéis quando se trata da relação portadora interferência;
Em pWOp quando se trata de ruído;
Em dB (W/m²/4 kHz) quando se trata da densidade de fluxo de potência numa faixa de 4 kHz.

(3) Os valores expressos em decibéis são os das relações de protecção para o conjunto dos sinais interferentes. Os valores expressos em pWOp são os do ruído observado na via telefónica mais desfavorecida e resultante do conjunto dos sinais interferentes.

(4) Para os satélites de radiodifusão situados nos limites da Região 2 com a Região 1 ou a Região 3, as relações *C/I* devem ser aumentadas de 1 dB.

(5) V. o parecer n.º 483 da CCIR.

(6) Este valor pode ser convenientemente modificado no caso das regiões tropicais, para ter em conta a atenuação devida às precipitações. Pode, igualmente, atender-se à discriminação de polarização.

(7) *C/I* = Relação entre a potência do sinal útil e a potência do sinal interferente.

(8) *N* = Potência de ruído.

1.2. Os valores indicados como aceitáveis são os valores necessários para proteger o sinal útil. Os valores indicados para uma contribuição única de interferência são os que convém utilizar como guia para fixar os critérios de partilha. É necessário calcular a interferência total devida a todas as fontes interferentes. Com efeito, respeitando para cada fonte os critérios aplicáveis a uma contribuição única de interferência, como se garante forçosamente que a interferência total corresponda às características de protecção indicadas acima. Uma contribuição única de interferência define-se como sendo o conjunto das emissões de uma estação que entram no receptor do serviço útil no canal a proteger.

1.3. A relação portadora/interferência *(C/I)* é a relação entre a potência do sinal útil e a potência do sinal interferente, à entrada do receptor que, no solo, sofre a interferência. Para o serviço fixo por satélite, o valor indicado deve ser sempre excedido, excepto em 20 % do mês mais desfavorável; para o serviço de radiodifusão e o serviço de radiodifusão por satélite, a percentagem correspondente é de 1 %.

1.4. O símbolo *N* designa a potência de ruído após a desmodulação num ponto de nível relativo 0 dBm0 do tom de medida numa qualquer via telefónica de um sistema telefónico MRF/MF. O valor indicado não deve ser excedido durante mais de 20 % do mês mais desfavorável.

1.5. Os valores especificados para a relação de protecção (quer dizer, a relação de potência portadora/interferência que corresponde a uma dada qualidade de imagem) são aplicáveis, para a planificação, aos sinais de televisão, seja qual for a norma utilizada.

1.6. Para os sistemas do serviço de radiodifusão por satélite nos quais o sinal útil é um sinal de televisão modulado em frequência, as relações de protecção são dadas para condições de referência especiais, das quais as mais importantes são:

a) Desvio de frequência do sinal útil (12 MHz ponta à ponta);
b) Qualidade do serviço útil (nível 4,5) (1);
c) Portadora do mesmo canal ou na mesma via (sem deslocação de frequências portadoras).

(1) Segundo a escala de avaliação de cinco notas definida no parecer n.º 500 da CCIR.

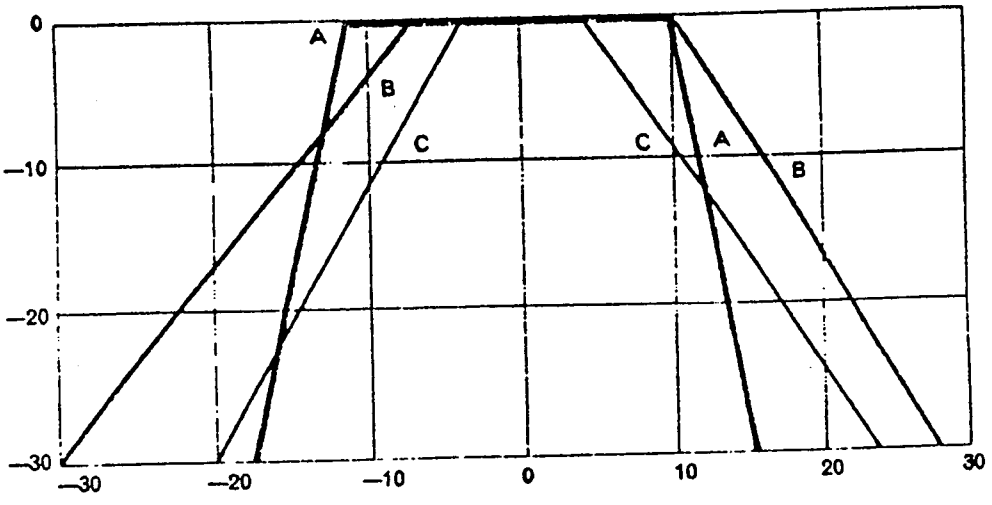
1.7. Se a concepção do sistema se basear em condições diferentes das condições *a*) e *b*) indicadas acima, a relação de protecção do sinal de televisão modulado em frequência é dada pela fórmula:

$$R = 12{,}5 - 20 \log (D_V/12) - Q + 1{,}1\ Q^2 \text{ (dB)}$$

na qual

D_V é o desvio de frequência nominal ponta a ponta (MHz);
Q é o nível de degradação respeitante somente às interferências.

1.8. Quando as portadoras estão deslocadas em frequência, não se pode aplicar a condição *c*). As relações de protecção do canal adjacente devem ser ajustadas em função da deslocação de frequência, como indica a figura 1. Por exemplo, para uma deslocação de 20 MIIz, o valor total aceitável da relação de protecção contra as interferências causadas a um sinal de televisão modulado em frequência por um sinal do mesmo tipo é de 13 dB; o valor correspondente para uma contribuição única de interferência é de 18 db.



Deslocação das frequências portadoras ∇f = (MHz)

$\nabla f = (f_{br} - F_u$

Fig. 1 Relação de protecção nas condições de referência em função da deslocação de frequência

Curva A — Para um sinal útil TV/BLR e um sinal interferente TV/MF.
Curva B — Para um sinal útil TV/MF e um sinal interferente TV/MF.
Curva C — Para um sinal útil TV/MF e um sinal interferente TV/BLR.

2. *Diâmetro de antena de referência no caso de uma estação terrena do serviço fixo por satélite a utilizar para o cálculo das interferências causadas pelas estações espaciais do serviço de radiodifusão por satélite.*

2.1. No serviço fixo por satélite, para uma antena de diâmetro superior a 2,5 m, o ganho dos lóbulos laterais é dado pela fórmula: $32 - 25 \log \theta$, na qual θ representa o ângulo de mira (parecer n.° 465 da CCIR). Esse ganho é independente do diâmetro da antena.

2.2. Todavia, relativamente às estações terrenas de emissão, o nível de interferência que afecta o trajecto ascendente dos outros sistemas de satélites é inversamente proporcional ao quadrado do diâmetro da antena. Portanto, a interferência diminui quando o diâmetro da antena aumenta. Contudo, no serviço fixo por satélite, estando a faixa de 11,7-12,2 GHz reservado às emissões no sentido espaço para Terra, esta questão não diz respeito directamente ao serviço de radiodifusão por satélite.

2.3. Tratando-se de antenas cujo diâmetro excede 100 λ, não parece, portanto, necessário fixar um diâmetro mínimo para as antenas das estações terrenas de recepção do serviço fixo por satélite na faixa partilhada de 11,7-12,2 GHz. Para o planeamento da partilha desta faixa pode considerar-se usual uma antena de 4,5 m com um rendimento de 60 % e um ganho de 53 dB no eixo do feixe. Todavia, convém notar que as administrações da Região 2 estudam a possibilidade de utilizar antenas com diâmetros compreendidos entre 3 m e 10 m.

3. *Utilização da dispersão de energia no serviço de radiodifusão por satélite.*

3.1. A dispersão artificial da energia contribui para facilitar a partilha entre o serviço de radiodifusão por satélite e os outros serviços a que a faixa está igualmente atribuída.

3.2. Esta dispersão da energia obtém-se juntando, na faixa de base, um sinal triangular ao sinal vídeo. Resulta daí uma faixa de base compósita, que, por sua vez, serve para modular em frequência a portadora no trajecto ascendente. A frequência do sinal triangular é geralmente sincronizada com um submúltiplo de frequência de quadro do sinal de televisão e o seu valor está normalmente compreendido entre 12,5 Hz e 30 Hz.

3.3. O quadro seguinte indica a redução relativa da densidade espectral de fluxo de potência numa faixa de 4 kHz em função do desvio ponta a ponta devido ao sinal de dispersão da energia. Os valores indicados neste quadro foram calculados utilizando a fórmula:

$$\text{Redução relativa (em decibéis) numa faixa de 4 kHz} = 10 \log \frac{\nabla F_{pp} + \delta f_{rms}}{4}$$

em que

ΔF_{pp} = desvio ponta a ponta devido ao sinal de dispersão da energia (kHz);
δ_{frms} = desvio eficaz devido à dispersão «natural» da energia (kHz).

Na elaboração do quadro admitiu-se para δ_{frms} um valor de 40 kHz, tendo em conta que é de 10 dB o valor dado para a dispersão «natural» no quadro 4 do projecto de Relatório n.º 631 (Rev. 76) da CCIR.

Redução da densidade espectral de densidade de fluxo de potência numa faixa de 4 kHz

Desvio ponta a ponta (kHz)	Redução relativa (dB)
0	10
100	15,44
200	17,78
300	19,29
400	20,41
500	21,30
600	22,04
700	22,67
800	23,22
900	23,71
1 000	24,15

3.4. O valor da dispersão da energia no serviço de radiodifusão por satélite foi determinado de modo a reduzir 22 dB à densidade espectral da densidade de fluxo de potência medida numa faixa de 4 kHz em relação a essa densidade medida em toda a faixa. Esta redução corresponde a um desvio ponta a ponta de 600 kHz.

ANEXO 10

Restrições aplicáveis às posições na órbita

Aplicando o procedimento descrito no artigo 4 para introduzir modificações no plano, as administrações devem respeitar os critérios enunciados a seguir:

1) Nenhum satélite de radiodifusão, que sirva uma zona da Região 1 utilizando uma frequência da faixa de 11,7-12,2 GHz, deve ocupar uma posição nominal na órbita mais ocidental que 37° O. Ou mais oriental que 146° E.;
2) Qualquer nova posição nominal na órbita, introduzida no plano na parte do arco de órbita compreendida entre 37° O. e 10° E. e associada a uma nova consignação, ou resultante de uma modificação feita a uma consignação que figura no plano, deve coincidir com uma posição nominal, na órbita, indicada no plano, na data de entrada em vigor dos actos finais (1), ou encontrar-se no máximo a 1° a este da dita posição na órbita.

Em caso de uma modificação a qualquer consignação que figure no plano, a utilização de nova posição nominal na órbita, que não coincida com qualquer das posições nominais na órbita indicadas no plano à data de entrada em vigor dos actos finais, será acompanhada de uma redução de p. i. r. e. de 8 dB em relação ao valor da p. i. r. e. inscrita no plano para a consignação antes da modificação desta.

(1) Actos Finais da Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (Genebra, 1977), entrados em vigor em 1 de Janeiro de 1979.

ANEXO 11

Método de cálculo da densidade de fluxo da potência produzida nos territórios da Região 2 por estações espaciais do serviço de radiodifusão das Regiões 1 e 3

Método de cálculo

1. Utilizando os dados seguintes, pode-se calcular a densidade de fluxo de potência produzida pela estação espacial, em condições de propagação em espaço livre, num ponto dado P situado á superfície da Terra:

1.1. Posição nominal na órbita;

1.2. P. i. r. e. (dBW);

1.3. Características do feixe de antena a meia potência (quer dizer, o eixo maior e o eixo menor, assim como a orientação da elipse correspondente).

1.4. Coordenadas geográficas do ponto de mira (B).

1.5. Coordenadas geográficas do ponto P.

2. Os valores relativos aos pontos 1.1 a 1.4 anteriores estão indicados no plano. Quanto ao ponto P, pode escolher-se conforme o objectivo dos cálculos. Para os cálculos que se seguem, as coordenadas geográficas no ponto P são 35° O. e 8° S.

3. Para obter o valor da densidade de fluxo de potência [decibéis (watts por metro quadrado)] produzida no ponto P calcula-se:

A distância d (m) entre o satélite e o ponto P;

O factor de dispersão A para a distância d:

$$A = 10 \log \frac{1}{4\pi d^2}$$

O ângulo φ, visto a partir do satélite, entre os pontos B e P;

A abertura φ do feixe a meia distância na direcção de P (no caso de um feixe circular, φ_o é independente da direcção);

O ganho relativo de antena δG (decibéis), para os valores de φ e φ_o, utilizando o diagrama de referência copolar da antena de emissão do satélite.

A densidade de fluxo de potência p_s, produzida no ponto P, é dada pela expressão (1):

$$p_s \text{ [dB (W/m}^2\text{)}] = \text{p. i. r. e.} + \delta G + A$$

Resultados

Figuram no seguinte quadro as densidades de fluxo de potência produzidas nos pontos de coordenadas 35° O. e 8° S. pelas estações espaciais de radiodifusão das Regiões 1 e 3, às quais foram consignadas no plano as posições nominais na órbita compreendidas entre 37° O. e 5° E. e os canais 1 a 25:

Densidade de fluxo de potência (DFP) produzida na Região 2 no ponto de coordenadas: longitude = 35° O., latitude = 8.° S.

APÊNDICE 31

Quadro das frequências a utilizar nas faixas atribuídas exclusivamente ao serviço móvel marítimo entre 4 MHz e 27,5 MHz

(V. o artigo 60)

No *quadro*, consoante o caso, as frequências a consignar numa dada faixa para cada uma das utilizações consideradas:

São designadas pela frequência mais baixa e pela frequência mais alta a consignar. Estas duas frequências são indicadas em normando;

São regularmente espaçadas entre si. O número de frequências a consignar e o valor do seu espaçamento, expresso em kilohertzes, são indicados por uma menção em itálico.

Quadro das frequências a utilizar nas faixas atribuídas

(kHz)

Quadro das frequências a consignar às estações de navio na faixa de 25 MHz

(kHz)

Limite	Frequências de chamada a consignar às estações de navio para telegrafia morse da classe A1A ou A1B (*g*)	Limite	Frequências (não emparelhadas) a consignar às estações de navio para os sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados, com velocidades de modulação que não excedam 100 bauds (*b*)	Limite	Frequências de trabalho a consignar às estações de navio para telegrafia morse da classe A1A ou A1B (*e*)	Limite
			25 076,3 · · · 25 089,8		25 091,5 · · · 25 108,5	
25 070	—	25 076	*28 frequências espaçadas de 0,5*	25 090,1	*35 frequências espaçadas de 0,5*	25 110

(*a*) V. o apêndice 16.
(*b*) V. o apêndice 33.
(*c*) Estas faixas podem também ser utilizadas pelas estações de bóias para a transmissão de dados oceanográficos e pelas estações que interrogam essas bóias, de acordo com as disposições da Resolução n.º 314.
(*d*) V. o apêndice 32.
(*e*) Nas faixas de frequência a utilizar pelas estações de navio para a telegrafia morse da classe A1A com uma velocidade de modulação que não exceda 40 bauds, as administrações podem consignar frequências suplementares intercaladas entre as frequências externas a consignar. Todas as frequências assim consignadas devem ser múltiplos de 100 Hz. As administrações devem assegurar uma repartição uniforme destas consignações nas faixas e evitar, na medida do possível, consignar as duas frequências que se encontram a ± 100 Hz de cada uma das frequências em relação harmónica indicada na primeira linha de cada série no apêndice 35.
(*f*) V. o apêndice 35.
(*g*) V. o apêndice 34.
(*h*) Para as condições de utilização da frequência 8364 kHz (v. o n.º 2988).

APÊNDICE 32

Disposição das vias a utilizar pelos sistemas de faixa estreita de telegrafia com impressão directa e de transmissão de dados nas faixas do serviço móvel marítimo compreendidas entre 400 e 23 000 kHz (frequências emparelhadas)

(V. o artigo 60 e a Resolução n.º 300)

A cada estação costeira que utiliza frequências emparelhadas são consignados um ou vários pares de frequência das séries seguintes. Cada par compreende uma frequência de emissão e uma frequência de recepção.

Quadro das frequências das estações costeiras para funcionamento a duas frequências

(kHz)

(*a*) Convém que as administrações consignem a frequência central de cada via do grupo apropriado e ou vias comuns às estações de navio que não estejam equipadas com osciladores de quartzo e que utilizem a relação harmónica para a chamada em telegrafia morse da classe A1A. As administrações podem, todavia, subdividir as vias do grupo apropriado e as vias comuns em frequência de chamada específicas, começando a 100 Hz da extremidade inferior da via e terminando a 100 Hz da extremidade superior (v. o exemplo abaixo) e consignar essas frequências a navios equipados de emissores com sintetizadores de frequência. As administrações devem evitar, na medida do possível, consignar as duas frequências situadas a ± 100 Hz de cada umas das frequências centrais em relação harmónica indicadas neste apêndice.

Exemplos de subdivisão de vias (frequências centrais em itálico):

4/1/a	4 180,1
4/1/b	*4 180,2*
4/1/c	4 180,3

6/1/a	6 270,1
6/1/b	6 270,2
6/1/c	*6 270,3*
6/1/d	6 270,4
6/1/e	6 270,5

8/1/a	8 360,1
8/1/b	8 360,2
8/1/c	8 360,3
8/1/d	*8 360,4*
8/1/e	8 360,5
8/1/f	8 360,6
8/1/g	8 360,7

12/1/a	12 540,1
12/1/b	12 540,2
12/1/c	12 540,3
12/1/d	12 540,4
12 /1/e	12 540,5
12/1/f	*12 540,6*
12/1/g	12 540,7
12/1/h	12 540,8
12/1/i	12 540,9
12/1/j	12 541,0
12/1/k	12 541,1

16/1/a	16 720,1
16/1/b	16 720,2
16/1/c	16 720,3
16/1/d	16 720,4
16/1/e	16 720,5
16/1/f	16 720,6
16/1/g	16 720,7
16/1/h	*16 720,8*
16/1/i	16 720,9
16/1/j	16 721,0
16/1/k	16 721,1
16/1/l	16 721,2
16/1/m	16 721,3
16/1/n	16 721,4
16/1/o	16 721,5

(*b*) Nas faixas dos 22 e 25 MHz as vias não estão em relação harmónica com as das faixas dos 4 a 16 MHz. Aplica-se, todavia, o princípio da subdivisão das vias em frequências de chamada específicas, começando a 100 Hz da extremidade inferior da via e terminando a 100 Hz da extremidade superior.

APÊNDICE 35

Quadro das frequências de trabalho, em kilohertzes, a consignar às estações de navio para a telegrafia morse de classe A1A, com velocidades de modulação que não excedam 40 bauds

[V. igualmente a nota *e*) do apêndice 31]

Nota. — A primeira linha de cada série, até à série 53, inclusive, indica as frequências em relação harmónica a consignar nas faixas de 4, 6, 8, 12 e 16 MHz. As outras frequências não estão necessariamente em relação harmónica.

(kHz)

APÊNDICE 36

Aparelhos automáticos destinados à recepção dos sinais de alarme radiotelegráfico e radiotécnico

(V. a secção II do artigo 41)

1. Os aparelhos automáticos destinados à recepção do sinal de alarme radiotelegráfico devem satisfazer as condições seguintes:

a) O aparelho deve funcionar sob a acção do sinal de alarme transmitido por radiotelegrafia em emissão das classes A2B e H2B, pelo menos (v. o n.º **4216**);
b) O aparelho deve registar o sinal de alarme, apesar das interferências (com a condição de que essas interferências não sejam contínuas) provocadas pelos parasitas atmosféricos e por sinais potentes diferentes do sinal de alarme, sem que seja, de preferência, necessária qualquer regulação manual, durante os períodos em que a vigília é assegurada com este aparelho;
c) O aparelho não deve entrar em funcionamento com parasitas atmosféricos ou com sinais potentes diferentes do sinal de alarme;
d) O aparelho deve possuir um mínimo de sensibilidade tal que, se os parasitas atmosféricos forem de pouca importância, ele possa funcionar sob a pressão do sinal de alarme transmitido pelo emissor de socorro de uma estação de navio, a qualquer distância dessa estação até ao alcance normal fixado para o dito emissor pela Convenção Internacional para Salvaguarda da Vida Humana no Mar e preferivelmente a distâncias superiores;
e) O aparelho deve sinalizar qualquer avaria que possa impedir o seu funcionamento normal durante os períodos de vigília.

2. Os aparelhos automáticos destinados à recepção do sinal de alarme radiotelefónico devem satisfazer as condições seguintes:

a) O aparelho deve funcionar sob a acção do sinal de alarme apesar das interferências intermitentes provocadas pelos parasitas atmosféricos e por sinais potentes diferentes do sinal de alarme, sem que seja, de preferência, necessária qualquer regulação manual durante os períodos em que a vigília é asseguradas com este aparelho;
b) O aparelho não deve entrar em funcionamento com parasitas atmosféricos ou com sinais potentes diferentes do sinal de alarme;
c) O aparelho deve poder funcionar para além da distância em que a transmissão da palavra é satisfatória. Deve, tanto quanto seja praticável, comportar um dispositivo que sinalize as avarias susceptíveis de impedir o seu funcionamento normal durante os períodos de vigília.

APÊNDICE 37

Características técnicas das radiobalizas de localização de sinistros que funcionam na frequência portadora de 2182 kHz

(V. a secção I do artigo 41)

As radiobalizas de localização de sinistros devem satisfazer as seguintes condições:

a) A potência radiada pelas radiobalizas de pequena potência (tipo L) deve ter o valor necessário para produzir, ao nível do mar e a uma distância de 30 milhas marítimas, um campo cuja intensidade seja igual ao inferior a 10 μV/m, sendo a intensidade de campo inicial de, pelo menos, 2,5 μV/m;

b) A potência radiada pelas radiobalizas de grande potência (tipo H) deve ter o valor necessário para produzir, ao nível do mar e a uma distância de 30 milhas marítimas, um campo cuja intensidade seja superior a 10 $_{\mu}V/m$;

c) Após um período de 48 horas de funcionamento contínuo, a potência radiada não deve ser inferior a 20 % do seu valor inicial;

d) As radiobalizas devem poder efectuar emissões da classe A2A (ou A2B) ou H2A (ou H2B), com uma taxa de modulação compreendida entre 30 % e 90 %;

e) As tolerâncias das frequências acústicas das emissões das radiobalizas de localização de sinistros (v. n.os **3256** a **3258**) são:

± 20 Hz para a frequência de 1300 Hz;
± 35 Hz para a frequência de 220 Hz;

f) O material deve ser concebido de maneira a estar de acordo com os pareceres pertinentes da CCIR.

APÊNDICE 38

Aparelhos de faixa estreita de telegrafia com impressão directa

(V. os artigos 59, 60, 63 e 64)

Os aparelhos de faixa estreita de telegrafia com impressão directa utilizados no serviço móvel marítimo devem satisfazer as condições seguintes:

a) Os aparelhos devem funcionar com os sinais do alfabeto telegráfico internacional n.º 2, com uma velocidade de modulação de 50 bauds, e fornecer na saída sinais do mesmo tipo susceptíveis de serem em seguida transmitidos pela rede telegráfica pública;

b) A rapidez de modulação no trajecto radioeléctrico não deve exceder 100 bauds;

c) As emissões devem ser da classe F1B, sendo o deslocamento da frequência de 170 Hz (1);

d) A tolerância de frequência do sinal emitido deve ser de ± 40 Hz para as estações de navio e de ± 15 Hz no caso das estações costeiras (2) (3) (4);

e) A frequência emitida superior deve corresponder a «espaço» (arranque) e a frequência emitida inferior deve corresponder a «marca» (paragem), de acordo com o parecer pertinente da CCIR;

f) Quando se utilize um sistema de correcção de erros, o aparelho deve estar equipado com um dispositivo simples para curto-circuitar esse sistema, a fim de permitir a emissão e a recepção, no trajecto radioeléctrico, de sinais não corrigidos de acordo com as disposições da alínea *a*) acima;

g) No serviço móvel marítimo, quando a telegrafia com impressão directa utiliza um sistema de detecção e correcção de erros, deve ser utilizado um sistema ARQ de 7 unidades ou um sistema, também de 7 unidades, sem circuito de retorno e com recepção em diversidade de tempo, utilizando o mesmo código. Convém que as restantes características do equipamento de detecção e correcção de erros estejam de acordo com os pareceres pertinentes da CCIR;

h) Se uma estação estiver equipada com um sistema de chamada selectiva de acordo com as disposições do apêndice 39 e com um sistema com impressão directa conforme com as disposições do presente apêndice, e utilizar um sinal de chamada a dois blocos, ser-lhe-á consignado para dois sistemas o mesmo número de identificação ou de chamada selectiva, em conformidade com as disposições dos n.os **2088** e **2143** a **2146**;

i) Se uma estação estiver equipada com um sistema com impressão directa de acordo com as disposições do presente apêndice, e utilizar um sistema de chamada a dois blocos, e se ainda não lhe tiver sido consignado um número em conformidade com as disposições dos n.os **2088** e **2143** a **2146**, convém consignar-lhe o referido número para o sistema de impressão directa;

j) A conversão da identificação numérica em combinações de 28 bits (quatro características) efectua-se de acordo com os pareceres pertinentes da CCIR.

---

(1) Quando se efectua a manipulação por deslocamento de frequência através da injecção de sinais de frequência acústica na entrada de um emissor de faixa lateral única, convém que se procure suprimir suficientemente a portadora residual da emissão de faixa lateral única. Por outro lado, uma escolha criteriosa da frequência acústica central permitirá reduzir ao mínimo a possibilidade de a portadora residual causar interferências nas vias vizinhas. Por esta razão, algumas administrações escolheram 1700 Hz para a frequência central.

(2) Para fins de exploração, convém que o equipamento de recepção associado seja compatível com a estabilidade de frequência dos emissores.

(3) Estas tolerâncias são aplicáveis aos equipamentos instalados depois de 1 de Janeiro de 1976 e a todos os equipamentos a partir de 1 de Janeiro 1985. Relativamente aos equipamentos instalados antes de 2 de Janeiro de 1976, a tolerância é de 100 Hz para os emissores de estação de navio (com uma deriva máxima de 40 Hz para períodos curtos da ordem de quinze minutos) e de 40 Hz para os emissores de estação costeira.

(4) Talvez possa ser oportuno fixar limites de tolerância mais restritos em função do método de exploração do serviço e do material utilizado.

APÊNDICE 39

Sistema de chamada selectiva a utilizar no serviço móvel marítimo

(V. os artigos 25, 62, 63 e 65 e o apêndice 9)

1. No caso em que seja necessário satisfazer as necessidades imediatas em matéria selectiva, o sistema utilizado deve apresentar as seguintes características:

1.1. O sinal de chamada selectiva deve conter cinco algarismos representando o número de chamada selectiva consignado a um navio para a chamada selectiva.

1.2. O sinal de frequência acústica aplicado à entrada do emissor da estação costeira deve ser constituído por uma série de impulsos de frequência acústica de acordo com as seguintes disposições:

1.2.1. As frequências acústicas que servem para representar os algarismos do número de chamada selectiva consignado a um navio devem estar de acordo com a série seguinte:

Algarismo	1	2	3	4	5	6	7	8	9	0	Repetição de algarismo
Frequência acústica (H3)	1 124	1 197	1 275	1 358	1 446	1 540	1 640	1 747	1 860	1 981	2 110

Por exemplo, a série de impulsos de frequência acústica correspondente ao número de chamada selectiva 12 133 seria 1124-1197-1124-1275-2110 Hz e a série correspondente ao n.º 22 222 seria 1197-2110-1197-2110-1197 Hz.

1.2.2. Se os números de chamada selectiva representados por apenas duas frequências — escolhidas entre as indicadas no § 1.2.1 — forem reservados para a chamada de grupos predeterminados de navios, poder-se-á dispor de cem combinações diferentes, a atribuir segundo as necessidades das administrações.

1.2.3. Os sinais produzidos pelos geradores de frequências acústicas devem ser essencialmente sinusoidais, com uma distorção harmónica total que não exceda 2 %.

1.2.4. Os impulsos de frequência acústica devem ser transmitidos em sequência.

1.2.5. A diferença entre as amplitudes máximas de dois impulsos quaisquer não deve exceder 1 dB.

1.2.6. A duração de cada impulso de frequência acústica, medida entre os pontos a 50 % da amplitude máxima deve ser de 100 ms ± 10 ms.

1.2.7. O intervalo de tempo entre dois impulsos consecutivos, medido entre os pontos a 50 % da amplitude máxima, deve ser de 3 ms ± 2 ms.

1.2.8. O tempo de estabelecimento e o tempo de extinção de cada impulso, medidos entre os pontos a 10 % e a 90 % da amplitude máxima, deve ser de 1,5 ms ± 1 ms.

1.2.9. A tolerância das frequências acústicas indicadas no § 1.2.1 deve ser de ± 4 Hz.

1.2.10. O sinal de chamada selectiva (número de chamada selectiva consignado à estação do navio) deve ser emitido duas vezes, com um intervalo de 900 ms ± 100 ms entre o fim do primeiro sinal e o começo do segundo (figura 1).

1.2.11. O intervalo entre as chamadas de uma estação costeira a navios diferentes deve ser, no mínimo, de um segundo (figura 1).

2. As informações suplementares que se seguem ao sinal de chamada selectiva devem ser transmitidas pela forma seguinte:

2.1. Quatro algarismos para identificar a estação costeira que chama.

2.2 Dois zeros seguidos de dois algarismos para indicar a via de transmissão em ondas métricas na qual deva ser dada a resposta (v. o apêndice 18).

2.3. As características dos sinais devem estar de acordo com as disposições dos §§ 1.2.1 e 1.2.3 a 1.2.9, inclusive.

2.4. A composição do sinal deve estar de acordo com o diagrama da figura 2, sendo de ± 30 ms a tolerância no intervalo de 350 ms.

3. Um sinal especial «Chamada a todos os navios», destinado a accionar os selectores de recepção instalados a bordo de todos os navios, qualquer que seja o seu número de chamada selectiva, deve comportar a emissão contínua da sequência das onze frequências acústicas indicadas no § 1.2.1. As características dos impulsos de frequência acústica devem satisfazer as disposições dos §§ 1.2.3, 1.2.4, 1.2.5 e 1.2.9. A duração de cada um desses impulsos, medida entre os pontos a 50 % da amplitude máxima, deve ser de 17 ms ± 1 ms; o intervalo de tempo entre os dois impulsos consecutivos, medido entre os pontos a 50 % da amplitude máxima, não deve exceder a 1 ms. Convém que a duração total do sinal «Chamada a todos os navios» tenha, no mínimo, cinco segundos.

4. Os selectores de recepção instalados a bordo dos navios deverão ter uma boa fiabilidade de funcionamento em todas as condições que permitam obter comunicações de qualidade satisfatória.

5. O selector de recepção deve ser concebido para receber os sinais definidos no § 1. Todavia, tendo em conta o facto de que as estações costeiras podem emitir sinais suplementares (por exemplo, para identificação da estação costeira), importa que a duração do regresso ao repouso do descodificador seja de 250 ms ± 40 ms.

6. Este selector deveria ser concebido, realizado e mantido de tal modo que pudesse funcionar em presença de ruídos atmosféricos e de outros sinais perturbadores, incluindo os sinais de chamada selectiva diferentes daquele para o qual foi ajustado o descodificador.

7. O selector de recepção deve comportar um dispositivo que forneça uma indicação acústica ou visual da recepção de uma chamada e, se exigido, um dispositivo complementar que permita determinar a identidade da estação de onde provém a chamada ou a via de transmissão em ondas métricas a utilizar para a resposta, segundo as necessidades das administrações.

8. Este dispositivo indicador deve entrar em funcionamento quando da recepção correcta do sinal de chamada, quer o registo correcto tenha sido feito quando da emissão do primeiro sinal de chamada pela estação costeira ou quando da sua repetição, ou em ambos os casos.

9. O dispositivo indicador deve manter-se em posição de funcionamento até ser reposto manualmente em descanso.

10. Convém que o selector de recepção seja tão simples quanto possível e possa funcionar de maneira segura durante longos períodos com um mínimo de manutenção, havendo toda a vantagem em que comporte meios que permitam efectuar o seu ensaio sem contribuição exterior.

FIGURA 1

Composição dos sinais de chamada selectiva, sem informações suplementares

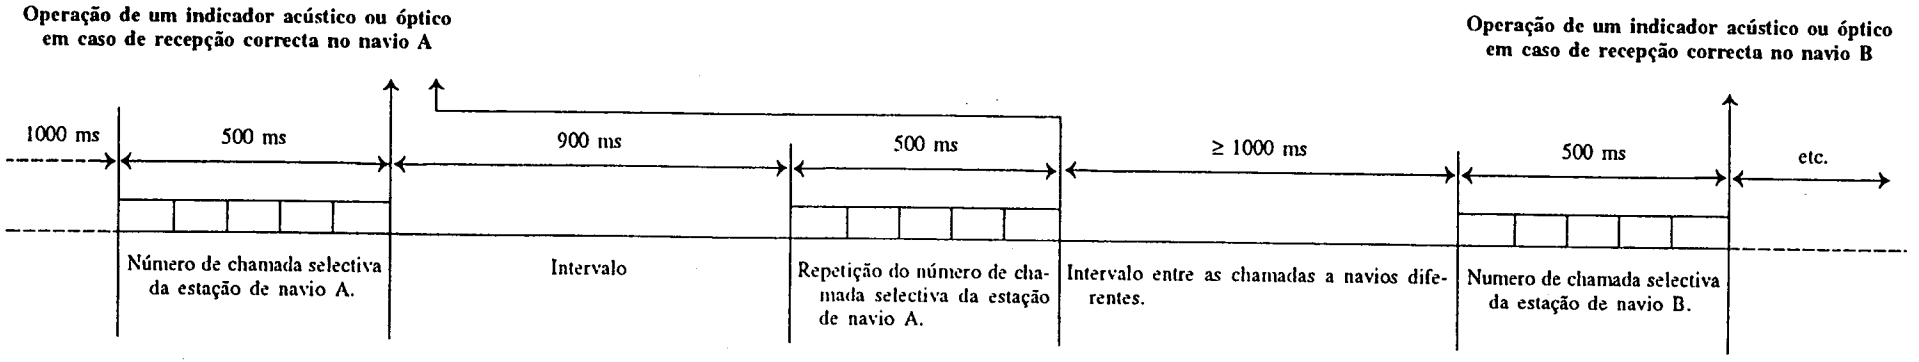

FIGURA 2

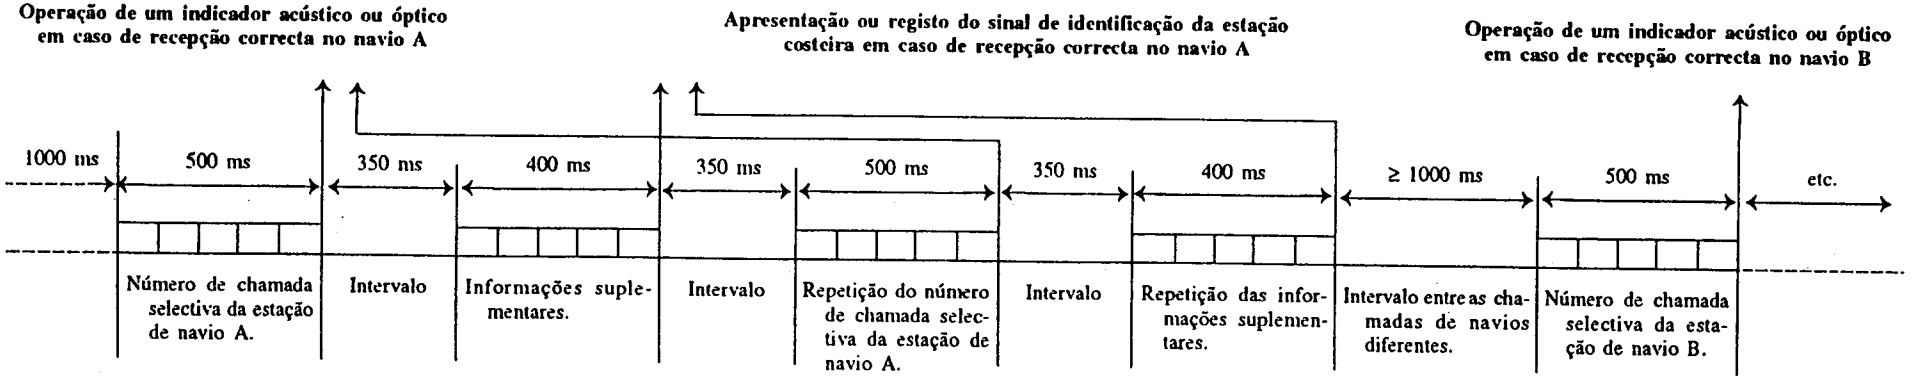
Composição dos sinais de chamada selectiva, com informações suplementares



APÊNDICE 40

Sistemas de compressores e expansores acoplados

(V. a secção IV do artigo 60 e o apêndice 17)

Quando o serviço móvel marítimo radiotelefónico internacional recorre a sistemas de compressores e expansores acopulados:

a) As características do equipamento de compressores e expansores devem estar de acordo com as disposições dos pareceres da CCIR;

b) Para se obter o resultado óptimo, as características dos equipamentos de faixa lateral única utilizados com sistemas de compressores e expansores acopulados devem estar de acordo com as disposições do apêndice 17 e convém, além disso, que satisfaçam as condições seguintes:

1) A estabilidade de frequência em períodos curtos (da ordem de quinze minutos) dos emissores de estação costeira é de ± 2 Hz;
2) A estabilidade de frequência em períodos curtos (da ordem de quinze minutos) dos emissores de estação de navio é de ± 5 Hz;
3) Para que a estabilidade do ganho total seja suficiente durante o período de uma comunicação é necessário que os receptores da estação costeira estejam equipados com dispositivos que permitam manter o erro de frequência de uma extremidade à outra num valor compreendido entre ± 2 Hz e que os receptores de estação de navio estejam equipados com dispositivos que permitam manter esse erro num valor compreendido entre ± 5 Hz;
4) A máxima variação admissível da amplitude do emissor na faixa das frequências acústicas de 350-2700 Hz, na emissão, é de 6 dB; o atraso diferencial não deve exceder 3 ms. No que respeita a estes requisitos, o receptor deve ter, pelo menos, as mesmas características de funcionamento;
5) Quando se utilizar a portadora piloto de uma emissão da classe R3E para produzir um sinal contínuo destinado a estabilizar a frequência e a comandar o ganho do receptor, no caso de uma emissão da classe J3E, por exemplo, o procedimento inicial de sintonização deve incluir, durante um curto período, a emissão de uma frequência acústica de referência apropriada (por exemplo, 1000 Hz ± 1 Hz) num nível da ordem de — 10 dBm0 ± 0,5 dB;
6) Caso se pretenda utilizar inversores ou qualquer outro tipo de dispositivos de segredo, há que ter em atenção o facto de que a frequência acústica superior da via telefónica é de 2380 Hz.

APÊNDICE 41

Procedimento para a obtenção dos azimutes radiogoniométricos e das posições

(V. o artigo 35)

SECÇÃO I

Instruções gerais

§ 1. As estações de serviço móvel aeronáutico utilizarão os procedimentos especiais que possam vigorar em aplicação de acordos concluídos pelas administrações. Contudo, deverão seguir as disposições deste apêndice se lhes for necessário participar em operações de radiogoniometria com estações do serviço móvel marítimo.

§ 2. Antes de chamar uma ou mais estações radiogoniométricas para lhes pedir o seu azimute ou a sua posição, a estação móvel deve procurar na nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais:

a) Os indicativos de chamada das estações a chamar para obter os azimutes ou a posição que deseja;

b) A frequência em que as estações radiogoniométricas escutam e a ou as frequências em que determinam os azimutes;

c) As estações radiogoniométricas que, por meio de ligações por circuitos especiais, podem funcionar em grupo com a estação radiogoniométrica a chamar.

§ 3. O procedimento que a estação móvel deverá seguir depende de diversas circunstâncias. De modo geral, a estação móvel deve ter em atenção o seguinte:

a) Se as estações radiogoniométricas não escutarem na mesma frequência (quer seja a frequência em que determinam o azimute ou qualquer outra frequência), devem pedir-se os azimutes separadamente a cada estação ou grupo de estações que utilizam uma dada frequência;

b) Se todas as estações radiogonoimétricas interessadas escutarem na mesma frequência e se estiverem em condições de determinar azimutes numa frequência comum (que pode ser diferente da frequência de escuta), a estação móvel deve chamá-las conjuntamente, para que todas essas estações determinem simultaneamente os azimutes na mesma emissão;

c) Se várias estações radiogoniométricas estiverem agrupadas por meio de circuitos especiais, apenas se deve chamar uma delas, designada «estação radiogoniométrica de comando», mesmo que todas estejam agrupadas com aparelhos emissores. Contudo, neste caso, a estação móvel deve, se necessário, mencionar na chamada, por meio dos respectivos indicativos de chamada, as estações radiogoniométricas de que deseja obter azimutes.

§ 4. A nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais contém as indicações relativas:

a) Ao tipo de sinal e à classe de emissão a empregar para obter os azimutes;

b) À duração das emissões que a estação móvel deve efectuar;

c) À hora utilizada pela estação radiogoniométrica considerada, se essa hora for diferente da do tempo universal coordenado (UTC).

SECÇÃO II

Regras de procedimento

§ 5. As seguintes regras de procedimento, aplicáveis à radiotelegrafia e à radiotelefonia, fundam-se no emprego da radiotelegrafia. Em radiotelefonia, as abreviaturas regulamentares podem ser substituídas por frases apropriadas.

Obtenção de um azimute

§ 6. (1) A estação móvel chama a estação radiogoniométrica ou a estação radiogoniométrica de comando na frequência de escuta indicada pela nomenclatura das estações de radiodeterminação e das estações que efectuam serviços especiais. Conforme o tipo de informação que pretenda, a estação que chama transmite a abreviatura regulamentar apropriada, seguida, se a estação radiogoniométrica for uma estação móvel, da abreviatura regulamentar QTH? Se necessário, indica a frequência em que vai emitir para permitir determinar o seu azimute e, em seguida, aguarda instruções.

(2) Utilizando a abreviatura regulamentar apropriada, a estação radiogoniométrica convida a estação que chama a efectuar a emissão necessária para o azimute. Se necessário, indica a frequência a utilizar para este efeito e o número de vezes que se deve repetir a emissão.

(3) Depois de ter ajustado, se necessário, a sua nova frequência de emissão, a estação que chama transmite dois traços de aproximadamente dez segundos, seguido, cada um deles, do seu indicativo de chamada. Repete estes sinais tantas vezes quantas lho tenha pedido a estação radiogoniométrica.

(4) A estação radiogoniométrica determina a direcção e, se possível, o sentido do azimute e a sua classe (v. o § 7).

(5) Se a estação radiogoniométrica não ficar satisfeita com a operação, pede à estação que chama que repita a emissão indicada na alínea (3).

(6) A estação radiogoniométrica transmite as informações à estação que chama pela seguinte ordem:

a) Abreviatura regulamentar apropriada;

b) Três algarismos indicando, em graus, o azimute verdadeiro em relação à estação radiogoniométrica;

c) A classe do azimute;

d) A hora da observação;

e) Se a estação radiogoniométrica for móvel, a sua própria posição e latitude e longitude, precedida da abreviatura regulamentar QHT.

(7) Logo que a estação que chama receba o resultado da observação, repete a mensagem se considerar necessário obter confirmação. A estação radiogoniométrica confirma então a exatidão da repetição ou, se for caso disso, rectifica, repetindo a mensagem. Quando a estação radiogoniométrica adquiriu a certeza de que a estação móvel recebeu correctamente a mensagem, transmite o sinal «fim de trabalho». A estação que chama repete então o sinal para indicar que a operação está terminada.

(8) Não havendo indicações contrárias, a estação que chama considera que foi determinado o sentido do azimute. Se a estação radiogoniométrica não determinou esse sentido, menciona isso na transmissão da informação ou então indica as duas direcções opostas que determinou.

Classificação dos azimutes

§ 7. Para apreciar a precisão e determinar a classe correspondente de um azimute:

a) Convém, em geral e especialmente no serviço radiogoniométrico móvel mantido nas frequências inferiores a 3000 kHz, que o operador utilize as características-tipo dos azimutes indicados no quadro seguinte;

b) Os operadores de uma estação radiogoniométrica podem, quando a natureza do equipamento e o tempo o permitirem, ter em conta a probabilidade de erro do azimute. Considera-se um azimute como pertencendo a uma dada classe se houver uma probabilidade inferior a $^1/_{20}$ de que o erro do azimute exceda os valores numéricos especificados para essa classe no quadro seguinte. Convém que essa probabilidade seja avaliada por meio da análise dos cinco componentes da variância total do azimute (instrumento, localização, propagação, amostragem dos azimutes e condições de observação).

Obtenção de uma posição determinada por duas ou mais estações radiogoniométricas organizadas em grupo

§ 8. (1) Se a estação que chama desejar ser informada da sua posição por um grupo de estações radiogoniométricas, chama a estação de comando como indicado na alínea (1) do § 6 acima e pede a sua posição utilizando a abreviatura regulamentar apropriada.

(2) A estação de comando responde à chamada e, logo que estejam prontas as estações radiogoniométricas, utilizando a abreviatura regulamentar apropriada, convida a estação que chama a emitir. Determinada a posição, a estação de comando transmite à estação que chama:

a) A abreviatura regulamentar apropriada;
b) A posição em latitude e longitude ou, se apropriado, em relação a um ponto geográfico conhecido;
c) A classe da posição, definida na alínea seguinte;
d) A hora da observação.

(3) Segundo a sua apreciação da precisão das suas observações, a estação de comando classifica a posição numa das quatro classes seguintes:

Classe A — Posições que o operador pode razoavelmente considerar como com um erro inferior a 5 milhas náuticas;
Classe B — Posições que o operador pode razoavelmente considerar como com um erro inferior a 20 milhas náuticas;
Classe C — Posições que o operador pode razoavelmente considerar como com um erro inferior a 50 milhas náuticas;
Classe D — Posições que o operador não pode considerar como com um erro inferior a 50 milhas náuticas.

(4) Contudo, para frequências superiores a 3000 kHz, no caso em que não convenham os limites de distância fixados na alínea precedente, a estação de comando pode classificar a posição segundo os pareceres da CCIR.

Obtenção de azimutes simultâneos de duas ou várias estações radiogoniométricas organizadas em grupo.

§ 9. A um pedido de azimutes, a estação de comando de um grupo de estações radiogoniométricas procede como o § 8 indica e transmite em seguida os azimutes determinados por cada estação do grupo, fazendo preceder cada azimute do indicativo de chamada da estação que o determinou.

QUADRO

Classificação dos azimutes

Classe	Erro absoluto do azimute (graus)	Características-tipo observadas					
		Intensidade dos sinais	Indicação do azimute	Desvanecimento	Interferência	Oscilação do azimute (graus)	Duração da observação
A	± 2	Muito boa ou boa	Nítida (zero bem definido).	Insignificante	Insignificante	Menos de 3	Suficiente.
B	± 5	Suficiente	Vaga	Ligeiro	Ligeiro	Mais de 3 menos de 5.	Breve.
C	± 10	Fraca	Muito vaga	Intenso	Grande	Mais de 5 menos de 10.	Muito breve.
D	Mais de ± 10	Quase inperceptível.	Mal definida	Muito intenso	Muito grande	Mais de 10	Insuficiente.

APÊNDICE 42

Quadro de atribuição das séries internacionais de indicativos de chamada (*a*)

(V. o artigo 25)

Séries de indicativos	Atribuídos a
AAA-ALZ	Estados Unidos da América.
AMA-AOZ	Espanha.
APA-ASZ	Paquistão (República islâmica do).
ATA-AWS	Índia (República da).
AXA-AXZ	Austrália.
AYA-AZZ	Argentina (República da).
A2A-A2Z	Botswana (República do).
A3A-A3Z	Tonga (Reino das).
A4A-A4Z	Omã (Sultanato de).
A5A-A5Z	Butão (Reino do).
A6A-A6Z	Emiratos Árabes Unidos.
A7A-A7Z	Qatar (Estado do).
A8A-A8Z	Libéria (República da).
A9A-A9Z	Bahrein (Estado do).
BAA-BZZ	China (República Popular da).
CAA-CEZ	Chile.
CFA-CKZ	Canadá.
CLA-CMZ	Cuba.
CNA-CNZ	Marrocos (Reino de).
COA-COZ	Cuba.
CPA-CPZ	Bolívia (República da).
CQA-CUZ	Portugal.
CVA-CXZ	Urugai (República Oriental do).
CYA-CZZ	Canadá.
C2A-C2Z	Nauru (República de).
C3A-C3Z	Andorra (Principiado de).
C4A-C4Z	Chipre (República de).
C5A-C5Z	Gâmbia (República da).
C6A-C6Z	Baamas (Comunidade das).
C7A-C7Z (*)	Organização Meteorológica Mundial.
C8A-C9Z	Moçambique (República Popular de).
DAA-DRZ	Alemanha (República Federal da).
DSA-DTZ	República da Coreia.
DUA-DZZ	Filipinas (República das).
D2A-D3Z	Angola (República Popular de).
D4A-D4Z	Cabo Verde (República de).
D5A-D5Z	Libéria (República da).
D6A-D6Z	Comores (República Federal e Islâmica das).
D7A-D9Z	República da Coreia.
EAA-EHZ	Espanha.
EIA-EJZ	Irlanda.
EKA-EKZ	União das Repúblicas Socialistas Soviéticas.
ELA-ELZ	Libéria (República da).
EMA-EOZ	União das Repúblicas Socialistas Soviéticas.
EPA-EQZ	Irão (República Islâmica do).
ERA-ESZ	União das Repúblicas Socialistas Soviéticas.

9WA-9WZ	Malásia.
9XA-9XZ	Ruandesa (República).
9YA-9ZZ	Trindade e Tobago.

(*) As séries de indicativos de chamada precedidas de um asterisco são atribuídas a organizações internacionais.

(*a*) As duas administrações interessadas comprometem-se a modificar a sua utilização actual das séries de indicativos de chamada HLA-HLZ e HMA-HMZ para, logo que possível, passarem a estar em conformidade com o quadro de atribuição de 1979, fim de indicarem claramente as outras administrações os seus arranjos de exploração. Nesse sentido, a administração da República da Coreia tomará as medidas apropriadas para modificar os indicativos de chamadas registados na UIT na série HMA-HMZ à medida que sejam efectuadas modificações na utilização dos indicativos de chamada desta série. A aplicação das medidas indicadas anteriormente deverá, em todo o caso, estar concluída em Janeiro de 1984.

APÊNDICE 43

Identidades no serviço móvel marítimo

1. *Considerações gerais.*

1.1. No serviço móvel marítimo, as identidades são constituídas por uma série de nove algarismos transmitidos no trajecto radioeléctrico para identificar de modo único as estações de navio, as estações terrenas de navio, as estações costeiras, as estações terrenas costeiras e as chamadas de grupo.

1.2. As identidades das estações de navio devem estar em conformidade com os pareceres pertinentes da CCIR e CCITT.

1.3. Essas entidades são constituídas de tal modo que a entidade ou uma parte da entidade permita aos utentes dos serviços telefónico ou telex, ligados à rede geral das telecomunicações, chamarem navios automaticamente no sentido estação costeira-navio.

1.4. Há três categorias de identidades no serviço móvel marítimo:

i) Identidades de estações de navio;
ii) Identidades de chamadas de grupos;
iii) Identidades de estações costeiras.

1.5. A nacionalidade ou o pavilhão de uma estação é indicado por um grupo de três algarismos, os algarismos de identificação de nacionalidade (NID).

2. *Algarismos de identificação de nacionalidade (NID).*

O quadro I dá os algarismos de identificação de nacionalidade atribuídos a cada país. Em conformidade com o n.° **2087** do Regulamento das Radiocomunicações, o secretário-geral está autorizado a atribuir algarismos de identificação de nacionalidade aos países que não figuram no quadro (1).

3. *Identidade da estação de navio.*

A identidade da estação de navio é composta por nove algarismos, como se indica a seguir:

N I D X X X X X X
1 2 3 4 5 6 7 8 9

em que:

N I D
1 2 3

representam os algarismos de identificação de nacionalidade. Cada X representa um algarismo compreendido entre 0 e 9.

4. *Identidade da chamada de grupo.*

A identidade da chamada de grupo utilizada para chamar simultaneamente diversos navios é formada como segue:

0 N I D X X X X X
1 2 3 4 5 6 7 8 9

sendo o primeiro caracter um zero e representando cada X um algarismo compreendido entre 0 e 9.

O NID representa apenas o país que consignou a identidade de grupo e, portanto, não impede que se chamem grupos compostos de navios de diferentes nacionalidades.

5. *Identidade da estação costeira.*

A identidade da estação costeira é composta como segue:

0 0 N I D X X X X
1 2 3 4 5 6 7 8 9

sendo os dois primeiros caracteres zeros e representando cada X um algarismos compreendido entre 0 e 9.

O NID representa o país onde se situa a estação costeira ou a estação terrena costeira.

QUADRO I

Algarismos de identificação de nacionalidade (1)

País	Algarismos

(1) Os pormenores relativos à atribuição dos números de identificação de nacionalidade (NID) deverão ser elaborados pelo secretário-geral, em estreita cooperação com a CCIR e a CCITT, de acordo com a Resolução n.° 313 e com as disposições do presente apêndice. Até que essas informações possam ser apresentadas à próxima conferência competente para decisão, o secretário-geral poderá efectuar atribuições provisórias. Essas atribuições serão, por consequência, objecto de exame ou de revisão pela conferência acima mencionada.

APÊNDICE 44

Números de chamada selectiva das estações de navio e números de identificação das estações costeiras

PARTE I

Quadro dos grupos de números de chamada selectiva das estações de navio e dos números de chamada selectiva para grupos de estações de navio que foram fornecidos às administrações

PROTOCOLO FINAL

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), os delegados abaixo assinados tomam nota das seguintes declarações, formuladas por algumas delegações signatárias:

N.º 1

República das Honduras

Por intermédio da sua delegação à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a República das Honduras deseja formular as seguintes reservas:

1) O seu Governo reserva-se o direito de tomar as medidas que julgue necessárias para proteger os seus interesses se outros Membros da União não se conformarem com as disposições do Regulamento das Radiocomunicações, dos seus anexos e dos protocolos que lhes estão agregados;
2) De igual modo declara que o seu Governo se reserva o direito de formular qualquer reserva até à data da ratificação dos Actos Finais da presente Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979).

N.º 2

República da Guatemala

A delegação da República da Guatemala:

a) Reserva para o seu Governo o direito de aceitar e de ratificar na totalidade ou em parte os Actos Finais da presente Conferência, bem como a aplicação destes no quadro territorial reconhecido pela Constituição da República;
b) Não aceita as reservas expressas por outros países se forem contrárias aos seus interesses nacionais, conforme apreciação definitiva que o Governo da República da Guatemala formule no momento de aceitar e de ratificar os Actos Finais da Conferência.

N.º 3

República do Chade

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República do Chade declara, relativamente à protecção dos seus interesses em matéria de telecomunicações, que a soberania do seu Estado não poderá de nenhum modo ser afectada pela disposições adoptadas pela presente Conferência ou pelas reservas formuladas por outros Estados Membros da União.

Por consequência, reserva para o seu Governo o direito de tomar as medidas que julgue necessárias para proteger os seus serviços de telecomunicações.

N.º 4

República Argelina Democrática e Popular, Reino da Arábia Saudita, Estado do Bahrein, República Popular do Bangladesh, Emirados Árabes Unidos, República Islâmica do Irão, República do Iraque, Reino Hachemita da Jordânia, Estado do Koweit, Líbano, Líbia (Jamahiriya Árabe, Líbia Popular Socialista), Reino de Marrocos, Sultanato de Omã, República Islâmica do Paquistão, Estado de Qatar, República Árabe Síria, República Democrática da Somália, República Democrática do Sudão e República Democrática Popular do Iémene.

As delegações dos países acima mencionados declaram que a assinatura e a eventual aprovação posterior pelos seus Governos respectivos dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), não implicam, de modo nenhum, o reconhecimento de Israel.

N.º 5

Bélgica

A administração belga tenciona pôr rapidamente em serviço uma rede de estações de radiodifusão na faixa dos 100-104 MHz.

Solicita instantemente às administrações interessadas que encarem desde já as medidas que tornem possível essa entrada em serviço.

N.° 6

República Popular do Benim

A delegação da República Popular do Benim reserva para o seu Governo o direito de tomar todas as medidas necessárias para proteger os seus interesses, se reservas formuladas por outras delegações vierem a comprometer o bom funcionamento dos seus serviços de telecomunicações.

N.° 7

Chile

Referindo-se às decisões tomadas pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) acerca das consignações de frequência que virão a figurar no Ficheiro de Referência Internacional das Frequências, tendo em conta igualmente as disposições do artigo 4, n.° 2, do Tratado do Antárctico, assinado em Washington em 1 de Dezembro de 1959, e reiterando os termos do n.° VIII do protocolo final da Convenção Internacional das Telecomunicações assinada em Málaga, Torremolinos, 1973, a delegação do Chile declara que o território antárctico chileno, território sobre que exerce soberania, o seu governo reserva-se o direito de consignar e de reconhecer as frequências que considere necessárias para os serviços de radiocomunicação, presentes e futuros, que funcionem nos limites do referido território.

N.° 8

Cuba

A delegação de Cuba, representando o seu Governo e em nome deste, declara não reconhecer qualquer valor jurídico ou moral à assinatura dos Actos Finais pelos representantes do regime de Pol Pot à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), com base nas seguintes considerações:

O regime genocida de Pol Pot não representa os interesses legítimos do povo do Kampuchea e não exerce qualquer autoridade nesse país;

A inscrição do regime de Pol Pot na presente Conferência é puramente formal e foi motivada por interesses exclusivamente políticos, sendo testemunho disso a ausência de participação nos trabalhos e debates da Conferência. Pelo facto de não dispor de qualquer autoridade sobre o território desse país e de não exercer aí qualquer jurisdição esse regime não pode regulamentar o funcionamento das telecomunicações.

A delegação de Cuba considera que, na ausência de representantes legítimos do povo do Kampuchea, o Conselho Popular Revolucionário, os Actos Finais da Conferência não devem conter qualquer assinatura de uma representação do Kampuchea.

N.° 9

Cuba

Ao assinar e ao aceitar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) em nome da Governo da República de Cuba, a delegação de Cuba declara que isso não significa de modo algum que reconhece a notificação, a inscrição e a utilização, pelo Governo norte-americano, de frequências na parte do território cubano da província de Guantanamo, que está ocupada ilegalmente e contra a vontade do povo cubano.

A utilização, pelo Governo dos Estados Unidos, de frequências radioeléctricas no território que usurpa em Guantanamo, Cuba, constitui um obstáculo aos serviços de telecomunicações de Cuba e ao exercício da soberania do nosso país sobre o espectro das frequências radioeléctricas, que constitui um recurso limitado.

O Governo de Cuba reserva-se o direito de tomar todas as medidas necessárias para a salvaguarda dos seus legítimos interesses.

N.° 10

República Islâmica do Irão

Esta Conferência não esteve em condições de responder satisfatoriamente às necessidades de radiodifusão em ondas decamétricas, nas atribuições de faixas de frequências revistas, especialmente nas faixas dos 6 e 7 MHz. Se a projectada Conferência de Radiodifusão em Ondas Decamétricas não estiver habilitada, pela sua agenda, a dispor de

certas partes do espectro atribuídas ao serviço fixo, ficará na impossibilidade de planificar a utilização de todas as faixas de frequências de modo a permitir aos países assegurarem os seus serviços de radiodifusão em caso de variações das condições de propagação em toda a extensão do ciclo de actividade solar. Na falta de um plano adequado, a administração da República Islâmica do Irão reserva-se o direito de tomar as medidas necessárias para utilizar as porções das faixas de 5850-5950 kHz e 7300-7400 kHz igualmente para os serviços de radiodifusão, conforme as necessidades desta administração.

N.º 11

República Democrática do Afeganistão

A delegação da República Democrática do Afeganistão reserva para o seu Governo o direito de continuar a utilizar os serviços fixo e móvel nas faixas atribuídas exclusivamente ao serviço móvel marítimo abaixo de 10 MHz. Essas faixas serão utilizadas para as necessidades internas do Afeganistão e de modo a não causar interferências prejudiciais ao serviço móvel marítimo.

N.º 12

República Islâmica da Mauritânia

A delegação da República Islâmica da Mauritânia declara que a assinatura dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), assim como a eventual ratificação posterior dos referidos Actos Finais pelo seu Governo, não implica de modo nenhum o reconhecimento do Estado de Israel.

N.º 13

República Islâmica do Paquistão

Considerando:

a) Que o estabelecimento de um plano de radiodifusão em ondas decamétricas é a condição indispensável do respeito pela legalidade e a ordem nessa parte do espectro;
b) Que todos os esforços até aqui feitos para elaborar um tal plano não tiveram êxito devido a atribuições inadequadas ao serviço de radiodifusão na faixa das ondas decamétricas, especialmente nas faixas das frequências mais baixas;
c) Que não foi aprovado pela presente Conferência qualquer alargamento das faixas de radiodifusão de 6 e 7 MHz, especialmente importantes;
d) Que a nota 531, relativa à parte alargada das faixas atribuídas ao serviço de radiodifusão, é demasiadamente rígida e não deixa qualquer margem de manobra à próxima Conferência Administrativa Mundial das Radiocomunicações;
e) Que é excessivamente longo o período de transferência das consignações deslocadas devido ao alargamento das faixas atribuídas ao serviço de radiodifusão;
f) Que as emissões de radiodifusão de um pequeno número de países nas faixas de 6 e 7 MHz já estão a invadir as faixas adjacentes atribuídas aos serviços fixos, com uma potência total de 12,5 MW;
g) Que, por razões de equidade, essas emissões de radiodifusão fora da faixa se multiplicarão no caso de a proposta Conferência Administrativa Mundial das Radiocomunicações não conseguir, por falta de atribuições satisfatórias, estabelecer um plano aceitável de radiodifusão em ondas decamétricas;
h) Que já não será possível, antes de muito tempo, corrigir esses erros de atribuição,

a delegação do Governo do Paquistão à presente Conferência Administrativa Mundial das Radiocomunicações da União Internacional das Telecomunicações não pode aceitar nem as atribuições que figuram no quadro de atribuição para as faixas de 5830-5950 kHz e de 7300-7500 kHz, nem a nota 531 e suas consequências. Sendo assim, reserva para o seu Governo o direito de tomar todas as medidas que considere necessárias para salvaguardar os seus interesses.

A referida delegação garante, no entanto, a cooperação e a participação plena e inteira da sua Administração na preparação do plano de radiodifusão em ondas decamétricas, em conformidade com a decisão da presente Conferência. Garante igualmente que as reservas expostas acima caducarão logo que seja elaborado e aplicado um plano aceitável de radiodifusão em ondas decamétricas.

Por outro lado, a delegação da República Islâmica do Paquistão reserva para o seu Governo o direito de aceitar ou não as consequências que possam advir do desrespeito por qualquer outro Membro da União das disposições dos Actos Finais da Conferência e do Regulamento das Radiocomunicações. Em tal caso, o Paquistão reserva-se o direito de tomar as medidas necessárias para proteger os seus interesses.

N.° 14

Grécia e República Socialista Federativa da Jugoslávia

Na faixa de 415-495 kHz, a presente Conferência adoptou, para a Região 1, atribuições diferentes das das Regiões 2 e 3. Os dois serviços a que esta faixa está atribuída, a saber, o serviço de radionavegação aeronáutica e o serviço móvel marítimo, são ambos extremamente importantes sob o ponto de vista da segurança. As delegações dos dois países acima mencionados pensam, portanto, que tal decisão suscitará graves problemas no que respeita à salvaguarda da vida humana.

Para evitar qualquer repercussão dessa decisão, as delegações dos países mencionados acima propuseram, em todas as fases das deliberações da presente Conferência, soluções visando garantir a protecção absoluta desses serviços e em especial do serviço de radionavegação aeronáutica. Como essas soluções não foram aceites pela presente Conferência, as delegações em questão declaram que as suas administrações não podem assumir a responsabilidade pelas eventuais consequências da utilização desta faixa tal como foi decidida, devido ao carácter internacional dos dois serviços.

Além disso, as delegações mencionadas acima declaram que reservam para as suas administrações o direito de modificar as consignações de frequência das suas estações costeiras na faixa de 415-435 kHz até à data de entrada em vigor de uma versão revista do Plano de Copenhaga, que especificará frequências de substituição na faixa de 435-495 kHz, seja qual for a data fixada.

N.° 15

República Oriental do Uruguai

A delegação da República Oriental do Uruguai declara que, em face da redução da largura das faixas de frequências atribuídas ao serviço fixo entre 4 e 27,5 kHz e dado que não foi previsto qualquer procedimento de reconsignação de frequências que permitisse garantir a certeza da continuidade de funcionamento das estações radioeléctricas do Uruguai quando o serviço de radiodifusão e o serviço móvel marítimo utilizarem as partes das faixas que foram retiradas ao serviço fixo, o seu Governo reserva-se o direito de adoptar as medidas que considere necessárias para continuar a utilizar convenientemente as frequências do serviço fixo que estão inscritas em nome do Uruguai no Ficheiro de Referência Internacional das Frequências — frequências que se revestem de importância vital para o país — até que sejam fornecidas novas frequências de substituição capazes de assegurar o bom funcionamento dos serviços de radiocomunicação do Uruguai.

A delegação da República Oriental do Uruguai duvida que, nas faixas do serviço fixo assim reduzidas, e especialmente em certas zonas ou sub-regiões em que o espectro está já congestionado, seja possível reconsignar as vias a transferir, apesar da redução dos valores dos parâmetros técnicos aplicáveis aos seus circuitos.

Por outro lado, a delegação da República Oriental do Uruguai reserva para o seu Governo o direito de adoptar as medidas que julgue necessárias para proteger os seus interesses caso as frequências de substituição atribuídas a qualquer outra administração venham a comprometer o seu sistema de radiocomunicação.

N.° 16

Japão

As interferências causadas por certas estações de radiodifusão da Região 1 que funcionam na faixa das ondas quilométricas comprometem o bom funcionamento das estações de radiofarol aeronáuticas do Japão.

Essas interferências aumentarão consideravelmente quando novos emissores de radiodifusão em ondas quilométricas sejam postos em serviço ou quando sejam introduzidas modificações nas características das consignações existentes a estações de radiodifusão em ondas quilométricas.

Como vem mencionado explicitamente nos considerandos da Resolução n.° 7 da Conferência Administrativa Regional de Radiodifusão em Ondas Quilométricas e Hectométricas (Genebra, 1975) e no § 4.4.4.1 do relatório da reunião especial preparatória da CCIR (Genebra, 1978), a utilização da faixa das ondas quilométricas pelas estações de radiodifusão da Região 1 pode influenciar desfavoravelmente as estações de outros serviços de radiocomunicação a que esta faixa está atribuída noutras regiões, especialmente as estações do serviço de radionavegação aeronáutica utilizadas para a salvaguarda da vida humana.

Todavia, a presente Conferência não resolveu o problema acima mencionado relativamente à utilização da faixa das ondas quilométricas. Além disso, adoptou uma Resolução relativa á modificação das frequências portadoras das estações de radiodifusão em ondas quilométricas na Região 1 sem ter tomado devidamente em consideração as possibilidades suplementares de interferência que daí possam resultar para as estações de radiofarol aeronáuticas da Região 3.

Consequentemente, a delegação do Japão reserva para o seu Governo o direito de tomar todas as medidas necessárias, incluindo um novo arranjo das suas consignações de frequências na faixa compreendida entre 130 e 526,5 kHz, sem ter em conta as atribuições feitas no Regulamento das Radiocomunicações, no caso de estações de radiodifusão da Região 1 prejudicarem gravemente o bom funcionamento das estações de radiofarol aeronáuticas do Japão na faixa de frequências compreendida entre 190 e 285 kHz.

N.° 17

República Federal da Nigéria

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República Federal da Nigéria reserva para o seu Governo o direito de tomar todas as medidas que considere necessárias para salvaguardar os seus interesses no caso de as reservas ou as interpretações erróneas dos Actos Finais feitas por outros países ou organizações constituírem ameaça para os serviços de telecomunicação da República Federal da Nigéria ou os prejudicarem.

Em especial, a delegação da República Federal da Nigéria não pode aceitar a decisão tomada por esta Conferência relativamente às ligações de conexão do serviço de radiodifusão por satélite, na faixa de 14-14,8 GHz, pelas seguintes razões:

a) A Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite, de 1977, elaborou um plano para as ligações descendentes na faixa de 11,7-12,5 GHz, com uma largura de faixa de 800 MHz;

b) A largura de faixa que foi atribuída exclusivamente às ligações de conexão do serviço de radiodifusão por satélite na nossa faixa de frequências preferida (14,5-15,3 GHz) é apenas de 300 MHz na faixa de 14,5-14,8 GHz aceite pela Conferência. Esta largura de faixa não será suficiente, dado o grande número de administrações por posição orbital.

N.° 18

República do Zaire

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República do Zaire reserva para o seu Governo o direito de tomar todas as medidas que julgue necessárias para assegurar a protecção dos seus serviços de radiocomunicações no caso de certos Membros da União não observarem as disposições do Regulamento das Radiocomunicações ou se as reservas formuladas pelas delegações de outros países vierem a comprometer o bom funcionamento dos serviços de radiocomunicações zairenses.

N.° 19

Canadá

a) Satélites do serviço móvel que funcionam na faixa das ondas decimétricas:

O Canadá concorda que os sistemas móveis de satélites que venha a pôr em serviço de acordo com o n.º **641** do Regulamento das Radiocomunicações devem ser coordenados e notificados relativamente aos artigos 11, 13 e 14. Mas, uma vez postos em serviço esses satélites, o Canadá considera que funcionarão no quadro de uma atribuição a título primário durante toda a duração da sua vida útil.

b) Radiodifusão em ondas decamétricas:

O Canadá considera que a presente Conferência não trouxe solução à grave saturação das faixas atribuídas ao serviço de radiodifusão em ondas decamétricas abaixo de 9 MHz. A Conferência rejeitou, por muito escassa maioria, uma proposta do Canadá que visava acrescentar em todo o mundo uma faixa de 100 kHz, entre 7300 e 7400 kHz, às frequências atribuídas a este serviço, quando essa adição teria permitido resolver o problema. É por isso que, ao assinar os presentes Actos Finais, o Canadá se reserva o direito de dar resposta a algumas das suas necessidades de radiodifusão recorrendo á faixa de 7300-7400 kHz. Certamente que, na medida do possível, o Canadá respeitará os direitos das administrações cujos serviços sejam explorados de acordo com os Actos Finais da presente Conferência.

N.° 20

República Popular da China

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República Popular da China declara o seguinte, em nome do Governo Chinês:

A delegação da China toma nota da decisão tomada pela presente Conferência acerca da convocação de uma Conferência Administrativa Mundial da Radiocomunicações encarregada de elaborar um plano para as faixas de ondas decamétricas atribuídas ao serviço de radiodifusão e pensa que se trata de uma medida eficaz que permitirá resolver o problema da saturação nas faixas atribuídas à radiodifusão em ondas decamétricas e o das emissões fora de faixa. Todavia, por razões de natureza histórica, a Administração da China reserva-se o direito de continuar a empregar as frequências que utiliza actualmente para a radiodifusão na faixa de 5060-27 500 kHz até à elaboração e à aplicação do proposto plano de radiodifusão em ondas decamétricas.

N.° 21

Chile

A delegação do Chile à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) declara, acerca das obrigações decorrentes do Regulamento das Radiocomunicações revisto, e mais especialmente no que respeita à transferência das atribuições actuais do serviço fixo em benefício de outros serviços na faixa das ondas decamétricas, que fará todos os esforços necessários para aplicar a nova regulamentação.

Contudo, reserva para o seu Governo o direito de tomar todas as medidas que julgue necessárias para manter em serviço, no interior do território nacional, as ligações do serviço fixo que, por razões técnicas, económicas ou outras, não possam ser transferidas nos prazos fixados pela presente Conferência.

N.° 22

República da Índia

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República da Índia não aceita as repercussões, sejam elas quais forem, das reservas que possa formular qualquer outra administração relativamente às disposições dos Actos Finais. A delegação da República da Índia reserva para o seu Governo o direito de tomar as medidas que julgue necessárias para proteger os seus interesses no caso de uma administração não observar as disposições do Regulamento das Radiocomunicações tais como foram revistas pela presente Conferência.

N.° 23

México

A delegação do México, ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), expressa a intenção da sua Administração de cumprir as disposições do Regulamento das Radiocomunicações, tais como adoptadas pela dita Conferência. Contudo, declara que o seu Governo se reserva o direito de tomar as medidas que considere necessárias para proteger os seus interesses no caso de um Membro da União não respeitar as disposições do referido Regulamento.

De igual modo, a delegação do México declara que a sua Administração fará todos os esforços para que a transferência das estações dos serviços fixo e móvel terrestre, actualmente registadas de acordo com o Quadro de atribuição das faixas de frequências em vigor, se faça nos prazos adoptados, para que a sua utilização esteja conforme com o novo Quadro. Todavia, se, na sequência das decisões tomadas pela presente Conferência para reduzir as faixas atribuídas a esses serviços ou para limitar a sua operação nas faixas de ondas decamétricas em proveito de outros serviços, as referidas estações não puderem continuar a funcionar eficazmente nas faixas que lhes foram consignadas ou nas faixas de substituição eventuais, o Governo do México reserva-se o direito de adoptar as medidas que julgue apropriadas para assegurar o funcionamento satisfatório dessas estações.

N.° 24

República da Costa do Marfim

A delegação da República da Costa do Marfim reserva para o seu Governo o direito de tomar todas as disposições que julgue necessárias para assegurar a protecção e o bom funcionamento dos seus serviços de telecomunicações em caso de não observância pelos outros Membros da União das disposições contidas no Regulamento das Radiocomunicações (Genebra, 1979).

N.° 25

República Islâmica do Irão

Relativamente às atribuições na faixa de 150-285 kHz inscritas no Quadro de atribuição das faixas de frequências e aprovadas pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação do Irão declara:

a) Que as estações de radiodifusão em ondas quilométricas de grande potência da Região 1 causam já interferências prejudiciais à radionavegação aeronáutica;

b) Que modificações das características de potência ou das frequências dos emissores de radiodifusão em ondas quilométricas, ou então a entrada em serviço de novas consignações na faixa das ondas quilométricas (150-285 kHz), aumentarão essas interferências e tornarão, por consequência, muito mais difícil no Irão a utilização actual da radionavegação aeronáutica;

c) Que, consequentemente, a Administração da República do Irão reserva para o seu país o direito de tomar as medidas necessárias para assegurar a protecção do serviço de radionavegação aeronáutica;

d) Que reserva igualmente o seu direito de utilizar também a porção de 160-190 kHz da faixa de 150-285 kHz para o serviço de radiodifusão em ondas quilométricas de acordo com as necessidades do Irão.

N.º 26

República da Venezuela

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da Venezuela expressa a intenção da sua administração de cumprir as disposições do Regulamento das Radiocomunicações revisto. Contudo, declara que o seu Governo se reserva o direito de adoptar as medidas que considere necessárias para proteger os seus interesses, muito especialmente no que se refere aos serviços fixo e móvel abaixo de 9975 kHz, bem como no caso em que um Membro da União não observe as disposições do Regulamento das Radiocomunicações (Genebra, 1979), ou no caso em que as reservas formuladas por outros países prejudiquem os seus serviços de telecomunicações actuais ou em projecto.

N.º 27

Estado da Cidade do Vaticano, Itália, Portugal e Turquia

Na opinião das Administrações pré-citadas, a presente Conferência não adoptou disposições apropriadas para dar resposta às necessidades do serviço de radiodifusão em ondas decamétricas, especialmente nas faixas de 6 e 7 MHz. Por este facto, a Conferência prevista na Resolução n.º 508 não poderá estabelecer um plano para todas as faixas de frequências atribuídas à radiodifusão em ondas decamétricas, e estes países não poderão, portanto, assegurar uma exploração contínua do seu serviço de radiodifusão em ondas decamétricas em face das condições de propagação variáveis ao longo do ciclo solar.

Consequentemente, as administrações pré-citadas reservam-se o direito de tomar as medidas necessárias para dar resposta às necessidades do seu serviço de radiodifusão em ondas decamétricas.

N.º 28

França, Principado do Listenstaina e Confederação Suíça

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), as delegações dos países supramencionados declaram reservar-se o direito de tomar qualquer medida considerada necessária para proteger os seus interesses se reservas apresentadas ou outras medidas tomadas vierem a ter consequências que prejudiquem o bom funcionamento dos seus serviços de radiocomunicações ou se certos Membros vierem a não cumprir as disposições em vigor do Regulamento das Radiocomunicações, especialmente no caso de eles estabelecerem ou explorarem, ou então deixarem estabelecer ou explorar, em seu território, sem coordenação prévia, estações do serviço de radiodifusão que não respeitem as disposições do n.º **2666** do Regulamento das Radiocomunicações.

N.º 29

República Federativa do Brasil

A presente Conferência adoptou a Resolução n.º 4, relativa ao período de validade das consignações de frequência às estações espaciais que utilizam a órbita dos satélites geostacionários. Sobre o assunto, a delegação da República Federativa do Brasil deseja formular as seguintes observações:

a) É inútil adoptar, na presente Conferência, o procedimento experimental descrito na Resolução em questão, tendo em conta as existentes disposições regulamentares do artigo 13;

b) O período fixado para a aplicação do procedimento experimental, que vai de 1 de Julho de 1980 até à próxima Conferência Mundial das Radiocomunicações Espaciais, não corresponde ao período muito mais longo que seria necessário para a aplicação completa desse procedimento, de modo a obter resultados significativos que permitissem avaliar a sua utilidade;

c) Os procedimentos adoptados nos termos da Resolução em questão podem facilmente levar a pensar que um dado país ou grupo de países tem um direito de prioridade permanente e pode apropriar-se das consignações de frequência e das posições orbitais, o que é contrário aos princípios expostos no artigo 33 da Convenção Internacional das Telecomunicações da UIT (Málaga, Torremolinos, 1973) e nas Resoluções n.ºs 2 e 3 adoptadas pela presente Conferência.

Por consequência, ao assinar os Actos Finais da presente Conferência, a delegação da República Federativa do Brasil reserva os direitos do seu Governo relativamente à aplicação da Resolução n.º 4 por um dado país ou grupo de países sempre que essa aplicação for considerada contrária às disposições dos artigos 11 e 13 adoptadas pela presente Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979).

N.º 30

Estado de Israel

A delegação de Israel declara que a assinatura que ela porá no Acordo e a eventual aprovação deste Acordo pela sua Administração só terá efeito e só obrigará Israel relativamente às administrações que apliquem as disposições da Convenção nas suas relações com o Estado de Israel.

Israel considera-se igualmente, e para todos os efeitos, incluído nas notas 621 (174-223 MHz) e 866 (15,7-17,3 GHz) — a despeito das objecções infundadas de um grupo muito pequeno de delegações.

Sem deixar de apoiar o princípio de uma planificação das faixas de ondas decamétricas para o serviço de radiodifusão, em conformidade com a Resolução n.º 508 da presente Conferência, a delegação de Israel nota:

a) Que as faixas de ondas decamétricas atribuídas pela presente Conferência ao serviço de radiodifusão não são suficientes para assegurar uma base apropriada para tal planificação;

b) Que a presente Conferência não tomou qualquer disposição contra a «interferência intencional» — quando é notório que certos Membros da União causam deliberadamente interferências prejudiciais aos serviços de radiodifusão;

c) Que esta prática de interferência intencional inutiliza mais de 50 % do espectro das frequências atribuído ao serviço de radiodifusão, que é absolutamente incompatível com a própria noção de planificação e que constitui violação flagrante da letra e do espírito da Convenção da UIT e do Regulamento das Radiocomunicações.

Nestas condições, Israel reserva-se o direito de tomar todas as medidas necessárias para assegurar o bom funcionamento e a protecção adequada dos seus serviços de radiodifusão. Ao fazê-lo, Israel não deixará de se esforçar por, na medida do possível, respeitar os direitos das administrações cujos serviços são explorados em conformidade com a Convenção e com os Actos Finais da presente Conferência.

N.º 31

Turquia

Ao assinar os Actos Finais da presente Conferência em nome do seu Governo, a delegação da Turquia à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) declara oficialmente que o Governo da Turquia não aceita qualquer obrigação decorrente da atribuição adicional (nota 694) da faixa de frequências de 645-862 MHz ao serviço de radionavegação aeronáutica a título permitido, a fim de assegurar a protecção do serviço de radionavegação aeronáutica contra as estações de radiodifusão existentes ou em projecto que funcionem em conformidade com o Quadro de atribuição das faixas de frequências na zona situada a leste de 40° E.

N.º 32

República Federal da Alemanha, Bélgica, Dinamarca, Estados Unidos da América, Grécia, Islândia, Itália, Luxemburgo, Noruega, Reino dos Países Baixos, Portugal, Reino Unido da Grã-Bretanha e da Irlanda do Norte e Turquia

As administrações dos países supramencionados reservam-se o direito de explorar sistemas, no serviço móvel por satélite, na faixa de frequência de 235-399,9 MHz, nos termos das disposições da nota do quadro de atribuição das faixas de frequências pertinente, com a única reserva do procedimento de coordenação previsto no artigo 14. A disposição suplementar dessa nota impõe uma condição de ausência de interferência que poderia conduzir a que fosse exigida a interrupção da exploração de um sistema de satélites que tivesse já sido objecto de uma coordenação se uma administração, apesar de ter aprovado o sistema de satélites em questão, viesse a pôr em serviço, ou simplesmente a projectar pôr em serviço, um sistema susceptível de sofrer interferências prejudiciais. As administrações supramencionadas não aceitam essa condição.

N.º 33

Áustria, Dinamarca, Espanha, Finlândia, França, Principado do Listenstaina, Noruega, Portugal, Suécia e Confederação Suíça

Ao assinar os Actos Finais da Conferência, as delegações da Áustria, Dinamarca, Espanha, Finlândia, França, Listenstaina, Noruega, Portugal, Suécia e Suíça desejam fazer a seguinte declaração:

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) recusou-se a incluir no Regulamento das Radiocomunicações uma disposição que teria permitido atribuir ao serviço móvel aeronáutico de certos países da Região 1 e da Região 2 a faixa de frequência de 862-960 MHz. A disposição proposta limitava claramente a exploração desse serviço a um pequeno número de vias no interior dessa faixa, no quadro de um sistema radiotelefónico público e sob reserva de acordos obtidos em conformidade com o procedimento previsto no artigo 14.

A disposição proposta destinava-se a favorecer a integração eventual de certas estações de aeronaves numa rede radiotelefónica pública integrada no solo e a proteger ao mesmo tempo os outros serviços que funcionam em conformidade com o quadro de atribuição das faixas de frequências.

São numerosos os países que têm urgente necessidade de serviços móveis telefónicos públicos, e o aumento dessas necessidades acelerar-se-á com a melhoria das redes telefónicas públicas tradicionais.

As delegações supramencionadas, notando com muita preocupação que tenha sido recusado o reconhecimento internacional a essa atribuição, reservam para as suas administrações o direito de utilizarem um número limitado de frequências no interior da faixa de 862-960 MHz para comunicar com as aeronaves no quadro de uma rede do serviço móvel telefónico público em conformidade com as condições descritas.

Serão tomadas medidas para garantir que os serviços mencionados acima não causem interferência prejudicial aos serviços que funcionam em conformidade com o quadro de atribuição das faixas de frequências nos outros países.

N.º 34

República Socialista Soviética da Bielorrússia, República Socialista Soviética da Ucrânia e União das Repúblicas Socialistas Soviéticas

No quadro de atribuição das faixas de frequências revisto pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) foram feitas atribuições ao serviço de radiodifusão na faixa das ondas decamétricas em prejuízo das atribuições ao serviço fixo.

Dado que, na URSS, as estações do serviço fixo funcionam de há muito nessas faixas de frequência, as delegações da União das Repúblicas Socialistas Soviéticas, da República Socialista Soviética da Ucrânia e da República Socialista Soviética da Bielorrússia estão autorizadas a declarar que na URSS as faixas de ondas decamétricas atribuídas adicionalmente em exclusivo ao serviço de radiodifusão serão também utilizadas pelo serviço fixo.

N.º 35

República Federal da Alemanha

Ao assinar os Actos Finais desta Conferência, a delegação da República Federal da Alemanha declara que a atribuição revista do espectro das faixas de ondas decamétricas ao serviço fixo ao serviço de radiodifusão e ao serviço marítimo não satisfaz as necessidades desses serviços na República Federal da Alemanha, tais como formuladas nos documentos pertinentes apresentados à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979).

A solução dos problemas existentes está condicionada pela transferência satisfatória desses serviços e pela elaboração de um plano de radiodifusão em ondas decamétricas aceite internacionalmente e que permita, nas faixas atribuídas ao serviço de radiodifusão, a inclusão necessária de todas as emissões fora de faixa e satisfaça as necessidades do serviço de radiodifusão em ondas decamétricas da República Federal da Alemanha.

Por consequência, no que se refere ao espectro das faixas de ondas decamétricas, a República Federal da Alemanha reserva-se o direito de tomar as medidas necessárias para fazer face às necessidades mínimas dos seus serviços respectivos.

N.º 36

Reino da Arábia Saudita, República de Chipre, Espanha, Estados Unidos da América, Grécia, Reino Unido da Grã-Bretanha e da Irlanda do Norte, República Socialista Democrática do Sri Lanka e República da Zâmbia

Os países supramencionados consideram que esta Conferência não esteve em condições de dar resposta satisfatória às necessidades do serviço de radiodifusão em ondas decamétricas, nas atribuições de faixas de frequências revistas, especialmente nas faixas de 6 e 7 MHz. Se a proposta Conferência de Radiodifusão em Ondas Decamétricas não estiver habilitada, pela sua agenda, a dispor de certas partes do espectro atribuídas ao serviço fixo, ficará impossibilitada de planear a utilização de todas as faixas de frequências de modo a permitir aos países assegurarem os seus serviços de radiodifusão em caso de variações das condições de propagação ao longo de todo o ciclo de actividade solar. Na falta de um plano adequado, as administrações supramencionadas reservam-se o direito de tomar as medidas necessárias para satisfazer as necessidades dos respectivos serviços de radiodifusão em ondas decamétricas.

N.º 37

República da Coreia

A delegação da República da Coreia, em nome do seu Governo, reserva para este o direito de tomar qualquer decisão que julgue necessária para salvaguardar os seus interesses, se outros Membros não observarem as disposições do Regulamento das Radiocomunicações (Genebra, 1979) ou dos seus anexos, ou se as reservas formuladas por outros países comprometerem o bom funcionamento dos seus serviços de telecomunicação.

N.º 38

Estados Unidos da América

A delegação dos Estados Unidos da América declara oficialmente que, ao assinar os presentes Actos Finais em nome dos Estados Unidos da América, não aceita certas decisões tomadas pela presente Conferência relativamente ao quadro de atribuição das faixas de frequências e às notas associadas a esse quadro. Por consequência:

1) Dado que a presente Conferência não previu atribuições suficientes para o serviço de radiodifusão em ondas decamétricas, especialmente nos 6 e 7 MHz, os Estados Unidos da América põem reservas sobre esta questão, como indicado na Declaração n.º 36, apresentada juntamente com as delegações da Arábia Saudita, de Chipre, da Espanha, da Grécia, do Reino Unido, do Sri Lanka e da Zâmbia;
2) Os Estados Unidos da América reservam-se o direito de explorar estações do serviço móvel por satélite na faixa de frequências de 235 a 399,9 MHz, como indicado na Declaração n.º 32, apresentada juntamente com as delegações da República Federal da Alemanha, da Bélgica, da Dinamarca, da Grécia, da Islândia, da Itália, do Luxemburgo, da Noruega, dos Países Baixos, de Portugal, do Reino Unido e da Turquia;
3) Na exploração das estações do serviço de localização, a título primário, nas faixas de 430-440 MHz, 5650-5850 MHz, 8500-8750 MHz, 8850-9000 MHz, 9200-9300 MHz, 9500-9800 MHz, 10 000-10 500 MHz, 13,4-14 GHz, 15,7-17,3 GHz e 33,4-36 GHz, os Estados Unidos não podem garantir a protecção de outros serviços nem a coordenação com outros serviços;
4) Os Estados Unidos da América reservam-se o direito de explorar estações do serviço fixo, do serviço móvel e do serviço de radiolocalização, a título primário, nas faixas especificadas nas notas relativas às faixas de frequências de 470-806 MHz e 890-960 MHz, sem a condição indicada nessas notas, que tornam tal exploração sujeita a um acordo nos termos do artigo 14. Os Estados Unidos coordenarão a utilização desses serviços com as administrações dos países vizinhos que são afectados;
5) Dado que a Conferência não efectuou atribuições suficientes para o serviço móvel marítimo em ondas decamétricas, especialmente abaixo de 12 MHz, os Estados Unidos declaram a sua intenção de satisfazer as necessidades do serviço móvel marítimo nas diferentes faixas de ondas decamétricas inferiores a 10 MHz que foram atribuídas ao serviço móvel a título primário.

N.º 39

Estados Unidos da América

A administração dos Estados Unidos da América chama a atenção para o facto de que algumas das suas emissões de radiodifusão nas faixas de ondas decamétricas atribuídas ao serviço de radiodifusão sofrem, da parte de Administrações signatárias dos presentes Actos Finais, interferências prejudiciais intencionais, interferências que são incompatíveis com a utilização racional e equitativa dessas faixas. Declara que enquanto essas interferências existirem se reserva o direito de tomar, a respeito delas, as medidas necessárias e apropriadas para proteger os interesses dos seus serviços de radiodifusão. No entanto, ao fazê-lo, tenciona, respeitar, na medida do possível, os direitos das administrações cujos serviços são explorados em conformidade com os presentes Actos Finais.

N.º 40

República da Colômbia, República Popular do Congo, Equador, República Gabonesa, República do Quénia, República da Uganda, República Democrática da Somália e República do Zaire

As delegações dos países supramencionados ratificam, na sua totalidade, a Reserva n.º 51 formulada na Conferência Administrativa Mundial das Radiocomunicações para a Radiodifusão por Satélite (1977) e, por consequência, reiteram o conteúdo dessa reserva no que diz respeito à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979).

De igual modo, as delegações pré-citadas desejam afirmar que a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), não têm competência para tratar ou decidir sobre questões de carácter territorial nem sobre aspectos relacionados com a soberania dos Estados.

Por outro lado, as delegações pré-citadas declaram mais uma vez que a posição dos países equatoriais relativamente às questões relacionadas com os segmentos da órbita dos satélites geostacionários situados por cima dos seus respectivos territórios se destina a trazer um benefício autêntico aos povos dos seus respectivos países, à comunidade internacional e, especialmente, aos países em desenvolvimento. Ao mesmo tempo, essas delegações expressam a sua oposição a que continue a ser aplicado o princípio «primeiro chegado, primeiro servido», que aproveita apenas a um pequeno número de países, beneficiários exclusivos desse natural limitado, em detrimento dos outros membros da comunidade internacional e, em particular, dos países em desenvolvimento.

Finalmente, as delegações dos países supramencionados declaram oficialmente que não aceitam e que, por consequência, não se consideram obrigadas, após a assinatura dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) e, em nenhuma circunstância, pelas resoluções, recomendações, acordos e decisões desta Conferência relativos ao posicionamento dos satélites geostacionários nos segmentos da órbita que correspondem aos territórios sobre os quais se exercem os direitos soberanos desses países.

N.º 41

República da Colômbia

Em nome do seu Governo, a delegação da Colômbia à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) reserva-se o direito de tomar, quando considerar necessário, as medidas apropriadas a propósito das obrigações que decorrem do Regulamento das Radiocomunicações, tal como revisto pela presente Conferência, e em especial acerca da transferência das consignações de frequências às estações do serviço fixo nas partes das faixas de ondas decamétricas que foram atribuídas a outros serviços.

Do mesmo modo, a delegação da Colômbia reserva-se o direito de continuar a utilizar, no interior do território nacional, as ligações do serviço fixo que funcionam em conformidade com o Regulamento em vigor e que, por razões técnicas, económicas e outras, não podem ser transferidas nos prazos previstos na presente Conferência.

N.º 42

República da Indonésia

A delegação da República da Indonésia à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979):

a) Reserva para o seu Governo o direito de tomar qualquer decisão ou qualquer medida de conservação visando salvaguardar os seus interesses em caso de os Actos Finais elaborados pela presente Conferência se acharem em contravenção com a Constituição, as leis e os direitos da República da Indonésia tais como existem actualmente ou possam resultar dos princípios formulados em 3 de Dezembro de 1976 na Declaração de Bogotá pelos países equatoriais, assim como de qualquer outro princípio do direito internacional. Ao fazer isso, o Governo da República da Indonésia terá em conta os interesses legítimos dos outros países, a fim de promover a cooperação internacional no que respeita à utilização pacífica do espaço para o bem de toda a humanidade;

b) Reserva igualmente o direito do seu Governo a tomar qualquer decisão e qualquer medida de conservação visando salvaguardar os seus interesses no caso em que Membros da União não observem as disposições dos Actos Finais da Conferência, ou em que reservas formuladas por outros Membros venham a comprometer os seus direitos.

N.º 43

Áustria

Ao assinar os Actos Finais da Conferência, a delegação da Áustria deseja fazer a seguinte declaração:

A Áustria não aprova as atribuições das faixas de ondas decamétricas de 5850-5950 kHz e 7300-7400 kHz aos serviços fixo e móvel, dado que não existe qualquer atribuição adicional ao serviço de radiodifusão nas faixas de 6 e 7 MHz.

Por consequência, a administração austríaca considera que a proposta Conferência da Radiodifusão em Ondas Decamétricas não estará em condições de planificar todas as faixas de frequências de modo a permitir aos países assegurarem um funcionamento regular dos respectivos serviços de radiodifusão, tendo em conta as condições de propagação variáveis durante o ciclo solar.

Por isso a delegação austríaca reserva para a sua administração o direito de tomar as medidas necessárias para salvaguardar os interesses dos seus serviços de radiodifusão em ondas decamétricas. Ao fazê-lo, a administração austríaca terá em conta, na medida do possível, os interesses dos serviços de outros países.

N.º 44

República Popular de Angola

A delegação da República Popular de Angola reserva para o seu Governo o direito de tomar todas as medidas que considere necessárias para proteger os interesses das suas telecomunicações se certos Membros não observarem as disposições do Regulamento das Radiocomunicações ou se reservas formuladas por outros países comprometerem o bom funcionamento dos seus serviços de telecomunicações.

N.º 45

República Argentina

A) A delegação da República Argentina declara que o seu Governo se reserva o direito de adoptar as medidas que considere pertinentes para assegurar o bom funcionamento dos seus serviços de telecomunicações se os seus interesses

estiverem comprometidos pelas decisões da presente Conferência, especialmente no que se refere à aplicação do procedimento de libertação de partes da faixa atribuída ao serviço fixo nas ondas decamétricas entre 4000 e 27 500 kHz e da transferência das estações do dito serviço das partes da faixa em questão para outras faixas de frequências.

De igual modo, a delegação da Argentina declara que se as reservas formuladas por outros países vierem a prejudicar os seus serviços de telecomunicações, a República Argentina reserva-se o direito de tomar as disposições necessárias para proteger os seus serviços.

B) A delegação da República Argentina declara que o seu Governo não reconhece as consignações de frequência que possam ser feitas directa ou indirectamente a quaisquer serviços, em qualquer parte do espectro radioeléctrico, para as ilhas Malvinas, a ilha da Geórgia do Sul, as ilhas Sandwich do Sul e o Antárctico argentino entre 25° e 74° de longitude oeste de Greenwich, ao sul de 60° de latitude sul, se essas consignações forem feitas em nome de um ou vários outros Estados, pois a República Argentina exerce direitos de soberania sobre esses territórios. De qualquer modo, a República Argentina reserva-se o direito de utilizar conforme entenda as frequências radioeléctricas consignadas nas condições pré-citadas.

C) Em nome do seu Governo, a delegação da República Argentina declara que a ocupação ilícita das ilhas Malvinas, das ilhas da Geórgia do Sul e Sandwich do Sul pelo Reino Unido foi conhecida pela Organização das Nações Unidas, que nas suas Resoluções n.^{os} 2065 (XX), 3160 (XXVIII) e 31/49 tem pedido instantemente que sejam activadas as negociações entre os dois Governos para acabar com uma situação de tipo colonial.

N.º 46

República Democrática Popular do Iémene

Ao assinar os Actos Finais da Conferência Mundial das Radiocomunicações (Genebra, 1979), a delegação da República Popular do Iémene, ao mesmo tempo que reafirma o seu apoio à cooperação internacional no domínio das telecomunicações, reserva para o seu Governo o direito de tomar todas as medidas que considere necessárias para proteger os seus interesses se um país não observar, seja de que modo for, as disposições dos Actos Finais da Conferência acima mencionada ou se reservas formuladas por outros países vierem a comprometer os seus serviços de telecomunicações.

N.º 47

República do Iraque e República Árabe Síria

As administrações dos países acima mencionados confirmam que, de acordo com a Resolução n.º 1, a IFRB não deveria aceitar qualquer notificação de consignação de frequências a estações situadas num território ocupado quando essas notificações são apresentadas pela administração do país ocupante.

N.º 48

Irlanda e Reino Unido da Grã-Bretanha e da Irlanda do Norte

Dado que não foi possível, na presente Conferência, obter a inclusão da Irlanda na nota 621, as delegações acima mencionadas declaram que as administrações aplicarão o Regulamento das Radiocomunicações como se a Irlanda tivesse sido mencionada na referida nota.

N. º 49

República Unida da Tanzânia

O Governo da República Unida da Tanzânia reserva-se o direito de tomar qualquer decisão que considere necessária para proteger os seus interesses se houver Membros que não observem de qualquer modo as disposições do Regulamento das Radiocomunicações — Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) — ou se reservas formuladas por outros países vierem a comprometer o bom funcionamento dos seus serviços de radiocomunicações.

N. º 50

República Popular de Moçambique

A delegação da República Popular de Moçambique reserva o direito do seu Governo de tomar todas as medidas necessárias para proteger os seus interesses se qualquer país não observar as disposições do Regulamento das Radiocomunicações elaborado pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), ou se as reservas formuladas por qualquer país vierem a comprometer o bom funcionamento dos seus serviços de telecomunicações.

N. º 51

República da Zâmbia

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República da Zâmbia reserva para o seu Governo o direito de tomar todas as medidas que considere necessárias para proteger os seus interesses em matéria de telecomunicações se qualquer Membro da UIT não observar, seja de que modo for, as disposições do Regulamento das Radiocomunicações.

N. º 52

República do Níger

À luz das reservas já apresentadas, a delegação do Níger à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) reserva ao seu Governo o direito de tomar todas as medidas úteis para proteger os seus interesses em matéria de radiocomunicações se não forem respeitadas as disposições dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) e do Regulamento das Radiocomunicações saído da referida Conferência.

N. º 53

República Popular do Congo

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação congolesa toma nota com apreensão das reservas formuladas por outras delegações no que se refere à utilização e à aplicação do Regulamento das Radiocomunicações.

Por consequência, a delegação da República Popular do Congo reserva para o seu Governo o direito de tomar medidas necessárias para a salvaguarda dos seus interesses no caso de os países signatários dos Actos Finais não observarem as disposições do Regulamento das Radiocomunicações, ou se as reservas formuladas pelas delegações de outros países vierem a comprometer o bom funcionamento dos seus serviços de radiocomunicações.

N. º 54

República Popular e Revolucionária da Guiné

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República Popular e Revolucionária da Guiné notou com apreensão as reservas feitas por certos Membros, especialmente no que se refere às atribuições inscritas no quadro de atribuição das faixas de frequências e ao respeito pelas disposições do Regulamento das Radiocomunicações.

Por consequência, reserva para o seu Governo o direito de tomar todas as medidas que considere úteis para salvaguardar os seus interesses em matéria de telecomunicações.

N. º 55

República Socialista Democrática do Sri Lanka

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República Socialista Democrática do Sri Lanka notou que várias administrações emitiram reservas relativamente a diversas disposições dos Actos Finais da Conferência encarregada de remodelar o Regulamento das Radiocomunicações.

A delegação da República Socialista Democrática do Sri Lanka reserva, portanto, para o seu Governo o direito de tomar todas as medidas que julgue necessárias para proteger os seus interesses no caso de as reservas em questão causarem prejuízo grave aos serviços de telecomunicações da República Socialista Democrática do Sri Lanka.

N. º 56

República Centro-Africana

A delegação da República Centro-Africana notou com apreensão certas reservas apresentadas quanto à aplicação das disposições do Regulamento das Radiocomunicações e especialmente no quadro de atribuições das faixas de frequências. Por consequência, reserva para o seu Governo o direito de tomar todas as medidas que julgue necessárias para proteger os seus serviços de telecomunicações e de aprovar o novo Regulamento das Radiocomunicações.

N. º 57

Ghana

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação do Ghana tomou nota das diversas reservas formuladas por outros países e está muito preocupada com as atribuições de frequências e as novas notas.

A delegação do Ghana reserva para o seu Governo o direito de proteger os seus interesses em matéria de telecomunicações e não aceita nenhuma das consequências das reservas formuladas por outros Governos que possam provocar um aumento da sua participação nos gastos da União.

N. º 58

República Socialista da Roménia

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República Socialista da Roménia notou com inquietação as reservas formuladas por outros países, especialmente no que respeita às atribuições no quadro de atribuição das faixas de frequências, assim como à aplicação do Regulamento das Radiocomunicações.

A delegação da República Socialista da Roménia reserva, portanto, para o seu Governo o direito de tomar todas as medidas que considere necessárias para proteger os seus interesses caso as reservas acima mencionadas venham a prejudicar os seus serviços de telecomunicações.

N. º 59

República da Libéria

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República da Libéria nota com preocupação as reservas formuladas por outros países no que respeita tanto às atribuições inscritas no quadro de atribuição das faixas de frequências como à aplicação do Regulamento das Radiocomunicações.

A delegação da República da Libéria reserva, portanto, para o seu Governo o direito de tomar todas as medidas que julgue necessárias para proteger os seus interesses no caso de essas reservas virem a prejudicar os seus serviços de telecomunicações.

N. º 60

Tailândia

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da Tailândia faz a seguinte declaração, em nome do seu Governo:

a) Ela verifica que numerosos países se reservam o direito de utilizar as porções das faixas de 5850-5950 kHz e de 7300-7400 kHz para serviços de radiodifusão;

b) Não aceita as reservas formuladas por outros países no que respeita à utilização das porções das faixas de 5859-5950 kHz e 7300-7400 kMz para serviços de radiodifusão e reserva para o seu Governo o direito de tomar todas as medidas firmes que possa julgar necessárias para proteger os seus serviços de telecomunicações;

c) Reservas para o seu Governo o direito de explorar estações do serviço móvel, excepto móvel aeronáutico, a título primário, nas faixas de 435-438 MHz e tomará as medidas necessárias para garantir que os serviços funcionem em conformidade com o quadro de atribuição das faixas de frequências noutros países não sofram qualquer interferência prejudicial provocada pelo serviço mencionado.

N. º 61

República Unida dos Camarões

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República Unida dos Camarões notou com grande preocupação as reservas feitas por outros países relativamente às atribuições feitas no quadro de atribuição das faixas de frequências e também relativamente à aplicação do Regulamento das Radiocomunicações.

A delegação da República Unida dos Camarões reserva, por consequência para o seu Governo o direito de tomar medidas julgadas necessárias para salvaguardar os seus interesses caso as reservas acima mencionadas venham a causar prejuízo aos seus serviços de telecomunicações.

N. º 62

Maurícia

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da Maurícia nota com preocupação as reservas formuladas por outras delegações especialmente no que respeita tanto às atribuições inscritas no quadro de atribuição das faixas de frequências como à aplicação do Regulamento das Radiocomunicações.

Por consequência, a delegação da Maurícia reserva para o seu Governo o direito de tomar qualquer medida que considere necessária para proteger os interesses do seu serviço de radiodifusão e dos outros serviços de telecomunicações caso essas reservas venham a comprometer, seja de que modo for, o bom funcionamento desses serviços.

N. º 63

República de Singapura

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), e após ter tomado nota das reservas apresentadas por outras delegações, especialmente no que respeita ao quadro de atribuições das faixas de frequências, a delegação da República de Singapura reserva para o seu Governo direito de tomar qualquer medida que considere necessária para proteger os seus interesses se um Membro não observar, seja de que modo for, as disposições do Regulamento das Radiocomunicações estabelecido pela referida Conferência, ou se as reservas mencionadas acima vierem a comprometer o bom funcionamento dos seus serviços de telecomunicações.

N. º 64

República das Filipinas

A delegação da República das Filipinas, após ter tomado nota das reservas formuladas por certas delegações, especialmente no que diz respeito à utilização do espectro das frequências, reserva para o seu Governo direito de tomar, se for caso disso, qualquer medida que possa ser necessária para proteger os seus interesses se alguns Membros não observarem as disposições dos Actos Finais da presente Conferência, dos seus anexos e do protocolo que lhe está agregado, ou se as reservas formuladas por outros países puderem ter consequências prejudiciais para os interesses das Filipinas.

N. º 65

Costa Rica

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da Costa Rica declara que a sua Administração procurará respeitar as disposições do Regulamento das Radiocomunicações adoptado no decurso da presente Conferência. Todavia, tendo em atenção as reservas formuladas por certos países, reserva para o seu Governo o direito:

a) De adoptar as medidas necessárias para proteger os serviços de radiocomunicações da Costa Rica no caso de a não observância do Regulamento, dos seus anexos e protocolos associados vir a causar prejuízo ao funcionamento dos seus serviços;

b) De não aceitar as reservas formuladas pelos diferentes países que não protegem os serviços fixo e móvel, dado que, especialmente nas faixas de ondas decamétricas, os referidos serviços têm importância capital para a Costa Rica e devem ser protegidos contra todos os tipos de interferências.

N. º 66

Equador

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação do Equador declara que a sua Administração se esforçará por respeitar todas as disposições do Regulamento que foi adoptado na presente Conferência. Contudo, tendo em atenção as reservas formuladas por outros países, reserva para o seu Governo o direito:

a) De adoptar as medidas que julgue necessárias para proteger os serviços de radiocomunicações do Equador, caso a não observância do Regulamento, dos seus anexos por outros países membros da União venha a prejudicar o funcionamento desses serviços;

b) De não aceitar as reservas formuladas por outros países se forem contrárias aos interesses nacionais do Equador;

c) De continuar a utilizar algumas das consignações actuais dos seus serviços fixo e móvel em ondas decamétricas se, por razões técnicas, económicas ou outras, não for possível transferi-los nos prazos previstos na presente Conferência.

N. º 67

República do Alto Volta

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República do Alto Volta notou com apreensão as reservas formuladas por certos países relativamente a certas disposições do Regulamento das Radiocomunicações.

Em consequência disso, reserva para o seu Governo o direito de tomar as medidas que julgue necessárias para salvaguardar os seus interesses, no caso de virem a ser comprometidos.

N. º 68

Reino Hachemita da Jordânia, Líbano e República Árabe Síria

As delegações pré-citadas à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), declaram-se solenemente obrigadas pelas disposições adoptadas pela presente Conferência, em conformidade com as disposições da Convenção Internacional das Telecomunicações.

Por consequência, rejeitam quaisquer declarações ou medidas que não estejam de acordo com as decisões formadas pela referida Conferência.

Em especial, afirmam que a declaração que figura na Reserva n.º 30, a propósito das notas relativas às faixas de 174-223 MHz e 15,7-17,3 GHz, é inaceitável, pois é contrária às decisões tomadas pela Conferência, a qual reconheceu inteiramente a justeza das objecções de ordem técnica formuladas pela delegação do Reino Hachemita da Jordânia contra a inclusão de Israel nas notas em questão.

N. º 69

República do Quénia

Devido às reservas apresentadas por certos países que procuram explorar certos serviços violando as disposições do Regulamento das Radiocomunicações estabelecido pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), a delegação da República do Quénia reserva para o seu Governo o direito de tomar as medidas que possa considerar necessárias para proteger os seus serviços de telecomunicações se outros Membros não observarem as disposições do Regulamento das Radiocomunicações, tal como revisto pela presente Conferência, em especial devido às Reservas n.^{os} 13, 32, 33, 36, 38 e 43 contidas no Protocolo final.

N. º 70

República Islâmica do Irão

A delegação da República Islâmica do Irão declara que a sua administração não aceita qualquer consequência das reservas formuladas por qualquer outra administração ou grupo de administrações relativamente às disposições dos Actos Finais. A delegação da Republica Islâmica do Irão reserva para o seu país o direito que o seu Governo tem de tomar todas as medidas que possa julgar necessárias para proteger os seus interesses se uma outra administração, especialmente em consequência de uma das Reservas n.^{os} 11, 32, 34 ou 38 do Protocolo final, não observar ou violar as disposições do Regulamento das Radiocomunicações, revisto pela presente Conferência e, mais particularmente, se tais actos prejudicarem as necessidades ou os interesses da República Islâmica do Irão.

N. º 71

República do Mali

Depois de ter tomado nota das reservas apresentadas por outras delegações, especialmente as que se relacionam com o quadro de atribuição das faixas de frequências, a delegação da República do Mali reserva para o seu Governo o direito de tomar as medidas que considere necessárias para salvaguardar os seus interesses se essas reservas ou o desrespeito das disposições do Regulamento das Radiocomunicações vierem a comprometer o bom funcionamento dos seus serviços de radiocomunicações.

N. º 72

Estados Unidos da América

Em referência à Reserva n.º 9 do Governo da República de Cuba, o Governo dos Estados Unidos da América nota que a presença dos Estados Unidos em Guantanamo está em conformidade com um tratado em vigor.

Os Estados Unidos reservam-se o direito de satisfazer, como no passado, as suas necessidades de radiocomunicações, em Guantanamo.

N. º 73

Bélgica, França, Luxemburgo, Reino dos Países Baixos e Confederação Suíça

Tomando nota das reservas expressas por diversas delegações acerca das atribuições insuficientes feitas ao serviço de radiodifusão na parte inferior da faixa das ondas decamétricas e das medidas que, como consequência, as suas respectivas administrações se propõem tomar, as delegações dos países supramencionados declaram que as suas administrações se reservam o direito de tomar todas as medidas necessárias tanto para assegurar o funcionamento satisfatório dos serviços a que essa porção do espectro está atribuída como para lhes permitir uma utilização equitativa da faixa decamétrica para o seu serviço de radiodifusão.

N.º 74

República Argelina Democrática e Popular, Reino da Árabia Saudita, Estado do Bahrein, Emirados Árabes Unidos, República do Iraque, Reino Hachemita da Jordânia, Estado do Koweit, Líbano, Líbia (Jamahiriya Árabe, Líbia Popular Socialista), Reino de Marrocos, Sultanato de Omã, Estado de Qatar, República Árabe Síria, República Democrática da Somália, República Democrática do Sudão e República Democrática Popular do Iémene.

Tendo tomado nota das reservas já apresentadas, as delegações dos países pré-citados reservam os direitos dos seus Governos de tomarem as medidas que julguem necessárias para proteger os seus interesses se um ou vários Membros da União não observarem as disposições dos Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), ou se as reservas formulados por esses Membros vierem a prejudicar os seus serviços de telecomunicações.

N.º 75

República Federal da Alemanha, Austrália, Áustria, Bélgica, Canadá, Dinamarca, Estados Unidos da América, Finlândia, França, Grécia, Irlanda, Itália, Japão, Principado do Listenstaina, Luxemburgo, Noruega, Nova Zelândia, Papuásia-Nova Guiné, Reino dos Países Baixos, Portugal, Reino Unido da Grã-Bretanha e da Irlanda do Norte, Suécia e Confederação Suíça.

As declarações pré-citadas, referindo-se às reservas formuladas pela República da Colômbia, a República Popular do Congo, o Equador, a República Gabonesa, a República do Quénia, a República da Uganda, a República Democrática da Somália e a República do Zaire na Declaração n.º 40 e pela República da Indonésia na Declaração n.º 42, expressam opinião de que, na medida em que essas duas declarações se referem à declaração de Bogotá de 3 de Dezembro de 1976 subscrita pelos países equatoriais e às suas reivindicações ao exercício de direitos de soberania sobre secções de órbita dos satélites geostacionários, as referidas reivindicações não podem ser reconhecidas pela presente Conferência e de que as decisões por ela adoptadas acerca da consignação e da utilização de frequências e de posições orbitais na órbita dos satélites geostacionários estão plenamente em conformidade com a Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973), que obriga a presente Conferência.

As delegações supramencionadas desejam igualmente declarar que a Resolução n.º 3, ao referir-se às «questões técnicas pertinentes relativas à situação geográfica especial de certos países», não implica o reconhecimento de reivindicações relativas a quaisquer direitos preferenciais no que concerne à órbita dos satélites geostacionários.

N.º 76

Reino Unido da Grã-Bretanha e da Irlanda do Norte

Referindo-se à declaração feita pela República da Argentina no n.º 45 do Protocolo final, o Governo do Reino Unido da Grã-Bretanha e da Irlanda do Norte não duvida da soberania do Reino Unido sobre as ilhas Falkland e suas dependências e sobre o território antárctico britânico. A este respeito convém chamar a atenção para o artigo IV do Tratado do Antárctico, de que o Reino Unido e a Argentina são signatários, que impede as pretensões territoriais no Antárctico.

O Governo do Reino Unido não aceita, portanto, a declaração da República da Argentina que contesta a soberania do Reino Unido sobre os territórios acima mencionados. Por outro lado, o Reino Unido tem o direito de possuir frequências consignadas aos seus serviços de radiocomunicações que funcionam a partir dos ditos territórios e consideraria qualquer utilização, pela República Argentina, de frequências a causar interferências prejudiciais às referidas consignações como uma violação da Convenção e do Regulamento das Radiocomunicações. O Reino Unido não aceita a alegação contida no último parágrafo da declaração da Argentina segundo a qual «a ocupação ilícita das ilhas da Geórgia do Sul e das ilhas Sandwich do Sul pelo Reino Unido foi reconhecida pela Organização das Nações Unidas». As resoluções das Nações Unidas pediram simplesmente a solução do desacordo mediante negociações entre os dois Governos.

N.º 77

Reino Unido da Grã-Bretanha e da Irlanda do Norte

Referindo-se à declaração feita pela República da Guatemala no n.º 2 do Protocolo final, o Governo do Reino Unido da Grã-Bretanha e da Irlanda do Norte não tem qualquer dúvida relativamente à soberania do Reino Unido sobre Belize e deseja reservar oficialmente os seus direitos sobre o assunto.

N.º 78

Reino Unido da Grã-Bretanha e da Irlanda do Norte

A delegação do Reino Unido da Grã-Bretanha e da Irlanda do Norte não aceita o n.º 7 do Protocolo final, do Chile, na medida em que este contesta a soberania do Governo de Sua Majestade do Reino Unido sobre o território antárctico britânico. A delegação faz referência ao artigo IV do Tratado do Antárctico, que impede as pretensões territoriais no Antárctico.

N.º 79

República da Colômbia, República Popular do Congo, Equador, República Gabonesa, República do Quénia, República da Uganda, República Democrática da Somália e República do Zaire

As delegações dos países supramencionados chamam a atenção para o facto de o ponto *e*) e a 2.ª parte do § 3.2 do dispositivo da Resolução n.º 3, aprovada pela Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), também se referirem à situação geográfica especial dos países equatoriais no que respeita à órbita dos satélites geostacionários, como se deduz das discussões havidas no seio do grupo de trabalho *ad hoc* e da comissão que trataram deste assunto.

Nestas condições, as delegações acima mencionadas aceitaram os termos da resolução pré-citada, que trata da utilização da órbita dos satélites geostacionários, tendo em conta — e de outro modo não podia ser — as circunstâncias pertinentes devidas à situação geográfica especial dos países cujo território é atravessado pelo equador terrestre.

Por consequência, seja qual for a planificação ou a regulamentação tendente a racionalizar a utilização da órbita dos satélites geostacionários pelo acesso equitativo de todos os países a essa órbita, será necessário ter em conta as considerações que os países equatoriais formularam sobre o assunto.

N.º 80

Papuásia-Nova Guiné

Ao assinar os Actos Finais da Conferência Administrativa Mundial das Radiocomunicações (Genebra 1979), a delegação da Papuásia-Nova Guiné reserva para o seu Governo o direito de tomar todas as medidas que julgue necessárias para salvaguardar os interesses dos seus serviços de radiocomunicação se outros países não observarem as disposições adoptadas pela Conferência e causem, por esse facto, interferências prejudiciais aos sistemas de radiocomunicação dependentes do Governo da Papuásia-Nova Guiné.

N.º 81

Japão

No que se refere às reservas formuladas pela delegação chilena e pela delegação argentina acerca das consignações de frequências na Antárctica, a delegação do Japão reafirma a posição do Governo Japonês relativamente ao artigo IV do Tratado do Antárctico.

N.º 82

República Democrática da Somália

A delegação da República Democrática da Somália à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) declara que o seu Governo não aceitará nunca quaisquer medidas ou situações que, resultantes de reservas já apresentadas por outras administrações, possam comprometer os interesses dos serviços de telecomunicações da Somália.

N.º 83

Cuba

Se, em consequência das reservas formuladas nos n.os 36 e 38 do Protocolo final da Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), no que respeita à utilização do serviço de radiodifusão nas faixas atribuídas a serviços diferentes do serviço pré-citado, nas vizinhanças de 6 e 7 MHz, essas novas faixas não puderem ser utilizadas de modo apropriado pelos serviços a que estão atribuídas, a administração da República de Cuba reserva-se o direito de as utilizar da forma que melhor corresponda aos seus interesses.

(Seguem-se as assinaturas.)

RESOLUÇÕES

Nota do secretário-geral

Em aplicação das decisões tomadas pela Conferência, as Resoluções foram classificadas e numeradas pelas categorias e segundo o sistema de numeração indicadas abaixo, Além disso, na aplicação deste processo de classificação verificou-se que certas Resoluções, pertencentes a um dado grupo, estavam directamente relacionadas com Resoluções que figuram noutros grupos. Este facto foi tido em conta para facilitar a consulta dos textos.

Números

Resoluções de aplicação geral 1-99
Princípios, procedimentos gerais e cooperação 1-20
Referem-se igualmente: n.os 35, 36 e 37.
Procedimentos específicos 30-39
Referem-se igualmente: n.os 1, 6, 7, 8, 9, 100, 101, 102, 200, 201, 202, 502, 503, 504, 506, 507, 700 e 701.
Questões técnicas 60-69
Serviço fixo/serviço fixo por satélite 100-199
Referem-se igualmente: n.os 8, 9, 31, 32, 33, 34, 502, 503, 504, 506, 507, 700 e 701.
Serviço móvel/serviço móvel por satélite 200-299
Referem-se igualmente: n.os 38, 305 e 315.
Serviço móvel marítimo/serviço móvel marítimo por satélite 300-399
Referem-se igualmente: n.os 200 e 201.
Serviço móvel aeronáutico/serviço móvel aeronáutico pos satélite 400-499
Serviço de radiodifusão/serviço de radiodifusão por satélite 500-599
Referem-se igualmente: n.os 31, 32, 33, 34, 100, 102, 700 e 701.
Outros serviços 600-699
Relativas a mais de um serviço 700-799
Referem-se igualmente: n.os 31, 32, 33, 34, 100, 101, 102, 502, 503, 504, 506 e 507.

V. igualmente a este respeito, o «Índice analítico» elaborado pelo Secretário-Geral.

RESOLUÇÃO N.º 1

Relativa à notificação das consignações de frequência (1)

A conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

referindo-se

Ao «preâmbulo» da Convenção (2);
Ao artigo 31 da Convenção (2) (acordos especiais);
Ao artigo 7 do Regulamento das Radiocomunicações (acordos especiais);
Ao artigo 12 do Regulamento das Radiocomunicações (notificado e inscrição, no ficheiro de referência internacional das frequências, das consignações de frequência às estações de radiocomunicação de Terra);

(1) Substitui a Resolução n.º 5 da Conferência Administrativa das Radiocomunicações (Genebra, 1979).
(2) Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973).

Ao artigo 13 do Regulamento das Radiocomunicações (notificação e inscrição, no ficheiro de referência internacional das frequências, das consignações de frequência às estações de radioastronomia e às estações de radiocomunicação espacial, com excepção das estações do serviço de radiodifusão por satélite);

Ao artigo 17 do regulamento das Radiocomunicações (procedimento relativo às faixas atribuídas em exclusão ao serviço de radiodifusão entre 5950 kHz e 26 100 kHz);

decide

que salvo indicação contrária especificamente estipulada em acordos especiais comunicados à União pelas administrações, qualquer notificação de uma consignação de frequência a uma estação deve ser feita pela administração do país em cujo território se situa a estação.

RESOLUÇÃO N.º 2

Relativa à utilização equitativa por todos os países com igualdade de direitos da órbita dos satélites geostacionários e das faixas de frequência atribuídas aos serviços de radiocomunicação espacial (1)

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

que todos os países têm o mesmo direito de utilizar as frequências radioeléctricas atribuídas aos diferentes serviços de radiocomunicação espacial, assim como a órbita dos satélites geostacionários para os referidos serviços;

tendo em conta o facto

de que o espectro das frequências radioeléctricas e a órbita dos satélites geostacionários constituem recursos naturais limitados e de que convém utilizá-los o mais eficaz e economicamente possível;

consciente do facto

de que a utilização, pelos diversos países ou grupos de países, de faixas de frequência atribuídas, assim como de localizações fixas na órbita dos satélites geostacionários, pode começar em datas diferentes, segundo as necessidades desses países e segundo os meios técnicos de que possam dispor;

decide

1. Que o registo na IFRB de consignações de frequência para os serviços de radiocomunicação espacial e a utilização dessas consignações não podem conferir prioridade permanente a este ou àquele país ou grupo de países e impedir a criação de sistemas espaciais por outros países;

2. Que, por consequência, convém que um país ou grupo de países em nome do qual tenham sido registadas pela IFRB consignações de frequência para os seus serviços de radiocomunicação espacial tome todas as medidas praticamente possíveis para deixar a outros países ou grupos de países que o desejem a possibilidade de utilizar novos sistemas espaciais;

3. Que convém que as administrações e os organismos permanentes da União tenham em conta as disposições contidas nos n.os 1 e 2 da presente Resolução.

RESOLUÇÃO N.º 3

Relativamente à utilização da órbita dos satélites geostacionários e à planificação dos serviços espaciais que utilizam essa órbita

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que a órbita dos satélites geostacionários e o especto das frequências radioeléctricas são recursos naturais limitados e que são utilizados pelos serviços espaciais;

b) Que é necessário assegurar o acesso equitativo a esses recursos e a sua utilização eficaz e económica por todos os países, como prevêem o artigo 33 da Convenção Internacional das Telecomunicações (Málaga, Torremolinos, 1973) e a Resolução n.º 2;

c) Que diversos países ou grupos de países podem utilizar as frequências radioeléctricas e a órbita dos satélites geostacionários diferentes, conforme as suas necessidades e os recursos de que dispõem;

---

(1) Substitui a Resolução Spa2-1 da Conferência Administrativa Mundial das Telecomunicações Espaciais (Genebra, 1971).

d) Que, em todo o Mundo, são cada vez mais numerosas as necessidades e consignação de posição orbital e de frequência para os serviços espaciais;

e) Que conviria, no que respeita à utilização da órbita dos satélites geostacionários por serviços espaciais, prestar atenção às questões técnicas pertinentes relativas à situação geográfica especial de certos países;

decide

1. Que seja convocada, o mais tardar em 1984, uma Conferência Administrativa Mundial das Radiocomunicações, com a finalidade de garantir concretamente a todos os países o acesso equitativo à órbita dos satélites geostacionários e às faixas de frequências atribuídas aos serviços espaciais;

2. Que essa Conferência se realize em duas sessões;

3. Que a primeira sessão deverá:

3.1. Decidir quais os serviços espaciais e as faixas de frequências para que convém estabelecer planos;

3.2. Decidir os princípios, os parâmetros técnicos e os critérios aplicáveis à planificação, especialmente no que se refere às consignações de órbita e de frequência para os serviços espaciais e às faixas de frequências indicadas no § 3.1, tendo em conta as questões técnicas pertinentes relativas à situação geográfica especial de certos países, e, por outro lado, estabelecer princípios directivos relativamente aos procedimentos regulamentares associados;

3.3. Elaborar os princípios orientadores em matéria de procedimentos regulamentares aplicáveis aos serviços e às faixas de frequências não indicadas no § 3.2;

3.4. Examinar outras iniciativas capazes de permitir alcançar o objectivo enunciado no ponto 1 desta resolução;

4. Que a segunda sessão se realize no mínimo 12 meses e no máximo 18 meses depois da primeira sessão, a fim de proceder à aplicação das decisões tomadas na primeira sessão;

convida

1. *A CCIR*, a efectuar estudos preparatórios e a fornecer à 1.ª Sessão da Conferência informações técnicas relativas aos princípios, aos critérios e aos parâmetros técnicos, incluídos aqueles de que haja necessidade para a planificação dos serviços espaciais;

2. *A IFRB*, a elaborar um relatório sobre a aplicação dos procedimentos dos artigos 11 e 13, incluindo informações sobre as dificuldades eventualmente assinaladas à IFRB pelas administrações que procuram obter acesso a posições orbitais e frequências apropriadas, e a distribuir esse relatório pelas administrações, pelo menos, um ano antes da 1.ª Sessão da Conferência.

3. *A IFRB*, a encarregar-se da preparação técnica da Conferência, em conformidade com as disposições do Regulamento das Radiocomunicações;

4. *As administrações*, a examinarem todos os aspectos da questão a fim de apresentarem propostas à Conferência e a cooperarem activamente nos trabalhos supramencionados da CCIR e da IFRB;

5. *O Conselho de Administração*, a tomar todas as medidas necessárias com vista à convocação da Conferência em conformidade com a presente Resolução.

RESOLUÇÃO N.º 4

Relativa ao prazo de validade das consignações de frequência às estações espaciais que utilizam a órbita dos satélites geostacionários

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que é necessário utilizar racional e eficazmente o espectro das frequências e a órbita dos satélites geostacionários e que convém tomar em consideração as disposições da Resolução n.º 2 relativa à utilização por todos os países, com igualdade de direitos, das faixas de frequências atribuídas aos serviços de radiocomunicação espacial;

b) Que a limitação do período de validade das consignações de frequência às estações espaciais que utilizam a órbita dos satélites geostacionários é um conceito que, aplicado, poderia permitir uma aproximação dos objectivos acima mencionados;

c) Que a amortização dos grandes investimentos efectuados para o desenvolvimento das radiocomunicações espaciais constitui um encargo especialmente pesado para todas as administrações e que esses investimentos devem ser feitos ao longo de um período predeterminado;

d) Que se deve procurar incitar as administrações que têm possibilidade desenvolver técnicas destinadas a melhorar a utilização do espectro das frequências e da órbita dos satélites geostacionários; com vista a aumentar os meios de radiocomunicações postos à disposição da comunidade mundial;

e) Que uma Conferência Administrativa Mundial das Radiocomunicações Especiais deve, por alturas de 1984, tratar da utilização da órbita dos satélites geostacionários e da planificação dos serviços espaciais que utilizam essa órbita;

f) Que seria útil estabelecer, a título experimental, um procedimentos que permitisse retirar ensinamentos da aplicação do novo conceito de notificação do período de validade de uma consignação nas

radiocomunicações espaciais, mas que não é desejável impor às administrações um período fixo regulamentarmente e idêntico em todos os casos, e que é preciso, antes, deixar às administrações o cuidado de serem elas próprias a proporem esse período de validade em função das suas necessidades e do interesse geral;

decide

1. Que entre 1 de Julho de 1980 e a Conferência Administrativa Mundial das Radiocomunicações Espaciais (v. a Resolução n.º 3), as consignações de frequência a estações de radiocomunicação espacial situadas na órbita das satélites geostacionários sejam tratadas como segue:

1.1. Uma consignação de frequência a uma estação espacial (1) instalada a bordo de um satélite geostacionário é considerada como abandonada definitivamente logo que expire o período de funcionamento indicado, na ficha de notificação, contado a partir da data da entrada em serviço dessa consignação. Este período é limitado àquele para o qual foi concebida a rede de satélite. A Comissão convida, então, a administração notificadora a proceder à anulação dessa consignação. Se, no prazo de 3 meses a contar da expiração desse período de funcionamento, a Comissão não tiver obtido resposta, inscreve na coluna «Observações» do ficheiro de referência um símbolo a indicar que a consignação não está em conformidade com a presente Resolução;

1.2. Se uma administração notificadora desejar prolongar o período de funcionamento, indicado inicialmente na ficha de notificação, de uma consignação de frequência a uma estação espacial (1) existente, informa disso a Comissão mais de 3 anos antes do fim do período em questão e, se todas as outras características fundamentais continuarem sem modificação, a Comissão modifica, em conformidade com o pedido, o período de funcionamento inicialmente inscrito no ficheiro de referência e publica essa informação numa secção especial da circular semanal;

1.3. Se, pelo menos, 3 anos antes do fim do período de funcionamento inscrito no ficheiro de referência de uma consignação de frequência a uma estação espacial (1) existente, uma administração empreender o procedimento de coordenação previsto no n.º **1060** para pôr em serviço uma nova estação espacial utilizando a mesma frequência consignada e a mesma posição orbital mas com características técnicas diferentes, e se a Comissão concluir, após a notificação, que a nova consignação está em conformidade com as disposições do n.º **1503** e que não aumenta, em relação à consignação anterior, a probabilidade de interferência em prejuízo de uma consignação recebe uma conclusão favorável e inscreve-se no ficheiro de referência;

1.4. Uma administração notificadora que deseje introduzir qualquer modificação às características fundamentais de uma consignação de frequência a uma estação espacial (1) inscrita no ficheiro de referência deve, em todos os casos, excepto nos previstos nos §§1.2 e 1.3, empreender o procedimento correspondente a essa modificação de acordo com as disposições dos n.os **1547** a **1551**;

2. Que, para a aplicação das disposições do § 1.1 anterior, as informações relativas ao período de validade das consignações de frequência às estações espaciais devem ser notificadas em adição às informações que figuram nos apêndices 3 e 4 do Regulamento das Radiocomunicações;

3. Que a aplicação da presente resolução não prejudicará, de nenhum modo, as decisões da Conferência Administrativas das Radiocomunicações Espaciais mencionada na Resolução n.º 3;

convida

a Conferência Administrativa Mundial das Radiocomunicações Espaciais prevista pela Resolução n.º 3 a tomar conhecimentos dos primeiros resultados da aplicação da presente resolução.

RESOLUÇÃO N.º 5

Relativa à cooperação técnica com os países em desenvolvimento no domínio dos estudos de propagação nas regiões tropicais

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

tendo notado

que a assistência fornecida pela União aos países em desenvolvimento concertadamente com outras instituições especializadas das Nações Unidas, tais como o PNUD, no domínio das telecomunicações, permite fazer bons augúrios para o futuro;

consciente

a) Do facto de que os países em desenvolvimento especialmente os situados em regiões tropicais, têm necessidade de possuir um melhor conhecimento da propagação das ondas radioeléctricas nos seus territórios para a utilização racional e económica de espectro radioeléctrico;

b) Do papel importante da propagação nas radiocomunicações;

---

(1) A expressão «estação especial» pode aplicar-se a mais de um satélite, com a condição de que esteja em funcionamento um único satélite num momento qualquer e de que as estações instaladas a bordo dos satélites sucessivos tenham características fundamentais idênticas.

c) Da importância dos trabalhos das CCI na evolução das telecomunicações em geral e das radiocomunicações em particular;

considerando

a) A necessidade que os países em desenvolvimento têm de ser eles próprios a fazer estudos sobre a telecomunicação em geral e sobre a propagação em particular nos seus territórios, pois, é esse, para eles o melhor meio de adquirirem as técnicas das telecomunicações e de planificarem os seus sistemas de modo racional, tendo em conta as condições especiais nas regiões tropicais;
b) Os poucos meios de que dispõem esses países;

decide convidar o secretário-geral

1. A oferecer a assistência da União aos países em desenvolvimento situados em regiões tropicais e que estejam a procurar fazer estudos no seu próprios território a fim de melhorarem e aperfeiçoarem as suas radiocomunicações;
2. A ajudar esses países, se necessário com a colaboração de organizações internacionais e regionais, tais como a União Africana dos Correios e Telecomunicações (UAPT), a União Panafricana das Telecomunicações (UAPT) e a União das Radiodifusões e Televisões Nacionais de África (URTNA), que possam interessar-se pela questão, a organizarem as campanhas nacionais de medidas de propagação, incluindo recolhas de dados meteorológicos apropriados, efectuadas na base dos pareceres, questões e programas de estudos da CCIR a fim de melhorar a utilização de espectro radioeléctrico;
3. A procurar obter fundos e recursos para este fim junto do PNUD ou de outras formas de financiamento, de modo a permitir que a União leve aos países interessados assistência técnica ao mesmo tempo suficiente e eficaz para os fins da presente Resolução;

convida instantemente as administrações

a apresentar à CCIR os resultados dessas medidas de propagação para que sejam examinados no quadro dos estudos da Comissão;

convida o conselho de administração

a acompanhar os progressos das campanhas de medida de propagação e os resultados obtidos e a tomar quaisquer providências que julgue necessárias.

RESOLUÇÃO N.º 6

Relativa à preparação de um manual destinado a explicar e ilustrar os procedimentos do Regulamento das Radiocomunicações

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) A complexidade dos procedimentos regulamentares especificados no capítulo IV do Regulamento das Radiocomunicações;
b) A necessidade, para muitas administrações, de disporem de um manual que permita ao seu pessoal compreender melhor esses procedimentos para facilitar a sua aplicação;
c) O recurso possível a diagramas, organigramas e outras ilustrações gráficas susceptíveis de facilitar a compreensão de procedimentos complexos;

reconhecendo

1.Que por falta de tempo, é difícil à Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) elaborar elementos explicativos e diagramas para incluir ou juntar aos Actos Finais;
2. Que é necessário um esforço especial para elaborar um manual que satisfaça adequadamente as necessidades mencionadas na alínea *b*);
3. Que há interesse em que formato de um tal manual seja compatível com o do Regulamento das Radiocomunicações;

decide

que a IFRB deve, logo que possível após a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979), elaborar um manual que incorpore ilustrações gráficas apropriadas, inclusive organigramas, destinadas a auxiliar o pessoal das administrações na aplicação dos procedimentos regulamentares previstos no capítulo IV do Regulamento das Radiocomunicações;

encarrega o secretário-geral

1. De publicar o manual elaborado pela IFRB;

2. De concluir de modo apropriado nas edições publicadas do Regulamento das Radiocomunicações os organigramas, quando estiverem disponíveis, acompanhados de uma nota a precisar que se destinam a facilitar a compreensão dos procedimentos mas que não fazem parte do Regulamento das Radiocomunicações.

RESOLUÇÃO N.º 7

Relativa ao desenvolvimento de uma gestão nacional das frequências radioeléctricas

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que o Regulamento das Radiocomunicações contém, entre outras disposições, procedimentos de coordenação, de notificação e de registo das frequências que determinam os direitos e obrigações dos países membros;
b) Que a aplicação desses procedimentos torna necessário um serviço de gestão de frequências radioeléctricas em cada país membro;
c) Que a existência de um tal serviço ajuda os países membros a salvaguardarem os seus direitos e a cumprirem as suas obrigações em conformidade com o Regulamento das Radiocomunicações;
d) Que a aplicação do Regulamento por intermédio de um tal serviço é do interesse de toda a comunidade internacional;

notando

que um tal serviço de gestão de frequências radioeléctricas precisa de pessoal devidamente qualificado e em número suficiente;

notando, por outro lado,

que as administrações de numerosos países em desenvolvimento têm necessidade de criar ou de reforçar um tal serviço adaptado à sua estrutura administrativa e de o encarregar da aplicação do Regulamento das Radiocomunicações no plano nacional e internacional;

recomenda

às administrações desses países que tomem medidas para esse efeito;

decide

1. Que se organizem reuniões entre representantes da IFRB e da CCIR e participantes interessados pelas questões relativas à gestão das frequências nas administrações dos países em desenvolvimento e dos países desenvolvidos;
2. Que o objectivo dessas reuniões seja o de elaborar modelos de estruturas adaptadas às administrações de países em desenvolvimento e de discutir os meios de os pôr em prática e de explorar esses serviços de gestão de frequências;
3. Que o objectivo dessas reuniões deveriam também identificar as necessidades especiais de países em desenvolvimento para estabelecer tais serviços e os meios necessários para satisfazer essas necessidades;

recomenda

aos países em desenvolvimento que prevejam, quando da planificação da utilização dos fundos recebidos especialmente de instâncias internacionais, e participação nas reuniões, bem como a criação e o desenvolvimento desses serviços;

convida o Conselho de Administração

a tomar as medidas necessárias para a organização de tais reuniões;

encarrega o secretário-geral

1. De difundir a presente Resolução junto dos Membros da União, chamando-lhes a atenção para a sua importância;
2. De difundir os resultados dessas reuniões, especialmente junto dos países em desenvolvimento;
3. De indicar a esses países as formas de auxílio que a UIT está em condições de colocar à disposição deles para a implementação da estrutura que desejem;

chama a atenção da próxima Conferência de plenipotenciários para

1. Os problemas especiais identificados na presente Resolução;
2. A necessidade de ser empreendida, no mais curto prazo possível, uma acção eficaz com vista à sua solução;
3. A necessidade de tomar todas as medidas práticas para assegurar os recursos para esse efeito.

RESOLUÇÃO N.º 8

Relativa à aplicação das modificações de atribuições nas faixas compreendidas entre 4000 kHz e 27 500 kHz

A Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979),

considerando

a) Que um certo número de faixas de frequências compreendidas entre 4000 kHz e 27 500 kHz e que estavam atribuídas antes, em exclusivo ou em partilha, ao serviço fixo foram reatribuídas a outros serviços;

b) Que as consignações existentes às estações dos serviços fixos e móvel devem ser progressivamente eliminadas dessas faixas reatribuídas para dar lugar a outros serviços;

c) Que as consignações que devem ser deslocadas, chamadas «consignações a transferir», devem ser reclassificadas noutras faixas de frequências;

consciente

das dificuldades que encontrarão as administrações e a IFRB durante a passagem dessas antigas atribuições para as da presente Conferência;

decide

1. Que o procedimento de transição do anexo A da presente Resolução seja utilizado para assegurar a passagem ordenada e equitativa das antigas atribuições para as que são feitas pela presente Conferência;

2. Que as disposições do n.º **1242** e as disposições associadas do artigo 12 relativas ao exame e à inscrição no ficheiro de referência das consignações nas faixas compreendidas entre 4000 kHz e 27 500 kHz atribuídas em exclusivo ou por partilha ao serviço fixo sejam suspensas de 1 de Janeiro de 1982 a 30 de Junho de 1984;

3. Que o procedimento provisório do anexo B da presente Resolução seja utilizado a fim de ter em conta qualquer consignação de frequência nova e urgente, nas faixas em causa, durante o período de suspensão das disposições do artigo 12 indicado no ponto 2 desta Resolução;

4. Que o procedimento de revisão do anexo C da presente Resolução seja utilizado para examinar, no final do período de transição, qualquer nova consignação de carácter urgente notificada durante o período de suspensão das disposições do artigo 12 indicado no ponto 2 desta Resolução;

5. Que se aplique, e termine em 1 de Fevereiro de 1983, um procedimento especial de transferência, descrito na Resolução n.º 404, às estações do serviço fixo aeronáutico que funcionam na faixa de 21 924-22 000 kHz, faixa que a presente Conferência atribuiu em exclusivo ao serviço móvel aeronáutico (R);

convida as administrações

1. A que, ao procurarem reinstalar as suas consignações do serviço móvel que se encontram na faixa compreendida entre 4000 kHz e 27 500 kHz reatribuídas a outros serviços, não se poupem a esforços para encontrar consignações de substituições nas faixas atribuídas em exclusivo ao serviço móvel em causa;

2. A facilitar a cooperação, abstendo-se de apresentar fichas de notificação relativas a consignações nas faixas em causa, durante o período de suspensão das disposições do artigo 12 indicado no ponto 2 das decisões desta Resolução, excepto no caso de consignações urgentes e novas a tratar no quadro do procedimento provisório;

pede à IFRB

que, durante o período de suspensão das disposições do artigo 12 no ponto 2 das decisões desta Resolução, não examine, nos termos desse artigo, fichas de notificação nas faixas em causa além daquelas que impliquem a supressão de consignações existentes.

ANEXO A À RESOLUÇÃO N.º 8

Procedimento de transição relativo à escolha e à aprovação das consignações de substituição

PARTE I

Fase preparatória

SECÇÃO I

Preparação e publicação pela IFRB de um conjunto de propostas relativas às consignações de substituição

1. Para fins desta Resolução, a expressão «consignação a transferir» refere-se a uma consignação de frequência a uma estação do serviço fixo nas partes das faixas de frequências anteriormente atribuídas ao serviço fixo e agora atribuídas a outros serviços, e para a qual deve ser encontrada uma consignação de substituição em conformidade com a presente Resolução.

2. A Comissão, logo que possível após o fim da aplicação do procedimento descrito no anexo à Resolução n.º 9, estabelece um conjunto de propostas com vista à substituição de todas as consignações a transferir, inscritas na secção provisória do ficheiro de referência nas faixas compreendidas entre 4000 kHz e 27 500 kHz e que a Conferência Administrativa Mundial das Radiocomunicações (Genebra, 1979) transferiu do serviço fixo para outros serviços.

3. As consignações a transferir são tratadas pela ordem das datas inscritas na coluna 2d, como indicado na Resolução n.º 9. Por outro lado, todas as consignações a transferir que tenham a mesma data revista são tratadas pela ordem seguinte:

1) Consignações para utilização nacional;
2) Consignações para utilização internacional.

Quando da aplicação desta disposição, as consignações a transferir serão tratadas por lotes, sem que seja concedida prioridade às consignações de qualquer administração.

4. As consignações a transferir de classe de funcionamento C só são tratadas quando tenham sido encontradas soluções para todas as consignações transferidas das classes de funcionamento A ou B.

5. As consignações a tranferir de classe de fucionamento C serão repartidas, tanto quanto possível, uniformente pelas faixas que estão ainda atribuídas ao serviço fixo.
